May 2004

Preface

The initiative to this bibliography was taken by the IUFRO Working Party 6.28.01, Gender research in forestry. The work started in spring 2003 and a preliminary version was presented and discussed at a workshop in Umeå on 16 May 2003. It was then decided that the bibliography should be updated regularly and also be available on the Internet. To make this possible the Forestry Library took upon themselves to do the updating and to make it available. This with financial support from the EU-programme "the Utilisation of the Boreal Forest" at Vindeln Experimental Forests. The beautiful tree on the frontpage was painted by Gun Lövdahl. Publisher of this bibliography is SLU, Forestry Library.

If you want to add references to this bibliography you can send them to the following address:

Abstract

The result of searches in 19 different databases and library catalogues are compiled in this bibliography of Gender and forestry. It contains 927 references. The terms used in the searches were *forest, forest management, masculinity, gender, sex & women* in different combinations. The bibliography is organized in a scheme with different headings: author (editors), title, language, source, database, type of publication, country/region and type of study. The *authors (editors)* are in alphabetical order, the *title* is the material which was found in the databases, *language* refers to the language of the document (in some cases with English summaries), *source* holds the information of the publisher, year, number if it is a serial, pages etc., *database* is where the title has been located, *type of publication* is the document type, *country/region* is the geographical area described in the document and *type of study* gives information about the study. This bibliography is a first step towards establishing a database in the research field gender and forestry. New references will be added to the bibliography. Researchers, students or anyone who wants to study gender issues in forestry can use it.

Introduction

The terms **masculinity** and **femininity** were born in the Age of Enlightenment. The new thinking was to contrast the differences in women and men's qualities. Gender research has been developed a lot since 1960 (Gaunt, 1999). We have always divided and categorized ourselves and among several different categories there are the aspect of gender (Lidestav, 2001). Gender is a natural aspect in the research field Forestry. Why? Our lives are about cultural and social patterns both when we are at work and during our spare time. Therefore the forestry sector is a natural place as well as any other working sector to study gender issues.

Forestry has traditionally been a masculine field. Today it is more common that a woman owns and works in the forestry sector (Lidestav & Wästerlund, 2000). One object of gender research in forestry is to identify gender discrimination. This is to establish special treatments of individuals within the forestry sector and to make them visible (Chaseling, 2001). But gender research is not only about **women** and **forestry** but also about **men** and **forestry**. Johansson have made a study of Swedish loggers everyday life and logging work from the beginning of 19th century. She have studied the individuality, freedom and egalitarianism among loggers and concentrated on masculinity within this working group, both in their spare time and when there are working (Johansson, 2001).

This bibliography is a first step towards establishing a database in the research field gender and forestry. New references have been added to this version of the bibliography. Researchers, students or anyone who wants to study gender issues in forestry can use it. It is the result of searches in 19 different databases and library catalogues. The terms used were **forest, forest management, gender, masculinity, sex & women** in different combinations.

Method

Databases -The Choice of databases

My first step of choosing databases were based on the fact that it is the same databases that we use at the Swedish University of Agricultural Sciences, Forestry Library, where I work. Then I wanted to find more publications in the research field gender and forestry. Therefore I searched in the search engine Googles for other Forestry Libraries and searched both in their own library catalogues and looked which databases they were referring to. Here follows a brief description of all the databases I have used in my searches.

A-SÖK (Artikelsök – Article Search)

This database is a reference database where you can find articles from Swedish newspapers, journals and yearbooks. It is a commercial database (Bibliotekstjänst).

AGRICOLA (Agricultural online access)

The National Agricultural Library and their cooperators created this database. This database began in 1970 and it contains all kinds of material in the agricultural field and allied disciplines, including printed work from the 15th century. It is available for the public (Agricola).

AGRIS

AGRIS were created by FAO and their idea was to make a system that could bring together literature within the agricultural field. Today there are about 240 centres over the world who participates in AGRIS. This database is an international database within the field Agricultural Sciences and Technology. It contains holdings from 1975-.

AMICUS

The National Library of Canada maintains AMICUS. It contains over 25 million bibliographic records of books, magazines, government documents, theses, sound recordings, maps etc. It has holdings from over 1300 Canadian Libraries and from other sources, for instance the Library of Congress. It is available for the public (Amicus).

BIBSYS

This database can be considered as the Union Catalogue of Norway. It contains books, periodicals etc. about 8 million copies. If you are registered at BIBSYS you can order loan and copies, but to search in the database is free of charge (Bibsys).

BLPC (The British Library Public Catalogue)

British library is the national library of United Kingdom. The British Library database holds over 10 million items available. There are a number of Catalogues included in BLPC:

Humanities (1975-)
Science, Technology & Business (1974-)
Retrospective (Pre 1975)
Music (1980)
Music (pre 1981-)
Journals (1700-)
Books (pre 1950 & 1980-)
Conference proceedings (1800-)

It is available for the public (British Library).

CAB abstracts

This database is compiled by CABI Publishing, “CABI *Publishing* is a leading international, not-for-profit publisher in applied life sciences” (Webspirs) and includes the following subjects: agronomy, biotechnology, crop protection, dairy science, economics, environmental degradation and remediation, forestry, genetics, herbicides, irrigation, leisure, recreation and tourism, microbiology, nutrition, parasitology, rural development, veterinary medicine etc. There are records printed from about 100 countries. This database grows by 150 000 new records per year. It is a commercial database (Cabi publishing).

CIFOR (Centre for international forestry research library catalogue)

I did not find so much information about this library catalogue but something about what CIFOR is: “CIFOR is an international research and global knowledge institution committed to conserving forests and improving the livelihood of people in the tropics”. It is available for the public (Cifor).

KVK (Karlsruhe Virtual Catalogue)

Here you can find 75 million books and serials in libraries and book trade catalogues worldwide. First you select the Union Catalogue you want to search in and then you enter your search words. You can search in several catalogues at the same time. It is available for the public.

My hits in this database were found in the following catalogues:

- ABES (Union Catalogue of France)
- BSZ (Union Catalogue of Southwest Germany)
- COPAC (Great Britain Union Catalogue)
- GBV (Library network of the German Federal states Bremen, Hamburg, Mecklenburg-Vorpommern, Niedersachsen, Sachsen-Anhalt, Schleswig-Holstein and Thüringen)
- HELKA (Finland National Library Catalogue)
- Helveticat (Swiss national library Catalogue)
- IDS (Basel Bern Library Catalogue)
- KOBV (Berlin-Brandenburg Library Catalogue)
- National Library of Australia
- National Library of Scotland
- NEBIS (Union Catalogue of Swiss libraries)
- SBBPIK (The Online Catalogue of the Berlin State Library)
- TIB Hannover
- Union Catalogue of Austria
- Union Catalogue of Bavaria
- Union Catalogue of Hesse
- Union Catalogue of Italy
- Union Catalogue of Northern Germany
- ZDB (Journal Catalogue of Staatsbibliothek zu Berlin)

LIBC (Library of Congress Catalogue)

Library of Congress is America's oldest federal cultural institution and this library catalogue is the national library catalogue of the United States. It has more than 18 million books, 2,5 million recordings, 12 million photographs, 4,5 million maps and 54 million manuscripts (Library of congress catalogue).

You can choose between Simple-, Advanced- and Left-anchored phrase searches. There is also the possibility to search in other catalogues as well and you get to choose from an alphabetical list of libraries. It is available to for the public.

LIBRIS

This is a Union catalogue of Swedish libraries. Here you can find more than four million titles and the holdings of about 300 Swedish libraries. Most of them are research libraries.

In LIBRIS you can also choose among several special databases. For instance, I have done a search in KVINNSAM, which is the largest interdisciplinary database in the Nordic countries with about 90 000 references of Swedish and foreign women studies. This database is produced by Gothenburg University Library. KVINNSAM holds titles from 1978-. KVINNSAM;s holdings are not included in LIBRIS. It is available to for the public. (Libris).

LINDA

LINDA is a union catalogue of Finnish University Libraries and other major libraries in Finland, for instance the National Repository Library. The database contains monographs, serials, cartographic materials, audiovisual materials, electronic resources, multimedia and archives. It is available for the public. (Linda).

LUKAS

This is the library catalogue of Swedish University of Agricultural Sciences. LUKAS started in 1983 and has holdings from 1970 to the present. Records are constantly added to the database by both new and old publications. Here you can choose among several databases. For instance you have the database LANTDOK, where you find articles and chapters published in Sweden (1983 to the present). It is available to for the public (Lukas).

Social Sciences in Forestry

Social Sciences in Forestry is a database produced by the Forestry Library of the University of Minnesota. It contains publications from 1985 to the present. The database covers legislation, policy and planning, management, economic development, and other forestry related topics. It is available to for the public (Social sciences in forestry).

SUBITO

SUBITO is an initiative from the German Ministry for Education and Research and the German states. The database contains German serials, articles and books catalogues. It is created for German Libraries but also libraries abroad. SUBITO philosophy is: “literature should be at the right place the right time!” It is a commercial database (Subito).

TREECD

TREECD is produced by CAB International. This database covers the subject’s forestry, forest products and agroforestry. In this database we can find journals, monographs, conference proceedings, books, annual reports, and other sources from more than 130 countries. The records in this database are included in CAB abstracts. It is a commercial database (Cabi publishing).

TRELLIS

This is an online catalogue, a partnership between the libraries of University of Guelph, University of Waterloo and Wilfrid Laurier University (TUG). TRELLIS contains over 7.5 million references of books, journals, newspapers, proceedings etc. It is available to for the public (Trellis).

Tropical forest conservation & development

The University of Minnesota Libraries database contains publications from 1982 to the present. Subjects included are: Tropical forest resources, deforestation, conservation, indigenous people, management, policy, trade and industrial development, nontimber forest products, research, education, training and history. It is available for the public (Tropical forest conservation & development).

Search terms

Within Agricultural libraries you use something called AGROVOC terms when you are going to classify publications, to make them available for the users. AGROVOC is “a controlled vocabulary that ensures that, throughout the whole database, the same concept is described with the same term(s)” (Agris, p 4). It is a multilingual thesaurus of AGRIS, the international information system for agricultural sciences and technology (Agris, p 1). I have used different combinations of some chosen AGROVOC search terms.

Terms I have used are:

Forest

Forest management

Gender

Masculinity

Sex

Women

I have combined these terms to make a search that covers the field gender and forestry as well as possible. I have made a quite broad search and if possible used truncation signs. It depends on the database if you are able to make a truncation with signs (*,? most common signs), to get different endings on words, or if you have to make more combinations of the terms. Sometimes the databases make a truncation automatically. These are the combination I have used:

Forest + truncation and gend + truncation
Forest + truncation and masculin + truncation
Forest + truncation and sex + truncation
Forest + truncation and wom + truncation

In case I could not truncate, I did these combinations:

Forest and gender
Forest and masculinity
Forest and sex
Forest and women
Forest and woman

Forest management and gender
Forest management and masculinity
Forest management and sex
Forest management and women
Forest management and woman

I am aware that I probably have missed some references because I have excluded the search term **men**. But I made that decision after having search for **forest** and **men**. I got a lot of hits but not exactly about the subject **gender** and **forestry**. I discussed this with my supervisor Gun Lidestav and we decided that the combinations above would cover most of the subject.

The result of this search is a bibliography of Gender and forestry, with 927 references. The bibliography is a scheme with different headings: author (editors), title, language, source, database, material, country/region and type of study. The **authors** are in alphabetical order, the **title** is the material which was found in the databases, **language** refers to the language of the document (in some cases with English summaries), **source** holds the information of the publisher, year, number if it is a serial, pages etc., **database** is where the title has been located, **type of publication** is the document type, **country/region** is the geographical area described in the document and **type of study** gives information about the study. You can find the bibliography as a supplement in the end of this report.

Out of this bibliography some summaries could be made. In the following part of this report results, I have looked closer at the three headings **type of publication, databases and country/region**, to see if I could draw any conclusions.

Results

I have compiled all the records by *type of publication*, *databases* and *country/region*. That means that I have made a summary of how many hits I have got in each database, how many articles, books etc. were found and regarding which country/region most has been written. The results are presented in the following tables.

Table 1a. Gender and forestry, publications by type of publications.

Type of publication:	Number of publications:
Article	571
Book	155
Report	54
Paper	49

Africa	90
North America	44
South America	18
Central America	9
Middle East	6
Oceanien	4
Australia	3
The Pacific	2
Indian Ocean	1
Borneo	1
Total	433

It seems that within this subject **gender and forestry** there mostly articles, books, reports and papers written. But there are also 18 thesis written within this field. Most hits were made in Social sciences in forestry, AGRIS and TREECD. The regions which has been mostly discussed in the litterature that has been presented in this bibliography are Asia Europe and Africa. In the next part, Discussion, I will take a closer look at the headings **Material, Databases and Country/region.**

Discussion

There are a number of things that could have influenced the results of my searches. One is that you could not tell from all references that I found, about which **country/region** the publication was discussed, the result of that were the number of blank squares in the bibliography under this category. Another thing is the differences between chosen databases. Some only presented articles, some of them were Union catalogues and not specific within the forestry field and others were special databases within the field **forestry** or **gender studies**. There is also a human factor that influences the results and that is when the publication is being classified; is it a document or a note, is it a paper or a note. Another issue is which publications are not classified at all and which one are included in the database? In this case there is the human factor as well, to choose which publication you should make available or not.

This bibliography is not complete in the meaning of closure, rather a beginning of establishing the field **gender research in forestry**, with the intention to be continued.
