J. Brockman – self regulation, crimes and misconduct in the professions, white collar and corporate crime, financial crimes, criminal procedure and evidence, the use of social science research as evidence in court, feminist jurisprudence, methodology and perspectives, women in the professions

B. Burtch – penology, corrections, sociology of law, social control, reproduction and law, state theory, electronic monitoring of offenders

B. Cartwright – criminological theory, sociology of deviance, school violence, qualitative research methods, cyber-research

R.R. Corrado – comparative juvenile justice, terrorism, evaluation research, administration of justice in Canada

G.J. Davies – statistical analysis, political terrorism, communities and crime

E. Elliott – social philosophy of punishment and abolitionism, critical analysis of the prison, women in prison, fear of crime

S. Fabian – criminal harassment, intimate partner violence, research methods, policy analysis, academic dishonesty

W.G. Glackman – research methodology, multivariate statistical techniques, forensic psychology, perceptions of crime

R.M. Gordon – adult guardianship/protection law, abuse and neglect of the elderly, health law including mental health law, young offenders and youth justice, gangs and related groups, restorative justice

C.T. Griffiths – policing, Native American criminality, delinquency and involvement in the criminal justice system, delivery of criminal justice services in the North, cross cultural studies in juvenile justice

M.A. Jackson – criminal justice administration and planning, judicial attitudes and sentencing behaviour, corrections (including alternatives to incarceration), law enforcement management, psychiatric decision-making, elderly, native, and female offenders, restorative justice

B. Kinney – court sentencing patterns, data interoperability in criminal justice databases

J. Lowman – prostitution, prostitution law and law enforcement, sociology of punishment, critical theory, research ethics

P. Lussier – criminological theory, developmental life-course criminology, interpersonal violence, sexual offending, prediction and classification, risk assessment, quantitative research methods

D. MacAlister – criminal law, criminal procedure and evidence, civil liberties, sentencing theory, restorative justice, policing and police powers, criminal justice accountability, wrongful conviction, legal responses to terrorism, mental health law, jurisprudence

N.A. Madu – correctional counseling, ethical dimensions and issues for helping professionals,

rights of persons with developmental disabilities, effective communication and wellness, Zen and the art of helping, application and process of therapeutic theory, multiple dimensions of human potential  
B. Morrison – social regulation, civil society, self-interest and interdependence, compliance and deviance, reason, emotion and behavior, restorative justice, particularly in the context of schools and education

J.A. Osborne – criminal law and procedure, human rights and civil liberties, administration of criminal justice, juvenile justice

T.S. Palys – research methodology, evaluation and assessment, decision-making, philosophy of science/sociology of knowledge

S.N. Verdun-Jones – criminal law, procedure and evidence, comparative criminal law and procedure, jurisprudence, sociology of law, interdisciplinary criminal justice research, history of criminal justice

J.S. Wong – policy analysis, program evaluation, cost-benefit analysis, meta analysis

### Associate Members

For areas of research, refer to the department listed.

S. Duguid, Department of Humanities

J. Whately, Continuing Studies

C. Yerbury, Continuing Studies

## Degrees Offered

The graduate programs lead to MA and PhD degrees in criminology, and MA in applied legal studies (notaries).

## Areas of Study and Research

The graduate programs concentrate on advanced academic study and have a strong research emphasis. The broad goal is to prepare students for careers in teaching criminology, in criminological research and in policy-making in criminal justice.

The graduate programs' emphasis fosters a spirit of inquiry and creative endeavor among the students, to develop critical and analytical capabilities, and training in various criminological research techniques.

## Centre for Restorative Justice

See "Centre for Restorative Justice" on page 464.

## Criminology Research Centre

See "Criminology Research Centre" on page 466.

## Feminist Institute for Studies on Law and Society

See "Feminist Institute for Studies on Law and Society" on page 466.

## Institute for Studies in Criminal Justice Policy

See "Institute for Studies in Criminal Justice Policy" on page 467.

## MA Program

### Admission Requirements

Students holding a baccalaureate or equivalent from a recognized institution must meet the admission requirements for graduate studies. See "1.3.2 Admission to a Graduate Diploma Program" on page 219 and also see "1.3.8 Conditional Admission" on page 220.

Normally, an applicant should have completed at least one course in social science research methods and one undergraduate introductory course in statistics.

Official transcripts and a short statement of interest, which includes a description of previous employment and research or other relevant work, is required.

Letters of recommendation from those who are familiar with their work are required.

An application fee of \$75 (Canadian) is paid online by charge card at time of application submission.

The deadline for receipt of the online application and supporting documents, for entrance commencing in the fall term, is February 1. Applicants are informed of the outcome as soon as possible thereafter.

## Degree Requirements

The school offers MA degrees through two research options: a thesis option, and a course work, practicum and project option. Students elect which option to pursue in consultation with their senior supervisor.

### Thesis Option

This option requires

- completion of a minimum of 18 units of course work as specified below, and
- satisfactory completion and oral defence of an original MA thesis

The course work requirement includes

CRIM 800-3 Theories of Crime  
CRIM 840-3 Proseminar  
CRIM 860-3 Research Methods I

and one of

CRIM 861-3 Research Methods II  
CRIM 862-3 Research Methods III  
CRIM 863-3 Research Methods IV

plus at least six units selected from additional graduate curriculum course offerings.

The thesis will not normally be more than 100 pages in length, including bibliography and footnotes, but exclusive of appendices.

### Course, Practicum and Project Option

This option requires

- completion of a minimum of 21 units of course work as specified below, and
- satisfactory completion of a supervised field practicum, and
- satisfactory completion of a practicum related research project.

The course work requirement includes

CRIM 800-3 Theories of Crime  
CRIM 810-3 The Phenomena of Crime I  
CRIM 840-3 Proseminar  
CRIM 860-3 Research Methods I  
CRIM 869-3 Professionalism and Criminal Justice

plus at least six units selected from additional graduate curriculum course offerings.

The practicum is met by satisfactory completion of a supervised one-term field placement in a criminal justice related agency. The practicum requires a paper that is related to the field placement, and this report is not normally more than 50 pages in length, including bibliography and footnotes, but exclusive of appendices. The paper is to be presented in the School of Criminology in a publicly advertised forum. The practicum paper does not require and should not contain original data.

## Satisfactory Performance

The candidate's progress is assessed at least once per year by the school (spring and fall). A student who performs unsatisfactorily is not permitted to continue in the program, subject to the review procedure described in *Graduate General Regulation* 1.8.2.

## Applied Legal Studies (Notaries Public) Program

This master's program is for students intending to practice as notaries public. The degree is granted on the successful completion of a 16 month course of study, and prepares students for admission to notarial

practice (subject to further requirements that are set out below), and for business and public service.

The number of students entering notarial practice in British Columbia is ultimately governed by the Society of Notaries Public of British Columbia, and accordingly, conferral of this degree is no guarantee of a position in either the necessary years of articles (described below) or in notarial practice. However, enrolment in the program is limited to approximate the number of future openings anticipated in the province.

## Admission Requirements

Applicants should regard their satisfaction of the entrance requirements as meaning only that they are eligible for selection. Because of the competition for admission, a regular applicant must have an undergraduate academic average substantially higher than the minimum in order to have a reasonable chance of admission. Certain factors such as financial hardship, learning disabilities or other disadvantages, or ethnic background, may be considered in the discretionary category. Note that only a limited number of positions will be available each year in the discretionary category.

To be eligible for selection, an applicant must have

- obtained an undergraduate degree in an approved course of study from a degree granting university with a cumulative grade point average of 3.0 or higher, or
- successful completion of 90 or more units of an approved course of study leading to an undergraduate degree at a degree-granting university with a cumulative grade point average of 3.0 or higher, and possess sufficient and appropriate work experience relevant to notarial practice that, in the view of the admissions committee, compensates for the lack of a completed degree, or
- met the criteria for discretionary applicants as set out below

Applicants are responsible for providing full documentation. Incomplete applications will not be evaluated.

### Discretionary Applicants

Special life factors may impede the ability of an otherwise promising candidate to satisfy some of the regular admission criteria. Accordingly, the admissions committee may consider factors such as age, disability, financial disadvantage, membership in an historically disadvantaged group, or any other factors that the applicant identifies. These factors are considered in the context of the applicant's life achievements and work experience, including community or charitable volunteerism.

Discretionary applicants must have completed the first two years of an approved course of study leading to an undergraduate degree at an approved college or university. A personal statement, two reference letters and, where appropriate, documentation such as medical reports are required. Each applicant is considered individually on their merits. An interview before the admissions committee may be required.

## Application

Potential applicants are strongly encouraged to contact the Society of Notaries Public of British Columbia before submitting an application.

The following must be submitted by February 1.

- completed application form which can be obtained from the Dean of Graduate Studies website
- all post-secondary academic transcripts
- application fee of \$75
- other documentation as required (e.g. letters of reference, medical certificates, special circumstances letters, or other supporting documentation for discretionary applicants)

## Degree Requirements

The following ten graduate courses are required. Courses are offered in the following sequence.

### Fall Term

ALS 601-3 Canadian Law and Legal System  
ALS 602-3 Legal Research and Writing  
ALS 603-3 Legal Philosophy

### Spring Term

ALS 610-3 Contracts  
ALS 611-3 Real Property I  
ALS 620-3 Selected Topics in Applied Legal Studies

### Summer Intersession

ALS 612-3 Real Property II  
ALS 615-3 Personal Planning

### Fall Term

ALS 630-6 Topics in Legal Practice  
ALS 631-3 MA Examination

Fall term courses employ a mixed mode of delivery where students attend campus for two weeks at the term's start, and for one week at the end. Weeks three through 12 are delivered via distance education. Students attend campus for the summer intersession (from early May to mid June). The final capstone course follows the same mixed delivery mode when students complete a final examination (normally toward the end of the fourth term) that shows mastery and critical engagement with the depth and breadth of the program's subject matter.

Those who do not wish notary public accreditation may be permitted to substitute up to two courses with the approval of criminology's director of graduate programs. Only one of these courses may be a directed readings course.

## PhD Program

### Admission Requirements

The minimum admission requirements are stated in "1.3.4 Admission to a Doctoral Program" on page 220. Normally, an applicant should have at least one course in social science research methods and one undergraduate introductory statistics course. Direct admission may be approved for those with an MA in criminology, an MA in a discipline other than criminology, or an MSc and, under exceptional circumstances, with an undergraduate degree or its equivalent with a minimum 3.5 CGPA.

Applicants submit a research interests statement and at least two previous academic work examples.

In exceptional circumstances, those with a BA (or equivalent) may be admitted if University regulations are met, original undergraduate research is demonstrated, and the applicant is recommended for direct entry by at least two criminology faculty who are eligible to teach or supervise in the PhD program. Those who meet the GPA requirement and have demonstrated research ability through field criminal justice experience may also be considered on recommendation of at least two program faculty members. Those so admitted will have their status reviewed by the end of the second term after admission. The graduate program committee determines the candidate's ability to complete the PhD by direct entry. The student will either be confirmed as an approved PhD candidate or directed to seek master's program admission.

Because many disciplines are allied to criminology, the graduate program committee reserves the right to determine equivalent courses already completed in the applicant's master's program. At the time of admission, the graduate program committee may waive up to 15 units of requirements.

An application fee of \$75 (Canadian) is paid online by charge card at time of application submission. The

deadline for receipt of the online application and supporting documents, for entrance commencing in the fall term, is February 1. Applicants will be informed of the outcome as soon as possible thereafter.

**Note:** Although applicants with two prior degrees from the School of Criminology may be accepted into the PhD program, this is not considered a good practice.

### Degree Requirements

PhD candidates must complete a minimum of 33 units consisting of

- at least three research methods courses (nine units)
- theories of crime I (three units)
- proseminar (three units)
- at least 18 units selected from additional curriculum offerings
- achieve satisfactory completion and oral defence of an original PhD thesis

A maximum of nine units may be completed in another department or university with supervisory committee and graduate program committee approval. These courses may be accepted as partially meeting PhD program requirements.

All students write comprehensive/preliminary exams in two curriculum areas: theory and methods. Normally, students are expected to finish courses and comprehensives within two years of program entry.

### Dissertation Procedures

In the term after comprehensive exams are passed, candidates develop a thesis prospectus based on original research defining the proposed investigation and demonstrates the relationship between it and existing scholarship. The thesis proposal is presented to the supervisory committee and, on approval, is circulated to faculty and resident graduate students and presented at a colloquium.

The thesis is defended in oral examination by an examining committee constituted under "1.9.3 Examining Committee for Doctoral Thesis" on page 224 in the *Graduate General Regulations*.

### Satisfactory Performance

The progress of each candidate is assessed at least twice a year (spring and fall). Students who perform unsatisfactorily may not continue, subject to review procedures of unsatisfactory progress described in "1.8.2 Review of Unsatisfactory Progress" on page 223 of the *Graduate General Regulations*.

## Department of Economics

3602 Diamond Building, 778.782.3562/3508 Tel, 778.782.5944 Fax, [www.sfu.ca/economics](http://www.sfu.ca/economics)

#### Chair

N. Schmitt Licence (Lausanne), MA (Car), PhD (Tor)

#### Associate Chair

G.M. Myers BA (Qu), MA, PhD (McM)

#### Graduate Program Chair

C. Lülfesmann MSc, PhD (Bonn)

#### Faculty and Areas of Research

See "Department of Economics" on page 104 for a complete list of faculty.

D.W. Allen – microeconomic theory, law and economics

D. Andolfatto – dynamic general equilibrium theory, macroeconomics, labor markets, monetary theory

B. Antoine – theoretical econometrics, financial econometrics

J. Arifovic – macroeconomics, monetary theory, learning and adaptation in economics

P. Curry – microeconomic theory, law and economics

D. Devoretz – development, immigration, demography economics

G. Dow – microeconomic theory, firm organization, economic prehistory

G. Dunbar – macroeconomics, applied microeconomics

S.T. Easton – international trade, economic history

J. Friesen – labor economics

R. Gençay – time series methods, financial econometrics, computational economics

R.G. Harris – international economics, economic theory

D.S. Jacks – economic history, international trade and finance

R.A. Jones – monetary theory, macroeconomics, finance

A.K. Karaivanov – development, mathematical economics, microeconomic theory

K. Kasa – macroeconomics, international economics

A. Kessler – political economy, contract theory, public economics

B. Krauth – applied macroeconomics, econometrics

P. Lavergne – economic theory, applied microeconomics

C. Lülfesmann – contract theory, industrial organization

F. Martin – macroeconomics, public finance, monetary theory

S. Mongrain – public finance, microeconomic theory, law and economics

D. Monte – game theory, bounded rationality

G.M. Myers – public and urban economics

N.D. Olewiler – natural resources, environmental economics

K. Pendakur – labor economics, public finance, econometrics

C.G. Reed – economic history, applied microeconomics, law and economics, economic prehistory

M. Rekkas – economic policy, political economics, industrial organization

A.J. Robson – game theory, uncertainty, preferences for status, biological evolution of economic preference

N. Schmitt – international trade, industrial organization

R.W. Schwindt – industrial organization, international trade, public policy toward business

L. Visschers – macroeconomics, labor, frictional markets, applied theory

S.D. Woodcock – labor economics, econometric theory

J. Xu – international macroeconomics, monetary economics, macroeconomics

\*joint appointment with business administration, home department is economics

### MA Program

#### Admission Requirements

See "1.3 Admission" on page 219 for University admission requirements. As well, the department requires that the applicant must hold a bachelor's degree with honors in economics or business administration, or must complete additional work to that standard. Normally, the graduate admissions committee will specify the appropriate additional requirements at the time of admission.

#### Degree Requirements

The MA program has four options. Under each, ECON 798 is required in addition to other work, unless a grade acceptable to the graduate program committee has been obtained in an equivalent courses. An undergraduate course can be used with the approval of the graduate program committee.

thesis option – seven courses including core work plus an original thesis

extended essay option – seven courses including core work plus two extended essays

project option – eight courses including core work plus a research project

course option – nine courses including core work plus ECON 997

#### Core Course Work

The core course work will normally consist of

- microeconomics – ECON 802
- macroeconomics – ECON 807 or 808
- econometrics – ECON 835 and either ECON 836 or 837

#### Elective Course Work

The remaining courses beyond those designated as core work will be ECON graduate courses or, with permission of the graduate program chair, courses in graduate business administration and other subjects.

#### Research and Oral Examination

Under the thesis, extended essay or project option, research papers must meet the standards set out in the *Graduate General Regulations* (page 219). An oral examination is required covering the students' written research in particular, and program in general, as outlined in the *Graduate Regulations*.

#### Final Examination

Under the course option, there will be a final examination (ECON 997) on core subjects, which normally will occur during the final examination period of the students' third term in the program.

#### Co-operative Education

This optional program provides work experience that complements MA studies. MA students in good standing with a minimum 3.0 GPA may apply to co-op after satisfactory completion of ECON 802, 807 (or 808), 835 and 836 or equivalent. The program consists of two separate work terms. Arrangements are made through the Faculty of Arts and Social Sciences co-op co-ordinator at least one term in advance (see page 212). To participate, prior approval from the graduate chair in the Department of Economics is required.

### PhD Program

#### Admission Requirements

See "1.3.4 Admission to a Doctoral Program" on page 220. Also required is an MA with graduate work in core areas equivalent to ECON 802, 807, 835 and 836. Any core area deficiency must be filled by completing the appropriate course(s) in addition to the course work normally required. In certain cases, students may be transferred into the PhD program from the MA program after meeting MA core and credit requirements (16 courses beyond the BA honors is required for such a PhD program).

#### Degree Requirements

This program allows specialization in economics, economics and business administration, or economics and a related discipline. Normally, every PhD program will include the following:

1. Successful performance in 11 approved courses beyond the economics MA requirements listed above. Those specializing in economics must include ECON 803, 804, 808, 809, 837 and either 838 or 839; those specializing in economics and business administration must include ECON 803 and 804, or 808 and 809. Those specializing in economics must also complete ECON 900 which does not count towards the 11 courses. Other courses may be drawn

from those normally offered at the graduate level by this or other related departments. Normally, a student must complete at least five courses of regularly scheduled course work within this department; exceptions to this rule must be approved by the student's supervisory committee and the graduate program committee.

2. Successful performance in written comprehensive examinations.

2.1 Students specializing in economics write comprehensive examinations in economic theory and one other field. In addition, students complete a field either by successfully completing two courses approved by the graduate program chair (other than required or readings courses) with at least an A-average, or a comprehensive examination in the field. The economic theory comprehensive exams consist of separate examinations in micro and macroeconomic theory. The microeconomics comprehensive theory examination usually encompasses topics and readings covered by ECON 802, 803, and 804. The macroeconomics comprehensive theory examination usually encompasses topics and readings in ECON 807, 808, and 809. Comprehensive exams in other fields normally encompass topics and readings presented in the main courses in those fields.

2.2 Students specializing in economics and business administration must write a comprehensive economic theory exam covering topics and guideline readings of either microeconomics (ECON 802, 803, and 804), or macroeconomics (ECON 807, 808 and 809). The student will complete three fields, subject to the following: a) at least two field requirements are satisfied by written examinations; b) at least two are drawn from accounting, finance, management science, marketing and organization behavior.

2.3 Arrangements for students specializing in economics and a related discipline, or economics and business administration and a related field will be recommended by the student's supervisory committee and approved by the department's graduate program committee.

2.4 Normally, full time students write micro/macro theory comprehensive exams at the first opportunity after the exam period of their second term.

3. An original and significant thesis completed by the candidate under department faculty supervision.

## Dissertation Procedures

### Thesis proposal seminar

This will be given by each candidate to fulfil the ECON 900 course requirement. ECON 900 will be completed in the summer term following completion of the student's theory comprehensive examinations. Each candidate produces a written paper, makes it available to all interested department members and presents it on a pre-announced date in the departmental seminar. The candidate's supervisory committee should attend and arrange for others interested to also attend. That committee, along with the candidate, should decide on the future course of thesis research paying due regard to the comments that have been received.

### Thesis core and a thesis seminar

These should be given by each candidate after the supervisory committee agrees that the thesis is substantially complete and before it is formally approved for defence. The thesis core should be a paper that describes the major original contributions of the thesis (preferably in a form appropriate for journal submission) and should be available to all interested department members.

## Thesis defence

Procedures for the thesis defence are described in the *Graduate General Regulations* (see "1.11 Publication of Thesis" on page 225).

## Satisfactory Performance

Each candidate's progress is assessed at least once a year in the fall term. Any student who performs unsatisfactorily is subject to the review of unsatisfactory progress described in "1.8.2 Review of Unsatisfactory Progress" on page 223.

## Research on Immigration and Integration in the Metropolis

4653/4655 Diamond Building, 778.782.4575 Tel, 778.782.5336 Fax, [www.riim.metropolis.net/](http://www.riim.metropolis.net/)

RIIM is one of four Canadian research centres studying the impact of Canadian immigrants on local economies, family, educational systems and physical infrastructure of cities. RIIM concentrates only on Vancouver but has links to all other Canadian metropolis sites and the world. This research group, based at Simon Fraser University, the University of Victoria and the University of BC, investigates immigrant impact in Vancouver.

## Department of English

6129 Academic Quadrangle, 778.782.3136 Tel, 778.782.5737 Fax, [www.sfu.ca/english](http://www.sfu.ca/english)

### Chair

C. Gerson BA (S Fraser), MA (Dal), PhD (Br Col), FRSCan

### Graduate Program Chair

C. Lesjak BA (Swarthmore), MA, PhD (Duke)

### Faculty and Areas of Research

See "Department of English" on page 256 for a complete list of faculty.

R. Arab – Shakespeare, early modern English literature, drama and culture, gender and class  
S. Brook – Post-war British literature, British cultural studies, feminist and gender theory, theories of affect, urban theory  
P. Budra – Shakespeare, drama to 1642, Elizabethan and Jacobean poetry and prose, popular culture  
C. Burnham – modernism, theory, visual culture, and popular culture  
D. Chariandy – post-colonial literature and theory, Canadian studies, diasporic theory  
R.M. Coe – rhetorical theory and history, contrastive rhetoric; composition theory and pedagogy; literacy; discourse analysis (including 'public doublespeak' and 'plain language'); genre theory, rhetorical approaches to literary criticism, drama  
D. Coley – late medieval literature and culture, Chaucer, middle English, alliterative poetry, speech act theories  
C. Colligan – 19th century English literature and culture, obscenity, British Imperialism  
S. Collis – American literature, Modernism, contemporary poetry and poetics  
P. Cramer – media studies, discourse analysis, rhetoric, critical theory, argumentation, automatic text analysis  
L. Davis – Romantic literature, Scottish and Irish literature 1700-1850, literature and nationalism, feminist critiques of Romanticism, 18th century folk music and print culture  
J. Derksen – contemporary poetry and poetics, globalization, urbanism, critical methodologies  
P. Dickinson – modern drama and performance studies, film studies, comparative Canadian literatures, queer theory and gender studies

M. Everton – colonial, early American and transatlantic print culture, history of the book, authorship  
J.D. Fleming – Renaissance, hermeneutics, epistemology  
C. Gerson – Canadian literature and literary history, women and literature, print culture in Canada  
M.A. Gillies – 19th and 20th century British literature  
T. Grieve – modernism (poetry and fiction), twentieth century literature, nineteenth century poetry; the essay; history and theory of rhetoric; composition  
A. Higgins – Medieval and Renaissance drama, Shakespeare, Middle English literature  
M. Hussey – Medieval literature and culture including Old English and Latin literary tradition, bilingual aesthetics, intellectual history, the relationship between material and literary artifacts  
C. Kim – Asian North American literature and theory, Canadian literature, diasporic and postcolonial literatures and theory, women's writing and feminist theory, print cultures and history of the book  
C. Lesjak – Victorian literature and culture, feminist and Marxist theory, theory of the novel  
M. Levy – romantic literature, women writers, domesticity and the family, law and literature, literature and the environment  
M. Linley – Victorian poetry and prose; 19th century women poets, literature and visual representation  
S. McCall – contemporary Canadian literature, First Nations studies, post-colonial studies  
D.H. Reder – indigenous literatures in Canada, indigenous literary theories and epistemologies, and autobiography theory  
P.M. St. Pierre – Commonwealth literature, Canadian literature  
E.A. Schellenberg – Restoration, 18th century literature, 18th century women writers, print culture  
J. Smith – 20th century US literature, US southern studies, cultural studies, post-colonial theory  
D. Solomon – 18th century literature, restoration drama and print culture  
T. Werth – Tudor literature and culture, romance, religious polemic  
S. Zwagerman – rhetoric and writing, speech act theories, gender and discourse, American literature

## Admission Requirements

In addition to requirements in the *Graduate General Regulations* (page 219), the department requires evidence of academic writing ability in the form of at least two substantial literary essays which are scholarly in format and approach. The papers may be undergraduate essays previously prepared, or ones specially written for this purpose. Applicants to the master of arts for teachers of English (MATE) are not required to submit a writing sample.

## MA Program

This program develops scholars with a critical and comprehensive awareness of English studies. While offering specialization in one of various areas of strength in the department, the program requires a breadth requirement through course work and thereby grounds students' interests in a wide and flexible understanding of English studies. Students without a strong English background may be required to strengthen their preparation before admission. As well, all MA students complete ENGL 880 and 881, the graduate professional development seminars.

The program may be completed in one of two ways as shown below.

### Option A

This option consists of six courses including ENGL 880, 881 and a pre-twentieth century literature course. In addition, students write a thesis of about 100 pages and defend it in an oral examination.

### Option B

This option consists of eight courses including ENGL 880, 881, a pre-twentieth century literature course, and one other pre-nineteenth century literature course. In addition, students undertake an MA final research paper.

Full-time students typically enrol in two regular courses per term in addition to one of the required professional development seminars. The MA program is completed in three terms. For further departmental requirements, consult the departmental handbook.

The department recognizes the special needs of working people who wish to improve their qualifications. Some graduate courses are regularly offered in the evening.

### Examinations

While the general regulations set the minimum CGPA necessary for continuance at 3.0, the department regards grades below B to be unsatisfactory and expects students to achieve above the minimum. If progress is unsatisfactory, withdrawal under "1.8.2 Review of Unsatisfactory Progress" on page 223 of the *Graduate General Regulations* may be required.

Option A students complete four courses, two professional development seminars, write a thesis of about 100 pages and defend it in an oral examination. Thesis option students submit a thesis proposal and are examined by the supervisory committee no later than one term following course work completion. Students proceed with the thesis only after approval of the supervisory committee and the graduate program committee.

Option B students (including MATE students) choose a paper or project from one of their six courses. The paper or project, which is revised and expanded for publication, is examined by two faculty who, together, assign a grade of pass with distinction/pass/fail. The paper or project is completed and submitted for evaluation no later than the end of the term following course work completion. A student who fails may be permitted a second and final attempt. For further information, see "1.1 Degrees Offered" on page 219.

### Specialization in Print Culture 1700-1900

The MA program also permits interdisciplinary specialization in the politics of print culture (1700-1900), focusing on the changing role of printed texts in an emerging commercial society.

### Master of Arts for Teachers of English (MATE)

This cohort program for English teachers in the secondary and elementary school and collegiate system, offers an accessible two year advanced degree in English studies which recognizes the particular needs of teachers for a review of new critical approaches in the field, and for scheduling adapted to the demands of employment.

The MATE cohort program consists of eight courses and an MA final paper or project. Two of these are required cohort courses, ENGL 831 and 834, which are taught as Shakespeare and twentieth century literature courses; and two are required professional development seminars, ENGL 880 and 881, which are taught as MATE cohort courses, focusing on recent critical approaches to literary study and on advanced research methods, respectively.

For information, see *Examinations* above.

### Interdisciplinary Studies

In addition to the MA programs described here, which accommodate and encourage interdisciplinary study, the University offers degree programs to exceptionally

able applicants whose proposed studies cannot be carried out in any existing program. Students interested in pursuing an MA may wish to submit a proposal for special arrangements through the Office of the Dean of Graduate Studies. See "1.3.4 Admission to a Doctoral Program" on page 220.

### Joint Master's in English and French Literatures

This program allows students who have already been trained in both literatures to continue studies beyond the undergraduate level. See "Joint Master in English and French Literatures" on page 258.

### PhD Program

Applicants will have a well planned project that integrates with the department's areas of expertise. Cross disciplinary proposals and innovative studies are encouraged. Students are expected to contribute at all stages of the program.

The department's major areas include English literature, language, and print culture. Library resources include the contemporary literature collection, the largest single collection of post-war experimental and avant-garde poetry in Canada; the Wordsworth collection, including one of the largest collections of Lake District writings; William Blake drawings, illuminations and engravings in facsimile. The library also has on-line scholarly databases and resources in all major areas of study and subscribes to a wide range of leading academic journals.

The program is normally completed within four years.

### Admission Requirements

Students must have an MA or equivalent with high standing from a recognized university and a solid grounding in English studies. To fill any academic gaps, extra undergraduate or graduate courses may be required. Before accepting a student into the program, the department will consider the proposed research in relation to faculty resources in the field.

To apply, transcripts of all previous post-secondary studies, three academic reference letters, two academic writing samples, and a one to two page doctoral project description are required. See "1.3 Admission" on page 219 for admission requirements.

### Application Deadline

February 1

### Residence Requirement

Six terms

### Program Requirements

The first two years involve course work, field examinations, and a thesis prospectus to provide necessary grounding before the thesis project. In the third year, students engage in dissertation research and writing. Upon admission, the graduate chair is the advisor until a senior supervisor and supervisory committee are confirmed. Each student is matched with a potential senior supervisor, normally upon admission, and the supervisory committee should be formed during the first year and no later than the beginning of the field exams. Student and senior supervisor are encouraged to meet early.

### Language Requirement

PhD students must demonstrate to the supervisory committee an acceptable reading ability in a language other than English. For information and regulations, see "Graduate General Regulations" on page 219.

The program's three stages include course work; field exams and thesis prospectus; thesis oral defence.

### Courses

By the third term's end, the student completes five regular courses, at least one of which must be outside the student's specialization area. ENGL 880/881 is also completed, which is the graduate professional development seminar. The senior supervisor, in consultation with the graduate program chair, advises the student about course choices.

### Field Exams and Thesis Prospectus

The field exam process begins at the start of the third doctoral term, normally in the first summer term, and must be completed by the end of the sixth term. There are two fields to be completed consecutively in the fourth and fifth terms. The thesis prospectus is written in the sixth term.

Field exams are a take-home essay, written within a week and graded pass/fail. In exceptional cases a distinction will be recognized. A field exam can be repeated not later than the following term. A second failure requires a review of the student's progress. Normally, those who fail two field exams must withdraw from the program. Once the field exams are complete, the student begins the thesis prospectus in preparation for writing the dissertation. See department handbook for examples of fields, the field schedule, and the thesis prospectus schedule ([www.sfu.ca/english/Gradwebpage/progdes.html](http://www.sfu.ca/english/Gradwebpage/progdes.html)).

### The Field Committees

The committee for the secondary field, which will be written first, consists of an advisor who is a field specialist and one knowledgeable faculty member. The primary field committee, which will be written second, consists of three faculty members: the primary field advisor (normally the dissertation supervisor) and two faculty members in the field.

### Secondary Field

The secondary field examination paper ensures a comprehensive expertise in an area of study distinct from, but providing a basis of, knowledge that is useful to the student's field of specialization. The department offers fields in three general areas (historical, geographical, and theoretical) and may consider other fields if faculty and library resources are sufficient and it is academically appropriate.

### Primary Field

The primary field exam ensures that students have a broad knowledge and understanding of the literature, historical contexts and critical history of the primary field of English studies that is germane to their dissertation area and in which they will be claiming expertise as university teachers and scholars.

### Thesis Prospectus

The thesis prospectus guides students toward defining a thesis topic and is undertaken normally in the sixth term following the completion of the second field exam. The supervisory committee for the thesis prospectus will be the dissertation committee that was formed for the primary field.

### Thesis

After the completion of the thesis prospectus, the candidate will write a scholarly thesis normally consisting of between 200 and 250 pages (not including bibliography).

From the supervisory committee's appointment, the student and senior supervisor meet at least three times a term through the field exam period, thesis prospectus term, and thesis research/ writing period.

The completed thesis is defended in an oral exam. The (defence) examining committee consists of a chair (normally the graduate program chair), members of the supervisory committee (senior supervisor and at least one other department member), a faculty member external to the department, and an external examiner who is not a member of Simon Fraser University.

# Department of French

2630 Diamond Building, 778.782.4740 Tel,  
778.782.5932 Fax, www.sfu.ca/french

## Chair

R. Canac-Marquis BA, MA (UQAM), PhD (Mass)

## Graduate Program Co-chairs

L. Frappier BA, MA, PhD (Montr)  
C. Guilbault BA, MA (Laval), PhD (Alta)

## Faculty and Areas of Research

See "Department of French" on page 111 for a complete list of faculty.

C. Black – applied linguistics, second language pedagogy

J. Calderón – 20th century and contemporary literature, cultural studies, literary theory

R. Canac-Marquis – transformational syntax, morpho-syntax, formal semantics, anaphora, second language acquisition

R. Davison\* – 18th century French literature, correspondence and pedagogy, women writers, émigré writers

L. Frappier – French Renaissance literature, French humanist tragedy, royal entries, Québécois theatre

M.C. Fauquenoy\* – French linguistics, sociolinguistics, Creole French dialects

C. Guilbault – experimental phonetics, applied linguistics, dialectology, speech perception

G. Merler\* – modern French and Quebec literatures, methods of discourse analysis, Stendhal, individual psychology and literary analysis, poetry

G. Planchenault – second language acquisition, didactics of French, intercultural pragmatics, sociolinguistic competence, French cinema

S. Steele – exile studies, French war writing, Medievalism in the Third Republic (secondary interest in Chrétien de Troyes), literary correspondence

(French/English), poetry in surrealism and its vicinity

C. Vigouroux – sociolinguistics, ethnography, migration, francophonie, language and globalisation, Africa

J. Viswanathan\* – modern French and French Canadian novel, narrative theory, film and fiction

P.M. Wrenn\* – text linguistics, experimental phonetics, Canadian French, phonostylistics, phonology

\*emeritus

The department offers graduate research leading to an MA, with a concentration in either French linguistics or literature. Students interested in French as a second language (FSL) should contact the graduate chair. (The FSL option will interest those contemplating a career in the teaching of French.) Students seeking PhD admission may apply under special arrangements provisions of graduate general regulation 1.3.4.

## Areas of Study

The major areas of study are as follows.

### Linguistics

Linguistic analysis of French (sound system, morphology, syntax, lexicon), varieties of French (social, regional and stylistic variations), French Creoles, French linguistic theories, French applied linguistics, theoretical approaches to the acquisition of French as a second language. A variety of practical applications of linguistic theory may be envisaged: pedagogy, translation, stylistic analysis.

### Literature

Periods and genres: French Medieval literature, travel accounts, 18th century literature, poetry and novel of the 19th century, 20th century fiction, poetry and drama, Québécois literature. Critical approaches: literature and society, women writers, history of literature, cultural studies, discourse analysis,

interdisciplinary approaches to literature, teaching of literature.

## MA Program

### Admission Requirements

Candidates must satisfy the general admission requirements as shown in "1.3.2 Admission to a Graduate Diploma Program" on page 219 and "1.3.8 Conditional Admission" on page 220 of the *Graduate General Regulations*. Program admission requires a sound background in French literature or French linguistics, as well as a good command of both oral and written French. Candidates lacking these must remedy the deficiency before admission is granted through satisfactory completion of one or two terms as a qualifying student (see "1.3.5 Admission Under Special Arrangements" on page 220).

Upon admission, each student will be assigned a temporary supervisor.

The program's degree requirements may be completed 'with thesis,' 'with project' or 'without thesis.' In each case, the student works under a supervisory committee's direction (see "1.6 Supervision" on page 222) that has been appointed by the end of the second term.

Initially, students are admitted to the MA without thesis option. Transfer to the MA with thesis or MA with project option may be permitted after completion of the second term on supervisory committee recommendation, and subject to graduate studies committee approval. Required course work, thesis topic, project topic or area of field examination and other requirements are approved by the supervisory committee and graduate studies committee.

### Degree Requirements

Students may be required to complete additional courses to remedy deficiencies or to ensure suitable thesis preparation or project research. The following are the minimum requirements.

#### MA with Thesis

Students in the MA with thesis option successfully complete 15 units of graduate courses from their chosen concentration, either in linguistics or literature. Within the 15 units, with senior supervisor approval, students may complete up to five units outside the department. In addition, students complete a thesis of about 100 pages that is defended at an oral exam as described in 1.9 and 1.10 of the *Graduate General Regulations*. Students submit a written thesis proposal no later than one term following the completion of course work. Substantive thesis work may proceed only after approval of the thesis proposal by the supervisory committee and the graduate studies committee.

#### MA with Project

This option requires a minimum of 20 graduate units, 15 of which are completed within the department. With senior supervisor approval, up to five units may be from outside the department. Also, students complete a project that contributes to French linguistics, French/ Francophone literature or FSL pedagogy which is submitted for oral examination. The project may have a practical component in a non-traditional format. A written proposal is submitted no later than one term after course work completion. Substantive project work may proceed only after project proposal approval by the supervisory committee and the graduate studies committee.

#### MA without Thesis

Students selecting this option are required to complete a minimum of 30 graduate work units. With the senior supervisor's approval, up to 10 units may be completed by completing courses outside the department. In addition, students must complete a

field examination based on three completed courses. Field examination preparation will be undertaken on the supervisory committee's advice.

### Language Requirement

Students must demonstrate to the graduate program committee an acceptable competence in written and oral French and must show at least a reading knowledge of one language other than English or French that is acceptable to the supervisory committee. This requirement is fulfilled by completing two courses in that language or by passing an exam of translation of a 250 word text into English.

## Graduate Courses

### Core Courses

Course selection must be made in consultation with the student's senior supervisor.

#### Linguistics and Literature

FREN 803-5 Research Methods in French Linguistics and/or French Literature

#### Linguistics

FREN 804-5 Topics in the Structure of French I  
FREN 805-5 Topics in the Structure of French II  
FREN 806-5 Topics in the Acquisition of French  
FREN 810-5 Pragmatics and the Structure of French  
FREN 811-5 Topics in the Varieties of French  
FREN 812-5 Approaches to the Linguistic Analysis of French

FREN 816-5 Sociolinguistic Approaches to French Studies

#### Literature

FREN 820-5 Types of Discourse  
FREN 821-5 Theories and Methods of Literary Analysis  
FREN 822-5 Socio-cultural Approaches to French Literature  
FREN 823-5 Interdisciplinary Approaches to French Literature  
FREN 824-5 Topics in French Canadian Literature  
FREN 825-5 Topics in French Literature  
FREN 826-5 Monographic Studies

## Joint Master in English and French Literatures

Students already trained in both literatures may continue studies beyond the undergraduate level in this joint program. Students enrol in and, if successful, receive a degree from one of two departments known as the home department. The other is designated the associate department.

### Application for Admission

Students may apply to either department or to both, indicating a preference. Both departments must agree on the student's admission or on conditions for admission. A home department will be assigned in consultation with the student and with the agreement of both departments. A minimum of 15 upper division undergraduate units in each discipline is required for admission. The student, after admission and two terms of course work, will have the option of completing an MA either with thesis or without, subject to agreement of both departments.

### Supervision

The home department selects a joint supervisory committee of two faculty from the home department and one from the associate department.

### Home Department Requirements

If English is the home department, students must complete both of  
ENGL 880-4 Pro-seminar I  
ENGL 881-4 Pro-seminar II

See the Department of English about requirements.

## Concentration Requirements

In addition to department requirements, students also complete either the MA with thesis or without thesis.

### MA with Thesis

For this option, students successfully complete another 20 units from Departments of French and English literature courses, including at least one from each department (one course from one department and three from the other, or two from each department). Students also complete a thesis of about 100 pages on a topic acceptable to the supervisory committee, and it is defended at an oral examination as described in "1.9 Preparation for Examinations" on page 224 and "1.10 Examinations" on page 225.

### MA without Thesis

Students successfully complete another 30 units selected from Departments of French and English literature courses, including at least two courses from each department (two from one department and four from the other, or three from each department) and a written field exam based on three completed courses. Field exam preparation is on the advice of the supervisory committee.

## Department of Gerontology

2800 Simon Fraser University Vancouver, 515 West Hastings Street, Vancouver, BC, V6B 5K3,  
778.782.5065 Tel, 778.782.5066 Fax, gero@sfu.ca,  
www.sfu.ca/gerontology/

### Chair

A.V. Wister HBA, MA, PhD (WOnt)

### Graduate Program Chair

H. Chaudhury BA (B'desh Engin), MSC Architecture (Tex), PhD (Wisc)

### Faculty and Areas of Research

See "Department of Gerontology" on page 114 for a complete list of faculty.

H. Chaudhury – design for dementia, place-based reminiscence, long term care and self in dementia  
G.M. Gutman – seniors' housing, long term care, dementia, health promotion/population health and aging, program evaluation  
L. Lovegreen – built environment and aging, coping and stress in late life, health promotion, older adult education  
B. Mitchell\* – families and aging, intergenerational relations, youth transitions, quantitative methods, health promotion and social policy  
N. O'Rourke – geriatric depression, personality and mental health, test construction/validation, caregiving  
A. Sixsmith – technology for independent living, quality of life and health and their determinants, service provision for older people  
A.V. Wister – social demography, healthy lifestyles, environment and aging, program evaluation, design and statistical methods

\*joint appointment with sociology and anthropology

### Advisor

Ms. A. Barrett BA (C'dia), 2800 Simon Fraser University Vancouver, 778.782.5065

A master of arts degree with two concentrations is offered: environment and aging; health and aging. The program prepares students for professional roles with high level current knowledge, and substantial competence in research tasks necessary to undertake those roles. It also provides focused, interdisciplinary training for individuals in occupations offering services to older adults. Students will develop an appreciation of the complex ethical issues that are faced by persons working with older adults.

Each concentration covers specific problems and issues. The environment and aging concentration teaches planning, design, research and evaluation of working, living and recreational environments for older persons including families and community environments. Students will have backgrounds in architecture, interior design, urban and regional planning, social/human ecology, kinesiology, recreation and leisure studies, occupational therapy, physiotherapy, human factors, human geography, sociology or environmental or social psychology.

The health and aging concentration provides knowledge applied to research, evaluation and critical analysis of health care systems and specific health promotion strategies. Students with degrees in psychology, sociology, demography, health sciences, medical geography, social work, nursing, health education, physiotherapy, physical education or kinesiology would be probable candidates.

Students complete a core methods course and electives selected from the two concentrations. The program builds upon the expertise, research activities, clinical experience, and international reputation of the associated Gerontology Research Centre.

## MA Program

### Admission Requirements

Applicants should consult the department's website for application information, or contact the advisor.

Candidates who have not completed the post baccalaureate diploma in gerontology or have a minimum of five upper division courses with substantial aging content may be advised to complete courses from the diploma program prior to applying.

fall admission applications should be completed by January 30 of that year and applications for spring admission by September 30 of the previous year.

The following prerequisites, or their equivalent, are required for each concentration.

### Environment and Aging

GERO 401-3 Environment and Aging

### Health and Aging

one of  
GERO 302-3 Health Promotion and Aging  
GERO 404-3 Health and Illness in Later Life  
GERO 407-3 Nutrition and Aging

### Both or No Concentrations

three of  
GERO 300-3 Introduction to Gerontology\*  
GERO 400-4 Seminar in Applied Gerontology\*  
GERO 409-3 Mental Health and Aging  
GERO 420-4 Sociology of Aging  
KIN 461-3 Physiological Aspects of Aging  
PSYC 357-3 Psychology of Adulthood and Aging

\*recommended

Students also complete at least one undergraduate methods course. Under special circumstances, the five prerequisite course requirement may be waived.

## Curriculum and Description

There are four program components: a core methods course; electives; thesis or project; and internship. Students complete six courses (one core, and five electives chosen from the two concentrations) and complete a thesis or project. Students who complete a thesis in lieu of the project will complete one less elective course. (See *Thesis or Project Option* below).

### Core Methods Course

Completion of one core methods course is required.

GERO 803-4 Analytical Techniques for Gerontological Research

## Elective Courses from Areas of Concentration

Students select remaining courses from the concentration courses, other electives, or from outside the program if approved by the student's senior supervisor, and may build a concentration in environment and aging or health and aging. A concentration is considered to be at least two courses in one of the two areas.

### Environment and Aging

GERO 810-4 Community Based Housing for Older People  
GERO 811-4 Institutional Living Environments  
GERO 822-4 Families, Communities and Health\*\*  
GERO 830-4 Human Factors, Technology and Safety

### Health and Aging

GERO 801-4 Health Policy and Applied Issues in Gerontology  
GERO 802-4 Development and Evaluation of Health Promotion Programs for the Elderly  
GERO 820-4 Principles and Practices of Health Promotion  
GERO 823-4 Mental Health and Illness in Later Life  
GERO 840-4 Special Topics in Gerontology\*\*\*  
GERO 889-4 Directed Studies\*\*\*

### Electives Outside of Concentration

GERO 804-4 Advanced Qualitative Methods in Gerontology  
GERO 805-4 Advanced Statistics for Behavioral Analysis in Gerontology  
GERO 806-4 Interdisciplinary Theories in Gerontology

\*\*may be used for either concentration

\*\*\*may be used for either concentration depending on the topic

## Project or Thesis Option

Students present a written thesis/project proposal to their supervisory committee. Project examples include: program evaluation for older adults; design and implementation of environments or services for elderly persons; and analyses of secondary data. A project will be evaluated by the supervisory committee and a qualified external reader. The project requirement must meet the guidelines set out in the "Graduate General Regulations" on page 219.

Students preparing for advanced graduate training may be permitted to select a thesis option and will complete one less elective course. The thesis provides high quality focused research. Original and innovative research is encouraged to meet this requirement. Committee selection and thesis proposal approval will follow the same steps as the project. The thesis requirement must meet the "Graduate General Regulations" on page 219.

## Internship

Students lacking relevant work experience will supplement their program with an internship by working for an agency or organization in a position of responsibility for a maximum of one term.

## PhD Program

### Admission Requirements

Admission will require a gerontology master's degree or a master's degree from another discipline in which a significant amount of course work and/or thesis/project research deals with aging or the aged. Applicants will be evaluated on an individual basis. Those not meeting these requirements will need to complete preparatory course work that is equivalent to a master's in gerontology or aging studies. It is recommended that applicants have a minimum 3.5 grade point average. In addition, there must be

supervisory capacity in the department to support the candidate's dissertation research.

In addition to program requirements, applicants meet University admission requirements to a doctoral program (see "1.3.4 Admission to a Doctoral Program" on page 220).

### Supervisory Committee

A senior supervisor is assigned to each student upon doctoral program admission. Two additional departmental committee members and one external department member will be added by the end of the first year. At least two supervisory committee members must be department members.

### Degree Requirements

Doctoral students complete five GERO graduate courses but may be required to complete up to seven additional courses if deemed necessary by the admissions committee. Two courses will be related to one of two streams that the student has selected as an area of expertise: environment and aging; or health and aging. Two courses will be methods/statistics courses, and one course will be a required theory course. (See "Gerontology GERO" on page 388 for course descriptions.)

After completion of course work, students will write two comprehensive examinations, and will also write and defend a dissertation.

### Course Requirements

#### Streams

##### *Environment and Aging Stream*

GERO 810-4 Community Based Housing for Older People  
GERO 811-4 Institutional Living Environments  
GERO 822-4 Families, Communities and Health  
GERO 830-4 Human Factors, Technology, and Safety

##### *Health and Aging Stream*

GERO 801-4 Health Policy and Applied Issues in Gerontology  
GERO 820-4 Principles and Practices of Health Promotion  
GERO 822-4 Families, Communities and Health  
GERO 823-4 Mental Health and Illness in Later Life

### Required Methods/Statistics Courses

Student complete any two\* of  
GERO 802-4 Development and Evaluation of Health Promotion Programs for the Elderly  
GERO 803-4 Analytical Techniques for Gerontological Research\*  
GERO 804-4 Advanced Qualitative Methods in Gerontology  
GERO 805-4 Advanced Statistics for Behavioral Analysis in Gerontology

\*or equivalent courses

### Required Theory Course

GERO 806-4 Interdisciplinary Theories in Gerontology

**Note:** Students may substitute up to three courses from other programs (especially the Faculty of Health Sciences) with departmental approval. Students may also complete one directed studies (GERO 899).

### Comprehensive Examinations

After completion of all course work, students write two comprehensive exams based on reading lists developed with their supervisory committee. These will be defended orally.

One comprehensive exam will cover methods and statistics, and the second will cover the substantive literature in the dissertation field. Material covered in the comprehensive exams will be determined by the student's supervisory committee.

A student who fails a comprehensive exam will have one additional chance for re-examination. Students failing either comprehensive exam more than once will not be allowed to continue in the program.

### Dissertation

Students write and successfully defend a dissertation prospectus in accordance with the *Graduate General Regulations* (see "1.9.4 Preparation for Examination of Doctoral Thesis" on page 224 and "1.10.1 Thesis Examination" on page 225).

## Department of History

6022 Academic Quadrangle, 778.782.4467 Tel, 778.782.5837 Fax, [www.sfu.ca/history](http://www.sfu.ca/history)

#### Chair

M. Leier BA, MA (S Fraser), PhD (Nfld)

#### Graduate Program Chair

E. Chenier BA (York, Can), MA, PhD (Qu)

#### Faculty and Areas of Research

See "Department of History" on page 115 for a complete list of faculty.

F. Becker – East Africa, Muslim Africa  
J. Brown – modern Chinese history  
E. Chenier – Canada  
L. Clossey – wider world  
L. Cormack – history of science and technology; early modern England  
J.S. Craig – early modern England  
A.S. Dawson – Latin America  
A. Ede – history of science and technology  
K. Ferguson – 20th century United States  
P. Garfinkel – modern Italy  
A. Geiger – immigration, North American West  
A. Gerolymatos – Greece and Balkans  
M.E. Kelm – Canada/First Nations  
N. Kenny – French Canada, urban space  
W. Keough – Atlantic Canada  
D. Krallis – Byzantine  
T. Kuehn – Middle East  
M. Leier – Canada, labor  
J.I. Little – Canada, French Canada  
D.N. MacLean – Middle East, Islam, India  
J. Matsumura – East Asia  
E. O'Brien – Renaissance  
H. Pabel – early modern Europe  
R. Panchasi – modern France  
N. Roth – modern Germany  
A. Seager – Canada, labor  
P. Sedra – Middle East  
J. Spear – 18th century US, race  
J.O. Stubbs – modern Britain  
J. Taylor – North American, environmental history  
I. Vinkovetsky – Russia

### Areas of Study

The Department of History offers graduate research leading to an MA and PhD. The major study areas are Canada, Europe, colonialism and imperialism, the Middle East, the Americas, and Africa. Only those who wish to specialize in one of the specific fields covered by the list of MA courses in the case of MA applicants, or PhD areas of specialization in the case of PhD applicants, will be considered. The department reserves the right to accept candidates only when a qualified supervisor is available and the University resources (including library facilities) are deemed adequate for the stated research priority.

### Admission Requirements

Admission will be in the fall term only, and should be completed by February 1. Applicants must submit a sample of their written work.

### Seminar Courses

HIST 814 is a compulsory MA seminar offered each fall term. HIST 806 and 810 are also offered as seminars each year. At least two other seminars will normally be offered, the choice depending on the research interests of the majority of the students.

## MA Program

### Conditions of Admission

MA candidates must satisfy the minimum University entrance requirements: at least a 3.0 average or its equivalent. In addition, the department requires a 3.33 (B+) average in history courses completed during the last two undergraduate years. A degree in a discipline related to history may be accepted in some cases.

### Programs of Study

In most circumstances, students will complete course work in 12 months. In the fall term, HIST 814 and one optional course is completed. In the spring term, students complete HIST 815 and two optional courses. Of the three optional courses, at least one must be from area two (regional courses) and one from area three (thematic/comparative courses), and students are expected to enrol in at least two seminars. For a list of area one, two, three and four courses, visit [www.sfu.ca/history/graduate.htm](http://www.sfu.ca/history/graduate.htm)

The prospectus workshop helps students prepare to research and write their theses. Students receive a satisfactory or unsatisfactory grade for this course. At the conclusion of the workshop, students defend their prospectuses to their committees in a formal setting.

During the third term, students research and write their theses.

Upon graduate program admission, students are assigned a provisional supervisor. See "1.6.4 Supervisory Committee" on page 222 for supervisory committee information. Students and supervisors should consult with each other in the first term about the composition of the supervisory committee, which consists of the supervisor and usually one other member of the history department. The supervisory committee should be formalized as soon as possible after the student's entry into the program.

Students with significant financial support from awards or teaching assistantships are expected to enrol in a full course load. Those with no such financial aid may enrol in a lesser course load.

### Degree Requirements

Students complete 25 units including HIST 814 and 826 (five courses), defend their thesis prospectus, and write a thesis of between 15,000 and 21,000 words, including footnotes (excluding bibliography). Shorter or longer theses may be submitted only with the graduate chair's prior approval. If a thesis will exceed the word limit, the graduate chair must give formal approval prior to scheduling the defence.

Students enrolled in HIST 898 (thesis) will participate in the monthly candidate seminars conducted by the graduate chair. Students are required to present portions of their own work at least once per term.

### Language Requirements

Students must demonstrate a reading ability in a language other than English that is acceptable to the supervisory committee. Students proposing to study Canadian history must demonstrate an ability to read French. Ability is determined by a time limited examination consisting of the translation of a passage of history in the particular language. A dictionary is permitted. The Department of French offers courses to help students meet the language requirements.

## PhD Program

### General

Prospective PhD candidates are advised that the degree is granted in recognition of the student's general grasp of the subject matter of a broad area of study; for the ability to think critically; and for the power to analyze and co-ordinate problems and data from allied fields of study.

All doctoral students are expected to complete at least one graduate seminar course for credit in their first year.

A student ordinarily is admitted to the PhD program after completion of an MA or its equivalent. BA applicants applying directly to the PhD program must have at least a 3.5 GPA or its equivalent. Candidates for the MA may, under exceptional circumstances, be admitted to the PhD program without completing the MA requirements if they have 20 units of course work. Admission from the MA program is contingent upon a distinguished level of performance, recommendation of directing faculty, scholarly potential, and available department resources.

### Programs of Study

Upon program admission, each student is assigned a faculty supervisor. See "1.6 Supervision" on page 222 for information on supervisory committees. The supervisory committee and the student determine three fields of study, at least two of which are chosen from the list below. A third field may be chosen within or outside the Department of History with permission of the graduate studies committee.

The student and each field supervisor will agree as soon as possible on a general readings list of approximately 45 books (or equivalent) in each field. Reading list copies must be submitted to the graduate program committee chair by the beginning of the second term. The graduate program committee approves these lists and places them in the student's files. Students are expected to cover the material on these lists, preferably by means of a structured reading and writing program with their supervisors.

The comprehensive examinations, based on reading lists, are offered twice a year in the first half of the fall and spring terms. Written exams are administered in weeks five and six. Oral exams are scheduled in weeks six through seven of the same term. Students who miss the first exams in their fourth term due to extenuating circumstances must complete them the following term. For details about the comprehensive exams, see the department's graduate brochure. All written examinations must be passed before the oral comprehensive exam. A student who fails one of the written examinations, and one only, will have one additional chance for re-examination before sitting the oral exam. A 'fail,' 'pass,' or 'pass with distinction' will be assigned by the examining committee after oral exam completion. Students failing at this stage are not permitted to continue in the program.

### PhD Fields

Canadian social and cultural history  
Canadian political and economic history  
Early modern European history  
European social history  
European cultural history  
European intellectual history  
European international relations since the early 19th century  
gender and history  
rural history  
mediaeval Europe  
France since 1789  
Germany since the 18th century  
Russia since Peter the Great  
the British Isles since 1485

Great Britain as a great power since 1763  
state and society in the nineteenth century Ottoman empire  
state and society in the twentieth century Middle East  
the Middle East in the international system  
the geopolitics of the Indian empire  
Islamic India  
sub-Saharan Africa since 1800  
European settlement in Africa  
United States to 1890  
United States since 1890  
United States cultural history 1830-1890  
colonial Latin America  
Latin America since Independence

### Thesis

Within one term of successful completion of comprehensive exams and formal candidacy admission, students submit a thesis prospectus on a topic selected from the specialization areas listed above. The same procedure is followed for MA candidates but the thesis committee may seek the participation of another who has particular expertise in the proposed thesis topic area. Through the thesis, the student must demonstrate an original contribution to knowledge. When the thesis is complete and the student is ready to offer himself/herself for the degree, a thesis examining committee will be formed, composed of the departmental graduate program committee chair or designate; the student's supervisory committee; a faculty member or a person otherwise suitably qualified who is not a supervisory committee member; and an external examiner who is not a University employee. This committee examines the student on the thesis and in the student's major field of study. See "Graduate General Regulations" on page 219 for further information and regulations.

### Language Requirements

Students must demonstrate a reading ability in one language other than English that is acceptable to the supervisory committee. Students proposing to study Canadian history must demonstrate a reading ability in French, determined by a time limited examination consisting of the translation of a history passage in the particular language. A dictionary will be permitted. The Department of French offers courses to help graduate students meet this requirements.

## MA Program

This full-time 12 month program, leading to a master of arts in international studies, consists of seven courses that are completed over three consecutive terms. Courses will be dependent upon which course stream a student is completing. These are

- stream A – international development
- stream B – complex emergencies

### Admission Requirements

Applicants must have a bachelor's degree with a cumulative grade point average of at least 3.0 from a recognized university, normally in an arts or social sciences discipline. Those admitted with other credentials, or those with an arts degree who, in the judgement of the program director, are without adequate foundation in the social sciences, may be required to make up any deficiency without receiving graduate credit for those courses. Students are normally admitted to the fall term in September.

### Application Requirements

The following application documentation is required.

- A Simon Fraser University graduate application form.
- Official transcripts from all institutions that the student attended, showing all grades. Transcripts must be mailed directly from the granting institution to the School for International Studies.
- Three official confidential letters of reference, mailed directly from referees, at least two of which must be from faculty members. This requirement may be waived for mid-career applicants with significant professional experience, in which case employment referees may be used. Please consult the school when using employment referees.
- A one page letter of intent that explains the reason for pursuing the master of international studies program, and the desired stream of study.
- Students whose first language is not English and whose undergraduate degrees are from institutions where English is not the language of instruction are required to submit English language test scores as follows: IELTS (International English Language Testing System) with a minimum score of 7 on the academic modules; or TOEFL IBT (Test of English as a Foreign Language internet based test) with an overall score of 88 or better with a minimum score of 20 in each of the four components (listening, speaking, writing, reading); or TOEFL PBT (Test of English as a Foreign language paper based test) with a minimum score of 570 including a minimum essay score of 5; or TOEFL CBT (Test of English as a Foreign language computer based test) with a minimum score of 230 including a minimum essay score of 5.

## Program Requirements

MA candidates complete a minimum of 30 units, including at least 24 units of course work (six graduate courses in seminar format) and a project (six units). Courses will be dependent upon which stream a student is completing.

### Stream A International Development

Students who choose this stream complete all of IS 800-4 Problems in International Development Policy and Practice  
IS 801-4 Institutions, Policies and Development  
IS 802-4 Directed Readings A (or POL 844)  
IS 803-4 Economics of International Organizations and Development  
IS 809-4 Selected Topics – Economic and Social Development of Selected Regions\*  
IS 888-6 MA Project  
POL 830-5 Comparative Politics: Methods and Approaches\*

### Stream B Complex Emergencies

Students who choose this stream complete all of IS 800-4 Problems in International Development Policy and Practice  
IS 801-4 Institutions, Policies and Development  
IS 806-4 State Failure and Reconstruction: Comparative Perspectives  
IS 807-4 Complex Emergencies and Humanitarian Intervention  
IS 808-4 Directed Readings B (or POL 842)\*  
IS 888-6 MA Project  
POL 830-5 Comparative Politics: Methods and Approaches (or IS 804)\*

\*students may substitute courses selected from other graduate programs for up to two of the courses, determined by the student's stream; substitute courses must be approved by the program director who will look for coherence and consistency with the overall objectives of the selected stream.

### MA Project

A major project is required for either stream involving either two extended essays (each of not more than 8,000 words) based on core readings or, with the approval of the program director, a project.

It is expected that the project will have some international dimension and may take different forms (e.g. a CD with sound and video, or a web site). The student will also be expected to write a short text (15,000-20,000 words, or six or seven pages of normal type) explaining briefly the question or topic, and the methods that have been employed. If the project is the production of a text alone, a 12,000-15,000 word paper (40-50 pages of normal type) is required explaining the question or theme, its significance, and methodology.

## Latin American Studies Program

5053 Academic Quadrangle, 778.782.3518 Tel, 778.782.5799 Fax, [www.sfu.ca/las](http://www.sfu.ca/las)

### Director

E. Hershsberg BA (Indiana), MA, PhD (Wis)

### Graduate Program Director

E. Hershsberg BA (Indiana), MA, PhD (Wis)

### Faculty and Areas of Research

See "Latin American Studies Program" on page 122 for a complete list of faculty.

E. Hershsberg – democracy and development in Latin America, neoliberalism, state and society in conflict, social policy in the Andes, human rights abuses in the southern cone

A. Hira – industrial, technology and regulatory policies in Latin America and East Asia

G. Otero – states, nations and indigenous movements; sociology of agriculture and food; NAFTA region and Latin America  
H. Wittman – environmental sociology, social movements, food and society, qualitative methods, Brazil and Guatemala

### Associate Members

Y. Atasoy, Department of Sociology and Anthropology  
R.E. Boyer, emeritus professor  
J.A.C. Brohman, Department of Geography  
R.A. Clapp, Department of Geography  
K. Corbett, Faculty of Health Sciences  
A. Dawson, Department of History  
F. de Maio, Department of Sociology and Anthropology  
J. Garcia, emeritus professor  
R. Jamieson, Department of Archaeology  
R.C. Newton, emeritus professor  
S. Pigg, Department of Sociology and Anthropology  
J.M. Sosa, Department of Linguistics  
P. Wagner, emeritus professor  
H. Zaman, Department of Women's Studies

## Graduate Certificate in Latin American Studies

This program may be of interest to those seeking certification of Latin American expertise. For information, and to be admitted, students should contact the Latin American Studies Program director.

This graduate certificate program is exclusively, and only, completed during enrolment in a master's or doctoral program. Therefore, graduate certificate courses may be applied toward a master's or doctoral program. Students are not permitted to complete this graduate certificate program on its own. Courses used to satisfy the requirements of a diploma program cannot also be used to satisfy the requirements of this graduate certificate program.

### Program Requirements

Students complete, with a minimum B grade, both of LAS 815-4 Theories of Latin American Development  
LAS 835-4 Social and Political Change in Latin America

and either

LAS 800-4 Approaches to Research in Latin American Studies

or another graduate research methods course offered through another department

plus one additional Latin America related course

Students are also required to demonstrate Spanish or Portuguese language proficiency by taking a faculty administered exam, or obtaining a B grade in an upper division Spanish or Portuguese language course.

Courses used to fulfil the requirements cannot be graded as satisfactory/unsatisfactory but instead must culminate in a letter grade.

## MA Program

This program offers interdisciplinary study and research leading to a master of arts. The program explores the interrelationships between socioeconomic, political, cultural and historical forces in Latin American development processes. It places emphasis on contemporary Latin America and the region's evolving engagement with the international system, while recognizing the importance of understanding colonialism and nation-state origins. Although most will focus on the contemporary problems of Latin American development, the program welcomes students whose research interests encompass earlier historical periods.

## Admission Requirements

Admission is conducted annually. Applicants must satisfy the Latin American studies graduate program committee that they are well prepared academically to undertake Latin American studies graduate work. See "1.3 Admission" on page 219 for additional University requirements. As well as this, the program requires

- a sample of the candidate's scholarly work, preferably with a Latin American focus (i.e. an undergraduate paper previously submitted as part of a course requirement)
- a short statement of purpose detailing interests and goals in Latin American studies
- proof of reading and speaking competence in Spanish or Portuguese, equivalent to the successful completion of three college level courses (i.e., SPAN 102, 103, 201). At the discretion of the Latin American studies graduate program committee, proof of competence in another language of Latin America and the Caribbean may be accepted in exceptional circumstances.
- If applicable, a resume of previous relevant course work and/or employment will be considered. Background may include specialized training, exposure to interdisciplinary studies of Latin America, and/or first hand field experience.

MA program acceptance is conditional on the availability of a senior supervisor selected only from Latin American studies and/or associated faculty.

## Degree Requirements

Student must complete these minimum requirements.

- Six courses including LAS 800, 815 and 835. The other three courses can include LAS 851, a directed readings course that may be completed from courses designated as having Latin American studies content offered by other departments or universities. Credit for the latter courses is subject to supervisory committee approval. Students with deficiencies may have to complete more courses.
- Students are expected to secure approval of their thesis proposal from their senior supervisor before embarking on field research.
- Students complete a thesis, giving evidence of independent research and critical abilities, that is judged by the examining committee at an oral defence. The thesis may be in English or Spanish.

## Other Graduate Latin American Content Courses

The following may be acceptable for inclusion in the MA program. Permission may be required from the departments in which these courses are offered and some courses may require prerequisites.

GEOG 666-4 Geography, Development Theory and Latin America

HIST 845-5 Themes in Latin American History

In addition, more broadly listed courses may be acceptable if focused on Latin America, subject to the Latin American studies graduate program committee designation. Some appropriate courses follow.

CMNS 845-5 Communication and Development  
ECON 855-4 Theories of Economic Development  
GEOG 622-4 Theories and Practices of Development  
POL 839-5 Comparative Development  
SA 850-5 Advanced Sociological Theory  
SA 870-5 Advanced Anthropological Theory

## Special Arrangements

Students seeking admission to a Latin American studies doctoral program may apply under the special arrangements provisions of the *Graduate General Regulations* section. See "1.3.4 Admission to a Doctoral Program" on page 220.

# Liberal Studies Program

## Advisor

Ms. P. Graham BA, MA (S Fraser), 2403 Simon Fraser University Vancouver, 778.782.5152 Tel, [koczars@sfu.ca](mailto:koczars@sfu.ca)

This program, which leads to a master of arts, liberal studies, is for adults returning to part-time study. The program, which is affiliated with the Department of Humanities, is offered at Simon Fraser University Vancouver during evening and weekend hours.

In the best tradition of liberal education, the program addresses some of the great works of our intellectual and artistic heritage, studies the perennial concerns that have shaped our culture, and explores contemporary perspectives on traditional ideas and values. The interdisciplinary seminars offer wide reading, careful reflection, and intense discussion. They are taught by faculty who are chosen for their expertise and teaching excellence, and for their interest in interdisciplinary studies.

## Admission Requirements

Applicants must satisfy the liberal studies graduate program committee of academic suitability. In addition to the normal graduate admission requirements, applicants must demonstrate readiness through reference letters, written work samples, and normally an interview. Exceptionally, the graduate program committee may recommend admission to those who do not meet normal requirements but who, by reason of prior experience, strong credentials and demonstrated competence, are particularly suited.

## Degree Requirements

Students complete six seminar courses and choose one of the three options listed below.

- submit two extended essays for oral examination
- submit one project for oral examination
- complete two additional courses and write a field examination based on material covered in three completed courses.

Two of the six required core courses (LS 800 and 801) are normally completed in the first two terms. The remaining courses may be selected from those offered in the program. Students choosing the third option will complete eight courses.

Students may enrol in one or two courses per term. Exceptionally, and by agreement of the graduate

program committee and the department involved, a student may complete two graduate courses in other departments toward this degree.

Extended essays, developed from course work papers and may make significant use of non-written media, will also be developed from course work and is examined as specified in *Graduate General Regulations* "1.10.1 Thesis Examination" on page 225. One of the two additional courses (see above) must be LS 898 and the other may be any LS course other than LS 998 or 999. Field examination preparation is on the supervisory committee's advice.

The program emphasizes a community of inquiry and discussion over independent research and entails several special expectations within the graduate study general regulations. Newly admitted students must attend an introductory short course prior to the beginning of the first core course in the fall term.

Supervisory committees are arranged by the graduate program committee chair. With the dean of graduate studies' approval, the supervisory and exam process for the extended essays or project may be modified to emphasize collegial exchange.

Students should expect to participate in out-of-class activities, such as pre-class dinners, that encourage interchange and enhance intellectual community.

Because the program is designed for individuals having other obligations, and who may for that reason require greater or lesser amounts of time to complete the program, it has been approved for part-time study.

## Courses

LS courses are intensive seminars. Core courses LS 800 and 801 develop a common readings base. The other six seminar courses may vary in approach and content each time they are offered, and will address a central tension in our intellectual lives, trace some of its sources, and consider its impact on our experience of the present. All courses are cross-disciplinary and may draw on faculty from across the University.

# Department of Linguistics

9203 Robert C. Brown Hall, 778.782.4725 Tel, 778.782.5659 Fax, [www.ling.ca/linguistics](http://www.ling.ca/linguistics)

## Chair

T.A. Perry BA (Wabash), MA, PhD (Indiana)

## Graduate Program Chair

N. Hedberg BA, PhD (Minn)

## Faculty and Areas of Research

See "Department of Linguistics" on page 123 for a complete list of faculty.

J. Alderete – phonology, morphology, and their interaction, computational learning algorithms, optimality theory and Athapaskan linguistics  
E.J. Fee – first language acquisition, atypical language acquisition, clinical phonetics  
D.B. Gerdts – syntax  
C-H. Han – syntax, semantics, computational linguistics  
N. Hedberg – syntax, semantics, pragmatics, cognitive science  
T. Heift – computer assisted language learning, applied linguistics, and computational linguistics  
S.K. Hilgendorf – sociolinguistics, applied linguistics, foreign language pedagogy, second language acquisition  
P. McFetridge – computational linguistics  
Z. McRobbie – experimental phonetics, phonology, Finno-Ugric linguistics, sociolinguistics  
J.D. Mellow – second language acquisition and teaching, First Nations languages

M. Munro – applied linguistics, experimental phonetics, second language acquisition  
P. Pappas – modern Greek, medieval Greek, language variation and change, contact linguistics, Indo-European linguistics, Balkan linguistics  
F.J. Pelletier\* – formal semantics of natural language, philosophy of language and logic, computational semantics  
T.A. Perry – phonology, German linguistics, linguistic theory  
J.M. Sosa – Hispanic linguistics, dialectology, language methodology, Caribbean area sociolinguistics  
M. Taboada – discourse, pragmatics, computational linguistics, systemic functional linguistics  
Y. Wang – experimental phonetics, neurolinguistics, psycholinguistics, second language acquisition, cognitive science

## Adjunct Faculty

F.J. Newmeyer – syntactic theory, structure of English, history of linguistics  
K. Shahin – phonetics and phonology, phonological acquisition, First Nations languages, Arabic

## Associate Members

For areas of research, refer to the department listed.

M. Boelscher Ignace, First Nations Studies Program, Department of Sociology and Anthropology  
F. Popowich, School of Computing Science

\*emeritus

## Degrees Offered

The program offers graduate work leading to the degrees of MA and PhD in linguistics.

Applicants are considered by how their proposed programs of study coincide with the research and teaching interests of the department. Where a student's interests span more than one field of study, a program of course work and supervised research in more than one field may be arranged. Individual programs may also be set up in co-operation with other departments under the special arrangements provisions of "1.3.4 Admission to a Doctoral Program" on page 220 of the *Graduate General Regulations*.

## Time Limit

Although University regulations allow a five year time limit for MA degree completion and eight years for the PhD, (including the MA degree work), an MA student is normally expected to complete the degree in two years and a PhD student in three years after the MA. See "Graduate General Regulations" on page 219.

## MA Program

### Admission Requirements

Students must demonstrate adequate linguistics preparation. Those with little or no academic linguistics preparation may not obtain clear program admission or admission as a qualifying student. See "1.3.5 Admission Under Special Arrangements" on page 220 and "1.3.4 Admission to a Doctoral Program" on page 220 in the *Graduate General Regulations* for general admission requirements.

### Areas of Specialization

Linguistic theory, phonetics, phonology, morphology, syntax, semantics, discourse-pragmatics, computational linguistics, Amerindian linguistics, historical and comparative linguistics, linguistics history, sociolinguistics, second language learning.

### Credit and Research Requirements

#### Course Work

Students complete at least 20 units of graduate course work in Linguistics, including LING 800, 801 and 851.

## Thesis

All students must complete an MA thesis based on original research, and must comply with University regulations on completing and defending the thesis.

## Language Requirements

Candidates must show a high competence in at least one language other than English.

## PhD Program

### Admission Requirements

Students must demonstrate a substantial background in linguistics and research methodology. Direct PhD program admission without an MA in linguistics, or equivalent is normally not possible. For general admission requirements, see “1.3 Admission” on page 219 of the *Graduate General Regulations*.

### Areas of Specialization

Linguistic theory, phonetics, phonology, morphology, syntax, semantics, discourse-pragmatics, computational linguistics, Amerindian linguistics, historical and comparative linguistics, history of linguistics, sociolinguistics, second language learning.

### Credit and Research Requirements

These requirements are beyond those of the MA requirements. Students may need to complete specified courses from the MA program requirements as a condition of admission to the PhD program.

### Course Work

Students complete at least 16 linguistics units (four courses), approved by the supervisory committee. Only one course may be a directed research course.

### Thesis Proposal

Candidates submit a written thesis proposal to the supervisory committee which defines the intended original research and the relationship between it and existing scholarship. After submission, the student presents the proposal at a departmental colloquium no later than the end of the ninth residence term. The written proposal must be approved by the supervisory committee prior to the start of substantive research.

### PhD Thesis

The thesis is completed according to regulations.

### Language Requirements

Candidates must show high competence in two languages other than English, with some knowledge of the structure of at least one non-Indo-European language. The supervisory committee determines how to demonstrate this competence.

## Department of Philosophy

4604 Diamond Building, 778.782.3343 Tel, 778.782.4443 Fax, [www.sfu.ca/philosophy](http://www.sfu.ca/philosophy)

### Chair

L. Shapiro BA (Wesleyan), PhD (Pitts)

### Graduate Program Chair

M. Hahn BA (S Fraser), MA (Br Col), PhD (Calif)

### Faculty and Areas of Research

See “Department of Philosophy” on page 127 for a complete list of faculty.

K. Akins – philosophy of mind, philosophy of perception, philosophy of the cognitive sciences  
S. Black – social and political philosophy, ethics, history of 17th century philosophy  
M. Hahn – philosophy of mind, philosophy of language, history of early analytic and continental philosophy

P.P. Hanson – epistemology, philosophy of language, philosophy of science, philosophy of mathematics, philosophy of mind

P.T. Horban – philosophy of religion

R.E. Jennings – logic, philosophy of language, philosophy of mind

J.S. McIntosh – philosophy of mind, philosophy of science, metaphysics

M. McPherran – ancient greek philosophy, history of philosophy, philosophy of religion, ethics/history of ethics

L. Shapiro – history of modern philosophy, feminism, philosophy of mind, epistemology, philosophy of personal identity

E. Tiffany – ethical theory, philosophical psychology, philosophy of mind and language

D. Zimmerman – ethics, social and political philosophy, philosophy of mind

### Application Procedures

See [www.sfu.ca/philosophy](http://www.sfu.ca/philosophy), or visit the department.

### Graduate Course Disciplines

The department's graduate courses are divided into the following areas.

#### *Metaphysics and Epistemology*

PHIL 802, 803, 804, 805, 806

#### *Logic and Formal Studies*

PHIL 812, 813, 814, 815

#### *Value Theory*

PHIL 822, 823, 824, 825, 826

#### *History*

PHIL 852, 853, 854, 855

#### *Directed Studies*

PHIL 861, 862, 863, 864, 865

#### *Degree Completion*

PHIL 898-6 MA Thesis

PHIL 899-6 Non-Thesis Project Completion

PHIL 998-6 PhD Thesis

PHIL 880 is the pro-seminar completed once only by every student in the first year of graduate work.

In addition to Simon Fraser University courses, students may also satisfy requirements by completing courses at the University of British Columbia, after consultation with their supervisor.

## MA Program

### Admission Requirements

See “1.3.3 Admission to a Master's Program” on page 219 for university admission requirements. In addition, the applicant must have either a 3.33 cumulative GPA or a 3.5 GPA in third and fourth year philosophy courses. Honors degrees, where available, are preferred. The department pays close attention to letters of reference and writing samples. A student whose undergraduate work does not satisfy these conditions may be required to complete additional undergraduate courses, or to enrol as a qualifying student before consideration for admission.

### Degree Requirements

These requirements apply to all MA candidates.

- completion of six courses (excluding PHIL 898 and 899), one of which may be a 300 or 400 division undergraduate course with an A- grade or better, and graduate studies committee permission. One course must be PHIL 880 Pro-seminar, which must be completed in the first graduate study year.
- demonstrated competence in such foreign languages as the graduate studies committee requires for the proposed research.
- demonstrated competence in formal logic at the level of PHIL 210, or higher when relevant the student's research.

There are three ways to complete a philosophy master's degree. The following outlines these options.

### Non-Thesis Option

This is the recommended degree program option for most students who plan to apply for admission to a philosophy PhD program after completing an MA.

The program broadens and deepens philosophical education and allows the student to develop the necessary materials for a successful PhD program application. This non-thesis option has the following additional requirements.

- completion of at least one course in each philosophy area: value theory; metaphysics and epistemology; history of philosophy. Taken together with upper division undergraduate courses completed previously or in addition to the MA requirement, three courses in each area are required.
- completion of seven rather than six courses (excluding PHIL 899)
- a cumulative grade point average of at least 3.5 is required at graduation.
- PHIL 899, completed under the senior supervisor's direction. A paper, normally from a previously completed graduate course, is revised to a standard suitable in form and content for submission to a professional journal. The resulting professional paper normally shall not exceed 30 pages.
- in the final exam, the student presents the professional paper in a public forum directed by the supervisory committee and at least one other faculty member in the field. After the public presentation and discussion, the expanded committee evaluates the paper and the student's performance.

### Specialized Thesis Option

This option is intended for those who have a particular project and supervisor in mind when they enter the program, and especially those with interdisciplinary interests. It has the following specific requirements.

- the student normally enters the program with a well-defined project and a permanent (as opposed to interim) senior supervisor.
- the project and course of study is approved by the graduate studies committee.
- up to three of the required courses may be from outside the Department of Philosophy.
- a thesis, normally no more than 100 pages in length, giving evidence of independent critical ability is submitted and successfully defended.
- the specialization is noted on the student's final transcript under the heading ‘Committee Decisions.’

### Classic Thesis Option

This option has the following specific requirements.

- completion at least one course in each area of philosophy: value theory, metaphysics and epistemology; history of philosophy.
- a thesis, normally not more than 100 pages in length, giving evidence of independent critical ability is submitted and successfully defended.

## PhD Program

### Admission Requirements

See “1.3.4 Admission to a Doctoral Program” on page 220 for admission requirements. In addition, the applicant is expected to have either a 3.67 cumulative GPA in third year and subsequent philosophy courses. Honors degrees, where available, are preferred. The department pays close attention to both letters of reference and writing samples. If previous work does not satisfy the above conditions, additional undergraduate courses may be required to enter the MA program, or to enrol as a qualifying student before admission to the MA or PhD program.

## Degree Requirements

### Course Requirements

- completion of 11 philosophy courses: one must be the Pro-seminar, PHIL 880, completed in the first graduate year; two courses may be a 300 or 400 level undergraduate course with graduate studies committee permission, completed with a grade of A- or higher. The remainder must be graduate courses.
- demonstrated competence in such foreign languages as the departmental graduate committee requires for the proposed research.
- demonstrated competence in formal logic up to standard metatheory for first order logic, or higher when relevant to the proposed research.

### Distribution Requirements

The candidate must complete at least two courses in each of the following philosophy areas: value theory; metaphysics and epistemology; history of philosophy.

### Credit for Prior Courses

Up to four graduate courses completed here or at another institution prior to enrolling in the PhD program may, with the approval of the graduate studies committee, count toward course and distribution requirements.

### Area Examinations

Competency exams are required in three of the following four fields: metaphysics and epistemology, value theory, logic/formal studies, and history of philosophy. Each examination is based on a reading list whose mastery shall not take more than one term.

### Dissertation Prospectus

The final step before advancement to candidacy (or ABD status) is the dissertation prospectus, consisting of a critical literature survey, an extended abstract, and an outline of the proposed dissertation. After the supervisory committee approves the prospectus, the candidate presents and defends the proposed plan of study at an open departmental colloquium.

### Dissertation

PhD students write and defend a dissertation embodying original philosophical research.

## Department of Political Science

6072 Academic Quadrangle, 778.782.5487 Tel,  
778.782.5364 Fax, [www.sfu.ca/politics/graduate/index.html](http://www.sfu.ca/politics/graduate/index.html), [polgrad@sfu.ca](mailto:polgrad@sfu.ca)

### Chair

(to be announced)

### Graduate Program Chair

(to be announced)

### Faculty and Areas of Research

See "Department of Political Science" on page 128 for a complete list of faculty.

A.J. Ayers – global political economy, comparative development

J. Busumtvi-Sam – international organization and law, conflict management, political economy

M. Griffen Cohen – public policy, women's studies, economics

K. Chenard – public policy, political economics, quantitative methods

L. Dobuzinkis – public policy/administration, political philosophy and political economy (rational choice)

G. Fuji Johnson – political philosophy, democratic theory, public policy

J.F. Godbout – American political institutions, elections, political behavior

A. Heard – Canadian judicial and constitutional issues, comparative human rights

E. Hershberg – comparative politics of Latin America and politics of development, social sector reforms in the Andean region, conflicts over accountability for

human rights abuses under military regimes in the Latin America's Southern Cone

A. Hira – international political economy, Latin American studies

M. Howlett – public administration and policy, Canadian government and politics

T. Kawasaki – Japanese politics and foreign policy, international relations theory, and international relations in the Asia-Pacific region

D. Laycock – political philosophy and public administration/policy, Canadian government

S.J. MacLean – comparative development; political economy; African political economy

S. McBride – political economy, Canadian politics, globalization

A. Moens – international relations, comparative politics, US politics

A. Perl – urban studies, public policy

M. Pickup – quantitative methods, comparative and Canadian politics, political behavior

D.A. Ross – international security and conflict studies, Canadian foreign and defence policies

P.J. Smith – public policy/administration, Canadian and comparative local government, Canadian government and politics, federalism

P.V. Warwick – research methods, comparative government, Western Europe

S. Weldon – institutional and social context of political attitudes and behavior

### Fields of Study

The major fields of study are

Canadian government and politics  
comparative government and politics  
international relations

Within these three major fields of study there are three distinct thematic emphases: public policy, political economy and governance. However, the department may offer advanced study in other political science fields, subject to the availability of faculty research expertise.

### Admission Requirements

For general requirements see "1.3 Admission" on page 219. In addition, the department requires written statements of the student's current interests and proposed areas of research. Applications for graduate work will be considered with reference to the manner in which the proposed area of the candidate's research coincides with faculty teaching and research interests. See the list of faculty for general research interests. Should additional course work be deemed necessary, the graduate studies committee will indicate the same as a prerequisite.

A written statement of current research interests, three reference letters from qualified referees, and a sample of written work are also required.

### MA Program

The program may be completed through an essay or project option, a thesis option, or a field exam option. Students are admitted to the essay or project option and require approval of the graduate program chair to transfer to another stream. Except in extenuating circumstances, students may only transfer once.

In accordance with *Graduate General Regulation 1.6.4*, each student will be assigned a supervisory committee.

The essay or project option requires completion of either extended essays in two department fields of study or one research project. Students in the essay or project option complete five courses: POL 801 or 802 plus four additional courses from at least two of the department's three fields of study. A research project, to a maximum of 12,500 words (plus bibliography), must have substantial original content.

Each extended essay will elaborate upon course work research and is not to exceed 12,500 words (plus bibliography). Extended essays and research projects are defended in an oral defence.

To be admitted to the thesis stream, students must submit to the thesis supervisory committee a thesis proposal outlining a brief topic summary, its relevance, the methodology to be followed, a chapter-by-chapter outline, thesis completion timetable and a bibliography. The proposal must be approved by the thesis supervisory committee.

Students in the thesis stream complete four courses: POL 801 or 802 plus three additional courses from at least two of the three fields of study offered by the department. Students also must write a thesis, normally 18,750 to 25,000 words in length (plus bibliography) and defend it in an oral defence.

For field exam stream admission, students must submit, first to the supervisory committee and then to the appropriate department field committee, a field exam proposal outlining major and minor fields of study and a timetable for field exam completion. The field exam proposal is approved by the supervisory committee. To fulfill the requirements, students complete POL 801 or 802 plus five additional courses from at least two of the three fields of study. Students also pass two written field exams: one in their major and one in their minor field of study. The supervisory committee serves as the nucleus of the field examination committee. With the student's consultation, the supervisory committee will be expanded to include additional examiners if necessary. Students who fail one field examination, and one only, may retake the failed field examination.

## PhD Program

The department offers specialized research resources in Canadian government and politics, comparative politics, and international relations with a thematic focus on issues of political economy, public policy and governance.

### Admission Requirements

In addition to the minimum admission requirements ("1.3.3 Admission to a Master's Program" on page 219 of the *Graduate General Regulations*), a completed political science MA is required, normally with a minimum 3.67 GPA. How well the applicant's proposed research coincides with the department's focus on political economy, public policy and governance is an important consideration. Background deficiencies must be met by completing appropriate courses in addition to normal PhD work.

Admission applications are reviewed once a year by the department graduate studies committee. The program starts in September.

### Supervisory Committee

In accordance with *Graduate General Regulation 1.6.4*, upon program admission, the departmental graduate studies committee assigns a senior supervisor.

### Program Requirements

At least five graduate courses beyond the MA requirements plus a second language requirement, two comprehensive exams and a thesis are required.

### Course Work

Students must successfully complete a minimum of six graduate courses. All courses are approved by the supervisory committee and reflect areas of specialization within the fields of political economy, public policy and governance as identified in the student's letter of intent. Students complete POL 801 or 802 or equivalent.

## Language Requirement

Students must demonstrate a reading ability in a language other than English that is acceptable to the supervisory committee. Those studying subjects related to Canadian politics must demonstrate an ability to read French, determined by successful completion of a time limited exam consisting of a dictionary aided translation of a political science literature passage written in the language selected.

## Comprehensive Examinations

Prior to thesis research, students must successfully pass two comprehensive exams that are administered by the Department of Political Science.

## Thesis

Candidates successfully completing both comprehensive exams will complete POL 890 which culminates with the presentation as a seminar to the department outlining his/her draft research proposal.

After the seminar, and in consultation with the supervisory committee, the candidate prepares a final proposal for graduate studies committee approval prior to being forwarded to the graduate studies committee. The research proposal will state the thesis title, topic, general intent, methodology and bibliography and will be accompanied by a detailed research plan and completion timetable of each thesis chapter. The proposal should not exceed 2000 words in length, excluding bibliographic references.

The thesis should not be more than 300 pages and must represent an original contribution to the development of the discipline. The completed thesis must be successfully defended at an oral defence established in accordance with the *Graduate General Regulations*. See “1.9 Preparation for Examinations” on page 224) and “1.10 Examinations” on page 225).

## Performance Evaluation

In accordance with the *Graduate General Regulations* (see “1.8 Progress, Withdrawal and Leave” on page 223), the student's progress is reviewed periodically by the graduate studies committee. At least once a year, the supervisory committee submits a written report on the student's progress to the graduate studies committee to aid its deliberations. Students judged to have maintained unsatisfactory progress may be asked to withdraw.

## Time Limits

Although *Graduate General Regulation* 1.12 (see “1.12 Maximum Time for Completion of the Requirements for the Degree” on page 225) establishes an eight year time limit for PhD completion, the department expects the PhD program will be completed within four to five years.

# Department of Psychology

5246 Robert C. Brown Hall, 778.782.3354 Tel, 778.782.3427 Fax, www.psyc.sfu.ca

Chair

(to be announced)

Graduate Program Chair

R.D. Wright BA (Br Col), MA, PhD (WOnt)

Faculty and Areas of Research

See “Department of Psychology” on page 131 for a complete list of faculty.

K. Bartholomew – adult attachment, abuse in intimate relationships, male same-sex relationships

M. Blair – concept acquisition, perceptual learning, attention, computational modeling, expertise, cognitive science

J. Carpendale – social cognitive development, moral development and cognitive development

A.L. Chapman – borderline personality disorder (BPD), emotion regulation, impulsive and self-damaging behavior, mindfulness and acceptance, behavioral theory and theory

R.J. Cobb – role of social support and attachment in the development of marriage, prevention of marital distress and dissolution, the effects of the marital context on child development, dating relationships

D. Connolly – psychology and law, children and the law, children's autobiographical memory, eyewitness memory

D.N. Cox – health psychology, sport psychology, forensic psychology, cognitive behavior therapy

K.S. Douglas – violence, risk assessment and management, mental disorder and violence, forensic assessment, law and psychology

R.T. Fouladi – multivariate statistics, statistical

modelling, measurement, health psychology

S.D. Hart – psychology and law, psychopathy, mentally disordered offenders, violence, wife assault, psychological assessment, personality disorder

A. Herdman – cognitive neuroscience, child

development, magnetoencephalography,

electroencephalography, eye tracking, literacy,

language, attention, multisensory processing,

memory

G. Iarocci – developmental psychopathology, autism,

development of visual attention and perception, risk

and protective factors and cultural identity in the

development of first nations children

W.R. Krane – multivariate statistics, psychological

scaling, psychometric theory

R.G. Ley – forensic psychology (criminal and civil),

trauma and PTSD adolescent psychopathology and

delinquency, psychodynamic psychotherapy

M. Liotti – neuroscience of emotion in health and

disease, normal and abnormal development of

executive control functions, brain functional

reorganization in neuropsychiatric disorders

M.D. Maraun – psychometrics and philosophy of

science

J. Martin – theoretical and philosophical psychology,

history of psychology, social developmental

psychology

J.J. McDonald – cognitive neuroscience, human

electrophysiology, event-related potentials, attention,

multisensory perception, error processing, executive

functioning

C.G. McFarland – social cognition, autobiographical

memory, mood and social judgment, social and

temporal comparison processes

R. Mistlberger – neurobiology of circadian rhythms

and sleep; shiftwork adaptation

M.M. Moretti – self, attachment and psychopathology;

developmental psychopathology particularly conduct

disorder, aggression and violence in girls; systemic

intervention; program development and evaluation

T.P. Racine – joint attention, early communication,

social cognitive development

J.D. Read – memory in forensic contexts, applied

cognition, recovered memory debate and memory

impairments, autobiographical memory and

eyewitness testimony

U. Ribary – cognitive neuroscience brain imaging,

non-invasive structural and functional brain imaging to

study sensory-motor and cognitive processing in

children and adults, analysis of brain's network

R.M. Roesch – psychology and law, including forensic

assessment, jail mental health, competency to stand

trial, juvenile delinquency

M.T. Schmitt – collective identity, responses to social

inequality, political attitudes and ideology

K.L. Slaney – history of psychology, philosophy of

science, introductory and advanced statistics,

measurement

T.M. Spalek – visual attention; cognition; memory;

word recognition; controlled vs. automatic processing

A.E. Thornton – adult clinical neuropsychology, neurocognitive models of memory and executive functions, encoding and retrieval processes in cognitively impaired patients

W.L. Thornton – positive and negative modifiers of cognitive aging, everyday problem-solving and decision-making, executive function, clinical neuropsychology

J.L. Viljoen – adolescent offenders, youth violence, risk assessment and management, legal rights and competencies, forensic psychology

N.V. Watson – sexual differentiation of the nervous system, hormones and behaviour, neuroplasticity, psychopharmacology, sex differences in humans and non-human animals

D.J. Weeks – attention, perceptual-motor behavior, stimulus-response translation, cerebral specialization in Down syndrome, human-machine interaction

R.D. Wright – visual attention; cognitive neuroscience

S.C. Wright – Intergroup relations/social identity:

responses to discrimination and collective action;

prejudice and prejudice reduction; minority language

education.

A. Young – child psychopathology, anxiety, learning

disabilities

S.L. Zaitsoff – eating disorders, peer relationships

and psychopathology

## Associate Members

For areas of research, refer to the department listed.

D. Goodman, Department of Biomedical Physiology

and Kinesiology

A. Horvath, Faculty of Education

N. O'Rourke, Department of Gerontology

F.J. Pelletier, Department of Philosophy

J. Sugarman, Faculty of Education

C. Waddell, Faculty of Health Sciences

H. Weinberg, Office of Research Ethics

## Advisor

Ms. A. Turner, 778.782.4367, anita\_turner@sfu.ca

## Overview of Graduate Training

The department offers graduate programs culminating in MA and PhD degrees. The department is organized around training and research in clinical psychology, cognitive and biological psychology, developmental psychology, law and forensic psychology, social psychology, and psychological theory and methods. Graduate training in all areas is research intensive. In addition to training in general clinical psychology, the Clinical Program offers specializations in clinical child psychology, clinical forensic psychology, and clinical neuropsychology.

## Application and Admission Requirements

All applicants must complete an online application form that is available on the dean of graduate studies website (<http://www.sfu.ca/gradstudents/applicants>). Refer to the department's website for yearly deadlines and additional requirements (<http://www.psyc.sfu.ca/grad>). Applicants must submit all supporting documents in one complete package (two copies of official transcripts of all post-secondary course work, three academic referee forms with supporting letters, Graduate Record Examinations [GREs], a CV, a check list, and if applicable, TOEFL results). GRE and TOEFL scores can be submitted separately but must be received by the departmental deadline. Incomplete application packages will not be considered. The online application is received by the department only after the application fee is processed.

**Note:** the department reserves the right to admit only qualified applicants for whom departmental resources and appropriate faculty supervisors are available.

## Application as Special Student

Admission requirements for special students are outlined in the *Graduate General Regulations* (see 1.3.5 Admission Under Special Arrangements). Applicants apply online on the Dean of Graduate Studies website (<http://www.sfu.ca/gradstudents/> applicants). Students seeking admission as a special student must also submit all post-secondary transcripts to the department no later than one month prior to the term in which they plan to undertake the proposed course of study. Applicants must obtain written permission from the instructor of each course that they wish to complete. Special students completing psychology graduate courses must obtain a grade no lower than B- (2.67) in each course to be admitted as a special student in subsequent terms.

## Program Continuance

### Satisfactory Performance

Each graduate student's performance in research and course work is assessed at least once a year, with a formal annual review being conducted every spring. Each student receives feedback on his/her progress following this review. It is the policy of the Department of Psychology that a grade of less than B (3.0) on any course is deemed unsatisfactory. Any graduate student who obtains a grade of less than B (3.0) in two or more courses in the preceding calendar year, or who fails to maintain a cumulative grade point average (CGPA) of at least 3.5, may be required to withdraw from the program.

A student in the Clinical Program whose behavior raises the question of possible violations of the ethical codes binding the profession (CPA Code of Ethics, APA Ethical Principles, and CPBC Code of Conduct) will be advised of the nature of the problem behavior in writing, and requested to meet with the clinical program in a confidential closed session to determine the facts. Access to clinical clients may be immediately suspended pending the outcome of this meeting. The student will be invited to present any information and to respond to any questions. Whether or not the student attends, the committee members subsequently will meet in camera to consider the facts, and to decide on a recommendation to make to the graduate studies committee (GSC) of the department. Possible outcomes of this process include limitation of clinical training work, restriction of contact with clinical clients or research participants, remedial work, and recommendation of termination from the program. Issues pertaining to ethical integrity of students who are not in the Clinical Program are subject to the same codes of conduct and will follow the same procedures as described above, but will be handled directly by the graduate studies committee.

A student may appeal the decision to the GSC of the department. The GSC will adjudicate the appeal using procedures outlined in graduate general regulation 1.8.2 Review of Unsatisfactory Progress. The grounds for appeal are errors or unfairness in the procedures that were followed.

### MA Thesis

Students are required to present a written thesis proposal to their supervisory committee before the end of their fourth term in the program. After the thesis has been submitted, an oral defence will be scheduled. Students are expected to have completed their MA thesis by the end of their second year in the program. For further information and regulations, see *Graduate General Regulations* 1.9.2.

### PhD Dissertation

Before starting dissertation research, the candidate presents a formal proposal for evaluation. The candidate must present a dissertation proposal before

the end of the second program year, and is expected to complete the PhD dissertation within four years of program entrance. The completed dissertation will be defended in oral examination. Judgment will be made by an examining committee. For further information, see *Graduate General Regulations* 1.9.4.

### Supervisory Committees

For the MA thesis, students establish a supervisory committee before the end of their first term. The MA supervisory committee will normally consist of at least two Department of Psychology tenure-track or tenured faculty members, one of whom will be the senior supervisor and committee chair. Other individuals who are considered necessary by the student and senior supervisor may serve on the committee. For the PhD dissertation, students establish a supervisory committee by the end of the second term following program admission. The PhD supervisory committee will consist of a Department of Psychology tenure-track or tenured faculty member who will be the senior supervisor and committee chair, and two or more additional members, at least one of whom must be a tenure-track or tenured faculty member in the Department of Psychology.

### MA and PhD Requirements

Graduate students must maintain continuous registration (fall, spring, summer terms) throughout their graduate program in the department.

MA students must achieve satisfactory performance in all course work including two breadth courses that are outside the student's research or specialization area, unless otherwise specified as in the clinical area and program, a minimum of two area courses, and must complete an MA thesis (PSYC 898). MA students are expected to complete their thesis by the end of their second year in the MA program. MA students can apply mid-program to the fast-track PhD program (<http://www.psyc.sfu.ca/grad>); students who are accepted are not required to complete an MA thesis.

PhD students must complete a minimum of two area courses, comprehensive examinations (PSYC 999), and a dissertation proposal within two years of doctoral program admission. PhD students complete their doctoral dissertation (PSYC 899) by the end of their fourth year in the PhD program.

All students must register in area research seminars (PSYC 912, 913, 914, 916, 917 or 918) every fall and spring term during their MA and PhD programs and to complete the requirements of their area of specialization. Failure to meet department timelines is noted in the student's annual performance review.

### Area Specializations

#### Cognitive and Biological Psychology

PSYC 910-3 Research Design I: Experiments  
PSYC 911-3 Research Design II: Research Studies  
PSYC 913-1.5 Research Seminar (annually in the fall and spring terms)

Area course 1\*  
Area course 2\*  
Area course 3\*  
Area course 4\*

Area courses are determined for each student individually and may include courses both from within and outside of the department.

#### Developmental Psychology

PSYC 750-3 Proseminar in Developmental Psychology (Area course 1)  
PSYC 824-3 Research Issues in Psychology  
PSYC 910-3 Research Design I: Experiments  
PSYC 911-3 Research Design II: Research Studies  
PSYC 914-1.5 Research Seminar (annually in fall and spring terms)

PSYC 950-3 Seminar in Developmental Psychology (Area course 2)  
PSYC 950-3 Seminar in Developmental Psychology (Area course 3)  
PSYC 950-3 Seminar in Developmental Psychology (Area course 4)

### Law and Forensic Psychology

PSYC 790-3 Proseminar in Law and Psychology (Area course 1)  
PSYC 810-3 Seminar in Social Psychology and Law (Area course 2)  
PSYC 815-3 Mental Health Law and Policy (Area course 3)  
PSYC 824-3 Research Issues in Psychology  
PSYC 892-3 Research/Policy Practicum in Law and Psychology  
PSYC 897-3 Research Project/Law&Psyc/Forensic Psyc  
PSYC 910-3 Research Design I: Experiments  
PSYC 911-3 Research Design II: Research Studies  
PSYC 916-1.5 Research Seminar (annually in fall and spring terms)  
PSYC 990-3 Seminar in Law and Psychology (Area course 4)  
PSYC 990-3 Seminar in Law and Psychology (Area course 5)

### Social Psychology

PSYC 760-3 Proseminar in Social Psychology (Area course 1)  
PSYC 760-3 Proseminar in Social Psychology (Area course 2)  
PSYC 824-3 Research Issues in Psychology  
PSYC 910-3 Research Design I: Experiments  
PSYC 911-3 Research Design II: Research Studies  
PSYC 917-1.5 Research Seminar (annually in fall and spring terms)  
PSYC 960-3 Proseminar in Social Psychology (Area course 3)  
PSYC 960-3 Proseminar in Social Psychology (Area course 4)

### Theory and Methods

PSYC 910-3 Research Design I: Experiments  
PSYC 911-3 Research Design II: Research Studies  
PSYC 918-1.5 Research Seminar (annually in fall and spring)  
Area course 1\*  
Area course 2\*  
Area course 3\*  
Area course 4\*  
Area course 5\*  
Area course 6\*

\*four to six area courses are determined for each student individually and may include courses both from within and outside the department.

### Clinical Psychology Area and Program

Students in the clinical program are all members of the clinical area. The PhD program, accredited by the Canadian Psychological Association (CPA) and the American Psychological Association (APA), is based on the scientist-practitioner training model. The program provides generalist training and specialization streams in clinical child psychology, clinical forensic psychology, and clinical neuropsychology. Standing in the program is contingent upon maintenance of satisfactory performance in course work, thesis work, practicum skills development, comprehensive exams, and adherence to professional ethical standards (CPA Code of Ethics, APA Ethical Principles, and CPBC Code of Conduct), as evaluated in the annual review of student progress. Unsatisfactory academic progress and/or CPA ethical code of conduct violations (e.g. dishonesty, boundary violations, etc.) may lead to withdrawal from the clinical program.

Students may pursue generalist training or specialize in one of clinical child psychology, clinical forensic psychology, or clinical neuropsychology. Each specialty stream has another associated research area (see requirements for specialty streams below). MA program students who wish to specialize pending acceptance into the PhD program must have course selections consistent with the specialty stream requirements. Specialty stream students are members of the clinical area and an associated area. Associated areas include clinical child (development psychology), clinical forensic (law and forensic psychology), and clinical neuropsychology (cognitive and biological psychology).

#### MA Requirements

MA students must satisfactorily complete all of  
 PSYC 744-3 Proseminar in Psychopathology  
 PSYC 770-3 Proseminar in Personality  
 PSYC 820-3 Seminar in Individual Assessment  
 PSYC 821-2 Practicum in Individual Assessment  
 PSYC 822-3 Seminar in Intervention  
 PSYC 823-2 Practicum in Intervention  
 PSYC 824-3 Research Issues in Psychology  
 PSYC 880-3 Practicum  
 PSYC 898-6 MA Thesis  
 PSYC 910-3 Research Design I: Experiments  
 PSYC 911-3 Research Design II: Research Studies

plus two area courses (within the clinical area for general clinical students or in keeping with the specialty stream requirements as outlined below).

In addition, students must participate in area research seminars (PSYC 912 annually in the fall and spring terms) during their MA programs.

#### PhD Requirements

PhD students must satisfactorily complete all of  
 PSYC 600-3 Biological Bases of Behavior  
 PSYC 819-3 Ethics and Professional Issues  
 PSYC 886-9 Internship  
 PSYC 899-6 PhD Thesis  
 PSYC 999-6 PhD Comprehensive Examination\*

plus one breadth course (see *Clinical Program Breadth/Domain Requirements* below)

plus two area courses

At least two courses must be from the advanced topics courses in assessment or intervention, as listed below. Note that the chosen courses will depend upon specialization.

PSYC 806-3 Advanced Topics in Assessment  
 PSYC 807A-3 Advanced Topics in Intervention: Child Therapy  
 PSYC 807B-3 Advanced Topics in Intervention: Family Therapy  
 PSYC 807C-3 Advanced Topics in Intervention: Group Therapy  
 PSYC 807D-3 Advanced Topics in Intervention: Marital Therapy  
 PSYC 807E-3 Advanced Topics in Intervention: Cognitive-Behavior Therapy  
 PSYC 809-3 Advanced Topics in Applied Psychology

\*including an ethics oral examination

Students will not be permitted to enrol in PhD course work beyond the seventh term in the MA program, until the MA thesis is complete, or they receive joint approval from their senior supervisor and the director of clinical training.

Students are required to enrol in PSYC 825 (ongoing clinical training) every term prior to internship (PSYC 886) except when formally exempt.

In addition, students must participate in area research seminars (PSYC 912 annually in the fall and spring terms) during their PhD programs.

Students must successfully defend dissertation proposals before applying for internship (by September 30th).

### Clinical Specialization Requirements

#### Clinical Child Stream (Developmental Psychology)

PSYC 750-3 Proseminar in Developmental Psychology (Area course 1)  
 PSYC 807A-3 Advanced Topics in Intervention: Child Therapy (Area course 4)  
 PSYC 807B-3 Advanced Topics in Intervention: Family Therapy  
 PSYC 830-3/831-2 Seminar/Practicum in Child Evaluation and Treatment Formulation (Area course 2)  
 PSYC 912-1.5 Research Seminar (annually in fall and spring)  
 PSYC 944-3 Seminar in Psychopathology (Area course 3)

#### Clinical Forensic Stream (Law and Forensic Psychology)

PSYC 790-3 Proseminar in Law and Psychology (Area course 1)  
 PSYC 815-3 Mental Health Law and Policy (Area course 2)  
 PSYC 835-3 Special Topics in Civil Forensic Psychology (Area course 3)  
 PSYC 836-3 Special Topics in Criminal Forensic Psychology (Area course 4)  
 PSYC 890-3 Practicum in Clinical Forensic Psychology  
 PSYC 897-3 Research Project/Law & Psyc/Forensic Psychology  
 PSYC 912-1.5 Research Seminar (annually in fall and spring)

#### Clinical Neuropsychology Stream (Cognitive and Biological Psychology)

PSYC 882-3 Neuropsychology Practicum  
 PSYC 912-1.5 Research Seminar (annually in fall and spring)  
 PSYC 806-3 Advanced Topics in Assessment (Area course 1)  
 PSYC 907B-3 Advanced Topics in Biological Psychology: Neurocognitive Disorders (Area course 2)  
 PSYC 907F-3 Advanced Topics in Biological Psychology: Cognitive Neuroscience (Area course 3)  
 ANAT 516-3 Functional Human Neuroanatomy: Central Nervous System (UBC) (Area course 4)

### Breadth/Domain Requirements

A breadth course is a course that is outside of the student's research or specialization area. For students in the Clinical Program, it must be a non-clinical psychology course that falls within one of the five foundational areas described below. The Canadian Psychological Association (CPA) and the American Psychological Association (APA) require that five foundational areas be covered by the curriculum of all accredited programs. These include:

- biological bases of behavior
- cognitive-affective bases of behavior
- social bases of behavior
- individual differences
- history and scientific foundations of general psychology

When choosing elective and breadth courses, students must ensure adequate coverage of each foundational area during their graduate training.

### SFU/UBC Law and Forensic Psychology Stream

The Simon Fraser University Program in Law and Forensic Psychology, in co-operation with the University of British Columbia, offers forensic psychology students the option of completing both a PhD and an LLB degree. Students completing the co-operative PhD/LLB stream will be enrolled in either

the law and forensic psychology area, or the clinical forensic stream. This program permits students to be on-leave from one university while completing requirements in the other. All Simon Fraser University and department MA and PhD requirements must be met. Co-operative SFU/UBC stream students must complete the requirements for both a PhD in law and forensic psychology, and an LLB in law. For application and admission information for the Simon Fraser University PhD degree, see the Department of Psychology's *Application and Admission Requirements*. Applicants seeking the LLB degree must apply separately to the Faculty of Law at UBC.

The PhD is awarded by Simon Fraser University's Faculty of Arts and Social Sciences, and the LLB is awarded by UBC's Faculty of Law. Students must satisfy all requirements for the PhD and LLB degrees.

## Public Policy Program

 Simon Fraser University Vancouver, mpp@sfu.ca

This program offers the skills, insights and analytical frameworks that public sector and non-profit policy analysts and managers require. It focuses on the political and economic contexts of public policy analysis and offers specialized study. Designed to develop the strategic and global perspective required of tomorrow's senior policy analysts and managers, the program uses a cohort model which encourages student interaction and co-operation. An individual research project undertaken in MPP 808 and 809 (advanced policy analysis) is an integral part.

### MPP Program

This full-time two year cohort program, leading to a master of public policy (MPP), consists of fourteen courses plus a summer co-op/internship. Courses are sequenced through the fall and spring terms. The maximum course load is four courses per term.

## Admission Requirements

To be considered for admission, applicants must have a bachelor's degree from a recognized university. Those admitted with other credentials, or those with degrees who, in the judgement of the program director, are without adequate foundation in the social sciences, may be required to make up any deficiency without receiving graduate credit for those courses.

Students are normally admitted in September. It is expected that approximately 25 students will be directly admitted in any one year.

The normal admission minimum undergraduate GPA is 3.0 (or equivalent), although the admissions committee and program director may consider relevant work experience when determining admission eligibility. Criteria for admission, in addition to undergraduate grades, include strong letters of reference, an essay, and for those whose native language is not English, acceptable TOEFL scores (570 minimum) and a score of 5 or above on the Test of Written English. Students with non-Canadian undergraduate or graduate degrees are required to complete the Graduate Record Exam (GRE).

## Application Requirements

The following application documentation is required.

- a Simon Fraser University graduate application form, which is available from the Public Policy Program office or from [www.sfu.ca/mpp](http://www.sfu.ca/mpp)
- official undergraduate transcript showing all grades (mailed directly from the granting institution)
- three confidential reference letters (mailed directly from referees), at least two of which are from faculty members (may be waived for mid-career applicants with professional experience; letters from employers may be used). Reference forms are available from the office or from [www.sfu.ca/mpp](http://www.sfu.ca/mpp)
- a one-page essay that explains why the applicant wishes to pursue the MPP degree
- a student whose first language is not English and whose undergraduate degrees were from institutions where English is not the language of instruction are required to submit TOEFL and Test of Written English scores
- GRE score for non-Canadian degree applicants

## Program Requirements

The candidate must complete a total of ten core MPP courses, a summer co-op/internship, plus four additional elective courses that must be approved by the Public Policy Program director.

### Year One

Students complete the following eight core courses.

- MPP 800-5 Introduction to Public Policy Issues
- MPP 801-5 Economic Foundations of Policy Analysis I
- MPP 802-5 Economic Foundations of Policy Analysis II
- MPP 803-5 Political Foundations of Policy Analysis I
- MPP 804-5 Political Foundations of Policy Analysis II
- MPP 805-5 Research Techniques and Quantitative Methods I
- MPP 806-5 Research Techniques and Quantitative Methods II
- MPP 807-5 Introduction to Policy Analysis

In the summer term, the co-op/internship course MPP 850 is completed.

### Year Two

Students complete the following two core courses.

- MPP 808-5 Advanced Policy Analysis I
- MPP 809-5 Advanced Policy Analysis II

In addition, four elective courses are required. The program director, in consultation with the student, selects appropriate graduate courses offered by affiliated programs and departments. To satisfy these

requirements, and when appropriate, students may choose from the following MPP courses.

- MPP 810-5 Issues in Public Policy I
- MPP 811-5 Issues in Public Policy II
- MPP 812-5 Selected Topics in Public Policy I
- MPP 813-5 Selected Topics in Public Policy II
- MPP 825-5 MPP Directed Readings I
- MPP 826-5 MPP Directed Readings II

## Department of Sociology and Anthropology

5053 Academic Quadrangle, 778.782.3518 Tel, 778.782.5799 Fax, [www.sfu.ca/sociology](http://www.sfu.ca/sociology)

### Chair

J. Pulkingham MA, PhD (Edin)

### Faculty and Areas of Research

See "Department of Sociology and Anthropology" on page 133 for a complete list of faculty.

- Y. Atasoy – political economy, globalization, political sociology, development studies, gender relations, cultural politics, Islamic politics, Turkey, Middle East
- M. Boelscher Ignace – practice theory, language and culture, aboriginal resource management, aboriginal peoples of northwestern North America
- J. Bogardus – critical anthropology, political sociology, critical pedagogy, participatory action research
- A. Burk – public space, monuments, and imagined communities; politics of visibility; geographical fictions; critical adult education; writing
- W. Chan – feminist and critical criminology; racism, racialization, and criminal justice; immigration control; social exclusion; welfare fraud; violence against women; domestic homicides
- D. Chunn – feminism and law; critical media and family studies; historical sociology of crime, madness and social welfare
- D. Culhane – critical anthropology, anthropology of/and law and health, contemporary ethnography, visual anthropology
- F. de Maio – medical sociology, income inequality, quantitative methods, Latin America
- P. Dossa – migration, gender and health, critical feminist anthropology, medical anthropology, aging and health policy, politics of disablement
- N. Dyck – social, political, urban anthropology; sport, childhood, nationality; theories of tutelage, discipline
- K. Froschauer – new Canadian political economy, natural resource development, immigration entrepreneurship
- M. Hathaway – globalization and science, transnational organizations and networks, politics of the environment
- M. Kenny – social and cultural effects of genetics, genomics and neuroscience
- D. Lacombe – contemporary social theory, sexuality and moral panic, deviance and social problems
- R.J. Menzies – sociology and history of psychiatry and public health; cultural and institutional constructions of madness; law, governance and social control; sociology of citizenship and social justice, contemporary men's and fathers' rights movements; qualitative research methods
- B. Mitchell – families and aging, youth transitions, family relationships, health and well-being
- G. Otero – states, nations and indigenous movements; sociology of agriculture and food, NAFTA, region and Latin America
- C.K. Patton – social study of medicine, especially social aspects of AIDS and wilderness medicine, continental theory
- S. Pigg – medicine, science and transnational processes; biomedicine modernity; AIDS; sexuality; reproductive health

- J. Pulkingham – gender and the state; critical social policy studies; income security policy; gender, family law and divorce
- G.B. Teeple – human rights, global division of labour, sociology of art, Marxism and sociological theory, political economy of Canada
- A. Travers – sociological theory (feminist and queer), gender and technology, sociology of sport, social issues and movements
- H. Wittman – environmental sociology, social movements, food and society, qualitative methods, Brazil and Guatemala
- J. Yang – linguistic and cultural anthropology, including contemporary China, post-socialism and neo-liberalism, development and environment

Four graduate programs are offered: MA in sociology, MA in anthropology, PhD in sociology, and PhD in anthropology.

The full-time master of arts (MA) programs offer comprehensive foundation in social theory in sociology and anthropology disciplines, and rigorous training in research methodologies, a particular strength of the department. The programs facilitate and support completion within two years, in six or seven terms. Graduates will be well prepared to enter doctoral (PhD) programs, and to hold professional positions in public, private and non-profit sectors.

## Admission Requirements

See "1.3 Admission" on page 219 for general requirements. In addition to these requirements, the department also requires a written statement about current interests and prospective research. How well the applicant's proposed research coincides with the research and teaching interests of the faculty is an important admission consideration. PhD applicants must submit a work sample from earlier or ongoing graduate studies.

Admission applications are normally considered once each year at the end of January. The program commences in September. Contact the graduate program chair or secretary for further information.

## Areas of Study

The department offers the following areas of study.

- anthropology and sociology of medicine, health and society (particularly politics of knowledge production, disability, mental health, AIDS)
- Canadian society (ethnic relations, demographic issues, social inequality, political economy)
- critical pedagogy
- development studies (especially the Third World, including studies of tourism and international health)
- environmental issues
- minority indigenous peoples (particularly Canadian Native peoples)
- political sociology (with emphasis on political economy, ethnic relations and social movements)
- social and cultural anthropology (with emphasis on the anthropology of contemporary life)
- social policy issues (aging, family, gender relations, government administration of native peoples)
- sociological and anthropological studies of law and legal systems
- sociological theory, anthropological theory, and the philosophy of the social sciences (European intellectual history, holistic, comparative, historical and post colonial perspectives)
- sociology of agriculture, and science, technology and society
- sociology of sexuality and moral panic, and social problems and deviance

## Graduate Seminar

All full-time graduate students must attend and actively participate in the graduate seminar during their first two program terms. In subsequent terms,

attendance and enrolment is voluntary. Special arrangements will be made for part-time students to fulfil this requirement.

### Language Requirement

Although French or a foreign language is desirable, there is no prescribed language requirement but, where a language other than English is necessary for field work or reading, proficiency is required.

## MA Program

### Anthropology

Students complete all of  
SA 840-1 Graduate Seminar I  
SA 841-1 Graduate Seminar II  
SA 856-5 Qualitative Methodology  
SA 857-5 Research Design Seminar  
SA 870-5 Contemporary Theory in Anthropology  
SA 874-5 Historical Perspectives on Anthropological Theory  
SA 896-6 MA Research  
SA 898-6 MA Thesis

plus two elective courses from  
SA 871-5 Readings in Anthropology I\*  
SA 872-5 Readings in Anthropology II\*  
SA 875-5 Ethnographic Methodology: Social/Cultural Anthropology  
SA 886-5 Selected Problems in Social Analysis

### Sociology

Students complete all of  
SA 840-1 Graduate Seminar I  
SA 841-1 Graduate Seminar II  
SA 849-5 Selected Topics in the History of Sociological Thought  
SA 850-5 Selected Topics in Contemporary Social Theory  
SA 856-5 Qualitative Methodology  
SA 857-5 Research Design Seminar  
SA 896-6 MA Research  
SA 898-6 MA Thesis

plus two elective courses from the following.

SA 853-5 Readings in Sociology I\*  
SA 854-5 Readings in Sociology II\*  
SA 855-5 Advanced Quantitative Methods in Sociology  
SA 886-5 Selected Problems in Social Analysis

Students in both the anthropology MA or the sociology MA programs may also choose a graduate course or graduate directed readings course in another Simon Fraser University department, or from another university on a Western Dean's Agreement.\*

\*supervisory committee and departmental graduate program committee approval required.

### Thesis

The thesis, completed by both anthropology and sociology students, will normally consist of no more than 75-100 pages, inclusive of bibliographies, appendices and tables. At the discretion of the supervisory committee, the maximum number of pages may be increased, normally only to facilitate the inclusion of large appendices and tables. The student's supervisory committee and a qualified external examiner will examine the thesis, and a public oral defence will be held. Theses are bound and placed in the library.

Normally, the MA program is completed within six terms, or two full years of study.

Students may be required to complete more than the eight required courses at the discretion of the supervisory committees.

Required courses are normally completed within the first three terms of MA program enrolment.

## PhD Program

Students complete the following courses plus the PhD qualifying examinations (by registering in SA 897).

### Anthropology

Students complete all of  
SA 840-1 Graduate Seminar I  
SA 841-1 Graduate Seminar II  
SA 856-5 Qualitative Methodology  
SA 857-5 Research Design Seminar  
SA 870-5 Contemporary Theory in Anthropology  
SA 874-5 Historical Perspectives on Anthropological Theory  
SA 897-5 PhD Qualifying Examinations  
SA 899-6 PhD Thesis

plus one of  
SA 871-5 Readings in Anthropology I\*  
SA 872-5 Readings in Anthropology II\*  
SA 875-5 Ethnographic Methodology: Social/Cultural Anthropology  
SA 886-6 Selected Problems in Social Analysis

### Sociology

Students complete all of  
SA 840-1 Graduate Seminar I  
SA 841-1 Graduate Seminar II  
SA 849-5 Selected Topics in the History of Sociological Thought  
SA 850-5 Selected Topics in Contemporary Social Theory  
SA 856-5 Qualitative Methodology  
SA 857-5 Research Design Seminar  
SA 897-6 PhD Qualifying Examinations  
SA 899-6 PhD Thesis

plus one of  
SA 853-5 Readings in Sociology I\*  
SA 854-5 Readings in Sociology II\*  
SA 855-5 Advanced Quantitative Methods in Sociology  
SA 886-5 Selected Problems in Social Analysis

Students in either anthropology PhD or sociology PhD programs may also choose a graduate course or graduate directed readings course in another Simon Fraser University department, or from another university on a Western Dean's Agreement.)\*

\*supervisory committee and departmental graduate program committee approval required for these courses and/or extra-departmental courses

Required courses, including qualifying examinations, and preparation and defence of the thesis prospectus, are normally completed within the first six terms of enrolment.

Course requirements are the same whether the student has completed an MA in this department, or completed a comparable MA program at another university. However, the department's graduate program committee may make special arrangements so that required courses in theory and methodology are not repeated.

### Qualifying Exam, Defence

At the conclusion of SA 897, students must complete a written qualifying examination. After successfully completing the qualifying exam, and prior to commencing work on the thesis, students defend a written prospectus that the student has prepared during SA 857. This oral defence is public.

### Thesis

After the above is complete, then the thesis is written, and finally defended in an oral examination.

## Co-operative Education

In this program students gain work experience that complements their academic studies. MA students in good standing with a minimum 3.0 GPA may apply

after satisfactory completion of SA 850 or 870, and 857 plus one of SA 853, 854, 871, 872, 886, or equivalent. Supervisory committee recommendation and departmental graduate program committee approval is required. Students may complete the traditional two separate work term co-op program, or the three consecutive work term co-op internship. Arrangements are made through the faculty's co-op co-ordinator at least one term prior. See page 212.

## Urban Studies Program

2115 Simon Fraser University Vancouver, 515 West Hastings Street, Vancouver, BC, V6B 5K3  
778.782.7914 Tel, 778.782.5297 Fax, urban@sfu.ca, www.sfu.ca/urban

\*joint appointment with geography

\*\*joint appointment with history

\*\*\*joint appointment with political science

\*\*\*\*joint appointment with sustainable community development

### Advisor

Ms. T. Evans BA (Manit), MA (S Fraser)

The city is a central feature of modern societies and economies. The development of cities over the past 500 years has enabled the evolution of the modern world. Academic interest in urban studies spans many disciplines and focuses on understanding cities, how they function, and how they change for the better.

This program develops the knowledge, skills and understanding that individuals, organizations, communities and governments need to improve human lives, strengthen municipal governance and advance urban sustainability. Students seek to understand, develop and diversify the structures, processes and actions that make cities livable. The curriculum integrates traditional understandings with new perspectives, both locally and globally.

Programs are available to both full-time and part-time students, ranging from mid-career professional to those who are simply curious about local politics, urban development, and sustainable cities. The program provides a strong foundation in economic, geographic, political and social analysis techniques and applies these skills to real-world urban problems.

Courses are offered in the evenings at Simon Fraser University Vancouver, located in the core of British Columbia's principal urban centre.

### Admission Requirements

Applicants for admission are normally required to have an undergraduate degree in one of the urban studies base disciplines (economics, geography,

political science, sociology and anthropology).

Applications from students with other degrees or with equivalent professional training and experience will also be considered. Admissions decisions will be based on material submitted with the application.

### Application

Applicants must submit the following documentation.

- application for admission to graduate studies
- official transcript of undergraduate grades (mailed directly from the granting institution)
- three confidential reference letters (mailed directly from referees, one of whom should be an academic)
- a statement of the applicant's program interest
- TOEFL and TWE test scores may be required for applicants whose first language is not English

### Financial Assistance

Limited student financial assistance is available.

## Master of Urban Studies Program

This program requires 32 units of URB courses, including the following required courses:

URB 670-4 Urban Research Methods  
URB 696-4 Seminar in Urban Studies  
URB 697-4 Research Project

These courses help students prepare an original urban research project to demonstrate integration of concepts and techniques acquired in previous course work. Up to two other graduate courses beyond those offered by Urban Studies may be substituted with the approval of the Urban Studies program committee.

## Graduate Diploma in Urban Studies

This diploma augments an undergraduate degree by providing exposure to, and development of urban expertise and insights. It requires completion of 24 URB course units. One or two graduate courses from other departments may substitute with permission.

## Department of Women's Studies

5102A Academic Quadrangle, 778.782.3333 Tel,  
778.782.5518 Fax, [www.sfu.ca/womens-studies](http://www.sfu.ca/womens-studies)

*Chair*  
(to be announced)

*Graduate Program Chair*  
H. Zaman BA (Dhaka), MA, PhD (Manit)

*Faculty and Areas of Research*  
See "Department of Women's Studies" on page 139 for a complete list of faculty.

L. Campbell, Women's Studies – Canadian women's history, social justice, social welfare  
M. Griffin Cohen, Political Science – feminist economics, public policy  
H. Leung, Women's Studies – queer theory and feminist theory; gender and sexuality in Asian cinemas; literacy and cultural studies  
J. Levitin, Contemporary Arts – women and film: theory and production; women and popular culture; women and comedy; Third World film and women  
C.K. Patton – sociology and anthropology; health; HIV/AIDS; methodology and methods training; social study of medicine  
M.L. Stewart, Women's Studies – women in Europe; French fashion and beauty industry  
H. Zaman, Women's Studies – women and work in comparative perspective; gender and development; feminist research methods; women of color and Canadian feminism; Third World

### Associate Members

For areas of research, refer to the department listed.  
M. Bubber, Library  
B. Burtch, School of Criminology  
P. Dossa, Department of Sociology and Anthropology  
O.A. Hankivsky, Department of Political Science  
J. Matsumura, Department of History  
J. Marchbank, Explorations in the Arts and Social Sciences Program  
K. Mezei, Department of English  
M.H. Morrow, Faculty of Health Sciences  
A. Travers, Department of Sociology and Anthropology

This program offers interdisciplinary study and research leading to a master's degree or a doctorate. The program provides a strong academic approach, with core courses on feminist theory and methodology and a blend of advanced studies in specific fields, as well as directed readings for more individualized study. Students develop and demonstrate intellectual and analytical skills, in accordance with the particular criteria of the level of study, and in consultation with their senior supervisor and supervisory committee.

## MA Program

### Admission Requirements

Applicants must satisfy the women's studies graduate program committee that they are prepared academically to undertake graduate work. In addition to University requirements, (see "Graduate General Regulations" on page 219), the program requires

- a substantial essay which is scholarly in format and approach. The submitted paper may be an undergraduate essay previously prepared, or one specially written for this purpose.
- a statement of women's studies interests and goals; normally students will be expected to present a definite proposal for their research.
- a short description of previous relevant course work and/or employment. Previous work should include both specialized disciplinary training and broader interdisciplinary work concerned with women.

The specific requirements for application are provided at [www.sfu.ca/womensstudies](http://www.sfu.ca/womensstudies).

A student will be admitted into a specific option (thesis, two extended essays or course intensive) and should apply to the options they prefer.

Qualified students will be accepted into the MA thesis option only if a suitable senior supervisor is willing to supervise the student. Senior supervisors will be selected from joint women's studies appointees and continuing faculty on the co-ordinating committee of the department including associate members.

A student can switch from one option to another only with the approval of the graduate program committee. A student can transfer to the thesis option only if there is a suitable supervisor available. A student with incomplete academic preparation for the MA program may be required to complete up to 12 units of additional work in either the Department of Women's Studies or another relevant program.

The graduate committee, which will deal with admissions and all matters pertaining to individual students, will consist of all continuing faculty members on the co-ordinating committee.

### Degree Requirements

The student normally will complete the following requirements.

- A minimum of 20 units of graduate seminar, including at least one of WS 800 or 822, maintaining at least a 3.0 CGPA, and
- Submit a thesis or two extended essays showing independent research and critical abilities. An MA

thesis is expected to be an in-depth empirical or theoretical study. The normal thesis length is 60-120 pages. Extended essays are defined as scholarly papers that meet the same standards of excellence as a thesis; they are examined in the same way, prepared in the same format, bound, and placed in the Library. Normally, the length of each essay is 30-60 pages. The extended essays are expected to demonstrate a breadth of knowledge and competence over several areas of study.

The student will be required to complete an oral examination on her or his thesis or papers at the end of the MA program. See "1.9 Preparation for Examinations" on page 224.

or

- The student must complete six graduate courses, one of which must be WS 822, and maintain at least a 3.0 CGPA.
- The student is also required to write two examinations based upon the subject areas of two of the completed Women's Studies courses.

Upon admission, the student will be assigned a two member advisory committee which has the responsibility for ensuring that the student fulfils all degree requirements. For further information concerning requirements, consult the department's graduate secretary or graduate chair.

### Supervisory Committee

Following the student's enrolment, a supervisory committee will be formed which has responsibility for determining, in consultation with the student, the projected program of study, selecting appropriate research topics, and ensuring that the candidate fulfils all degree requirements. The senior supervisor will be selected from joint appointees in the Department of Women's Studies and continuing faculty members on the co-ordinating committee. Other faculty outside the department who are considered necessary by the student and her/his supervisors may also be added to the committee.

## PhD Program

### Admission Requirements

Applicants must satisfy the Department of Women's Studies graduate program committee that they are prepared academically to undertake doctoral level work in women's studies. Normally, a master's degree will be required. Applicants are required to submit three letters of reference.

In addition to University requirements for admission to a doctoral level program, as listed in the *Graduate General Regulations* (see "1.3.4 Admission to a Doctoral Program" on page 220), the program requires:

- a sample of scholarly work in the form of a substantial essay which is scholarly in format and approach
- a statement of research interests and goals in women's studies; normally students will be expected to present a definite proposal for their research
- a short description of previous relevant course work and/or employment. Previous work should include both specialized disciplinary training and broader interdisciplinary work concerned with women and/or gender.

### Degree Requirements

Normally, the student completes the following.

- Students complete three graduate courses. The graduate committee, in consultation with the student's supervisory committee, may require a student to complete additional courses, either to obtain breadth of background in women's studies or to acquire specific preparation in the topic of the

student's proposed thesis. Two of any required courses may be from women's studies at the universities under the Western Deans' Agreement or relevant offerings in other Simon Fraser University departments, with the approval of the student's supervisory committee. Students who have completed the Simon Fraser University or UBC master of arts program before admission to the doctoral program will not be permitted to duplicate graduate courses that they completed during their MA programs.

- Students must pass comprehensive examinations that consist of three major scholarly/professional

tasks to be set by the student's supervisory committee in consultation with the student, approved by the Department of Women's Studies graduate committee, and completed to the satisfaction of the supervisory committee. One of the three tasks must be an exam or a review of the literature.

- Students prepare a PhD thesis proposal and defend it in a presentation that is open to the whole department.
- Students will submit a PhD thesis giving evidence of independent research and critical abilities in the interdisciplinary study of women and/or gender. The

student will be examined on the thesis in accordance with the *Graduate General Regulations* (see "1.9.4 Preparation for Examination of Doctoral Thesis" on page 224).

Normally students will complete course work before completing the comprehensive examinations, and will then go on to present and defend the PhD thesis proposal, all within two years.

For further information concerning requirements, consult the department graduate secretary or graduate chair.

## Faculty and Areas of Research

See "Faculty of Business Administration" on page 143  
for a complete list of faculty.

N.A.R. Abramson – strategy, international strategy  
and comparative management  
C. Atanasova – applied financial econometrics  
S.P. Bertels – sustainability, innovation, systems  
resilience  
A. Bick – investments and asset pricing  
G.W. Blazenko – business finance  
M.J. Brydon – management information systems  
G.R. Bushe – leadership, teamwork, organizational  
change  
E.W. Bukszar, Jr. – strategy  
J.C-W. Chang – marketing  
Y. Chen – accounting, performance measurement,  
international accounting  
E.U. Choo – management science  
D. Chung – accounting, capital markets  
B.D. Cohen – technology and operations,  
entrepreneurship  
C.M. Collins – adoption of new technology, marketing  
new technology  
D. Cyr – e-business and website design  
C.P. Egri – sustainability, CSR, leadership,  
international management  
C.E.N. Emby – accounting  
M. Favere-Marchesi – audit judgment, audit quality  
and review, fraud, international auditing  
M.R. Fizzell – accounting  
J.N.P. Francis – international and strategic marketing,  
negotiations, advertising  
E. Gatev – finance  
E.R. Gedajlovic – entrepreneurship, corporate  
governance, strategy and firm performance  
A.C. Gemino – management information systems  
I.M. Gordon – accounting theory, CSR and  
sustainability reporting, accounting education  
R.R. Grauer – business finance  
S. Gupta – operations management  
J.K. Hall – strategy, sustainable development, social  
impacts of innovation and entrepreneurship  
D.R. Hannah – management and organization studies  
G. Havers – ethics  
J.W. Heaney – business finance  
J.Y.C. Ho – marketing  
K. Hrazdil – accounting  
R.D. Iverson – management and organization studies  
J. Jermias – accounting  
P. Julia – operations management  
S.M. Kates – marketing, consumer research,  
branding, psychological growth  
J.H. Kietzmann – entrepreneurship, organizational  
strategy development  
P.C. Klein – business finance  
R. Krider – marketing  
R. Krishnan – international business  
B.A. Lautsch – industrial relations, management and  
organization studies  
T.B. Lawrence – management and organization  
studies  
M.B. Lazarova – international business  
J. Li – international business

E.A. Macdonald – accounting  
E.M.A. Maine – management of technology, policy  
I.P. McCarthy – technology and innovation  
management, operations management, strategy,  
organizational design  
L.N. Meredith – business marketing, marketing  
strategy  
M.A. Moore – strategy, managerial economics  
J. Nui – banking and corporate finance  
M. Parent – management information systems  
D.C. Parker – decision support systems  
A.D. Pavlov – business finance  
J. Peloza – marketing, new product development  
L.F. Pitt – marketing strategy with emphasis on the  
marketing-technology interface  
G. Poitras – international finance, econometrics,  
financial institutions  
B.H. Reich – project and program management,  
information technology governance  
A. Rubin – accounting  
K.E. Ruckman – acquisition, technology and imitation  
strategy  
N. Saraf – management information systems  
R.W. Schwindt\* – industrial organization; international  
trade; business, government and society  
D.M. Shapiro – industrial organizations, managerial  
economics, business and public policy  
J.P. Sheppard – business policy, corporate failure and  
survival  
C.F. Smart – business policy, organizational behavior  
D.R. Smith – business finance  
P-H. Soh – technology strategy, social networks,  
strategic alliances, innovation and entrepreneurship  
S. Spector – accounting  
K.G. Stewart – business communication  
D.C. Thomas – international business  
P.M. Tingling – management information systems  
K. Trottier – accounting, capital markets  
R.L. Tung – international business  
A. Vedrashko – finance and real estate

A.G. von Nordenflycht – business strategy, corporate  
governance and professional services  
J.H. Waterhouse – accounting  
M.N. Wexler – business, government and society,  
organizational behavior and theory  
Y. Yang – marketing  
R.A. Yates – commercial law  
J.L. Zaichkowsky – marketing  
C.D. Zatzick – management and organization studies  
N. Zhao – error reporting and learning from errors in  
organizations, and organizational stigma  
\*joint appointment with economics

## Graduate Diploma Offered

graduate diploma in business administration

## Graduate Degrees Offered

master of business administration  
master of financial risk management  
doctor of philosophy  
doctor of philosophy under special arrangements

## Graduate Programs

Four programs leading to the MBA degree are  
offered: executive MBA, global asset and wealth  
management, master of business administration, and  
management of technology MBA.

The executive MBA program is a weekend program  
for mid-career managers or executives who want to  
continue working while studying in a collegial  
environment. The program takes a general  
management perspective; it focuses on  
organizational and decision-making processes that  
cut across functional divisions.

The global asset and wealth management program  
(GAWM), designed in co-operation with the financial  
community, provides expertise in the engineering and  
architectural aspects of investment management.  
Students obtain top-notch engineering skills through  
courses in economic theory and the science of asset  
allocation and security selection. They will also  
develop skills in the architectural side of investment  
management through courses in client relationship  
management, interpersonal communication,  
investment counselling and estate planning.

The Management of Technology program (MOT) is for  
those who already have at least two years of  
experience working in the technology sector and who  
are now considering a move into management.  
Students study part time over 24 months.

The MBA program provides broad-based and  
rigorous business training to prepare students for the  
global business world. Applicants should have  
non-business undergraduate degrees, and limited  
professional work experience, although work and life  
experiences will be considered for admission. The  
program is unique because it offers strong  
fundamentals to relatively inexperienced students  
over 12 months of intensive course work during three  
full-time terms, followed by a four-month internship.

The PhD program develops outstanding students in  
research and teaching for future employment at  
leading international academic institutions by  
designing a unique program of study under the  
guidance of their supervisor and the academic chair.

## Graduate Diploma in Business Administration

Segal Graduate School of Business, 500 Granville  
Street, Vancouver, BC, V6C 1W6, 778.782.5013 Tel,  
778.782.5122 Fax, www.sfu-business.ca/gdba

### Academic Chair

E.W. Bukszar, Jr. BA (J Carroll), MBA, PhD (Arizona),  
778.782.5195

### Executive Director

D. Cross BA (Qu), MHA (Ott), 778.782.5023

The graduate diploma in business administration  
(GDBA) provides core business skills to those with an  
undergraduate degree in a discipline other than  
business. Delivered online over three terms, the  
GDBA is a convenient and practical alternative to a  
traditional classroom-based program and provides  
business fundamentals to improve career prospects.

## Admission Requirements

The basic entry qualification is a degree from a  
recognized university in an area other than business  
administration, commerce or equivalent. A university  
level course in mathematics is required and three  
reference letters, preferably from supervisors or  
former professors. Candidates must be computer  
literate and familiar with the Internet. The program  
requires a strong command of the English language.  
Applications are assessed as they are received.

## Application

Candidates must submit the following documentation.

- Simon Fraser University's *Application for Admission to the Graduate Diploma Program in Business Administration*
- official transcript of undergraduate grades (mailed directly from the granting institution)
- three confidential letters of reference (mailed directly from the referees)
- TOEFL and TWE test scores, if applicable. Applicants must complete the Test of English as a Foreign Language (TOEFL) and the Test of Written English (TWE) if their first language is not English and/or their national language is other than English. The minimum University requirement for test scores is: IELTS (International English Language Testing System) with a minimum score of 7 on the Academic Modules; or TOEFL iBT (Test of English as a Foreign Language internet based test) with an overall score of 88 or better with a minimum score of 20 in each of the four components (listening, speaking, writing, reading); or TOEFL CBT (Test of English as a Foreign language computer based test) with a minimum score of 230 including a minimum essay score of 5.
- a recent passport style photograph

## Diploma Requirements

Students complete 24 units from the following.

BUS 550-2 Financial Accounting  
 BUS 551-2 Managerial Accounting  
 BUS 552-4 Managerial Economics  
 BUS 553-2 Quantitative Business Methods  
 BUS 554-2 Management Information Systems  
 BUS 555-4 Managerial Finance  
 BUS 556-4 Marketing Management  
 BUS 557-4 Human Resource Management/Organizational Behavior  
 BUS 558-3 Special Topics\*  
 BUS 559-4 Special Topics\*  
 BUS 560 Directed Studies\*

\*requires prior permission of the academic director

## Courses

The following BUS courses are offered for the graduate diploma: BUS 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560.

## MBA Program

Segal Graduate School of Business, 500 Granville Street, Vancouver, BC, V6C 1W6, 778.782.5013 Tel, 778.782.5153 Fax, mba@sfu.ca, www.sfbusiness.ca/mba

### Academic Chair

E. Bukszar BA (J Carroll), MBA, PhD (Arizona)

### Executive Director

D. Cross BA (Qu), MHA (Ott), 778.782.5023

This program provides broad-based and rigorous business training for the global business world. Applicants should have non-business undergraduate degrees, and limited professional work experience, although work and life experiences will be considered.

This unique program offers strong fundamentals to relatively inexperienced students over 12 months of intensive course work in three full-time terms, followed by a four-month internship. Students who completed the graduate diploma in business administration (GDBA) at a suitable standard will qualify for first term advanced standing. The program consists of required courses with no electives. Instead, four courses (designated with an asterisk) deepen and enhance core content. Course design will enable a significant course content individualization.

## Admission

Entry is competitive. Meeting the minimum admission requirements does not guarantee acceptance.

Applicants must have an undergraduate degree with a minimum 3.0 cumulative grade point average (CGPA) (B average) or an undergraduate degree and the GDBA with a minimum 3.0 CGPA.

Students apply at [www.sfu.ca/dean-gradstudies/apply.htm](http://www.sfu.ca/dean-gradstudies/apply.htm) and submit the following documentation by mail to the MBA program address above.

- official undergraduate transcripts mailed directly from the granting institution
- three confidential letters of reference mailed directly from the referees
- graduate management admission test (GMAT) results
- applicants whose primary language is not English, or whose previous education was conducted in another language, must submit evidence of satisfactory completion of a standardized English test that is acceptable to the University (see "1.3.2 Admission to a Graduate Diploma Program" on page 219). The minimum acceptable test scores are: TOEFL 88 with a minimum of 20 in each category (Internet based exam); or TOEFL 570 and TWE 5 (paper based exam); or TOEFL 230 (computer based exam) and IELTS with a 7.0 overall band score.
- a recent passport style photograph
- a current curriculum vitae

## Financial Assistance

Entrance scholarships, available on a limited basis, are awarded competitively. See "Financial Aid for Graduate Students" on page 229 or visit [www.sfu.ca/dean-gradstudies/finaids/htm](http://www.sfu.ca/dean-gradstudies/finaids/htm).

## Degree Requirements

Students must maintain a minimum 3.0 grade point average (GPA) (B average) and complete 45 units of prescribed courses as follows.

Course work follows three general themes:

foundation (F), transformation (T) and exploration (E).

### Term 1 Fall\*

BUS 701-2 Strategy† (F)  
 BUS 702-3 Marketing Management (F)  
 BUS 703-3 Managerial Economics (F)  
 BUS 704-3 Leadership and Team Building\* (T)  
 BUS 705-3 Financial/Managerial Accounting (F)  
 BUS 706-2 Data and Decisions (F)

### Term 2 Spring

BUS 707-2 Ethical Decision-making (T)  
 BUS 708-3 Finance (F)  
 BUS 709-3 Managing Information (F)  
 BUS 710-3 Emerging Markets\* (F)  
 BUS 711-3 Negotiation and Conflict Resolution (F)  
 BUS 712-3 Cross-cultural Management (T)

### Term 3 Summer

BUS 713-3 Essays† (E)  
 BUS 714-3 New Ventures \* (E)  
 BUS 715-3 Operations Management (F)  
 BUS 716-3 Sustainability\* (T)

### Term 4 Fall

BUS 727-0 MBA Internship (E)

\*specific course offerings determined annually

†pre-session course

GDBA graduates may apply for advanced standing for BUS 702, 703, 704, 705, 706, 708. A minimum 3.0 CGPA in that diploma program is required.

## Courses

The following courses are offered for this program: BUS 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716. Courses from the

other MBA programs may be used as substitutes for these courses at the discretion of the academic chair.

## Executive MBA Program

Segal Graduate School of Business, 500 Granville Street, Vancouver, BC, V6C 1W6, 778.782.5013 Tel, 778.782.5122 Fax, [emba\\_program@sfu.ca](mailto:emba_program@sfu.ca), [www.sfbusiness.ca/emba](http://www.sfbusiness.ca/emba)

### Academic Chair

A.R. Vining LLB (London), MBA, MPP, PhD (Calif)

### Executive Director

D. Cross BA (Qu), MHA (Ott), 778.782.5023

This program is for experienced, mid to upper level managers and professionals seeking to improve their capacity to lead, think strategically, and manage change. The program emphasizes global business leadership skills, strategic analysis, and change management.

The program utilizes a cohort model where students complete courses in the same sequence, and student interaction and co-operation are emphasized. Study groups and project teams are an important aspect of the learning experience.

Because Executive MBA students pursue full-time careers, classes typically meet on alternate weekends, all day Friday and Saturday, and are held at Segal Graduate School of Business.

## Admission Requirements

Applicants will be considered for admission based on the following criteria.

- current business experience, with a minimum of four to five years of managerial responsibilities
- GMAT (graduate management admission test) results
- academic qualifications, including an undergraduate degree (B average) or a professional designation (i.e. CA, CMA, CGA, PEng)\*
- three letters of reference

All students must demonstrate proficiency in mathematics, and Excel. A statistics workshop is offered in the summer prior to the term start.

\*While priority will be given to those with a university degree or a professional designation, a limited number of applicants may be admitted who do not hold a formal degree but possess exceptional business management qualifications.

The application deadline is April 1 for September enrolment in the same year.

## Degree Requirements

To qualify for the MBA degree, students must maintain a minimum average grade of B (3.0 GPA) and complete 14 courses from the following list.

BUS 601-2 Data and Decision-Making  
 BUS 602-4 International Management  
 BUS 603-4 Structure and Change in Organizations  
 BUS 604-4 Organizational Change and Development  
 BUS 606-4 Finance  
 BUS 607-4 Strategy  
 BUS 610-2 Directed Studies in Business Administration  
 BUS 611-4 Directed Studies in Business Administration  
 BUS 612-4 Directed Studies in Business Administration  
 BUS 615-4 Marketing Management  
 BUS 621-4 Information Technology and Organizational Transformation  
 BUS 632-2 Operations Management  
 BUS 651-4 Managerial Economics  
 BUS 652-2 Special Topics in Business Administration  
 BUS 653-2 Special Topics in Business Administration  
 BUS 654-2 Special Topics in Business Administration

BUS 655-2 Special Topics in Business Administration  
 BUS 660-4 Special Topics in Business Administration  
 BUS 661-4 Special Topics in Business Administration  
 BUS 662-2 Special Topics in Business Administration  
 BUS 663-4 Special Topics in Business Administration  
 BUS 670-3 Financial Accounting  
 BUS 681-4 Leadership and Teamwork  
 BUS 688-4 Industrial Relations  
 BUS 689-4 Special Topics in Business Administration  
 BUS 691-2 Business and Government  
 BUS 696-6 Applied Project  
 BUS 698-4 Directed Studies in Business Administration

Students may substitute, at the discretion of the academic chair, equivalent courses from another Simon Fraser University graduate program for the 600 division courses listed above.

## Courses

The following BUS courses are offered for the Executive MBA program: BUS 601, 602, 603, 604, 606, 607, 610, 611, 612, 615, 621, 632, 651, 652, 653, 654, 655, 660, 661, 662, 663, 670, 681, 688, 689, 691, 696, 698.

## MBA (Global Asset and Wealth Management) Program

Segal Graduate School of Business, 500 Granville Street, Vancouver, BC, V6C 1W6, 778.782.7962 Tel, 778.782.5122 Fax, [www.sfbusiness.ca/gawm](http://www.sfbusiness.ca/gawm)

### Academic Chair

A.D. Pavlov BSc (Sonoma), MBA (Thunderbird), MA, PhD (Calif)

### Executive Director

D. Cross BA (Qu), MHA (Ott), 778.782.5023

The global asset and wealth management program (GAWM) was designed with the financial community to provide expertise in engineering and architectural aspects of investment management. Students obtain engineering skills through courses in economic theory and the science of asset allocation and security selection. They will develop skills in the architectural side of investment management through courses in client relationship management, interpersonal communication, investment counselling and estate planning. Internships within the financial services community may be available to outstanding students who are enrolled in the full time GAWM program.

## Admission Requirements

Applicants must have an undergraduate degree in business, commerce, economics, a professional designation such as a CFA, or successful completion of Simon Fraser University's graduate diploma in business administration (GDBA). In addition, applications are considered based on the following.

- two to three years of work experience in the financial services industry
- a Graduate Management Admission Test (GMAT) score report
- three letters of reference from colleagues, supervisors or significant clients
- demonstrated English proficiency if an applicant has not graduated from an English speaking university or the applicant's first language is not English
- in-person or telephone interview by the admissions committee.

## Application

Students must submit the following documentation when applying for the GAWM MBA.

- Simon Fraser University's *Application for Admission to the GAWM MBA*
- official transcripts of undergraduate grades (mailed directly from the granting institution)

- three confidential letters of reference (mailed directly from the referees)
- GMAT (graduate management admission test) results
- TOEFL and IELTS test scores, if applicable. Applicants must complete the test of English as a Foreign Language (TOEFL) if their first language is not English and/or their national language is other than English. The minimum University requirements for test scores is: IELTS (International English Language Testing System) with a minimum score of 7 on the Academic Modules; or TOEFL iBT (Test of English as a Foreign Language internet based test) with an overall score of 88 or better with a minimum score of 20 in each of the four components (listening, speaking, writing, reading); or TOEFL CBT (Test of English as a Foreign language computer based test) with a minimum score of 230 including a minimum essay score of 5.
- a recent passport style photograph

## Financial Assistance

A limited number of scholarships may be awarded annually from funds donated by the GAWM Business Council, subject to funding. See "Financial Aid for Graduate Students" on page 229 for information about scholarships and awards for graduate students.

## Degree Requirements

Students must maintain a minimum 3.0 grade point average (B grade) and complete 42 units or more from the following list:

BUS 802-3 Foundations of Financial Economics  
 BUS 803-3 Financial Econometrics  
 BUS 804-3 Strategic Analysis For Wealth Management  
 BUS 805-3 Capital Markets  
 BUS 806-2 Client Relationship And Leadership Effectiveness I  
 BUS 807-2 Client Relationship And Leadership Effectiveness II  
 BUS 808-2 Client Relationship and Leadership Effectiveness Practice  
 BUS 809-3 Equity Security Analysis and Portfolio Management  
 BUS 810-3 Fixed Income Security Analysis and Portfolio Management  
 BUS 811-3 International Security Analysis and Portfolio Management  
 BUS 812-2 Tax and Estate Planning  
 BUS 813-2 Ethics, Wealth Management and the Securities Industry  
 BUS 814-3 Derivative Securities  
 BUS 816-3 Investment Policy  
 BUS 819-3 Final Project for GAWM Students

## Courses

The following BUS courses are offered for the global asset and wealth management program: BUS 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 816, 819, 823.

## MBA (Management of Technology) Program

Segal Graduate School of Business, 500 Granville Street, Vancouver, BC, V6C 1W6, 778.782.5259 Tel, 778.782.5153 Fax, [motmba@sfu.ca](mailto:motmba@sfu.ca), [www.sfbusiness.ca/mba/mot/](http://www.sfbusiness.ca/mba/mot/)

### Academic Chair

E.W. Bukszar, Jr. BA (J Carroll), MBA, PhD (Arizona), 778.782.5195

### Executive Director

D. Cross BA (Qu), MHA (Ott), 778.782.5023

This MOT program addresses high technology business sector needs, continuing the University's long tradition of industry collaboration. Graduates will

have a solid grounding in management theories and disciplines, particularly focused on topics relevant to an organization with technical core competencies. MOT MBA students work in enterprises that have advanced technology products or services. Most will have an undergraduate degree in a technical discipline; some will have an undergraduate business degree with technical work experience.

The program consists of six part-time terms including an industry-based final project.

## Admission Requirements

For admission, applicants to the MOT MBA must have a four year undergraduate degree with a minimum 3.0 cumulative grade point average (B average). They must also meet the following criteria.

- a minimum of two years of relevant work experience in a technology firm or technology position
- graduate management admission test (GMAT) test results
- three letters of reference from colleagues, supervisors or significant clients

## Application

The following are required to apply for admission.

- Simon Fraser University's online *Application for Admission to the MOT MBA*
- official transcripts of undergraduate grades (mailed directly from the granting institution)
- three confidential letters of reference (mailed directly from the referees)
- GMAT (graduate management admission test) results
- English is the language of University instruction and communication so an applicant whose primary language is not English or whose previous education has been conducted in another language must demonstrate command of English sufficient to pursue graduate studies in the chosen field. Applicants normally will be required to achieve a satisfactory score on a standardized English test acceptable to the University. This test must include a writing component. The Test of English as a Foreign Language (TOEFL) including reading, writing, speaking, and listening components is acceptable for this purpose. The IELTS (International English Language Testing Systems) is also acceptable. The minimum University requirements for test scores is TOEFL 88 with a minimum of 20 in each category (internet based exam), or TOEFL 570 and TWE 5 (paper based), or TOEFL 230 (computer based), and IELTS overall band score of 7.0
- a recent passport style photograph
- a current curriculum vitae

## Financial Assistance

See "Financial Aid for Graduate Students" on page 229 for information on university scholarships and awards that are available to graduate students.

## Degree Requirements

Students must maintain a minimum 3.0 grade point average (B grade) and complete 54 units (46 units if accounting and managerial economics are waived) or more from the following list:

BUS 750-4 Managing Technological Innovation  
 BUS 751-4 Managerial Economics†  
 BUS 752-4 Strategic Management of Technology-based Firms  
 BUS 753-2 Ethics and Corporate Responsibility  
 BUS 754-4 Marketing Tech-Based Products and Services  
 BUS 755-2 Topics in International Business  
 BUS 756-4 Strategic Use of Information and Knowledge  
 BUS 758-4 Business Operations Design

BUS 761-2 Leadership for the Technology Driven Enterprise  
 BUS 762-4 Project Management  
 BUS 763-2 Managing Self and Others: An Organizational Simulation  
 BUS 764-4 Financing the Organization  
 BUS 766-4 Managerial and Financial Accounting†  
 BUS 770-2 Special Topics  
 BUS 771-2 Special Topics  
 BUS 772-2 Special Topics  
 BUS 773-2 Special Topics  
 BUS 774-4 Special Topics  
 BUS 776-4 Special Topics  
 BUS 778-4 Directed Studies in Management of Technology\*  
 BUS 780-6 Applied Project

\*requires prior approval of the academic director

†corequisites may be waived for recent graduates in business or economics with prior approval of the academic director

Students wishing to complete the biotechnology management stream must successfully complete eight units of biotechnology specific courses as determined by the academic director.

Biotechnology management stream students are not required to complete two of the following courses.

BUS 756-4 Strategic Use of Information and Knowledge  
 BUS 762-4 Project Management  
 BUS 774-4 Special Topics in the Management of Technology

## Courses

The following BUS courses are offered for the Management of Technology program: BUS 750, 751, 752, 753, 754, 755, 756, 759, 761, 762, 763, 764, 766, 770, 771, 772, 773, 774, 776, 778, 780, 781.

## MFRM (Financial Risk Management) Program

Segal Graduate School of Business, 500 Granville Street, Vancouver, BC, V6C 5K3, 778.782.7962 Tel, 778.782.5122 Fax, mfrm@sfu.ca, www.sfbusiness.ca/mfrm

### Academic Director

A.D. Pavlov BSc (Sonoma), MBA (Thunderbird), MA, PhD (Calif)

### Executive Director

D. Cross BA (Qu), MHA (Ott), 778.782.5023

The rapid globalization of business and escalating volatility of financial markets has increased demand for professionals with skills to effectively manage financial and non-financial risks that are facing firms. The study of both types of risk makes the master of financial risk management (MFRM) unique in Canada. MFRM graduates will have a solid grounding in the fundamentals of finance, asset pricing, credit, market, operational and enterprise-wide strategic risk management. They measure, mitigate and learn to manage such risks in the global business arena. The program reflects current trends in the finance industry and continues the University's heritage of innovation. The program consists of three full-time terms.

## Admission Requirements

Admission is based on the following.

- a four year undergraduate degree in business, commerce, economics, mathematics, physics or other suitable quantitatively oriented programs. Candidates holding a professional designation such as a PRM or FRM and evidence of strong mathematics competency would also be ideal candidates. Students with a strong mathematical aptitude who have completed the graduate diploma

- in business administration offered by the University would be qualified for admission consideration
- preference is given to qualified candidates with at least two years of work experience
- an in-person or telephone interview with the admissions committee
- proficiency in the English language.

The admissions committee reserves the right to waive qualifications in exceptional circumstances.

## Application

Beyond general University graduate requirements, including demonstration of English language competency when an applicant's previous education has been in a language other than English, applicants must submit the following documentation.

- application for admission to the MFRM program
- graduate management admission test (GMAT) score report or the graduate record exam (GRE)
- a transcripts of grades from a four year undergraduate degree, mailed directly from the granting institution
- three confidential letters of reference, mailed directly from the referees
- a recent passport style photograph
- a current curriculum vitae

## Financial Assistance

See "Financial Aid for Graduate Students" on page 229 for information about scholarships and awards that are available to graduate students.

## Degree Requirements

A minimum 3.0 grade point average (B grade) is required and completion of 42 units including BUS 802-3 Financial Economics  
 BUS 803-3 Financial Econometrics  
 BUS 805-3 Capital Markets  
 BUS 810-3 Fixed Income  
 BUS 814-3 Derivative Securities  
 BUS 818-3 Advanced Topics in Business Finance  
 BUS 857-3 Numerical Methods  
 BUS 863-3 Operational Risk Management  
 BUS 864-3 Credit Risk Management  
 BUS 865-3 Market Risk Management  
 BUS 866-3 Enterprise-wide Strategic Risk Management  
 BUS 868-3 Perspectives on Risk and Insurance  
 BUS 869-3 Topics in Risk Management  
 BUS 870-3 Final Project

## Courses

The following courses are offered for the master of financial risk management program: BUS 802\*, 803\*, 805\*, 810\*, 814\*, 818, 857, 863, 864, 865, 866, 868, 869, 870.

\*also offered for the MBA in global asset and wealth management

## PhD Program

Segal Graduate School of Business, 500 Granville Street, Vancouver, BC, V6C 1W6, 778.782.6796 Tel, 778.782.5122 Fax, www.sfbusiness.ca/phd

### Academic Chair

D.C. Thomas BSc (Appalachian State), MBA (N Carolina), PhD (S Carolina), 3275 Segal Graduate School of Business, 778.782.7709 Tel

In a small cohort, students benefit from sharing experience with others studying in various areas of business through a small number of common core courses. In addition, students study in their area of specialization and research methods that are tailored to the needs of individual students and the research strengths of the faculty. Also included is a teaching development component involving a certificate program. This is for graduate students without

substantial teaching experience, or for experienced teachers who wish to upgrade their skills.

## Admission Requirements

The minimum doctoral admission university requirements are provided in "1.3.4 Admission to a Doctoral Program" on page 220. Students are admitted in the fall term only. A minimum GMAT score of 600 and 5 on analytical writing is required. Interviews and a statement of interest is used to determine fit between students and faculty.

## Application

Students must submit the following when applying.

- Simon Fraser University's graduate application form
- official transcript of undergraduate and graduate grades (mailed directly from the granting institution). It is advisable to include an unofficial copy of your transcript(s) with your application
- three confidential letters of reference using the Faculty of Business Administration PhD Reference Form, at least two of which are completed by faculty members at universities that comment on the student's ability to conduct original research
- Faculty of Business Administration PhD Application Supplemental Information Form and Check List
- official score on the graduate management admissions test (GMAT). It is highly advisable to schedule testing well in advance of the application deadline. If available, please include an unofficial copy of the test result upon application.

## English Language Competence

English is the language of instruction and communication at the University. An applicant whose primary language is not English or whose previous education was conducted in another language must demonstrate command of English that is sufficient to pursue graduate studies. Applicants normally will achieve a satisfactory score on a standardized English test that is acceptable to the University. This test must include a writing component. The Test of English as a Foreign Language (TOEFL) combined with the Test of Written English (TWE) are acceptable for this purpose. The International English Language Testing System (IELTS) is also acceptable. The minimum University requirements are as follows.

- IELTS with a minimum score of 7 on the academic modules; or
- TOEFL iBT (internet-based TOEFL test) with an overall score of 88 or better with a minimum score of 20 in each of the four components (listening, speaking, writing, reading); or
- TOEFL CBT (computer-based TOEFL test) with a minimum score of 230 including a minimum essay score of 5

## Degree Requirements

The program combines a small number of cohort courses, a research methodology minor, and specialty courses selected by the senior supervisor and the doctoral candidate's committee to create a curriculum which will be flexible within certain limits.

Candidates typically complete three core courses, three courses in the research methods minor, and three to five courses in their specialized area as determined by their senior supervisor and doctoral committee. A research project with a pass/fail grade is required in the third term, and a candidacy exam. The candidate must fulfil the university qualifications regarding a thesis and its public defence.

Those who lack a business degree may, at the discretion of the PhD director, be asked to complete qualifying courses (see qualifying courses).

**Core Courses (for all except finance students)**

Students complete all of

BUS 980-4 Theory Development in Business Administration

BUS 981-4 Research Methods in Business Administration

BUS 982-4 Dissertation Development Workshop

Core courses will be offered once a year.

**Core Courses (for finance students only)**

Students complete all of

BUS 815/ECON 815-4 Portfolio Theory

ECON 803-4 Microeconomic Theory II

ECON 837-4 Econometric Theory I

Core courses will be offered once a year.

**Research Methods Minor**

The research methods minor area requires three research methods courses approved by both the PhD program director and the student's senior supervisor. These courses are deemed pertinent to the student's specific research. Other courses will be considered if they meet the needs of the PhD candidate. Examples of some possible courses are as follows.

ECON 835-4 Econometrics

ECON 836-4 Applied Econometrics

ECON 837-4 Econometric Theory I

ECON 838-4 Econometrics Theory IIA

EDUC 863-5 Quantitative Methods in Educational Research

EDUC 867-5 Qualitative Methods in Educational Research

PSYC 911-3 Research Design II: Research Studies

SA 857-5 Research Design Seminar

STAT 602-3 Generalized Linear and Nonlinear modelling

STAT 801-4 Statistics

STAT 802-4 Multivariate Analysis

STAT 805-4 Non-parametric and Discrete Data Analysis

STAT 806-4 Lifetime Data Analysis

These three required research methods courses will be completed in the first five terms. The student's supervisor can add to, or substitute, minor courses in consultation with the director of the PhD program.

**The Major: Specialization**

These three to five courses are set and administered by the senior supervisor in consultation with the student's PhD committee and the PhD program director. These courses can include Faculty of Business Administration graduate courses, directed studies courses, special topics, as well as approved graduate courses in other programs or universities. It is highly recommended that at least one of the major courses be given by the student's senior supervisor. In special cases, the senior supervisor can recommend, in consultation with the PhD director, that the student complete fewer, or more, courses than required in the major. At least two courses should be offered at Simon Fraser University.

**Qualifying Courses**

Students without prior business education or those who lack some specific background, or combination of education and experience, may be required to complete qualifying courses after PhD program admission. These requirements are at the discretion of the PhD director in consultation with potential senior supervisors. The number of qualifying courses may vary widely depending on the student's specific background and their intended area of study.

**Third Term Project (Summer Project)**

PhD students will generate a research project in their third term that will be graded by the senior supervisor on a pass/fail basis. The student can rewrite the project once. If the grade is still deficient, they will be asked to withdraw from the program. Those who pass the research project will present it in an open research presentations. Questions and answers emerging in this context should assist the student to develop their research.

**PhD Comprehensive Exam**

PhD students must pass a comprehensive exam in the sixth term of the program. This will include written examinations in each student's major and methodology minor, followed by an oral exam.

**Proposal Defence**

Prior to registration in BUS 992, the candidate presents an oral thesis proposal defence. The PhD

director assigns a faculty member who is external to the candidate's committee, but within the faculty, to join in the examination. The exam will probe a written thesis proposal and may extend into the area in which the candidate intends to do their work. The senior supervisor, committee and external examiner will confer a pass/fail grade upon the candidate's presentation and written work. Evaluator suggestions concerning improvement are expected. Those who fail the proposal defence are given one further opportunity at which to defend. A second failure requires withdrawal from the program. No candidate, unless given special permission, is permitted to complete a candidacy exam after the eighth term.

**Thesis/Thesis Defence**

Following "1.9 Preparation for Examinations" on page 224 of the *Graduate General Regulations*, the PhD thesis will focus on original research in one long narrative/empirical work or a series of papers.

**Residence Requirement**

The candidate must be enrolled and in residence at the University for a minimum of five terms. See "1.7.3 Residence Requirement for the Doctoral Degree" on page 223.

**Teaching Option**

PhD students without substantial teaching experience may complete the Certificate Program for Graduate Students in University Teaching and Learning — instructional development, teaching enhancement and a practicum — offered by the Learning and Instructional Development Centre. The program enhances and develops teaching skills. The practicum involves developing and delivering an undergraduate course in the Faculty of Business Administration.

**Courses**

The following BUS courses are offered for the PhD program: BUS 975, 976, 977, 978, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992

## Faculty and Areas of Research

For a complete list of faculty, see "School of  
Computing Science" on page 76.

P.S. Anderson – telecommunication and broadcasting  
policy; communication technology; communication to  
mitigate disasters/emergency communications

R.S. Anderson – international development;  
negotiation and dialogue in conflict and intervention;  
community economic development

E. Balka – politics, design, implementation and use of  
health information technologies; women and  
information technologies; technology assessment;  
participatory design of technology; information  
technology and work; technology and social  
movements; technology and occupational health  
A.C.M. Beale – Canadian and global cultural policy;  
feminist political economy of communication; history  
of communication thought; film and video

P. Chow-White – new media and technology; race;  
culture; information society; genomics  
K.A. Cross – critical communication theory; political  
communication; news and democracy; elections and  
campaigns; ideology and discourse; political  
economy; cultural studies; strategic communications  
for social and development movements; global news  
trends

Z. Druick – documentary film; film history and theory;  
technology and popular culture; narrative, semiotic  
and aesthetic theory; critical social and cultural theory  
A.L. Feenberg – critical theory of technology;  
technology studies; Marcuse and the Frankfurt  
School; Heidegger; online community; online  
education; software development for online  
discussion forums

R.S. Gruneau – popular culture and media;  
communications and cultural theory

S. Gunster – advertising and consumer culture;  
critical cultural theory; political discourse;  
environmental communication

R.A. Hackett – political communication; journalism  
and media studies; news and ideologies; media and  
social movements

L.M. Harasim – computer mediated communication  
and collaboration; telelearning and telework; social  
network design and evaluation

D.Y. Jin – political economy of culture and media;  
telecom policy and industry; globalization; Asia media  
and culture; new media

S. Kline – advertising; children's media and culture;  
audience research; public communication campaigns;  
non-broadcast video designs and uses

M. Laba – media analysis; popular culture; social  
issues communication; social advertising

B.S. Lewis – film and video studies, comparative  
broadcast and film policy

R.M. Lorimer – publishing; mass communication

J. Marontate – technology and culture; art worlds;  
science studies; innovation; cultural heritage;

interdisciplinary networks and critical theory  
K. McAllister – cultural studies and visual culture;  
memory and trauma studies; racialization; (post)

colonialism, refugee studies; Asian Canadian studies;  
photography; memorials; fieldwork  
G. McCarron – history and theory of communication;

history and theory of rhetoric; discourse analysis; film  
studies; advertising; cultural theory

D.C. Murphy – media production: documentary and  
advocacy video production; sound design; video  
post-production processes (motion graphics,  
compositing, keying and aesthetic design); media  
production as a pedagogical process; social  
implications of media. Educational design: interactive  
pedagogical media, web-based interfaces; media  
production facility design.

C.A. Murray – cultural participation and creative labor;  
cultural infrastructure and creative cities; cultural  
industries and broadcast policy; communication rights  
and global trade; research design in policy evaluation  
S. Poyntz – children, media and digital culture; history  
of media literacy; theories of the public sphere; film  
and historical representation

R.K. Smith – management of technological change

B.D. Truax – acoustic and electroacoustic  
communication; soundscape studies; audio aspects  
of media and advertising; electroacoustic and  
computer music

Y. Zhao – political economy of international  
communication; relationship between communication,  
development and democracy in transitional societies;  
media and information industries in China

## Adjunct Faculty

S. Braham – communications/computing systems,  
planetary explorations, space communications

N. Duxbury – Canadian cultural planning and  
policy-making; cultural indicators; cultural  
infrastructure

J.A.D. Holbrook – science, technology and regional  
innovation systems; evaluation of research networks;  
return on investment in research and innovation

Communication is a comparatively new discipline that  
builds on traditional social science disciplines. It  
focuses on analysis of the context and means in  
which information in its diverse forms is created,  
packaged, circulated, interpreted, and controlled. As  
an applied science, communication is important in the  
creation and critical evaluation of legal and public  
policies in broadcasting, telecommunications, and  
community and international development. The study  
of communication has also become prominent in the  
professions, notably in law, education, community  
medicine, counselling, and mental health, and in  
business administration, and broadcasting.

The school draws on a variety of perspectives, but it  
is most readily distinguished by the fact that it treats  
communication as a humanistic social science with  
both theoretical and applied dimensions. Students  
explore communication theory and practice and are  
encouraged to apply research and theory to issues  
and problems in contemporary societies and cultures.

The school offers graduate programs leading to an  
MA degree or PhD degree.

## Fields of Study and Research

Faculty resources provide for graduate studies in the  
following general areas of interest. Students may wish  
to specialize in one or more of these general areas, or  
to select related aspects from two or more.

- theoretical foundations in communication studies
- communication in history
- broadcasting and telecommunication regulation,  
policy and practice
- communication, development and environment
- the information society/economy
- computer mediated networks and virtual  
environments
- publishing
- international communication, inter-cultural  
communication
- science and technology policy, technology-transfer,  
communication of science
- media and cultural studies
- cultural policy and cultural politics
- acoustic environments and communication
- management of technology
- telework, telelearning, distance education
- political communication
- communication in conflict and intervention
- crisis/emergency communication

## Research and Training Facilities

Assessment of Technology in Context Design  
Laboratory

Graduate Resource Centre

Interactive Media Lab (network and multimedia  
studies)

Media Analysis Laboratory

Sonic Research Studio and Soundscape Archives

Telematics Laboratory

## MA Program

### Admission Requirements

Admission requires a bachelor's degree in  
communication (with at least a good second-class  
standing) or an equivalent degree in an  
interdisciplinary or humanities program, in one of the  
social sciences, or in socially oriented information  
systems, or biological sciences. However, qualified  
students will be accepted only if the communication  
graduate studies committee finds a suitable senior  
supervisor. Besides applications from communication  
students, the school encourages applications from  
those with experience in humanities, social or  
biological sciences, and interdisciplinary studies.

All applications should be directed to the graduate  
studies committee and, in addition to general  
university requirements, should include the following.

- an online application along with the application fee
- all official post-secondary transcripts
- a three to five page succinct statement of interests  
and goals, together with an account of relevant  
academic and personal background

- two samples of scholarly and/or other written work relevant to the applicant's objectives and any tapes, films, etc. the applicant considers relevant
- three references, at least two of whom should be familiar with the applicant's academic work.

The application deadline is December 15. The committee announces decisions before the last week of April. Students enter the program in fall term.

The school recognizes working individuals' special needs. The graduate program is approved for part-time students but University regulations require all MA students to complete studies within 12 full-time equivalent terms or six years, whichever is shorter.

As a condition of entry into the program, students with undergraduate degrees in disciplines other than communication may be required to complete up to two additional courses to complete their MA. These conditions, if applicable, will be specified in the letter of offer as determined by the admissions committee on an individual basis.

### Advising and Supervision

Each new student is assigned an interim advisor upon program admission. The student selects a senior supervisor and, in consultation with this faculty member, selects one or two other faculty to serve on a supervisory committee by the beginning of the student's third term. Although the graduate studies committee (GSC) will endeavor to provide interim advisors with expertise in the student's stated area of research interest, there is no obligation to select the interim advisor as senior supervisor.

### Degree Requirements

The program may be completed through extended essay, or project or thesis. Each is equivalent. Each requires the completion of the same number of courses, is research based and is subject to external examination. Students determine which option is suitable for their research in consultation with their senior supervisor and supervisory committee.

The thesis represents a longer form of research and is normally between 80 to 100 pages, inclusive of all bibliographies and appendices.

The extended essays requires completion of two essays of not more than 40 pages, which may be on related fields, but which may not substantively duplicate papers presented in course work.

A student may present an alternative format such as a CD-ROM, website, video or audio documentary, on-line software development, or other technologically based formats. All projects need to be documented in a written form, not to exceed 40 pages, and be determined in consultation with the senior supervisor. This documentation should include the rationale behind the project, a description of the research undertaken, as well as a description and evaluation of the project itself.

All thesis and essay options will be deposited in the University library. Procedures for the supervision and examination of extended essays and projects are the same as those for theses:

All master's students present, discuss and defend their MA thesis, project and essay options in an exam before their supervisory committee and external examiner as required by graduate regulation 1.9.

Extensive guidelines for each option are found on the School of Communication's graduate website: [www.cmns.sfu.ca/ma-guidelines](http://www.cmns.sfu.ca/ma-guidelines)

Supervision: a supervisory committee should be approved by the graduate studies committee at the beginning of the third term.

Formal review: graduate degree candidates will have an annual formal review of their academic progress by the graduate studies committee.

Graduate courses are in six groups. Group 1 contains survey courses that define and map the field and expose students to faculty interests and research programs. Group 2 contains research methods and methodology courses that help with research projects. Group 3 contains the school's various research area courses. In group 4 courses, students complete field work, or work and study in a professional setting. In group 5 courses, students perform research and/or reading under faculty member supervision. Group 6 refers to the course designations for work on theses, projects, extended essays, or dissertations in process, or colloquia where students present such work, and for comprehensive examinations.

### Course Requirements

At least four graduate courses (normally completed before beginning a thesis, a project, or two extended essays) which must include the following, unless otherwise stipulated as a condition for admission:

- one course from group 1
- one course from group 2
- two additional courses, at least one of which is selected from within the school. No more than one may be completed with the same instructor, except by permission of the graduate studies committee.

#### Group 1 Courses: Surveys of History and Theory

CMNS 800, 802, 804

#### Group 2 Courses: Research Design and Methods

CMNS 801, 805

#### Group 3 Courses: Research Area Courses

CMNS 815, 830, 840, 845, 855, 856, 857, 858, 859

#### Group 4 Courses: Research Internship and Fieldwork

CMNS 881, 882

#### Group 5 Courses: Directed Readings and Studies

CMNS 850, 851, 880

#### Group 6 Courses: Colloquia and Theses

CMNS 860, 898

### Co-operative Education

The co-operative education program combines professional work experience with academic studies. After the first two terms of the program, students may alternate work and academic terms. All work positions are in paid study related jobs and may lead to the communications project or extended essay in lieu of a master's thesis. Application for the co-op program is made through the school's co-op co-ordinator and the co-operative education office.

### PhD Program

The school will offer PhD students the opportunity to choose from the fields of study and research listed above under *Faculty and Areas of Research* and *Fields of Study and Research*.

#### Admission Requirements

Admission requirements will normally include a master's degree or an exceptional record of undergraduate and/or graduate work in a relevant area of study. Enrolment is strictly limited.

For general university admission requirements, see "Graduate General Regulations" on page 219. In addition, applicants are asked to provide

- an online application along with the application fee.
- a two to three page succinct account of their past academic experience, which would include scholarly work, research accomplished or in progress, relevant teaching experience and degree of responsibility for course content

- samples of scholarly writing, research reports, or other material
- three references (at least two of whom should be familiar with the applicant's academic work)
- a brief outline of the applicant's research objectives, with representative bibliographical references and other source material, where applicable, including a statement of interest with an explanation or account of how they see their research objectives fitting in with the School of Communication and potential supervisors.

The application deadline is December 15. The committee announces its decisions before the last week of April. Students enter in the fall term.

### Degree Requirements

Doctoral candidates complete course work, comprehensive exams, a dissertation proposal, and submit a dissertation which demonstrates an original contribution to the field of communication. Candidates normally satisfy the following requirements.

### Course Work

Students complete a minimum of nine graduate courses for those with a bachelor's degree (including CMNS 860), or five graduate courses for those with a master's degree. The graduate studies committee may require additional courses depending on the student's background and dissertation project. These courses are normally completed before completing the comprehensive examinations, or beginning a dissertation, and will include the following:

- two courses from group 1
- one course from group 2
- a minimum of two additional five-unit courses for those entering with a master's degree, at least one of which is selected from within the school, and may include other courses from groups 1 and 2. A minimum of six additional courses is required of PhD students without a master's degree. A minimum of four of these must be completed from the school's course offerings. For all students, a maximum of two courses may be completed from groups 4 and 5. No more than two of group 4 or 5 may be completed with the same instructor, except with graduate studies committee permission.
- students will be required by the communication graduate studies committee to demonstrate adequate command of any language essential to the completion of their dissertations

#### Group 1 Courses: Surveys of History and Theory

CMNS 800, 802, 804

#### Group 2 Courses: Research Design and Methods

CMNS 801, 805

#### Group 3 Courses: Research Area Courses

CMNS 815, 830, 840, 845, 855, 856, 857, 858, 859

#### Group 4 Courses: Research Internship and Fieldwork

CMNS 881, 882

#### Group 5 Courses: Directed Readings and Studies

CMNS 850, 851, 880

#### Group 6 Courses: Colloquia, Theses and Comprehensives

CMNS 860, 895, 899

### The Comprehensive Examination

In consultation with their supervisory committee, students must apply to complete the comprehensive examination following completion of required course work and normally no later than the sixth term. Upon passing, the student is admitted to full degree candidacy. The examination may be retaken once.

To prepare for the comprehensive exam, students select and design two comprehensive fields which may be related to the dissertation topic itself or carve out an area of potential teaching competence. At least one examination shall survey a range of theoretical or methodological frameworks within the study of communication to meet a breath requirement.

The student submits definition papers, including bibliography, on each of the fields in preparation for both a written and oral examination.

#### Dissertation Proposal

Students enrol in CMNS 899 in the term immediately following completion of the comprehensives, and will present a full dissertation proposal to their supervisory committee. Specific comprehensive examinations and dissertation proposal guidelines are available from the graduate program co-ordinator.

#### An Original Dissertation

PhD students complete a doctoral dissertation that demonstrates an ability to make an original contribution to the field of communication.

#### Advising and Supervision

Students are advised to read section 6 of the *General Regulations* and the school's *Guidelines for Supervisory Committees*.

Upon admission, students are assigned an interim advisor. The student selects a senior supervisor and, in consultation, selects two or three other faculty for a supervisory committee by the beginning of the third term. Although the graduate studies committee endeavors to select interim advisors with expertise in the student's research area, there is no obligation to choose the interim advisor to be senior supervisor.

Students have the right to discuss their programs and status with the graduate program chair, to ask for a review of any recommendation or grade, and to appeal committee, supervisor or faculty decisions.

## School for the Contemporary Arts

Room 601C SCA, 778.782.3724 Tel, 778.782.5907  
Fax, www.sfu.ca/sca, mfragrad@sfu.ca

#### Director

M.S. Gottfrit BA (C'dia), MA (McG) – music

#### Graduate Program Chair

J. Radul BMus, BA (S Fraser), MFA (Bard)

#### Faculty and Areas of Research

See "School for the Contemporary Arts" on page 152 for a complete list of faculty.

C.V.A. Browne – documentary and innovative film production, poetry, fiction, screenplay, poetics, interdisciplinary performance

A. Clay – drawing, painting, text work, installation, contemporary feminist and critical theories

H. Daniel – performance and new technologies

A. Eigenfeldt – music for dance, MIDI systems, digital signal processing

M. Eist – ballet, modern dance, body therapies, choreography, dance education, dance history

J. Garay – choreography, performance, costume design

M.S. Gottfrit – electroacoustic music, film-sound design and scoring

P. Gruben – directing, scriptwriting, editing: dramatic and experimental narrative

S. Hill – theatre performance, directing, devising, interdisciplinary collaboration

R. Kitsos – choreography, performance, combining new technologies and performance

D.D. Kugler – directing, dramaturgy, play-making

J. Levitin\*\* – film production and theory, independent film making, feminist film criticism, ideological studies, third world film, comedy, directing, women's studies  
D.K. MacIntyre – music composition, interdisciplinary composition and performance, collaboration  
L. Marks – experimental and electronic media, non-Western approaches to media technologies, representation of the senses, and Arab and African cinema  
D. Oleksijczuk – images and objects produced in Britain and Canada, intercultural and global approaches to the history of art, contemporary art and visual culture

C. Pavsek – documentary cinema, political cinema, German cinema, film theory  
J. Radul – performance, video, photography, sound and text, contemporary theory

P. Stella – acting, directing, playmaking, dramaturgy  
O. Underhill – composition, conducting, contemporary ensembles, music theatre, interdisciplinary collaboration, 20th century theory

C. Welsby – avant garde film and video making, photography and time-based gallery installations

J. Yoon – photo and video based installation, image and text, art in the public realm, contemporary theory

– feminist, post-colonial and diasporic discourses

\*joint appointment with communication

\*\*joint appointment with women's studies

### MFA Program

The program, leading to a master of fine arts (MFA) in interdisciplinary studies, provides advanced training in music, dance, theatre, film, and visual arts. It furthers cross-disciplinary research, technical skill and artistic creativity, and the development of critical awareness of the relatedness of the arts both in contemporary society and in an historical perspective. The MFA degree is the standard qualifying degree for teaching at the post-secondary level. Courses provide flexibility to accommodate individual differences in background and artistic goals, with emphasis on the production of creative interdisciplinary work. The program is full time and two years in duration. It cannot be pursued part-time and has a residency requirement due to the nature of the artistic practice.

### Admission Requirements

Applicants must hold a BFA, BA, BMus or BEd in one or more of the art disciplines, with a 3.0 CGPA or better. In special cases, a candidate may be admitted who does not satisfy this requirement but who either possesses comparable certification (an art school or conservatory diploma) or has exceptional experience as a practising artist.

Applicants must demonstrate creative competence with a high standing in music, dance, theatre, film, or visual art undergraduate courses, or substantial experience in these fields outside the university. For consideration by the admissions committee, applicants submit a work portfolio of audio or video tapes, scores, slides, films, plays or academic papers. Performing artists may be asked to audition.

Foreign students may be required to demonstrate proficiency in the English language, attained by scoring 570 or above in the Test of English as a Foreign Language.

### Degree Requirements

MFA candidates complete a minimum of 35 units, including 25 of course work and a project, which is the equivalent of 10 units. Normally, this project is an art presentation accompanied by appropriate documentation with an oral defence.

Students complete all of

FPA 811-5 Interdisciplinary Graduate Seminar I

FPA 812-5 Interdisciplinary Graduate Seminar II

FPA 813-5 Interdisciplinary Graduate Studio  
FPA 898-10 Master of Fine Arts Graduating Project

plus two of

FPA 883-5 Studio in Fine and Performing Arts I

FPA 885-5 Studio in Fine and Performing Arts II

FPA 887-5 Selected Topics in Fine and Performing Arts

FPA 889-5 Directed Study in Fine and Performing Arts

## School of Interactive Arts and Technology

Simon Fraser University Surrey, Central City,  
250–13450 102nd Avenue, Surrey, BC V3T 0A3,  
778.782.7499 Tel, 778.782.7488 Fax,

#### Director

J. Bowes AB (Hamilton College), MSc (Syr),  
PhD (Mich State)

#### Graduate Program Chair

M. Hatala MSc, PhD (Kosice Tech)

#### Faculty and Areas of Research

For a complete list of faculty, see "School of Interactive Arts and Technology" on page 158.

A.N. Antle – child-centred design and evaluation of interactive technologies, mixed reality and location-based interaction models, play and informal learning in interactive environments, industry-based, human-centred design practice

L. Bartram – collaboration interfaces, perceptual issues in information visualization, methodologies for interface evaluation, and human interaction in complex systems

J. Bizzocchi – interactive narrative; critical analysis of interactive experience; the craft of game design; production aesthetics for large flat-screen video display; educational technology and distributed learning

J. Bowes – digital media and telecommunications policy; computer mediated communication and online commerce; technology transfer; minorities and media; history of technology

T.W. Calvert\* – animation and choreography of human figures; networked multimedia systems for learning; the design and evaluation of human-computer interfaces for complex systems; computer graphics

J. Dill\* – information visualization, visual analytics, design visualization, haptic rendering, intelligent graphical interfaces

S. DiPaola – collaborative knowledge systems; interactive art expression systems; facial and character systems for animation and real-time interactivity; alternative and social user interfaces; 3D interactive avatar and agent collaboration systems

H.I. Erhan – design cognition, computer-aided design, design requirements, component-based design, formal methods, software engineering

B.D. Fisher – interaction science cognitive systems, human-information discourse, visual analytics, games and simulations

C. Geisler – institutional transformation, changing faculty-to-faculty processes, collaborative systems design, analyzing language, rhetorical agency

D.J. Gromala – biopotentials, meditation and art, multiple levels of awareness, biomedicine, interface design, phenomenological philosophies of experience, critical analyses of interactive art, media and culture, medical visualization, qualitative research methods

M. Hatala – knowledge representation and knowledge management; ontologies and semantic web; intelligent information retrieval; organizational learning; online learning

P. Pasquier – multi-agent systems: artificial intelligence, artificial life, machine learning; metacreation: machines endowed with creative behavior; audio art: composition, sound design, sound spatialisation; performance and technology: theory and practice

A.D.N. Rajah – post-traditional media, sacred spaces: sacred art and digital technology, interfaces for navigating sacred content

B. Riecke – human multi-modal spatial cognition, spatial orientation, and navigation, enabling robust and effortless spatial orientation in virtual environments, self-motion perception, illusions, and simulation, perceptually oriented, multi-modal human-computer interfaces and human-centered, effective virtual reality simulations, multi-model, interactive art/dance performances

T. Schiphorst – authoring methodologies; human computer interaction; wearable technology; multi-modal interaction

M. Seif el-Nasr – interactive entertainment, expressive artificial intelligence systems, authored cinematic systems, computer and video game research

C. Shaw – virtual environments, 3D free-form surface design, two-handed 3D user interfaces, bioinformatics visualization, scientific visualization, information visualization, human-computer interaction, computer graphics

R. Wakkary – interaction design; multi-user interaction; design methods in interaction and games; collaborative authorship; digital culture and online content; online learning

R. Woodbury – design space exploration, parametric design, online interpretations, computer supported co-operative work, online learning

\*emeritus

## Program Goals

This program offers master's and doctoral degrees in art, design, media and information technology with particular expertise in the computational and interactive aspects of art, design, new media learning, business, computer games, cognition, performing arts, social science and cultural studies. The program is geared toward students who wish to learn about technology and how it is made and used.

The program has the quadruple objectives of: first, research and development of new computational technology in the context of complex human organizations and situations; second, research into the acts of designing, making, and managing technology; third, inquiry into and use of research methodologies that enable interdisciplinary collaboration and the development of new technologies; and fourth, application of new technologies in society and industry, particularly in creative areas of art, design, games and media.

## Degrees Offered

The program offers courses leading to an MA, MSc and PhD, and provides graduate study in diverse areas related to people, technology and society, especially the areas of art, design, games and knowledge management.

The following degrees, for those who were admitted in September 2003 or earlier, have been phased out: master of applied science (information technology); master of applied science (interactive arts)

## Fields of Study, Research, and Research Facilities

Faculty conduct research in a variety of areas including design, digital media, performance and media art, human-computer interaction, computer supported co-operative work, and information technology. Specific areas include collaborative

product development; computational design; design science; digital game design; digital storytelling; human figure, face and character animation; information visualization; interaction design; interactive narrative; knowledge representation and management; knowledge visualization; media and telecommunication policy; performance in mediated environments; scientific visualization; visual analytics; and ubiquitous computing and wearable computing.

Faculty research is supported by NSERC, SSHRC, the Networks of Centres of Excellence, Canarie, Heritage Canada, the Canadian Foundation for Innovation, the BC Knowledge Development Fund, BCcampus and others.

## Research Laboratories

The school operates an extensive suite of research laboratories in new facilities. It dedicates the best spaces in these facilities as working space for graduate students. The facilities include the following.

### *The Usability Lab*

This lab supports research in user interfaces, user response, internet structure, online repositories and visualization. Facilities include head and eye tracking equipment, servers, terabyte storage arrays, software, displays, and desktop and laptop computers.

### *The Black Box*

This lab provides the ability to stage and measure human motion and performance. It includes a theatre with resilient floors, blackout curtains, lighting, sound, motion capture and green screen. Ancillary equipment includes cameras, software, servers and desktop computers.

### *Rapid Prototyping Lab*

This new lab is developing a suite of tools and fixtures for rapid creation of design prototypes. It includes a 3D printer, a laser cutter, an industrial sewing machine, large format plotters, electronics kits and a collection of power and hand tools.

### *Interactive System Prototyping Lab*

Many researchers in SIAT build large scale prototypes. This lab provides high resolution displays and projectors, numerous input and sensing devices, and desktop and laptop computers.

### *Video Lab*

This is a small lab devoted to research in video studies, production and editing. It provides video cameras, mixing hardware and software and acoustically isolated rooms.

### *InfoNet Media Lab*

The lab houses a computational environment for the creation, usage, and sharing of multi-modal information. It supports a 128 node Beowulf cluster, instrumentation and prototyping software, high resolution displays, and desktop and laptop computers.

### *Shared Virtual Environments Lab*

The lab supports research into telepresence, and the use of computing environments to share activity over networks. The lab houses a two-wall cave, several stereoscopic displays, access grid conferencing facilities, and a very high resolution digitally enabled conference table.

The Video Theatre supports research in the audience reception of media. It houses a high-resolution projector, a 102" screen, multimedia recording and playback systems and a 3000W stereo sound system.

### *Simon Fraser University Libraries*

Specialized reference services and specialist librarians for the graduate program are available.

### *Regional Opportunities*

Ties with high technology industry and other Simon Fraser University programs offer additional facilities and synergies for graduate level research.

## Admission Requirements

There will be annual admission into the program with the possibility of early or out-of-cycle admissions in special cases.

The minimum standards will be those of Simon Fraser University, as described in the *Graduate General Regulations* (page 219), augmented by the following specific requirements.

It is our aim to admit groups of students with diverse backgrounds, across the broad areas in which our faculty have disciplinary expertise. The following admission requirements are designed to encourage such diversity while setting minimum standards for acceptance into the program.

Master's students will be admitted to study for either the MA or MSc degree. Students may articulate between the MA and MSc degrees by meeting the admission and program requirements of the degree to which they articulate and with the approval of the graduate program committee. A student may make one application for articulation.

## Minimum Standard Entrance Requirements Specific to the MA and MSc Programs

- an undergraduate degree in a field related to the proposed program of study. For example: BSc computer science, BAsC engineering (electrical, communications, computer engineering), BA or BSc in education, management, economics or communications, BFA in art, design or performing arts, BA in art, art history, architecture, linguistics, psychology or philosophy, BArch, BLArch, BID or
- an undergraduate degree in another, related discipline. Applicants must establish the relationship between the discipline in which they hold their previous degree or degrees and this program; and how they would benefit from this program.
- for MSc applicants, a record of substantial university course work in scientific and/or technological areas.
- a minimum cumulative GPA of 3.0 or better at a Canadian university, or equivalent, for the undergraduate degree.
- two reference letters from suitably qualified persons.

## Minimum Standard Entrance Requirements Specific to the PhD Program

- a graduate degree in a field related to the proposed program of study, e.g. MSc computer science, MASc engineering (electrical, communications, computer engineering), MA or MSc in education, management, or economics, communications, MFA in art, design or performing arts, MA in art, art history, architecture, linguistics, psychology or philosophy, MArch, MLArch or
- a graduate degree in another, related discipline. Applicants are required to establish: the relationship between the discipline in which they hold their previous degree or degrees and this program; and how they would benefit from this program.
- or
- an undergraduate degree in one of the two categories above. Applicants are required to demonstrate both high academic standing (3.5 GPA or better at a Canadian university, or equivalent), for the undergraduate degree, and evidence of research aptitude and accomplishment.
- a minimum cumulative GPA of 3.0 or better at a Canadian university, or equivalent, for the master's degree.
- three reference letters each from a suitably qualified person.

## Additional Admission Requirements for the MA, MSc and PhD Programs

### English Language Proficiency

Students must demonstrate proficiency in the English language through one of the following means.

- a previous undergraduate or graduate degree completed at a university where English is the applicant's primary language of instruction
- a minimum score of 88 with a minimum of 20 in each category on internet based TOEFL
- a minimum score of 570 on the paper-based TOEFL test with a minimum TWE score of 5
- a minimum score of 230 on the computer-based TOEFL test with a minimum TWE score of 5

### Portfolio/Interview

Candidates who are considered for admission may be required to submit a work portfolio and/or be required to attend a personal or telephone interview during the latter stages of the admission process.

### Advising and Supervision

Student supervision will comply with graduate general regulations section 1.6 *Supervision*. Students entering the program will be assigned an interim advisor. The interim advisor has two main tasks: advising the student on issues related to study within the program and assisting the student in identifying and approaching potential senior supervisors. There is no requirement that the interim advisor has a role in supervision once the senior supervisor is approved.

The normal size of MA and MSc supervisory committees is two members. The normal size of a PhD supervisory committee is two or three members.

## MA, MSc and PhD Programs

### Degree Requirements

The primary requirement for the MA, MSc and PhD degrees is the thesis. The course requirements are aimed to support the student's thesis research. Students fulfil the following requirements to complete their degree. The MA, MSc and PhD requirements have common components, and are thus presented together. As requirements differ, they are listed respectively for each degree.

### Required Courses

Students complete

IAT 800-3 Foundations of Computational Art and Design

and one of

IAT 801-3 Qualitative Research Methods and Design

IAT 802-3 Quantitative Research Methods and Design

IAT 800 is a mandatory course, but may be waived for those students with sufficient formal educational background in art and design computation.

### Core Courses

Master's students complete at least four additional courses as described below.

MA students complete two courses from the following.

IAT 810-3 New Media

IAT 811-3 Computational Poetics

IAT 812-3 Cognition, Learning and Collaboration

IAT 813-3 Artificial Intelligence in Computational Art and Design

IAT 814-3 Knowledge Visualization and Communication

MSc students complete two courses from the following.

IAT 812-3 Cognition, Learning and Collaboration

IAT 813-3 Artificial Intelligence in Computational Art and Design

IAT 814-3 Knowledge Visualization and Communication

PhD students complete at least five additional courses including at least two from the following.

IAT 810-3 New Media

IAT 811-3 Computational Poetics

IAT 812-3 Cognition, Learning and Collaboration

IAT 813-3 Artificial Intelligence in Computational Art and Design

IAT 814-3 Knowledge Visualization and Communication

### Electives, Special Topics and Directed Readings

Elective offerings are expanding as the faculty complement grows. Several new special topics courses will be offered that reflect the interest and expertise of new faculty. Course offerings will be listed on the program's website ([www.siat.sfu.ca/grad](http://www.siat.sfu.ca/grad)) as they become available.

Master's and PhD students complete two courses from electives, special topics and directed readings courses. Required or core courses that are not completed as part of the degree requirements may also be completed as electives. Subject to supervisory committee approval and graduate program committee approval, students may fulfil part of these requirements through other appropriate graduate courses at Simon Fraser University or elsewhere (the latter subject to Simon Fraser University rules on external courses). Normally, all students complete at least one course towards these requirements as either an elective or special topics offered within the program. For determining degree requirements in core, elective, special topics and directed readings categories, the number of courses with at least three units each shall be used. At least one elective must be a research methods course appropriate to the student's course of study.

Special topics courses offered in the program will be approved by the graduate program committee to essentially the same criteria required for approval of a new elective. At the time of approval, each special topics course will be evaluated for suitability for study towards the master's or doctoral degree and the results of such evaluation will be noted in the course approval and course outline. At the time of approval, each special topics course will be evaluated for suitability for fulfilling the program's research methods requirement and the results of such evaluation will be noted in the course approval and course outline.

Directed readings are seminar or tutorial experiences that develop special research interests in depth and with faculty supervision. Students should not expect to complete a directed readings course where there is a substantively comparable course offered at Simon Fraser University. Directed readings should be distinct from the work to be undertaken towards the master's thesis. Normally, directed readings should not be completed under the supervision of a student's senior supervisor. Normally a master's student would complete at most one, and for doctoral students at most two, directed readings course during his or her degree. Directed readings offered within the program will be approved by the graduate program committee to essentially the same criteria required for approval of a new elective. At the time of approval, a directed readings course may be approved as fulfilling the program's research methods requirement.

### MSc Elective Requirements

Students complete at least one course from the following

IAT 840-3 Models of Networked Practice

IAT 842-3 Theory and Design of Games

IAT 844-3 Spatial Computing

IAT 845-3 Methods for Research into Technological Systems

plus any special topics course or any directed readings course approved by the graduate program committee for study towards the MSc degree.

The following may be used to satisfy elective requirements, subject to the MSc elective requirements above. For MA and PhD students, there is no elective requirement.

IAT 830-3 Learning Design and Media

IAT 831-3 Encoding Media Practice

IAT 832-3 Exploring Interactivity

IAT 833-3 Embodiment and Electronic Performance

IAT 840-3 Models of Networked Practice

IAT 842-3 Theory and Design of Games

IAT 844-3 Spatial Computing

IAT 845-3 Methods for Research into Technological Systems

IAT 881-3 Special Topics I

IAT 882-3 Special Topics II

IAT 883-3 Special Topics III

IAT 884-3 Special Topics IV

IAT 885-3 Special Topics V

IAT 886-3 Special Topics VI

IAT 887-3 Special Topics VII

IAT 888-3 Special Topics VIII

IAT 871-3 Directed Reading I

IAT 872-3 Directed Reading II

IAT 873-3 Directed Reading III

### Designated Research Methods Courses

The following research methods courses satisfy the research methods requirement in the elective course requirements. This course requirement must be relevant to the student's thesis work and be approved by the student's supervisor and the graduate program committee as being appropriate. Courses external to SIAT may also be used to satisfy this requirement and must be approved by the student's supervisory committee and the graduate program committee.

IAT 833-3 Embodiment and Electronic Performance

IAT 834-3 Mixed Methods in Design Research

IAT 845-3 Methods for Research into Technological Systems

### IAT 805-0 Research Colloquium

The research colloquium is an important part of the program. Master's students present in one seminar, and PhD students present two seminars and all are expected to attend a large majority of the seminars for at least two academic terms.

### Requirements Specific to MA and MSc Degrees

Master's students produce and defend a thesis as part of degree requirements. All Simon Fraser University regulations on thesis form and examination process apply. The standards of scholarship (quality of work) for the master's degree are no less than those for the doctorate, except the scale, scope and originality of the thesis may be less. Commonly, the master's thesis shows refinement of a developed scholarly specialization, a useful replication of established note and, in some cases, a pretesting or prototype of supporting ideas for eventual PhD research.

#### IAT 897-6 MA Thesis

Students who are working on their master of arts thesis enrol in this course. This course will not count toward the course work requirements.

#### IAT 898-6 MSc Thesis

Students who are working on their master of science thesis will enrol in this course. This course will not count towards the course work requirements.

### Requirements Specific to the PhD Degree

#### PhD Comprehensive Examination

The PhD degree requires a comprehensive examination aimed at testing for achievement in interdisciplinarity, breadth of knowledge, depth of knowledge, topic focus and scholarly skill.

With the consent of their Supervisory Committee, students may sit the comprehensive examination following completion of required course work. Upon

passing, the student will be admitted to full degree candidacy. The examination may be retaken once.

As part of the preparation to undertake the comprehensive examination, the student submits, to the supervisory committee, a comprehensive annotated bibliography of readings used throughout course work, and readings related to the proposed thesis topic. The senior supervisor will inform the graduate program committee of the supervisory committee's consent to write the examination and will provide a copy of the annotated bibliography. Upon receipt of this from the senior supervisor, the graduate program committee will form an examination committee comprising the supervisory committee, the graduate program chair or designate, and one other member of faculty in the School who is eligible to act as a senior supervisor. The graduate program chair or designate shall chair the examination committee.

The examination will have three sections. The first will test for breadth of knowledge within the student's course of study. The second will test for knowledge of the proposed thesis topic. The third will test for knowledge of and skill with pertinent research methodology. At least two of the sections will have a required archival component. The exam will have an oral component that will test for all three sections.

The examining committee will refer to the bibliography when preparing the exam. The exam process should not exceed one term from the date of notification to the graduate program committee of the consent to write the examination. This may be longer should a student be required to retake the examination.

Specific guidelines for these examinations are available from the graduate program assistant.

#### *PhD Proposal*

The PhD degree requires a dissertation proposal aimed at collegial review of the proposed work, development of research formulation and presentation skills, and approval of the dissertation work by the supervisory committee and the graduate program chair. The approval of the graduate program chair is largely for oversight issues, for example, required ethics clearances. The dissertation proposal has two components: a research prospectus and a public event with timely notification given to the campus community.

#### *PhD Dissertation*

PhD candidates produce and defend a dissertation as part of degree requirements. All Simon Fraser University regulations on thesis form and examination process apply. A successful dissertation demonstrates an original contribution to a student's field of study. The standard of work expected is that of peer-reviewed work by accomplished scholars in their specialization. Candidates are encouraged to consider the professional and career implications of this major scholarly work.

IAT 899-6 PhD Dissertation

Students who are working on their PhD dissertation will enrol in this course. This course will not count toward the course work requirements. PhD candidate status is neither required for nor implied by enrolment in this course.

*PhD students who have completed a SIAT MA or MSc*  
PhD students who have completed a master's (MA or MSc) degree within the program are not required to complete IAT 800, 801 or 802 as part of their PhD program. Instead, these students may apply to the graduate program committee for a reduction in course work aimed at breadth and scholarly skill. Students complete at least one core course and three electives.

## Co-operative Education

On an optional basis and with graduate program committee approval, students may participate in co-operative education by placement in a government or private research agency to gain practical experience in their thesis or dissertation area. The co-op option is separate from course work and serves as an adjunct to the thesis/dissertation process.

Co-operative education provides opportunities to gain practical research experience in external settings. Enrolment requires successful completion of at least two courses within the program, good academic standing, no deferred grades and approval of the graduate program committee.

This option is separate from course work and serves as an adjunct to the thesis/dissertation process. Students are responsible for making all external arrangements and pay the co-op enrolment fee as listed in the Graduate Fee Schedule (see "Tuition Fee Schedule 2009 – 2010" on page 227).

The following co-op courses are available.

IAT 861-0 Practicum I  
IAT 862-0 Practicum II

## Publishing Program

3576 Simon Fraser University Vancouver, 515 West Hastings Street, Vancouver, BC, V6B 5K3,  
778.782.5242 Tel, 778.782.5239 Fax,  
www.ccsf.sfu.ca

#### *Director*

R.M. Lorimer BA, MA (Manit), PhD (Tor)

#### *Professor*

R.M. Lorimer BA, MA (Manit), PhD (Tor) – publishing policy

#### *Assistant Professor*

J. Maxwell BA (Br Col), MPub (S Fraser), PhD (Br Col) – technology

#### *Senior Lecturers*

R. Dosi BJourn (MMoreno), MPub (S Fraser) – design  
M. Schendlinger – editing

#### *Associate Members*

A. Cowan, Continuing Studies – publishing education, editing and production  
L. Copeland, Library  
C. Gerson, English – history of Canadian publishing  
M. Jordan, Library  
B. Owen, Library – information technology  
R.K. Smith, Communication – information technology

#### *Adjunct Faculty*

M. Benjamin BA (Ott) – publishing consultant and writer  
T. Best BA (Tor) – vice president marketing, HB Fenn and Company Limited  
R. Bringham BA (Indiana), MFA (Br Col) – author  
P. Bruce BA (Car), MA (Tor) – publisher, Phyllis Bruce Books  
K. Cochrane BA (Qu) – associate publisher, Doubleday Canada  
P. Cocking BA (Br Col) – design director, Douglas & McIntyre  
D. Cooke BA (Car) – literary agent and owner, The Cooke Agency  
J. David BA (WOnt), MA (Windsor) – publisher, ECW Press  
J.J. Douglas LLD (S Fraser) – retired publisher, Douglas and McIntyre  
N. Flight BA (Denison), MA (Bryn Mawr) – associate publisher, Greystone  
R. Hancox Dip (Regent St), PMD, Neiman Fellow (Harv), Professional Fellow  
K. Hanson BA (Alta), MBA (Tor) – president, Simon and Schuster Canada

D. Kent – president and CEO, Harper Collins Canada  
A. MacDougall – president, Raincoast Books  
R. McCullough – publisher, Whitecap Books Limited  
P. Milroy BA (Ont) – publisher, UBC Press  
S. Osborne, BA (Br Col) – publisher, Geist Magazine  
C. Riggs BA (Saint Mary's, Can), MPub (S Fraser) – partner, Turner-Riggs Workspace  
C. Scott Richardson BA (Tor) – vice president and creative director, Canadian publishing, Random House Canada  
M. Schendlinger – editing and magazine publishing  
M. Tambllyn BA (WLaur), MBA (WOnt) – sales data analysis  
R. Touchie BA (Windsor), MA (Br Col) – publishing management  
P. Whitney, BA (Sask), MLS (Br Col) – chief librarian, Vancouver Public Library  
J. Willinksy BA (Laurentian), MEd (Tor) PhD (Dal) – professor, Stanford University

#### *Advisor*

Ms. J. Ray BA (S Fraser), 3576 Simon Fraser University Vancouver, 778.782.5242, jray@sfu.ca

## MPub Program

This program leads to a master of publishing degree (MPub) and is designed for those in, or intending to enter, the publishing industry. It is composed of a set of courses, an internship, and a project report, and encompasses a range of publishing activities including business, design, editing and multimedia.

### Admission Requirements

Applicants require a bachelor's degree with a minimum 3.0 grade point average from a recognized university or equivalent. In addition, applicants must

- have some demonstrated familiarity with the publishing industry
- be familiar with the operation of both Apple and IBM compatible microcomputers
- demonstrate a suitable level of competence in editing and proofreading
- be familiar with the major concepts of marketing and accounting
- demonstrate a suitable level of competence in English composition

Entering students are expected to have a minimum knowledge of publishing which will be assessed through an evaluation of documents and experience, and in some cases, interviews and examinations. Those without the necessary knowledge, understanding and skills must successfully complete the following courses or their equivalents.

BUS 251-3 Financial Accounting I  
BUS 254-3 Managerial Accounting I  
BUS 343-3 Introduction to Marketing  
CMNS 371-4 The Structure of the Book Publishing Industry in Canada  
CMNS 372-4 The Publishing Process

The following course is valuable background as a foundation for editing.  
ENGL 375-4 Studies in Rhetoric

### Satisfactory Performance

The progress of each student is assessed at the end of each term. A course grade of less than B is considered unsatisfactory. Any student who obtains a grade of less than B in two or more courses may be required to withdraw from the program.

### Degree Requirements

#### **Course Work**

Students complete 37 units in addition to an internship and project report. The curriculum is composed of courses offered exclusively within the program. The director may recommend that some students substitute courses from Simon Fraser University or

other institutions, and/or experience and demonstrate expertise for program courses.

**Internship and Project Report**

A key component is an internship and project which integrates the knowledge the student has gained with the demands of an applied setting. This internship is in the workplace, typically in industry, public institutions or government. An appropriate level of documentation and reporting is required. During the Internship, which generally last four months, the student receives academic supervision as required from the student's senior supervisor. Day-to-day

supervision is by designated industry supervisors who have appropriate qualifications and will be appointed by the University. In very small companies, alternate arrangements may be made.

The internship will focus on a specific student initiated project, by one or more supervisory committee members or by the industry supervisor's employer.

The student submits an outline defining the project scope, plans for documentation and reporting, anticipated activities, schedule and conclusion. The outline is approved by the supervisory committee and program director. Commitment of the company or

institution, the industry supervisor and the University will be formalized by a letter exchange.

The student produces two reports: a work report which is a student work appraisal; and a project report which investigates a particular problem. The latter serves as a project record and interpretation.

The supervisory committee and director assess the project on the conduct of the project, work and report quality. There is no oral exam. however, a project report will be submitted (see "1.11 Publication of Thesis" on page 225).

# Faculty of Education

8655 Education Building, 778.782.4787 Tel,

## Dean

K.C. Magnusson BEd, MEd (Regina), PhD (Alta)

## Associate Deans

S.C. de Castell BA (Sir G Wms), MA, PhD (Lond)

D. Paterson BEd (Alta), MA, PhD (Br Col)

## Faculty and areas of research

See "Faculty of Education" on page 199 for a complete list of faculty.

C.L. Amundsen – teaching and learning technology use in higher education; faculty development

H. Bai – philosophy of education; humanities; social, moral philosophy; epistemology; ecology; Asian philosophies; Zen arts

R. Barrow – philosophy of education; moral philosophy; curriculum; teacher education; place of philosophy in empirical educational research and teacher education

K. Beck – international education, globalization, postcolonial thought, feminist principles, race, diversity and multicultural education, curriculum and pedagogy in higher education, ethics of care

C.W. Bingham – philosophy of education; literary theory; curriculum; the psyche; teaching as a life practice; inter-human recognition; literary representations of education, hermeneutics, deconstruction, queer theory

S. Blenkinsop – philosophy of education; imagination in teaching and learning; ecology; relational epistemologies; theories of place; existentialism; continental philosophy

S.R. Campbell – historical and psychological development of mathematical thinking from an embodied perspective informed by Kant, Husserl, and Merleau-Ponty; methods of psychophysics and cognitive neuroscience as a means for operationalising affective and cognitive models of math anxiety and concept formation

W. Cassidy – curriculum and instruction; citizenship/law-related education; social justice and human rights; the ethics of care; fostering inclusive educational environments for 'at risk' marginalized youth; cyberbullying

A. Chinnery – teacher education, philosophy of education, moral education, curriculum theory, social justice education

D.H. Dagenais – bilingualism; socio-linguistics; literacy; ethnography; educational change; language learning in minority and majority contexts; literacy practices at home and at school

S.C. de Castell – educational media studies, non-formal learning environments; multi-modal, study of emerging methods of models of educational communications, education, gaming and gender

K. Egan – Canada Research Chair; educational theory; intellectual development; the nature and development of imagination and its role in education

L. Fels – arts-based research; writing as research and presentation; drama/theatre education; arts as social action; performance and technology; on-line publishing; curriculum and evaluation; professional development in education

M. Fettes – epistemological, sociopolitical and pragmatic aspects of educational reform; theoretical aspects of modernity and post-modernity; the history and sociology of linguistic and educational thought

R. Frie – psychotherapy, subjectivity and inter-subjectivity in modern philosophy, psychoanalysis

I. Geva-May – policy studies, policy analysis, policy evaluation, comparative policies, public policy

instruction and international development of public policy programs, political cultures impact on policy-making, disciplinary focus on policy of higher education, immigration, health care

P.P. Grimmett – teacher education and teacher development; curriculum theory and implementation; educational leadership; teacher research; reflective practice; cultures of teaching

H. Han – TESL/FL, applied linguistics, sociolinguistics, critical discourse analysis, language ideology and practices

M.J. Hoskyn – development of executive function in young children, neurophysiological processes involved with learning to read among preschoolers and school-aged children, learning disabilities, early intervention

R. Ilieva – teaching and learning English as an additional language, sociocultural, poststructural, critical and psychoanalytical perspective on language learning, teaching and curriculum, culture(s) in language education, teacher identities, international education

M. Jacquet – intercultural and multicultural education, bilingual education teacher in-service training related to diversity, cultural and religious accommodation in school, integration of African francophone students

L. Kanevsky – giftedness and gifted learners, socio-cultural and Vygotskian approaches to learning and development

D. Kaufman – teaching and learning with technology, instructional methods in higher education, research and evaluation methods, medical education

P.A. Keats – witnessing and vicariously witnessing trauma; secondary traumatization; acute and post-traumatic stress; expressive trauma interventions, visual research methods

V. Kelly – holistic education, indigenous education, the integration of the arts in education and art therapy, aesthetic ways of knowing and the imagination, indigenous knowledge, arts-based research methodologies

J. LaBrie – post-secondary education leadership; role of agenda setting in policy development; funding models in post-secondary education; strategic planning; international program development and curricular integration

L. LaRocque – community, collaboration, ethic of caring, leadership, district-school relations, implementation of change, school reform, educational policy, teacher education

L.J. Le Mare – children's socio-emotional development in family and school contexts; early childhood education; impact of early adversity

D.A. Laitsch – the use and misuse of research in policymaking and issue advocacy; policy issues related to market-based education reform efforts; the impact of high stakes accountability and assessment programs on educational systems

P. Liljedahl – instances of creativity, insight, and discovery in mathematics; mathematics and affect, professional growth of teachers, mathematical problem-solving, numeracy, instructional design

G.M. Ling – cultural theory, philosophy and curriculum theory, art and literature

M.J. MacDonald – early childhood education; language and literacy development; intergenerational and family literacy; pedagogical documentation; negotiated curriculum; early childhood environments

A.M. MacKinnon – science education; teacher education; philosophy of science; children's conceptual development in science; the nature and role of practicum experiences in teacher development

G. Madoc-Jones – language arts; hermeneutics; philosophy of education; poetry; history of literacy; BC literature

C.M. Mamchur – language arts education; enhancing teacher and student self-concept and developing curriculum to do that; teaching and learning style models; Jungian psychological type and perceptual psychology measures (pre and in-service), archetypes and language acquisition

E. Marshall – representations of gender and sexuality in children's and young adult's literature, constructions of girlhood and study textual representations in a range of cultural texts produced/read by youth

S. Marshall – academic literacy; sociolinguistics; multilingualism; language learning

D. Moore – applied linguistics, sociolinguistics, bilingualism and plurilingualism; pluriliteracy; immigration; language acquisition and second language learning; code-switching

J. Nesbit – educational psychology; educational technology; self-regulated learning with multimedia; cognitive tools; learning resource evaluation; adaptive learning systems; research methods

P. Neufeld – general inter-literacy development and instruction; learning disabilities; and English-as-a-second-language reading; the social construction of disability and risk

M. Nilson – post-secondary education governance, finance, access, participation, and policy, leadership, program development, assessment, evaluation

D.K. O'Neill – educational technology; inquiry learning in K-12 history and science; computer-supported collaborative learning (CSCL) in K-12; tele-mentoring (on-line mentoring), relationships to support inquiry-oriented teaching

D. Paterson – school counselling; developmental counselling; counselling in the elementary school; school-based support teams; counselling in groups

M. Pidgeon – higher education, aboriginal post-secondary completion and retention, student services, methodology, critical policy analysis

N. Popadiuk – international students, cultural transitions and adjustment, culturally-competent counselling, interpersonal relationships, agency, post-secondary, school counselling

S. Richmond – arts education; aesthetics and arts theory; philosophical and social foundations of education; globalization; arts-based research; photography; teacher education

C. Sabatier – French education, multilingualism pedagogy; socio-linguistic research on school and immigration

M.J. Schmidt – K-12 research in the areas of educational reform; classroom assessment; ethnography; education of minorities; intersection of parenting and schools; educational leadership

Ö. Sensoy – study of social power in relation to education and schooling, encompassing fields such as critical pedagogy, critical multicultural education, social education, popular culture, media literacy, cultural studies, anti-oppression oriented theories, visual research methods

Y. Senyshyn – philosophy of education and language; philosophical analysis applied to creative live musical performance

N. Sinclair – the use of technology in mathematics education, role of the aesthetic in mathematics learning, teaching and learning geometry

S.J. Smith – human sciences; issues related to physical education; outdoor education and health education; physical education, phenomenological

inquiry, pedagogical theory, and children's play interactions

C. Snowber – movement education; arts-based educational research; physical education; arts in education; phenomenological curriculum research; embodiment and pedagogy; writing and the body  
L. Sterling – program evaluation in aboriginal health and labor markets; First Nations curriculum; impact of residential schools; curriculum development for aboriginal social work programs

J.H. Sugarman – the psychology of personhood, selfhood, and human agency, sociocultural perspectives on psychological development, theory and philosophy of educational psychology  
K. Toohey – English as a second foreign language; multi-cultural education; native Indian education; bilingual education; bilingual education for minority language students

S. Vamos – health education; teacher preparation in health education; curriculum development in health education; co-ordinated school health programs; adolescent health behaviours and attitudes.

D. van der Wey – coalition politics, indigenous education, anti-oppression education, aboriginal literature and pedagogy, curriculum and pedagogy

P.H. Winne – educational psychology; self-regulated learning; learning tactics and strategies; metacognition; software learning technologies that support learning

A.F. Wise – educational technology, online teaching and learning environments, computer-supported collaborative learning (CSCL), computer-mediated communication, designing online conversation spaces, professional education and lifelong learning in formal and informal environments, education technology and international development

D. Zandvliet – learning environments, science and environmental education, education and technology; affects and effects of new ICT's on physical and psychosocial learning environments

R. Zazkis – mathematics education; teacher's understanding of mathematics

## Graduate Programs

8655 Education Building, 778.782.3984 Tel, 778.782.4320 Fax, [www.educ.sfu.ca/gradprogs](http://www.educ.sfu.ca/gradprogs)

Graduate Program Director  
H. Bai BA (Calg), PhD (Br Col)

### Graduate Degrees Offered

master of arts  
master of education  
master of science  
doctor of education  
doctor of philosophy  
doctor of philosophy under special arrangements

The Faculty of Education offers graduate programs leading to MEd, MA, MSc, EdD and PhD degrees in select fields of scholarly and professional studies. The nature of and requirements for degrees vary by degree and by field of study.

The MEd is a professional degree signifying advanced knowledge about and advanced training in educational practice. Minimal requirements for MEd course work/comprehensive exam programs are the completion of 31 units in required and elective courses, plus a final comprehensive examination (five units). The content of EDUC 883 MEd Comprehensive Examination varies by program.

In the individual program, the MEd culminates in a project that materially and substantially relates theory to practice or that systematically examines a significant problem in education. Students enrolled in the MEd program that includes a project must successfully complete a minimum of 33 units divided

between courses (at least 28 units) and EDUC 881 Project (five units).

The MA, MSc, EdD and PhD degrees signify advanced knowledge in a field of specialization and advanced competence in conducting significant and original research in education.

Minimum requirements for the MA and MSc degrees are successful completion of 33 units of required and elective graduate courses (at least 23 units) and EDUC 898 Master's Thesis (10 units).

Minimum requirements for the PhD are successful completion of 35 units beyond graduate requirements for an MA or MSc, consisting of 20 units divided among required and elective courses, comprehensive examination (five units) and EDUC 899 Doctoral Thesis (10 units).

The EdD in educational leadership is a professional degree signifying the acquisition of advanced knowledge and expertise in educational leadership. Minimum requirements are successful completion of 40 units of graduate work, consisting of 25 units divided among required and elective courses, a comprehensive examination (five units), and EDUC 899 Doctoral Thesis (10 units).

### Admission Requirements

See "1.3 Admission" on page 219 of the *Graduate General Regulations* for University admission requirements. In exceptional circumstances, applicants who do not meet these requirements may be considered if superior scholarly or professional achievement is demonstrated.

All applications are reviewed once a year. Completed applications to the master in counselling psychology program must be received by January 15. Completed applications to all other master's programs must be received by January 15. Completed applications to PhD programs must be received by January 15. Individual master's program applicants (see below) are urged to begin the application process well in advance of this deadline.

Admission is granted to a specific degree and to a particular program or specialization. Admission decisions are available by March 15. Application information is available November 15 via the web.

Please contact MEd Community Graduate and EdD programs directly for deadlines.

### MA, MEd, MSc Program Information

778.782.3984 Tel, 778.782.4320 Fax, [educmasters@sfu.ca](mailto:educmasters@sfu.ca)

### PhD Program Information

778.782.4787 Tel, 778.782.4320 Fax, [educdoc@sfu.ca](mailto:educdoc@sfu.ca)

### MEd Community Graduate Program Information

778.782.5951 Tel, 778.782.8119 Fax, [cpmed@sfu.ca](mailto:cpmed@sfu.ca)

### EdD Program Information

778.782.8099 Tel, 778.782.8119 Fax, [educedd@sfu.ca](mailto:educedd@sfu.ca)

### Supervision

A pro-tem advisor, who is appointed by the director of graduate programs upon admission, offers counsel regarding elective courses and other matters and, in those programs requiring a project or thesis, about selecting a committee to supervise this work. For additional information about supervisory committees, refer to "1.6 Supervision" on page 222 of the *Graduate General Regulations*.

### Master's Programs

The MA and MSc degrees signify the acquisition of advanced knowledge in the student's field of

specialization and competence in conducting significant and original research in education. Graduate programs leading to these degrees culminate with a master's thesis (EDUC 898).

The MEd is a professional degree signifying advanced knowledge and training in educational practice. All MEd programs, except an individual program, culminate with a comprehensive exam (EDUC 883). In an individual program, a project (EDUC 881) is undertaken that materially and substantially relates theory to practice or that examines a significant education problem.

### MEd Community Graduate Programs – Two Year Option

MEd programs are for practicing educators who wish to improve abilities to critically read, evaluate and integrate educational theory and research.

Two year MEd programs in educational leadership and in curriculum and instruction, offered in communities throughout the province, focus on a theme that integrates scholarly inquiry with focal interests and professional practice needs. During fall and spring terms, classes normally are scheduled every second weekend where the program is situated. In the summer terms, students typically attend classes on the Burnaby campus in July.

School districts, educational institutions, groups and individuals interested in an MEd community graduate program should contact the office at 778.782.5951.

### Field Programs – Three Year Option

A three year option of the MEd focuses on educational practice and builds on the graduate diploma in advanced professional studies in education. This option admits students who are enrolled in the two year graduate diploma and provides for a third study year leading to the MEd in educational practice. Contact Field Programs, 778.782.4892 Tel, 778.782.5882 Fax, [edprgpa@sfu.ca](mailto:edprgpa@sfu.ca), [www.educ.ca/fp](http://www.educ.ca/fp).

### Residence Requirements

See "1.7 Residence and Course Requirements" on page 222.

### Research Competence Requirement

Master's students must demonstrate research competence that is appropriate to their program or program specialization to the supervisory committee's satisfaction. See "1.7.2 Residence Requirement for the Master's Degree" on page 223.

### MEd Comprehensive Examinations

All MEd candidates, except those in an individual program, must complete a comprehensive exam by enrolling in EDUC 883. Normally, this occurs in the term in which course requirements are completed or in the immediately following term. Students are advised to observe deadlines for adding courses in planning the term in which they enrol in EDUC 883.

### MEd Project

Available only to students in an individual program.

### MA and MSc Thesis

Normally, before the fifth course, a master's thesis research plan is presented to the tenured or tenure track member of the faculty whom the student proposes to be senior supervisor. The senior supervisor and at least one other faculty member chosen in consultation with the senior supervisor constitutes the supervisory committee and the student proceeds to the thesis. The master's thesis is examined as prescribed in the *Graduate General Regulations* ("1.9 Preparation for Examinations" on page 224 and "1.10 Examinations" on page 225).

## Programs of Study

### Arts Education

This program leads to a master of education course work/comprehensive exam (MEd) or MA degree. The MEd requires 35 units of course work plus a comprehensive exam while the MA requires 25 units plus a thesis.

#### Core Courses

Students complete all of  
 EDUC 843-5 Embodiment and Curriculum Inquiry  
 EDUC 848-5 Ideas and Issues in Aesthetic Education  
 EDUC 849-5 Artists, Society and Arts Education  
 EDUC 850-5 Creativity and Education  
 EDUC 852-5 Education and Dramatic Art  
 EDUC 868-5 Curriculum Theory and Art Education  
 EDUC 869-5 Music Education as Thinking in Sound

All students enter the program through the MEd and may move to the MA after completing four courses with faculty approval. MA students complete a minimum of five courses from the list. Other courses may be required depending on thesis interest.

#### Comprehensive Examination/Thesis

A final comprehensive exam is required for MEd students. A thesis is required for MA students.

### Counselling Psychology

This program leads to an MA or MEd degree. The MA program is for students interested in careers as counsellors in schools, colleges, and community agencies. Students pursue a general program with specialized course and field work opportunities. Counselling MA students complete a minimum of 40 units of course work and a thesis plus the following.

#### MA Program

##### Core Courses

MA students complete all of  
 EDUC 799-3 Supervised Counselling Clinic I  
 EDUC 800-3 Supervised Counselling Clinic II  
 EDUC 801-3 Counselling Practicum I  
 EDUC 802-3 Counselling Practicum II  
 EDUC 862-4 Individual Assessment in Counselling  
 EDUC 870-4 Theories of Counselling  
 EDUC 872-3 Ethics in Counselling Psychology  
 EDUC 874-5 Counselling Skills and Strategies  
 EDUC 878-5 Group Counselling  
 EDUC 898-10 Master's Thesis

##### Methodology Course

MA students must complete one methodology research course selected from the list below in consultation with the senior supervisor.

EDUC 863-5 Quantitative Methods in Educational Research  
 EDUC 864-5 Research Designs in Education  
 EDUC 866-5 Advanced Qualitative Research in Education  
 EDUC 867-5 Qualitative Methods in Educational Research  
 EDUC 975-5 Advanced Quantitative Methods in Educational Research

##### Elective Course

In addition, MA students must complete one elective course selected from the MA/MEd electives list (see below) in consultation with the senior supervisor.

#### MEd Program

The MEd program is for students who wish to become counsellors in educational settings. The program consists of a minimum of 45 units and a comprehensive exam. All MEd students must complete the core requirements listed below.

##### Core Courses

MEd students complete all of  
 EDUC 799-3 Supervised Counselling Clinic I  
 EDUC 800-3 Supervised Counselling Clinic II  
 EDUC 801-3 Counselling Practicum I

EDUC 802-3 Counselling Practicum II  
 EDUC 862-4 Individual Assessment Procedures  
 EDUC 864-5 Research Designs in Education  
 EDUC 870-4 Theories of Counselling Psychology  
 EDUC 872-3 Ethics in Counselling Psychology  
 EDUC 874-5 Counselling Skills and Strategies  
 EDUC 877-4 Contemporary School Counselling  
 EDUC 878-5 Group Counselling  
 EDUC 883-5 MEd Comprehensive Examination

##### Elective Course

In addition, MEd students must complete one elective course selected from the MA/MEd electives list (see below) in consultation with the senior supervisor.

##### Comprehensive Examination (EDUC 883)

Students complete a comprehensive examination after completing course work and supervised field experiences. The exam is set by faculty members associated with the program, in association with the director, and covers ethics and professional practice.

#### MA/MEd Electives

MEd and MA students choose their elective course from the following.

EDUC 803-5 Educational Program Supervision  
 EDUC 805-5 Social Development in the School Context  
 EDUC 819-5 Studies in Teacher-Student Interaction  
 EDUC 822-5 Evaluation of Educational Practice  
 EDUC 829-5 Contemporary Issues in Learning Disabilities  
 EDUC 833-5 Social and Moral Philosophy and Education  
 EDUC 860-3 Foundations of Educational Psychology  
 EDUC 863-5 Quantitative Methods in Educational Research  
 EDUC 866-5 Advanced Qualitative Research in Education  
 EDUC 867-5 Qualitative Methods in Educational Research  
 EDUC 871-4 Family Counselling  
 EDUC 873-4 Vocational Counselling  
 EDUC 876-5 Cognitive Intervention Research  
 EDUC 878-5 Group Counselling  
 EDUC 970-5 Systems and Paradigms in the Psychology of Education  
 EDUC 975-5 Advanced Quantitative Methods in Educational Research

### Curriculum and Instruction

This program leads to the MA, which requires at least 25 units of course work and a thesis (EDUC 898); or the MEd degree, which requires at least 35 units of course work and a comprehensive examination (EDUC 883). The program is for educators who wish to examine critically current educational theory, research and practice. Participants are encouraged to examine their own instructional practices and to consider the match between practices and developing education theories.

The program can focus on an area of specialization such as imaginative education, inclusion, foundations, health and French education, or can be pursued as a general program. Current information about the specializations is available from the Graduate Programs office or at [www.educ.sfu.ca/gradprogs](http://www.educ.sfu.ca/gradprogs). Each specialization adds course requirements to the general program requirements.

#### Core Courses

MA and MEd students complete three of the following.  
 EDUC 816-5 Developing Educational Programs and Practices for Diverse Educational Settings  
 EDUC 820-5 Current Issues in Curriculum and Pedagogy  
 EDUC 822-5 Evaluation of Educational Programs  
 EDUC 823-5 Curriculum and Instruction in an Individual Teaching Speciality

EDUC 830-5 Implementation of Educational Programs  
 EDUC 833-5 Seminar in Social and Moral Philosophy and Education  
 EDUC 851-5 Perspectives on Technology-Supported Learning  
 EDUC 864-5 Research Designs in Education

#### Comprehensive Examination/Thesis

A final comprehensive exam is required for MEd students. A thesis is required for MA students.

### Educational Leadership

This program leads to the MA or MEd degree and is intended for current or prospective leaders who are engaged in educational activities in a variety of societal workplaces (e.g. schools, colleges, community agencies, health agencies, justice agencies, arts agencies).

The MA consists of five required courses (25 units) plus a thesis; the MEd consists of seven courses (35 units) plus a comprehensive exam. While the program is grounded both in research and in practice, it has a strong philosophical and conceptual orientation which encourage students to view issues and problems in the workplace in more complex and educative ways.

#### Core Courses

MEd and MA students complete all of  
 EDUC 813-5 Organizational Theory and Analyses  
 EDUC 815-5 Administrative Processes  
 EDUC 817-5 Policy Processes  
 EDUC 818-5 Leadership Studies

#### MEd Requirements

Students will normally be admitted to the MEd course work/comprehensive exam program. In addition to the four core courses, students will complete  
 EDUC 811-5 Fieldwork I

plus two additional courses (10 units) approved by the co-ordinator.

EDUC 883-5 MEd Comprehensive Examination follows completion of course work requirements. It is held once a year, during summer session.

#### MA Requirements

Students admitted to the MEd program may, on the senior supervisor's recommendation, transfer into the MA program. The MA requires the four core courses above plus EDUC 864. Students must demonstrate appropriate research competence which may necessitate completing one or both of the following.

EDUC 863-5 Quantitative Methods in Educational Research  
 EDUC 867-5 Qualitative Methods in Educational Research

Students may also complete one or more electives as required or approved by the senior supervisor.

EDUC 898-10 Master's Thesis follows completion of course work requirements.

For further information, contact Community Graduate Programs, 778.782.5951 Tel, [cpmed@sfu.ca](mailto:cpmed@sfu.ca)

### Educational Practice

This three-year program, leading to the MEd (course work/comprehensive exam), which focuses on educational practice and builds on the graduate diploma in advanced professional studies in education. It is available only to students who are enrolled in the graduate diploma offered by Field Programs. Students in the second year of the two year diploma program may apply to this MEd program and will undertake a third year following completion of the diploma course work. It requires 30 units of 500 division EDPR courses, plus 15 core graduate units, and a comprehensive exam.

#### Core Courses

EDUC 807-5 The Foundations of Action Research

EDUC 811-5 Fieldwork I  
 EDUC 867-5 Qualitative Methods in Educational Research  
 EDUC 883-5 MEd Comprehensive Examination  
 Contact Field Programs: 778.782.4892 Tel,  
 778.782.5882 Fax, edprgpa@sfu.ca

### Educational Psychology

This program leads to the MA or MEd degree (comprehensive examination). Through studies of theories and allied empirical research in educational psychology, and research methodologies, the program provides a general survey of educational psychology or specialization in development, exceptionality, or reading. Students may apply for transfer credit if graduate course work completed at another institution duplicates courses in this program.

#### Core Courses

MA and MEd students complete all of  
 EDUC 840-0 Graduate Seminar  
 EDUC 860-3 Foundations of Educational Psychology  
 EDUC 864-5 Research Designs in Education

#### Stream Courses

All MA and MEd students choose one of the following streams and complete those specified courses.

##### General Stream

EDUC 827-5 Individual Differences in Learning  
 EDUC 842-5 Sociocultural Perspectives on the Psychology of Development and Education

##### Development Stream

EDUC 805-5 Social Development in the School Context  
 EDUC 842-5 Sociocultural Perspectives on the Psychology of Development and Education

##### Exceptionality Stream

EDUC 829-5 Contemporary Issues in Learning Disabilities  
 EDUC 876-5 Cognitive Intervention Research

##### Reading Stream

EDUC 826-5 The Reading Process  
 EDUC 828-5 Instructional Practices in Reading

#### Elective Courses

Elective courses must be approved by the pro-tem advisor or senior supervisor prior to enrolment.

#### MA Requirements

Students complete all  
 • core courses (eight units)  
 • courses in a stream (10 units)  
 • two electives chosen from courses within the educational psychology program (10 units)  
 • one of  
 EDUC 863-5 Quantitative Methods in Educational Research  
 EDUC 867-5 Qualitative Methods in Educational Research  
 • and  
 EDUC 898-10 Master's Thesis

#### MEd (Comprehensive Examination) Requirements

Students complete all  
 • core courses (eight units)  
 • courses from any three streams (30 units)  
 • at least one elective course within the educational psychology program (five units)  
 • and  
 EDUC 883-5 MEd Comprehensive Examination

### Educational Technology and Learning Design

This program leads to either the MA (thesis) or MEd (comprehensive examination) degree. The program takes a scholarly approach to learning technologies design, plans for its use, and/or evaluations of technology-based learning innovations.

Designed to accommodate students who work full time during the day or who take a leave to study full time, the program supports diverse cohorts including K-12 teachers, college instructors, instructional designers, and aspiring academics. Applicants from a wide variety of educational and technical backgrounds are welcome. Depending upon the course work on their transcripts, students may be admitted conditionally upon completing Faculty of Education prerequisite courses.

#### Core Courses

MA and MEd students complete all of  
 EDUC 864-5 Research Designs in Education  
 EDUC 890-4 Educational Media as Foundations of Curriculum  
 EDUC 891-4 Learning Design in Technology-mediated Environments  
 EDUC 892-4 Cognitive Tools and Multimedia Learning  
 EDUC 893-4 Organizational and Social Aspects of Learning Technology Design  
 EDUC 894-4 Methods for Research and Inquiry in Learning Technologies

#### MA Requirements

MA students complete  
 • one elective course  
 • plus  
 EDUC 898-10 Master's Thesis

#### MEd Requirements

Students pursuing a master of education degree complete  
 • two elective courses  
 • plus  
 EDUC 883-5 MEd Comprehensive Examination

### Individual Program

In exceptional cases, when no other regular master's program can accommodate special interests, an applicant may propose an individual program. The curriculum must include a minimum of 30 units plus EDUC 881 for an MEd project, or 25 units plus EDUC 898 for an MA.

Individual program applicants must submit a proposal detailing the following.

- the inquiry to be pursued for the master's project or thesis
- courses proposed and their sequence (called the plan of study and research)
- a rationale for how the proposed courses contribute to the master's project or thesis
- the program may contain a combination of up to 10 units of course work in Directed Readings and/or EDUC 811 or 812 Fieldwork.
- an explanation of how the applicant's interests are not met by a regularly offered master's program.

The plan must be developed with, and approved by, a faculty sponsor who automatically becomes the senior supervisor of the master's project or thesis. A second person suitably qualified in relation to the project or thesis joins the supervisory committee normally before the completion of the fourth course.

In addition to other criteria considered for admission, the director of graduate programs or designate will adjudicate the plan of study and research regarding availability of resources to support it and whether it can be completed in reasonable time.

### Secondary Mathematics Education

This cohort program, leading to the MSc (thesis) or MEd (course work/comprehensive) in the teaching of secondary school mathematics, is offered jointly by the Faculty of Education and the Department of Mathematics. For the MSc (thesis) degree, as well as writing a thesis which will be supervised by a member of the Faculty of Education or the Department of Mathematics, students complete 28 units (see below).

Students pursuing the MEd (course work) option will, in addition to 28 units, complete a minimum of 7 units of graduate electives in education and/or mathematics, and a comprehensive examination. Students will select a degree option in consultation with faculty members.

#### Core Courses

MA and MEd students complete all of  
 EDUC 844-5 The Research Basis of Mathematics Education  
 EDUC 845-5 Learning Mathematics with Computers  
 EDUC 846-5 Foundations of Mathematics Education  
 EDUC 847-5 Teaching and Learning Mathematics  
 MATH 603-4 Foundations of Mathematics  
 MATH 604-4 Geometry

#### Elective Courses

The remaining courses are selected from Faculty of Education or Department of Mathematics graduate courses.

#### Comprehensive Examination/Thesis

A final comprehensive exam is required for MEd students. A thesis is required for MSc students.

### Teaching English as an Additional Language (TESL/TEFL)

This program, leading to the course work/comprehensive MEd degree, is for teachers working with English as an additional language learners in public schools. It will also appeal to teachers of English as a second or foreign language to adults, whose interests are primarily pedagogical. The program consists of 35 units of course work followed by the MEd comprehensive examination.

#### Core Courses

MEd students complete all of  
 EDUC 820-5 Current Issues in Curriculum and Pedagogy  
 EDUC 824-5 Seminar in Second Language Teaching  
 EDUC 825-5 Second Language Acquisition and Schooling  
 EDUC 856-5 Sociocultural Perspectives on Education and Identity

#### Elective Courses

MEd students complete three of  
 EDUC 816-5 Developing Educational Programs and Practices for Diverse Educational Settings  
 EDUC 823-5 Curriculum and Instruction in an Individual Teaching Specialty  
 EDUC 827-5 Individual Differences in Learning  
 EDUC 833-5 Seminar in Social and Moral Philosophy and Education  
 EDUC 854-5 Teachers as Agents of Change  
 EDUC 855-5 Multicultural and Race Relations Education: Policy Development and Program Implementation

#### Comprehensive Examination

A comprehensive exam is required for MEd students.

### Doctoral Programs

Doctoral degrees signify the acquisition of advanced knowledge in a field of specialization and advanced competence in conducting significant and original education research. The EdD program emphasizes leadership in education. The PhD programs accentuate theoretical and professional studies plus advanced scholarly inquiry in education. Both degrees culminate in a comprehensive examination (EDUC 983) and a doctoral thesis (EDUC 899). Requirements for doctoral degrees vary by program.

#### Residence Requirements

See "1.7 Residence and Course Requirements" on page 222.

## Comprehensive Examination

All doctoral candidates must complete a comprehensive examination by enrolling in EDUC 983. This is a prerequisite to EDUC 899 Doctoral Thesis. Normally, the comprehensive exam is completed in the term in which course requirements are completed or the term immediately following.

## EdD and PhD Thesis

Normally, before the fourth course, a thesis research plan is presented to the tenured or tenure track Faculty of Education member whom the student proposes to be senior supervisor. Following the supervisor's approval and at least one other faculty member chosen in consultation with the senior supervisor, the supervisory committee is formed and the student proceeds to the thesis. The completed thesis is examined as in *Graduate General Regulations* "1.9 Preparation for Examinations" on page 224 and "1.10 Examinations" on page 225).

For EdD students, the member(s) in addition to the senior supervisor may be member(s) of the University faculty or other approved suitably qualified persons.

## Programs of Study

### Arts Education

This PhD program is for those interested in becoming scholars and leaders in art education. Students complete all of

### Educational Theory

EDUC 901-5 Seminar in the History of Educational Theory  
EDUC 902-5 Interdisciplinary Seminar in Contemporary Educational Theory

### Arts Core

EDUC 945-5 Doctoral Seminar in Arts Education

### Curriculum Specialization

EDUC 899-10 Doctoral Thesis  
EDUC 910-5 Directed Readings  
EDUC 983-5 Doctoral Comprehensive Examination

Courses in research methodology may be required depending upon the student's research interests.

### Curriculum Theory and Implementation

This PhD program requires successful completion of 20 units beyond the MA, MSc or MEd requirements.

Students complete all of  
EDUC 899-10 Doctoral Thesis  
EDUC 901-5 Seminar in the History of Educational Theory  
EDUC 902-5 Interdisciplinary Seminar in Contemporary Educational Thought  
EDUC 911-5 Colloquium in Curriculum Theory I  
EDUC 912-5 Colloquium in Curriculum Theory II  
EDUC 983-5 Doctoral Comprehensive Examination

The supervisory committee may require further work in the Faculty of Education or other faculties. Students are encouraged to complete additional courses from related departments outside the Faculty of Education.

### Philosophy of Education

This program focuses on three interconnecting themes of ecology, culture and consciousness, and brings relevant philosophical traditions, theories, innovations, and methods to work with these themes.

Students complete all of  
EDUC 899-10 Doctoral Thesis  
EDUC 901-5 Seminar in the History of Educational Theory  
EDUC 902-5 Interdisciplinary Seminar in Contemporary Educational Theory  
EDUC 921-5 Seminar in Philosophy and Educational Theory

EDUC 922-5 Advanced Seminar in Epistemology and Education  
EDUC 983-5 Doctoral Comprehensive Examination

## Educational Leadership

This EdD program is for educational administrators who work full time, and so classes are held on extended weekends and during the summer. This degree looks beyond educational leadership as the application of generic management techniques. It prepares leaders for situations where technique is insufficient and prepares educational leaders to deal with currently pressing issues and to understand deeper ethical, political, socio-cultural, technological, and educational matters.

Students complete all of  
EDUC 899-10 Doctoral Thesis  
EDUC 950-5 Approaches to Educational Research  
EDUC 960-5 Ethics, Law and Professional Leadership  
EDUC 961-5 Educational Governance, Reform and Diversity  
EDUC 962-5 Organizational Leadership, Accountability, and the Public Interest  
EDUC 964-5 Seminar in Educational Theory  
EDUC 983-5 Doctoral Comprehensive Examination

### EdD Program Information

778.782.8099 Tel, 778.782.8119 Fax, [www.educ.sfu.ca/gradprogs/doctoral/education\\_leadership](http://www.educ.sfu.ca/gradprogs/doctoral/education_leadership)

### Program in French

[www.sfu.ca/baff-offa/educfr](http://www.sfu.ca/baff-offa/educfr)

## Educational Psychology

This PhD program addresses theories, basic and applied research, and research methods in educational psychology. The program does not prepare students for BC College of Psychologists registration. Students may apply for transfer credit if a course is acceptable to the degree. Exact transfer credit equivalence is not required, providing the course is assessed as content equivalent. Admitted students must satisfy all requirements for the MA program in educational psychology. If EDUC 975 was completed in the MA program, PhD students must take another course of at least four units to replace EDUC 975 in the doctoral program.

### Core Requirements

Students complete all of  
EDUC 840-0 Graduate Seminar  
EDUC 899-10 Doctoral Thesis  
EDUC 970-4 Systems and Paradigms in Educational Psychology  
EDUC 971-4 Advanced Topics in Educational Psychology  
EDUC 975-4 Advanced Quantitative Methods in Educational Research  
EDUC 983-5 Doctoral Comprehensive Examination

### Electives

Students select at least two additional graduate courses totalling a minimum of eight units. Elective courses must be approved by the pro-tem advisor or senior supervisor prior to enrolment.

If EDUC 840 was complete in the MA program, PhD students are not required to complete the course again.

## Educational Technology and Learning Design

This program develops highly qualified educational technology researchers and designers in academia, research and development labs, corporations, school boards or other settings. The PhD program is organized in close conjunction with the master in educational technology and learning design program.

Admitted students satisfy all requirements for the master in educational technology and learning

design. Applicants are welcomed from a variety of educational and technical backgrounds, although they may be required to complete courses from the MA program before beginning course work on the PhD.

### Core Courses

Students complete all of  
EDUC 899-10 Doctoral Thesis  
EDUC 931-4 Group and Organizational Learning Technologies  
EDUC 932-4 Learner-Centred Design  
EDUC 983-5 Doctoral Comprehensive Examination  
and one of  
EDUC 901-5 Seminar in the History of Educational Theory  
EDUC 902-5 Interdisciplinary Seminar in Contemporary Educational Theory

and one of  
EDUC 866-5 Advanced Qualitative Methods in Education\*  
EDUC 975-4 Advanced Quantitative Methods in Educational Research\*

plus one elective graduate course of a minimum of three units as approved by the supervisor and co-ordinator of the program.

\*prerequisites must also be satisfied, either prior to admission or during enrolment (see "Education EDUC" on page 361 in the *Course Catalogue* for prerequisites)

The supervisory committee may require further work in the Faculty of Education or other faculties. Students are encouraged to draw additional courses from related units outside of the Faculty of Education.

In addition to the course requirements listed above, students must also participate in the Education Technology Program Institute each term.

## Languages, Cultures and Literacies

This PhD program offers educators/researchers the opportunity to focus on the cultural and linguistic diversity that characterizes contemporary classrooms. The program provides opportunities for students to participate in ongoing research and ultimately to conduct their own research regarding how diversity might be recognized, strengthened and taken as a resource in public education. Courses offer a range of opportunities to question meanings and practices of social difference including those based on race, gender, language, class, and sexuality.

Students complete all of  
EDUC 866-5 Advanced Qualitative Methods in Educational Research  
EDUC 899-10 Doctoral Thesis  
EDUC 923-4 The Politics of Difference: Coalition Building and Critical Pedagogy  
EDUC 924-4 Multilingual Societies and Identities in a Globalizing World  
EDUC 925-4 Critical Literacies in Multilingual Contexts  
EDUC 926-2 Doctoral Seminar A: Anthropological Approaches to Educational Research  
EDUC 927-2 Doctoral Seminar B: Sociolinguistic Approaches to Educational Research  
EDUC 928-2 Doctoral Seminar C: Critical and Sociocultural Approaches to Educational Research  
EDUC 983-5 Comprehensive Examination

Students are welcome to complete other courses in the Faculty of Education and throughout the University, with their senior supervisor's permission.

## Mathematics Education

This PhD program is for those interested in becoming scholars and leaders in mathematics education. Prior knowledge of mathematics and issues related to teaching and learning mathematics is required.

Students complete all of  
 EDUC 899-10 Doctoral Thesis  
 EDUC 910-5 Directed Readings  
 EDUC 941-5 Mathematical Learning and Thinking:  
     Historical, Philosophical and Psychological  
     Dimensions  
 EDUC 942-5 Contemporary Theories and  
     Methodologies in Mathematics Education  
 EDUC 946-5 Doctoral Seminar in Mathematics  
     Education  
 EDUC 983-5 Doctoral Comprehensive Examination  
 plus one elective graduate course as approved by the  
 supervisor and co-ordinator of the program.

## Field Programs

8559 Education Building, 778.782.4892/5830 Tel,  
 778.782.5882 Fax, [www.educ.sfu.ca/fp](http://www.educ.sfu.ca/fp),  
[edprgpa@sfu.ca](mailto:edprgpa@sfu.ca)

### *Director*

L. Kanevsky BA (S Fraser), MASpEd (San Diego),  
 MPhil, PhD (Col)

### Graduate Diploma Offered

graduate diploma in advanced professional studies in  
 education

This diploma is laddered to the master of education  
 program in Educational Practice. See "Educational  
 Practice" on page 287 for details.

### Graduate Diploma in Advanced Professional Studies in Education

This diploma program, administered through Field  
 Programs, consists of a minimum of 30 units in 500  
 division EDPR courses. (The total units may vary,  
 depending on the program content but will not be less  
 than 30 units of 500 division EDPR courses.) Course  
 work from other programs or universities may not be  
 transferred into this graduate diploma program.

Graduate diploma programs are developed in  
 co-operation with other educational partners (e.g.  
 school districts and consortia, Ministry of Education  
 regional offices) and all courses are offered at  
 off-campus sites. Each program addresses a theme

that is relevant to the educational community.

Students normally progress through the program as a  
 cohort. Significant program portions may be  
 supported via the Internet. Students who are unable  
 to follow a cohort must complete 30 units, at least 18  
 of which must be in the given theme.

### Admission

The minimum admission requirements are

- a bachelor's degree from a recognized university
- a teaching certificate based on a recognized teacher  
 preparation program, and
- submitted evidence of the student's ability to  
 undertake advanced work in education.

Under exceptional circumstances, applicants without  
 a teaching certificate but having a bachelor's degree  
 and significant teaching or leadership experience in  
 education (e.g. in a pre-school or post-secondary  
 setting) may be accepted into the program.

# Faculty of Environment

8800 Technology and Science Complex 2,  
778.782.8787 Tel, 778.782.8788 Fax,  
www.sfu.ca/fenv

## Dean

J.T. Pierce BA (Tor), MA (Wat), PhD (Lond)

## Associate Dean

D. Knowler BA, MA (Alta), PhD (York, UK)

## Graduate Certificate and Diploma Offered

graduate certificate in development studies  
graduated diploma in quantitative methods in  
fisheries management

## Graduate Degrees Offered

master of arts  
master of resource management  
master of resource management (planning)  
doctor of philosophy  
doctor of philosophy under special arrangements

## Development Studies Program

K9666 Shrum Science Centre, 778.782.4265 Tel,  
778.782.4346 Fax, www.sfu.ca/devgroup

Development Studies is the study of social transformation or change, particularly those changes that affect the quality of life of individuals and groups. The problems of social transformation are urgent and complex, and often they transcend the boundaries of conventional academic disciplines. Development Studies examines the problems in, processes involved, and the prospects for the transformation of human, natural, and material resources in various contexts and at various levels of social interaction, from the local, national, and regional to the international/global level.

To study development as social transformation, one must draw upon many disciplines in order to obtain a balanced understanding of historical and contemporary processes. These disciplines include, but are not limited to: anthropology, business, communication, economics, education, geography, history, law, political science, psychology, resource and environmental management, and sociology.

## Graduate Certificate in Development Studies

This graduate certificate in development studies links faculty teaching and research across nine units in the university, and enables students to coordinate their graduate studies so as to concentrate on development issues, using a multidisciplinary approach. Students move through their programs in their departments while also being in regular contact with those with common interests in development across the university.

## Program Requirements

- Students will be admitted to the university and graduate from their home units according to departmental, school and faculty regulations.
- Students enrolled in listed certificate courses must meet all course requirements. Students will be advised early of course scheduling (listed in the certificate) to enable them to plan their programs in consultation with their supervisory committees.

- The list of courses taught in the next terms will be published well in advance. Students should plan course choices leading to the certificate well ahead. Completing the certificate may require completion of more courses than the degree requires and may thus prolong completion time.
- Students will graduate with a regular graduate degree offered by their home units, plus a certificate that recognizes their concentration in the field of development studies.

## Admission Requirements

On being granted regular admission to a graduate program in any department, school, or faculty in the University (including special arrangements), students will be informed about the certificate by the steering committee. Though working on projects, theses, and essays is not a requirement of the certificate, students who elect to complete projects, theses, essays in the unit of admission (known as the home department) in a development-related subject will be encouraged to participate.

## Continuation Requirements

Maintaining satisfactory progress as a graduate student in the University. Students will be informed of their progress toward the certificate.

## Graduation Requirements

Students will complete four courses selected from the course list approved by the program's steering committee, including a core seminar course on development. Students complete listed courses from at least two different departments or schools (or non-departmentalized faculties). Any student can complete the certificate with an appropriate combination of courses, including the core seminar. Students are advised to complete the core seminar course in the first half of their graduate studies.

## Required Courses

The core seminar course is currently offered as a special topics course co-hosted by the School of Communication and the Department of Political Science. A list of courses eligible for inclusion in the certificate will be published annually.

## Department of Geography

7123 Robert C. Brown Hall, 778.782.3321 Tel,  
778.782.5841 Fax, www.sfu.ca/geography

### Chair

R. Hayter BA (Newcastle, UK), MA (Alta),  
PhD (Wash)

### Graduate Program Chair

E. McCann MA (Glas), MA (Miami, Ohio),  
PhD (Kentucky)

### Faculty and Areas of Research

See "Department of Geography" on page 173 for a complete list of faculty.

N.K. Blomley – political and urban geography  
T.A. Brennand – glacial geomorphology, quaternary environments, regional paleohydrology, paleogeology  
J.A.C. Brohman – third world development, economic geography, Latin America  
R.A. Clapp – economic geography, resource conservation, forest policy

V.A. Crooks – socio-spatial process of disablement, doctor patient interactions, geographies of primary health care, social policies and programs  
S. Dragicevic – geographic information science, spatial analysis and modeling  
A.M. Gill – tourism and community planning, resources management  
R. Hayter – regional development, manufacturing, BC's forest economy, Japan  
N. Hedley – geographic and spatial visualization, advanced interface research, geographic information systems, cartography, spatial cognition  
E.J. Hickin – fluvial geomorphology  
M. Holden – urban and environmental policy, sustainable development  
J. Hyndman – feminist, political and cultural geography  
P.T. Kingsbury – cultural geography, consumption tourism, social theory  
L.F.W. Lesack – ecosystem biogeochemistry, land and water interactions, limnology  
G.P. Mann – labor, natural resources, political economy, social theory  
E. McCann – urban geography, urban politics and policy  
J.T. Pierce – economic and rural geography, research methodology  
M.L. Roseland – regional planning and sustainable communities  
M.G. Schmidt – soil science, forest ecology, geographic information systems  
N.C. Schuurman – geographic information science, spatial data and integration  
J. Sturgeon – environmental geography  
J. Taylor – history of the North American west  
I. Tromp-van Meerveld – watershed hydrology, ecohydrology  
J. Venditti – fluvial geomorphology, landscape dynamics, stream restoration

### Associate Members

W.G. Gill, Vice-President, University Relations  
M.V. Hayes, Faculty of Health Sciences  
S. Markey, Explorations in the Arts and Social Sciences

## Areas of Research

The Department of Geography offers MA, MSc and PhD degrees in the Faculty of Environment. Emphasis is placed on the application of theoretical frameworks to the analysis of social, economic and physical landscapes, with particular reference to western North America.

## MA Program

### Admission Requirements

Normally, an undergraduate 3.25 CGPA is required for entry. Admission is in the fall term and applications should be completed by January 15. Admission requires a command of quantitative techniques and qualitative methodologies. Candidates lacking these will complete courses equivalent to GEOG 251 and 301. The admitted candidate works under the faculty advisor's guidance pending the choice of a two faculty member supervisory committee, one of whom may be from outside the department. They will be chosen by the beginning of the second term.

### Degree Requirements

All MA candidates are expected to complete the requirements (30 units) in six terms.

The MA program requires a thesis (18 units). The remaining 12 units consist of required and elective courses. The recommended maximum thesis length is 120 pages (including bibliography and end notes, but excluding appendices). The thesis involves the conceptualization of a problem and the collection, analysis and interpretation of empirical data. Normally, MA students present their research projects at a departmental conference (Graduate Research Day) held annually in the fall term following their entry. A written proposal should be submitted to the student's supervisory committee, defended in colloquium and approved by the end of the second term. The completed thesis will be judged by the candidate's examining committee at an oral defence.

### Course Requirements

GEOG 600 and 601 are seminars offered each fall and spring. Grading is satisfactory/unsatisfactory. Attendance is compulsory for a satisfactory grade. GEOG 604 and 605, offered every year, are required for MA students. With the advisor's consent, GEOG 604 can be replaced by another course. One of GEOG 620 and 640 (special topics) is normally offered each year depending on research interests. Other courses are offered less frequently, depending on demand and faculty availability.

### MSc Program

The department offers a program leading to a master of science with emphasis on earth surface processes and environmental geoscience, specifically in aspects of geomorphology, biogeography, soils, climatology and hydrology; spatial information science, remote sensing, GIS and spatial analysis.

### Admission Requirements

Normally, MSc candidates should have a BSc 3.25 CGPA in geography or a related discipline to enter the program. Admission is in the fall term. Applications should be completed by January 15.

### Supervisory Committee

The MSc candidate, once admitted, works under a faculty advisor's guidance, pending the choice of a supervisory committee. The supervisory committee, normally consisting of two faculty members, one of whom may be from outside the department, will be chosen by the start of the second term.

### Degree Requirements

All candidates complete degree requirements (30 units) in six terms. The program requires a thesis (18 units). The remaining 12 units will be comprised of required and elective courses.

### Course Requirements

Students complete 12 units minimum (three courses) **plus** GEOG 600 and 601 which are non-credit courses graded satisfactory/unsatisfactory. Attendance is compulsory to obtain a satisfactory grade. Normally, MSc students present their research projects at a departmental conference (Graduate Research Day) held annually in the fall term following their entry. Students normally complete GEOG 606 as part of the 12 units. With the advisor's consent, another course is possible. The remaining seven units comprise two courses from the list below, or with the graduate chair's approval, from related graduate courses in other departments such as biological sciences, chemistry, physics, mathematics, earth sciences, resource and environmental management and computing science. Students with deficiencies may be asked to complete more course work.

### Thesis

The MSc program requires the submission and successful defence of a thesis. Normally, MSc students present proposed research at a one-day conference (research day) held in the spring term. A written proposal is submitted to the supervisory committee, defended in colloquium and approved by the end of the second term and before substantive research. The thesis normally involves the conceptualization of a problem and the collection, analysis and interpretation of empirical data. The recommended maximum length of an MSc thesis is 120 pages (including bibliography, but excluding appendices). The completed thesis is judged by the candidate's examining committee at an oral defence.

### Courses

The following GEOG courses are offered for the MSc program: GEOG 600, 601, 606, 611, 612, 613, 614, 615, 617, 651, 653, 655, 656, 691, 697. For a full course list, see "Geography GEOG" on page 384.

### PhD Program

For admission, see "Graduate General Regulations" on page 219. Applicants must have a MA or MSc. Those admitted without an appropriate background may have to make up specified courses. Incoming PhD students are will complete the doctoral component of GEOG 600, a seminar on geography graduate studies, offered each fall term.

### Supervisory Committee

The student works under the faculty advisor's guidance, pending formation of a supervisory committee normally consisting of three faculty, one of whom may be from outside the department, is chosen by the beginning of the second term.

### Degree Requirements

The advisor, and subsequently the supervisory committee, and the student determine a study program to suit background and research objectives. After committee consultation, students can elect, or may be required to complete courses to acquire relevant knowledge and skills, including language.

### Qualifying Examination

Written and oral qualifying exams establish competence to proceed with doctoral thesis research and are completed at the end of the second residence term and no later than the end of the third. Students who fail the written or oral exam may retake each once, after a one term lapse.

Both parts of the qualifying examination must be successfully completed by the end of the fourth residence term. The qualifying examination committee consists of supervisory committee members (the senior supervisor acts as chair), plus an examiner external to the supervisory committee.

Written exams comprise four papers jointly agreed by the qualifying examination committee. The oral must be held within three weeks of completion of the written examination. The student is examined primarily in topics covered by the written exams, but questions may range over the entire discipline.

### Thesis

Candidates who successfully complete qualifying exams will present a thesis proposal at a department colloquium no later than the end of the fifth residence term. The supervisory committee must approve the written proposal prior to substantive research. The completed thesis is judged by the examining committee at an oral defence. If the defence fails, the candidate is ineligible for further degree candidacy. See "Graduate General Regulations" on page 219.

## School of Resource and Environmental Management

8405 Technology and Science Complex 1,  
778.782.4659 Tel, 778.782.4968 Fax,  
www.rem.sfu.ca, reminfo@sfu.ca

### Director

K. Lertzman BSc (Manit), MSc, PhD (Br Col)

### Professors Emeriti

J.C. Day BS, MSc (WOnt), PhD (Chic)

J.L. Knetsch BS, MS (Mich State), MPA, PhD (Harv)

### Professors

A.M. Gill BA (Hull), MA (Alta), PhD (Manit) – tourism and community development\*

F. Gobas BSc, MSc (Amst), PhD (Tor) – environmental chemistry and toxicology, environmental fate modelling

T.I. Gunton BA, MA (Wat), PhD (Br Col) – regional resource and development planning

M. Jaccard BA, MRM (S Fraser), PhD (Grenoble) – resource and environmental economics with primary research interests in the field of energy and sustainable economies

K. Lertzman BSc (Manit), MSc, PhD (Br Col) – forest ecology, long term forest dynamics, landscape ecology, conservation biology, global change

R.M. Peterman BSc (Calif), PhD (Br Col), Canada Research Chair – fish population dynamics and management, simulation modelling, risk assessment, decision analysis

P.W. Williams BA (Ott), MA (Wat), PhD (Utah State) – policy, planning and management issues in tourism and outdoor recreation

### Associate Professors

A. Cooper BA (Northwestern), MFS (Yale), PhD (Wash) – quantitative ecology, historical ecology, biodiversity, animal movement, resource selection

W. Haider MSc (Vienna), MA (Car), PhD (McG) – parks and outdoor recreation, human dimensions in resource management, choice modelling, social decision support systems

S. Cox BSc (Massachusetts, Lowell), MSc, PhD (Br Col) – fish stock assessment, conservation and multi-species management of recreational and marine fisheries, human dynamics

D. Knowler BA, MA (Alta) PhD (York, UK) – ecological economics, bioeconomic modelling, natural resource management in developing countries, valuation of environmental resources

E. Pinkerton BA (Wellesley), MAT (Harv), MA (Middlebury), PhD (Brandeis) – maritime anthropology, common property theory, community roles in management of adjacent renewable resources

M. Rutherford BSc, LLB (Br Col), MRM (S Fraser), MPhil, PhD (Yale) – environmental policy and planning, ecosystem-based management, policy evaluation and learning, environmental law

J.R. Welch AB (Hamilton), MA, PhD (Arizona) – cultural resource management, resource planning and policy, and traditional cultural values, systems of land use, and ecological knowledge\*\*

### Assistant Professors

K. Kohfeld BSc (Brown), MPhil, PhD (Col) – physical processes of the earth system, global change

A. Salomon BSc (Qu), MSc (Br Col), PhD (Wash) – post doctoral research fellow, marine community and ecosystem dynamics, University of Calgary

### Adjunct Faculty

C. Bataille BA (Br Col), MRM, PhD (S Fraser) – managing partner, MK Jaccard and Associates (climate change policy and energy management)

D. Boyd BComm (Alta), BLaw (Tor), MA (McG) – Senior Association, Faculty of Law, University of Victoria (environmental law)

M.J. Bradford BSc, MSc (S Fraser), PhD (McG) – research scientist, Department of Fisheries and Oceans (water flow effects on chinook salmon)

A. deBruyn BSc, MSc (Vic, BC), PhD (McG) – NSERC postdoctoral fellow

D. Dunkley BA (Guelph), MRM (S Fraser) – geoscientist/watershed planner, Greater Vancouver Regional District (policy and planning development, environment and impact assessment)

A. Fall BSc, PhD (S Fraser) – research consultant working on landscape ecology, spatially explicit simulation, natural disturbance models and sustainable forest management

J. Fall BSc (Vic, BC), MRM (S Fraser) – instructor, Capilano College

S. Hanna BSc (Vic, BC), MRM (S Fraser) – senior environmental specialist, Acres International (environmental and socioeconomic impact assessment, water resource management and environmental auditing)

H. Harker BSc (US Merchant Marine Acad), MSc (Alaska), PhD (Wat) – community planning services director, Red Deer Country, Red Deer, Alberta

E. Heyerdahl BSc (Ore), MSc, PhD (Wash) – research forester, USDA Forest Service (dendochronology, fire ecology and the analysis of historical fire regimes)

R. Hoos BSc (Calg), MSc (Vic, BC) – director of northern affairs, Polar Gas, Calgary (environmental impact assessment)

M. Ikononou BSc (Trent), MSc, PhD (Alta) – research scientist, Department of Fisheries and Oceans (mass spectrometry, environmental analytical chemistry and environmental pollution as it relates to fresh water and marine ecosystems)

S. Jessen BES, MA (Wat), PhD (Br Col) – manager, oceans and great freshwater lakes program, Canadian Parks and Wilderness Society

J. Kelly BA (Br Col), MA (Br Col), PhD (S Fraser) – principal, Kelly and Associates, Resource Consulting, director, strategic services, InterVISTAS Consulting, sustainable tourism development

N. Knight BSc, MRM (S Fraser), PhD (Br Col) – associate vice-president, planning, University of British Columbia

A. Krishnaswamy MA (Indian Forest), MA, PhD (Wash) – socioeconomic extension specialist, FORREX (forest management, community outreach)

W. Kurz DipHolzwirt (Hamburg), PhD (Br Col) – forest ecology and management, global carbon budgets

P. Lee BSc (S Fraser), MSc (Prin), PhD (S Fraser) – monitoring ecologist, Parks Canada, Vancouver (ecological integrity)

Oceans (ecosystems processes in watersheds, tophic ecology and habitat science)

E. MacIsaac BSc (Br Col) – head, Fish-Forest Research Program, Department of Fisheries and Oceans

A. MacKinnon BSc, MSc (Br Col) – manager, Forest Ecology, BC Ministry of Forests (forest ecology)

D. Marmorek BES (Wat), MSc (Br Col) – director and partner, Environmental and Social Systems Analysts Ltd. (ESSA), (adaptive environmental assessment and management; ecological impacts of acid deposition)

D.W.I. Marshall BSc (Qu) – program director, Fraser Basin Management Program (environmental and social impact assessment)

J. Morrison BEd, MEd (Vic, BC), MBA (S Fraser) – management consultant, Jim Morrison and Associates

A. Murray BSc (EnvStu) (Wat), MSc (Cant) – vice-president, community and environmental affairs, Vancouver International Airport Authority (environmental, impact assessment, environmental

management systems, sustainable development, conflict resolution, community involvement)

J. Nyboer BSc (Alta), BEd (Tor), MRM, PhD (S Fraser) – executive director, Canadian Industry Energy End-Use Data and Analysis Centre (CIEEDAC) and Energy Research Group (ERG) (energy system modelling, industrial energy use analysis, energy efficiency analysis, technology assessment)

M. Pellatt BSc, PhD (S Fraser) – coastal ecologist, Parks Canada (coastal ecology, paleoecology)

R. Porges ABD (Br Col), BA, MSc (S Fraser) – director, research services, Tourism British Columbia

P. Ross BSc (Trent), MSc (Dal), PhD (Utrecht) – research scientist, Department of Fisheries and Oceans, Institute of Ocean Sciences (environmental contaminants in marine mammals, modelling contaminants in the eco-system)

K. Rothley BS (MIT), MFS, PhD (Yale) – dean, Ontario Hockey Academy (animal behavior and the design of protected areas)

S. Saunders BSc (Qu), MRM (S Fraser), PhD (Michigan Tech) – research ecologist, Vancouver Forest Region, BC Ministry of Forests and Range

D. Selbie BScH (Qu), PhD (Qu) – research scientist, Department of Fisheries and Oceans Cultus Lake Laboratory

MM. Weinstein BSc, PhD (McG) – marine biologist, aquatic resources co-ordinator for 'Namgis First Nation, Alert Bay, British Columbia

L. Wolfe BSc (Ore), MSc, MBA (Br Col), PhD (S Fraser) – principal, Quadra Planning Consultants Ltd., Larry Wolfe Associates

C. Wood BSc (S Fraser), PhD (Br Col) – research scientist, conservation biology section, Fisheries and Oceans Canada, Science Branch

\*joint appointment with geography  
\*\*joint appointment with archaeology

The School of Resource and Environmental Management offers two interdisciplinary graduate degrees. The master's program culminates in either a master of resource management degree, or a master of resource management (planning) degree. In addition, there is a doctoral program leading to a doctor of philosophy degree.

These programs are designed for recent graduates from a range of disciplines, and for individuals with experience in private organizations or public agencies dealing with natural resources and the environment. Relevant disciplines of undergraduate training or experience include fields such as biology, engineering, chemistry, forestry and geology, as well as business administration, economics, geography, planning and a variety of social sciences. The programs provide training for professional careers in private or public organizations and preparation for further training for research and academic careers.

In the optional co-op education program, students work in a private organization or a resource management agency to gain first hand experience.

## Co-operative Education

This program places students in a government or private resource or environmental management agency to gain professional experience in applied problem solving. This optional program can lead to work that is directly applicable to REM 699.

## Centres and Institutes

### Centre for Tourism Policy and Research

The school plays a leading role in the operation of Simon Fraser University's Centre for Tourism Policy and Research. The centre undertakes research, offers professional development seminars and

workshops, and conducts planning and marketing research projects for public and private sector tourism organizations.

## Co-operative Resource Management Institute

REM faculty play an active role in this institute, a unit on the Burnaby Mountain campus that houses natural resources management agencies. The institute can facilitate solutions to difficult multidisciplinary issues in resource management by providing an environment where personnel from different management agencies such as forestry, fisheries and wildlife can work side-by-side with Simon Fraser University faculty, graduate students, post-doctoral fellows and research associates on a daily basis. The university benefits from greater concentration of expertise in resource management and from new opportunities for multidisciplinary, collaborative research programs.

## Admission Requirements

Refer to the "Graduate General Regulations" on page 219 for admission requirements. Contact the School of Resource and Environmental Management directly for more information ([reminfo@sfu.ca](mailto:reminfo@sfu.ca)). Those with degree qualifications in fields not directly related but with extensive experience in resource management are encouraged to apply.

Individuals will vary in their preparation for the various disciplines in the school. Therefore, admission to the school might be conditional upon the completion of certain undergraduate courses.

Application deadline: February 1.

## Graduate Diploma in Quantitative Methods in Fisheries Management

This interdisciplinary program provides an opportunity to study the latest quantitative methods in fisheries management. The program is aimed at those with a background in fisheries science and management, as well as those who would simply like to learn more about this field. It provides a strong foundation in the quantitative tools that are necessary for doing fish stock assessment and providing scientific advice in support of fisheries management decisions. It will also provide professionals working in the field with an opportunity to upgrade their skills in the increasingly important areas of statistics, simulation modelling and analyses of uncertainties and risks. The program emphasizes both the theory and the application of these methods to real world situations.

## Application and Admission

Applicants are normally required to hold an undergraduate degree in one of the natural or applied sciences with a minimum 3.0 CGPA or a B grade. Applications from students with other degrees or with equivalent professional training and experience will also be considered.

Applicants must submit the following documentation to the graduate secretary of the school.

- online application for graduate admission, instructions available from the Dean of Graduate Studies office's web site at [www.sfu.ca/dean-gradstudies/forms.htm](http://www.sfu.ca/dean-gradstudies/forms.htm);
- official copy of transcript of undergraduate and graduate grades (mailed directly from the granting institution);
- three confidential letters of reference (mailed directly from the referees);
- a one page statement of student interest;
- TOEFL and TWE test scores may be required for applicants whose first language is not English.
- resumé
- REM checklist

## Requirements

A mandatory non-credit one day orientation workshop for all new diploma program students will give an overview of how the various courses mentioned below will help students meet challenging issues in fisheries science and management. The workshop will also initiate dialogue between diploma students (who will bring significant work experience to class discussions), faculty and fisheries graduate students.

### Required Courses

Students complete a minimum of 22 units composed of the following courses. It is preferable that students complete the first four courses in the following order.

REM 613-5 Methods in Fisheries Assessment  
REM 661-5 Special Topics in Resources Management  
REM 663-5 Special Topics in Resource Management  
STAT 650-5 Quantitative Analysis in Resource Management and Field Biology

Students must also complete one or more of the following courses, or others approved by the academic program co-ordinator and instructor of the course.

REM 612-5 Simulation Modelling in Natural Resource Management  
REM 625-5 Risk Assessment and Decision Analysis for Management of Natural Resources  
STAT 602-3 Generalized Linear and Non-linear Modelling

## MRM Program

Students who successfully complete this program will be awarded the degree of master of resource management.

Students complete seven required courses (see below), six graduate elective courses and a research project (REM 699). A minimum of 69 units is required, consisting of 43 required units and 26 elective units. In exceptional cases, if a student provides evidence of advanced education that is equivalent to one of the required courses, a waiver may be granted for that course, thereby reducing the required courses to six.

### Prerequisite Courses

All students must be familiar with the material covered in an undergraduate course in parametric and nonparametric statistics.

### Required Courses

Students complete all of  
REM 601-5 The Social Science of Natural Resources Management  
REM 611-5 Applied Population and Community Ecology  
REM 621-5 Ecological Economics  
REM 631-5 Earth Systems and Global Change in Environmental Management  
REM 698-3 Field Resource Management Workshop  
REM 699-10 Research Project  
REM 801-5 Principles of Research Methods and Design in Resource and Environmental Management

and one of

REM 642-5 Regional Planning I  
REM 644-5 Public Policy Analysis and Administration

### Elective Courses

To fulfil the six elective courses requirement, students generally choose those that support and complement their particular research interests. Students may, in consultation with their senior supervisor, select REM courses and/or courses from other departments.

### Planning Stream

Students who successfully complete this planning stream will be awarded the master of resource management (planning) degree.

In Canada, this planning stream program is distinctive because of its focus on the policy, economic and science aspects of natural resource and environmental planning.

The program is accredited by the Canadian Institute of Planners (CIP) and the Planning Institute of BC (PIBC). An MRM (Planning) graduate is eligible for membership as a certified professional planner and may enjoy improved employment prospects, conference and workshop participation, and access to professional development programs.

Students must successfully complete of the following.

### Required Courses

REM 601-5 The Social Science of Natural Resources Management  
REM 602-5 Natural Resource Management II: Advanced Seminar  
REM 611-5 Population and community Ecology  
REM 621-5 Ecological Economics  
REM 631-5 Earth Systems and Global Change in Environmental Management  
REM 641-5 Law and Resources  
REM 642-5 Regional Planning I  
REM 643-5 Environmental Conflict and Dispute Resolution  
REM 699-10 Research Project  
REM 801-5 Principles of Research Methods

### Elective Courses

In addition to the specified required courses, students complete three elective courses chosen from the following.

REM 610-5 Applied Environmental Toxicology and Environmental Management of Contaminants  
REM 612-5 Simulation Modelling in Natural Resource Management  
REM 613-5 Methods in Fisheries Assessment  
REM 625-5 Risk Assessment and Decision Analysis for Management of Natural Resources  
REM 632-5 Terrain Evaluation  
REM 633-5 Introduction to Remote Sensing and Aerial Photographic Interpretation  
REM 644-5 Public Policy Analysis and Administration  
REM 645-5 Resource Development Communities  
REM 646-5 Environmental and Social Impact Assessment and Environmental Management Systems  
REM 647-5 Parks and Outdoor Recreation Planning  
REM 648-5 The Tourism System  
REM 649-5 Tourism Planning and Policy  
REM 650-5 Energy and Materials Management and Policy  
REM 651-5 Project Evaluation and Non-market Valuation Methods  
REM 652-5 Community Tourism Planning and Development  
REM 655-5 Water Planning and Management  
REM 658-5 Energy and Materials Systems Modelling  
REM 660-5 Special Topics in Natural Resources Management  
REM 670-5 Introduction to Forestry  
REM 671-5 Forest Ecology

plus any course from approved external curriculum such as Simon Fraser University's Centre for Sustainable Community Development, Simon Fraser University's The City Program, UBC's School of Community and Regional Planning, or other relevant Simon Fraser University courses such as geography, business, etc.

## PhD Program

### Admission Requirements

To qualify for admission, an applicant must satisfy all university admission requirements as outlined in the graduate general regulations. Applicants must have:

- the ability to carry out innovative, independent and original PhD level research in that field
- high academic standing in previous university work
- a master's degree in a related discipline

All applicants must submit the following with their application:

- all university transcripts
- a short curriculum vitae providing evidence of awards, academic performance, publications and relevant research and work experience
- a 500-1,000 word *statement of interest* describing how this program fits into the applicant's research and career objectives
- three letters of reference (using the form provided in the application package) from respected academics/researchers who have first-hand knowledge of the applicant's research capabilities and academic training
- results from the GRE Test and
- official results of the TOEFL and TWE or IELTS exams (for applicants whose first language is not English and whose previous education has been conducted in another language)

Applicants must be accepted by an identified senior supervisor prior to admittance. PhD applicants are strongly advised to visit the University for an interview prior to February 1 of the year of requested admission. See "1.3.4 Admission to a Doctoral Program" on page 220.

## Transfer from the Master's Program to the PhD Program

An MRM student who shows exceptional ability may apply to transfer to the PhD program only if the student has the ability to carry out innovative, independent and original PhD level research in that field, and has obtained high academic standing in previous university work. All university regulations governing transfers must be met. Transfers are only permitted when the student has been in the master's program for two but not more than four terms.

Transfer applications must be approved by the student's supervisory committee, the REM graduate studies committee, and the senate graduate studies committee. Transfer students will be eligible to earn only the PhD degree.

## Degree Requirements Courses

All REM PhD students must complete and maintain an A- average in the following.  
REM 611-5 Population and Community Ecology  
REM 621-5 Ecological Economics  
REM 644-5 Public Policy Analysis and Administration  
REM 698-3 Field Resource Management Workshop  
REM 802-5 Research Approaches for REM PhD Students

The student's supervisory committee may recommend that the student completes elective courses in addition to the required courses in order to strengthen the student's background in areas directly related to their thesis research. Elective courses may be completed outside REM, if approved by the student's supervisory committee.

Students who transferred from the REM master's program into the REM PhD may obtain a course waiver for REM 611, 621, and 698 if they have received credit with an A- average. If a student receives a course waiver, the student is not required to replace the course for which the waiver was received with another course.

### Comprehensive Examinations

To complete the PhD degree the student must pass the REM PhD comprehensive examination that examines the candidate's knowledge and abilities in

disciplinary areas that are different from but related to the student's thesis research. The comprehensive examination includes three disciplinary areas, i.e.

- environmental sciences
- policy and planning in resource and environmental management
- natural resource and environmental economics

To complete the comprehensive examination, the student must prepare a written integrative paper which addresses issues in these three areas. The integrative paper is evaluated by the comprehensive examination committee in accordance with the policies and procedures of the School of Resource and Environmental Management. Students must pass an oral exam based on the integrative paper which is administered by the comprehensive examining committee. The integrative paper will normally be completed in the first three terms in the PhD program and the oral exam will normally be completed early in the student's fourth term in the program. If the candidate fails the comprehensive exam, and this assessment is approved by the graduate studies

committee, the student will be required to withdraw from the PhD program.

Detailed information about the comprehensive examination procedures, dates, and deadlines are provided in the *PhD Handbook of the School of Resource and Environmental Management*.

#### **Thesis Proposal**

PhD candidates must submit a written thesis proposal by the end of the fifth term of full time program enrolment. In conjunction with the supervisory committee, students develop a detailed written research proposal which must be defended before this committee. This thesis proposal is intended to demonstrate that the candidate's research abilities are adequate for PhD level research and to determine that the proposed research is feasible and has merit. The student must pass the thesis proposal defence to remain in the program.

#### **Thesis**

A written thesis based on the candidate's original research in resource and environmental science and

management is the final PhD program requirement and must include aspects of at least two disciplinary areas (such as ecology and policy, or toxicology and law). The topic must be approved as noted above and the student's progress will be evaluated annually in accordance with the graduate general regulations.

When the thesis is essentially complete, the student must first present it to a departmental colloquium prior to proceeding to the formal thesis defence. This presentation shall form the basis of the supervisory committee's recommendation about defence readiness. All PhD candidates must then pass the formal thesis defence, which is conducted in accordance with University regulations. All other PhD general requirements are as outlined in the graduate general regulations.

#### **Residence Requirement**

A PhD candidate must be enrolled and in residence at Simon Fraser University for the minimum number of terms as described in the "Graduate General Regulations" on page 219.

778.782.5766 Fax, [www.fhs.sfu.ca](http://www.fhs.sfu.ca), [fhsgrads@sfu.ca](mailto:fhsgrads@sfu.ca)

## Dean

J. O'Neil BA, MA (Sask), PhD (Calif)

## Associate Deans

M.V. Hayes BA, MSc, PhD (McM), CCFP

C. Janes BA (San Diego), MA (Colorado), PhD (Calif)

## Director, Graduate Programs

M. Joffres Bac-C (Lycee de Foix), MD (Toulouse),  
MSPH, PhD (Hawaii)

Faculty hiring is underway. See "Faculty of Health Sciences" on page 207 for a complete list of faculty, and [www.fhs.sfu.ca](http://www.fhs.sfu.ca) for updated information.

## Faculty and areas of research

R. Allen – air pollution exposure assessment in indoor and outdoor exposures; air pollution health effects; the development of methods to reduce exposure misclassification in large epidemiological studies  
T. Beischlag – molecular mechanisms of action or halogenated and polycyclic aromatic hydrocarbons; molecular mechanisms of transcription factor cross-talk; development and application of genomic approaches to monitor global chromatin changes in response to environmental contaminants and exogenous chemicals

N. Berry – reproductive health and globalization, global health, Latin America, maternal mortality, immigrant parenting and family health, health promotion, community-based participatory research  
J. Calvert – international trade agreements and health policy, environment and energy, privatization, Canadian health policy, employment and human resources in the health sector

A. Chockalingam – global burden of cardiovascular and respiratory diseases; hypertension prevention and control, control of cardiovascular risk factors, ethnicity, gender and cardiovascular diseases, patient education, clinical trials research, methodology  
S. Corber – operational aspects of public health programs and interventions in Canada and globally; principles and practice of population and public health disease prevention and control international health  
K.K. Corbett – behavioral and organizational change, health communication and intervention research; participatory research with and service delivery to diverse communities and under-served populations  
S. Erikson – global health, women's reproduction, global political economy of health, governmentality, globalization and health, global relations of power, global health in international affairs

B. Fischer – mental health and addiction services and policy, knowledge translation and exchange

E. Goldner – mental health and addiction services and policy, knowledge translation and exchange  
L. Goldsmith – access to health care; medical under service; structure and organization of health care systems; qualitative methods

M.V. Hayes – social geography, population health

R. Hogg – demography, population health, infectious diseases epidemiology, HIV/AIDS, marginalized populations, First Nations health, antiretroviral therapy

C. Janes – anthropological health research in global settings, health disparities in areas undergoing socioeconomic and political reform

M. Joffres – primary prevention, population health, hypertension and cardiovascular disease epidemiology, as well as studying the link between emotions and health

B. Lanphear – children's environmental health and development of epidemiological studies of

environmental exposures and their impact on children's physical and behavioral health

F. Lee – infectious disease, mental health and addictions

L.H. Malcoe – social epidemiology; population health inequities related to gender, class, racism, and colonialism; intimate partner violence against women; participatory intervention research; indigenous health; theory and methods for studying social determinants of health

L. McCandless – Bayesian statistics, statistical methods for epidemiology, causal inference in observational studies confounding bias, Markov Chain Monte Carlo method

C. Miller – HIV and hepatitis C, addiction, adolescent health, gender theory, health policy, mixed methods  
M.H. Morrow – critical health policy with foci on: mental health reform, service provision and access to health services; mental health and social inequity; mental health and citizen engagement; globalization, neoliberal reforms, gender and health

P. Nepomnaschy – ecological perspectives on human reproduction, growth, and development; life history theory, effects of environmental and social factors on human reproduction, human variation in response to social and environmental stressors, physiological effects of stress on female reproduction, fetal adaptations to environmental and maternal challenges, effects of prenatal stress on developmental and reproductive strategies on the adult

M. Niiikura – virology, viral pathogenicity, vaccinology

B. O'Connor – population health promotion; health inequities

R. Pantomphlet – infectious disease immunology

K. Palmer – comparative health care systems and policy, public health practice, international/global health

G. Prefontaine – epigenetic/molecular genetics

J.K. Scott – immunochemistry, immunology

J. Snyder – applied ethics, public health ethics, bioethics

J. Somers – mental health services and policy, addiction and substance abuse

M. Steinberg – epidemiology and occupational health

T. Takaro – disease susceptibility factors in environmental and occupational health, particularly inflammatory lung conditions including asthma, chronic beryllium disease and asbestosis; linking laboratory biomarker work with public health practice including community-based interventions

R. Tucker – gender, ethnic and socio-economic disparities in adolescent mental health and relationships between mental health and other health issues

S. Venners – molecular environmental epidemiology of human reproduction: endocrine disrupting pollutants, biomarkers of exposure, effect, and susceptibility, gene-environment interactions, intersections of environmental, social, psychological and nutritional epidemiology

C. Waddell – children's health and mental health, health policy, population health

D. Zabkiewicz – mental health and substance abuse epidemiology

L. Zeng – statistical methods for longitudinal data analysis: estimating functions, transition models, missing data

## Advisor

Ms. L.J. Kumpula BA (S Fraser), 778.782.6852 Tel,  
778.782.5766 Fax, [kumpula@sfu.ca](mailto:kumpula@sfu.ca)

## Graduate Diploma

graduate diploma in global health

## Graduate Degrees Offered

master of public health

master of science

## Introduction

The Faculty of Health Sciences currently offers two graduate degrees, master of science (MSc) and master of public health (MPH), as well as the diploma in global health. It is anticipated that a PhD program will be offered in the future.

Students wishing to pursue research training in one of the many health sciences subject areas, and who may be considering doctoral training, should consider enrolling in the master of science program. Students desiring an applied career in population and public health should consider enrolling in the master of public health program. The MSc program is highly flexible, and can be planned according to specific interests. The program culminates with the defence of a thesis. The MPH program is a course intensive program that meets Canadian and international standards for public health practice. It requires a supervised practice experience (a practicum) and completion and defence of a master's project.

## Master of Public Health Program

Faculty of Health Sciences research and teaching programs share the defining features of integrating social, behavioral, and life sciences approaches to determinants of individual and population health, disease surveillance, health promotion, and risk mitigation. This integration combines a broad spectrum of research approaches, methods of inquiry, levels of analysis, and research perspectives.

A master's degree program, which focuses on population and public health, is offered with practice-based study which integrates core public health knowledge with the attainment of public health practitioner skills.

In addition to training in the core public health sciences, students complete one of two concentrations: global health, and population health. Both were designed to meet guidelines for public health education and practice as published by the Public Health Agency of Canada, the Canadian Public Health Association, and the US-based Council on Education for Public Health. However, the MPH program is currently undergoing accreditation review of these guidelines.

## Admission Requirements

Applicants who are recent graduates will have a baccalaureate degree in a discipline relevant to population and public health including the social and behavioral sciences, life sciences, and/or the quantitative sciences. A 3.3 cumulative grade point average is normally required. Applicants with substantial practitioner experience in health or a related field will be evaluated in part on their academic credentials and career accomplishments.

Applicants may receive conditional admission subject to satisfactory completion of additional specified courses and a statistics university undergraduate course or its equivalent.

Applicants should indicate their preferred MPH concentration (see above), and must demonstrate experience, interest, and commitment to their chosen

area of study. Global health concentration applicants should have some international experience.

Factors influencing MPH program admission include the availability of faculty with expertise in the desired area of study, enrolment space, and the applicant's specific preparation.

Meeting program application requirements does not guarantee program admission.

*Students are admitted annually in the fall term only.* All applicants must meet the application deadline which is normally set for the beginning of February. Only complete applications are considered. To apply on-line and pay the application fee, visit <http://www.sfu.ca/gradstudents/prospective/index.html>. For information about how to apply, visit the Faculty of Health Sciences' website at <http://www.fhs.sfu.ca/graduate-programs>.

## Core Requirements

All MPH students complete a minimum of 46 units of course work, which includes a 13 week practicum completed over an academic term, and submission of a master's project. With senior supervisor and graduate program director approval, students may submit a thesis in lieu of a master's project, but *all students complete a practicum*. Students choosing to write a thesis will complete a minimum of 49 units.

Students who choose to take longer to complete their program should plan a minimum of two courses per term. Note that graduate general regulations govern the permitted time to complete a master's degree (see "1.12.2 Master's Degree" on page 225).

The core courses indicated below will meet the core learning objectives and core competencies developed in consultation with faculty, students, community stakeholders, and potential future employers.

## Core Course Requirements for all MPH Concentrations (22 units)

Students complete all of  
HSCI 801-4 Biostatistics for Population Health Practice I  
HSCI 802-4 Principles of Epidemiology for Public Health  
HSCI 803-3 Qualitative and Survey Research Methods  
HSCI 845-3 Environmental and Occupational Health  
HSCI 880-3 Practicum  
HSCI 897-3 Master's Project  
HSCI 900-1 Seminars in Population and Public Health\*  
HSCI 901-1 Practicum Preparation Seminar\*\*

\*offered in the spring term, normally completed in the first program year

\*\*offered in the fall term, normally completed in the same year as the practicum

## Master's Project (HSCI 897)

Normally in the term following practicum completion, students enrol in HSCI 897 to develop the final project with their supervisors. In the following and every subsequent term, students then enrol in the project completion course (HSCI 895) until the project is completed and successfully defended, as described in Graduate General Regulations 1.9 and 1.10.

## Thesis Option

Instead of a project, students may choose a thesis. Approval of the supervisor and the graduate program director is required, to ensure that Faculty of Health Sciences thesis guidelines are met, including the development and defence of a thesis proposal.

Students choosing the thesis option will enrol in HSCI 898 and continue to enrol in this course until the thesis is completed and successfully defended, as described in Graduate General Regulations 1.9 and 1.10. Thesis students must complete a practicum.

*Note that thesis students will complete 49 units.*

## The Practicum (HSCI 880)

All students will complete a practicum, which may be undertaken during any term. Before going on practicum, students complete, at minimum, the following courses.

HSCI 801-4 Biostatistics for Population Health Practice I  
HSCI 802-4 Principles of Epidemiology for Public Health  
HSCI 803-3 Qualitative and Survey Research Methods  
HSCI 901-1 Practicum Preparation Seminar

Students will consult with their senior supervisor concerning all courses to be completed before the practicum. Under special circumstances, students may request written permission from the director, public health practice, and the senior supervisor to substitute one of the above courses, or to embark on the practicum prior to completion of these required courses.

Students normally complete their practicum during the summer term of their first year, but it may be completed later provided that prerequisites are met. Either way, these options allow ample time to complete core requirements before undertaking the practicum.

## Practicum Preparation Seminar (HSCI 901)

Students register in the practicum preparation seminar (HSCI 901) in their practicum year. Normally, students enrol in this course in the fall term of their first year.

## Concentration Requirements

In addition to the requirements stated above, students choose one of the following concentrations.

### Environmental and Occupational Health Concentration

This concentration trains practitioners for practice, research, and leadership positions in environmental health. Environmental health sciences is a complex, multifaceted field that is dedicated both to protecting communities and workers from environmental factors that adversely impact human health, and to maintaining the ecological balances essential to long-term human health and environmental quality. Environmental health is one of the largest areas of public health comprising a large percentage of public health practitioners.

In addition to the core courses listed above, students complete all of  
HSCI 815-3 concepts and Principles of Public Health Practice  
HSCI 847-3 Risk Assessment and Communication for Human Health  
HSCI 849-3 Environmental and Occupational Epidemiology

and one of  
HSCI 824-3 Comparative Health Care Systems  
HSCI 827-3 Analysis of the Canadian Health Care System

and one of  
HSCI 830-3 Health Promotion  
HSCI 835-3 Social and Behavioral contexts of Health and Disease

and one of  
HSCI 846-3 Environmental and Occupational Epidemiology  
HSCI 848-3 Toxicology, Susceptibility and Environmental Health

and two of  
HSCI 804-3 Biostatistics for Population Health Practice II  
HSCI 850-3 Air Pollution and Human Health  
HSCI 855-3 Disease Prevention and Control

With the approval of their senior supervisor and consent of the graduate program director, a student may substitute one course from this list with an HSCI elective, or from another department or faculty.

## Global Health Concentration

This concentration prepares professionals and graduates to become agents of change who are prepared to mitigate health inequities in a global context. The concentration teaches the skills and knowledge of population and public health so that students can work in resource challenged contexts. Students learn strategies for promoting health and preventing disease in socially and culturally diverse settings that are characterized by serious health inequities. Students will identify and challenge the power structures that produce poverty, inequality, and disease. They will analyze issues of ethics and human rights as these apply to health disparities worldwide. And they will develop programs and formulate policy to change and enhance the performance of health systems. Putting such knowledge into action is a critical dimension of the program. The program provides skills, experiences, sensitivity, ethical principles, and insights to respond creatively to health challenges in an interconnected and globalized world.

In addition to the core courses shown above, students in this concentration complete all of  
HSCI 821-3 Problems in Global Health  
HSCI 822-3 Globalization and Health Inequities  
HSCI 824-3 Comparative Health Care Systems  
HSCI 830-3 Health Promotion

and a minimum of one methods or skills course chosen from  
HSCI 804-3 Biostatistics for Population Health Practice II  
HSCI 805-3 Intermediate Epidemiologic Methods  
HSCI 806-3 Principles of Demographic Analysis  
HSCI 825-3 Advocacy and Communication in Global Health  
HSCI 826-3 Program Planning and Evaluation in Global Health

or a course providing appropriate methods and skills, chosen from HSCI courses, or from another department or faculty, with the permission of the senior supervisor and the graduate program director

and two additional courses selected from  
HSCI 823-3 Health, Gender and Development  
HSCI 825-3 Advocacy and Communication in Global Health  
HSCI 826-3 Program Planning and Evaluation in Global Health  
HSCI 828-3 Health, Human Security, Social Justice  
HSCI 829-3 Health Policy-making in a Global Context  
HSCI 855-3 Disease Prevention and Control  
HSCI 870-3 Global Health and International Affairs

or, with the approval of the senior supervisor, a student may substitute two courses from this list with electives drawn from the list of HSCI graduate courses, from other departments and faculties.

## Population Health Concentration

This concentration focuses on health policy and planning for health care delivery, health promotion and disease prevention, and applied methods for assessing population health. The concentration prepares established professionals and recent university graduates for positions of leadership in population and public health.

In addition to the core courses shown above, students in this concentration complete all of  
HSCI 815-3 Concepts of Population and Public Health Practice  
HSCI 827-3 Analysis of the Canadian Health Care Delivery System

HSCI 835-3 Social and Behavioral Contexts of Health and Disease  
 HSCI 855-3 Disease Prevention and Control  
 and a minimum of one methods or skills course chosen from  
 HSCI 804-3 Biostatistics for Population Health Practice II  
 HSCI 805-3 Intermediate Epidemiologic Methods  
 HSCI 806-3 Principles of Demographic Analysis  
 HSCI 825-3 Advocacy and Communication in Global Health  
 HSCI 826-3 Program Planning and Evaluation in Global Health

or a course providing appropriate methods or skills, chosen from HSCI courses or from another department or faculty, with permission of the senior supervisor and the graduate program director  
 plus three additional elective courses chosen from HSCI courses or from relevant courses in other faculties and departments, with permission of the senior supervisor and course instructor.

### **Social Inequities and Health Concentration**

The importance of reducing health inequities has emerged as an imperative for health scholars, policymakers and practitioners both within Canada and globally. Increasingly, health inequities are being understood within a conceptual framework that foregrounds the role of structural factors and accounts for intersecting axes of oppression and privilege. Despite a substantial evidence base documenting social inequities in health, there are major gaps in our understanding of the pathways and mechanisms whereby health inequities are produced. Thus, there is limited information on which to base development of effective prevention and intervention policies that will reduce these inequities.

This concentration's goal is to prepare MPH students for critical and reflexive research and practice that addresses health inequities related to poverty, racism, colonialism, sexism and other forms of structural violence. Upon completion of the concentration, learners will have a commitment and capacity to advance theory, research, and practice that explains why systemic social inequities persist and how best to reduce their effects on population health.

In addition to core courses, students complete all of  
 HSCI 807-3 Researching Health Inequities  
 HSCI 815-3 Concepts of Population and Public Health Practice  
 HSCI 835-3 Social and Behavioral Contexts of Health and Disease  
 HSCI 838-3 Theorizing Social Inequities and Health  
 HSCI 839-3 Strategies for Reducing Health Inequities  
 and one of  
 HSCI 824-3 Comparative Health Care Systems  
 HSCI 827-3 Analysis of the Canadian Health Care System

and one of  
 HSCI 822-3 Globalization and Health Inequities  
 HSCI 823-3 Health, Gender and Development  
 HSCI 829-3 Health Policy Making in a Global Context  
 HSCI 891-3 Special Topics in Health Sciences\*  
 SA 855-3 Advanced Quantitative Methods

\*when offered as Exploring Social Locations:  
 Women's Health and Policy in Canada

With the approval of their senior supervisor and consent of the graduate program director, a student may substitute one course from this list with an HSCI elective, or from another department or faculty.

plus one additional elective chosen from an HSCI course or from relevant courses in other faculties and departments, with permission of the senior supervisor and the director of graduate programs.

## **Master of Science Program**

This program offers students the opportunity to develop an area of research expertise in the health sciences. It prepares graduates for research careers in one of the signature areas that either have been developed or are currently under development within the faculty including global health; environmental health and toxicology; epidemiology and prevention of chronic disease, population and public health perspectives on mental health and addictions; the impact of social inequalities on multiple health outcomes; adolescent and children's health, health policy, and interdisciplinary perspectives on infectious disease. The available courses and directed research experiences available will cover health issues from the level of cells, organisms, systems, communities and populations, encompassing and transcending strictly individual or clinical perspectives.

Formal academic instruction is available in regularly taught courses within the faculty (as described above) as well as in other faculties and departments the University, and other BC and Alberta universities through the Western Deans' Agreement. In addition, directed studies and directed research courses may be available in areas specific.

### **Thesis Requirement**

The MSc is a research degree in which the main component will be a thesis that addresses a health sciences research problem. The thesis will comprise a focused body of study that would normally require about two to three terms to complete.

### **Admission Requirements**

Applicants who are recent graduates should have completed a baccalaureate degree in a discipline relevant to their health sciences interest. Such disciplines include the social and behavioral sciences, life sciences and/or the quantitative sciences. A minimum cumulative grade point average of at least 3.3 on grading scales that are similar to those used by Simon Fraser University is normally required.

Applicants with substantial experience as practitioners in health or a related field will be evaluated in part on their academic credentials and in part on their career accomplishments. Applicants may receive conditional admission, subject to satisfactory completion of additional specified courses.

Factors influencing admission include an assessment of whether the student's educational and career interest are complementary to the research strengths of the faculty, enrolment space, and the student's specific preparation. Meeting program application requirements does not guarantee program admission. Applicants should demonstrate how their educational, research and/or career experiences have prepared them for their selected areas of concentration.

Students are admitted annually for each fall term. All applicants must meet the application deadline, which is set for the beginning of February preceding the term of matriculation. Only complete applications are considered. To apply and pay the application fee online, consult the graduate studies website at <http://www.sfu.ca/gradstudents/applicants/index.html>. For specific Faculty of Health Sciences information, visit <http://www.fhs.sfu.ca/graduate-programs>.

### **Course Requirements**

The curriculum plan consists of a minimum of six courses, one seminar and a thesis.

Requirements include two courses in methodology and research design that are relevant to the student's research and career interest. To meet this requirement, most students will find it advantageous, depending on their interests and prior training, to complete at least two of the following courses.

HSCI 801-4 Biostatistics for Population Health Practice I  
 HSCI 802-4 Principles of epidemiology for Public Health  
 HSCI 804-3 Biostatistics for Population Health Practice II  
 HSCI 805-3 Intermediate Epidemiologic Methods.

Methods requirements for those intending to conduct laboratory-based research may be met through directed laboratory research experiences.

In addition to the two methods courses, four additional courses, selected in consultation with their supervisor, are completed from any of the faculty's graduate courses. With senior supervisor and graduate program director approval, a student may complete up to two courses outside the faculty but within the University, or from other Western Dean's Agreement universities. This agreement provides easy inclusion of graduate courses from most universities in BC and adjoining provinces.

All students complete

HSCI 900-1 Seminars in Population and Public Health

This course, which is completed during the spring term, provides a context for all master's students to meet and learn from faculty and each other.

The thesis requirement is completed by enrolling in HSCI 898-6 Master's Thesis

It comprises focused study that normally requires two to three terms to complete. Upon embarking on their thesis research, MSc thesis stream students enrol in this course and continue to enrol in the thesis completion course HSCI 896 until the thesis is completed and successfully defended, as described in graduate general regulations 1.9 and 1.10.

Before commencing master's thesis research, all students prepare and successfully defend a thesis proposal before their supervisory committee, and obtain relevant ethics, biosafety, and experimental animal handling approvals as necessary.

## **Graduate Diploma in Global Health**

This stand-alone diploma provides complementary graduate training in the basics of global health practice to those interested in learning more about global health methods and concepts. In addition to core courses, elective courses help students apply learning experiences to their global health interests and activities. The diploma is a useful adjunct to clinical training (e.g. medicine or nursing), academic training in complementary fields (e.g. development, international relations, public policy) and for those who wish to work internationally, or learn about global health research challenges and practice.

### **Course Work and Requirements**

Students complete a minimum of 22 units including all of the following core courses.

HSCI 801-4 Biostatistics for Population Health Practice I  
 HSCI 802-4 Principles of Epidemiology for Public Health  
 HSCI 821-3 Problems in Global Health  
 HSCI 822-3 Globalization and Health Inequities

### **Elective Courses**

In addition to the required core courses listed above, students complete a minimum of three elective courses, two of which should be chosen from global health area requirements, and the third course can be chosen from HSCI graduate courses, or from other Simon Fraser University graduate programs. Students should choose electives in consultation with the co-ordinator and/or director, graduate programs.

### Course Credit

Students who have completed any or all of the following global health, or population and public health courses, cannot complete corresponding 800 division HSCI courses for further credit: PPH 820, 821, 822, 823, 860, 870, 880, 897, GLOH 510, 520, 530, 610, 615, 620, 630, 635, 640, 650, 680, 690, 810, 815, 820, 830, 835, 840, 850, 880, 890.

Students in the diploma program or in the master of public health program who have completed any or all of the following global health or population and public health courses cannot complete corresponding 800 division HSCI courses for further credit: PPH 820, 821, 822, 823, 860, 870, 880, 897, GLOH 519, 520, 530, 610, 615, 620, 630, 635, 640, 650, 680, 690, 810, 815, 820, 830, 835, 840, 850, 880, 890.

Students who have completed the master's project under the title *Seminar in the Workplace Integrated*

*Learning* (PPH 897), or under the title *Practicum Project in Global Health* (GLOH 698), or under the title *MSc Project* (PPH 897) cannot complete HSCI 897 for further credit.

### Institute for Health Research and Education

Director: D. MacLean, MA, MHS (Tor), MD (Dal),  
Associate Directors: C.B. Dean, BSc (Sask), MMath,  
PhD (Wat), M.V. Hayes, BA, MSc, PhD (McM),  
778.782.4821 Tel, 778.782.5927 Fax,  
www.ihre.sfu.ca, ihre@sfu.ca

The Institute for Health Research and Education (IHRE) promotes and facilitates research collaborations that bridge the basic biomedical sciences, clinical interfaces, societies, cultures, and the health of populations, health services and systems, and technology of health. It provides a focus

for researchers from all sectors of health, and provides infrastructure to promote and foster cross-disciplinary research collaborations and the creation and promotion of new knowledge. Applications lie in the understanding of health issues from population-based, individual, and biological perspectives, and development and transfer of new technologies and treatments into the community. The IHRE coordinates a range of activities that provide library holdings in the areas of health, provided expert personnel to assist with grant applications, and skilled personnel to maintain health-related instrumentation. It has also served to foster and initiate the Faculty of Health Sciences, a venue for instructional programs open to students in September 2005, starting with a master's degree in population and public health.

master of pest management  
master of science  
doctor of philosophy  
doctor of philosophy under special arrangements

## General Regulations

See "Graduate General Regulations" on page 219 for  
admission requirements, enrolment, residence  
requirements and degree completion time limits.

## Admission Requirements

### Requirements for a Master's Degree

The minimum requirements are those stated in the  
"Graduate General Regulations" on page 219. Any  
additional requirements imposed by the supervisory  
committee must be satisfied. Individual departments  
may require additional graduate courses. Students  
who, in the opinion of the supervisory committee, lack  
certain graduate course prerequisites may be  
required to complete some undergraduate courses.

### Requirements for a Doctoral Degree

A PhD candidate must present a thesis embodying  
original research. In addition, 15 units beyond the  
BSc degree is required. Of these, at least 12 must be  
graduate courses and the remaining three may be  
graduate or upper division undergraduate within the  
candidate's department or an ancillary department.

These are minimum faculty requirements. Individual  
departments may have additional requirements.

## Full-Time Study

Full-time study for the MET, MPM, MSc, and PhD  
normally is a period of intensive work during which not  
more than 20 employment hours per week may be  
undertaken by the candidate. These refer to clock  
hours either at external employment off campus or  
employment on campus as a teaching assistant or  
research assistant performing specified duties not  
directly related to the candidate's program of study.

## Supervisory Committee

For information on supervisory committees, see  
"Graduate General Regulations" on page 219.

## Thesis

The thesis must be presented and lodged in the  
University library. Details concerning the final form for  
binding are available from the library.

## PhD Examinations

Examinations may be oral and/or written and all  
committee members must certify the results. See  
"1.9.4 Preparation for Examination of Doctoral  
Thesis" on page 224 for further regulations.

## Research Facilities

Faculty of Science research programs, housed in  
modern research laboratories, are serviced by a wide  
range of facilities and equipment. The research  
complement includes 194 faculty members, 87  
post-doctoral fellows and research associates and  
400 to 500 graduate students.

Biological research is enhanced by fresh and salt  
water aquarium facilities, a quarantined insectary, an  
11 metre research vessel, and boat and vehicle  
transports. The Bamfield Marine Sciences Centre on  
Vancouver Island is available as a marine biology and  
oceanography teaching and research facility. The  
centre is operated jointly by the Universities of  
Alberta, British Columbia, Calgary, Victoria, and  
Simon Fraser University.

Experimental facilities are available at TRIUMF, a 500  
MeV proton accelerator, for the study of high energy  
nuclear reactions, muon chemistry, condensed matter  
physics, and nuclear decay systems of exotic nuclei.  
TRIUMF is a joint venture of the Universities of  
Alberta, British Columbia, Victoria, Carleton,  
Montreal, Toronto and Simon Fraser University.

# Department of Biological Sciences

B8255 Shrum Science Centre, 778.782.4475 Tel,  
778.782.3496 Fax, [www.sfu.ca/biology](http://www.sfu.ca/biology)

## Chair

F. Breden BA (S Florida), MS (Georgia), PhD (Chic)

## Graduate Program Chair

M.M. Moore BSc, PhD (Br Col)

## Faculty and Areas of Research

See "Department of Biological Sciences" on page 183  
for a complete list of faculty.

L.I. Bendell-Young – ecotoxicology, environmental  
toxicology  
S.R. Bisgrove – cell biology  
F. Breden – population genetics, evolution of social  
behavior  
J. Cory – biological control  
I.M. Coté – marine conservation  
B.J. Crespi – behavioral ecology  
J.K. Christians – organismal physiology  
N.K. Dulvy – aquatic conservation  
E. Elle – plant evolutionary ecology  
D.J. Green – avian ecology, avian populations,  
conservation biology  
G.J. Gries – behavioral ecology, chemical ecology,  
semiochemicals  
J. Guttman – anatomy and cell biology  
M.W. Hart – marine invertebrates  
N.H. Haunerland – biochemistry, insect physiology  
H. Hutter – developmental neurobiology  
C.J. Kennedy – biochemical and aquatic toxicology,  
A.R. Kermode – plant molecular biology  
L.F.W. Lesack – ecosystem biogeochemistry,  
limnology; land-water interactions  
C.A. Lowenberger – parasitology, insect vectors  
R.W. Mathewes – paleoecology, palynology  
J. Mattsson – Arabidopsis developmental genetics  
A.O. Mooers – biodiversity, molecular analysis  
M.M. Moore – fungal pathogenesis, toxicology,  
microbiology  
R.A. Nicholson – pesticide biochemistry, toxicology  
I. Novales Flamarique – visual ecology,  
neuroethology, evolution  
W. Palen – aquatic conservation

E. Palsson – mathematical biology, cell modeling  
Z.K. Punja – plant biotechnology and pathology  
J.D. Reynolds – salmon conservation and  
management  
G.L. Rintoul – cell neurophysiology  
B.D. Roitberg – population dynamics, insect  
behavioral ecology  
M.A. Silverman – cellular neuroscience  
T.D. Williams – physiological ecology  
M.L. Winston – apiculture, social insects  
R.C. Ydenberg – behavioral ecology

## Adjunct Faculty

D. Bertram – seabird conservation biology, marbled  
Murrelet recovery  
W.S. Boyd – bird migration and conservation  
C. Bishop – wildlife ecotoxicology  
R. Butler – bird migration and conservation  
C. Eichkoff – ecotoxicology  
J. Elliott – wildlife ecotoxicology, population ecology  
of raptors  
D. Esler – population biology of waterfowl ecology  
P. Gallagher – coastal studies, selective fisheries,  
marine conservation  
D. Gillespie – biological control, biology of  
omnivorous insects  
M. Goettel – invertebrate pathology, whole organism  
and population levels (insects and microbes)  
M. Hipfner – conservation in marine ecosystems  
D. Lank – behavioral ecology and population and  
conservation biology  
D. McQueen – aquatic food web modelling; limnology  
A. Plant – plant molecular physiology  
B. Smith – ecological population modeling for  
conservation

## Associate Members

For areas of research, refer to the department listed.  
T. Beischlag, Faculty of Health Sciences  
B. Brandhorst, Department of Molecular Biology and  
Biochemistry  
F. Gobas, School of Resource and Environmental  
Management  
C. Krieger, Department of Biomedical Physiology and  
Kinesiology  
M. Niikura, Faculty of Health Sciences  
G. Prefontaine, Faculty of Health Sciences  
L.M. Quarmby, Department of Molecular Biology and  
Biochemistry  
R. Routledge, Department of Statistics and Actuarial  
Science  
P. Ruben, Department of Biomedical Physiology and  
Kinesiology  
G.F. Tibbitts, Department of Biomedical Physiology  
and Kinesiology

## Biochemistry and Molecular Biology

See page 305 for more information.

## Biophysics

Students who wish to undertake biophysics  
interdisciplinary work may apply to the Department of  
Biological Sciences or the Department of Physics.  
See "Graduate General Regulations" on page 219 for  
biophysics under special arrangements.

## Marine Science

Marine science courses, which may be included in a  
biology graduate program at Bamfield, BC, are  
offered in conjunction with certain other universities.  
They are available for graduate credit for MSc and  
PhD students on recommendation of the supervisory  
committee. See page 416 for a list of MASC courses.

## Admission Requirements

See "Graduate General Regulations" on page 219.

## Biological Sciences

### MSc and PhD Program Requirements

All master and doctoral programs require a thesis based on original research.

Each PhD student must pass an oral candidacy exam prior to the end of the fourth program term or the second term after transfer from the MSc program. The exam concentrates on the student's research area, follows a written PhD research proposal submission, and is graded acceptable/unacceptable. Students with an unacceptable grade must pass a second exam within six months; a second unacceptable rating requires program withdrawal.

For those with a master's degree, the PhD program requires at least three courses totalling not less than eight units. Of these, at least six graduate courses and the remaining units are chosen from graduate or upper division undergraduate courses within the candidate's department, or in an ancillary department. Where advance approval is obtained, a PhD student may complete up to one-half of the above course requirement at another university.

PhD students entering directly from a bachelor's program or transferring from the MSc program must complete 15 units in total (i.e. one additional three unit course beyond the University MSc requirement) (see "1.7.2 Residence Requirement for the Master's Degree" on page 223). Additional course work may be set by the supervisory committee.

For graduate program information, contact the chair, department graduate studies committee.

## Pest Management

### MPM Program Requirements

The research-based master of pest management (MPM) program is distinct from an MSc program in its strongly applied approaches to learning and discussion of biological principles, and in interfacing science with problems facing society. The program requires a thesis based on original research with relevance to pest management (BISC 849).

Each MPM student must complete all of  
BISC 601-2 Agriculture, Horticulture and Urban Pest Management

BISC 602-2 Forest Pest Management  
BISC 847-3 Pest Management in Practice

and two of

BISC 816-3 Biology and Management of Forest Insects

BISC 817-3 Social Insects

BISC 841-3 Plant Disease Development and Control

BISC 843-3 Population Processes

BISC 844-3 Biological Controls

BISC 846-3 Insecticide Chemistry and Toxicology

BISC 851-3 Vertebrate Pests

BISC 852-3 Biology of Animal Disease Vectors

BISC 884-3 Special Topics in Pest Biology and Management

and one additional 800 division elective (three units).

### Pest Management Courses

BISC 601, 602, 603, 604, and 605 are designed for students in the master of pest management degree. They may be completed for credit subject to prior approval by the student's supervisory committee.

## Environmental Toxicology

### MET Admission Requirements

Before entering the master of environmental toxicology (MET) program, the following or equivalents should be completed. These prerequisites may be waived by the departmental graduate studies committee under special circumstances on recommendation from the director.

BISC 312-3 Environmental Toxicology I  
BISC 313-3 Environmental Toxicology II  
CHEM 282-3 Organic Chemistry II  
MBB 221-3 Cellular Biology and Biochemistry

### MET Program Requirements

Student chooses a senior supervisor after admission, with program director consultation. A supervisory committee is formed by the beginning of the third term of full time equivalent enrolment. Students complete a project on a specific environmental toxicology aspect which may be based on original field, laboratory or library research. The student is supervised on this project by the senior supervisor while enrolled in BISC 656. In addition to submission of a report at project completion, the student prepares for an oral exam according to *Graduate General Regulations* (see "1.9 Preparation for Examinations" on page 224) and will be examined according to section 1.10 (see "1.10 Examinations" on page 225).

This program may be completed on a part time basis.

Every MET program consists of a minimum of 32 graduate units, including the following courses.

#### Core Courses

BISC 650-3 Environmental Risk Assessment: Human Health Risk Assessment and Ecological Effects-based Risk Assessment

BISC 651-3 Environmental Toxicology Tests I: Ecological Effects-based Tests

BISC 652-3 Environmental Toxicology Tests II: Mammalian Toxicity Tests

BISC 654-3 Food and Drug Toxicology

BISC 655-3 Environmental Toxicology Seminar

BISC 656-0 Master of Environmental Toxicology Project

BISC 855-3 Biochemical Toxicology

STAT 650-5 Quantitative Analysis in Resource Management and Field Biology

#### Elective Courses

Students complete one of

BISC 854-3 Ecotoxicology

EASC 613-3 Groundwater Hydrology

REM 610-5 Management of Contaminants in the Environment

and six units chosen from the following

BISC 846-3 Insecticide Chemistry and Toxicology

BISC 839-3 Industrial Microbiology

BISC 883-3 Special Topics in Environmental Toxicology

KIN 851-3 Recent Advances in Experimental Carcinogenesis

REM 612-5 Simulation Modelling in Natural Resource Management

### Professional Registration and Certification

Eligibility for the certification examination of the American Board of Toxicology Inc. can be met through the master of environmental toxicology program and seven years of work experience.

### Environmental Toxicology Courses

The following courses are offered for this program:

BISC 650, 651, 652, 654, 655, 656, 657, 658.

## Co-operative Education

This option allows students to gain work experience outside the University. Award of the degree is not contingent upon satisfactorily completing this option. Students enrolling in the co-op program must note the regulations governing minimum fee requirements. See "1.10 Examinations" on page 225.

## Department of Biomedical Physiology and Kinesiology

K9625 Shrum Science Centre, 778.782.3573 Tel, 778.782.3040 Fax, <http://www.sfu.ca/kinesiology>

#### Director

P.C. Ruben, BSc, MSc (G Washington), PhD (Calg), Burnaby Mountain Endowed Professor

#### Graduate Program Chair

S.N. Robinovitch BSc (Br Col), MSc (MIT), PhD (Harvard/MIT), Canada Research Chair\*

#### Faculty and Areas of Research

For a complete list of faculty, see "Department of Biomedical Physiology and Kinesiology" on page 186.

P.N.S. Bawa – neuroscience

A.P. Blaber – environmental and aerospace physiology

A.E. Chapman – biomechanics\*

T.W. Claydon – physiological and pathophysiological regulation of ion channels

V.E. Claydon – cardiovascular autonomic function

A.J. Davison – oxygen and the anti-oxidant vitamins\*

J. Dickinson – motor learning and human factors\*

M. Donelan – locomotion neuromechanics

D.T. Finegood – regulation of carbohydrate metabolism

D. Goodman – motor control and learning

J.A. Hoffer – neural control of movement and neural prostheses

C. Krieger – physiology and pathophysiology of motor control

S.A. Lear – cardiac rehabilitation

C.L. MacKenzie – motor control, human skills

R.G. Marteniuk – motor control\*

J.B. Morrison – bioengineering and environmental ergonomics\*

W.S. Parkhouse – exercise physiology and biochemistry

S.N. Robinovitch – biomechanics, falls and fall-related injuries in the elderly

M.P. Rosin – environmental carcinogenesis

P.C. Ruben – molecular basis of inheritable diseases

G.F. Tibbits – cardiac biology

A.V. Vieira – nutritional biochemistry

M.J. Wakeling – biomechanics and treatment of muscle dysfunction

H. Weinberg – electrophysiology of information processing and complex behavior\*

M.D. White – environmental physiology

*Adjunct Faculty*

L. Hove-Madsen – cardiac physiology

M.S. Koehle – exercise and environmental physiology

P.M. Lane – cancer imaging and disease prevention/treatment

P. Pretorius – physiology of aging

D. Robinson – ergonomics and human factors

I. Rossberg-Gempton – social, cultural and psychological factors of health promotion

A.W. Sheel – exercise, cardio-respiratory and environmental physiology

R.A. Strath – optometry, contact lenses in the work environment

D.E.R. Warburton – cardio-respiratory physiology

L. Zhang – oral pathology

\*emeritus

**Associate Members**

For areas of research, refer to the departments listed.  
 M.F. Beg, School of Engineering Science  
 G. Chapman, School of Engineering Science  
 B.L. Gray, School of Engineering Science  
 B. Kaminska, School of Engineering Science  
 C. Menon, School of Engineering Science  
 M. Parameswaran, School of Engineering Science  
 A.H. Rawicz, School of Engineering Science  
 M.V. Sarunic, School of Engineering Science  
 N.V. Watson, Department of Psychology  
 E.C. Young, Department of Molecular Biology and Biochemistry

**Admission Requirements**

See "1.3 Admission" on page 219. At least 24 units of appropriate undergraduate science course are required.

**Graduate Courses**

If the subject matter of a listed course has been previously completed with graduate credit, the course may not be completed again for credit.

**MSc Program (Thesis)****Degree Requirements**

This program requires a 18 units minimum of graduate courses and a thesis. If a supervisory committee deems that preparation is inadequate, more than this may be required. At least 12 of these units must be from graduate kinesiology courses.

All students must complete the following two courses.

KIN 801-3 Seminar on Research in Kinesiology  
 KIN 802-3 Statistical Applications in Kinesiology Research

Students must also complete four additional courses, at least two of which must be from the following.

KIN 810-3 Integrative Muscle Physiology  
 KIN 812-3 Molecular and Cellular Cardiology  
 KIN 821-3 Environmental and Exercise Physiology  
 KIN 825-3 Motor Learning and Control  
 KIN 840-3 Human Biomechanics  
 KIN 850-3 Control Systems in Health and Disease  
 KIN 861-3 Neuroscience  
 KIN 870-3 Modeling of Physiological Systems

Remaining units may be selected from any KIN graduate courses, and any other graduate courses at the University or other universities with prior graduate program committee approval. Courses will be chosen by the supervisory committee after consultation with the candidate. For further information and regulations, see "Graduate General Regulations" on page 219.

**Thesis**

The school encourages early thesis proposal submission which is circulated to faculty and resident graduate students, and formally presented for open forum discussion. A formal defence of the completed thesis is made to the examination committee at an open forum. The thesis proposal must precede the defence by at least four months. For regulations, see "Graduate General Regulations" on page 219.

**Time Required for Degree**

Requirements are normally completed in six terms.

**MSc Program (Course Work)****Degree Requirements**

The MSc Program by Course Work requires the completion of 30 units of graduate courses in the Department of Biomedical Physiology and Kinesiology.

All students must complete the following two courses.

KIN 801-3 Seminar on Research in Kinesiology  
 KIN 802-3 Statistical Applications in Kinesiology Research

and three of

KIN 810-3 Integrative Muscle Physiology  
 KIN 812-3 Molecular and Cellular Cardiology  
 KIN 821-3 Environmental and Exercise Physiology  
 KIN 825-3 Motor Learning and Control  
 KIN 840-3 Human Biomechanics  
 KIN 850-3 Control Systems in Health and Disease  
 KIN 861-3 Neuroscience  
 KIN 870-3 Modeling of Physiological Systems

and four electives chosen from any KIN graduate courses, and any other graduate courses at Simon Fraser University or other universities with prior approval of the graduate program committee.

All students must also complete a one-term directed study project KIN 804. Students who do not complete their project in one term must enrol for KIN 809 (Project Completion) in all subsequent terms until the project is completed. No additional credit will be given for KIN 809.

**Time Required for Degree**

It may be possible to complete the MSc course work in one calendar year of full-time study. However, it is anticipated that normally six terms will be required for degree completion. The program can be undertaken by students who are also employed.

**Application Criteria for Transfer from MSc to PhD Program**

Students currently in the kinesiology master's program may be considered for transfer to the PhD program. Such transfers will be infrequent and very selective. Normally, only students enrolled in their third through sixth terms may apply to transfer to the PhD program. The graduate program committee (GPC) reviews such applications, and the GPC chair forwards a recommendation to the dean of graduate studies. The decision is made by the dean of graduate studies.

In addition to section 1.3.4 of the graduate general regulations, eligibility and the decision regarding transfer to the PhD in kinesiology will include the following criteria.

- strong support letters from the senior supervisor and at least one other academic referee
- excellent academic performance (e.g. minimum GPA of 3.67)
- strong background in research design and statistics or modeling as appropriate to the area
- completion of kinesiology graduate seminar course
- evidence that the student is capable of completing and disseminating research. Such capability will be judged by research to date, publications and letters from referees.

**PhD Program****Degree Requirements**

Students are admitted to the program in an area defined and determined prior to acceptance by the school's graduate program committee. The program must be within the student's and the school's capabilities. Students must show competence in methodology relevant to proposed research.

Normally the supervisory committee will prescribe courses necessary to complete the student's academic preparation. In exceptional circumstances, the supervisory committee may allow the student to proceed without additional course work over and above that for a master's degree.

Study and research is designed to suit the background and research objectives of each student and may differ widely from student to student.

The student will present two school seminars on topics approved by the student's senior supervisor, of which one should be directly related to the student's thesis research. At least one of the seminars should be presented as a school seminar. The graduate program committee encourages students to participate in appropriate scientific meetings and conferences. As such, approval of a formal conference presentation, in lieu of one of the school seminars, will typically be granted.

**Comprehensive Examinations**

The comprehensive exam will normally consist of a research proposal, and a related oral and written exam.

The research proposal will be written in the format of either an NSERC Discovery Grant application, or a CIHR Operating Grant application, with an eleven page limit exclusive of budget, references, appendices, figures and tables. The proposal is to be written independently by the candidate, and should be written in enough detail to determine that the research is feasible and sufficient for PhD level research. The associated closed-book written examination will consist of questions structured to examine the candidate's knowledge of the proposed research area and to determine whether he/she is capable of carrying out the proposed research. The questions may cover areas such as: fundamental knowledge, theoretical ideas or models, methodology, analysis and interpretation of results.

The oral examination is designed to further assess the candidate's ability to understand the issues, and their ability to undertake the proposed research. It will consist of a 20-30 minute presentation of the candidate's research proposal to an open forum, followed by a closed session. At the oral examination, the examiners may ask the student to clarify or elaborate the answers to the written exam questions and may further explore the student's knowledge in any area relevant to the proposed research.

PhD students should normally expect to complete their comprehensive exams within the first six terms of PhD program enrolment. The examining committee will include the senior supervisor who, in consultation with the candidate, will nominate the other examining committee members, subject to the approval of the graduate program committee. Normally, this will consist of at least: one other member of the student's supervisory committee who is an SFU kinesiology faculty member and is also a faculty member external to the school as external examiner, who may be a member of the student's supervisory committee. The graduate program committee chair or designate will chair the committee.

**Dissertation****Dissertation Proposal**

Upon successful completion of the comprehensive examinations, the candidate prepares a dissertation proposal, which is circulated to faculty and resident graduate students, and will formally present this proposal for discussion at a school open forum. The proposal must precede the dissertation defence by at least one year.

**Completed Dissertation**

The completed dissertation is judged by the candidate's examining committee. If the dissertation defence is failed, the candidate is ineligible for further candidacy in the degree program at this University.

For information and regulations, refer to the "Graduate General Regulations" on page 219.

## Department of Chemistry

C8035 Shrum Science Centre, 778.782.3590 Tel, 778.782.3765 Fax, [www.sfu.ca/chemistry](http://www.sfu.ca/chemistry)

### Chair

Z-G. Ye BSc (Hefei Technol), MSc (Xi'an Jiaotong), PhD (Bordeaux)

### Graduate Program Chair

E. Plettner BSc, PhD (S Fraser)

### Faculty and Areas of Research

See "Department of Chemistry" on page 191 for a complete list of faculty.

G. Agnes – analytical chemistry

## Degrees Offered

Courses leading to an MSc and a PhD are offered.

## Degree Requirements

An assigned graduate supervisory committee meets with the student at least once a year to assess progress. The first meeting must occur before the end of the second term when the student makes an oral presentation of the research proposal. In subsequent years research progress must be reported.

## MSc Program

### Admission Requirements

See "Graduate General Regulations" on page 219.

### Degree Requirements

#### Course Work

The minimum requirement is 12 graduate units.

#### Research

A major program part is original research. A thesis describing this is submitted and defended.

## PhD Program

### Admission Requirements

See "Graduate General Regulations" on page 219.

### Degree Requirements

#### Course Work

For students entering with a BSc or equivalent: 15 graduate units. For those entering with a master's degree: six graduate units not including CHEM 801.

#### Research

A major program part is original research. A thesis embodying new and significant results is presented and defended at program conclusion.

### Transfer from MSc to PhD Program

Transfer from the MSc to the PhD program without submitting an MSc thesis must satisfy University requirements. Evidence of research potential will be judged by the graduate program committee.

## Molecular Biology and Biochemistry

See page 305 for information.

## Chemical Physics

Students who wish to undertake chemical physics interdisciplinary work may apply to the Department of Chemistry or to the Department of Physics. See "Graduate General Regulations" on page 219 for chemical physics under special arrangements.

## Co-operative Education

This option facilitates work experience outside the academic sphere. Students enrolled in the MSc program may enrol in CHEM 881 and 882. This option is only tenable after the completion of an MSc thesis and defence but before formal graduation. Enrolment requires graduate program committee approval.

## Department of Earth Sciences

7201 Technology and Science Complex 1, 778.782.5387 Tel, 778.782.4198 Fax, [www.sfu.ca/earth-sciences](http://www.sfu.ca/earth-sciences)

### Chair

D.J. Thorkelson BSc, MSc (Br Col), PhD (Car)

### Graduate Program Chair

H.D. Gibson BA (Colgate), MSc, PhD (Car)

### Faculty and Areas of Research

See "Department of Earth Sciences" on page 192 for a complete list of faculty.

D.M. Allen – hydrogeology  
A.J. Calvert – geophysics, exploration seismology  
J.J. Clague – geologic hazards and quaternary geology  
S. Dashtgard – petroleum geology, sedimentology, stratigraphy, ichnology  
G. Flowers – glaciology  
H.D. Gibson – structural geology, geochronology, tectonics  
D. Kirste – aqueous geochemistry, isotope geochemistry, hydrology  
J.A. MacEachern – ichnology and sedimentology  
D. Marshall – ore deposits, metamorphism, geochemistry  
D. Stead – engineering geology, rock mechanics, forestry geoscience  
D.J. Thorkelson – cordilleran tectonics and volcanology  
B.C. Ward – quaternary and environmental geology and forestry geoscience  
G. Williams-Jones – volcanology and geological hazards

### Adjunct Faculty

K.L. Bann – ichnology, ichnofacies, sequence stratigraphy, shallow marine environments  
P. Bobrowsky – quaternary geology and hazards  
B. Coffey – petroleum geology, carbonate sedimentology, carbonate sequence stratigraphy  
M. Colpron – cordilleran tectonics, bedrock mapping  
R. Couture – landslides, slope stability  
R. Enkin – paleomagnetism  
D. Froese – quaternary geology, tephrochronology, natural hazards  
L. Godin – structural geology, continental tectonics  
L. Jackson – quaternary stratigraphy, debris flow hazards  
O. Lian – quaternary stratigraphy, post-glacial sedimentary geology  
J. Monger – geology of the North American cordillera  
J. Moore – evolution of deformed belts, volcanic processes  
B. Rabus – remote sensing, natural hazards  
K. Simpson – volcanology, hazard assessment, economic geology  
L.C. Struik – bedrock geology, central BC, hazards policy  
P. Whitfield – hydrology

## MSc Program

A master of science is offered with emphasis on earth surface processes and environmental geoscience, surficial and Quaternary geology and sedimentology.

### Admission Requirements

See "Graduate General Regulations" on page 219. Students should normally have a BSc or equivalent with honors with at least a good second class standing (3.0 GPA) in the earth sciences (geology, geological engineering, geophysics, geomorphology, soil science or physical geography).

### Degree Requirements

#### Course Work

All students complete EASC 600 and 12 units minimum composed of at least four EASC graduate courses, or with the graduate chair's approval, from related graduate courses in other departments such as geography, chemistry, physics, biological sciences, and resource and environmental management. Course selections will include no more than six units from 700 division EASC courses. In addition, a thesis is required. The actual course selection will be a reflection of the student's research interest and guidance from the senior supervisor.

## Research

Graduates will be required to conduct original research and report their results in a thesis.

## PhD Program

Applicants normally have completed a master's degree in science or engineering. Admission is governed by the minimum University requirements (see "1.3.4 Admission to a Doctoral Program" on page 220). For students entering without a master's degree, the following additional requirements apply.

### Entry with a BSc or Equivalent Degree

- a 3.67 cumulative grade point average or equivalent first class standing
- completion of a thesis or other scholarly work

### Transfer from MSc to PhD Program

- at least 12 months in the MSc program
- a 3.67 cumulative grade point average
- completion of a thesis or other scholarly work
- approval of the student's supervisory committee and departmental graduate program committee.

## Course Work

For those with a BSc or equivalent, 15 graduate units in addition to EASC 600, 900, 901 and 998 is required. For those with a master's, six units of graduate courses in addition to EASC 600, 900, 901 and 998 is required. Graduate courses are chosen from the *Course Catalogue* (page 354), or with the graduate chair's approval, from related graduate courses in other departments/programs including physical geography, chemistry, physics, biological sciences, and the resource and environmental management. Course selections will include no more than six units from 700 division EASC courses.

Students must maintain a 3.0 CGPA in course work (see "1.5.1 Normal Grading System" on page 221). Failure to do so is evidence of unsatisfactory progress (see "1.5.4 CGPA Required For Continuation and Graduation" on page 221).

With advance approval, a PhD student may complete up to one half of the above course requirements at another university. Additional course work may be assigned by the supervisory committee, based on the results of the oral candidacy examination.

In addition to normal course work, PhD students present two research seminars (EASC 900 and 901); at least one should be based on completed or nearly completed thesis work. One seminar may address any earth sciences topic approved by the supervisory committee. PhD students are expected to attend all the research seminars in the department.

## Oral Candidacy Examination

PhD students must complete an oral candidacy exam prior to the end of the fourth term of enrolment, or in the first term after transferring from the MSc program.

The candidate must submit a written thesis proposal to the supervisory committee and present it at the beginning of the oral candidacy exam, which is followed by an oral exam. The student demonstrates an ability to conduct independent research, and have a sufficient command of the studied discipline to explain the research proposal and defend it. The examination must be successfully completed prior to undertaking any significant thesis research.

The exam concentrates on major and two minor research areas, as agreed by the supervisory committee and student, and is graded satisfactory/unsatisfactory by an examining committee of the supervisory committee and one external member. Students with an unsatisfactory grade must pass a second exam within six months; a second unsatisfactory rating results in withdrawal.

## Thesis

Students define and undertake original research, the results of which are reported in a thesis and defended before an examining committee (see "1.9.3 Examining Committee for Doctoral Thesis" on page 224). Students must conform to residence requirements (see "1.7.3 Residence Requirement for the Doctoral Degree" on page 223).

The program will normally be completed in 12 terms (four years) and not more than 15 terms (five years).

The student's progress is reviewed every 12 months by a supervisory committee of three or more faculty (see "1.8.1 Progress Evaluation" on page 223). The senior supervisor will be an earth sciences faculty member approved by the graduate program committee. At each review, the student presents a summary of work to date, with the first review being the oral candidacy exam when the thesis proposal is to be presented. Students with unsatisfactory research progress, or failing to demonstrate satisfactory knowledge and understanding of recent publications in their research area, or failing to have their revised research proposal approved by the supervisory committee within 18 months of admission may be required to withdraw (see "1.8.2 Review of Unsatisfactory Progress" on page 223).

### Chair

T. Archibald BMath (Wat), MA (York), MA, PhD (Tor)

### Graduate Program Chairs

N. Bruin PhD (Leiden)

S. Ruuth BMath (Wat), MSc, PhD (Br Col)

### Faculty and Areas of Research

See "Department of Mathematics" on page 196 for a complete list of faculty.

B.R. Alspach\* – graph theory, discrete mathematics  
 T. Archibald – history of mathematics  
 J. Bell – algebra, analytic number theory, combinatorics, asymptotic enumeration  
 J.L. Berggren\* – history of mathematics, algebra  
 P.B. Borwein – analysis, computation, number theory  
 T.C. Brown\* – algebra, combinatorics  
 N. Bruin – arithmetic geometry, number theory  
 C. Chauve – bioinformatics, algorithmics, combinatorics  
 I. Chen – number theory, arithmetic geometry  
 K.-S. Choi – number theory, algebra  
 R. Choksi – calculus of variations, partial differential equations, and applications to material science  
 A. Das\* – variational techniques; interior solutions in general relativity  
 M. DeVos – structural graph theory, combinatorial number theory  
 R. Fetecau – numerical methods, mathematical modelling, analysis for multi-scale phenomena; geometric mechanics and its relation to numerical algorithms for mechanical systems, symplectic integration, variational methods for collisions  
 L. Goddyn – combinatorics  
 J. Jedwab – discrete mathematics, exploratory computation, digital communication  
 M.C.A. Kropinski – numerical solutions of nonlinear differential equations; fluid dynamics  
 A.H. Lachlan\* – mathematical logic  
 P. Lisonek – combinatorics, coding theory  
 Z. Lu – algorithm design and analysis for large-scale continuous discrete optimization and stochastic programming, application of operations research in bioinformatics, data mining, finance, logistics and supply chain, manufacturing and structural design

M. Mishna – combinatorial functional equations, algorithmic and algebraic combinatorics, computer algebra  
 B. Mohar – topological graph theory, graph colouring, algebraic graph theory, graphs and matrices, infinite graphs  
 M.B. Monagan – algebra, computer algebra  
 D. Muraki – asymptotic analysis and modelling for the physical sciences, nonlinear waves and dynamics, atmospheric fluid dynamics  
 N. Nigam – PDE and numerical analysis, with applications in computational electromagnetics and micromagnetics  
 A.M. Oberman – nonlinear partial differential equations, numerical analysis, math finance  
 A. Punnen – discrete/combinatorial organization and applications  
 N.R. Reilly\* – algebra  
 R.D. Russell – numerical analysis; numerical solution of differential equations, dynamical systems  
 S. Ruuth – scientific computing, differential equations, dynamics of interfaces  
 C.Y. Shen\* – electromagnetic scattering; large scale scientific computing  
 L. Stacho – graph theory, discrete mathematics  
 T. Stephen – combinatorial optimization, approximation algorithms, complexity and combinatorics  
 J. Stockie – fluid dynamics, scientific computing, industrial mathematics  
 B.S. Thomson\* – analysis  
 M.R. Trummer – numerical analysis; differential equations, integral equations  
 P. Tupper – molecular dynamics, phase field models, phylogenetics, statistical mechanics, stochastic differential equations  
 J.F. Williams – asymptotic analysis for nonlinear PDEs, adaptive numerical methods and industrial mathematical models  
 R. Wittenberg – nonlinear dynamics, differential equations  
 K. Yeats – combinatorics and quantum field theory  
 \*emeritus

## Admission Requirements

See "1.1 Degrees Offered" on page 219 for admission requirements. Applicants normally submit aptitude section scores and an appropriate advanced section of the Educational Testing Service's graduate record exams. Applicants whose first language is not English will be asked to submit TOEFL results.

## Co-operative Education

The department has introduced co-op education into its graduate program to allow students to gain work experience outside the academic sphere. Students who are currently enrolled in the MSc or PhD programs may apply.

## Applied and Computational Mathematics

### Admission Requirements

See "Graduate General Regulations" on page 219 for admission requirements. Applicants normally submit scores in the aptitude section and an appropriate advanced section of the Educational Testing Service's graduate record examinations. Applicants with backgrounds in areas other than mathematics (for example, a bachelor's degree or its equivalent in engineering or physics) may be considered suitably prepared for these programs.

## MSc Program Requirements

An MSc candidate will normally obtain 26 units beyond courses completed for the bachelor's degree. These 26 will consist of at least four courses chosen from the core courses list below, with at least one from each of the pairs APMA 900, 901; APMA 920, 922; APMA 930, 935; a further seven graduate units; and a further three units which may be graduate or 400 undergraduate division. Normally courses that are cross-listed as undergraduate courses cannot be used to satisfy graduate course requirements. The six core courses are as follows.

APMA 900-4 Advanced Mathematical Methods I  
APMA 901-4 Advanced Mathematical Methods II  
APMA 920-4 Numerical Linear Algebra  
APMA 922-4 Numerical Solution of Partial Differential Equations  
APMA 930-4 Fluid Dynamics  
APMA 935-4 Analysis and Computation of Models

In addition to this requirement (normally completed in five terms), the student completes a project involving a significant computational component and submits and successfully defends a project report. This project should be completed within about one term.

## PhD Program Requirements

PhD candidates must obtain a further eight graduate units beyond the MSc requirements. Candidates who are admitted to the PhD without an MSc must obtain credit or transfer credit for an amount of course work equivalent to that obtained by students with a MSc.

Candidates pass an oral candidacy exam given by the supervisory committee before the end of the fourth full time term. The exam consists of a proposed thesis topic defence and supervisory committee questions about related proposed research topics. The exam follows submission of a written PhD research proposal and is graded pass/fail. Those with a fail complete a second exam within six months. A student failing twice will normally withdraw.

A PhD candidate must submit and defend a thesis based on his/her original work that embodies a significant contribution to mathematical knowledge.

## Courses

See page 312 for APMA course descriptions. The APMA courses replace courses formerly labelled MATH. For MATH 800-899 descriptions, see page 417. Course descriptions for STAT 801-890 are on page 446. Except for selected topics courses, students with credit for a MATH labelled course may not complete the corresponding APMA course for further credit.

## Mathematics

### MSc Program Requirements

#### Thesis Option

MSc candidates normally complete at least 18 graduate units beyond courses completed for the bachelor's degree. Of these, at least 12 should be numbered 800 or above. The course work should involve at least two different mathematics areas subject to supervisory committee and department graduate studies committee approval. The candidate also submits a satisfactory thesis and defends it at an oral exam based on the thesis and related topics (MATH 898). See "Graduate General Regulations" on page 219 for regulations.

#### Project Course Option

An MSc candidate is normally required to complete at least 30 graduate units beyond courses completed for the applicant's bachelor's degree. Of these, at least 18 units should be from courses numbered 800 or above. The course work should normally involve at least three different mathematics areas subject to the

approval of the student's supervisory committee and the department's graduate studies committee.

The candidate is required to complete and pass the project course MATH 880 and the examination course MATH 882. At most, one unsuccessful attempt each at MATH 880 and at MATH 882 is allowed.

See "Graduate General Regulations" on page 219 for further information and regulations.

## PhD Program Requirements

A PhD candidate is normally required to complete the MSc requirements (either option) and at least 12 further graduate units. Of these, at least eight units should be from courses numbered 800 or above. Subject to the approval of the department's graduate studies committee, a PhD candidate with a MSc is deemed to have completed the MSc requirements for the purpose of the PhD program requirements. The graduate course work should normally involve at least four different areas of mathematics subject to the approval of the student's supervisory committee and the department's graduate studies committee.

Candidates normally pass a two stage general exam. The first stage consists of successful completion of a comprehensive exam (MATH 878). In the second, students present to their supervisory committee a written thesis proposal and then defend it at an open oral defence (MATH 879). The supervisory committee evaluates the thesis proposal and defence, and passes or fails the student. A candidate cannot complete either general exam stage more than twice. Both stages must be completed within six full-time terms of initial enrolment in the program.

Students must submit and successfully defend a thesis which embodies a significant contribution to mathematical knowledge (MATH 899).

See "Graduate General Regulations" on page 219 for further information and regulations.

## Courses

Seven hundred division courses may be offered in conjunction with a 400 division course. Students may not complete a 700 division course if it is offered in conjunction with a 400 division course which they have completed previously.

See "Department of Molecular Biology and Biochemistry" on page 200 for a complete list of faculty.

D.L. Baillie – developmental genetics, genomics  
C.T. Beh – cholesterol molecular genetics and genomics  
B.P. Brandhorst – cell biology of development  
F.S.L. Brinkman – bacterial genomics and bioinformatics

M.A. Brockman – virology, immunology of HIV  
N.J. Chen – bioinformatics, genome architecture, expression and evolution  
J. Choy – immunology, cardiovascular physiology  
R.B. Cornell – membrane biochemistry, protein lipid interactions

L. Craig – structure assembly and function of bacterial pili and related virulence factors  
W.S. Davidson – molecular, population and evolutionary genetics  
S.M. Gorski – developmental and cellular genetics, apoptosis  
N. Harden – developmental genetics, signal transduction  
N.C. Hawkins – developmental genetics  
R. Holt – synthetic biology. DNA sequencing, neurogenomics  
B.M. Honda – molecular biology and gene regulation  
S. Jones – bioinformatics and genomics of cancer  
M.R. Leroux – protein structure and function  
M.W. Paetzel – protein structure and function  
F.F. Pio – proteomics, bioinformatics, apoptosis  
L.M. Quarmby – cell biology  
J.K. Scott\*\*\* – immunochemistry, immunology  
D. Sen\* – nucleic acid biochemistry, chromosome structure  
J.L. Thewalt\*\* – membrane biophysics, nuclear magnetic resonance  
P.J. Unrau – RNA-catalyzed chemical reactions, early metabolism, self-replicating systems  
E.M. Verheyen – *Drosophila* developmental genetics, cell fate determination  
E.C. Young – Ligand-induced conformational changes in ion channels

#### Adjunct Faculty

T. Borgford – protein biochemistry, biotechnology  
R. Bruskewich – bioinformatics, rice genomics  
D. Granville – cardiovascular diseases, apoptosis  
M. Hirst – genomics, protein interactions  
K.Y. Leung – bacterial pathogenesis and secretion  
M. Marra – functional genomics of cancer, bioinformatics, large scale DNA mapping and sequencing  
J. Mills – cell signalling, neuro development  
G.B. Morin – proteomics, protein interactions  
F. Ouellette – bioinformatics, data management tools  
E. Stringham – developmental and molecular genetics of cellular signalling

Obtain information from the MBB graduate program assistant, Department of Molecular Biology and Biochemistry, Simon Fraser University, 8888 University Drive, Burnaby, BC, V5A 1S6, 778.782.5631, mbb@sfu.ca

## Admission Requirements

See "1.3 Admission" on page 219 for requirements. Applicants should normally have completed some advanced course work in a related discipline.

## Degree Requirements

Students are assigned a graduate supervisory committee which specifies appropriate work to meet or exceed the minimum requirements. Students are expected to attend the MBB research seminar series and participate regularly in a journal club.

## MSc Program

### Course Work

Minimum requirements are 12 graduate units including MBB 801 and up to three units of colloquia.

### Research

A major part of the MSc is original research. A thesis describing the work is submitted and defended in accordance with *Graduate General Regulations*.

## PhD Program

### Course Work

For those with a BSc or equivalent, 18 units minimum is required, at least 15 of which must be graduate including MBB 801 and 806. This can include up to three MBB units. PhD students normally enrol in MBB 806 at the earliest opportunity following four program terms. With supervisory committee approval, MSc students may apply to the MBB graduate program committee for transfer to the PhD program.

For those entering with an MSc, six units minimum are required including MBB 806 and 801 if not already completed. MBB 806 must be completed at the first opportunity following two terms of program enrolment.

### Research

A major portion of the program is original research. An original thesis is presented and defended according to "1.7.5 Doctoral Thesis" on page 223 of the *Graduate General Regulations*. In addition, all MBB candidates present a public seminar.

## Graduate Diploma in Bioinformatics

The Department of Molecular Biology and Biochemistry and the School of Computing Science offers this program which provides advanced education in bioinformatics for students with a bachelor's degree in molecular biology, cell biology, biochemistry, computer science, mathematics, or related disciplines. Admission is highly competitive.

This program supports students sponsored by the Canadian Institutes of Health Research (CIHR) Bioinformatics in Health Science Training Grant in which Simon Fraser University is a full partner with the University of BC and the BC Genome Sciences Centre. Students who are not part of the program are strongly encouraged to choose their courses from those offered at Simon Fraser University.

The program requires 33 units, with four core courses (12 units), three electives (9 units) and a minimum of two practicum rotation terms (12 units). Students must obtain a B or better in each course or practicum. The student's advisory committee consists of a senior mentor and two other participating faculty members from the faculty at Simon Fraser University, UBC and the BC Genome Sciences Centre. In consultation with mentors, students will be assigned practicums based on needs, interest, and background. The result of the

practicum is written in journal form for an oral presentation. The advisory committee will grade both the oral presentation and written report.

### Core Courses

All four core courses should be completed in the first term, dependent upon term course offerings.

Students complete one of  
CMPT 341-3 Introduction to Computational Biology  
CMPT 771-3 Bioinformatics Algorithms

and one of  
MBB 441-3 Bioinformatics  
MBB 741-3 Bioinformatics

and one of  
CMPT 505-3 Problem-based Learning in Bioinformatics\*  
MBB 505-3 Problem-based Learning in Bioinformatics\*

and one of  
CMPT 506-3 Critical Research Analysis\*\*  
MBB 506-3 Critical Research Analysis\*\*

\*course is completed at Simon Fraser University, BC Cancer Agency, and the Centre for Molecular Medicine and Therapeutics

\*\*course is completed at Simon Fraser University and University of British Columbia

### Elective Courses

In each of the first, second and third terms, students must also complete at least three elective courses in each term from the following.

CMPT 354-3 Database Systems I<sup>4</sup>  
CMPT 740-3 Database Systems<sup>5</sup>  
CMPT 761-3 Image Synthesis  
CMPT 764-3 Visualization  
CPSC 304-3 Database Management and Design<sup>4†</sup>  
CPSC 504-3 Advanced Database Design and Data Mining<sup>5†</sup>  
CPSC 536A-3 Topics in Algorithms and Complexity – Bioinformatics<sup>†</sup>  
MEDG 505-3 Genome Analysis<sup>1†</sup>  
MBB 331-3 Molecular Biology<sup>4</sup>  
MBB 435-3 Genomic Analysis (or MBB 835)<sup>1</sup>  
MBB 442-3 Proteomics (or MBB 842-3)  
MBB 659-3 Special Topics in Bioinformatics<sup>2</sup>  
MBB 669-3 Special Topics in Genomics<sup>2</sup>  
MBB 679-3 Special Topics in Proteomics<sup>2</sup>  
MBB 831-3 Molecular Evolution of Eukaryote Genomes  
MBB 832-3 Molecular Phylogeny and Evolution  
STAT 547-3 Statistical Problems Arising in Genomics<sup>†</sup>  
STAT 890-4 Statistics: Selected Topics<sup>3</sup>

<sup>1</sup> credit will be given for only one of MBB 435 or MEDG 505

<sup>2</sup> special topics courses are given upon student demand and instructor availability

<sup>3</sup> STAT 890 is a Special Topics course and course content will vary by course offering

<sup>4</sup> CPSC 304, CMPT 354 and MBB 331 will not count toward elective requirements; they will be recommended if the student is deficient in either computational or life sciences background

<sup>5</sup> credit will be given for only one of CMPT 740 and CPSC 504

<sup>†</sup> course is completed at University of British Columbia

### Practicum Courses

In addition to elective courses as outlined above, students complete the first practicum course in the second term, and the second practicum course in the third term, dependent upon course offerings. Students complete the practicums by choosing at least two of

CMPT 611-6 Research Rotation I (or MBB 611)\*  
CMPT 612-6 Research Rotation II (or MBB 612)\*  
CMPT 613-6 Research Rotation III (or MBB 613)\*

\*course is completed at Simon Fraser University, University of BC, and BC Cancer Agency

## Courses Offered by Other Departments

Upon the supervisory committee's recommendation and with the department graduate studies committee's approval, MBB students may complete relevant courses from other departments toward their degree. Some courses of interest may include, but are not limited to CHEM 752, 754 and 811.

## Graduate Course Work at Other Universities

With the supervisory committee's recommendation and department graduate studies committee approval, up to six units completed elsewhere that didn't result in a degree may apply to requirements, but not exceed more than half the required units in addition to MBB 801, 802 and 806.

## Department of Physics

### Faculty and Areas of Research

See "Department of Physics" on page 203 for a complete list of faculty.

L.E. Ballentine\* – dynamical chaos, foundations of quantum mechanics  
J.L. Bechhoefer – liquid crystals, soft condensed matter, pattern formation  
D.H. Boal\* – statistical mechanics and biophysics  
D. Broun – highly correlated electronic materials, high  $T_c$  superconductivity  
E.D. Crozier\* – condensed matter, structure and electronic properties, EXAFS  
J.S. Dodge – superconductivity, magnetism, optical spectroscopy  
E.G. Emberly – biophysics, nanostructures  
N. Forde – optical tweezers, biophysics  
B.J. Frisken – soft condensed matter  
A.V. Frolov – theoretical cosmology at the particle physics boundary  
P. Haljan – quantum computing, laser cooling and trapping of ions  
M.E. Hayden – magnetic resonance  
B. Heinrich\* – molecular beam epitaxy, superconductivity, surface physics  
D.J. Huntley\* – luminescence dating, archaeometry  
I. Herbut – condensed matter theory  
K.L. Kavanagh – materials science, nanostructures  
M. Kennett – theories of disordered and out-of-equilibrium systems  
G. Kirczenow – condensed matter theory  
J. McGuirk – ultra cold degenerate gases  
P. Mooney – semiconductor physics  
D. O'Neil – experimental high energy physics  
M. Plischke – condensed matter theory, statistical physics  
L.E. Pogosian – theoretical cosmology at the particle physics boundary  
J.E. Sonier – MuSR spectroscopy, high  $T_c$  superconductivity  
B. Stelzer – high energy physics, subatomic particle physics, collider experiments  
J.L. Thewalt – biophysics, NMR studies of membranes  
M.L.W. Thewalt – semiconductor physics  
H.D. Trotter – lattice quantum chromodynamics, phenomenology of strong and weak interactions, field theoretical study of non-Abelian gauge theories

M. Vetterli – intermediate energy and particle physics  
 K.S. Viswanathan\* – high energy theory, classical and quantum gravity  
 S. Watkins – semiconductor physics  
 M. Wortis\* – solid state theory, statistical mechanics, surface physics, membranes, biophysics

#### Adjunct Faculty

B.S. Davids – experimental nuclear structure and astrophysics  
 B.K. Jennings – theoretical intermediate energy physics  
 R.M. Woloshyn – theoretical particle physics, Lattice field theory  
 M. Scheinfein – magnetism, nanostructures  
 M. Zuckermann – solid state physics, statistical mechanics, biophysics, lipid membranes

## Degrees Offered

The Department of Physics offers programs leading to the MSc and PhD degrees in physics.

## MSc Program

### Admission Requirements

Applicants have second class standing or equivalent in honors physics, honors mathematics and physics, engineering physics, or electrical engineering. See "Graduate General Regulations" on page 219.

### Degree Requirements

#### Course Work

The minimum requirement is 17 units, of which at least 14 must be graduate and will normally include  
 PHYS 801-2 Student Seminar  
 PHYS 810-3 Fundamental Quantum Mechanics  
 PHYS 821-3 Electromagnetic Theory

and one of

PHYS 812-3 Introduction to Quantum Field Theory  
 PHYS 841-3 Equilibrium Statistical Mechanics

Additional undergraduate courses, including prerequisites to required graduate courses, may be required to remedy deficiencies in background.

#### Research

Part of the program is conducting original research. A thesis describing this research is submitted and defended at the program's conclusion.

## PhD Program

### Admission Requirements

To qualify for admission, a student must have a master's degree or the equivalent in physics. Also see "Graduate General Regulations" on page 219.

### Degree Requirements

#### Course Work

The minimum requirement consists of nine graduate units beyond the master's or equivalent degree. Students who have not previously received credit for PHYS 801 must complete this course as well. Faculty of Science requirements must also be met.

#### Research

A major portion of this program is conducting original research. A thesis, embodying new and important results or original research, must be presented and defended at the conclusion of the degree program.

## Admission from a Master's Program to the PhD Program

A student may be admitted from an MSc with a 3.67 CGPA calculated over a minimum of 15 graduate units, and approval of the student's supervisory committee and senate graduate studies committee.

## Language Requirement

In certain areas of research, familiarity with languages other than English may be important so a student's supervisory committee may require a reading knowledge of one such language.

## Biophysics

Students who wish to undertake biophysics interdisciplinary work may apply to the Department of Physics or the Department of Biological Sciences. Those who wish to work in biophysics under special arrangements should see "1.3.4 Admission to a Doctoral Program" on page 220.

## Chemical Physics

Apply to the Departments of Physics or Chemistry for chemical physics interdisciplinary work. For chemical physics under special arrangements, see "1.3.4 Admission to a Doctoral Program" on page 220.

# Department of Statistics and Actuarial Science

K10545 Shrum Science Centre, 778.782.3803 Tel, 778.782.4368 Fax, www.stat.sfu.ca

#### Chair

R.A. Lockhart BSc (Br Col), MA, PhD (Calif)

#### Graduate Program Chair

D. Bingham BSc (C'dia), MSc (Car), PhD (S Fraser), Canada Research Chair

#### Faculty and Areas of Research

See "Department of Statistics and Actuarial Science" on page 206 for a complete list of faculty.

R. Altman – correlated discrete data and latent variable models

D. Bingham – design of experiments, industrial statistics, Bayesian methods

D.A. Campbell – functional data analysis, dynamic systems models, time-frequency representations

J. Cao – estimating differential equations, data analysis, statistical genomics, Bayesian inference

C.B. Dean – spatial statistics, disease mapping, statistics in health

J. Graham – statistical genetics

J. Hu – incomplete data analysis, interim reviews and related design issues in health studies

R.A. Lockhart – goodness-of-fit testing, inference for stochastic processes, large sample theory

T.M. Loughin – categorical data analysis, design and analysis of experiments, statistical computing

Y. Lu – risk theory, stochastic modeling, statistical applications

W.B. McNeney – biostatistics, epidemiology and epidemiologic study design

G. Parker – financial risk management, interest rate risk

R.D. Routledge – biometrics, estimating the sizes of animal populations

C.J. Schwarz – modelling of animal population dynamics, capture-recapture methods

M.A. Stephens\* – goodness-of-fit testing and directional data

T.B. Swartz – statistical computing, Bayesian methods and applications

B. Tang – design of experiments, industrial statistics  
 S. Thompson – network sampling, estimation of animal population size  
 C. Tsai – risk theory, ruin theory, stochastic processes in insurance and finance.  
 L. Zeng – statistical methods of the longitudinal data analysis, estimating functions, transition models, missing data

#### Adjunct Professors

R.F. Balshaw – life history data, longitudinal data, mixed models  
 S.G. Banneheka  
 P. Gill – sports statistics, round robin models, spatio-temporal modelling  
 F. He – forestry, landscape evolution  
 N.W. Hengartner – spatial and environmental statistics, errors in variables, classifications, inverse problems, nonparametric statistics  
 J.J. Spinelli – biostatistics, epidemiology, goodness-of-fit  
 \*emeritus

## Admission Requirements

See "1.3.4 Admission to a Doctoral Program" on page 220 for admission requirements. Applicants whose first language is not English normally submit the Test of English as a Foreign Language results.

Applicants with degrees in areas other than statistics are encouraged to apply provided they have some formal training in statistical theory and practice.

## Actuarial Science

### MSc Program

Students seeking actuarial science graduate studies may, with supervisory committee and graduate studies committee approval, follow the statistics program (shown below), but with requirements and project content adjusted for actuarial science as follows. Students normally complete 30 units including

STAT 801-4 Statistics

and at least two of

ACMA 820-4 Stochastic Analysis of Insurance Portfolios

ACMA 821-4 Advanced Actuarial Models

ACMA 822-4 Risk Measures and Ordering

and at least two of

ACMA 850-4 Actuarial Science, Selected Topics

STAT 802-4 Multivariate Analysis

STAT 804-4 Time Series Analysis

STAT 805-4 Non-Parametric Statistics and Discrete Data Analysis

STAT 806-4 Lifetime Data Analysis

STAT 870-4 Applied Probability Models

STAT 890-4 Statistics: Selected Topics

As well, students submit and successfully defend a project based on an actuarial science problem (see "1.10.1 Thesis Examination" on page 225).

## Statistics

### MSc Program

The program offers a wide range of statistical techniques and provides experience in practical statistics application. It teaches statistical expertise for careers in either theoretical or applied statistics.

Students complete at least 30 units in statistics and related fields beyond those that were completed for the bachelor's degree. Of these 30, at least 24 will be graduate courses or seminars, and the remaining six are chosen from graduate courses or those 400 division undergraduate courses which may be

completed for credit for the BSc in statistics. Normally these courses will include

STAT 801-4 Statistics

STAT 811-2 Statistical Consulting I

STAT 812-2 Statistical Consulting II

and at least four of

STAT 802-4 Multivariate Analysis

STAT 804-4 Time Series Analysis

STAT 805-4 Non-Parametric Statistics and Discrete

Data Analysis

STAT 806-4 Lifetime Data Analysis

STAT 870-4 Applied Probability Models

STAT 890-4 Statistics: Selected Topics

STAT 891-2 Seminar

As well, students must submit and successfully defend a project based on some problem of statistical analysis, as outlined in the *Graduate General Regulations* (see “1.10.1 Thesis Examination” on page 225). This problem will often arise out of the statistical consulting service.

Students with a good undergraduate background in statistics will normally complete the course work in four terms. The project, including the defence, is expected to require two terms or less. Students with backgrounds in other disciplines, or with an inadequate background in statistics, may be required to complete certain undergraduate courses in the department in addition to the above requirements.

### PhD Program

A candidate will generally obtain at least 30 units beyond those for the bachelor's degree. Of these, at least 22 will be graduate courses and the remaining eight may be from graduate courses or those 400 division undergraduate courses which may be completed for credit for the BSc in statistics. Students who hold an MSc in statistics are deemed to have earned 18 of the 22 graduate units and four of the eight undergraduate or graduate units required.

Candidates normally pass a general examination covering a broad range of senior undergraduate

statistics material. A candidate ordinarily cannot complete the general exam more than twice. This exam is normally completed within four full time terms of initial PhD enrolment.

Students submit and successfully defend a thesis which will embody a significant contribution to statistical knowledge.

See “Graduate General Regulations” on page 219 for further information and regulations.

### Co-operative Education

Students in the MSc or PhD program may obtain work experience during their graduate studies by participating in the co-operative education program. Employment lasting one or two terms with government agencies, companies or other organizations employing statisticians is arranged for qualified students. Such employment often provides the problem which forms the basis of the MSc project.

## Actuarial Mathematics ACMA Faculty of Science

### ACMA 210-3 Mathematics of Compound Interest

Measurement of interest, present value. Equations of value. Basic annuities: immediate, due, perpetuity. General annuities. Yield rates: cash flow analysis, reinvestment rate, portfolio and investment year methods. Amortization schedules and sinking funds. Bonds and other securities. Applications: real estate mortgages depreciation methods. Interest rate disclosure and regulation in Canada. Covers the interest theory portion of Exam FM of the Society of Actuaries. Prerequisite: MATH 152. Students with credit for ACMA 310 may not take this course for further credit. Quantitative.

### ACMA 315-3 Credibility Theory

Limited fluctuation credibility theory: full credibility, partial credibility. Greatest accuracy credibility theory: the Bayesian methodology, the credibility premium, the Buhlmann model, the Buhlmann-Straub model, exact credibility, linear versus Bayesian versus no credibility. Empirical Bayes parameter estimation: nonparametric estimation, semiparametric estimation, parametric estimation. Simulation: basics of simulation, simulation in actuarial modeling. Covers part of the syllabus for Exam C of the Society of Actuaries, and Exam 4 of the Casualty Actuarial Society. Prerequisite: STAT 285. Quantitative.

### ACMA 320-5 Actuarial Mathematics I

Survival distributions: age at death, life tables, fractional ages, mortality laws, select and ultimate life tables. Life insurance: actuarial present value function (apv), moments of apv, basic life insurance contracts, portfolio. Life annuities: actuarial accumulation function, moments of apv, basic life annuities. Net annual premiums: actuarial equivalence principle, loss function, accumulation type benefits. Actuarial reserves: prospective loss function, basic contracts, recursive equations, fractional durations. Covers part

of the syllabus for Exam M of the Society of Actuaries and Exam 3 of the Casualty Actuarial Society, and covers practical applications such as computational aspects of pricing and reserving, and risk measurement of insurance portfolios. Prerequisite: MATH 232, STAT 285, and ACMA 210 (with a grade of C+ or higher). Quantitative.

### ACMA 335-3 Risk Theory

Basic distributional quantities: moments, percentiles, generating functions and sums of random variables. Classifying and creating distributions. Frequency and severity with coverage modifications: deductibles, the loss elimination ratio and the effect of inflation for ordinary deductibles, policy limits, coinsurance. Aggregate loss models. Multi-state transition models with actuarial applications: non-homogeneous Markov chains, cash flows and their actuarial present values. The exponential distribution and the Poisson process. Covers part of the syllabus for Exam M of the Society of Actuaries, and Exam 3 of Casualty Actuarial Society. Prerequisite: ACMA 320. Quantitative.

### ACMA 395-3 Special Topics in Actuarial Science

Topics in areas of actuarial science not covered in the regular certificate curriculum of the department. Prerequisite: dependent on the topics covered.

### ACMA 425-3 Actuarial Mathematics II

Actuarial reserves: allocation of the loss to the policy years. Multiple life functions: joint-life, last-survivor. Multiple decrement models: stochastic and deterministic approaches, associated single decrement, fractional durations. Valuation theory for pension plans. Insurance models including expenses: gross premiums and reserves, type of expenses, modified reserves. Nonforfeiture benefits and dividends: equity concept, cash values insurance options, asset shares, dividends. Covers part of the syllabus for Exam M of the Society of Actuaries and Exam 3 of the Casualty Actuarial Society. Prerequisite: ACMA 320. Quantitative.

### ACMA 445-3 Loss Models: Estimation and Selection

Quality of an estimator: unbiasedness, asymptotic unbiasedness, consistency, means squared error, uniform minimum variance. Confidence interval. Tests of hypotheses. Estimation for complete data. Estimation for grouped data. Estimation for modified data: Kaplan-Meier estimator, variances and confidence intervals of the empirical estimator, kernel density estimator. Parameter estimation. Variance of the estimators and confidence intervals. Model selection: graphical procedures, goodness-of-fit test, likelihood ratio test. Interpolation and smoothing. Covers part of the syllabus for Exam C of the Society of Actuaries and Exam 4 of the Casualty Actuarial Society. Prerequisite: ACMA 320. Quantitative.

### ACMA 465-3 Mathematics of Demography

Data: Sources and Errors. Measures of mortality and fertility: Crude rates, Age-specific mortality rates, Adjusted measures of mortality. Construction of Life Tables from census data: 1989-91 U.S. Life Table, 1990-92 Canadian Life Table. Stationary Population Theory: survivorship group, Lexis diagram. Stable Population Theory: Sharpe-Lotka theorem, growth rate, quasi-stable populations. Population Projections: logistic curve, component method. Uses of Census Data: Funding Social Security. Prerequisite: ACMA 320. Cannot repeat for credit if taken as STAT 490 or ACMA 490 previously. Quantitative.

### ACMA 470-3 Property and Casualty Insurance

Ratemaking: terminology, process, trend, ultimate losses, expense provisions, profit and contingencies, overall rate indications, classification rates, increased limits. Individual risk rating: prospective systems, retrospective rating, design. Loss Reserving: accounting concepts, definitions, principles, loss reserving process. Risk classification: relationship to other mechanisms, criteria for selecting rating variables, examples, efficiency, estimating class relativities. Covers part of the syllabus for Exam 5 of

Casualty Actuarial Society. Prerequisite: ACMA 320. Cannot repeat for credit if taken as STAT 490 or ACMA 490 previously. Quantitative.

### ACMA 475-3 Theory of Pension

Overview of pension plans: design, funding, regulation, accounting standards. Pension funding methods: actuarial cost methods, terminal funding method. Individual actuarial cost methods: accrual benefit cost method, entry-age actuarial cost method, unit-credit method, individual-level-premium method, attained-age-normal method. Group actuarial cost methods. Prerequisite: ACMA 320. Corequisite: ACMA 425. Cannot repeat for credit if taken as STAT 490 or ACMA 490 previously. Quantitative.

### ACMA 490-3 Selected Topics in Actuarial Science

The topics included in this course will vary from term to term depending on faculty availability and student interest. Prerequisite: dependent on the topic covered.

### ACMA 495-3 Directed Studies in Actuarial Science

Independent study and/or research in topics chosen in consultation with the supervising instructor. Prerequisite: written permission from the Department of Statistics and Actuarial Science undergraduate curriculum committee.

### ACMA 820-4 Stochastic Analysis of Insurance Portfolios

Life insurance models. Interest rate models for life insurance: time series, stochastic differential equations, estimation. Portfolios of identical policies. Diversified portfolios. Prerequisite: ACMA 320.

### ACMA 821-4 Advanced Actuarial Models

Advanced non-life insurance mathematics. Individual risk models, collective risk models, ruin models. Actuarial reserve models: Bonus-malus system, IBNR techniques. Generalized linear models in Actuarial Science. Prerequisite: ACMA 335.

### ACMA 822-4 Risk Measures and Ordering

Actuarial risks. Insurance premium calculation principles and properties. Risk measures and ordering. Applications. Prerequisite: ACMA 335.

### ACMA 850-4 Actuarial Science: Selected Topics

## Applied Legal Studies ALS Faculty of Arts and Social Sciences

### ALS 601-3 Canadian Legal System

Designed to give students a systematic knowledge of the workings of Canadian law and the Canadian legal system. Provides a comprehensive discussion of the various principles and schools of jurisprudence, and will canvass the basic legal institutions in Canada. Considers the history of Canadian law, the development of the framework of the Canadian constitution, the Constitution itself, the roles and responsibilities of Canadian courts and the roles and responsibilities of members of the legal profession. Ensures that students gain a comprehensive understanding of the nature of legal reasoning, the doctrines of precedent and stare decisis, and the key rules and principles of statutory interpretation. Students will also be given a systematic introduction to four substantive areas of law: criminal law, administrative law, family law, and tort law.

### ALS 602-3 Legal Research and Writing

Designed to give students a solid foundation in legal research and writing skills. Provides students with an overview of how both legislation and case law are created, including consideration of the basic principles of legal analysis. Proper legal research techniques and strategies will be considered for both

primary and secondary legal sources. Consideration will also be given to the many on-line legal research resources. Finally, students will receive instruction in the general principles of legal writing and apply these principles to different types of legal writing including analytical writing and the drafting of legal documents.

### ALS 603-3 Legal Philosophy

Designed to give students a solid grounding in the central themes of legal philosophy. Examines the major schools of jurisprudence. Affords an opportunity to reflect in a disciplined and critical way on the structure and functions of law, legal institutions and systems. Involves an analysis of the nature of legal reasoning and discourse, and looks to the connections between law and morality.

### ALS 610-3 Contracts

Introduces students to the fundamental principles underlying Contract Law in Canada, and the practical application of such principles in the commercial environment. Students will learn the essential elements of what makes an "enforceable contract" such as offer and acceptance, certainty of terms, form and consideration as well as those things that may well make a contract unenforceable, such as misrepresentation, frustration, duress and privacy issues. Warranties, representations, conditions and remedies for breach of contract will also be covered, as will contractual interpretation.

### ALS 611-3 Real Property I

Involves the study of basic principles and statutory regimes which govern the institution of Real Property. Topics addressed will include: the legal concept of land, the nature of and rationale for property, transfer of interests in land, registration of title and the nature of the land title system, the acquisition of estates in land, co-ownership of land, and future interests.

### ALS 612-3 Real Property II

Deals with the law relating to vendors and purchasers of real estate, particularly as affected by the substantive law of mortgages, and considers the remedies available to vendors, purchasers, mortgagors and mortgagees, as well as the role and duties of real estate agents. Also deals with residential and commercial tenancies.

### ALS 615-3 Personal Planning

Provides an overview of the law of succession and familiarizes students with the principles necessary to competently advise clients about the transfer of property on death and to draft a will that meets the client's objectives. Powers of Attorney and Representation Agreements as planning tools will be examined.

### ALS 620-3 Selected Topics in Applied Legal Studies

Designed to give students a detailed understanding of key topics in applied legal studies, with a particular emphasis upon areas of law and practice that are of special interest to Notaries Public. Topics may change from year to year and may vary by instructor but it is anticipated that topics will include, the law of agency; current issues in tax law; the law affecting business/not for profit incorporation, and business associations.

### ALS 630-3 Topics in Legal Practice

Builds on the theoretical understanding students have by exploring how the legal advisor assists clients in effectively dealing with their issues. Topics range from the purpose of legal professionals to developing sustainable strategies for the operation of a legal practice.

### ALS 631-3 MA Examination

A final examination on core subjects, which will normally occur towards the end of the student's fourth term in the program.

## Applied and Computational Mathematics APMA Faculty of Science

### APMA 900-4 Advanced Mathematical Methods I

Hilbert spaces. Calculus of variations. Sturm-Liouville problems and special functions. Green's functions in one dimension. Integral equations. Prerequisite: MATH 314 or equivalent. Students with credit for MATH 900 may not take APMA 900 for further credit. Recommended: MATH 419.

### APMA 901-4 Advanced Mathematical Methods II

First order partial differential equations. Characteristics. Eigenfunction expansions and integral transforms. Discontinuities and singularities; weak solutions. Green's functions. Variational methods. Prerequisite: MATH 314 or equivalent. Students with credit for MATH 901 may not take APMA 901 for further credit. Recommended: MATH 418.

### APMA 902-4 Applied Complex Analysis

Review of complex power series and contour integration. Conformal mapping, Schwarz-Christoffel transformation. Special functions. Asymptotic expansions. Integral transform. Prerequisite: MATH 322 or equivalent. Students with credit for MATH 836 or 902 may not take APMA 902 for further credit.

### APMA 905-4 Applied Functional Analysis

Infinite dimensional vector spaces, convergence, generalized Fourier series. Operator Theory; the Fredholm alternative. Application to integral equations and Sturm-Liouville systems. Spectral theory. Prerequisite: MATH 900 or permission of the instructor. Students with credit for MATH 905 may not take APMA 905 for further credit.

### APMA 910-4 Ordinary Differential Equations

The solutions and properties of ordinary differential equations and systems of ordinary differential equations in the real and complex domains. Prerequisite: MATH 415 or equivalent. Students with credit for MATH 842 or 910 may not take APMA 910 for further credit.

### APMA 912-4 Partial Differential Equations

An advanced course on partial differential equations. Topics covered usually will include quasi-linear first order systems and hyperbolic, parabolic and elliptic second-order equations. Prerequisite: MATH 901 or permission of the instructor. Students with credit for MATH 845 or 912 may not take APMA 912 for further credit.

### APMA 920-4 Numerical Linear Algebra

Direct and iterative methods for the numerical solution of linear systems, factorization techniques, linear least squares problems, eigenvalue problems. Techniques for parallel architectures. Students with credit for MATH 850 or 920 may not take APMA 920 for further credit.

### APMA 921-4 Numerical Solution of Ordinary Differential Equations

Study of the practical numerical methods for solving initial and boundary value problems for ordinary differential equations. Students with credit for MATH 851 or 921 may not take APMA 921 for further credit.

### APMA 922-4 Numerical Solution of Partial Differential Equations

Analysis and application of numerical methods for solving partial differential equations. Finite difference methods, spectral methods, multigrid methods. Students with credit for MATH 852 or 922 may not take APMA 922 for further credit.

**APMA 923-4 Numerical Methods in Continuous Optimization**

Numerical solution of systems of nonlinear equations, and unconstrained optimization problems. Newton's method, Quasi-Newton methods, secant methods, and conjugate gradient algorithms. Students with credit for MATH 853 or 923 may not take APMA 923 for further credit.

**APMA 929-4 Selected Topics in Numerical Analysis**

Study of a specialized area of numerical analysis such as computational fluid dynamics, approximation theory, integral equations, integral transforms, computational complex analysis, special functions, numerical quadrature and multiple integrals, constrained optimization, finite elements methods, sparse matrix techniques, or parallel algorithms in scientific computing.

**APMA 930-4 Fluid Dynamics**

Basic equations and theorems of fluid mechanics. Incompressible flow. Compressible flow. Effects of viscosity. Prerequisite: MATH 361 or equivalent. Students with credit for MATH 930 may not take APMA 930 for further credit. Recommended: MATH 462.

**APMA 934-4 Selected Topics in Fluid Dynamics**

Study of a specialized area of fluid dynamics such as hydrodynamic stability, multiphase flow, non-Newtonian fluids, computational fluid dynamics, boundary-layer theory, magnetic fluids and plasmas, bio- and geo-fluid mechanics, gas dynamics. Prerequisite: APMA 930 or permission of the instructor.

**APMA 935-4 Analysis and Computation of Models**

Analysis of models from the natural and applied sciences via analytical, asymptotic and numerical studies of ordinary and partial differential equations. Prerequisite: MATH 418 and MACM 316 or equivalent. Students with credit for MATH 883 or 935 may not take APMA 935 for further credit.

**APMA 939-4 Selected Topics in Mechanics of Solids**

Study of a specialized area of the mechanics of solids such as composite materials, micromechanics, fracture, plate and shell theory, creep, computational solid mechanics, wave propagation, contact mechanics. Prerequisite: APMA 935 or permission of the instructor.

**APMA 981-4 Selected Topics in Continuum Mechanics****APMA 982-4 Selected Topics in Mathematical Physics****APMA 990-4 Selected Topics in Applied Mathematics****Archaeology ARCH  
Faculty of Arts and Social  
Sciences****ARCH 100-3 Ancient Peoples and Places**

A broad survey of human cultural development from the late Palaeolithic/PalaeoIndian periods (ca 40,000 BP) to the rise of civilization and empires, in both the Old and New Worlds. Breadth-Social Sciences.

**ARCH 131-3 Human Origins**

A non-technical survey of the primate background of humans, fossil primates, and fossil humans, and the associated evidence of cultural development. An introduction to physical anthropology. Breadth-Social Sciences/Science.

**ARCH 200-3 Special Topics in World Prehistory**

Non-specialized introductory summaries of selected regional topics in world prehistory. Breadth-Social Sciences.

**ARCH 201-3 Introduction to Archaeology**

A survey of methods used by archaeologists to discover and interpret the past. Examples will be drawn from selected sites and cultures around the world. Students who have taken ARCH 101 may not enrol in ARCH 201. Breadth-Social Sciences.

**ARCH 226-3 The Prehistory of Religion: Shamans, Sorcerers and Saints**

Charts the emergence and changes in the expression of human religious behavior. It covers the earliest rituals of the Palaeolithic, the importance of fertility cults, ancestor cults, alliance rituals, shamans, witchcraft, and monotheism. Prerequisite: any lower division archaeology or anthropology course. Breadth-Humanities/Social Sciences.

**ARCH 252-3 Ancient Egypt and Africa**

Exploration of the major cultural developments in Africa from the origin of humankind to the rise of several ancient civilizations, with special emphasis on ancient Egypt. Students are exposed to various approaches taken by palaeoanthropologists, prehistoric archaeologists, historians and Egyptologists. Prerequisite: Students who have taken ARCH 200 under this title may not take this course for further credit. Breadth-Humanities/Social Science.

**ARCH 272-3 Archaeology of the Old World**

A survey of the major centres of Old World cultural development from the Palaeolithic to the Bronze Age. Basic concepts used in reconstructing prehistoric cultures, and the artifactual and contextual evidence for the development of culture. Prerequisite: ARCH 100 or 201. Breadth-Social Sciences.

**ARCH 273-3 Archaeology of the New World**

A survey of prehistoric cultures of North and South America. The peopling of the New World, the rise of the pre-Columbian civilizations of Mexico and Peru, and the cultural adaptations by prehistoric populations to other parts of the New World. Prerequisite: ARCH 100 or 201. Breadth-Social Sciences.

**ARCH 301-3 Prehistoric and Indigenous Art**

Art styles and traditions of prehistoric and preliterate peoples in one or more world cultural areas. Breadth-Humanities.

**ARCH 302-3 Art of Ancient Civilizations**

A descriptive survey of the art and architecture of major ancient civilizations in Africa, Asia, the Mediterranean basin and the Americas. Prerequisite: students with credit for ARCH 331 (special topics course) may not take ARCH 302 for further credit. Part of the course content will be delivered via WebCT and the World Wide Web. Students must have frequent broadband access.

**ARCH 311-5 Archaeological Dating**

A study of various scientific methods of dating archaeological samples, including Carbon 14, thermoluminescence, obsidian-hydration, fission track, potassium-argon, magnetic, and other dating techniques.

**ARCH 330W-3 Prehistory of Latin America**

Intensive study of the prehistoric cultures of Latin America. Emphasis will be on the development of the civilizations of prehistoric Mexico and Peru. Prerequisite: ARCH 273 or LAS 140. ARCH 330 is identical to LAS 330, and students cannot receive credit for both courses. Writing.

**ARCH 332-3 Special Topics in Archaeology I**

This course will be offered from time to time to meet special needs of students and to make use of

specializations of visiting faculty members. Prerequisite: to be announced.

**ARCH 333-3 Special Topics in Archaeology II**

This course will be offered from time to time to meet special needs of students and to make use of specializations of visiting faculty members. Prerequisite: to be announced.

**ARCH 334-3 Special Topics in Archaeology III**

This course will be offered from time to time to meet special needs of students and to make use of specializations of visiting faculty members. Prerequisite: to be announced.

**ARCH 335-5 Special Laboratory Topics in Archaeology**

This is a laboratory course that will be offered from time to time to meet special needs of students and to make use of specializations of visiting faculty members. Prerequisite: to be announced.

**ARCH 336-3 Special Topics in Prehistoric and Indigenous Art**

Art styles and traditions of prehistoric and preliterate peoples in selected world cultural areas. Prerequisite: to be announced. Breadth-Humanities.

**ARCH 338-3 Archaeology of China**

Reviews major archaeological discoveries of China concerning human evolution, the origins of agriculture, the development of early complex societies, and the origin of Chinese civilization. The focus is prehistoric archaeology but includes the early historic/dynastic periods. Prerequisite: ARCH 131 or 201. Students who have taken ARCH 333 or 335 under this topic may not take this course for further credit.

**ARCH 340-5 Zooarchaeology**

An introduction to the study of animal remains from archaeological sites. Coverage of the major concepts and methods used in the study of animal remains and detailed practical coverage of the vertebrate skeleton. Prerequisite: ARCH 201.

**ARCH 344-3 Primate Behaviour**

The evolution of the primate order and the ecology and behavior characterizing the different grades of primates: prosimians, monkeys, and apes. Current trends in interpreting primate behavior are emphasized. Prerequisite: ARCH 131 or any lower division biology course.

**ARCH 348-5 Archaeological Conservation**

An introduction to archaeological conservation, the processes affecting the condition of archaeological materials prior to excavation, during excavation, during analysis, exhibition and during reposition. Successful completion of this course will give archaeologists a good understanding of the various materials they encounter during excavation and how to preserve these artifacts and other materials. It will not qualify students to be professional archaeological conservators. Prerequisite: six units in Archaeology, including ARCH 201. Students who have taken ARCH 335-5 Special Topics in Archaeology: Archaeological Conservation may not take ARCH 348-5 for further credit.

**ARCH 349-5 Management of Archaeological Collections**

The philosophy, policies and practices of the care of archaeological collections. This lecture and laboratory course treats the practical problems of designing museum programs within a framework of legal responsibilities for collections. Contemporary issues such as repatriation will be discussed. Prerequisite: three 200 division archaeology courses.

**ARCH 350-3 Practicum I**

First term of work experience in the Archaeology Co-operative Education Program. Units for this course do not count towards the units required for an SFU degree. Prerequisite: normally 45 units with a

CGPA of 3.0 and the following courses are recommended: both ARCH 131 and 201; either ARCH 272 or 273; and three of ARCH 372, 373, 376, 377, 386, 442.

### ARCH 351-3 Practicum II

Second term of work experience in the Archaeology Co-operative Education Program. Units for this course do not count towards the units required for an SFU degree. Prerequisite: normally 45 units with a CGPA of 3.0 and ARCH 350.

### ARCH 360-5 Native Cultures of North America

A descriptive study of the cultures of North American natives north of Mexico, as they were at initial European contact, organized on a culture area basis. Native groups in each area will be discussed in terms of languages, population estimates, early post-contact history and its impact on traditional ways of life, dominant ethnographic economic/adaptive emphases, socio-political organization, religion, ceremony and warfare. Prerequisite: ARCH 201 and 273.

### ARCH 365-3 Ecological Archaeology

Deals with the techniques for reconstruction of past environments, as well as the effect of environment on past settlements and people. Environment as considered in the course will encompass the presence of other settlements, and deal with relationships among settlements. Prerequisite: ARCH 201.

### ARCH 370-3 Western Pacific Prehistory

The exploration of prehistoric developments in the Western Pacific region, beginning with the first traces of humans, dealing with problems in the rise of civilization, and finally, tracing the voyages of the early Pacific navigators. Prerequisite: ARCH 272.

### ARCH 372-5 Material Culture Analysis

Analysis and interpretation of archaeological material culture. This lecture and laboratory course combines the practical problems of recognition and interpretation of archaeological specimens, typology, seriation, and statistical procedures with the basic principles of archaeological theory. Prerequisite: ARCH 201.

### ARCH 373-5 Human Osteology

A detailed study of the human skeleton with emphasis on lab and field techniques. Prerequisite: ARCH 131.

### ARCH 376-5 Quantitative Methods in Archaeology

Theory, method, and operation of the application of statistical techniques to the description, classification, analysis, and interpretation of archaeological data. Prerequisite: ARCH 201, and either STAT 203 (formerly 103) or PSYC 210. Quantitative.

### ARCH 377-5 Historical Archaeology

An introduction to theory and method in North American historical archaeology. Laboratory instruction is provided in historic artifact analysis and interpretation. Prerequisite: ARCH 201 and one lower division ARCH course.

### ARCH 378-3 Pacific Northwest North America

The prehistory and cultural traditions of the region. The content, antecedents, relationships, and changes in these cultures through time. Technological, socio-economic, and environmental factors in culture growth. Prerequisite: ARCH 273.

### ARCH 379-3 Archaeology of the American Southwest

The prehistory and cultural traditions of the region. The content, antecedents, relationships, and changes in these cultures through time. Technological, socio-economic, and environmental factors in culture growth. Prerequisite: ARCH 273.

### ARCH 383-3 Molecular Bioarchaeology

Introduces molecular biology techniques used to analyze DNA to address archaeological questions

and applications to degraded DNA samples for forensic identification of human remains and conservation of endangered species. Prerequisite: ARCH 131 or 201. Students who have taken ARCH 334 or 335 under this topic may not take this course for further credit.

### ARCH 385-5 Paleoanthropology

The relationship between culture and biology in prehistoric human evolution. The recognition and critical evaluation of the significance of the similarities and differences among fossil human types. Prerequisite: ARCH 131 and 272.

### ARCH 386-3 Archaeological Resource Management

Surveys the origins, implementations, and need for archaeological heritage legislation on an international and national scale. Topical issues associated with contract archaeology, public archaeology, native heritage, and avocational societies are incorporated. Prerequisite: ARCH 201.

### ARCH 390-5 Archaeobotany

An introduction to the recovery and analysis of macroscopic archaeological plant remains. The major methodological and interpretive issues in archaeobotany will be covered, with an emphasis on plant domestication in selected regions of the world. Prerequisite: ARCH 201 and either 272 or 273.

### ARCH 432-5 Advanced Physical Anthropology

An intensive investigation of the theory and problem areas in physical anthropology. Prerequisite: ARCH 373 and either 344 or 385.

### ARCH 433-6 Background to Field Work

Lectures cover the archaeological background and rationale for specific field research questions, the critical relationship in any field project between the research questions asked and the methods and techniques employed, and the craft of field work including use of equipment, specific excavating, recording and cataloguing techniques, field safety and camp life. Prerequisite: normally taken concurrently with ARCH 433 and 435; ARCH 131 and 201; at least one group I course, permission of the department.

### ARCH 434-3 Exercises in Mapping and Recording

A series of exercises in which the student must demonstrate the ability to apply the various recording and mapping skills covered in the course. The graded exercises are done individually and in teams, both on-campus and in the field. Prerequisite: normally taken concurrently with ARCH 433 and 435; ARCH 131 and 201; at least one group I course; permission of the department.

### ARCH 435-6 Field Work Practicum

A practical application of the background knowledge and specific techniques of ARCH 433 and 434. It takes place in a research oriented field excavation. Evaluation of student performance is based upon assessments of efficiency and accuracy of excavation techniques/recording procedures, and upon the student's overall contribution to the smooth functioning of the team. Prerequisite: normally taken concurrently with ARCH 433 and 434; ARCH 131 and 201; one group I course; permission of the department.

### ARCH 438-5 Geoarchaeology

This course introduces the concept of archaeological sites as active constituents in natural Quaternary land-forming and land-altering systems. Lectures will focus on all processes which may have contributed to the present geomorphological contexts of archaeological sites and their sedimentary and pedological contents. Prerequisite: ARCH 201 and either 272 or 273.

### ARCH 442-5 Forensic Anthropology

Current techniques in identification of recent human skeletal remains. Prerequisite: ARCH 373.

### ARCH 450-3 Practicum III

Third term of work experience in the Archaeology Co-operative Education Program. Units for this course do not count towards the units required for an SFU degree. Prerequisite: normally 45 units with a CGPA of 3.0 and ARCH 351.

### ARCH 451-3 Practicum IV

Fourth term of work experience in the Archaeology Co-operative Education Program. Units for this course do not count towards the units required for an SFU degree. Prerequisite: normally 45 units with a CGPA of 3.0 and ARCH 450.

### ARCH 452-5 Introduction to Paleopathology

Introduces the study of ancient and historic diseases in humans and animals as expressed in bones, teeth, mummified remains, art, and historical documents. Provides an essential foundation for differential diagnosis in skeletal biology and forensic osteology. Prerequisite: ARCH 373. Students who have taken ARCH 332 or 335 under this topic may not take this course for further credit.

### ARCH 471W-5 Archaeological Theory

The cultural, evolutionary, physical, and distributional principles which underlie the prediction and reconstruction of the past. Prerequisite: ARCH 131, 201, 272 and 273. Writing.

### ARCH 479-3 Directed Readings

Directed readings for upper level students who desire to study selected topics in depth. Prerequisite: permission of the department.

### ARCH 480-5 Directed Laboratory/Library/Field Research

A course in which students can undertake specific laboratory, library or field based research supervised by a faculty member. It is open to students from other departments. Prerequisite: permission of the department.

### ARCH 485-5 Lithic Technology

An in-depth study of how to manufacture and analyze stone tools. Includes rock and mineral identification, stone working by students, fracture mechanics, and relevance to theoretical problems. Prerequisite: ARCH 372.

### ARCH 498-5 Honors Reading

Directed readings in a selected field of study under the direction of a faculty member. Papers will be required. Prerequisite: permission of the department.

### ARCH 499-5 Honors Thesis

An honors thesis of some ten to fifteen thousand words will be written under the direction of a faculty member. Prerequisite: permission of the department.

### ARCH 871-5 Archaeological Theory

Critical evaluation of new approaches to the study of the human past.

### ARCH 872-0 Graduate Seminar in Archaeology and Prehistory

A seminar on selected problems in archaeological science and prehistory. Grading will be restricted to satisfactory/unsatisfactory (S/U).

### ARCH 873-2 Graduate Seminar in Archaeology and Prehistory

A seminar on selected problems in archaeological science and prehistory. Students may take ARCH 873 for credit once in the graduate program.

### ARCH 876-5 Research Design

Seminar focusing on the development of thesis research design and data analysis.

### ARCH 892-5 Directed Readings in Prehistory

Directed readings under the supervision of a faculty member in the prehistory of any selected region of the world.

**ARCH 893-3 Directed Readings**

Intensive readings under the supervision of a faculty member in an area of interest related to the student's program.

**ARCH 894-3 Special Topics**

This course will be offered from time to time to meet special needs of students and make use of specialization of visiting faculty members.

**ARCH 895-5 Special Topics**

This course will be offered from time to time to meet special needs of students and to make use of specialization of visiting faculty members.

**ARCH 896-5 Directed Laboratory/Library/Field Research**

Directed laboratory, library or field research under the supervision of a faculty member in an area of interest related to the student's program.

**ARCH 898-6 MA Thesis****ARCH 899-6 PhD Thesis**

## Asia-Canada ASC Faculty of Arts and Social Sciences Department of Humanities

**ASC 101-3 Introduction to Asia-Canada Studies I**

An introductory course on Asia-Canada interactions. It will survey various issues, both historical and contemporary, including those involving Asian-Canadians.

**ASC 102-3 Introduction to Asia-Canada Studies II**

An introductory course on Asian civilizations in three areas: East Asia, Southeast Asia and South Asia. A survey course, it is designed to cover multiple dimensions of people's lives and history in Asia.

**ASC 200-3 Introduction to Chinese Civilization**

An introduction to historical and cultural perspectives on China. Topics covered will include different aspects of traditional Chinese civilization with a view to understanding contemporary Chinese society. Prerequisite: 15 units.

**ASC 201-3 Introduction to Japanese Civilization**

An introduction to historical and cultural perspectives covering the basic aspects of Japan: geography, history, culture, politics, economy, etc. Prerequisite: 15 units.

**ASC 202-3 Studies in Asian Cultures**

An introduction to East, Southeast or South Asian art, literature, history or philosophy. The emphasis will be on the cultural importance of the themes covered and on their relationship to contemporary societies. Prerequisite: 15 units.

**ASC 205-3 Special Topics: Field Studies in Chinese Culture**

This course is part of the core courses offered in the China Field School covering topics on various aspects of Chinese culture and society, from Chinese medicine, martial arts, painting and calligraphy, etc. to contemporary life and local history in the area. Prerequisite: 15 units. Students who have taken GS 201 or 251 may not take this course for further credit.

**ASC 300-3 Asians and North Americans in Public Discourse**

A cross-cultural examination of the ways we perceive and represent each other in public discourse, including literature, news media, cinema, and other education and entertainment media. Prerequisite: 45 units. Recommended: one lower division ASC course.

**ASC 301-3 Asia-Canada Identities: Experiences and Perspectives**

This course will explore the experience of Asian immigrants and their children, focusing in particular on social and cultural aspects. Prerequisite: 45 units. Recommended: one lower division ASC course.

**ASC 302-3 Selected Topics in Chinese Studies**

Content will vary according to interests of faculty and students but will involve China-related study within one or more of the social science or humanities disciplines. Prerequisite: 45 units. Recommended: ASC 200.

**ASC 303-3 Selected Topics in Japanese Studies**

Content will vary according to interests of faculty and students but will involve Japanese-related study within one or more of the social science or humanities disciplines. Prerequisite: 45 units. Recommended: ASC 201.

**ASC 400-3 Selected Topics in Asia-Canada Studies**

Prerequisite: 45 units.

**ASC 401-3 Directed Studies**

Individual study. Prerequisite: ASC 101 or 102, and one ASC 300 level course and permission of the program director.

## Biological Sciences BISC Faculty of Science

**BISC 100-4 Introduction to Biology**

An introduction to the basic concepts of biology, emphasizing evolution as a unifying theme. Topics include cell structure, mitosis and meiosis, DNA structure and function, evolution and population and ecosystem ecology. Students with credit for BISC 101 or 102, or succeeding biology courses, may not take BISC 100 for further credit. Students with a C or better in Biology 12, who are considering a BISC Major, are encouraged to proceed directly to BISC 101 and 102. Breadth-Science.

**BISC 101-4 General Biology**

An introduction to the biochemical and physiological mechanisms of living organisms. Topics covered include cell structure and function, DNA replication and the flow of genetic information, enzyme function, metabolism and physiology of microorganisms, plants, and animals. Prerequisite: high school biology 12 (or equivalent) with a grade of C or better, or BISC 100. BISC 101 and 102 may be taken in any order, and are available for B-Sci credit, but are primarily designed to deliver prerequisite information to BISC majors and related departments and Faculties. Non-science students are encouraged to earn their B-Sci units in other BISC breadth courses (e.g. BISC 110, 111 and 112). Breadth-Science.

**BISC 102-4 General Biology**

Survey of the diversity of life, and its evolutionary history on earth. The student is introduced to the study of genetics, development, and evolution, giving an overview of how these processes interact to produce form and function. Also included are principles of behavior and ecological relationships of organisms to each other and their environment. Prerequisite: high school biology 12 (or equivalent) with a grade of C or better, or BISC 100. BISC 101 and 102 may be taken in any order, and are available for B-Sci credit, but are primarily designed to deliver prerequisite information to BISC majors and related departments and Faculties. Non-science students are encouraged to earn their B-Sci units in other BISC breadth courses (e.g. BISC 110, 111, and 112). Breadth-Science.

**BISC 110-3 The Evolution and Diversity of Life on Earth**

Current theories about the origin and evolution of life on this planet. The course will include a survey of the five kingdoms to emphasize both the structural and functional diversity of living forms, as well as the characteristics shared by members of each major group. Students having credit for BISC 102 may not take BISC 110 for further credit. Breadth-Science.

**BISC 111-3 Special Topics: Current Topics in Biology I**

Selected topics in biology intended to fulfil breadth requirements for non-majors. Topics will vary depending on instructor. Breadth-Science.

**BISC 112-3 Special Topics: Current Topics in Biology II**

Selected topics in biology intended to fulfil breadth requirements for non-majors. Topics will vary depending on instructor. Breadth-Science.

**BISC 202-3 Genetics**

Principles and concepts of the transmission of genetic information treated comparatively in man, animal, plant and microbe. Prerequisite: BISC 101 and 102.

**BISC 204-3 Introduction to Ecology**

An introduction to biotic-environmental relationships and dynamics; ecological concepts; population dynamics, variation, adaptation and evolution. Prerequisite: BISC 101 and 102. Credit will not be granted for both BISC 204 and GEOG 215.

**BISC 272-3 Special Topics in Biology**

Selected topics in areas not currently offered within the undergraduate course offerings in the Department of Biological Sciences. Prerequisite: to be announced in the Undergraduate Schedule of Classes and Examinations. Entry into this course normally requires completion of the lower division core for biological sciences, or permission of the department.

**BISC 300-3 Evolution**

The phenomenon of organic evolution, and the major forces leading to changes in allele frequencies over time, i.e. natural selection and genetic drift. Topics include adaptation, speciation, the origin of life, and the major evolutionary trends over geological time. Prerequisite: BISC 202. Recommended: BISC 204. Students with credit for BISC 400 may not take BISC 300 for further credit.

**BISC 302-3 Genetic Analysis**

Discussion and manipulations of some of the organisms and techniques applicable to genetic analysis. Prerequisite: BISC 202.

**BISC 302W-3 Genetic Analysis**

Discussion and manipulations of some of the organisms and techniques applicable to genetic analysis. Prerequisite: BISC 202. Writing.

**BISC 303-4 Microbiology**

The biology of micro-organisms and their significance in the understanding of cellular processes. Prerequisite: BISC 102 and MBB 231.

**BISC 304-3 Animal Ecology**

A study of the interrelationships of animals and their physical and biotic environment. Prerequisite: BISC 101, 102 and 204.

**BISC 304W-3 Animal Ecology**

A study of the interrelationships of animals and their physical and biotic environment. Prerequisite: BISC 101, 102, and 204. Writing.

**BISC 305-3 Animal Physiology**

A comparative study of basic physiological mechanisms in invertebrates and vertebrates. Prerequisite: MBB 231 and PHYS 102 (or PHYS 121 or 126 or 141) with a grade of C- or better.

**BISC 306-4 Invertebrate Biology**

An introduction to selected invertebrate phyla with an emphasis on functional morphology, diversity and ecology. Prerequisite: BISC 101, 102 and 204.

**BISC 307-3 Animal Physiology Laboratory**

A laboratory course using contemporary techniques of animal physiological research. Prerequisite: BISC 305 and 329.

**BISC 307W-3 Animal Physiology Laboratory**

A laboratory course using contemporary techniques of animal physiological research. Prerequisite: BISC 305 and 329. Writing.

**BISC 309-3 Conservation Biology**

An examination of the primary threats to biodiversity, how biological processes contribute to the persistence of populations and structure of communities, and species and landscape approaches to conservation in the real world. Prerequisite: BISC 204. Students who have taken BISC 474 in spring 2006 or BISC 475 in spring 2008 as special topics courses titled 'Conservation Ecology' cannot take this course for further credit.

**BISC 310-3 The Natural History of British Columbia**

Field course on the ecology, distribution, and characteristics of organisms representative of various biotic regions of the province (both terrestrial and marine). Sampling techniques are emphasized. The course will normally be taught as a full-time, intensive, three week course with field trips of one to several days duration. Prerequisite: BISC 204, and one of the following: BISC 306, 316, 317, 326, 337.

**BISC 313-3 Environmental Toxicology**

This course introduces students to basic principles of toxicology and several classes of widely encountered environmental pollutants. Emphasis is on toxicology as an interdisciplinary science. This course is a prerequisite for all advanced toxicology courses. Prerequisite: MBB 231.

**BISC 316-4 Vertebrate Biology**

A review of the evolution and the taxonomy of the vertebrate classes. A comparative study of their organ systems and functions with particular reference to reproduction. A comparison of the functional morphology of some species by laboratory dissections. Prerequisite: BISC 101 and 102.

**BISC 317-3 Insect Biology**

Life histories, bionomics, comparative morphology, and classification of insects and related organisms. A collection may be required, depending on instructor. Prerequisite: BISC 101 and 102.

**BISC 326-3 Biology of Algae and Fungi**

A survey of form, function and phenetics. Prerequisite: BISC 101 and 102.

**BISC 329-4 Introduction to Experimental Techniques**

This course is designed to introduce students to basic measurement methods and instrumentation as used in modern biology. Prerequisite: CHEM 121 and 122, MBB 231, PHYS 102 (or PHYS 121 or 126 or 141), STAT 201.

**BISC 333-3 Developmental Biology**

Classical and modern experimental approaches will be described for understanding development of embryos of several species having common and distinctive features. These approaches are at the organismal, cellular, molecular and genetic levels. Prerequisite: BISC 202, MBB 222, MBB 231.

**BISC 337-4 Plant Biology**

An introductory course covering many aspects of plant biology including the origin and evolution of plants, basic anatomy, plant growth and development and the utilization and impact of plants in human society. Prerequisite: BISC 101 and 102.

**BISC 341-3 Practicum I**

First term of work experience in the Biological Sciences Co-operative Education Program. Units for this course do not count towards the units required for an SFU degree. Prerequisite: acceptance in the biological sciences co-operative education program.

**BISC 342-3 Practicum II**

Second term of work experience in the Biological Sciences Co-operative Education Program. Units for this course do not count towards the units required for an SFU degree. Prerequisite: BISC 341 and re-admission to the science co-operative education program.

**BISC 357-3 Gene Cloning**

Introduction to various techniques in gene cloning and the applications of gene cloning. Laboratory exercises follow a sequence of events commonly practiced in many molecular genetics laboratories and include novel technologies such as cloning by site-directed recombination. Lecture content spans basic cloning in plasmids to novel large-scale genomics technologies. Prerequisite: BISC 202, MBB 222, 231. Recommended: MBB 331. Credit will not be granted for both BISC 357 and MBB 308. Cannot be taken for credit if already taken as a Special Topics course.

**BISC 366-3 Plant Physiology**

The plant's physical environment and the physiological basis (mechanisms and principles) of the interaction between plants and their environment in relation to their survival and ecological distribution. Prerequisite: MBB 231.

**BISC 367-3 Plant Physiology Laboratory**

A laboratory course using contemporary techniques of plant physiological research. Prerequisite: BISC 329 and 366.

**BISC 367W-3 Plant Physiology Laboratory**

A laboratory course using contemporary techniques of plant physiological research. Prerequisite: BISC 329 and 366. Writing.

**BISC 372-3 Special Topics in Biology**

Selected topics in areas not currently offered within the undergraduate course offerings in the Department of Biological Sciences. Prerequisite: to be announced in the Undergraduate Schedule of Classes and Examinations.

**BISC 403-3 Current Topics in Cell Biology**

The lectures will explore two or three major themes in current cell biology, such as cell motility, the cell cycle, and cellular signalling. A critical component of the course is to develop an understanding of the experimental basis of our knowledge about cells. Prerequisite: MBB 222, 231 with C- or better, and completion of 75 units, or completion of BISC 305 or 366 with a C- or better.

**BISC 404-3 Plant Ecology**

The study of the distribution and abundance of plants, including how individuals, populations, and communities are affected by abiotic (climate, soil) and biotic (competition, herbivory) factors. A major focus will be life history evolution (pollination, defence, dispersal). Experimental and observational laboratory exercises are primarily conducted outdoors. Prerequisite: BISC 101, 102, and 204.

**BISC 404W-3 Plant Ecology**

The study of the distribution and abundance of plants, including how individuals, populations, and communities are affected by abiotic (climate, soil) and biotic (competition, herbivory) factors. A major focus will be life history evolution (pollination, defence, dispersal). Experimental and observational laboratory exercises are primarily conducted outdoors. Prerequisite: BISC 101, 102, and 204. Writing.

**BISC 405-3 Neurobiology**

Physiology of neuroscience, focusing on cellular and molecular mechanisms. Topics include: cellular and

subcellular organization of the nervous system, electrical properties of neurons, ion channels, synaptic transmission, sensory systems, learning and memory, neurodegenerative diseases. Prerequisite: BISC 305. Students who have completed BISC 472 under the title 'Neurobiology' may not complete BISC 405 for further credit.

**BISC 406-3 Marine Biology and Oceanography**

An introduction to the marine environment, marine organisms and the ecological and oceanographic processes affecting them. Prerequisite: BISC 306 or 316.

**BISC 407-3 Population Dynamics**

An evaluation of factors influencing the natural fluctuation and regulation of plant and animal population numbers. Prerequisite: BISC 304 or 404.

**BISC 410-3 Behavioral Ecology**

An introduction to the evolution of behavior and its adaptiveness in a natural context. Corequisite: BISC 304 or permission of the department.

**BISC 411-3 Behavioral Ecology Laboratory**

Illustration of the principles of behavioral ecology, and the experimental approach to its study, by means of a series of laboratory and field exercises and an individual project. Prerequisite: BISC 304 and 410. Corequisite: BISC 410 could be taken concurrently.

**BISC 414-3 Limnology**

An integrated examination of biological, chemical and physical processes in lakes and running water ecosystems. Interactions among biological, chemical and physical controls on the structure, function and dynamics of aquatic ecosystems are emphasized. Environmental problems resulting from human disturbances to aquatic ecosystems are examined. Prerequisite: 75 units in a science program, including BISC 204 or GEOG 215, or permission of the instructor.

**BISC 416-4 Fish Biology**

An introduction to the biology of fishes with an emphasis on classification, evolution, anatomy, physiology, and ecology. Prerequisite: BISC 316 or permission of the department.

**BISC 418-3 Parasitology**

Ecology and phylogeny of animal parasites (from protozoa to helminthes), including those of humans, domestic animals and wildlife. Parasite success, host-parasite interactions, general epidemiological principles of parasitic infections, and reproductive strategies used by parasites to increase the likelihood of transmission as well as host responses and medical options for past and current parasite problems. Prerequisite: BISC 204. Recommended: BISC 300, 306.

**BISC 419-3 Wildlife Biology**

Theoretical and applied aspects of ecology and behavior in relation to wildlife populations and their habitats, with emphasis on important mammals and birds in British Columbia. Attendance on local field trips is required. Prerequisite: BISC 304. Recommended: BISC 316.

**BISC 422-3 Population Genetics**

Theoretical and experimental aspects of inheritance at the population level. Topics include Hardy-Weinberg, one- and two-locus selection theory, introduction to quantitative genetics, and Fisher's fundamental theorem of natural selection. Prerequisite: BISC 202 and STAT 201.

**BISC 429-4 Separation Methods in Biology**

A systematic introduction to separation principles and strategies for the purification of biomolecules, with laboratory experiments using contemporary techniques in complex biological systems. Detailed instruction in composing and writing scientific reports. Prerequisite: MBB 222, 231, 75 units.

**BISC 429W-4 Separation Methods in Biology**

A systematic introduction to separation principles and strategies for the purification of biomolecules, with laboratory experiments using contemporary techniques in complex biological systems. Detailed instruction in composing and writing scientific reports. Prerequisite: MBB 222, 231, 75 units. Writing.

**BISC 430-3 Microbe-Plant Interactions**

Interactions between major groups of microbes (including fungi, bacteria, viruses, phytoplasmas and viroids) with higher plants, including the chemical signals which trigger the onset of recognition events that result in a parasitic or mutualistic relationship, and the mechanisms of plant defence. Prerequisite: MBB 231 and at least one of BISC 303, 326, 337. Students who have completed BISC 475 under the title 'Microbe-Plant Interactions' may not complete BISC 430 for further credit.

**BISC 432-3 Chemical Pesticides and the Environment**

The physical, chemical and biological properties of chemical pesticides; risks and benefits associated with their use in pest management. Prerequisite: BISC 305 or 366. Recommended: for those who wish entry to the Master of Pest Management program.

**BISC 434-3 Paleoecology and Palynology**

The principles of paleoenvironmental reconstruction, emphasizing the study of pollen grains, spores, and other microfossils in solving problems of paleobiology and earth history. Prerequisite: minimum 60 units including BISC 204, or GEOG 215. Some background in botany, biogeography, or earth sciences is desirable.

**BISC 435-3 Introduction to Pest Management**

Survey of the natures, causes and consequences of pest problems and of the natural and applied factors and processes that determine their occurrence and intensity. Prerequisite: BISC 317, or 75 units.

**BISC 439-4 Industrial Microbiology**

This course introduces students to the use of microorganisms in biotechnology, e.g. in the environmental, pharmaceutical and chemical industries. The lectures will cover the unique physiology/biochemistry of industrial microorganisms and their use in processes such as fermentation, bioremediation, chemical synthesis and protein production. The laboratory component is designed as a series of exercises that form a complete research project. Prerequisite: BISC 303 or equivalent.

**BISC 440-3 Biodiversity**

The production and organization of biodiversity (investigations of species, and an in-depth look at taxonomy, systematics and phylogenetics). Evolutionary and ecological theories behind the patterns of biodiversity (the current and future geographic distribution of species, and how biodiversity is related to ecosystem function). The values society gives biodiversity (how our values are reflected in law and regulation). Prerequisite: BISC 300, STAT 201 or equivalent, both with C or better, plus 75 units.

**BISC 440W-3 Biodiversity**

The production and organization of biodiversity (investigations of species, and an in-depth look at taxonomy, systematics and phylogenetics). Evolutionary and ecological theories behind the patterns of biodiversity (the current and future geographic distribution of species, and how biodiversity is related to ecosystem function). The values society gives biodiversity (how our values are reflected in law and regulation). Prerequisite: BISC 300, STAT 201 or equivalent, both with C or better, plus 75 units. Writing.

**BISC 441-3 Evolution of Health and Disease**

Application of the principles and theories of evolution and ecology to the study of health and disease, with a

particular but not exclusive emphasis on humans.

Topics to be covered include the evolutionary ecology of infectious disease, the immune system, cancer, senescence, fetal programming, and the genetic/environmental bases of disease. The course will involve a combination of lectures by the primary faculty member teaching the course, discussions, student research projects (papers, written and revised, and presentations to the class), and specialist guest lectures. Prerequisite: BISC 202 or 204. Recommended: BISC 300.

**BISC 443-3 Practicum III**

Third term of work experience in the Biological Sciences Co-operative Education Program. Units for this course do not count towards the units required for an SFU degree. Prerequisite: BISC 342 and re-admission to the science co-operative education program.

**BISC 444-3 Practicum IV**

Fourth term of work experience in the Biological Sciences Co-operative Education Program. Units for this course do not count towards the units required for an SFU degree. Prerequisite: BISC 443 and re-admission to the science co-operative education program.

**BISC 445-3 Environmental Physiology of Animals**

A discussion of the physiological mechanisms and adaptations which permit animals to live in diverse environments. The course will adopt a comparative approach to physiology. Prerequisite: BISC 305.

**BISC 446-3 Practicum V**

Fifth term of work experience in the Biological Sciences Co-operative Education Program. Units for this course do not count towards the units required for an SFU degree. Prerequisite: BISC 444-0 and re-admission to the science co-operative education program.

**BISC 449-4 Histological Techniques in Biology**

Principles of microscopy and histological techniques for sample preparation: fixation, dehydration, embedding, and sectioning. Use of lipid and nucleic acid stains and antibodies for labeling. Prerequisite: BISC 329.

**BISC 455-3 Endocrinology**

A study of endocrine organs and their role in integrating physiological functions in animals. Prerequisite: BISC 305 and one of BISC 306 or 316.

**BISC 457-3 Plant Molecular Biology and Biotechnology**

An introduction to plant molecular biology and the techniques, applications and issues of plant genetic engineering. Prerequisite: MBB 222, 231.

**BISC 471-3 Special Topics in Biology**

Selected topics not currently offered within the undergraduate course offerings in the department of Biological Sciences. Prerequisite: to be announced.

**BISC 472-3 Selected Topics in Biology**

Selected topics in areas not currently offered within the undergraduate course offerings in the Department of Biological Sciences. Prerequisite: to be announced in the Undergraduate Schedule of Classes and Examinations.

**BISC 473-3 Selected Topics in Biology**

Selected topics in areas not currently offered within the undergraduate course offerings in the Department of Biological Sciences. Prerequisite: to be announced in the Undergraduate Schedule of Classes and Examinations.

**BISC 474-3 Special Topics in Biology**

Selected topics in areas not currently offered within the undergraduate course offerings in the Department of Biological Sciences. Prerequisite: to be announced in the Course Timetable and Exam Schedule.

**BISC 475-3 Special Topics in Biology**

Selected topics not currently offered within the undergraduate course offerings in the Department of Biological Sciences. Prerequisite: to be announced in the Course Timetable and Exam Schedule.

**BISC 490-5 Research Design**

Prerequisite: completion of all lower division biological sciences courses, plus upper division BISC courses appropriate to the subject of the intended research as determined by the departmental undergraduate curriculum committee; completion of all physics, chemistry and mathematics requirements for the major or honors program; at the time of application, students will normally have a CGPA of 3.00 (B standing). BISC 490 may be taken in the term prior to BISC 491/492 by students intending to complete the three course ISS.

**BISC 491-5 Research Technique**

Prerequisite: completion of all lower division biological sciences courses, plus upper division BISC courses appropriate to the subject of the intended research as determined by the departmental undergraduate curriculum committee; completion of all physics, chemistry and mathematics requirements for the major or honors program; at the time of application, students will normally have a CGPA of 3.00 (B standing). Corequisite: BISC 490 and 492.

**BISC 492-5 Research Reporting**

Prerequisite: completion of all lower division biological sciences courses, plus upper division BISC courses appropriate to the subject of the intended research as determined by the departmental undergraduate curriculum committee; completion of all physics, chemistry and mathematics requirements for the major or honors program; at the time of application, students will normally have a CGPA of 3.00 (B standing). Corequisite: BISC 490 and 491.

**BISC 492W-5 Research Reporting**

Prerequisite: completion of all lower division biological sciences courses, plus upper division BISC courses appropriate to the subject of the intended research as determined by the departmental undergraduate curriculum committee; completion of all physics, chemistry and mathematics requirements for the major or honors program; at the time of application, students will normally have a CGPA of 3.00 (B standing). Corequisite: BISC 490 and 491. Writing.

**BISC 497W-3 Undergraduate Research: Writing Intensive**

A student may enrol in this course only with prior written agreement of a faculty member to act as research supervisor, who will also provide instruction and feedback on the writing and presentation of results from the research. A maximum of six credit hours in research courses can be applied towards the degree. Prerequisite: 90 units. Writing.

**BISC 498-3 Undergraduate Research I**

Prerequisite: 90 units. A student will be permitted to enrol in this course only if he/she obtains the prior written agreement of a faculty member to act as research advisor. A different advisor is required than for BISC 499, but a student may take BISC 497W with the same advisor either following or concurrently with BISC 498. A maximum of six units in research courses can be applied towards the degree.

**BISC 499-3 Undergraduate Research II**

Prerequisite: 90 units. A student will be permitted to enrol in this course only if she/he obtains the prior written agreement of a faculty member to act as research advisor. A different advisor is required than for BISC 498, but a student may take BISC 497W with the same advisor either following or concurrently with BISC 499. A maximum of six units in research courses can be applied towards the degree.

**BISC 601-2 Agriculture, Horticulture and Urban Pest Management**

A broad range of agricultural pests and their management, with emphasis on insects, crop diseases, and weeds in greenhouses, orchards and field crops. Pest problems in urban environments, including stored products in and near buildings.

**BISC 602-2 Forest Pest Management**

Management of insect, microbial, vertebrate and plant pests of forests and forest products, including seed orchards, nurseries, dryland sorting areas. Emphasis is placed on diagnosis, decision-making, interactions and techniques for forest pest management.

**BISC 603-5 Farm and Speciality Crop Pest Management**

Agricultural pests and their management, with emphasis on insects and crop diseases, and including garden and greenhouse pests.

**BISC 604-3 Orchard Crop Pest Management**

Insects, diseases, and other pests of fruit trees, including grapevines and small fruits, and their management.

**BISC 605-3 Management of Animal Disease Vectors**

Management of vectors, especially arthropods, of human and animal diseases, especially microbial; selected topics in epidemiology.

**BISC 650-3 Environmental Risk Assessment**

This course emphasizes recent development in quantitative human health risk assessment and ecological effects based risk assessment of environmental chemicals. Prerequisite: BISC 313.

**BISC 651-3 Toxicity Tests I: Ecological Effects Based Tests**

This course provides the basic concepts and practical experience for the application of ecologically-based toxicity tests. Prerequisite: BISC 313.

**BISC 652-3 ET Tests II: Mammalian Toxicity Tests**

The main focus of this course is on laboratory testing procedures currently employed in the toxicological evaluation of chemicals. Prerequisite: BISC 313 or permission of the department.

**BISC 654-3 Food and Drug Toxicology**

Investigates those toxic compounds in the environment which are added to, contaminate, or supplement one's diet. Prerequisite: BISC 313 or equivalent.

**BISC 655-3 Environmental Toxicology Seminar**

A structured series of seminars on the recent developments of environmental toxicology.

**BISC 656-6 Master of Environmental Toxicology Project**

One term experience in a university or commercial laboratory according to student's interests. Prerequisite: acceptance into the environmental toxicology program.

**BISC 657-0 Co-Op Practicum I**

First work experience for MET students. Prerequisite: permission of the department.

**BISC 658-0 Co-op Practicum II**

Second work experience for MET students. Prerequisite: Permission of the department.

**BISC 800-1 Basic Skills for a Career in Science**

Introduction to methods of writing research articles and grant proposals, preparing talks for scientific and non-scientific audiences, and writing for the media. The student-supervisor relationship and conflict resolution are also discussed.

**BISC 806-3 Evolutionary Theory**

A consideration of recent advances and current controversies in our understanding of the development, diversification and adaptation of life through natural selection.

**BISC 807-3 Ecological and Evolutionary Physiology**

This course considers what physiology has to offer behavioral and evolutionary ecology (and vice versa), with a focus on whole organism or 'integrative physiology.'

**BISC 812-3 Marine Research Techniques: Scientific Diving**

An introduction to the use of diving in marine/freshwater research, related underwater methodology, diving competency and current issues in marine biological research and scientific diving.

**BISC 814-3 Aquatic Ecology**

Current problems in the ecology of marine and freshwater environments. Topics will be selected from recent developments in physiological ecology, energetics, population ecology and community studies.

**BISC 815-3 Contemporary Problems in Plant Physiology**

Directed studies in modern laboratory approaches to specific areas of research.

**BISC 816-3 Biology and Management of Insects**

Bionomics, ecology, economic impact, and management of the major groups of insects, based on intensive reviews of information on representative species. Prerequisite: BISC 317 or permission of the department.

**BISC 817-3 Evolution of Social Behavior**

Study of the proximate and ultimate causes and consequences of alternative social systems in non-human animals.

**BISC 821-1 Cell and Molecular Biology Colloquium**

This seminar course provides a rigorous introduction to recent research in cell biology. Papers will be selected along a particular theme, but there is always a strong emphasis on the experimental basis of our knowledge about cellular mechanisms. Prerequisite: permission of the instructor. A student may not take more than 3 units of Cell and Molecular Biology Colloquium courses, including MBB 821, 822, 823.

**BISC 822-1 Cell and Molecular Biology Colloquium**

This seminar course provides a rigorous introduction to recent research in cell biology. Papers will be selected along a particular theme, but there is always a strong emphasis on the experimental basis of our knowledge about cellular mechanisms. Prerequisite: permission of the instructor. A student may not take more than 3 units of Cell and Molecular Biology Colloquium courses, including MBB 821, 822, 823.

**BISC 823-1 Cell and Molecular Biology Colloquium**

This seminar course provides a rigorous introduction to recent research in cell biology. Papers will be selected along a particular theme, but there is always a strong emphasis on the experimental basis of our knowledge about cellular mechanisms. Prerequisite: permission of the instructor. A student may not take more than 3 units of Cell and Molecular Biology Colloquium courses, including MBB 821, 822, 823.

**BISC 824-3 Survival and Reproductive Strategies**

An examination of strategies for resource acquisition and allocation, and the behavioral, ecological and life history means whereby organisms maximize lifetime reproductive success.

**BISC 827-1 Seminar in Evolutionary and Behavioral Ecology**

An introduction to the important issues, methods and philosophy of behavioral ecology, and discussion of current topics. Prerequisite: BISC 304 and 410 or permission of the department.

**BISC 828-3 Models in Behavioral Ecology**

An intensive survey course of current modeling techniques used for analysis of problems in behavioral ecology.

**BISC 829-3 Conservation Ecology**

This course will illustrate the value of applying ecological theory, particularly concerning life history and demography, to issues of management and conservation. Examination of life history characteristics and variability of individuals will demonstrate how knowledge of demography and population parameters are essential for effective conservation. Emphasis will be on vertebrate species.

**BISC 838-3 Population Biology**

Consideration of the ecological and genetic processes acting at the population level.

**BISC 839-3 Industrial Microbiology**

This course introduces students to the use of micro-organisms in biotechnology, e.g. in the environmental, pharmaceutical and chemical industries. The lectures will cover the unique physiology and biochemistry of industrial micro-organisms as well as discussing their use in various processes including industrial fermentation, bioremediation, chemical synthesis and protein production (e.g. vaccines) by recombinant organisms. Prerequisite: a second or third year undergraduate microbiology course.

**BISC 841-3 Plant Disease Development and Control**

An examination of the major factors that lead to development of soil-associated and foliar plant diseases in cultivated crops, in relation to the nature, underlying principles, application and limitations of various types of control practices.

**BISC 842-3 Molecular Physiology of Insects**

An examination of hormonal and nutritional factors that influence growth and development, as well as energy metabolism in insects, with emphasis on the molecular mechanisms involved in their regulation.

**BISC 843-3 Applied Behavioral Ecology**

Concepts and methods from behavioral ecology and population dynamics are used to solve problems of an applied nature (e.g. pest management, harvesting policies, management of human diseases). Model building and analysis feature prominently.

**BISC 844-3 Biological Controls**

Principles, theory, and practice of the use of living organisms in the natural regulation and the control of organisms. Emphasis will be on parasitic insects, and include host specificity, genetics, genetic controls, and the evolution of host-parasite associations.

**BISC 846-3 Insecticide Chemistry and Toxicology**

The chemistry of insecticides, with emphasis on their toxicology, metabolism and molecular mechanism of action.

**BISC 847-3 Pest Management in Practice**

Status and special problems of research development and implementation of pest management programs in different kinds of ecosystems; consideration of factors such as management systems, economics, communication, legal and social constraints, and ethics in the practice of pest management.

**BISC 849-6 Master of Pest Management Thesis**

An independent research thesis based on laboratory or field-based research and focused on some aspect of pest management. The research may be supervised by any faculty member in the Department of Biological Sciences.

**BISC 851-3 Vertebrate Pests**

Evaluation of the biology of vertebrates that are in conflict with human activities; discussion of control strategies and economic and social impacts.

**BISC 852-3 Biology of Animal Disease Vectors**  
Physiological, molecular, and behavioral interactions between parasites of human importance and their insect vectors. Emphasis is placed on current literature relating to modern approaches in reducing parasite transmission.

**BISC 854-3 Ecotoxicology**

The proposed course will detail the physiochemical factors that influence contaminant behavior in aquatic and terrestrial ecosystems. Prerequisite: BISC 101, 312, CHEM 102, and 103. Recommended: BISC 414.

**BISC 855-3 Biochemical Toxicology**

This course examines the biodynamics and actions of toxicants on several key biological systems within living organisms at the biochemical and molecular levels. Prerequisite: BISC 313.

**BISC 859-3 Special Topics I**

Selected topics in biological science. The content of this course varies from term to term.

**BISC 869-3 Special Topics II**

**BISC 879-3 Special Topics III**

**BISC 880-3 Special Topics in Behavioral Ecology**

A consideration of advanced special topics in the field of behavioral ecology.

**BISC 881-3 Special Topics in Cell and Molecular Biology**

A student participation seminar course focusing on recent literature on selected topics in cellular, developmental, and molecular biology. Prerequisite: permission of the instructor

**BISC 883-3 Special Topics in Environmental Toxicology**

Special topics course with emphasis on recent developments in environmental toxicology.

**BISC 884-3 Special Topics in Pest Ecology and Management**

A course that provides graduate students with an in-depth analysis of a topic in pest ecology and management. The course content will change from year to year to reflect student interests and topical research, and can be taught by any faculty member of the Department of Biological Sciences.

**BISC 885-3 Special Topics in Animal Physiology**

Special topics in comparative vertebrate and invertebrate functional mechanisms and adaptations. Prerequisite: undergraduate course in animal physiology.

**BISC 886-3 Special Topics in Marine and Aquatic Biology**

Special topics course emphasizing recent developments in the area of aquatic and marine biology.

**BISC 887-3 Special Topics in Plant Biology**  
Advanced treatment of selected topics or specialized areas in plant biology. The special topics to be discussed will vary from term to term.

**BISC 888-1 Directed Readings in Biology**  
Programs of directed readings and critical discussions offered by staff members to individual students. A formal description of the study program is required (forms available from the graduate secretary). These forms must be approved by the departmental graduate studies committee at the beginning of the term, prior to enrolment.

**BISC 889-2 Directed Readings in Biology**  
Intended to cover the same ground as a normal graduate course, it may be given to one or two students when a lecture/seminar is inappropriate.

**BISC 890-3 Directed Readings in Biology**  
Programs of directed readings and critical discussions offered by staff members to individual students. A formal description of the study program is

required (forms available from the graduate secretary). These forms must be approved by the departmental graduate studies committee at the beginning of the term, prior to enrolment.

**BISC 898-6 MSc Thesis**  
**BISC 899-6 PhD Thesis**

**Business Administration BUS**  
**Faculty of Business**  
**Administration**

**BUS 130-3 Business in the Networked Economy I**

The management and operation of business, including the principles, concepts, ideas and tools used by managers. Management in the contemporary world of high technology is emphasized, featuring examples and cases involving high-tech firms. In addition, the course exposes students to international and local business issues, and to large companies as well as to smaller, entrepreneurial firms. Students with credit for TECH 128, 129 and 130 may not take this course for further credit. Breadth-Social Sciences.

**BUS 207-3 Managerial Economics**

Emphasis is upon the relevance of economic models to business decision-making and, in particular, upon the rational analysis of choice alternatives within the firm. Course will include consideration of optimizing techniques and analysis of risk, demand, production and profit in addition to examination of long-term investment decisions and business forecasting. Prerequisite: ECON 103, 105; MATH 157; 15 units. Students with credit for ECON 301 or BUS 307 may not take BUS 207 for further credit. Quantitative.

**BUS 225-3 Co-op Practicum I**

This is the first term of work experience for students in the Co-operative Education Program. It provides an opportunity to integrate theory and practice. This course is open only to co-op students. The co-op program co-ordinator must be contacted at the beginning of the term prior to enrolment for this course. Units for this course do not count towards the units required for an SFU degree.

**BUS 237-3 Information Systems in Business**

Introduces students to the knowledge and skills necessary to make full use of business information systems. Demonstrates how information systems are used by organizations to improve productivity and create competitive advantage. Provides hands on training in productivity tools including Excel, Visio, Access and Web design tools. Prerequisite: 12 units. Students may not receive credit for both BUS 237 and 337.

**BUS 242-3 Introduction to Financial Management**

This course is designed to introduce students to the concepts and techniques of corporate financial analysis. The goal is to provide them with the skills and understanding necessary to apply financial tools in a work-related context. Three primary financial functions are considered: management of working capital, the investment decision, and funds acquisition. The course also covers issues from financial accounting related to the development of financial statements and financial statement analysis. Prerequisite: MATH 110. Special Instructions: this course is only open for credit to students in the integrated studies program within the bachelor of general studies degree.

**BUS 251-3 Financial Accounting I**

An introduction to financial accounting, including accounting terminology, understanding financial statements, analysis of a business entity using financial statements. Includes also time value of money and a critical review of the conventional

accounting system. Prerequisite: 12 units. Quantitative.

**BUS 254-3 Managerial Accounting I**

Theory and methods of cost compilation for managerial planning, control and decision making; the use of budgets and analysis in planning and controlling operations, establishing supervisory and departmental responsibility, and various techniques of measuring results. Prerequisite: BUS 251; 15 units. Students with credit for BUS 324 or 328 may not take BUS 254 for further credit. Quantitative.

**BUS 272-3 Behavior in Organizations**

Theories, concepts and issues in the field of organizational behavior with an emphasis on individual and team processes. Core topics include employee motivation and performance, stress management, communication, work perceptions and attitudes, decision-making, team dynamics, employee involvement and conflict management. Prerequisite: 12 units.

**BUS 303-3 Business, Society and Ethics**

This course examines and reviews contemporary thinking on the changing role of business and business persons in the operations of society, particularly Canadian society. The course explores the changing legal, ethical and regulatory environments of business focusing on the critical alignments -- values, policies, technology and legal approaches -- between the modern organization and its broader public. Prerequisite: 60 units.

**BUS 312-4 Introduction to Finance**

Role and function of financial managers, financial analysis, compound interest valuation and capital budgeting, management of current assets, introduction to financial instruments and institutions. Prerequisite: BUS 254 (or 324); 60 units. Recommended: BUS 207 or ECON 301. Quantitative.

**BUS 314-3 New Venture Finance**

Start-up and early-stage ventures have particular financial challenges associated with the uncertain and unproven nature of the project. This course analyzes how entrepreneurs and their financial backers can spot, create and manage value. Topics covered include opportunity recognition, cash flow forecasting, valuation methodologies, financial contracts, and careful negotiations. Various sources are considered for start-up capital (private debt, angel financiers, venture capitalists, development banks), and different strategies are considered for harvesting or exiting (initial public offerings, merger, acquisition, leveraged buy-out, shut down) a venture. Prerequisite: BUS 312, 60 units.

**BUS 315-4 Investments**

Investments from an individual and institutional point of view. Topics include: bond valuation and the term structure of interest rates, stock valuation, portfolio theory, asset pricing models, efficient markets and portfolio performance evaluation. Prerequisite: BUS 312, 336 and 207 or ECON 301; 60 units. Quantitative.

**BUS 316-3 Derivative Securities**

The role derivative securities, mainly options and futures contracts, in controlling risk and enhancing profit opportunities. Valuation of derivative securities. The organization of options and futures markets and the mechanics of trading. Prerequisite: BUS 312, 336; 60 units. Students with credit for BUS 416 may not take BUS 316 for further credit. Quantitative.

**BUS 319-3 Integrative Financial and Managerial Accounting**

For students planning further course work in accounting. Its integrative approach includes financial and managerial accounting topics, alternative accounting models, accounting systems and accounting data management, international accounting and accounting ethics. Prerequisite: BUS

254 (or 324 or 328), 237 and 60 units. Students with credit for BUS 252 may not take BUS 319 for further credit. Corequisite: BUS 254 can be taken concurrently with BUS 319.

### **BUS 320-3 Financial Accounting: Assets**

In-depth coverage of the accounting methods, problems and limitations associated with assets. Alternative valuation bases will be emphasized and illustrated together with the impact on income. Integration of theory and practice in relation to the treatment of assets. Prerequisite: BUS 254; 60 units. Quantitative.

### **BUS 321-3 Financial Accounting: Equities**

In-depth coverage of accounting, methods, problems, and limitations, associated with liabilities and owners' equity. An introduction to the unique aspects and issues of accounting for not-for-profit organizations will also be provided. Prerequisite: BUS 320-3; 60 units. Quantitative.

### **BUS 322-3 Intermediate Managerial Accounting**

In-depth examination of important managerial accounting topics introduced in BUS 254 (e.g., transfer pricing, variance analysis) and more advanced topics (e.g., decision making under uncertainty, the value of information), focusing on providing the tools and techniques needed for the generation, analysis and dissemination of management accounting information necessary for making strategic business decisions. The course will also introduce and develop the case approach in order to prepare students for BUS 424. Prerequisite: BUS 254, 60 units.

### **BUS 325-3 Co-op Practicum II**

This is the term semester of work experience for students in the Co-operative Education Program. It provides an opportunity to integrate theory and practice. This course is open only to co-op students. The co-op program co-ordinator must be contacted at the beginning of the term prior to enrolment for this course. Units for this course do not count towards the units required for an SFU degree.

### **BUS 326-3 Co-op Practicum III**

This is the third term of work experience for students in the Co-operative Education Program. It provides an opportunity to integrate theory and practice. This course is open only to co-op students. The co-op program co-ordinator must be contacted at the beginning of the term prior to enrolment for this course. Units for this course do not count towards the units required for an SFU degree.

### **BUS 327-3 Co-op Practicum IV**

This is the fourth term of work experience for students in the Co-operative Education Program. It provides an opportunity to integrate theory and practice. This course is open only to co-op students. The co-op program co-ordinator must be contacted at the beginning of the term prior to enrolment for this course. Units for this course do not count towards the units required for an SFU degree.

### **BUS 329-4 Income Tax for Business Decision-Making**

An examination of the underlying principles, concepts and methodology of income taxation in Canada, with emphasis upon the use of current reference sources. The course focus will be upon business taxation. Prerequisite: 60 units. Corequisite: BUS 320 or permission of Faculty.

### **BUS 336-4 Data and Decisions II**

This course is an extension of BUEC 232. It develops and applies the quantitative models that are most directly relevant to business decisions. Beginning with material on multiple regression and forecasting modeling, the course moves on to decision analysis, business simulation, quality control, and an

introduction to optimization. Prerequisite: MATH 157 and BUEC 232, 60 units. Quantitative.

### **BUS 338-3 Understanding Technological Innovation**

An introduction to the theory and practice of the management of technological innovation. The external environment for technological innovation is examined through investigation of national and regional systems of innovation. The internal firm capabilities for creating and sustaining innovative firms are explored in detail, from the creation of ideas through to the commercialization of new products and services. Proficiency is gained in identifying sources of innovative value, implementing processes to capture it, and creating strategies for commercialization. Prerequisite: 60 units.

### **BUS 341-3 Fundamentals of Marketing for Integrated Studies Program**

This course is intended to be a first course in marketing management. Its purpose is to present students with the fundamentals of the marketing management process and of the importance of marketing in general. You will also develop some insight into the complex area of marketing decision-making and what marketing managers need to know to be effective. By applying fundamental marketing concepts, students will be able to solve real life marketing problems. Particular emphasis will be placed on understanding consumer behavior and segmentation analysis, the management of promotion, product-related decision-making and market distribution. Uncontrollable environmental elements pertinent to marketing planning will also be discussed. Prerequisite: 60 units. This course is only open for credit to students in the Integrated Studies Program within the bachelor of general studies degree.

### **BUS 342-3 Foundations of Entrepreneurship**

Provides an overview of entrepreneurship, where opportunities come from, and where they may be found. Prerequisite: 60 units. Students with credit for BUS 395 Special Topics (Intro to Entrepreneurship) may not take this course for further credit.

### **BUS 343-3 Introduction to Marketing**

The environment of marketing; relation of social sciences to marketing; evaluation of marketing theory and research; assessment of demand, consumer behavior analysis; market institutions; method and mechanics of distribution in domestic, foreign and overseas markets; sales organization; advertising; new product development, publicity and promotion; marketing programs. Prerequisite: 60 units.

### **BUS 345-4 Marketing Research**

A course in the management of marketing research. The basics of the design, conduct, and analysis of marketing research studies. Prerequisite: BUS 343, 336; 60 units; students with credit for BUS 442 may not complete BUS 345 for further credit.

### **BUS 346-3 International Business**

Study of international environment and its impact on business behavior: cultural, social, economic and institutional factors; major functions of international business; export and import trade, foreign investment, production and marketing operations; theoretical principles, government policies, business practices. Prerequisite: 60 units.

### **BUS 347-3 Consumer Behavior**

A study of the manner in which decisions are made in the market place, by both the ultimate consumer and the industrial buyer. Course will include consideration of consumer decision processes, individual and group influences and special cases such as brand loyalty and consumerism. Prerequisite: BUS 343; 60 units.

### **BUS 360-4 Business Communication**

This course is designed to assist students to improve their written and oral communication skills in business

settings. The theory and practice of business communication will be presented. Topics include analysis of communication problems, message character, message monitoring, message media. Exercises in individual and group messages and presentations will be conducted. Prerequisite: 60 units.

### **BUS 360W-4 Business Communication**

This course is designed to assist students to improve their written and oral communication skills in business settings. The theory and practice of business communication will be presented. Topics include analysis of communication problems, message character, message monitoring, message media. Exercises in individual and group messages and presentations will be conducted. Prerequisite: 60 units. Writing.

### **BUS 361-3 Project Management**

Introduction to the hard and soft skills of project management. Management software and techniques such as work breakdown, estimation, budgeting and status reporting are used. Applies structured processes and develops team-based skills and knowledge. Assumes no prior computing or technical knowledge. Prerequisite: 60 units.

### **BUS 362-4 Business Process Analysis**

Prepares students to model, analyze and propose improvements to business processes. In the major project, students analyze a process within an organization and use current techniques and tools to propose changes and a supporting information system. Prerequisite: BUS 237; 60 units.

### **BUS 364-3 Information Systems in Organizations and Society**

This course is directed at the student as a consumer and a manager of systems within organizations, and as a member of society. We will discuss the use of information technology in the functional areas of business as a method of control as well as its implication in improving efficiency and effectiveness within organizations. The student will be encouraged to form his/her own opinions about this very pervasive technology. Prerequisite: BUS 237; 60 units.

### **BUS 374-3 Organization Theory**

This course will examine theories of organization which use the organization as a basic unit of analysis. It will show how the structure and internal processes of an organization are linked to and partially determined by forces in the external environment of the organization. Contextual factors such as the technology and corporate strategy of the organization will also be examined. Prerequisite: 60 units; BUS 272 (or 372).

### **BUS 380-3 Comparative Management**

This course examines the major similarities and differences in management systems and practices in a variety of countries, including western Europe, East Asia, Middle East, and Latin America. Topics include the following: comparative management frameworks, managing cultural differences, cross-cultural business negotiations, and international human resource management. Prerequisite: BUS 272; 60 units. Students with credit for BUS 430 may not take BUS 380 for further credit. Recommended: BUS 346.

### **BUS 381-3 Introduction to Human Resource Management**

Subjects include human resource planning, job analysis and design, recruitment, employment equity, selection and placement, performance appraisal, compensation and benefits, training and development, occupational health and safety, and industrial relations. For each subject an overview of current Canadian issues and practices is presented. Prerequisite: BUS 272 (or 372); 60 units.

**BUS 393-3 Commercial Law**

Common law, equity, and statute law; contracts, agency, and negotiable instruments; partnership and corporation law; international commercial law. Prerequisite: 60 units. BUEC 391 is not to be taken concurrently with BUS 393.

**BUS 394-3 Selected Topics in Business Administration**

The subject matter will vary from term to term depending upon the interest of faculty and students. Prerequisite: as stated by the faculty at the time of offering; 60 units.

**BUS 395-3 Selected Topics in Business Administration**

The subject matter will vary from term to term depending upon the interest of faculty and students. Prerequisite: as stated by the faculty at the time of offering; 60 units.

**BUS 403-3 Seminar in Business and Society**

Focuses on and integrates many of the ethics-related topics touched upon in core business courses. Emphasis may vary and may include discussions of market failures, codes of ethics, privacy/confidentiality issues, cross-cultural business norms, social and environmental issues, organizational cultures and best practices in corporate governance. Prerequisite: 90 units, BUS 360.

**BUS 410-3 Financial Institutions**

An examination of financial institutions and the markets in which they operate. Topics may include: institutional structure, financial contract forms, valuation and pricing relationships, financial intermediation, financial transacting, the regulatory environment, risk measurement and hedging strategies. Prerequisite: BUS 315, 316, 360; 60 units.

**BUS 413-4 Corporate Finance**

Corporate decisions in the context of financial markets. Topics include: real asset investments, financing alternatives, dividend policy, working capital management, and corporate securities valuation. Prerequisite: BUS 315, 316, 360; 60 units.

**BUS 417-4 Security Analysis**

This course covers the historical, theoretical and practical issues involved in the market valuation of securities. Three general areas are studied: valuation of fixed income securities; valuation of equity securities; and topics in portfolio management. Prerequisite: BUS 315, 316, 360; 60 units. Students who have taken BUS 492 under the topic Security Analysis may not take BUS 417 for further credit.

**BUS 418-3 International Financial Management**

An introduction to international financial markets and institutions and to the management of assets and liabilities in an international/multinational setting. Topics to be covered include: exchange rate determination and management of foreign exchange risk; interest rate swaps; international portfolio management; comparative markets; and country risk. Prerequisites: BUS 315, 316, 360; 60 units.

**BUS 419-3 Advanced Derivative Securities**

This is a second course in derivative securities. Topics may include: extensions of the Black-Scholes model, pricing of American options, interest rate derivatives, complex derivatives and real options. Prerequisite: BUS 315, 316, 360; 60 units. Students who have taken BUS 493 under the topic Advanced Derivative Securities may not take BUS 419 for further credit.

**BUS 420-3 Advanced Accounting**

In-depth coverage of advanced accounting topics, specifically issues relating to business combinations and foreign currency. Consideration is also given to the interpretation and analysis of financial statements. Prerequisites: BUS 321, 360; 60 units.

**BUS 421-3 Accounting Theory**

Consideration of methods by which accounting theory is developed and examination of specific models including historical costs, replacement costs, resale price and price level adjustment models. Prerequisites: BUS 321, 360, BUS 207 or ECON 301; 60 units.

**BUS 424-3 Advanced Managerial Accounting**

Process costing; joint and by-product costing; inventory planning and control; cost accounting and statistical methods, relationship to operations research. Prerequisites: BUS 322 or 319, 336, 360; 60 units.

**BUS 425-3 Co-Op Practicum V**

This is the fifth term of work experience for students in the accounting Co-operative Education Program. It provides an opportunity to integrate theory and practice. This course is open only to accounting co-op students. The co-op program co-ordinator must be contacted at the beginning of the term prior to enrolment for this course. Credits for this course do not count towards the units required for an SFU degree.

**BUS 426-3 Auditing and Assurance: Concepts and Methods**

A study of the conceptual foundations and the nature and purpose of the external audit function. The course will also discuss some of the more recent developments in auditing such as comprehensive auditing, computer auditing, and the use of statistical methodology in auditing. Prerequisite: BUS 321, 360 and 60 units.

**BUS 431-3 Business with East Asian Countries**

This course examines the opportunities and challenges of doing business with the Pacific Rim countries such as China, Japan and Korea. Topics include the following: the political and economic systems as they affect foreign investment; social and cultural systems as they affect management practices; the conduct of business negotiations for market entry; and marketing strategies. Prerequisite: BUS 346, 360, and one of BUS 380 or 432; 60 units.

**BUS 432-3 International Human Resource Management**

Significance of multinational complexity and diversity (cultural, economic, demographic, etc.) to the human resource function. Interplay among human resource functions (employee procurement, allocation, utilization), types of employees, and countries of operation. Prerequisite: BUS 360 and one of BUS 381 or 374; 60 units. Recommended: BUS 346.

**BUS 434-3 Foreign Market Entry**

Examines various topics related to a firm's entry into international markets and the means of sustaining a formidable presence vis-a-vis competitors in foreign markets. Begins with an overview of the historical evolution of the globalization process, the internationalization process of individual firms, challenges that internationalizing firms face in terms of differences in culture and political risk among various host markets entered, and models of multinational companies, and then builds on this background in providing an overview and in-depth coverage of important entry modes such as licensing/franchising, JVs/alliances, acquisitions/mergers with specific focus on managing these modes of entry in an international setting. Prerequisite: BUS 346 and 360; 60 units. Students who have taken BUS 492 (Topic: Foreign Market Entry) may not take this course for further credit.

**BUS 435-3 Management of International Firms**

Strategic requirements for the management of multinational corporations. Firm-specific and institutional challenges facing global managers in formulating and implementing profitable strategies.

Prerequisite: BUS 346, 360 and one of BUS 380 or 432; 60 units.

**BUS 437-3 Decision Analysis in Business**

A seminar in the use of Bayesian techniques in business decisions. Prerequisite: BUS 336, 360; 60 units.

**BUS 440-4 Simulation in Management Decision-making**

Development and use of simulation models as an aid in making complex management decisions. Hands on use of business related tools for computer simulation. Issues related to design and validation of simulation models, the assessment of input data, and the interpretation and use of simulation output. Prerequisite: BUS 336, 360; 60 units.

**BUS 443-3 Marketing for New Ventures**

Understand how to develop and launch new products that will be successful with customers. Students will learn to: identify product/service opportunities; generate and evaluate concepts; develop concepts into products; launch new products. Prerequisite: 60 units; BUS 360, 343.

**BUS 444-3 Business to Business Marketing**

This course deals with the marketing of products and services to industrial and other non-consumer sector buyers. The student will be expected to apply previously acquired marketing skills to purchasing situations which arise between organizations. Due to the nature of manufacturing activity in this province, industrial marketing will be approached from a resource industry based standpoint where discussions permit. Prerequisite: BUS 343, 360; 60 units; students with credit for BUS 344 may not complete BUS 444 for further credit.

**BUS 445-3 Analysis of Data for Management**

The analysis and interpretation of data, particularly multivariate data. This course is complementary to BUS 345 but may be taken independently. Applications in management science and information systems, organizational behavior and other areas as well as in marketing will be examined. Prerequisite: BUS 343, 336, 360; 60 units.

**BUS 446-4 Marketing Strategy**

Marketing strategy focuses on the analysis of market problems and opportunities and the development of appropriate strategies. Topics include: analytical techniques, strategic planning methods and managerial problems of planning. Case analysis and problem solving will be the major orientation of the course. Prerequisite: BUS 312, 347, 360; 60 units.

**BUS 447-3 Global Marketing Management**

The marketing of goods and services in an international context, with emphasis on Pacific Rim countries. Theoretical concepts, environmental influences. Researching and forecasting international markets. The management of international marketing. Prerequisite: BUS 343, 360; 60 units. Recommended: BUS 346.

**BUS 448-4 Integrated Marketing Communications**

An integrative approach to the study of promotion including advertising publicity, personal selling and sales promotion; evaluation of the role promotion has in marketing and the economy; formulation and analysis of promotional goals, planning, organizing and controlling; utilization of market research studies; forecasting, budgeting, media selection; promotion institutions. Prerequisite: BUS 347, 360; 60 units.

**BUS 449-3 Ethical Issues in Marketing**

A critical examination of topics such as consumerism, marketing ethics, and social responsibility, efficiency of marketing or ecological marketing. The particular emphasis may vary depending on the interests of the class and instructor. Prerequisite: BUS 343, 360; 60 units.

**BUS 450-3 Emerging Technologies for Business**

Develops abilities to monitor social, cultural, commercial, political and technical developments to forecast and assess emerging technologies. Forecasting methods including expert opinion, trend analysis and scenario construction will be discussed. Selected emerging technologies will be examined through invited speakers and videos. Prerequisite: 60 units, BUS 338, 360.

**BUS 451-8 Project in International Marketing**

Addresses a key international marketing issue facing a Norwegian or other European firm with interests in or expansion plans for North America. These firms will be identified by our partner institution, BI Norwegian School of Management, in consultation with prospective students. Prerequisite: 80 units; four 400-level marketing courses. This course is available only to students from the BI Norwegian School of Management who are on an exchange at SFU under the special program agreement.

**BUS 452-3 Strategic Management of Innovation**

Through readings, cases and lectures, students learn to develop and implement strategy within the context of high technology businesses and other organizations in which innovation and commercialization of intangible assets is of profound importance. Well suited for students interested in working as consultants or analysts. Prerequisite: 60 units, BUS 338, 360. Students with credit for BUS 492 may not complete this course for further credit.

**BUS 453-3 Sustainable Innovation**

Challenges associated with continuing innovation are examined and students work to generate innovative solutions by challenging existing economic models. Students learn about sustainable opportunity, recognition, and screening, and understand how great ideas to 'save the planet' can get off the ground. Prerequisite: 60 units, BUS 360. Students with credit for BUS 494 may not complete this course for further credit.

**BUS 454-3 Creativity in Business**

Designed to aid participants in opening to the creativity within themselves so that each person's life can be lived as a 'work of art.' True creativity in business results from the contagious energy of inspired and creative individuals. Prepares students for innovation and entrepreneurship culminating in the presentation of a brand book for a new venture (actual or imagined -- up to you!). Prerequisite: 60 units, BUS 360. Students with credit for BUS 493 may not complete this course for further credit.

**BUS 456-4 Honors Seminar I**

One of a cohort of three courses presented at the Segal Graduate School of Business for senior students enrolled in the undergraduate program in Business Administration. This course is part of a 12 unit seminar program fulfilling the requirements of the honors portion of the degree requirements. Each full-time one term program emphasizes current issues in business and society, industry interaction, and dialogue and discussion as conduits for student centred learning. Prerequisite: 105 units, 3.5 CGPA, or permission of the faculty. Corequisite: BUS 457, 458.

**BUS 457-4 Honors Seminar II**

One of a cohort of three courses presented at the Segal Graduate School of Business for senior students enrolled in the undergraduate program in Business Administration. This course is part of a 12 unit seminar program fulfilling the requirements of the honors portion of the degree requirements. Each full-time one term program emphasizes current issues in business and society, industry interaction, and dialogue and discussion as conduits for student centred learning. Prerequisite: 105 units, 3.5 CGPA,

or permission of the faculty. Corequisite: BUS 456, 458.

**BUS 458-4 Honors Seminar III**

One of a cohort of three courses presented at the Segal Graduate School of Business for senior students enrolled in the undergraduate program in Business Administration. This course is part of a 12 unit seminar program fulfilling the requirements of the honors portion of the degree requirements. Each full-time one term program emphasizes current issues in business and society, industry interaction, and dialogue and discussion as conduits for student centred learning. Prerequisite: 105 credit hours, 3.5 CGPA, or permission of the faculty. Corequisite: BUS 456, 457.

**BUS 459-3 Services Marketing**

Increases students' sensitivity to the marketing concepts previously studied as applied to service industries, and familiarizes students with the management problems of service marketing managers. Prerequisite: 60 units; BUS 343, 347 and 360. Students who have taken BUS 490-495 under the same topic may not take this course for further credit.

**BUS 462-3 Business Intelligence**

Utilizes technology to support analysis and decision making abilities by identifying, analyzing and effectively reporting important business information. Concepts of data warehousing, data mining and visualizing data are introduced. A variety of software applications are used to demonstrate tools and techniques that support analysis and decision making for managers. Prerequisite: BUS 336, 360; 60 units. Corequisite: BUS 336 can be taken concurrently.

**BUS 464-3 Data Management and IS Audit**

Focuses on the use of integrated database management systems in organizations and their application to IS audit and security. Students analyze data models and create business reports based on SQL. SQL queries are designed for audit and information security purposes. The CoBIT framework is used to understand foundations of IS audit. Prerequisite: BUS 360, 362 (or CMPT 370), 60 units.

**BUS 466-3 Web-Enabled Business**

Explores strategic issues and technologies in contemporary web-based business, from the evolution of business applications on the Internet through to contemporary Open Source and Web 2.0 applications. In depth exploration of new technology and business applications related to these technologies. Prerequisite: BUS 237, 360; 60 units.

**BUS 468-3 Managing Information Technology for Business Value**

Focuses both on current issues (e.g. build/buy, outsourcing, alignment) and emerging issues (e.g. social networking, utility computing, knowledge management and privacy) in obtaining value from information technology. Prerequisite: BUS 237, 360; 90 units. Recommended: BUS 362.

**BUS 472-3 Seminar in Organizational Behavior**

Advanced topics in organizational behavior. Specific emphasis may vary depending on special interest of faculty. However, general content will extend basic theories and problem descriptions covered in BUS 272 and 374 and will include advanced organizational theory and special topics in personnel. Prerequisite: BUS 272 (or 372) or 374; 360; 60 units.

**BUS 473-4 Operations Management**

The management of operating systems including allocation and scheduling of resources; control of costs, inventories, quality, and manpower; design of operating systems including location, layout and manpower; establishment of work methods and standards. Prerequisite: BUS 336, 360; 60 units.

**BUS 474-3 Supply Chain Management**

Exploration of the entire network of companies that work to design, produce, distribute, service and recycle their goods and services to customers. Efficient flow of information, material and finances along the entire chain allows firms to collaborate in a manner that benefits both corporations and customers. Analysis of the broader supply chain enables improvements in procurement, customer response time, risk sharing, on-time delivery, inventory levels, and transportation and global logistics. Prerequisite: 60 units; BUS 360 and 336. Students who have taken BUS 490-495 under this topic may not take this course for further credit.

**BUS 477-4 New Venture Planning**

Emphasis will vary but may include in any given term consideration of small business in the Canadian economy, career comparisons in small and large businesses, evaluation of new ventures, organization, capitalization, planning, marketing and financial management. Prerequisite: BUS 312, 343, 360; 90 units.

**BUS 478-3 Strategy**

Integration of the various areas of business for the purpose of analysing and recommending strategies for planning and decision-making within the firm and a defined environment. Prerequisite: BUS 207 (or ECON 301), 312, 343, 360W and either BUS 374 or 381; 90 units.

**BUS 480-3 Negotiation/Conflict Resolution for Integrated Studies Programs**

Overall, the course will be a combination of theory, discussion, instructor demonstration, skill practice in large and small groups and small group practice of the four-stage negotiation/conflict resolution model/process. The students in this course will learn about and be able to discuss interest-based negotiation and conflict resolution theory, strategize and plan for various negotiations and conflict situations and be able to put into practice a practical, efficient and productive process for negotiating agreements and resolving conflict. Prerequisite: BUS 360; 60 units. This course is only open for credit to students in the Integrated Studies Program within the bachelor of general studies degree.

**BUS 481-3 Recruitment and Selection**

Design and administration of recruiting and selections mechanisms. Analysis of procedures and skills that are used to translate strategic objectives into staffing decisions. How these mechanisms are affected by internal and external factors such as person-organization fit, labor markets, government legislation and technology. Prerequisite: BUS 381 and 360; 60 units.

**BUS 482-3 Performance Management**

The design and implementation of performance management systems. How these systems articulate organizational mission, strategy and goals, provide organizational and individual standards, and integrate systems and procedures within the context of organizational culture and practices. Prerequisite: 60 units; BUS 272, 381 and 360.

**BUS 484-3 Employment Systems**

Examination of the day-to-day administration of various employment systems in both unionized and non-unionized settings. Employment systems have implications for how conflicts between employee and employer interests are resolved, for the attainment of due process in the workplace, and for the flexibility and efficiency of work organization. Characteristics and outcomes of various employment systems will be examined. Prerequisite: 60 units; BUS 381 and 360.

**BUS 485-3 Negotiations and Conflict Management**

Negotiation is the art and science of securing agreements between two or more parties that are

interdependent and who are seeking to maximize their outcomes. The purpose of this course is to understand the theory and processes of negotiation as it is practiced in a variety of settings. The course will allow participants the opportunity to develop these skills experientially and to understand negotiation in useful analytical frameworks. Prerequisite: 60 units; BUS 272 and 360. Students with credit for BUEC 485 may not take BUS 485 for further credit.

#### **BUS 486-3 Leadership**

Addresses theoretical foundation and research associated with leadership, including a critical assessment of what leaders do. Issues such as gender and leadership, leadership ethics, and culture and leadership will be examined. Prerequisite: 60 units; BUS 272, 360. Students who have taken BUS 490-495 under this topic may not take this course for further credit.

#### **BUS 487-3 Organizational Development and Change Management**

Theories and methods of planned change in organizations with an emphasis on the psychological, cultural and structural issues of implementing change. Prerequisite: BUS 360, 60 units, BUS 374 or 381.

#### **BUS 488-3 Group Dynamics and Teamwork**

Interpersonal and group behavior in organizational contexts, including group development, team building, interpersonal communications, interpersonal conflict, group problem-solving and decision-making. Prerequisite: BUS 360, 60 units, BUS 374 or 381.

#### **BUS 490-3 Selected Topics in Business Administration**

The subject matter will vary from term to term depending upon the interest of faculty and students. Prerequisite: as stated by the faculty at the time of offering; 60 units. This course is only open for credit to students in the Integrated Studies Program within the Bachelor of General Studies degree completion program.

#### **BUS 491-3 Selected Topics in Business Administration**

The subject matter will vary from term to term depending upon the interest of faculty and students. Prerequisite: as stated by the faculty at the time of offering; 60 units. This course is only open for credit to students in the Integrated Studies Program within the Bachelor of General Studies degree completion program.

#### **BUS 492-3 Selected Topics in Business Administration**

The subject matter will vary from term to term depending upon the interests of faculty and students. Prerequisite: as stated by the faculty at the time of offering; 60 units.

#### **BUS 493-3 Selected Topics in Business Administration**

The subject matter will vary from term to term depending upon the interests of faculty and students. Prerequisite: as stated by the faculty at the time of offering; 60 units.

#### **BUS 494-3 Selected Topics in Business Administration**

The subject matter will vary from term to term depending upon the interests of faculty and students. Prerequisite: as stated by the faculty at the time of offering; 60 units.

#### **BUS 495-3 Selected Topics in Business Administration**

The subject matter will vary from term to term depending upon the interests of faculty and students. Prerequisite: as stated by the faculty at the time of offering; 60 units.

#### **BUS 496-5 Selected Topics in Business Administration**

The subject matter will vary from term to term depending upon the interests of faculty and students. Prerequisite: as stated by the faculty at the time of offering; 60 units.

#### **BUS 498-3 Directed Studies**

Independent reading and research on topics selected in consultation with the supervising instructor. Prerequisite: permission of the faculty; 60 units.

#### **BUS 499-5 Directed Studies**

An intensive and independent reading and research course on topics selected in consultation with the supervising instructor, and approved by the dean of the faculty. Prerequisite: permission of the faculty; 60 units.

#### **BUS 507-4 Managerial Economics**

The course combines economic theory and quantitative methods techniques to develop models and rules for managing resources efficiently. Prerequisite: introductory statistics/computing/mathematics, or permission of the instructor.

#### **BUS 512-4 Introduction to Business Finance**

An overview of the investment and financing decisions of firms. Topics to be covered include valuation, the capital expenditure decision, financial markets, and financial and dividend policy. Prerequisite: BUS 507 and 528 or permission of the instructor.

#### **BUS 527-3 Financial Accounting**

Concepts, principles and contemporary issues in financial accounting from the user perspective. Prerequisite: introductory statistics, computing, calculus or permission of the instructor.

#### **BUS 528-3 Managerial Accounting**

Concepts and principles of managerial accounting focussing on the use of accounting information by internal decision makers. Prerequisite: BUS 527 or equivalent course.

#### **BUS 536-4 Quantitative Methods in Management**

The objective of this course is to supply prospective managers with the skills necessary to make effective use of formal quantitative analyses, whether those analyses are performed by themselves or by a technical specialist. The course is intended for students with diffuse interests and diverse backgrounds who nevertheless have a common objective of enhancing their abilities to confront complex management decisions in a practical fashion. Prerequisite: introductory statistics/computing/mathematics, or permission of the instructor.

#### **BUS 543-4 Introductory Graduate Marketing**

The marketing of products and related services to business and other non-consumer sector buyers. Prerequisite: introductory statistics/computing/mathematics, or permission of the instructor.

#### **BUS 550-2 Financial Accounting**

Concepts and principles in financial accounting from the user perspective.

#### **BUS 551-2 Managerial Accounting**

The use of accounting information for managerial decisions. Prerequisite: BUS 550 or equivalent.

#### **BUS 552-4 Managerial Economics**

Applications of economic theory to business problems.

#### **BUS 553-2 Quantitative Business Methods**

The use of quantitative or statistical techniques in managerial decision making.

#### **BUS 554-2 Management Information Systems**

The design and implementation of information systems to provide appropriate and timely information to management.

#### **BUS 555-4 Managerial Finance**

An overview of investment and financing decisions of the firm, including valuation, capital expenditures, financial markets, dividend and financial policy. Prerequisite: BUS 550 and 553 or equivalent.

#### **BUS 556-4 Marketing Management**

An introduction to the application of pricing, promotion, channel selection and product planning to marketing decisions.

#### **BUS 557-4 Human Relations**

#### **Management/Organization Behavior**

Issues in the behavior of people in organizations, and human resource management practices that influence employee behavior.

#### **BUS 558-3 Special Topics**

#### **BUS 559-4 Special Topics**

#### **BUS 560-3 Directed Studies**

Prerequisite: requires prior permission of the academic director.

#### **BUS 561-2 Special Topics**

#### **BUS 562-2 Special Topics**

#### **BUS 572-4 Organizations and Human**

#### **Resource Management**

This course introduces students to theories of organizational behavior and organization theory. The student will be expected to develop an understanding of issues in the management of people and work and the design and functioning of organizations. The course will cover concepts of motivation, leadership, decision-making, power and politics, structure, environments and organizational effectiveness. The course will also introduce students to the major professional fields in organizational behavior, industrial relations, personnel, and organizational development. Prerequisite: introductory statistics/computing/mathematics, or permission of the instructor.

#### **BUS 578-4 Strategic Management**

The course focuses on the managerial tasks of developing and implementing organizational strategy and the processes involved. Prerequisite: BUS 507, 527, 536, 543.

#### **BUS 601-2 Data and Decision-Making**

This course explores the application of quantitative methods to managerial decision-making. Topics will include data analysis and statistical description, sampling and statistical inference, and regression analysis. Case studies are used to help managers cope with decision-making in complex and uncertain circumstances.

#### **BUS 602-4 International Management**

Will examine the international context of business including global trends in international trade, analyses of emerging markets, strategic alliances, and the human, cultural and ethical issues arising from doing business abroad.

#### **BUS 603-4 Structure and Change in Organizations**

This course applies contemporary organizational theory to the managerial challenges of entrepreneurial, corporate, public sector and not-for-profit organizations in the areas of organizational structure and change, adapting the organizations to their changing environment, and articulating alternate plans for organizational survival (and where possible, growth).

#### **BUS 604-4 Organizational Change and Development**

An examination of the concepts, principles and assumptions of organization development.

**BUS 606-4 Finance**

Provides a solid grounding in the principles of business finance. Students are introduced to important financial tools and gain an appreciation of how business decisions impact financial performance and shareholder value.

**BUS 607-4 Strategy**

Analysis of strategic issues affecting the success of the total enterprise and its sub-units. The course includes industry analysis, internal analysis of the core competencies and value chains that enable corporate and business level strategies, the evolution of strategy and how that occurs in different environments and organizational types, and implementation issues organizations face when enacting strategies.

**BUS 610-2 Directed Studies in Business Administration**

Individual study with a faculty member. The course outline must be approved by the graduate program committee.

**BUS 611-4 Directed Studies in Business Administration**

Individual study with a faculty member. The course outline must be approved by the graduate program committee.

**BUS 612-4 Directed Studies in Business Administration**

Individual study with a faculty member. The course outline must be approved by the graduate program committee.

**BUS 615-4 Marketing Management**

An analysis of the strategic consideration of marketing management and their impact on the firm and its competitors.

**BUS 621-4 Information Technology and Organizational Transformation**

A seminar format will be used to discuss the concepts and frameworks essential to the effective management of information technology. Our focus will be on the strategic role that information systems play in organizations, their structure and components, and various perspectives on how to plan and manage this technology.

**BUS 632-2 Operations Management**

Focuses on the processes by which goods and services are produced and the impact of operations on corporate strategy and elements in the value chain.

**BUS 651-4 Managerial Economics**

The application of modern microeconomic theory to problems of managerial decision-making. The importance of both economic models and quantitative applications are explained. Topics include demand, cost and productivity analysis; the analysis of market structure and firm strategy, international competition and trade; organizational economics; and the analysis of risk, uncertainty and information.

**BUS 652-2 Special Topics in Business Administration**

Course content varies from term to term. Specific course outlines must receive prior approval of the graduate program committee.

**BUS 653-2 Special Topics in Business Administration**

Course content varies from term to term. Specific course outlines must receive prior approval of the graduate program committee.

**BUS 654-2 Special Topics in Business Administration**

Course content varies from term to term. Specific course outlines must receive prior approval of the graduate program committee.

**BUS 655-2 Special Topics in Business Administration**

Course content varies from term to term. Specific course outlines must receive prior approval of the graduate program committee.

**BUS 660-4 Special Topics in Business Administration**

Course content varies from term to term. Specific course outlines and bibliographies must receive prior approval of the graduate program committee.

**BUS 661-4 Special Topics in Business Administration**

Course content varies from term to term. Specific course outlines and bibliographies must receive prior approval of the graduate program committee.

**BUS 662-2 Negotiations**

Negotiation is the art and science of securing agreements between two or more parties that are interdependent and who are seeking to maximize their outcomes. The central issues of this course deal with understanding behavior of individuals, groups and organizations in the context of competitive situations.

**BUS 663-4 Special Topics in Business Administration**

Course content varies from term to term. Specific course outlines and bibliographies must receive prior approval of the graduate program committee.

**BUS 670-3 Financial Accounting**

The development and analysis of financial statements and their role in financial and strategic decisions.

**BUS 681-4 Leadership and Teamwork**

Leadership theory, interpersonal relations and group dynamics in organizational life, and the development of perceptual and communication skills in small groups.

**BUS 688-4 Industrial Relations**

Collective bargaining, the collective agreement, work stoppages, arbitration and the legal environments.

**BUS 689-3 Special Topics in Business Administration**

Course content varies from term to term. Specific course outlines and bibliographies must receive prior approval of the graduate program committee.

**BUS 691-2 Business and Government**

Examines the rationale for and nature of government intervention, and the impact of public policies on business.

**BUS 696-6 Applied Project**

Students will undertake a strategic firm analysis or public policy analysis (public sector students). Students may undertake other types of projects with permission of the executive MBA director. The project is submitted to the library. Prerequisite: BUS 607, 691.

**BUS 698-4 Directed Studies in Business Administration**

Individual study with a faculty member. The course outline must be approved by the graduate program committee.

**BUS 701-2 Strategy**

Strategic management requires a dynamically oriented analysis of markets, industries and the companies within those industries. The goal of strategic management is to proactively develop strategies to create and sustain competitive advantage. Participants will gain an understanding of what strategy is, how it is constrained, formulated, developed and implemented.

**BUS 702-3 Marketing Management**

An introduction to the application of pricing, promotion, channel selection and product planning to marketing decisions. The strategic consideration of

marketing management and its impact on the firm will be discussed.

**BUS 703-3 Managerial Economics**

Applications of economic theory to business problems. The importance of economic models and quantitative applications will be explained. Topics include demand, cost and productivity analysis; the analysis of market structure and firm strategy; and the analysis of risk, uncertainty and information.

**BUS 704-3 Leadership and Team Building**

Using laboratory education methods, this course will provide students with personalized feedback and coaching on interpersonal skills. Skills like leadership, coaching, team building, persuading, negotiating and managing conflict will be refined. Students will also be exposed to methods in observing and influencing group processes.

**BUS 705-3 Financial/Managerial Accounting**

Analysis of financial statements and their role in organizational life. Concepts and principles in financial accounting from a user perspective. The use of accounting information for managerial decisions.

**BUS 706-2 Data and Decisions**

The use of quantitative or statistical techniques in managerial decision-making.

**BUS 707-2 Ethical Decision Making**

An examination and review of contemporary thinking on the changing role of business and business persons in the operations of society. The course explores the changing legal, ethical, and regulatory environments of business focusing on the critical alignments of values, policies, technology and legal approaches between the modern organization and its broader public.

**BUS 708-3 Finance**

An overview of investment and financing decisions of the firm, including valuation, capital expenditures, financial markets, dividend and financial policy. Prerequisite: 705.

**BUS 709-3 Managing Information**

This course will introduce students to the theories and practices concerning the management and the application of Information Technology (IT) in organizations. Skills in analyzing complex situations in a holistic manner will be reinforced through the use of case methods. Technical aspects of information technology will be discussed.

**BUS 710-3 Emerging Markets**

This course focuses on managerial challenges facing firms that operate (or intend to operate) in emerging markets, and ways in which these challenges can be addressed. Such challenges refer to interfaces between firms and elements in their internal and external environments.

**BUS 711-3 Negotiation and Conflict Resolution**

Students will learn about interest-based negotiation and conflict resolution theory, strategize and plan for various negotiations and conflict situations and be able to put into practice a practical, efficient, and productive process for negotiating agreements and resolving conflict.

**BUS 712-3 Cross-Cultural Management**

Exposure to the dilemmas and opportunities that arise within international and multicultural work environments needed in dealing with a global business environment. Strategies for adopting organizational practices that address these issues will be discussed. Emphasis will be placed on the management of people and groups in international organizations. The focus of the course is on the interaction between people in international work settings rather than interactions between specific countries and/or cultures.

**BUS 713-3 Essays**

Students will undertake an essay that will generally fall into two of the following three categories: 1. an industry analysis; 2. a firm level analysis; 3. a regional analysis. Other topics of analyses will be considered on a case-by-case basis. Prerequisite: 30 units of course work in the MBA program.

**BUS 714-3 New Ventures**

The purpose of this course is to teach the basic skills of venturing — how to translate an entrepreneurial vision into action. The course also provides an opportunity for participants to explore their personal situation and assess the desirability of an entrepreneurial career.

**BUS 715-3 Operations Management**

Students will examine the processes and methods that enable organizations to achieve better productivity, quality, time and information performance. Design and control aspects of effective operations management as they relate to service and manufacturing entities will also be discussed. The course will explore the management of operating systems, including allocation and scheduling of resources; control of costs, inventories, quality, and manpower; design of operating systems including location, layout and manpower; establishment of work methods and standards.

**BUS 716-3 Sustainability**

Students will explore how businesses are realigning or reinventing their organizations toward more sustainable business models. Developments that enable organizations to reduce their firms' negative environmental and social impacts while increasing profits and competitive advantage will be discussed. Students will also learn about management systems and initiatives for improving the environmental and social performance of organizations and the business system as a whole.

**BUS 717-1.5 Essays (completion)****BUS 727-0 MBA Internship**

Two to eight month internship is for the MBA students and takes place in their last semester. Approved entrepreneurial projects will also be accepted. The associate directors of the Business Career Management Centre must be contacted prior to registration for this course. Students must be current graduate students in the MBA program, and must have a CGPA and previous SGPA of at least 3.0.

**BUS 750-4 Managing Technological Innovation**

This course examines successful product and process innovations in industry, as well as the effective organization and management of the technological change process in new ventures, multi-divisional and multinational enterprises.

**BUS 751-4 Managerial Economics for Technology Firms**

The purpose of this course is to introduce students to basic concepts in microeconomics and to explore the relevance of economic reasoning to managerial decision-making, both tactical and strategic. The importance of economic concepts, economic models and quantitative applications will be emphasized and applied to problems regularly encountered by technology managers.

**BUS 752-4 Strategic Management of Technology-Based Firms**

This course deals with how technology-based firms develop and implement strategies to create competitive advantage. The module treats strategy at two levels of analysis: (a) the overall strategy of the firm and (b) the technology strategy of the firm.

**BUS 753-2 Ethics and Corporate Responsibility**

This course addresses how to navigate the moral quandaries, issues and debates raised by direct participants and stakeholders in the high-tech

economy. Topics include character building practices, moral stages in the high-tech career, corporate social responsibility, the role of reputation capital in the high-tech firm, and the moral and legal obligations of the expert.

**BUS 754-4 Marketing Tech-based Products and Services**

What differentiates high-tech markets from more traditional ones is the environment — shrinking product life cycles, rapid changes in information and knowledge and great uncertainty about competitors. This course is designed to teach strategies for developing and executing marketing strategies in technology-intensive markets.

**BUS 755-2 Topics in International Business**

This course will address emerging issues in international business relevant to technology intensive firms. Globalization means that cross-cultural business interactions have become more commonplace.

**BUS 756-4 Strategic Use of Information and Knowledge**

This course will demonstrate, through cases and discussion, how information can be used to support decision-making, monitor operations and enable global communications. Topics will include knowledge management and information technology to support a learning organization.

**BUS 758-4 Business Operations Design**

The Business Operations Design course integrates organizational theory and operations management theory to provide a working knowledge of the key elements involved in designing and operating organizations. The aim is to introduce students to the best current thinking for creating effective organizational configurations that realize a desired strategy and achieve the accompanying performance.

**BUS 759-4 Special Topics**

This course provides flexibility to address emergent topics in Technology Management.

**BUS 761-2 Leadership for the Technology Driven Enterprise**

Developing and balancing critical management competencies at the individual, interpersonal, team and organizational levels. Focus is on effective organization, motivation and leadership.

**BUS 762-4 Project Management**

In high technology firms, projects are a way of life. The introduction of a new product or service, the redesign of an information system, and the opening of a new warehouse are all examples of projects that the technology-driven manager may encounter. This course demonstrates how complexity can be managed in a manner that increases the probability of project success. As a course assignment, students develop their own plan for the project/internship phase of the program.

**BUS 763-2 Managing Self and Others: An Organizational Simulation**

An intensive 3-day simulation where students discover what they would actually do when confronted with the reality of working in a company with multiple interdependencies, financial and geographical constraints and a complex and changing environment. Graded on a Satisfactory/Unsatisfactory basis.

**BUS 764-4 Financing the Organization**

The objective is to teach the foundations of applied finance with respect to the capital raising process and the creation of finance-able business plans. A company 'life cycle' approach to financial development is utilized and topics explored include the entrepreneurial process, angel and venture capital financing, legal entities and capital structure, term sheet negotiations, business valuation

techniques, going public, debt financing, mergers and acquisitions, financial contracting.

**BUS 766-4 Financial and Managerial Accounting**

Concepts and principles in financial accounting from the user perspective and the use of accounting information for managerial decision-making.

**BUS 770-2 Special Topics****BUS 771-2 Special Topics****BUS 772-2 Special Topics****BUS 773-2 Special Topics****BUS 774-4 Special Topics****BUS 776-4 Special Topics in Biotechnology****BUS 778-4 Directed Studies in Management of Technology**

Individual study with a faculty member. A course outline must be approved by the graduate program committee.

**BUS 780-6 Applied Project**

Students will undertake a strategic business analysis and write an extended essay jointly supervised by a Simon Fraser University faculty member and an industry partner. The Management of Technology program director and a faculty member will negotiate the purpose, content and deliverables of each project with the student and the sponsoring organization.

**BUS 781-3 Applied Project (Completion)****BUS 802-3 Foundations of Financial Economics**

An introductory course in the theory of finance and investor behavior, financial decision-making under uncertainty as well as capital market equilibrium.

**BUS 803-3 Financial Econometrics**

Financial econometrics for testing asset pricing models and portfolio performance measurement.

**BUS 804-3 Strategic Analysis for Wealth Management**

Will teach students to analyse the competitive prospects for a given industry as well as specific companies within that industry. It will also include analysis of strategic choices in the financial services industry.

**BUS 805-3 Capital Markets**

Empirical issues in capital markets for wealth and asset management including topics in behavioral finance, and performance measurement and attribution.

**BUS 806-2 Client Relationship and Leadership Effectiveness I**

Emphasizes how to become an effective investment counsellor. Topics covered will include leadership styles, client relationship development, interpersonal communication, coaching/counselling strategies and skills, conflict and team management, and performance measurement. Information systems for effective client relationship management will also be covered.

**BUS 807-2 Client Relationship and Leadership Effectiveness II**

This course is a continuation of the concepts in BUS 806.

**BUS 808-2 Client Relationship and Leadership Effectiveness Practice**

Assists students in developing self-awareness and the ability to evaluate their leadership. Covers personal leadership plans, effective leadership practices and reflection-in-action and life-long learning practices.

**BUS 809-3 Equity Security Analysis and Portfolio Management**

Extends concepts covered in the financial economics course sequence to the valuation of equity securities. Topics include the components of fundamental and technical analysis for individual stocks, as well as an analysis of different investment strategies and styles.

**BUS 810-3 Fixed Income Security Analysis and Portfolio Management**

The term structure of interest rates, fixed income returns, yield-spread analysis, sources of risk in fixed income securities, and embedded options.

**BUS 811-3 International Security Analysis and Portfolio Management**

Extends equilibrium asset pricing models to an international context and analyses the implications on equity and fixed income security analysis and portfolio management. Students will be introduced to various international market indices and the role of international securities in investment portfolios. Currency hedging will also be covered.

**BUS 812-2 Tax and Estate Planning**

Provides students with an understanding of the implications of taxes and intergenerational wealth transfer on portfolio management. It will review basic elements of the tax system, tax-efficient investment vehicles and estate planning. Specific examples of the effect of these factors on investors' portfolios will be considered. This course will be taught in the context of Canadian tax law, but will also contain selected coverage of the tax codes of other countries, including the U.S. Mechanisms for implementing investors' charitable concerns will also be considered.

**BUS 813-2 Ethics, Wealth Management and the Securities Industry**

Reviews the regulatory framework for investment managers and analyses the types of ethical considerations that might arise. Specific topics will include the importance of knowing the client, the nature of fiduciary obligations, suitability, standards of care (i.e., the prudent person and produce expert rules) and the identification and proper management of conflicts of interest.

**BUS 814-3 Derivative Securities**

An introductory course in derivative securities that includes pricing as well as the use of derivative securities in portfolio management and structured transactions.

**BUS 815-4 Portfolio Theory**

A study of optimum portfolio selections and diversification of financial assets including cash vis-a-vis different classes of utility functions of final wealth. Also, an examination of the behavior of speculative prices and rates of return. Prerequisite: ECON 331. Offered once a year. This is the same course as BUS 815.

**BUS 816-3 Investment Policy**

A capstone course that focuses on the development of effective investment policy for high net worth as well as institutional investors. It integrates topics in previous courses and is closely linked to BUS 809 Client Relationship Management III.

**BUS 817-4 Theory of Capital Markets**

A study of capital market equilibrium theories, risk allocation, valuation models under perfect and imperfect markets and their empirical testing. Prerequisite: ECON 331, 835. Offered once a year. This is the same course as BUS 817.

**BUS 818-3 Advanced Topics in Business Finance**

Extensions of advanced topics beyond those covered BUS 802 and 805. Prerequisite: BUS 814 (co-requisite acceptable).

**BUS 819-3 Final Project for GAWM Students**

Students will be required to complete a written project equivalent to one full course. A project will generally represent successful research on a topic in asset and wealth management. The project will be supervised by faculty members, but members of the broad investment management community may also participate in the supervisory committee as second readers when appropriate. We hope that topics

proposed by members of the Business Council may be suitable from time to time.

**BUS 820-2 Final Project (Completion)****BUS 821-2 Final Project for Financial Risk Management Students (Completion)**

**BUS 823-2 Introduction to Security Analysis**  
This is a course in the PhD program on a selected topic. Prerequisite: enrolment in GAWM program.

**BUS 856-4 Special Topics in Financial Risk Management**

A course outline must be approved by the Business Graduate Program Committee.

**BUS 857-3 Numerical Methods**

Computational tools for financial analysis, financial engineering and risk management.

**BUS 859-4 Directed Studies in Financial Risk Management**

Individual study with a faculty member. A course outline must be approved by the Business Graduate Program Committee.

**BUS 863-3 Operational Risk Management**

Tools for identifying, measuring, monitoring and mitigating operational risks. Techniques include causal modeling and simulation.

**BUS 864-3 Credit Risk Management**

Credit risk management with emphasis on portfolio models, including probability of default and loss given default models, credit capital allocation, active portfolio management, credit derivatives, and structured transactions.

**BUS 865-3 Market Risk Management**

Value at risk, advanced market risk models, statistical models, stress testing, scenario analysis, and risk-adjusted performance measurement.

**BUS 866-3 Enterprise-wide Strategic Risk Management**

Strategic risks facing organizations and the economic forces driving strategic hedging with an analytical framework for measuring industry and firm structure and financial market volatility.

**BUS 867-2 Accounting for Financial Instruments**

Provides a comprehensive definition of all types of financial instruments and develops a thorough understanding of operational accounting and auditing for a broad range of financial instruments.

**BUS 868-3 Perspectives on Risk and Insurance**

Economic principles, concepts, and practice of risk and insurance.

**BUS 869-3 Topics in Risk Management**

Integrative and topical issues in financial risk management.

**BUS 870-3 Final Project for Financial Risk Management Students**

A risk management research project, completed within the final academic term, based on ideas generated in previous terms, with in-class sessions on topic development, presentation, and reporting of findings as well as regular meetings with a designated supervisor. Project may be done individually or in pairs.

**BUS 974-4 Financial Econometrics****BUS 975-2 Selected Topics IV**

This is a course in the PhD program on a selected topic.

**BUS 976-2 Selected Topics V**

This is a course in the PhD program on a selected topic.

**BUS 977-2 Selected Topics VI**

This is a course in the PhD program on a selected topic.

**BUS 978-2 Selected Topics VII**

This is a course in the PhD program on a selected topic.

**BUS 980-4 Theory Development in Business Administration**

The effective use of empiricism, positivism, and interpretive explanations in generating, defending and clarifying logically rigorous arguments is explored. Participants from diverse fields (marketing, international business, management studies, accounting, policy analysis, finance, etc.) within the administrative sciences will look at the processes which have guided theory development and theory testing within their field of inquiry. Attention will focus on what criteria are used to assess the adequacy of explanations and useful theories. The seminar seeks to advance the participants' interest in putting theory into practice. Prerequisite: Enrolment in PhD program.

**BUS 981-4 Research Methods in Business Administration**

Provides an overview of the major quantitative and qualitative analytical methods associated with empirical research in Business Administration. This seminar is aimed at providing an overview of the research process, an introduction to a range of research techniques and data analysis appropriate to those techniques. It should develop participants' skills for designing research as well as an ability to critically assess research reported in the literature. To do this, the course will focus on various approaches to research design, discuss the kinds of analyses appropriate to those designs, and introduce computer packages for data analysis, such as Statistical Package for Social Sciences (SPSS). Prerequisite: enrolment in PhD program.

**BUS 982-4 Dissertation Development Workshop**

This seminar is intended to support doctoral students in the early stages of the development of their dissertations. Practical and conceptual issues with respect to the integration of theory, research design, and methodology will be explored. The seminar will provide a forum for students to share their dissertation work in progress, and learn from each other with respect to theoretical, analytical, and methodological problems, successes and trade-offs. Prerequisite: enrolment in the PhD program or consent of the instructor.

**BUS 983-4 Directed Studies I**

Supervised individual study on a topic of the student's choice, under the guidance of one or more faculty. Arrangements for this course must be approved by the graduate chair in advance of enrolment. Prerequisite: enrolment in PhD program.

**BUS 984-4 Directed Studies II**

Supervised individual study on a topic of the student's choice, under the guidance of one or more faculty. Arrangements for this course must be approved by the graduate chair in advance of enrolment. Prerequisite: enrolment in PhD program.

**BUS 985-4 Directed Studies III**

Supervised individual study on a topic of the student's choice, under the guidance of one or more faculty. Arrangements for this course must be approved by the graduate chair in advance of enrolment. Prerequisite: enrolment in the PhD program.

**BUS 986-4 Directed Studies IV**

Supervised individual study on a topic of the student's choice, under the guidance of one or more faculty. Arrangements for this course must be approved by the graduate chair in advance of enrolment. Prerequisite: enrolment in PhD program.

**BUS 987-4 Selected Topics I**

Specialized study in topics germane to the program, but not covered extensively in other core courses. Prerequisite: enrolment in PhD program.

**BUS 988-4 Selected Topics II**

Specialized study in topics germane to the program, but not covered extensively in other core courses. Prerequisite: enrolment in PhD program.

**BUS 989-4 Selected Topics III**

Specialized study in topics germane to the program, but not covered extensively in other core courses. Prerequisite: enrolment in PhD program.

**BUS 990-4 Research Project**

PhD students will generate a research project in their third term that will be graded by the senior supervisor on a pass/fail basis. The student can rewrite the project once. If the grade is still deficient, they will be asked to withdraw from the program. Those who pass the research project will present it in an open research presentation. Questions and answers emerging in this context should assist the student to develop their research. Prerequisite: enrolment in PhD program.

**BUS 991-0 PhD Comprehensive Exam**

Students will be required to pass a comprehensive exam in the sixth term of the program. This will include written examinations in each student's major and methodology minor followed by an oral exam. Graded on a Satisfactory/Unsatisfactory basis. Prerequisite: enrolment in PhD program.

**BUS 992-4 PhD Thesis**

Prerequisite: enrolment in PhD program.

## Business Administration and Economics BUEC Faculties of Business Administration, and Arts and Social Sciences

**BUEC 232-4 Data and Decisions I**

An introduction to business statistics with a heavy emphasis on applications and the use of EXCEL. Students will be required to use statistical applications to solve business problems. Prerequisite: MATH 157 and 15 units. MATH 157 may be taken concurrently with BUEC 232. STAT 270, Introduction to Probability and Statistics, will be accepted in lieu of BUEC 232. Students with credit for STAT 270 may not take BUEC 232 for further credit. Quantitative.

**BUEC 280-3 Introduction to Labor Economics**

Basic analysis of the labor market and the industrial relations system with emphasis on the major issues of public policy in Canada. Prerequisite: ECON 103 or 200 and 105 or 205. Students who have taken ECON 301, 305 or 381 may not take BUEC 280 for further credit. Quantitative.

**BUEC 333-4 Statistical Analysis of Economic Data**

An introduction to the use and interpretation of statistical analysis in the context of data typical of economic applications. Prerequisite: ECON 103 or 200; ECON 105 or 205; BUEC 232 or STAT 270; MATH 157; 60 units. Students with a minimum grade of A- in BUEC 232 or STAT 270 can take BUEC 333 after 30 units. Students seeking permission to enrol based on their BUEC 232 or STAT 270 grade must contact the Undergraduate Advisor in Economics. Students with credit for ECON/COMM 236 may not take BUEC 333 for further credit. Quantitative.

**BUEC 391-3 Law in the Economic Society**

An introductory examination of the history, evolution and aspirations of the rule of law in general, and as pursued and developed within civil and common law jurisdictions with emphasis on the working of the Canadian Federal and Provincial legislative,

administrative and judicial forces, in particular.

Students will be encouraged to identify and analyse various socio-economic legal issues and how legal principles are developed within the concepts of Canadian law and its reaction to evolving socio-economic forces that affect our individual and collective legal rights, duties and privileges and powers. Prerequisite: 60 units. BUEC 391 may not be taken concurrently with BUS 393. Students with credit for BUEC 293 may not take BUEC 391 for further credit.

**BUEC 396-3 The Structure of Industry**

Examination of the structure, conduct and performance of specific industries, exploring the degree of concentration, the nature and extent of competitive behavior and the factors affecting particular industry patterns. Emphasis will be upon the Canadian economy, and consideration will be given to the efforts and implications of 'non-pure' competitive structures. Prerequisite: ECON 103 or 200 and 105 or 205; 60 units. Quantitative.

**BUEC 397-5 Government and Business**

The theory and practice of the control of monopoly and maintenance of competition. The need for development of public policies with regard to the regulation of business activity; anti-competitive business practices; anti-trust legislation in Canada and the United States and its judicial interpretation; the preservation of competition as a means of regulating private business; alternative approaches to the monopoly problem. Prerequisite: ECON 103 or 200 and 105 or 205; 60 units.

**BUEC 427W-3 Industrial Organization: Law and Economics**

An in depth examination of the application of economic reasoning to the law. The course considers how legal relationships influence behavior and how economic models can explain the structure of the law. A selected number of topics will be covered, and may include the economic approach to common law; property rights; contracts; torts; criminal behavior; family law; and corporate bankruptcy law. Prerequisite: ECON 301. Students with credit for BUEC 495 cannot take this course for further credit. Writing.

**BUEC 433-5 Forecasting in Business and Economics**

Modern techniques of statistical, econometric, population and technological forecasting are presented along with discussions of a wide range of topics including Box-Jenkins methods, leading indicators, survey data, world models and the use of information sets of increasing size. Applied work on the Canadian and BC economies. Prerequisite: BUEC 333; 60 units.

## Canadian Studies CNS Faculty of Arts and Social Sciences

*Students will no longer be admitted to the Canadian studies major, minor, honors or joint major programs effective for the fall 2009 term. Also, Canadian studies courses will not be offered after the summer 2009 term. Students contemplating entering one of these programs are advised to check with the advisor.*

**CNS 160-3 The Social Background of Canada**

This course analyses the foundations and attributes of modern Canadian society using an interdisciplinary approach. As an introduction to Canadian Studies, the major themes of the course are social conflict and social change. Topics include French-English relations, Canada and the United States, ethnicity and multiculturalism, industrialism, regional conflict, social movements, nationalism and Canada's social structure, classes and elites. Breadth-Social Sciences

**CNS 210-3 Foundations of Canadian Culture**

An introductory study of Canada, which uses a variety of disciplinary methods to understand and assess Canada's unique culture. The course draws on material from history, law, literature, politics, sociology and the fine arts in order to explore regional diversity and national needs and the nature of Canada as a bilingual and multicultural state. Breadth-Humanities

**CNS 250-3 Perspectives on the Environment in Canada**

Environmental issues and attitudes toward the environment in Canadian society and thought, drawing on a variety of interdisciplinary sources. Students who have taken CNS 391 under this topic may not take this course for further credit. Breadth-Social Sciences.

**CNS 260-3 Screening Canadian Experience**

Explores the Canadian experience through film and text.

**CNS 280-3 Canadian Political Economy**

An introductory study of Canada's political economy, stressing the interrelated nature of Canada's economic and political life. The course focuses on current economic problems and policies, taking into account the geographical, historical and political environments. Topics include the resource and industrial structures, research and development, the public sector, fiscal and monetary policy, the role of the state, trade and foreign ownership, energy, regional disparity, corporate concentration and the political economy of federalism. This course is identical to POL 223 and students cannot take both courses for credit.

**CNS 360-4 Interdisciplinary Readings in Canadian Studies**

Allows students to pursue in depth a particular Canadian problem from an interdisciplinary perspective. Prerequisite: 60 units. Please refer to course outline before enrolling.

**CNS 390-3 Hockey in Canadian Popular Culture**

The game of hockey is perhaps the most central and pervasive form of popular culture in Canada. It has been called the 'tie that binds,' the 'common passion,' and the 'Canadian game.' This course seeks to create a critical understanding of how hockey's significance extends far beyond the ice rink into the cultural, economic and political spheres of Canadian society. Prerequisite: at least 60 units. Students who have taken this course as CNS 390 Topics in Canadian Popular Culture cannot take this course for further credit.

**CNS 391-3 Special Canadian Topics**

An intensive interdisciplinary exploration of particular topics that illustrate aspects of the Canadian reality. Prerequisite: 60 units.

**CNS 393-3 Popular Culture in Canada**

Examines selected structures of Canadian popular culture focusing on specific theme(s) such as humor, popular literature, music, entertainments, culture and economy, etc. Prerequisite: 60 units. Students who have taken CNS 391 with same title may not take this course.

**CNS 481-3 Special Regional Topics**

The role of the regions of regionalism in Canada is increasingly problematical, as the burden of the unity debate extends outwards from the Ontario/Quebec divide. This seminar will provide students with a grounding in interdisciplinary readings pertaining to the topic and an opportunity to pursue directed research on a specific topic of their choice. Prerequisite: 60 units. Students who have taken CNS 481 Special Topics may not take CNS 481 for further credit.

**CNS 485-3 Contemporary Canadian Thought**

Selected issues in contemporary Canadian thought. Prerequisite: 60 units.

**CNS 490-5 The Canadian Intellectual Tradition**

An interdisciplinary seminar examining some of the major forces that have shaped and continue to shape Canadian thought, expression and society. Materials and theories will be drawn from historiography, history, philosophy, religion, politics, political economy, policy studies, literature, art and sport. Prerequisite: at least 60 units.

**CNS 491-3 Technology and Canadian Society**

This course examines and assesses technology and its impact on Canadian society. It concentrates on 20th century technology and uses a case study approach examining some broad themes in the study of technology such as: technological determinism, technological impact assessment, innovation, technology as progress, technological dependency, technological sovereignty, and bias in technology. Prerequisite: at least 60 units. Breadth-Humanities

**CNS 493-4 Advanced Topics in Canadian Studies**

Interdisciplinary exploration of selected topics that illustrate aspects of Canadian reality. Prerequisite: 60 units.

**CNS 495-5 Canadian Studies Honors Essay**

An essay required of each honors student in Canadian Studies, based on a substantial interdisciplinary research effort by the student under the supervision of Canadian Studies faculty in the appropriate disciplines. A paper based on the essay must be presented in a Canadian Studies seminar. Prerequisite: enrolment as honors student in Canadian Studies.

## Chemistry CHEM Faculty of Science

**CHEM 110-3 Introductory Chemistry**

General fundamental concepts and nomenclature; stoichiometry and chemical calculations; nuclear and atomic structures, chemical bonding; properties of gases, liquids, solids and solutions; chemical kinetics and chemical equilibrium. This course has the same lecture component as CHEM 111 but no laboratory work. Students who intend to take further laboratory courses in chemistry must take CHEM 111. Prerequisite: BC high school mathematics 12 (or equivalent) or permission of the department. No previous training in chemistry is required for this course. Students with credit for high school chemistry 12 (or equivalent), or any university chemistry course may not take CHEM 110 or 111 for further credit. Students may not count both CHEM 110 and 111 for credit. Corequisite: If BC high school mathematics 12 credit not obtained, then MATH 100 must be taken as a corequisite to CHEM 110. Quantitative/Breadth-Science.

**CHEM 111-4 Introductory Chemistry and Laboratory**

General fundamental concepts and nomenclature; stoichiometry and chemical calculations; nuclear and atomic structures, chemical bonding; properties of gases, liquids, solids and solutions; chemical kinetics and chemical equilibrium. This course includes a laboratory component. Prerequisite: BC high school mathematics 12 (or equivalent) or permission of the department. No previous training in chemistry is required for this course. Students with credit for high school chemistry 12 (or equivalent), or any university chemistry course may not take CHEM 110 or 111 for further credit. Students may not count both CHEM 110 and 111 for credit. Corequisite: if BC high school Mathematics 12 credit not obtained, then MATH 100 must be taken as a corequisite to CHEM 111. Quantitative/Breadth-Science.

**CHEM 120-3 General Chemistry I**

Atomic and molecular structure; chemical bonding; thermochemistry; elements; periodic table; gases, liquids, solids, and solutions. This course has the same lecture component as CHEM 121 but no laboratory work. Students who intend to take further laboratory courses in chemistry must take CHEM 121. Prerequisite: BC high school chemistry 12 or CHEM 111 or CHEM 110 (or 101). Students may not count both CHEM 120 and 121 for credit. Recommended: MATH 151 (or 154) and PHYS 120 (or 101) as a corequisite. Quantitative/Breadth-Science.

**CHEM 121-4 General Chemistry and Laboratory I**

Atomic and molecular structure; chemical bonding; thermochemistry; elements; periodic table; gases, liquids, solids, and solutions. This course includes a laboratory component. Prerequisite: BC high school chemistry 12 or CHEM 111 (or 101 and 106). Students may not count both CHEM 120 and 121 for credit. Recommended: MATH 151 (or 154) and PHYS 120 (or 101) as a corequisite. Quantitative/Breadth-Science.

**CHEM 122-2 General Chemistry II**

Chemical equilibria; electrochemistry; chemical thermodynamics; kinetics. Students who intend to take further laboratory courses in chemistry should take CHEM 122 concurrently with CHEM 126. Prerequisite: CHEM 121 or 120 (or 102) Recommended: MATH 152 (or 155) and PHYS 121 (or 102) as a corequisite. Quantitative.

**CHEM 126-2 General Chemistry Laboratory II**

Experiments in chemical equilibrium, acids and bases, qualitative analysis, electrochemistry and chemical kinetics. Prerequisite: CHEM 121 (or 102 and 115). Corequisite: CHEM 122. Quantitative.

**CHEM 180-3 The Chemistry of Life**

A basic introduction to chemical kinetics, thermodynamics, electrochemistry, and equilibria as they apply to the structure and function of biomolecules. Concepts will be illustrated using modern examples of biological systems. Students will be introduced to central ideas and selected molecular engineering methods in biochemistry and molecular biology. Prerequisite: CHEM 121.

**CHEM 191-3 Living in a Materials World: From the Stone Age to Nanoscience**

A survey of materials that have been used throughout human history, from stone, bone and wood to modern plastics and superconductors. The chemical principles that give rise to different materials' properties will be examined, with an emphasis of how small changes at the molecular level can have important implications in everyday life. We will also trace the development of new materials and how they have been perceived and studied throughout the ages. Intended for both science and non-science students. Quantitative/Breadth-Science.

**CHEM 192-3 Chemistry in Your Home, Work, and Environment**

The impact of chemistry on modern living. Students will gain a broad perspective on chemical processes with historical, environmental and economic importance in shaping society, examining both the beneficial and harmful aspects of the chemicals that shape our lives. Topics may include: perfumes, explosives, drugs, dyes, plastics, pesticides and greenhouse gases. Intended for both science and non-science students. Quantitative/Breadth-Science.

**CHEM 193-3 Close Encounters of the Radioactive Kind**

An introduction to the concepts of radiation and nuclear science. Emphasis will be placed on applications; by the end of the term students will be able to make well-informed opinions on the role of

nuclear science and its use. Intended for both science and non-science students. Breadth-Science.

**CHEM 215-4 Introduction to Analytical Chemistry**

The principles of analytical chemistry and their practical application to solution samples. Titrimetric and electrochemical methods. Prerequisite: CHEM 122 (or 103) and 126 (or 118). Quantitative.

**CHEM 230-3 Inorganic Chemistry**

The chemistry of the elements and their inorganic compounds in terms of fundamental concepts of periodicity of properties, valence, ionization potential, electron affinity, electronegativity, stability of oxidation states, bonding, structure and stereochemistry. Co-ordination complexes and organometallic chemistry. Prerequisite: CHEM 122 (or 103). Corequisite: students who expect to take further courses in inorganic chemistry should take the laboratory course CHEM 236 concurrently with 230. Quantitative.

**CHEM 236W-3 Inorganic Chemistry Laboratory**

An introduction to the synthetic and spectroscopic techniques used in the preparation and characterization of both main group and transition metal compounds. Prerequisite: CHEM 122 and 126 (or 103 and 118). Corequisite: CHEM 230. Writing/Quantitative.

**CHEM 260-4 Atoms, Molecules, Spectroscopy**

Elements of physical chemistry from the molecular point of view. Introduction to quantum chemistry, atomic and molecular structure, and spectroscopy. Prerequisite: CHEM 122 (or 103), MATH 152, PHYS 121. Recommended: MATH 232. Quantitative.

**CHEM 281-4 Organic Chemistry I**

Structure, bonding, physical and chemical properties of simple organic compounds. Introduction to spectroscopy. Kinetics and mechanisms of organic reactions. This course includes a laboratory component. Prerequisite: CHEM 121. Corequisite: CHEM 122 (or 103). Quantitative.

**CHEM 282-2 Organic Chemistry II**

Polyfunctional organic compounds and complex organic reactions. Introduction to natural products. Prerequisite: CHEM 281. Quantitative.

**CHEM 286-2 Organic Chemistry Laboratory II**

Laboratory work chosen to complement CHEM 282. Prerequisite: CHEM 281. Corequisite: CHEM 282. Quantitative.

**CHEM 306-3 Practicum I**

This is the first term of work experience in a co-operative program available to students planning to pursue a career in chemistry or related areas. Units from this course do not count towards the units required for an SFU degree. Prerequisite: completion of 28 units in a science program, including first-year calculus, chemistry and physics. Minimum CGPA 2.67 (or permission of co-op co-ordinator).

**CHEM 307-3 Practicum II**

This is the second term of work experience in the Chemistry Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: CHEM 306 and completion of 42 units toward a BSc degree. Minimum CGPA 2.67 (or permission of co-op co-ordinator).

**CHEM 316-4 Introductory Instrumental Analysis**

Principles and applications of basic analytical instrumentation based upon spectroscopy, chromatography and electrochemistry. Prerequisite: CHEM 215 (or 218) and CHEM 260, or permission of the department. Students may not count both CHEM 316 and 416 for credit. Quantitative.

**CHEM 317-2 Analytical Environmental Chemistry**

Principles and applications of the methodologies of analytical chemistry employed in the determination of substances in air, water, and soil, with particular emphasis upon sampling and sample preparation. Prerequisite: CHEM 316 and 371. Corequisite: CHEM 372 should be taken concurrently. Quantitative.

**CHEM 332-3 The Chemistry of Transition Metals**

The synthesis and characterization of classical and organometallic complexes of the transition metals, and their physical and chemical properties. Prerequisite: CHEM 230, 236 and 260, or permission of the department. Quantitative.

**CHEM 333-3 Inorganic Chemistry of Biological Processes**

An introduction to the principles governing the formation, properties and investigation of metal-ligand complexes with special reference to the role of metals in biological processes. Prerequisite: MBB 321 (or BICH 301 or 321); or CHEM 282 (or 250) and CHEM 230 (or 232.) Quantitative.

**CHEM 336-2 Advanced Inorganic Chemistry Laboratory**

Laboratory experiments in co-ordination, organometallic and solid state chemistry, involving synthesis, characterization and spectroscopy. Prerequisite: CHEM 236. Corequisite: CHEM 332 must precede or be taken concurrently. Quantitative.

**CHEM 340-3 Materials Chemistry**

Bonding in solid state materials. Introduction to symmetry and its applications in materials science. Structure and physical properties of solid state materials. Prerequisite: completion of 60 units in a science or applied science program, including first year chemistry, physics and calculus. Quantitative.

**CHEM 360-3 Thermodynamics and Chemical Kinetics**

Elements of physical chemistry from the macroscopic point of view. Thermodynamics, and its applications to chemical equilibrium. Chemical kinetics and reaction rate theories. Prerequisite: CHEM 122 (or 103), MATH 152 (or 155), PHYS 121 (or 102). Recommended: MATH 251. Quantitative.

**CHEM 366W-3 Physical Chemistry Laboratory I**

Experiments in thermodynamics, chemical kinetics, electrochemistry, and atomic and molecular structure. Prerequisite: CHEM 260. Corequisite: CHEM 360. Writing/Quantitative.

**CHEM 367-2 Physical Chemistry Laboratory II**

Continues CHEM 366. Prerequisite: CHEM 366. Quantitative.

**CHEM 371-3 Chemistry of the Aqueous Environment**

An introduction to chemical processes in the aqueous environment. Quantitative treatment of the variables determining the composition of natural systems. Chemistry of aqueous toxic agents, wastewater treatment, and related matters. Prerequisite: CHEM 281 (or 150) and CHEM 360 (or 261). Quantitative.

**CHEM 372-3 Chemistry of the Atmospheric Environment**

Quantitative treatment of chemical and physical processes in the atmospheric environment. Chemistry of the troposphere including air pollution and climate change. Chemistry of the stratosphere including ozone depletion. Environmental radioactivity. Current topics. Prerequisite: CHEM 281 (or 150) and CHEM 360 (or 261). Quantitative.

**CHEM 380-4 Chemical and Instrumental Methods of Identification of Organic Compounds**

Basic principles of infrared, ultraviolet, nuclear magnetic resonance and mass spectroscopy as applied to the identification of organic compounds. Prerequisite: CHEM 260 and 282 and 286 (or 250 and 255), or permission of the department.

**CHEM 381-4 Intermediate Organic Chemistry**

An intermediate level course in modern organic chemistry, including both theoretical design of synthetic routes and practical training in the laboratory. The central topics to be discussed include methods to form carbon-carbon bonds, use of organometallic reagents, asymmetric synthesis, pericyclic reactions, the use of enzymes in organic synthesis, and the automation of synthetic organic chemistry. Prerequisite: CHEM 380. Quantitative.

**CHEM 406-3 Practicum III**

This is the third term of work experience in the Chemistry Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: CHEM 307 and completion of 56 units toward a BSc degree. Minimum CGPA of 2.67 (or permission of co-op co-ordinator).

**CHEM 407-3 Practicum IV**

This is the last term of work experience in the Chemistry Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: CHEM 406. Minimum CGPA of 2.67 (or permission of co-op co-ordinator).

**CHEM 408-3 Practicum V**

Optional term of work experience in the Chemistry Co-operative Education Program. Units for this course do not count towards the units required for an SFU degree. Prerequisite: CHEM 407.

**CHEM 419-3 Special Topics in Analytical Chemistry**

Principles and applications of emerging techniques in analytical chemistry. Prerequisite: CHEM 316.

**CHEM 432-3 Organometallic Chemistry**

The organometallic chemistry of the transition elements; the synthesis, characterization and catalytic behavior of organometallic compounds. Prerequisite: CHEM 332. Quantitative.

**CHEM 439-3 Special Topics in Inorganic Chemistry**

An in-depth treatment of a current topic in inorganic chemistry. Contact the department for information regarding the topic to be covered in a given term. Prerequisite: CHEM 332

**CHEM 440-3 Solid State Materials Chemistry**

The study of the detailed chemistry of solid state inorganic materials in terms of crystal structures, bonding, preparative methods, analytical and characterization techniques, mixed valence states, solid solutions, defects and non-stoichiometry, molecular mechanisms of the optical, electronic, ionic, magnetic and dielectric properties, and materials applications in advanced technology. Prerequisite: CHEM 340. Quantitative.

**CHEM 442-3 Polymeric Materials Chemistry**

The course covers the detailed chemistry of polymers, including polymer structure, studies of polymer solutions, molecular weight determination, and the synthesis of polymers. In addition, topics of current interest in polymer science will be discussed. Prerequisite: CHEM 282. Quantitative.

**CHEM 444-3 Organic Materials Chemistry**

Emphasis will be placed on the synthesis and properties of materials that are useful in the design of electrooptical devices, such as light emitting diodes (LEDs) and liquid crystal displays (LCDs). Topics to

be discussed will include liquid crystals, conjugated polymers, and the assembly of thin film materials. A case study approach will be employed in order to provide an overview of these areas of research, with examples taken from the primary literature. Prerequisite: CHEM 282. Quantitative.

**CHEM 450-3 Physical Organic Chemistry**

A study of the structure, stereochemistry and conformation of molecules and their effect on the reactivity of organic molecules. The physical basis of organic chemistry. Prerequisite: CHEM 360 (or 261) and 380. Quantitative.

**CHEM 452-3 Bio-organic Chemistry**

An advanced treatment of the use of enzymes in organic synthesis, the use of stable and radioisotopes in the study of enzymatic processes and the design of enzyme inhibitors. Prerequisite: CHEM 381 or permission of the department. Quantitative.

**CHEM 455-3 Synthetic Organic Chemistry**

This course teaches the principles involved in the planning and execution of the synthesis of organic molecules. Emphasis is on synthesis of naturally occurring compounds of biological importance. Prerequisite: CHEM 381 or permission of the instructor. Quantitative.

**CHEM 459-3 Special Topics in Organic Chemistry**

An advanced, in-depth treatment of a specialized area of organic chemistry. Prerequisite: CHEM 380 or permission of the instructor.

**CHEM 460-3 Advanced Physical Chemistry**

Statistical thermodynamics, kinetic theory of gases, transport properties, intermolecular forces, electrical properties of molecules, properties of ionic solutions, Debye-Hückel theory, electrochemistry. Prerequisite: MATH 251; CHEM 260 and 360, or PHYS 385 and 344 (or 244). Quantitative.

**CHEM 462-3 Molecular Spectroscopy**

Atomic spectra. Electronic, vibrational and rotational spectra of diatomic and polyatomic molecules. The Raman effect. Nuclear and electron spin resonance. Symmetry classification of molecules and their energy levels. Prerequisite: CHEM 260 or PHYS 385. Quantitative.

**CHEM 464-3 Quantum Chemistry**

Fundamentals of quantum mechanics and its principal results and techniques as applied to atoms and molecules: atomic structure, molecular bonding, rotations and vibrations of molecules, symmetry of atomic and molecular orbitals. Prerequisite: CHEM 260, MATH 232, 251; or PHYS 385. Recommended: MATH 310. Quantitative.

**CHEM 465-3 Electrochemistry**

Modern techniques and concepts in electrochemistry. Topics include equilibrium and dynamic electrochemistry, ion transport and voltammetry. Electrochemical systems of increasing importance including chemically modified electrodes, fuel cells and solar energy conversion applications will also be discussed. Prerequisite: CHEM 360. Quantitative.

**CHEM 469-3 Special Topics in Physical Chemistry**

Selected topics of physical chemistry not regularly covered in the chemistry undergraduate course offerings. Topics may vary from year to year and may include (but are not limited to): chemical kinetics, electrochemistry, magnetic resonance, polymer chemistry, surface chemistry. Prerequisite: CHEM 260 and 360 (or 261 and 361) or permission of the instructor.

**CHEM 481-5 Undergraduate Research**

Experimental and/or theoretical research; preparation of a written report and oral presentation in research seminar format. Admission requires selection of a faculty supervisor and submission of a research

proposal. Prospective students must contact the chemistry advisor to register their interest in this course before the last day of classes of the previous term. The research proposal is due by the end of the examination period preceding the research term. Prerequisite: permission of the department; knowledge of chemistry at an advanced level. Normally taken after completion of 300 level course requirements.

#### **CHEM 482-3 Directed Study in Advanced Topics of Chemistry**

Directed reading in a topic chosen in consultation with a supervisor. Admission requires selection of a faculty supervisor and submission of a study topic to the department a least one month prior to the start of the term in which the course will be taken. Prerequisite: permission of the department. Normally taken during the fourth year of study.

#### **CHEM 483-5 Honors Research**

Experimental and/or theoretical research; preparation of a written report and oral presentation in research seminar format. Admission requires selection of a faculty supervisor and submission of a research proposal. Prospective students must contact the chemistry advisor to register their interest in this course before the last day of classes of the previous semester. The research proposal is due by the end of the examination period preceding the research term. Prerequisite: CHEM 481 and permission of the department. Credit for this course may only be applied to the honors chemistry program.

#### **CHEM 740-3 Solid State Materials Chemistry**

The study of the detailed chemistry of solid state inorganic materials in terms of crystal structures, bonding, preparative methods, analytical and characterization techniques, mixed valence states, solid solutions, defects and non-stoichiometry, molecular mechanisms of the optical, electronic, ionic, magnetic and dielectric properties, and materials applications in advanced technology.

#### **CHEM 742-3 Polymeric Materials**

The course covers the detailed chemistry of polymers, including polymer structure, studies of polymer solutions, molecular weight determination, and the synthesis of polymers. In addition, topics of current interest in polymer science will be discussed.

#### **CHEM 744-3 Organic Materials Chemistry**

This is an advanced level course in modern organic materials chemistry. Emphasis will be placed on the synthesis and properties of materials that are useful in the design of electrooptical devices, such as light emitting diodes (LEDs) and liquid crystal displays (LCDs). Topics to be discussed will include liquid crystals, conjugated polymers, and the assembly of thin film materials. A case study approach will be employed in order to provide an overview of these areas of research, with examples taken from the primary literature.

#### **CHEM 750-3 Physical Organic Chemistry**

An advanced treatment of mechanism and structure in organic chemistry and the use of physical methods as probes of structure, stereochemistry and conformation.

#### **CHEM 752-3 Bio-organic Chemistry**

An advanced treatment of the use of enzymes in organic synthesis, the use of stable and radio isotopes in the study of enzymatic processes, and the design of enzyme inhibitors.

#### **CHEM 754-3 Carbohydrate Chemistry**

A detailed treatment of the structure and reactions of monosaccharides, the use of carbohydrates as chiral templates in organic synthesis, advances in glycoside synthesis, the occurrence, chemistry, and conformational analysis of complex carbohydrates and their role in biological systems.

#### **CHEM 755-3 Synthetic Organic Chemistry**

An advanced treatment of strategy in organic synthesis. The principles and use of modern synthetic methodology.

#### **CHEM 759-3 Special Topics in Organic Chemistry**

An advanced treatment of specific topics related to the study of organic compounds. Topics which will be discussed will vary from one term to the next.

#### **CHEM 801-3 Student Seminar**

Discussion of recent literature in chemistry through student seminars.

#### **CHEM 819-3 Special Topics in Analytical Chemistry**

In-depth coverage of a particular area of analytical chemistry. Example subject areas include separation science, mass spectrometry, optical spectroscopy, electrochemistry, or surface science. Occasionally the subject matter of this course will be a survey of recent advances in the field.

#### **CHEM 832-3 Organometallic Chemistry**

An advanced treatment of the synthesis, structures, reactions and spectroscopic identification of inorganic compounds.

#### **CHEM 833-3 Recent Advances in Main Group Chemistry**

Important developments in main group chemistry in recent years will be examined in the context of the basic chemistry of the elements involved; not every element or group will necessarily be discussed.

#### **CHEM 839-3 Special Topics in Inorganic Chemistry**

An advanced, in-depth treatment of a specialized area of inorganic chemistry.

#### **CHEM 842-3 Special Topics in Radiochemistry**

Theory and practical techniques of the current uses of radioactive isotopes in systems of chemical interest.

#### **CHEM 863-3 Magnetic Resonance**

Principles, techniques and applications of NMR and ESR.

#### **CHEM 864-3 Quantum Chemistry**

Non-relativistic quantum mechanics. Atomic and molecular structure, perturbation theory, variation method.

#### **CHEM 865-3 Electrochemistry**

Modern techniques and concepts in electrochemistry. Topics include equilibrium and dynamic electrochemistry, ion transport and voltammetry. Electrochemical systems of increasing importance including chemically modified electrodes, fuel cells and solar energy conversion applications will also be discussed.

#### **CHEM 869-3 Special Topics in Physical Chemistry**

A specialized area of physical chemistry will be selected from a list of topics.

#### **CHEM 881-0 Co-op Practicum I**

First term of work experience for graduate students. Prerequisite: completion of MSc thesis including defence.

#### **CHEM 882-0 Co-op Practicum II**

Second term of work experience for graduate students. Prerequisite: completion of MSc thesis including defence.

#### **CHEM 898-6 MSc Thesis**

A thesis for the MSc degree may be written on a topic in either chemistry or chemical education. Students electing to write a thesis in chemical education, are required to complete satisfactorily 10 units of course work in the Faculty of Education in addition to the minimum chemistry degree requirements. The 10 units of course work in the Faculty of Education may not be used for credit towards the PhD degree in

Chemistry if the student transfers into the PhD program.

#### **CHEM 899-6 PhD Thesis**

### **Chinese CHIN**

### **Faculty of Arts and Social Sciences**

### **Department of Linguistics Language Training Institute**

#### **CHIN 100-3 Mandarin Chinese I**

Introduction to the study of Mandarin Chinese and to the development of basic oral and written skills for those with no background in Mandarin. Students will study phonetics, vocabulary, syntax, grammar and culture.

#### **CHIN 101-3 Mandarin Chinese II**

Continues to build on all four language skills acquired in CHIN 100. Prerequisite: CHIN 100 or equivalent.

#### **CHIN 151-3 Spoken Mandarin for Speakers of Other Chinese Dialects I**

Designed for speakers of a Chinese dialect other than Mandarin, e.g., Cantonese. Learners will come to the course with no ability in spoken Mandarin, but some command of Chinese reading and writing. By the end of CHIN 151, students will be able to use spoken Mandarin at a basic level. Prerequisite: no knowledge of spoken Mandarin; placement interview. Students who have taken CHIN 151 (Spoken Mandarin for Speakers of Other Chinese Dialects) may not take this course for further credit.

#### **CHIN 152-3 Spoken Mandarin for Speakers of Other Chinese Dialects II**

Designed for speakers of a Chinese dialect other than Mandarin, e.g., Cantonese. Learners will come to the course with novice level proficiency in spoken Mandarin and a good command of Chinese reading and writing. By the end of CHIN 152, students will have improved their pronunciation and aural comprehension of spoken Mandarin and have enhanced their conversational skills. Prerequisite: CHIN 151 or equivalent.

#### **CHIN 185-6 Intensive Mandarin Chinese in the China Field School**

This six week intensive language study course will be taken by all students enrolling in the China Field School. Upon arrival at the university in China, students will be assigned to two course sections at the appropriate level according to their language skills from beginners to upper intermediate in reading, writing, comprehension, conversation and grammar. For students wanting to continue their language studies at SFU after attending the field school, the Chinese language instructor will conduct a placement interview and assign the appropriate course level.

#### **CHIN 200-3 Mandarin Chinese III**

Continues to build on all four skills of the language acquired in CHIN 101/102, with special emphasis on improving the students' spoken facility in the language. Prerequisite: CHIN 100 and 101 or equivalent.

#### **CHIN 201-3 Mandarin Chinese IV**

Continues to build on all four skills of the language acquired in CHIN 200, with special emphasis on improving the students' spoken facility. Prerequisite: CHIN 200 or equivalent.

### **Cognitive Science COGS Faculty of Arts and Social Sciences**

#### **COGS 100-3 Exploring the Mind**

This course provides a basic integrative overview of how cognitive science aspires to integrate the

empirical findings, theories, and methods of psychology, neuroscience, linguistics, computing science and philosophy. Prerequisite: Open to all students. Students with credit for COGS 200 may not take COGS 100 for further credit. Breadth-Humanities/Social Sciences/Science.

### **COGS 200-3 Foundations in Cognitive Science**

An introduction to major empirical methods and theoretical frameworks for exploring the mind that examines some of the foundational debates that have fueled investigations over the past fifty years. Taking an interdisciplinary approach, the course illustrates how a convergence of ideas from psychology, philosophy, linguistics, and computer science has led to deep explanations of a range of cognitive science topics. Prerequisite: COGS 100. Students who have taken COGS 200 before 1998 may take this course for further credit.

### **COGS 300-3 Selected Topics in Cognitive Science**

An interdisciplinary exploration of recent work on some special topic in cognitive science (such as vision, reasoning, connectionism, etc.) Prerequisite: lower division cognitive science course requirements. Students with credit for COGS 400 may not take COGS 300 for further credit.

### **COGS 310-3 Consciousness**

Explores the topic of consciousness, often called "the last great mystery of science," focusing on current scientific theories and empirical investigations from philosophy, psychology, and neuroscience. Prerequisite: COGS 100 and 200 (or permission of the instructor).

### **COGS 370-3 Cognitive Science Practicum I**

First term of work experience in the Cognitive Science Co-operative Education Program. Students should apply to the Faculty of Arts co-operative education co-ordinator by the end of the third week of the term preceding the employment term. Units from this course do not count towards the units required for an SFU degree. Prerequisite: normally 30 units, including COGS 100 and four other courses in the Cognitive Science program, with a minimum CGPA of 2.75.

### **COGS 371-3 Cognitive Science Practicum II**

Second term of work experience in the Cognitive Science Co-operative Education Program. Students should apply to the Faculty of Arts co-operative education co-ordinator by the end of the third week of the term preceding the employment term. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of COGS 370 and 45 units with a minimum CGPA of 2.75.

### **COGS 470-3 Cognitive Science Practicum III**

Third term of work experience in the Cognitive Science Co-operative Education Program. Students should apply to the Faculty of Arts co-operative education co-ordinator by the end of the third week of the term preceding the employment term. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of COGS 371 and 60 units with a minimum CGPA of 2.75.

### **COGS 471-3 Cognitive Science Practicum IV**

Fourth term of work experience in the Cognitive Science Co-operative Education Program. Students should apply to the Faculty of Arts co-operative education co-ordinator by the end of the third week of the term preceding the employment term. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of COGS 470 and 75 units with a minimum CGPA of 2.75.

### **COGS 490-5 Honors Project I**

An in-depth investigation of a topic in Cognitive Science culminating in a critical literature review and the formulation of a research proposal. Prerequisite: approval of cognitive science steering committee after student has completed a cognitive science major and at least two courses specified under honors in the program calendar entry.

### **COGS 491-5 Honors Project II**

The research proposed in COGS 490 is executed, culminating in the completion of a substantive piece of research. Prerequisite: approval of Cognitive Science steering committee either when student has completed COGS 490 or when student is taking COGS 490.

## **Communication CMNS Faculty of Communication, Art and Technology**

### **CMNS 110-3 Introduction to Communication Studies**

An introduction to selected theories about human communication. This course is required for a major, honors or minor in communication. Breadth-Social Sciences.

### **CMNS 130-3 Explorations in Mass Communication**

An introduction to the role of mass communication (radio, television, telecommunications and the press) in Canadian society. This course is required for a major, honors or minor in communication.

### **CMNS 130W-3 Explorations in Mass Communication**

An introduction to the role of mass communication (radio, television, telecommunications and the press) in Canadian society. This course is required for a major, honors or minor in communication. Writing.

### **CMNS 200-3 Effective Communication**

Introduction to techniques and methods of communicating effectively in complex organizations; with the media, government, the public; in the work place, in local and international business and trade, etc. The challenge of working in meetings, doing research in teams, preparing analytic/technical reports and press statements, managing complex interactive communication processes will be addressed, with special reference to the role of culture, policy, and law, technical change, and potential conflict. Prerequisite: 25 units. Recommended: for communication co-op students.

### **CMNS 210-3 Media History**

An assessment of the social implications of developments in information technology from prehistory to the middle of the 20th century. Topics include: the origins of symbolic representation; the oral tradition; the significance of different systems of writing and numeration; the consequences of print; and the initial changes brought about by electronic media. Prerequisite: CMNS 110.

### **CMNS 220-3 Understanding Television**

This course examines television, both as a medium of communication and an element of culture. Prerequisite: CMNS 110 and 130.

### **CMNS 221-3 Media and Audiences**

An introduction to the study of popular culture and mass media, with a focus on the organization and role of audiences. Prerequisite: CMNS 110 and 130.

### **CMNS 223-3 Advertising as Social Communication**

An interdisciplinary examination of the significance of advertising as a social message system in our consumer society. The course proposes an analytical method for appreciating the changing styles and

functions of advertising in the 20th century.

Prerequisite: CMNS 110 and 130.

### **CMNS 223W-3 Advertising as Social Communication**

An interdisciplinary examination of the significance of advertising as a social message system in our consumer society. The course proposes an analytical method for appreciating the changing styles and functions of advertising in the 20th century. Prerequisite: CMNS 110 and 130. Writing.

### **CMNS 226-3 Digital Media Communication Techniques**

This course introduces students to a variety of digital media communication technologies and techniques, including image and sound capturing and manipulation, Internet-based publishing and research, digitizing, editing and archiving. Design and management tasks involved in communicating using digital media are also introduced, including strategic and research planning, data integrity management, file structuring and packaging, and work presentation. Prerequisite: CMNS 110 and 130. Recommended: CMNS 220.

### **CMNS 230-3 The Cultural Industries in Canada: Global Context**

What do we mean when we talk about the 'cultural industries' today? This course explores the business structure and economics of the cultural sectors, the regulatory and policy frameworks, and their social and cultural contexts. Students are encouraged to develop, compare and contrast at least two sectors from the audio, print or visual industries. While the primary focus is on the Canadian case, students will be encouraged to look at other countries. Overriding themes explore the following: relationships between public and private sectors; independent and commercial creators; rights of creators versus distributors; specialty and general media; indigenous and global contents. Prerequisite: CMNS 130.

### **CMNS 235-3 Introduction to Journalism in Canada**

An overview of journalism as a social, cultural and political institution in Canada. Topics include: themes of news; print and electronic journalism; journalism and politics; history of Canadian journalism; legal, technological, professional, corporate and ethical influences. Prerequisite: CMNS 130.

### **CMNS 240-3 The Political Economy of Communication**

Examination of the political and economic processes that have generated the policies and structures of mass media, telecommunications and related industries; the relationship between the dichotomies of state and market, citizen and consumer, capitalism and democracy, global and local, and sovereignty and globalization in media industries and policies; overview of influences on State and international policies towards the media. Prerequisite: CMNS 110 and 130.

### **CMNS 247-3 International Communication**

A survey and analysis of opportunities and constraints in the field of international communication. The course will consider perspectives from which to understand and address regional differences, universal patterns of communication in international relations, and in development co-operation. Comparative and contrastive examples will be drawn from communication practices current in the Asia-Pacific region. Prerequisite: CMNS 110 and 130.

### **CMNS 253-3 Introduction to Information Technology: The New Media**

An introduction to new communication/information technologies, seen as new media of communication: the technologies, their uses, and the social issues arising from them. Prerequisite: CMNS 110 or 130.

**CMNS 253W-3 Introduction to Information Technology: The New Media**

An introduction to new communication/information technologies, seen as new media of communication: the technologies, their uses, and the social issues arising from them. Prerequisite: CMNS 110 or 130. Writing.

**CMNS 258-3 Introduction to Electroacoustic Communication**

An introduction to the audio medium as a communication tool and to electroacoustic aspects of communication in general. Specific techniques of field recording, interviewing, editing, sound processing, multi-tracking, and basic digital studio techniques will be presented using the school's studio facilities.

**CMNS 259-3 Acoustic Dimensions of Communication I**

A course designed to develop the student's perception and understanding of sound and its behavior in the interpersonal, social, environmental, media and creative fields. The acoustic and psychoacoustic bases of sound will be introduced with special reference to acoustic design, the electroacoustic media, and sonic environments.

**CMNS 260-3 Empirical Communication Research Methods**

An introduction to empirical research methods in diverse traditions of communication enquiry. Some methods recognize communication as everyday interactions; others analyze communication as a process; still others blend traditional scientific empiricism with analytical and critical methods derived from the arts and humanities. Topics include: ethics, paradigms, conceptualizing and operationalizing research, sampling, interviews, surveys, unobtrusive observation, content analysis, and the role of statistics in communication research. Prerequisite: CMNS 110 or 130. Quantitative.

**CMNS 261-3 Documentary Research in Communication**

Media and communication studies often utilize historical, governmental and corporate records. The course introduces the techniques necessary to analyze the primary source documents. Topics include: ethics, documentary discourse analysis, Canadian and international documentary searches on NGOs, governments, corporations; writing of policy briefs. Prerequisite: CMNS 110 or 130.

**CMNS 262-3 Design and Method in Qualitative Communication Research**

Examination of a wide range of approaches to research in media and cultural studies, including a discussion of ethical issues. Topics may include: historical methods, field work methods, textual analysis, case studies. Prerequisite: CMNS 110 or 130. Students who have credit for CMNS 286 in Spring 2004 may not take CMNS 262 for further credit.

**CMNS 286-3 Selected Topics**

Analysis of a particular topic in the general area of communication. Prerequisite: CMNS 110 and 130.

**CMNS 287-3 Selected Topics**

Analysis of a particular topic in the general area of communication. Prerequisite: CMNS 110 and 130.

**CMNS 304-4 Communication in Everyday Life**

An introduction to context theory and media literacy. Films and documentaries are used as texts for the study of communication and popular culture. Prerequisite: 45 units including two of CMNS 220, 221, 223.

**CMNS 304W-4 Communication in Everyday Life**

An introduction to context theory and media literacy. Films and documentaries are used as texts for the study of communication and popular culture.

Prerequisite: 45 units including two of CMNS 220, 221, 223. Writing.

**CMNS 310-4 Media and Modernity**

An examination of the development of communication theory in western social thought from the eighteenth century to the early twentieth century. Discussion is focused around a series of debates about the changing nature of human communication in modernity with specific reference to the rise of modern mass media. Topics discussed include the so-called growth of mass society in modernity; the emergence of Marxism; the origins of modern linguistics; and the rise and reformation of behavioural approaches to communication research. Prerequisite: two of CMNS 210, 221, 240.

**CMNS 320-4 Children, Media and Culture**

The course examines the part played by communication media in children's lives by reviewing the debates and research in this field. Specific attention will be paid to the issues of violence, literacy, imagination, quality and marketing through an examination of the critical writing and advocacy movements which have arisen around the problem of children's media. Prerequisite: 60 units including two of CMNS 220, 221, 223, 226. Strongly recommended: CMNS 362 or 363.

**CMNS 321-4 Cultural Production of Popular Music**

Examination of the cultural production of popular music with emphasis on the relationship between the nature and strategies of popular music production and the patterns of its audience consumption. Prerequisite: CMNS 221.

**CMNS 322-4 Documentary Media**

Introduction to the history and theory of documentary film, focusing on a range of examples from the 1920's to the present. Explores the shifting definition of documentary and realism. Prerequisite: 60 units including CMNS 220; or FPA 135, 136 or 137. Students who have taken CMNS 386-4 (Special Topics) with the topic "Problems in Documentary", offered in Fall 03, Fall 05, and Spring 07 terms, may not take this course for further credit.

**CMNS 323-4 Cultural Dimensions in Advertising**

This course develops a critical overview of the contemporary debates about the consumer society. This exploration of consumer culture begins by examining recent characterizations of the psycho-social dynamics of consumption in consumer culture. It goes on to trace the historical formation of advertising as a key cultural practice, mediating the market transactions between producers and consumers. The marketing communication model is the focus of a detailed examination of the increasingly sophisticated co-ordination of communication and consumer research activities. Prerequisite: 60 units, including two of CMNS 220, 221, 223 or 226. Strongly recommended: CMNS 362 or 363.

**CMNS 323W-4 Cultural Dimensions in Advertising**

This course develops a critical overview of the contemporary debates about the consumer society. This exploration of consumer culture begins by examining recent characterizations of the psycho-social dynamics of consumption in consumer culture. It goes on to trace the historical formation of advertising as a key cultural practice, mediating the market transactions between producers and consumers. The marketing communication model is the focus of a detailed examination of the increasingly sophisticated co-ordination of communication and consumer research activities. Prerequisite: 60 units, including two of CMNS 220, 221, 223 or 226. Strongly recommended: CMNS 362 or 363. Writing.

**CMNS 324-4 Media, Sports and Popular Culture**

An examination of the changing relationships between media, sport and popular culture in both a North American and a global context. Prerequisite: two of CMNS 210, 220, 221, 223, 240. Cannot be taken for further credit if student has taken CMNS 386 under same title.

**CMNS 325-4 Visualization and Visual Culture in Communication**

Investigates both theories and techniques of visualization design, visual culture, and visual communication. Themes covered in the course include: theories of visualization in relation to communication studies; methodologies for studying the interplay of technology, culture and media in visual studies and visual communication design; analysis of imaging conventions and innovations in the context of contemporary global communication; and visual communication in diverse cultural contexts. This is a laboratory-based course, requiring the completion of practical assignments that apply the ideas and theories presented in lectures and readings. Prerequisite: 60 units including two CMNS, IAT or FPA upper division courses. Students who have taken CMNS 387-4 offered with subtitle "Visualization" may not take this course for further credit.

**CMNS 326-4 Applied Media Workshop: On the Hill**

This course provides an opportunity for students to build on the knowledge they have acquired in Digital Media Communication Techniques (CMNS 226), and apply that knowledge to the production of the School of Communication's web based news magazine and documentary program On The Hill ([www.sfu.ca/oth](http://www.sfu.ca/oth)). Students will draw on their understanding of public communication in democracies and media analysis skills to create new and innovative visual and aural journalism. In addition, students will learn to build teamwork skills as they produce segments for the shows in groups. The course seminars will emphasize communication design, and the social and ethical issues which arise when working with documentary and news material for public dissemination. Prerequisite: permission of instructor, and 60 units including CMNS 226 and 235.

**CMNS 331-4 News Discourse and Political Communication**

An examination of journalism and the news media as a set of institutions with important political and ideological roles. The course overviews theoretical perspectives and applies selected theoretical concepts to such topics as influences on media content, how news generates meaning, ideological aspects of media frames, and the evaluation of journalism's performance in relation to normative expectations of democratic political communication. Prerequisite: two of CMNS 230, 235 and 240.

**CMNS 332-4 Communication and Rhetoric**

An examination of rhetoric and persuasion in the context of communication studies. Several classical accounts of persuasion and rhetoric are examined in order to develop a fuller understanding of the promotional ethos of the modern age. How different institutional modes of persuasive discourse have been shaped by a variety of research agendas and underlying theories about human nature is also studied. Prerequisite: 60 units including two of CMNS 220, 221, or 223. Cannot repeat this course for credit if taken as CMNS 286-3 in 2003-4.

**CMNS 333-4 Broadcast Policy and Regulation in the Global Context**

Television, in broadcast, cable and video-on-demand formats, has dominated the cultural industries of Canada. Traditionally seen as important to political and cultural self-determination, broadcasting strategy,

business and government policies are now being adapted in view of globalization of technologies which are altering the production, financing, and distribution of new and existing information and entertainment services. This course focuses on developing applied business and public policy analytic skills. Tools of on-line searches, presentation software, the rudiments of strategic analysis of industrial sectors (strengths, weaknesses, threats, opportunities) and technical policy writing will be covered. A simulation will be staged around a convergence theme drawn from technology, business, or public interest policy issues. Prerequisite: CMNS 240 and 261. Recommended: CMNS 230.

#### **CMNS 334-4 Cultural Policy**

Examination of the modern foundations and current policy processes of federal, provincial and municipal policies for the arts, cultural industries and heritage. Related social policies, such as bilingualism and multiculturalism, and the international context of Canadian cultural policy, will also be addressed. Prerequisite: CMNS 261 and one of CMNS 230 or 240.

#### **CMNS 336-4 Telecommunication Regulation in North America**

Development of the theory and practice of regulation of the telecommunications industry in Canada and the USA. Prerequisites: CMNS 240 and 261. Recommended: CMNS 230. Students who have taken CMNS 436 in the past may not take this course for further credit.

#### **CMNS 342-4 Science and Public Policy: Risk Communication**

The course examines communication in the relation between science (technology) and public policy, and more particularly, in the evaluation of risk. Prerequisite: Two of CMNS 260, 261, 262.

#### **CMNS 346-4 Communication and Development**

An introduction to explanations and interpretations of the roles of communication in development, and the historical framework through which such analysis is made. It shows how an unequal structure of world political economy is conserved in association with ever increasing amounts of information and new means to communicate. Examples from Canada and other countries will be used. Prerequisite: 60 units including CMNS 110 and 130. Recommended: CMNS 240. Students who have taken CMNS 345 may not take CMNS 346 for further credit.

#### **CMNS 347-4 Communication in Conflict and Intervention**

The role of communication, and in particular the mass media, in various types of conflict and the uses of communication-based strategies in the intervention, arbitration and mediation of those conflicts. Prerequisite: 60 units including CMNS 110 and 130. Recommended: CMNS 247 and 362.

#### **CMNS 348-4 Globalization and Media**

Examines the dynamic global transformations in media, including print, broadcast, film, and digital media in a broad international and comparative context. Investigates globalization as a critical concept and considers media in the long history of globalization. Focuses on political, cultural, and technological issues addressed by media and globalization at the turn of the 21st Century. Prerequisite: 60 units including at least two of CMNS 210, 220, 221, 223, 230, 235, 240 or 253. Students who have taken CMNS 387 with the subtitle "Globalization and Media" may not take this course for further credit.

#### **CMNS 353-4 Social Contexts of Information Technology**

Examination of a particular application of information/communication technology, focussing on the technology itself and its capabilities; how it is

implemented, and what social impacts it has on the people who use it. Emphasis is placed on understanding how the system works in the ongoing social context in which it is developed, installed and used. The specific application studied may vary from term to term. Prerequisite: CMNS 253; and CMNS 261 or 362.

#### **CMNS 354-4 Communication and Social Issues in Design**

This course will explore social issues and values in designing technology, through a focus on both the objects and processes of design. Emphasis will be placed on communication between participants in the design process, and identification of social issues and values that influence design. Students will work in cross-disciplinary groups during labs. Lab exercises will emphasize making decisions that occur during the design process explicit, and making values that enter into design processes explicit. Prerequisite: 60 units, including any one of CMNS 253; CMPT 275; KIN 201, 205 or ENSC 100. CMNS students must also have completed CMNS 362 or 363.

#### **CMNS 358-4 Sound Recording: Theory and Design**

An intermediate level studio workshop to develop the student's skills in sound production with an understanding of the communicational implications of sound design. Audio theory and its applications in both the digital and analogue formats will be presented, along with practical studio techniques for stereo and multi-channel sound production. Prerequisite: CMNS 258 with a grade of B or higher, and approval of instructor.

#### **CMNS 359-4 Acoustic Dimensions of Communication II**

A special topics course and small class work group at an intermediate level in acoustic communication dealing intensively with specific problems in psychoacoustics, acoustic design, soundscape studies, noise in the community, acoustic aspects of social organization, the acoustic aspects, language and interpersonal communication, electronic sound production, media analysis, theories of sound cognition, and information processing. Prerequisite: CMNS 259.

#### **CMNS 362-6 Evaluation Methods for Applied Communication Research**

Research design and techniques for the study of the introduction, uses and consequences of new media and technologies, new communication policies and practices in their socio-economic and cultural context, and communication in innovation and change. Prerequisite: at least 60 units, including two of CMNS 253, 260 or 261.

#### **CMNS 363-6 Approaches to Media and Audience Research**

A survey and application of research approaches to media and audience analysis including content analysis, textual analysis, agenda setting, effects research, focus group and survey research, message evaluation and audience studies. Prerequisite: at least 60 units, including one of CMNS 220, 221 or 223, and CMNS 260. Quantitative.

#### **CMNS 371-4 The Structure of the Book Publishing Industry in Canada**

An analysis of the various facets of the book publishing industry in Canada including ownership patterns, legal foundations, criteria for book selection and marketing. Includes examination of both commercial and educational publishing. The industry will be analysed within the framework of Canadian cultural and other government policies affecting the industry. Prerequisite: 60 units, including CMNS 110 and 130.

#### **CMNS 372-4 The Publishing Process**

Students will follow the book-publishing process from the acquisition and editing of manuscripts through to production, promotion and distribution. Each topic proceeds from basic concepts and precepts to case studies of particular kinds of publishing companies (e.g., literary, regional and general trade) and particular types of books (e.g., children's, genre, fiction and poetry). The publishing decision-to-publish process is simulated. Required readings focus on the history of book publishing, as well as on current developments. Prerequisite: 60 units, including CMNS 110 and 130.

#### **CMNS 375-4 Magazine Publishing**

This course addresses the basic concepts and practices used in the magazine publishing industry in the areas of business, writing, editing, design, marketing, advertising, distribution, and production. It emphasizes readership and editorial policy, new technology and changing costs and revenue patterns. Prerequisite: 60 units.

#### **CMNS 386-4 Special Topics in Communication**

Intensive analysis of a particular topic in the general area of communication. Prerequisite: depends on topic, published before enrolment.

#### **CMNS 387-4 Special Topics in Communication**

Intensive analysis of a particular topic in the general area of communication. Prerequisite: depends on topic, published before enrolment.

#### **CMNS 388-4 Special Topics in Communication**

Intensive analysis of a particular topic in the general area of communication. Prerequisite: depends on topic; published before enrolment.

#### **CMNS 395-3 Communication Practicum I**

First term of work experience in the School of Communication's Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: students must complete Bridging Online (visit [www.sfu.ca/coop/bol](http://www.sfu.ca/coop/bol) for further details) at least two terms before their anticipated co-op placement. Students must then enrol with the co-op program by the second week of the term preceding the work term of application, and have a minimum GPA of 2.70. Graded as pass/fail (P/F).

#### **CMNS 396-3 Communication Practicum II**

The second term of work experience in the School of Communication Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: CMNS 395. Graded as pass/fail (P/F).

#### **CMNS 408-4 Communication Network Project Group**

An advanced workshop in network analysis focussed on applied research. Prerequisite: two upper division CMNS courses and permission of the instructor.

#### **CMNS 410-4 Media and Ideology**

An advanced seminar in media studies focussing upon theoretical debates about the allegedly ideological character of mass media and mass culture. Prerequisite: 75 units, including CMNS 310. Recommended: CMNS 331 and SA 327. Students who have taken CMNS 422 may not take this course for further credit.

#### **CMNS 423-4 Globalization: Cultural Issues**

Explores the cultural dimension of global flows of capital and data, comparing, on the one hand, the consequences of increased mobility and, on the other hand, the drive towards increased control and immobility of displaced populations. Examines how the tightening of national boundaries and economic and political processes of globalization have left populations "placeless" whether because of war, environmental disaster, etc. Looks at the ways in which these groups make sense of their displacement and immobility through narratives, stories and

images, focusing on issues of power and the destruction of social life. Prerequisite: 75 units including CMNS 221 or 223; and two CMNS upper division courses; and CGPA of 3.00 or higher. Students who have taken CMNS 487 in terms 1051, 1057 and 1081 cannot take this course for further credit.

**CMNS 424-4 Colonialism, Culture and Identity**  
Examines why identity is such an important issue for contemporary diasporic communities and former colonies. Introduces students to critiques of representations that construct "racialized" groups as inferior, primitive threats to civilization and their constitution of passive, disciplined subjects. Primarily focuses on innovative cultural strategies developed in Indigenous People, the Black diaspora, Asian/Canadian communities and survivors of the Jewish Holocaust to create ethical communities and critique the impact of colonial violence on contemporary societies. Prerequisite: 75 units including CMNS 221 or 223; and two CMNS upper division courses; and CGPA of 3.00 or higher. Students who have taken CMNS 487 in terms 1037, 1047 and 1067 cannot take this course for further credit.

**CMNS 425-4 Applied Communication for Social Issues**  
An advanced seminar in applied communication that focuses on the research and strategic design of media messages, campaigns and programs for public awareness, education, and social change. This course involves the application of theories and approaches in critical media analysis to the tasks of media design and media use for public understanding, engagement and participation around social issues. Prerequisite: 75 units, including CMNS 221 and one of CMNS 260, 261 or 262.

**CMNS 426-4 Video Design for Social Communication**  
The workshop examines the growing role that video is playing in a variety of public relations, industrial, advocacy and educational contexts. The emphasis of this course is on issues of communication design in relation to the goals and values in specific communication forums. Prerequisite: 75 units, including CMNS 226 and two of CMNS 220, 326, 358.

**CMNS 428-4 Media Analysis Project Group**  
An advanced workshop in media analysis focussed on applied research. Prerequisite: two upper division CMNS courses and permission of instructor.

**CMNS 431-4 News Research and Analysis**  
Applied research seminar using techniques of textual and contextual analysis to test media themes and explore patterns of coverage and omission in Canada's new media. Students also have an opportunity to publicize their work through the NewsWatch Canada Project. Prerequisite: instructor's permission, normally granted on the basis of a CGPA of at least 3.0, and 75 units, including at least one of CMNS 235, 331 or 335, and at least one of CMNS 261 or 363.

**CMNS 432-4 Opinion, Propaganda and Political Communication**  
Explores the general relationship between mediated politics and political media. The interaction of political marketing, persuasion and political advertising during and between elections is examined. Prerequisite: 75 units including at least two CMNS or DIAL upper division courses. Cannot receive credit for this course if taken as CMNS 486-4 in Summer 2004-2005.

**CMNS 433-4 Issues in Communication and Cultural Policy**  
Advanced seminar on current issues in communication policy. Topics will be selected from among current policy issues in local, national and international aspects of broadcasting, the cultural

industries, the arts and heritage. Prerequisite: 75 units including CMNS 333 or 334.

**CMNS 435-4 Information Rights in the Information Age**  
An advanced seminar to examine key information policy issues and the actors involved in setting policy (governments, information industry, news media, libraries, citizen groups) in Canada, with international comparisons. Prerequisite: 75 units, including CMNS 261 and one of CMNS 240, 333, 334 or 353.

**CMNS 437-4 Media Democratization: From Critique to Transformation**  
An advanced seminar on the normative debates, social bases, and strategic potential for media democratization in the context of economically developed liberal democracies like Canada and the United States. This course complements other courses which critically examine state communication policies and the political economy and allegedly ideological character of corporate media. Here, we focus on campaigns and movements in civil society to define and build alternative communicative forms based on equality, democratic participation and/or human rights. Prerequisite: 75 units, including CMNS 235, 240 or 331. Cannot be taken for further credit if student has taken CMNS 428 or 487 under the same title.

**CMNS 438-4 Communication Policy Project Group**  
An advanced workshop in communication policy in media and information technology focussed on applied research. Prerequisite: two upper division CMNS courses and permission of the instructor.

**CMNS 443-4 Comparative Asian Media Systems**  
Offers a basis for understanding different Asia media systems in concrete historical, political and socio-economic contexts. Introduces students to a range of epistemological and theoretical issues in media systems in a vast and extremely diverse region that is undergoing a period of rapid political, economic, social and cultural transformation. Provides an overview of issues relating to different media systems and case studies of media and politics in specific countries in the region. Prerequisite: 75 units including one of CMNS 230 or 240, and one of CMNS 261 or 262.

**CMNS 444-4 Political Economy of International Communication**  
An examination of the domestic and international implications of the development of mass media and telecommunications and the differential impact of the free flow of technology and information. Prerequisite: 75 units, including CMNS 240, and 261 or 262.

**CMNS 445-4 Media and Popular Culture in China**  
An exploration of the media and popular culture scene in reform-era China. A wide range of media and popular culture forms and practice (including films, television shows, lifestyle magazines, street tabloids, and popular rhymes) are analysed in their concrete institutional settings and dynamic relationships with official ideologies, market imperatives, and the everyday struggles and cultural sensitivities of various social groups during a period of epochal transformation in China. Prerequisite: 75 units including CMNS 240, and 261 or 262; and one of CMNS 310, 331, 345, or 346. Students who have taken CMNS 428, 486 or 487 with this topic may not take CMNS 445 for further credit.

**CMNS 446-4 The Communication of Science and the Transfer Of Technology**  
Evaluation of the communication of scientific knowledge and the transfer of technology, both within industrialized settings and to non-industrialized settings. Specific reference to the communication of

values related to the use of technologies and the role of science and technology in international development. Prerequisite: 75 units, including CMNS 345 or 346, and one of CMNS 260, 261 or 262. Recommended: CMNS 253 and 362.

**CMNS 447-4 Negotiation and Dialogue as Communication**  
This course provides frameworks and tools with which to understand and evaluate negotiation and evaluate negotiation as a form of communication. The objective of the course is to provide an understanding of the role of communication in the negotiating process, and the consequences of different kinds of negotiation strategies in intercultural, international, competitive, and conflictual situations. It combines theoretical discussion with practical case studies, involves guest negotiators and analysts, and provides an appreciation of the world-wide scale and importance of negotiation as a basis for clarifying relationships. Prerequisite: 75 units including one of CMNS 347, DIAL 390, DIAL 391 or DIAL 392. Strongly recommended: CMNS 362.

**CMNS 448-4 International Communication Project Group**  
An advanced workshop in international communication and development focussed on applied research. Prerequisite: two upper division CMNS courses and permission of the instructor.

**CMNS 452-4 Race and the Media**  
Examines the contemporary construction and maintenance of race and ethnicity, through movies, music, and the Internet. Provides grounding in scholarship on media, race, ethnicity, and identity. Explores the historical role of entertainment in racialization. Investigates contemporary issues and forms of media and race. Prerequisite: 75 units including one of CMNS 220, 221, 223 or 262, and at least two CMNS upper division courses. Students who have taken CMNS 486 with subtitle "Race and the Media" cannot take this course for further credit.

**CMNS 453-4 Issues in the Information Society**  
Advanced seminar to discuss issues in the interplay between contemporary society and new computer/communication technologies, at the level of comprehensive theories of society, on one hand, and major public policy, on the other. Prerequisite: 75 units, including CMNS 353 and 362.

**CMNS 454-4 Computer Mediated Work and Workplace Communication**  
An investigation of the content, quality and character of jobs and workplace communication systems that involve computers. An examination of the influence of managerial goals and workplace relations on the design and choice of hardware and software for: office automation; computer-aided and computer-integrated manufacturing systems; computer-aided design, expert systems, and electronic networks. Prerequisite: 75 units including CMNS 253. Recommended: CMNS 353 and 362.

**CMNS 455-4 Women and New Information Technologies**  
In the 1970s, technological change came under the scrutiny of a wide range of interest groups. Research concerned with women and technological change documented that women were affected differently by technology than men, and that, in general, women occupy different positions in the technological change process than men. As interest in women and technological change has grown in the past 25 years, the benefits of focusing on gender as a variable of study have extended beyond making women's experiences visible. Focusing on gender offers the possibility of discovering theoretical limitations which, when addressed, have implications that extend beyond the interests of women. Prerequisite: 75 units, including any one of CMNS 253, 353, or 453; CMPT 320; WS 204.

**CMNS 456-4 Communication to Mitigate Disasters**

An examination of the special role communication and information systems play in efforts to mitigate effects of major emergencies and disasters. Topics include: Canadian and international disaster management programs, practices and issues; principles of emergency communication planning and operation, and the application and influence of new communication and information technologies (including electronic networks) in hazard information gathering, interpretation, exchange and management. Prerequisite: 75 units, including two of CMNS 230, 240, 253, and 353.

**CMNS 458-4 Information Technology Project Group**

An advanced workshop in applied information technology and its evaluation focussed on applied research. Prerequisite: two upper division CMNS courses and permission of instructor.

**CMNS 460-4 Seminar in Dialogue and Public Issues**

Focuses on the practical tools and conceptual approaches used in dialogue, with comparisons of the role and impact of dialogue among community, government, corporate, union, First Nations, legal-regulatory, advocacy groups and organizations. Emphasis is on interaction among interest groups and stakeholders, cultures of negotiation and decision-making, techniques of facilitation, and strategies for effective outcomes. Prerequisite: 75 units including either at least two of CMNS 332, 347, 425, 432, 437, 447 or DIAL 390, 391, 392.

**CMNS 461-3 Field Placement in Dialogue**

Students work under faculty supervision in a placement where dialogue is planned or where dialogue occurs. Arrangements are the responsibility of the student, and enrolment is limited. Prerequisite: 75 units including CMNS/DIAL 460, and permission of instructor.

**CMNS 472-4 Books, Markets and Readers**

Application of marketing concepts to the area of book publishing. The concepts and skills learned will help to differentiate book categories and markets, and to create a marketing strategy for a book or a literary launch. The course will also discuss reading trends and the effect of market conditions on publishing. Prerequisite: 75 units including CMNS 372.

**CMNS 473-4 Publication Design and Print Production**

An examination of theory, principles and applications in publication design and print production including computer applications. The course focuses on magazines, books and electronic formats. Creative, marketing and managerial issues will all be explored. Prerequisite: 75 units.

**CMNS 474-4 The Business of Publishing**

This course examines business practices within publishing firms. It emphasizes financial planning and operations, acquisitions, marketing and promotion. Prerequisite: 75 units including CMNS 372.

**CMNS 478-4 Publishing Project Group**

An advanced workshop in publishing analysis or design focussed on applied research. Prerequisite: two upper division CMNS courses and permission of the instructor.

**CMNS 479-1 Directed Study**

Independent research and reading on topics selected in consultation with the supervising instructor. Prerequisite: two upper division CMNS courses and consent of instructor. No more than ten units of Directed Study may be taken.

**CMNS 480-2 Directed Study**

Independent reading and research on topics selected in consultation with the supervising instructor. Prerequisite: two upper division CMNS courses and

consent of instructor. No more than 10 units of directed study may be taken.

**CMNS 481-3 Directed Study**

Independent reading and research on topics selected in consultation with the supervising instructor. Prerequisite: two upper division CMNS courses and consent of instructor. No more than 10 units of directed study may be taken.

**CMNS 482-4 Directed Study**

Independent reading and research on topics selected in consultation with the supervising instructor. Prerequisite: two upper division CMNS courses and consent of instructor. No more than 10 units of directed study may be taken.

**CMNS 483-5 Directed Study**

Independent reading and research on topics selected in consultation with the supervising instructor. Prerequisite: two upper division CMNS courses and consent of instructor. No more than 10 units of directed study may be taken.

**CMNS 486-4 Special Topics in Communication**

Intensive analysis of a particular topic in the general area of communication and/or attention to the work of a particular writer or school of thought. Prerequisite: depends on topic; published before enrolment.

**CMNS 487-4 Special Topics in Communication**

Intensive analysis of a particular topic in communication and/or attention to the work of a particular writer or school of thought. Prerequisite: depends on topic; published before enrolment.

**CMNS 488-4 Selected Topics in Communication**

Intensive analysis of a particular topic in the general area of communication. Prerequisite: depends on topic; published before enrolment.

**CMNS 489-4 Field Placement in Communication**

For students who have at least 24 upper level units in communication, this course offers the opportunity to work under faculty supervision in a field placement situation related to one of the areas of concentration in communication. Arrangements for field placement and faculty supervision are the responsibility of the student, and enrolment will depend upon the availability of faculty resources in any semester. Prerequisite: 75 units and permission of the school.

**CMNS 494-3 Communication Practicum III**

The third term of work experience for students in the School of Communication Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: CMNS 396. Graded as pass/fail (P/F).

**CMNS 495-3 Communication Practicum IV**

The fourth term of work experience for students in the School of Communication Co-operative Education Program. Units from this course do not count towards the Units required for an SFU degree. Prerequisite: CMNS 494. Graded as pass/fail (P/F).

**CMNS 496-3 Communication Practicum V**

An optional fifth term of work experience for students in the School of Communication Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: CMNS 495. Graded as pass/fail (P/F).

**CMNS 497-5 Honors Research Proposal**

Preparation for honors research project, including literature review, ethics approval (if necessary), and presentation of work in progress at end of term. Prerequisite: students accepted into honors program only.

**CMNS 498-10 Honors Research Project**

Intensive work in a particular topic in the general field of communication. Involves an extensive individual research project under the direct supervision of at least two committee members (at least one of whom

is a CMNS faculty member) who will provide guidance and critical feedback as necessary. Presentation of completed project at end of term. Prerequisite: successful completion of CMNS 497.

**CMNS 800-5 Contemporary Approaches in Communication Studies**

This course surveys current interdisciplinary perspectives in communication studies and theory. It is normally offered in the fall term, and expected in the first year of graduate study.

**CMNS 801-5 Design and Methodology in Communication Research**

A survey course which examines the problems, methods and theoretical assumptions in communication research using case studies of research design and methods. Students may design a research project and conduct a small pilot study in a selected area. Normally offered in the spring term and expected in the first year of graduate study.

**CMNS 802-5 History of Communication Theory**

A survey of classic works, issues and debates in communication theory.

**CMNS 804-5 Seminar in Advanced Communication Theory****CMNS 805-5 Communication Research Methods and Techniques**

Survey of research methodology and techniques used in empirical communication studies. Includes research design, measurement, and the use of the computer in evaluation.

**CMNS 815-5 Social Construction of Communication Technologies**

A study of the social theory of information technologies, examining issues affecting computer-mediated communication.

**CMNS 824-5 Colonialism, Culture and Identity**

A study of colonialism, culture, and identity with a focus on the strategies used by diasporic communities and (neo)colonial subjects to address the impact of colonial violence as well as create ethical communities. Historical and contemporary case studies will be examined. Students who took CMNS 855 in Term 1071 may not take this course for further credit.

**CMNS 830-5 Popular Culture and Media Theory**

Examines recent debates in popular culture and media theory, including post-modernism, hegemony, resistance and culture at the margin.

**CMNS 840-5 Political Economy of Communications**

A study of the political, economic and social process that produces the structure and policies of mass media, and of telecommunication agencies in their historical setting.

**CMNS 845-5 Communication and Development**

A study of communication in development, with a special emphasis on the confrontation of knowledge systems, and their expertise; international organizations and social justice; the roles of science and technology in development; the process of globalization; media and environmental sustainability.

**CMNS 850-5 Directed Readings and Research**

Pursuance of particular areas of interest related to a student's program.

**CMNS 851-5 Directed Studies**

Pursuance of interest in specific areas, including field studies related to the student's program. May include work and study in supervised professional settings.

**CMNS 855-5 Selected Topics in Communication Studies**

Specialized one-time graduate course offerings on topics related to the current research of school faculty or visiting professors.

**CMNS 856-5 Graduate Seminar**

Advanced work in an area of specialization. Review and evaluation of research in progress.

**CMNS 857-5 Selected Topics in Communication Studies**

Specialized graduate course offering on a topic related to the current research of school faculty or visiting professor.

**CMNS 858-5 Selected Topics in Communication Studies**

Specialized graduate course offering on a topic related to the current research of school faculty or visiting professor.

**CMNS 859-5 Acoustic Dimensions of Communications**

Special topics in sound and communication studies with emphasis on specific problems in psycho-acoustics, theories of sound cognition and information processing, soundscape studies, acoustic design, community noise surveys, media analysis and related technology. Students will gain experience in designing and conducting research projects in one of these areas. Prerequisite: CMNS 359 or equivalent.

**CMNS 860-2 Graduate Colloquium**

Discussion of essentials of researching, writing, and defending a thesis. Presentation by students of thesis related research plans or results, thesis architecture, of finished chapters for critical review by faculty and students. MA students must complete this course once before proceeding to a thesis defence. S/U standing only.

**CMNS 880-5 Directed Readings and Research**

Supervised enquiry in concentrated areas of specialization.

**CMNS 881-5 Research Internship**

Work and study in an approved professional setting.

**CMNS 882-5 Research Field Work**

External research beyond regular contact with the University.

**CMNS 891-0 Co-op Practicum I****CMNS 892-0 Co-op Practicum II****CMNS 895-6 Comprehensive Examination**

Examination of three areas of which one must be on the theoretical or methodological framework/procedures indicated by the proposed dissertation. S/U standing only. The exam may be retaken once in the event of unsatisfactory performance.

**CMNS 898-6 MA Thesis****CMNS 899-6 PhD Thesis****Computing Science CMPT  
Faculty of Applied Sciences****CMPT XX1-3 Computers and the Activity of People**

Concerned with computer literacy and appreciation. What are computers? What do they do? How do they do it? How will they affect us? Illustrations given of applications of computing in the arts, commerce, industry, science and everyday activity. Programming is introduced but not emphasized; instead, students will be exposed to a variety of computer hardware and software elements that are in wide use. No special prerequisite. Students with a grade of B or higher in BC high school computer science 12, or those who have obtained credit for or are currently enrolled in any other Computing Science course may not take CMPT 001 for further credit.

**CMPT 100-3 Software Packages and Programming**

Introduction to the fundamentals of computer operation and computer programming. The use of software packages is emphasized, focussing on spreadsheets, databases, and presentation graphics.

Techniques of solving problems using structured programs in a modern database programming environment are introduced. Prerequisite: BC mathematics 12 or MATH 100 or MATH 110. Students with credit for CMPT 101, 102, 103, 104, 120, 126 or 128 may not take CMPT 100 for further credit.

**CMPT 102-3 Introduction to Scientific Computer Programming**

A programming course which will provide the science student with a working knowledge of a scientific programming language and an introduction to computing concepts, structured programming, and modular design. The student will also gain knowledge in the use of programming environments including the use of numerical algorithm packages. Corequisite: MATH 152 or 155 (or 158). Students with credit for CMPT 101, 103 104, 120, 126 or 128 may not take CMPT 102 for further credit. Quantitative.

**CMPT 110-3 Programming in Visual Basic**

Topics will include user interfaces, objects, event-driven programming, program design, and file and data management. Prerequisite: BC mathematics 12 (or equivalent) or any 100 level MATH course. Students who have obtained credit for, or are currently enrolled in a computing science course at the 200 level or higher, or ITEC 240, 241 or 242 may not take CMPT 110 for further credit except with permission of the School of Computing Science. Quantitative.

**CMPT 118-3 Special Topics in Computer and Information Technology**

Special topics in computing science which are of current interest to non-computing students. The course will be offered from time to time depending on availability of faculty and on student interest. Students who have obtained credit for, or are currently enrolled in a computing science course at the 200 level or higher, may not take CMPT 118 for further credit.

**CMPT 120-3 Introduction to Computing Science and Programming I**

An elementary introduction to computing science and computer programming, suitable for students with little or no programming background. Students will learn fundamental concepts and terminology of computing science, acquire elementary skills for programming in a high-level language and be exposed to diverse fields within, and applications of computing science. Topics will include: pseudocode, data types and control structures, fundamental algorithms, computability and complexity, computer architecture, and history of computing science. Treatment is informal and programming is presented as a problem-solving tool. Students should consult with the self-evaluation on the School of Computing Science website to decide whether they should follow the CMPT 120/125 course sequence or enrol in CMPT 126. Prerequisite: BC Math 12 or equivalent is recommended. Students with credit for CMPT 101, 102, 103, 104, 125, 126, 128 or any course numbered CMPT 200 or higher may not take this course for further credit. Quantitative/Breadth-Science.

**CMPT 125-3 Introduction to Computing Science and Programming II**

A rigorous introduction to computing science and computer programming, suitable for students who already have some backgrounds in computing science and programming. Intended for students who will major in computing science or a related program. Topics include: fundamental algorithms; elements of empirical and theoretical algorithmics; abstract data types and elementary data structures; basic object-oriented programming and software design; computation and computability; specification and program correctness; and history of computing science. Prerequisite: BC MATH 12 (or equivalent) and CMPT 120. Students with credit for CMPT 101, 104, 126, 128 or any course numbered CMPT 200 or

higher may not take this course for further credit. Quantitative.

**CMPT 126-3 Introduction to Computing Science and Programming**

A rigorous introduction to computing science and computer programming, suitable for students who already have substantial programming background. This course provides a condensed version of the two-course sequence of CMPT 120/125, with the primary focus on computing science and object oriented programming. Topics include: fundamental algorithms and problem solving; abstract data types and elementary data structures; basic object-oriented programming and software design; elements of empirical and theoretical algorithmics; computation and computability; specification and program correctness; and history of computing science. Prerequisite: BC MATH 12 (or equivalent). Students should feel comfortable writing programs in a structured language. Students must consult with the self-evaluation on the Computing Science web site to decide whether they should follow the CMPT 120/125 course sequence or enroll in CMPT 126. Students with credit for CMPT 101, 104, 125, 128 or any course numbered CMPT 200 or higher may not take this course for further credit. Quantitative/Breadth-Science.

**CMPT 128-3 Introduction to Computing Science and Programming for Engineers**

An introduction to computing science and computer programming, suitable for students wishing to major in Engineering Science or a related program. This course introduces basic computing science concepts, and fundamentals of object oriented programming. Topics include: fundamental algorithms and problem solving; abstract data types and elementary data structures; basic object-oriented programming and software design; elements of empirical and theoretical algorithmics; computation and computability; specification and program correctness; and history of computing science. The course will use a programming language commonly used in Engineering Science. Prerequisite: BC MATH 12 (or equivalent). Students with credit for CMPT 101, 104, 125, 126 or any course numbered CMPT 200 or higher may not take this course for further credit. Quantitative/Breadth-Science.

**CMPT 150-3 Introduction to Computer Design**

Digital design concepts are presented in such a way that students will learn how basic logic blocks of a simple computer are designed. Topics covered include: basic Von Neumann computer architecture; an introduction to assembly language programming; combinational logic design; and sequential logic design. Students who have taken ENSC 150 or CMPT 290 cannot take this course for further credit. Prerequisite: Strongly recommended: MACM 101 and CMPT 120, or MACM 101 and substantial programming background. Quantitative.

**CMPT 165-3 Introduction to the Internet and the World Wide Web**

In this course, we shall examine the structure of the Internet and the World Wide Web as well as design and create web sites. Students who have obtained credit for, or are currently enrolled in a CMPT course at the 200 division or higher, CMPT 118 or 170, or IAT 265 or 267 may not take CMPT 165 for further credit. Breadth-Science.

**CMPT 170-3 Introduction to Web Application Development**

An introduction to the creation of web pages, as well as interactive websites. Students will learn how to create web pages using current best practices. Creation of web-based application using a modern web application framework. Prerequisite: CMPT 120 or 126 or 128. Enrolling in CMPT 125 concurrently is

highly recommended if CMPT 126 or 128 has not already been completed.

### **CMPT 212-3 Object-Oriented Applications Design in C++**

Introduction to object-oriented software design concepts, the object-oriented features of the C++ language, other advanced C++ features, plus a simple introduction to the fundamentals of graphical user interfaces and the development of windowed applications. Prerequisite: CMPT 101, 104, 125, 126 or 128. Recommended: CMPT 201 or 225.

### **CMPT 218-3 Special Topics in Computing Science**

Special topics in computing science which are of current interest or are not covered in the regular curriculum will be offered from time to time depending on availability of faculty and on student interest. Prerequisite: CMPT 201 or 205.

### **CMPT 225-3 Data Structures and Programming**

Introduction to a variety of practical and important data structures and methods for implementation and for experimental and analytical evaluation. Topics include: stacks, queues and lists; search trees; hash tables and algorithms; efficient sorting; object-oriented programming; time and space efficiency analysis; and experimental evaluation. Prerequisite: MACM 101 and one of CMPT 101, 104, 125, 126 or 128; or CMPT 128 and approval as a Biomedical Engineering Major. Students with credit for CMPT 201 may not take this course for further credit. Quantitative.

### **CMPT 250-3 Introduction to Computer Architecture**

This course deals with the main concepts embodied in computer hardware architecture. In particular, the organization, design and limitations of the major building blocks in modern computers is covered in detail. Topics will include: processor organization; control logic design; memory systems; and architectural support for operating systems and programming languages. A hardware description language will be used as a tool to express and work with design concepts. Prerequisite: CMPT/ENSC 150, or CMPT 290 or 105 with permission of instructor. This course is identical to ENSC 250 and students cannot take both courses for credit. Students who have taken CMPT 390 may not take CMPT 250 for further credit. Quantitative.

### **CMPT 261-3 Spatial Computing**

An exploration of the major concepts of analytical and computational geometry and an introduction to tools for programming geometric information and displaying the results. Students completing this course will have a basic understanding of how computer graphics systems work; skills in writing programs to display geometric information for graphics display; ability to solve geometric problems using transformations, geometric representations and the basic algorithms of computational geometry; and familiarity with various common mathematical notation for representing spatial objects. Prerequisite: CMPT 125, MATH 232. Students with credit for ITEC 271, 272, and 273 may not take this course for further credit. CMPT 261 and IAT 261 are identical courses; at most one may be taken for credit.

### **CMPT 265-3 Multimedia Programming for Art and Design**

Using cases from topics such as animation, cinema, music and design, this course introduces a variety of programming tools and techniques. Practical use of multimedia scripting languages and authoring environments is covered in the context of a series of composition and design projects. Code libraries and programming techniques for specific media will be introduced. Assessment will be based on both programming and the expressive use of programs in their case context. Prerequisite: CMPT 120 (or

equivalent first programming course). Students with credit for IART 206, 207 and 208 may not take this course for further credit. CMPT 265 and IAT 265 are identical courses; at most one may be taken for credit.

### **CMPT 267-3 Introduction to Technological Systems**

Introduction to the core technologies and systems used in media-rich interactive environments, including computer hardware, operating systems, input and output technologies, networking and media. The concepts will be examined by working in a high-level media programming environment. This course is equivalent to IAT 267; students with credit for IAT 267 may not take this course for further credit. Students who have obtained credit for, or are currently enrolled in, a computing science course at the 300 division or higher, or are approved computing science major or honors students may not take this course for further credit. Prerequisite: CMPT 120 (or equivalent first programming course).

### **CMPT 275-4 Software Engineering I**

Introduction to software engineering techniques used in analysis/design and in software project management. The course centres on a team project involving requirements gathering, object analysis and simple data normalization, use-case-driven user documentation and design followed by implementation and testing. Additionally, there is an introduction to project planning, metrics, quality assurance, configuration management, and people issues. Prerequisite: CMPT 201 or 225, MACM 101, MATH 151, one W course. MATH 154 or 157 with a grade of at least B+ may be substituted for MATH 151.

### **CMPT 276-3 Introduction to Software Engineering**

An overview of various techniques used for software development and software project management. Major tasks and phases in modern software development, including requirements, analysis, documentation, design, implementation, testing, installation, support, and maintenance. Project management issues are also introduced. Prerequisite: CMPT 225, MACM 101. Students who have taken CMPT 275 may not take this course for further credit.

### **CMPT 300-3 Operating Systems I**

This course aims to give the student an understanding of what a modern operating system is, and the services it provides. It also discusses some basic issues in operating systems and provides solutions. Topics include multiprogramming, process management, memory management, and file systems. Prerequisite: CMPT 201 or 225, and MACM 101 or CMPT 205. Students with credit for CMPT 401 may not take CMPT 300 for further credit.

### **CMPT 301-3 Information Systems Management**

Topics include strategic planning and use of information systems, current and future technologies, technology assimilation, organizational learning, end-user computing, managing projects and people, managing production operations and networks, evaluating performance and benefits, crisis management and disaster recovery, security and control, financial accountability, and proactive management techniques for a changing environment. Prerequisite: CMPT 201 or 225.

### **CMPT 305-3 Computer Simulation and Modeling**

This course is an introduction to the modelling, analysis, and computer simulation of complex systems. Topics include analytic modelling, discrete event simulation, experimental design, random number generation, and statistical analysis. Prerequisite: CMPT 201 or 225, MACM 101, STAT 270.

### **CMPT 307-3 Data Structures and Algorithms**

Analysis and design of data structures for lists, sets, trees, dictionaries, and priority queues. A selection of topics chosen from sorting, memory management, graphs and graph algorithms. Prerequisite: CMPT 201 or 225, MACM 201, MATH 152 and MATH 232 or 240.

### **CMPT 308-3 Computability and Complexity**

This course introduces students to formal models of computations such as Turing machines and RAMs. Notions of tractability and intractability are discussed both with respect to computability and resource requirements. The relationship of these concepts to logic is also covered. Prerequisite: MACM 201.

### **CMPT 310-3 Artificial Intelligence Survey**

Provides a unified discussion of the fundamental approaches to the problems in artificial intelligence. The topics considered are: representational typology and search methods; game playing, heuristic programming; pattern recognition and classification; theorem-proving; question-answering systems; natural language understanding; computer vision. Prerequisite: CMPT 201 or 225 and MACM 101.

### **CMPT 318-3 Special Topics in Computing Science**

Special topics in computing science at the 300 level. Topics that are of current interest or are not covered in regular curriculum will be offered from time to time depending on availability of faculty and student interest. Prerequisite: CMPT 201 or 225.

### **CMPT 320-3 Social Implications – Computerized Society**

An examination of social processes that are being automated and implications for good and evil, that may be entailed in the automation of procedures by which goods and services are allocated. Examination of what are dehumanizing and humanizing parts of systems and how systems can be designed to have a humanizing effect. Prerequisite: a course in computing science and 45 units. Students with credit for CMPT 260 may not take CMPT 320 for further credit. Breadth-Science.

### **CMPT 322-3 Professional Responsibility and Ethics**

The theory and practice of computer ethics. The basis for ethical decision-making and the methodology for reaching ethical decisions concerning computing matters will be studied. Writing as a means to understand and reason about complex ethical issues will be emphasized. Prerequisite: three CMPT units, 30 total units, and any lower division W course.

### **CMPT 322W-3 Professional Responsibility and Ethics**

The theory and practice of computer ethics. The basis for ethical decision-making and the methodology for reaching ethical decisions concerning computing matters will be studied. Writing as a means to understand and reason about complex ethical issues will be emphasized. Prerequisite: three CMPT units, 30 total units, and any lower division W course. Writing.

### **CMPT 340-3 Biomedical Computing**

The principles involved in using computers for data acquisition, real-time processing, pattern recognition and experimental control in biology and medicine will be developed. The use of large data bases and simulation will be explored. Prerequisite: completion of 60 units including CMPT 101, 125, 126 or 128 (or 102 or 104 with a grade of B or higher).

### **CMPT 354-3 Database Systems I**

Logical representations of data records. Data models. Studies of some popular file and database systems. Document retrieval. Other related issues such as database administration, data dictionary and security. Prerequisite: CMPT 201 or 225, MACM 101.

**CMPT 361-3 Introduction to Computer Graphics**

This course provides an introduction to the fundamentals of computer graphics. Topics include graphics display and interaction hardware, basic algorithms for 2D primitives, anti-aliasing, 2D and 3D geometrical transformations, 3D projections/viewing, Polygonal and hierarchical models, hidden-surface removal, basic rendering techniques (color, shading, raytracing, radiosity), and interaction techniques. Prerequisite: CMPT 201 or 225 and MATH 232 or 240.

**CMPT 363-3 User Interface Design**

This course provides a comprehensive study of user interface design. Topics include: goals and principles of UI design (systems engineering and human factors), historical perspective, current paradigms (widget-based, mental model, graphic design, ergonomics, metaphor, constructivist/iterative approach, and visual languages) and their evaluation, existing tools and packages (dialogue models, event-based systems, prototyping), future paradigms, and the social impact of UI. Prerequisite: CMPT 201 or 225.

**CMPT 365-3 Multimedia Systems**

Multimedia systems design, multimedia hardware and software, issues in effectively representing, processing, and retrieving multimedia data such as text, graphics, sound and music, image and video. Prerequisite: completion of 60 units including CMPT 201 or 225.

**CMPT 370-3 Information System Design**

This course focuses on the computer-related problems of information system design and procedures of design implementation. Well-established design methodologies will be discussed, and case studies will be used to illustrate various techniques of system design. Prerequisite: CMPT 275 or 276; CMPT 354.

**CMPT 371-3 Data Communications and Networking**

Data communication fundamentals (data types, rates, and transmission media). Network architectures for local and wide areas. Communications protocols suitable for various architectures. ISO protocols and internetworking. Performance analysis under various loadings and channel error rates. Prerequisite: CMPT 201 or 225, CMPT/ENSC 150 and MATH 152. MATH 155 or 158 with a grade of at least B+ may be substituted for MATH 152.

**CMPT 373-3 Software Development Methods**

Survey of modern software development methodology. Several software development process models will be examined, as will the general principles behind such models. Provides experience with different programming paradigms and their advantages and disadvantages during software development. Prerequisite: CMPT 276 or 275.

**CMPT 376-3 Technical Writing and Group Dynamics**

Covers professional writing in computing science, including format conventions and technical reports. Examines group dynamics, including team leadership, dispute resolution and collaborative writing. Also covers research methods. Prerequisite: Any lower-division W course. Co-requisite: CMPT 275.

**CMPT 376W-3 Technical Writing and Group Dynamics**

Covers professional writing in computing science, including format conventions and technical reports. Examines group dynamics, including team leadership, dispute resolution and collaborative writing. Also covers research methods. Prerequisite: Any lower-division W course. Co-requisite: CMPT 275. Writing.

**CMPT 379-3 Principles of Compiler Design**

This course covers the key components of a compiler for a high level programming language. Topics include lexical analysis, parsing, type checking, code generation and optimization. Students will work in teams to design and implement an actual compiler making use of tools such as lex and yacc. Prerequisite: MACM 201, CMPT 150 and 201 or 225.

**CMPT 383-3 Comparative Programming Languages**

Various concepts and principles underlying the design and use of modern programming languages are considered in the context of procedural, object-oriented, functional and logic programming languages. Topics include data and control structuring constructs, facilities for modularity and data abstraction, polymorphism, syntax, and formal semantics. Prerequisite: CMPT 201 or 225, MACM 101.

**CMPT 384-3 Symbolic Computing**

This course considers modelling and programming techniques appropriate for symbolic data domains such as mathematical expressions, logical formulas, grammars and programming languages. Topics include recursive and functional programming style, grammar-based data abstraction, simplification and reduction transformations, conversions to canonical form, environment data structures and interpreters, metaprogramming, pattern matching and theorem proving. Prerequisite: CMPT 225; MACM 101.

**CMPT 401-3 Operating Systems II**

Advanced concepts in modern operating systems such as scheduling algorithms, address space protection, virtual memory, multiprocessor operating systems, microkernels, virtual machine hypervisors, embedded and real-time operating systems. Students will implement parts of an operating system. Prerequisite: CMPT 150 and 300.

**CMPT 404-3 Cryptography and Cryptographic Protocols**

The main cryptographic tools and primitives, their use in cryptographic applications; security and weaknesses of the current protocols. The notion of security, standard encryption schemes, digital signatures, zero-knowledge, selected other topics. Prerequisite: MACM 201. CMPT 307 and 308 are recommended.

**CMPT 405-3 Design and Analysis of Computing Algorithms**

Models of computation, methods of algorithm design; complexity of algorithms; algorithms on graphs, NP-completeness, approximation algorithms, selected topics. Prerequisite: CMPT 307.

**CMPT 406-3 Computational Geometry**

Mathematical preliminaries; convex hull algorithms; intersection problems; closest-point problems and their applications. Prerequisite: CMPT 307.

**CMPT 407-3 Computational Complexity**

Machine models and their equivalences, complexity classes, separation theorems, reductions, Cook's theorem, NP-completeness, the polynomial time hierarchy, boolean circuit models and parallel complexity theory, other topics of interest to the students and instructor. Prerequisite: CMPT 307.

**CMPT 408-3 Theory of Computing Networks/Communications**

Network design parameters and goals, dynamic networks and permutations, routing in direct networks, structured communication in direct networks, other topics of interest to the students and instructor. Prerequisite: CMPT 307 and 371.

**CMPT 409-3 Special Topics in Theoretical Computing Science**

Current topics in theoretical computing science depending on faculty and student interest. Prerequisite: CMPT 307.

**CMPT 411-3 Knowledge Representation**

Formal and foundational issues dealing with the representation of knowledge in artificial intelligence systems are covered. Questions of semantics, incompleteness, non-monotonicity and others will be examined. As well, particular approaches, such as procedural or semantic network, may be discussed. Prerequisite: completion of nine units in Computing Science upper division courses or, in exceptional cases, permission of the instructor.

**CMPT 412-3 Computational Vision**

Computational approaches to image understanding will be discussed in relation to theories about the operation of the human visual system and with respect to practical applications in robotics. Topics will include edge detection, shape from shading, stereopsis, optical flow, Fourier methods, gradient space, three-dimensional object representation and constraint satisfaction. Prerequisite: MATH 152, and nine units in Computing upper division courses or permission of the instructor.

**CMPT 413-3 Computational Linguistics**

This course examines the theoretical and applied problems of constructing and modelling systems, which aim to extract and represent the meaning of natural language sentences or of whole discourses, but drawing on contributions from the fields of linguistics, cognitive psychology, artificial intelligence and computing science. Prerequisite: completion of nine units in Computing Science upper division courses or, in exceptional cases, permission of the instructor.

**CMPT 414-3 Model-Based Computer Vision**

This course covers various topics in computer vision with the emphasis on the model-based approach. Main subjects include 2-D and 3-D representations, matching, constraint relaxation, model-based vision systems. State-of-the-art robot vision systems will be used extensively as study cases. The solid modelling and CAD aspects of this course should also interest students of computer graphics. Prerequisite: MATH 152 and nine units in CMPT upper division courses, or permission of the instructor.

**CMPT 415-3 Special Research Projects**

To be individually arranged.

**CMPT 416-3 Special Research Projects**

To be individually arranged.

**CMPT 417-3 Intelligent Systems**

Intelligent Systems using modern constraint programming and heuristic search methods. A survey of this rapidly advancing technology as applied to scheduling, planning, design and configuration. An introduction to constraint programming, heuristic search, constructive (backtrack) search, iterative improvement (local) search, mixed-initiative systems and combinatorial optimization. Prerequisite: CMPT 201 or 225.

**CMPT 418-3 Computational Cognitive Architecture**

Computationally-oriented theories of human cognitive architecture are explored, beginning with neurologically inspired (neural network) models of "low-level" brain processes, and progressing upwards to higher-level symbolic processing, of the kind that occurs in rule-following and problem solving. Arguments concerning the need for modular processing and combinatorially adequate forms of mental representation are examined at length. Prerequisite: CMPT 201 or 225. Recommended: CMPT 310.

**CMPT 419-3 Special Topics in Artificial Intelligence**

Current topics in artificial intelligence depending on faculty and student interest. Prerequisite: CMPT 310 or permission of the instructor.

**CMPT 426-3 Practicum I**

First term of work experience in the School of Computing Science Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: students must complete Bridging Online (visit [www.sfu.ca/coop/bol](http://www.sfu.ca/coop/bol) for further details) at least two terms before their anticipated co-op placement. Students must then enrol with the co-op program by the second week of the term preceding the work term. Normally, students will have completed a minimum of 45 units by the end of the term of application, CMPT 275 and have a minimum CGPA of 2.50. Graded as pass/fail (P/F).

**CMPT 427-3 Practicum II**

The second term of work experience for students in the Computing Science Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: CMPT 426, CGPA of 2.50. Graded as pass/fail (P/F).

**CMPT 428-3 Practicum III**

The third term of work experience for students in the Computing Science Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: CMPT 427, CGPA of 2.50. Graded as pass/fail (P/F).

**CMPT 429-3 Practicum IV**

The fourth term of work experience for students in the Computing Science Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: CMPT 428, CGPA of 2.50. Graded as pass/fail (P/F).

**CMPT 430-3 Practicum V**

An optional fifth term of work experience for students in the Computing Science Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: CMPT 429, CGPA of 2.50. Graded as pass/fail (P/F).

**CMPT 431-3 Distributed Systems**

An introduction to distributed systems: systems consisting of multiple physical components connected over a network. Architectures of such systems, ranging from client-server to peer-to-peer. Distributed systems are analyzed via case studies of real network file systems, replicated systems, sensor networks and peer-to-peer systems. Hands-on experience designing and implementing a complex distributed system. Prerequisite: CMPT 300, 371. Students who have taken CMPT 401 before September 2008 may not take this course for further credit.

**CMPT 432-3 Real-time Systems**

The design and implementation of real-time systems. Techniques for specifying system timing requirements and determining if these requirements are met. Different models for the design of real-time schedulers are examined and analyzed. The design of real-time operating systems and their role in supporting real-time systems are also studied. Prerequisite: CMPT 250, 300.

**CMPT 433-3 Embedded Systems**

The basics of embedded system organization, hardware-software co-design, and programmable chip technologies are studied. Formal models and specification languages for capturing and analyzing the behavior of embedded systems. The design and use of tools for system partitioning and hardware/software co-design implementation, validation, and verification are also studied. Prerequisite: CMPT 250, 300.

**CMPT 441-3 Computational Biology**

This course introduces students to the computing science principles underlying computational biology. The emphasis is on the design, analysis and implementation of computational techniques. Possible topics include algorithms for sequence alignment, database searching, gene finding, phylogeny and

structure analysis. Prerequisite: CMPT 307. Students with credit for CMPT 341 may not take this course for further credit.

**CMPT 454-3 Database Systems II**

An advanced course on database systems which covers crash recovery, concurrency control, transaction processing, distributed database systems as the core material and a set of selected topics based on the new developments and research interests, such as object-oriented data models and systems, extended relational systems, deductive database systems, and security and integrity. Prerequisite: CMPT 300 and 354.

**CMPT 456-3 Information Retrieval and Web Search**

Introduction to the essentials of information retrieval and the applications of information retrieval in web search and web information systems. Topics include the major models of information retrieval, similarity search, text content search, link structures and web graphics, web mining and applications, crawling, search engines, and some advanced topics such as spam detection, online advertisement, and fraud detection in online auctions. Prerequisite: CMPT 354.

**CMPT 459-3 Special Topics in Database Systems**

Current topics in database and information systems depending on faculty and student interest. Prerequisite: CMPT 354.

**CMPT 461-3 Image Synthesis**

Covers advanced topics and techniques in computer graphics with a focus on image synthesis. Topics include photorealistic rendering, advanced ray tracing, Monte Carlo methods, photon maps, radiosity, light fields, participating media, as well as tone reproduction. Prerequisite: CMPT 361, MACM 201 and 316. Students with credit for CMPT 451 may not take CMPT 461 for further credit.

**CMPT 464-3 Geometric Modeling in Computer Graphics**

Covers advanced topics in geometric modeling and processing for computer graphics, such as Bezier and B-spline techniques, subdivision curves and surfaces, solid modeling, implicit representation, surface reconstruction, multi-resolution modeling, digital geometry processing (e.g. mesh smoothing, compression, and parameterization), point-based representation, and procedural modeling. Prerequisite: CMPT 361, MACM 316. Students with credit for CMPT 469 between 2003 and 2007 or equivalent may not take CMPT 464 for further credit.

**CMPT 466-3 Animation**

Topics and techniques in animation, including: The history of animation, computers in animation, traditional animation approaches, and computer animation techniques such as geometric modelling, interpolation, camera controls, kinematics, dynamics, constraint-based animation, realistic motion, temporal aliasing, digital effects and post production. Prerequisite: CMPT 361 and MACM 316 or permission of the instructor.

**CMPT 467-3 Visualization**

Presents advanced topics in the field of scientific and information visualization. Topics include an introduction to visualization (importance, basic approaches, and existing tools), abstract visualization concepts, human perception, visualization methodology, data representation, 2D and 3D display, interactive visualization, and their use in medical, scientific, and business applications. Prerequisite: CMPT 361, MACM 316.

**CMPT 468-3 Introduction to Computer Music and Sound Synthesis**

An introduction to the fundamentals of digital audio, computer music, basic sound synthesis algorithms, and digital audio effects and processing. Topics

include concepts of sound and digital audio representation, basic concepts of digital filtering, fundamentals of spectrum analysis, and sound synthesis techniques. Understanding of theoretical concepts will be consolidated through practical programming assignments in Matlab, however there will also be exposure to various freeware real-time audio programming and sound editing environments. Prerequisite: MATH 152 and one of CMPT 125, 126 or 128 (or permission of instructor).

**CMPT 469-3 Special Topics in Computer Graphics**

Current topics in computer graphics depending on faculty and student interest. Prerequisite: CMPT 361.

**CMPT 470-3 Web-based Information Systems**

This course examines: two-tier/multi-tier client/server architectures; the architecture of a Web-based information system; web servers/browser; programming/scripting tools for clients and servers; database access; transport of programming objects; messaging systems; security; and applications (such as e-commerce and on-line learning). Prerequisite: CMPT 354. Students who have taken CMPT 474 may not take this course for further credit.

**CMPT 471-3 Networking II**

This course covers the fundamentals of higher level network functionality such as remote procedure/object calls, name/address resolution, network file systems, network security and high speed connectivity/bridging/switching. Prerequisite: CMPT 300 and 371.

**CMPT 473-3 Software Quality Assurance**

Factors in software quality include functionality, reliability, usability, efficiency, maintainability, and portability. Techniques for assessing the quality of software with respect to such factors, and methods for improving the quality of both software products and software development processes. Prerequisite: CMPT 373.

**CMPT 474-3 Web Systems Architecture**

Web service based systems are fundamentally different from traditional software systems. The conceptual and methodological differences between a standard software development process and the development of a web service based information system. The technology involved during the construction of their own web service based application in an extensive project. Prerequisite: CMPT 371.

**CMPT 475-3 Software Engineering II**

Students will study in-depth the techniques, tools and standards needed in the management of software development. Topics will include software process and quality standards, life cycle models, requirements specification issues, project estimation, planning and tracking, project management tools, team dynamics and management, configuration and change management techniques and tools, metrics, quality assurance and test techniques, professional and legal issues. Prerequisite: CMPT 275 or 276 and 15 units of upper division courses. Recommended: co-op experience. Students with credit for CMPT 373 may not take this course for further credit.

**CMPT 477-3 Introduction to Formal Verification**

Introduces, at an accessible level, a formal framework for symbolic model checking, one of the most important verification methods. The techniques are illustrated with examples of verification of reactive systems and communication protocols. Students learn to work with a model checking tool. Prerequisite: CMPT 275 or 276.

**CMPT 479-3 Special Topics in Computing Systems**

Current topics in computing systems depending on faculty and student interest. Prerequisite: CMPT 401.

**CMPT 481-3 Functional Programming**

The functional style of programming will be examined in the context of a modern functional language such as Haskell. Topics will include lazy evaluation and infinite data structures, higher order functions, pattern matching, program transformation and verification, and polymorphic types. Prerequisite: CMPT 383.

**CMPT 489-3 Special Topics in Programming Language**

Current topics in programming languages depending on faculty and student interest. Prerequisite: CMPT 383.

**CMPT 496-3 Directed Studies**

Independent study in topics selected in consultation with the supervising instructor(s) that are not covered by existing course offerings. Students must submit a proposal to the undergraduate chair, including the name and signature of the supervising faculty member(s). The proposal must include details of the material to be covered and the work to be submitted. Prerequisite: students must have completed 90 units, including 15 units of upper division CMPT courses, and have a GPA of at least 3.00. The proposal must be submitted to the undergraduate chair at least 15 days in advance of the term. The proposal must be signed by the supervisor(s) and the undergraduate chair.

**CMPT 497-6 Dual Degree Program Capstone Project**

Students will select one project to be completed in their final year of study. Each student must complete a project report and make a project presentation. The project may include: a research survey, a project implementation, a research paper/report. Prerequisite: Students must be in their final year of the Dual Degree Program.

**CMPT 498-6 Honors Research Project**

Students must submit a proposal to the Undergraduate Chair, including the name and signature of the supervising faculty member(s). Students must complete a project report and make a project presentation. This course can satisfy the research project requirements for Computing Science honors students. Prerequisite: students must have completed 90 units, including 15 units of upper division CMPT courses, and have a GPA of at least 3.00. The proposal must be submitted to the Undergraduate Chair at least 15 days in advance of the term. The proposal must be signed by the supervisor(s) and the undergraduate chair.

**CMPT 499-3 Special Topics in Computer Hardware**

Current topics in computer hardware depending on faculty and student interest. Prerequisite: CMPT/ENSC 250 or CMPT 390.

**CMPT 505-3 Problem Based Learning in Bioinformatics**

The problem-based learning course will develop students' ability to exchange ideas in small groups focused on real but simplified problems in bioinformatics. Problems will be carefully selected to cover all aspects of bioinformatics research. Prerequisites: enrolled in Graduate Diploma in Bioinformatics. This course is identical to MBB 505 and students can not take both courses for credit.

**CMPT 506-3 Critical Research Analysis**

Advanced seminar series for bioinformatics. Prerequisites: Enrolment in Graduate Diploma in Bioinformatics. This course is identical to MBB 506 and students can not take both courses for credit.

**CMPT 601-5 Computing Science Education I**

This course will introduce graduate students in Education to the basics of computing science. Emphasis will be placed on the use of microcomputers. Topics will be programming microcomputers; file handling; microcomputer

hardware; word processing; graphics; social, economic and legal implications. Prerequisite: graduate status in education. If the student has an adequate background in computing, this course must be replaced by other computing science undergraduate or graduate courses.

**CMPT 602-5 Computing Science Education II**

This course introduces some formal topics in Computing Science to the graduate student in education. Topics include discrete mathematical structures; models of computing; data structures; formal languages and algorithms. Also, methods will be introduced for the design and implementation of large programs using structured modular design. Prerequisite: CMPT 601 or consent of instructor(s).

**CMPT 611-6 Research Rotation I**

One term of original bioinformatics research conducted in the lab of a designated mentor. Students are required to write their results in a scientific journal format and defend these results before a panel consisting of the project mentor plus two other qualified faculty members. Prerequisite: enrolment in Graduate Diploma in Bioinformatics. This course is identical to MBB 611 and students can not take both courses for credit.

**CMPT 612-6 Research Rotation II**

One term of original bioinformatics research conducted in the lab of a designated mentor. Students are required to write their results in a scientific journal format and defend these results before a panel consisting of the project mentor plus two other qualified faculty members. Prerequisites: enrolment in Graduate Diploma in Bioinformatics. This course is identical to MBB 612 and students can not receive credit for both courses.

**CMPT 613-6 Research Rotation III**

One term of original bioinformatics research conducted in the lab of a designated mentor. Students are required to write their results in a scientific journal format and defend these results before a panel consisting of the project mentor plus two other qualified faculty members. Prerequisites: enrolment in Graduate Diploma in Bioinformatics. This course is identical to MBB 613 and student can not receive credit for both courses.

**CMPT 701-3 Computability and Logic**

Deep connections between logic and computation have been evident since early work in both areas. More recently, logic-based methods have led to important progress in diverse areas of computing science. This course will provide a foundation in logic and computability suitable for students who wish to understand the application of logic in various areas of CS, or as preparation for more advanced study in logic or theoretical CS.

**CMPT 705-3 Design and Analysis of Algorithms**

The objective of this course is to expose students to basic techniques in algorithm design and analysis. Topics will include greedy algorithms, dynamic programming, advanced data structures, network flows, randomized algorithms.

**CMPT 710-3 Computational Complexity**

This course provides a broad view of theoretical computing science with an emphasis on complexity theory. Topics will include a review of formal models of computation, language classes, and basic complexity theory; design and analysis of efficient algorithms; survey of structural complexity including complexity hierarchies, NP-completeness, and oracles; approximation techniques for discrete problems.

**CMPT 711-3 Bioinformatics Algorithms**

Fundamental algorithmic techniques used to solve computational problems encountered in molecular biology. This area is usually referred to as

Bioinformatics or Computational Biology. Students who have taken CMPT 881 (Bioinformatics) in 2007 or earlier may not take CMPT 711 for further credit.

**CMPT 721-3 Knowledge Representation and Reasoning**

Knowledge representation is the area of Artificial Intelligence concerned with how knowledge can be represented symbolically and manipulated by reasoning programs. This course addresses problems dealing with the design of languages for representing knowledge, the formal interpretation of these languages and the design of computational mechanisms for making inferences. Since much of Artificial Intelligence requires the specification of a large body of domain-specific knowledge, this area lies at the core of AI. Prerequisites: CMPT 310/710 recommended. Cross-listed course with CMPT 411.

**CMPT 725-3 Logical Methods in Computational Intelligence**

Provides an overview and in-depth introduction on several new developments in computational logic for intelligent systems. In particular, we shall cover three areas of strategic importance: natural language processing, abductive logic programming and constraint-based logic programming. The purpose is to introduce graduate students to the frontiers of computational logic research and applications. Students of various backgrounds, such as Linguistics and Cognitive Sciences, are most welcome. Some of the course will proceed in seminar style. Students should be prepared to read and present papers and to participate in discussions.

**CMPT 726-3 Machine Learning**

Machine Learning is the study of computer algorithms that improve automatically through experience. Provides students who conduct research in machine learning, or use it in their research, with a grounding in both the theoretical justification for, and practical application of, machine learning algorithms. Covers techniques in supervised and unsupervised learning, the graphical model formalism, and algorithms for combining models. Students who have taken CMPT 882 (Machine Learning) in 2007 or earlier may not take CMPT 726 for further credit.

**CMPT 730-3 Programming Languages**

This course will cover basic concepts in the area of programming languages. The course will be largely of a theoretical nature and will concentrate on fundamental concepts of lasting importance, rather than topics of current interest.

**CMPT 731-3 Functional Programming**

This course will cover functional programming including introduction to a functional programming language, program transformation and verification, implementation of functional programming languages, and other selected topics which may include parallel evaluation of functional programs, analysis of performance, and advanced applications. Students who have taken CMPT 831 may not take this course for further credit.

**CMPT 740-3 Database Systems**

Introduction to advanced database system concepts, including query processing, transaction processing, distributed and heterogeneous databases, object-oriented and object-relational databases, data mining and data warehousing, spatial and multimedia systems and Internet information systems.

**CMPT 741-3 Data Mining**

The student will learn basic concepts and techniques of data mining. Unlike data management required in traditional database applications, data analysis aims to extract useful patterns, trends and knowledge from raw data for decision support. Such information are implicit in the data and must be mined to be useful.

**CMPT 745-3 Software Engineering**

This course examines fundamental principles of software engineering and state-of-the-art techniques for improving the quality of software designs. With an emphasis on methodological aspects and mathematical foundations, the specification, design and test of concurrent and reactive systems is addressed in depth. Students learn how to use formal techniques as a practical tool for the analysis and validation of key system properties in early design stages. Applications focus on high level design of distributed and embedded systems.

**CMPT 755-3 Compiler Theory**

Precedence, LL(k), LR(k) grammars; SLR(k), LALR(k), L(m)R(k) parsing techniques; transduction grammars; general compiler organization, code generation and optimization; memory allocation for object programs; garbage collection. Students who have taken CMPT 830 may not take this course for further credit.

**CMPT 760-3 Operating Systems**

This course will discuss design issues relating to the functionality and performance of modern workstation operating systems, such as methods for sharing memory, file and data objects, and choice of communication protocols. The special needs of high performance multiprocessor systems and real time systems will also be addressed.

**CMPT 761-3 Image Synthesis**

Advanced topics and techniques in computer graphics with a focus on image synthesis are covered. Topics include photorealistic rendering, advanced ray tracing, Monte Carlo methods, photon maps, radiosity, light fields, participating media, as well as tone reproduction. Students with credit for CMPT 461, CMPT 770, or equivalent may not take CMPT 761 for further credit.

**CMPT 764-3 Geometric Modeling in Computer Graphics**

Advanced topics in geometric modeling and processing for computer graphics, such as Bezier and B-spline techniques, subdivision curves and surfaces, solid modeling, implicit representation, surface reconstruction, multi-resolution modeling, digital geometry processing (e.g., mesh smoothing, compression, and parameterization), point-based representation, and procedural modeling. Prerequisite: CMPT 361, MACM 316. Students with credit for CMPT 464 or equivalent may not take CMPT 764 for further credit.

**CMPT 765-3 Computer Communication Network**

This course will cover the fundamentals and recent advances in computer communication networks. The emphasis will be on the design and analysis of networks, especially switching, routing, and network topology.

**CMPT 767-3 Visualization**

Advanced topics in the field of scientific and information visualization are presented. Topics may include: an introduction to visualization (importance, basic approaches and existing tools), abstract visualization concepts, human perception, visualization methodology, 2D and 3D display and interaction and their use in medical, scientific, and business applications. Prerequisite: CMPT 316, 461 or equivalent (by permission of instructor). Students who have taken CMPT 878 or 775 may not take this course for further credit.

**CMPT 768-3 Computer Music Theory and Sound Synthesis**

Introduces the fundamentals of digital audio signal processing, with applications to computer music and sound analysis/synthesis. Students who have taken CMPT 468 cannot take this course for additional credit.

**CMPT 771-3 Internet Architecture and Protocols**

Investigates the design and operation of the global network of networks: the Internet. This course studies the structure of the Internet and the TCP/IP protocol suit that enables it to scale to millions of hosts. The focus is on design principles, performance modeling, and services offered by the Internet.

**CMPT 773-3 User Interface Design**

This course provides an overview of a number of research areas in human-computer interaction. Topics may include: overview of HCI (historical/intellectual, GUI, case studies), interactive systems (design, evaluation, software development), interaction methods (vision, graphic design, touch, speech, etc.), human factors (information processing, capabilities), research frontiers (computer supported co-operative work, intelligent systems, hypertext, multimedia, virtual reality, cyberspace). Recommended: CMPT 363 or equivalent (instructor discretion). Students who have taken CMPT 873 may not take this course for further credit.

**CMPT 777-3 Formal Verification**

The goal of formal verification is to prove correctness or to find mistakes in software and other systems. This course introduces, at an accessible level, a formal framework for symbolic model checking, one of the most important verification methods. The techniques are illustrated with examples of verification of reactive systems and communication protocols. Students learn to work with a model checking tool such as NuSMV.

**CMPT 813-3 Computational Geometry**

This course covers recent developments in discrete, combinatorial, and algorithmic geometry. Emphasis is placed on both developing general geometric techniques and solving specific problems. Open problems and applications will be discussed.

**CMPT 814-3 Algorithmic Graph Theory**

Algorithm design often stresses universal approaches for general problem instances. If the instances possess a special structure, more efficient algorithms are possible. This course will examine graphs and networks with special structure, such as chordal, interval, and permutation graphs, which allows the development of efficient algorithms for hard computational problems.

**CMPT 815-3 Algorithms of Optimization**

This course will cover a variety of optimization models, that naturally arise in the area of management science and operations research, which can be formulated as mathematical programming problems.

**CMPT 816-3 Theory of Communication Networks**

This course investigates the design, classification, modelling, analysis, and efficient use of communication networks such as telephone networks, interconnection networks in parallel processing systems, and special-purpose networks.

**CMPT 820-3 Multimedia Systems**

This seminar course covers current research in the field of multimedia computing. Topics include multimedia data representation, compression, retrieval, network communications and multimedia systems. Computing science graduate student or permission of instructor.

**CMPT 821-3 Robot Vision**

This course discusses issues and research results pertinent to robot vision. Topics include depth recovery for robot navigation, three dimensional object recognition and scene analysis, model-based approaches, parallel vision machines and algorithms, and case studies of contemporary robot vision systems.

**CMPT 822-3 Computational Vision**

A seminar based on the artificial intelligence approach to vision. Computational vision has the goal of discovering the algorithms and heuristics which allow a two dimensional array of light intensities to be interpreted as a three dimensional scene. By reading and discussing research papers — starting with the original work on the analysis of line drawings, and ending with the most recent work in the field — participants begin to develop a general overview of computational vision, and an understanding of the current research problems.

**CMPT 823-3 Formal Topics – Knowledge Representation**

This course surveys current research in formal aspects of knowledge representation. Topics covered in the course will centre on various features and characteristics of encodings of knowledge, including incomplete knowledge, non monotonic reasoning, inexact and imprecise reasoning, meta-reasoning, etc. Suggested preparation: a course in formal logic and a previous course in artificial intelligence.

**CMPT 825-3 Natural Language Processing**

In this course, theoretical and applied issues related to the development of natural language processing systems and specific applications are examined. Investigations into parsing issues, different computational linguistic formalisms, natural language syntax, semantics, and discourse related phenomena will be considered and an actual natural language processor will be developed.

**CMPT 826-3 Automated Learning and Reasoning**

This course covers topics shared both by AI and cognitive science. Current AI research papers are examined from the perspective of cognitive science, and vice versa. Topics covered in a given term will vary, depending upon the instructor, but most of the following topics will be addressed in any given term: connectionist models of intelligence; 'human-like' automated deduction; reasoning by analogy; topics in natural language; automated concept learning; and computational approaches to semantics. Prerequisite: at least one graduate or undergraduate AI course, or instructor's permission.

**CMPT 827-3 Intelligent Systems**

Intelligent systems are knowledge-based computer programs which emulate the reasoning abilities of human experts. This introductory course will analyze the underlying artificial intelligence methodology and survey advances in rule-based systems, constraint solving, incremental reasoning, intelligent backtracking and heuristic local search methods. We will look specifically at research applications in intelligent scheduling, configuration and planning. The course is intended for graduate students with a reasonable background in symbolic programming.

**CMPT 829-3 Special Topics in Bioinformatics**

Examination of recent literature and problems in bioinformatics. Within the CIHR graduate bioinformatics training program, this course will be offered alternatively as the problem-based learning course and the advanced graduate seminar in bioinformatics (both concurrent with MBB 829). Prerequisite: permission of the instructor.

**CMPT 842-3 Concurrency Control in Database Systems**

Transactions, recoverability, serializability theory, schedulers, locking, timestamping, optimistic schedulers, multiversion database systems; recovery, commit protocols, termination protocols; replicated database systems, quorum based concurrency control; distributed snapshot taking, distributed deadlock detection, reliable storage systems; concurrency control in object oriented database systems.

**CMPT 843-3 Database and Knowledge-base Systems**

An advanced course on database systems which focuses on data mining and data warehousing, including their principles, designs, implementations, and applications. It may cover some additional topics on advanced database system concepts, including deductive and object-oriented database systems, spatial and multimedia databases, and database-oriented Web technology.

**CMPT 852-3 VLSI Systems Design**

This course links two fields that traditionally have been considered two separate entities: computer architecture and integrated circuit design. The vehicle used to demonstrate the interaction of layout issues and architectural concepts is metal oxide semiconductor technology.

**CMPT 880-3 Special Topics in Computing Science**

This course aims to give students experience to emerging important areas of computing science. Prerequisite: instructor discretion.

**CMPT 881-3 Special Topics in Theoretical Computing Science****CMPT 882-3 Special Topics in Artificial Intelligence****CMPT 884-3 Special Topics in Database Systems****CMPT 885-3 Special Topics in Computer Architecture****CMPT 886-3 Special Topics in Operating Systems****CMPT 888-3 Special Topics in Computer Graphics, HCI, Vision and Visualization**

Examines current research topics in computer graphics, human computer interaction (including audio), computer vision and visualization.

**CMPT 889-3 Special Topics in Interdisciplinary Computing****CMPT 891-3 Advanced Seminar**

Acquaints new graduate students with the research interests of the faculty, and introduces students to issues relevant to their graduate students. Grade given: S (satisfactory) or U (unsatisfactory).

**CMPT 894-3 Directed Reading****CMPT 897-6 MSc Project****CMPT 898-6 MSc Thesis****CMPT 899-6 PhD Thesis**

## Contemporary Arts FPA Faculty of Communication, Art and Technology

**FPA 104-3 Music Fundamentals**

This course is designed to provide a basic understanding of the elements of music and teaches the skill of reading music notation. An introduction to music theory and exposure to the application of music materials in a wide spectrum of music literature will be accompanied by practical exercises. The course is designed for students with no formal music training. May be of particular interest to students in other departments.

**FPA 111-3 Issues in Fine and Performing Arts**

This course introduces students to some basic issues in the fine and performing arts through the presentation and discussion of selected works in dance, film, music, theatre and visual art. It is designed to give students who intend further study in one or more of these arts some familiarity with critical issues affecting all of them. It is a recommended preparation for the school's upper division history and critical courses. May be of particular interest to students in other departments. Breadth-Humanities.

**FPA 120-3 Introduction to Contemporary Dance**

Development of movement skills through fundamentals of contemporary dance technique, explorations in improvisation, and short composition studies. An introduction to dance literature will focus on selected topics. May be of particular interest to students in other departments.

**FPA 122-4 Contemporary Dance I**

First of two studio courses in contemporary dance and ballet technique. Introduces theoretical approaches to contemporary dance. This is one of four courses required for entry into the dance major and minor programs. Prerequisite: prior approval as a result of an audition. Corequisite: FPA 122 and FPA 129 must be taken concurrently.

**FPA 123-4 Contemporary Dance II**

Continues and expands on the work undertaken in FPA 122. Emphasizes work in contemporary dance and ballet technique with attention to theoretical approaches to contemporary dance. Prerequisite: FPA 122. Corequisite: FPA 123 and FPA 124 must be taken concurrently.

**FPA 124-3 Dance Improvisation**

Selected dance improvisational skills will be explored in a variety of solo, duet, small group and large group forms through structured movement themes. Emphasis will be on sensory awareness, elements of movement, and literal and abstract imagistic stimuli. (studio) This is one of four courses required for entry into the BFA dance major and extended minor. Recommended: dance or theatre experience.

**FPA 129-3 Movement Fundamentals**

This studio/theory course incorporates techniques of body awareness, centering, and structural realignment. The emphasis is on body conditioning and body connectedness. This course will be of interest to dancers, actors, kinesiologists, and athletes. This is one of four courses required for entry into the dance major and extended minor program.

**FPA 130-4 Fundamentals of Film**

Introduces students to the basic components of filmmaking through lectures, film screenings and creative projects in the various media that combine to form cinema. Prerequisite: prior approval through formal application. Students who have taken FPA 132, 133, 134 or 230 may not take FPA 130 for further credit. A laboratory fee is required. Students should be advised that course activities may require additional costs.

**FPA 131-4 Filmmaking I**

An introductory course in 16 mm. film production, emphasizing creative use of the medium. Each student is expected to conceive, direct and edit a short film with a non-synchronous sound track, as well as participate in the making of class exercises and other students' films. Prerequisite: FPA 130 and prior approval. A laboratory fee is required. Students should be advised that film production will probably incur significant costs in addition to lab fees. Students who completed FPA 230 The Crafts of Film I in spring 1990 or earlier may not take this course for further credit.

**FPA 135-3 Introduction to Cinema**

An introductory course designed to facilitate a fundamental understanding of film technique, style and form in order to develop the skills with which to analyze films of all genres. Through lectures and screenings it will provide an overview of the social, aesthetic and technical development of motion pictures, introducing tools for the formal analysis of the elements of cinema: cinematography and lighting, art direction, performance, editing, sound and the screenplay. The formal and historical elements of documentary, avant-garde and dramatic films will be addressed. The course will involve the screening and

discussion of several complete feature films and shorts, as well as excerpts from others.

**FPA 136-3 The History and Aesthetics of Cinema I**

This course will examine the early development of cinema from 1890 until about 1945, with particular emphasis on the fundamental principles of film as an art form. A substantial number of films will be shown during laboratory sessions. Students with credit for FPA 236 offered in 1982/83 and prior years may not take this course for further credit. May be of particular interest to students in other departments. Breadth-Humanities.

**FPA 137-3 The History and Aesthetics of Cinema II**

This course will examine selected developments in cinema from 1945 to the present, with attention to various styles of artistic expression in film. A substantial number of films will be shown during laboratory sessions. Students with credit for FPA 237 offered in 1982/83 and prior years may not take FPA 137 for further credit. May be of particular interest to students in other departments. Breadth-Humanities.

**FPA 140-3 Music after 1900**

An introductory survey of major historical trends and practices of music in the 20th and 21st centuries as revealed by the study of selected music examples. Critical issues fundamental to an understanding of contemporary composition will be examined (e.g. impressionism, twelve-tone music, indeterminacy, the role of technology, improvisation). Prerequisite: FPA 104. May be of particular interest to students in other departments. Breadth-Humanities.

**FPA 145-3 Introduction to Music Composition and Theory**

This course introduces basic concepts of music composition such as melody and pitch organization, harmony, rhythm and form. The fundamental principles of theory and acoustics (e.g. voice-leading, overtone structure, metre) will be studied with particular reference to composition. Students will compose short works within given guidelines that address specific compositional issues. Prerequisite: FPA 104.

**FPA 147-3 Introduction to Electroacoustic Music**

An introduction to the application of electroacoustic technology to music, including the concepts of the audio signal, signal processing and sound synthesis in their musical applications. The techniques of tape music, electronic music and computer music composition will be introduced and their role in both studio composition and live performance will be discussed. Practical experience in several of these areas is included in the lab component. Breadth-Humanities.

**FPA 150-3 Introduction to Acting I**

An approach to the elements of acting based on improvisation, with some attention to working from established texts. Focus will be placed on the development of the actor's instrument. The work will include the development of individual powers of expression — vocally, physically, intellectually, imaginatively, and emotionally. May be of particular interest to students in other departments.

**FPA 151-3 Introduction to Acting II**

Expands the work of Acting I with an increased emphasis on text, leading to scene work. Prerequisite: FPA 150. Students who have completed FPA 152 may not take 151 for further credit. May be of particular interest to students in other departments.

**FPA 160-3 Introductory Studio in Visual Art I**

A hands-on studio course modeled on the progressive development of artistic practice from simple mark-making to full scale installation. Through a process of continuous transformation, an original

idea is developed in a sequence of methods, materials and scales. Some research is required. A course materials fee is required.

### **FPA 161-3 Introductory Studio in Visual Art II**

A continuation of the work begun in FPA 160, with emphasis on particular problems in the visual arts worked through a series of projects, culminating in the Campus Project, a site-specific public work designed, built and installed at the end of the term. Some research is required. Prerequisite: FPA 160. A course materials fee is required. May be of particular interest to students in other departments.

### **FPA 167-3 Visual Art and Culture I**

An introduction to the visual arts of the nineteenth century. Formal and thematic approaches to the arts will be introduced, with attention to the social, institutional, national, and international contexts of art. Breadth-Humanities.

### **FPA 168-3 Visual Art and Culture II**

A study of the visual arts from the twentieth century to the present, with attention to the artists, artworks, movements, and discourses that re-defined the functions and meanings of art. The debates of modernism, postmodernity, postcolonialism, feminism, and the avant-garde will be systematically explored. Breadth-Humanities.

### **FPA 170-3 Introduction to Production Technology**

An introduction to the processes, tools and technology used in the production and presentation of the fine and performing arts. Course requirements will include hands-on assignments in the production of theatre, dance, and music events. Students will work directly with equipment and materials, and are expected to be involved in work on productions and exhibitions outside of lecture and lab hours. Laboratory fee required. May be of particular interest to students in other areas and departments.

### **FPA 171-3 Introduction to Stage and Production Management**

An introduction to the management, and organization of the performing arts. This course will provide a grounding for students who wish to become further involved in the administration of the performing arts and may include practical experience outside of regular seminar hours. May be of particular interest to students in other areas and departments. Students who have received credit for FPA 171 STT-Intro to Stage and Production Management may not take FPA 171 for further credit.

### **FPA 210-3 Artworks, Theories, Contexts**

Introduces theoretical concepts and historical issues that have informed the creation, perception, interpretation, and analysis of selected artworks in formative epochs, such as the Renaissance, Romanticism, Modernism, or Postmodernism. Prerequisite: 24 units including six in the history or theory of the fine or performing arts. Students with credit for FPA 211 Introduction to Contemporary Theory in the Arts cannot take this course for further credit.

### **FPA 220-4 Contemporary Dance III**

The first studio course in a series designed for students pursuing a major or extended minor in dance. Emphasizes work in contemporary dance and is designed to develop technical facility in movement and acquaint the student with form and style in contemporary dance. Prerequisite: FPA 122, 123, 124, 129 and prior approval by interview.

### **FPA 221-4 Contemporary Dance IV**

The second studio course in a series designed for students pursuing a major or extended minor in dance. Expands on the work undertaken in FPA 220-4 Contemporary Dance III and aims to develop technical facility in movement and acquaint the

student with form and style in contemporary dance. (studio) Prerequisite: FPA 220.

### **FPA 224-3 Dance Composition I**

Study in the craft of dance composition emphasizing specific problems in space, time, dynamics, structure and imagery. Students will perform compositions for critical analysis and participate in the rehearsal and performance of their colleagues' compositions. Prerequisite: FPA 122, 123, 124 and 129 and interview.

### **FPA 227-3 History of Dance: From the 20th Century to the Present**

Study of the development of modern dance and the reformation of the ballet from the beginning of the 20th century to the present. Emphasis will be placed on seminal dance artists and the impact their work has had upon the art form in western theatre dance. Students with credit for FPA 328 may not take this course for further credit. Recommended: FPA 127. May be of particular interest to students in other departments.

### **FPA 228W-3 Dance Aesthetics**

An introduction to aesthetic theory as it applies to dance. Lectures will address, among other things, the nature of aesthetic experience, as well as issues pertaining to critical judgment, communication, taste, and high and low art. Prerequisite: students who completed selected topics course FPA 229 in Fall 2005 or Fall 2006 may not take this course for further credit. Writing.

### **FPA 229-3 Selected Topics in Dance I**

A specific topic in dance which is not otherwise covered in depth in regular courses. The work will be practical, theoretical, or a combination of the two, depending on the particular topic in a given term. Prerequisite: FPA 220 or prior approval.

### **FPA 230-5 Filmmaking II**

The first of two courses (FPA 231-5 is the second) which form an intensive study of the craft of sync-sound 16 mm. filmmaking, with an emphasis on production planning, creative development and the shooting and editing of short films. In-class exercises and film screenings will lead to the production of several original films. Each student will be expected to play major creative and technical roles in these productions. Prerequisite: FPA 131, one of FPA 136 or 137 or prior approval. Students should be advised that film production will probably incur significant costs in addition to lab fees. Students who have taken FPA 330 for credit may not take FPA 230 for further credit. Corequisite: FPA 233. A laboratory fee is required.

### **FPA 231-5 Filmmaking III**

This course continues the work begun in FPA 230-5 Filmmaking II. Students will acquire proficiency in film technique through lab exercises, readings and film screenings. As well, all students will participate in the completion of short original sync-sound 16 mm. films which were begun in FPA 230. Emphasis is placed on the development of means for creative expression supported by technical skills. Prerequisite: FPA 230, 233 and laboratory fee required. Students should be advised that film production will probably incur significant costs in addition to lab fees.

### **FPA 232-3 Film Sound**

Through lectures, demonstrations and studio work, students will be introduced to several aspects of location sound recording and audio post production for film and video. Topics will include synchronization systems and techniques, editing, music scoring, mixing and both analog and digital sound technology. Prerequisite: FPA 131 or 147 and prior approval. Students who have completed FPA 330 may not take FPA 232 for further credit. Recommended: CMNS 258.

### **FPA 233-2 The Techniques of Film**

Covers the technical aspects of basic 16 mm. production skills: camera, lighting, sound, editing, lab processes. Prerequisite: FPA 131 and prior approval. Laboratory fee required. Corequisite: FPA 230.

### **FPA 235-3 Experimental Film and Video**

A survey of the key works and ideas that have informed contemporary moving image art practice nationally and internationally. Beginning with antecedents in painting and photography, the course will move forward from the early European avant-garde to the lyrical and structural works of the seventies, the issue-based work of the eighties, and finally the gallery-based practices of the present day. Intended for all students with an interest in the moving image as an art form. Prerequisite: one of FPA 135, 136, 137, 167 or 168 or 30 units. Students who have taken FPA 289-3 in Spring 2006 or Spring 2007 under this title may not take this course for further credit.

### **FPA 236-3 Cinema in Canada**

Examines the achievements of dramatic, documentary and experimental filmmaking in Canada from the earliest days until the present. Special attention will be paid to the cinemas of Quebec and western Canada, and to the cultural, political and theoretical traditions that have shaped contemporary cinema in Canada. Prerequisite: FPA 136 or 137, or 30 units. May be of particular interest to students in other departments. Breadth-Humanities.

### **FPA 237-3 Selected Topics in Film and Video Studies**

This course will cover a specific topic within the field of film and video studies not covered in depth in regularly scheduled courses, such as: a national cinema; film and politics; Quebec cinema; documentary film and video, etc. Weekly sessions. The course may be repeated for credit if a different topic is taught. Prerequisite: FPA 136 or 137. Breadth-Humanities.

### **FPA 238-3 Screenwriting I**

This course introduces the methodologies of writing for the screen in various styles, including dramatic, documentary and experimental forms, with an emphasis on structure and the creative expression of visual ideas. Students will perform a variety of writing assignments and each will be expected to complete one or more short original scripts. Prerequisite: one of FPA 136, 137 or 253 and prior approval. Students who have taken FPA 332 for credit may not take FPA 238 for further credit.

### **FPA 238W-3 Screenwriting II**

This course introduces the methodologies of writing for the screen in various styles, including dramatic, documentary and experimental forms, with an emphasis on structure and the creative expression of visual ideas. Students will perform a variety of writing assignments and each will be expected to complete one or more short original scripts. Prerequisite: one of FPA 136, 137 or 253 and prior approval. Students who have taken FPA 332 for credit may not take FPA 238 for further credit. Writing.

### **FPA 240-3 Contemporary Music Performance I**

Performance of works from the contemporary music repertoire for instruments and voice. A range of material will be covered from more improvisational pieces to conventionally notated scores. Prerequisite: audition/interview.

### **FPA 243-3 Gamelan I**

Practical and theoretical study of music for gamelan ensemble, based on, but not limited to, traditional Javanese music. This course is designed as an introduction to the study of the music of non-Western cultures and as a method of developing ensemble musicianship. Prerequisite: prior approval. May be of particular interest to students in other departments.

**FPA 244-3 Theory of Contemporary Music**

The theoretical investigation of the basic materials of the tempered chromatic scale, alternative tuning systems, and contemporary practices of texture and rhythm. Analysis of a wide range of music, score-reading and exposure to recorded music will be part of the course. Prerequisite: FPA 140 and 145.

**FPA 245-3 Music Composition I**

Composition for small instrumental groups, electroacoustic resources or combinations of instruments and electronics. Students are also encouraged to do work involving collaboration with dance, film, theatre and visual art. In addition to individual composition lessons, students will be required to attend a composition seminar where the practice of composition will be discussed. Seminar topics will include orchestration, world repertoire, and issues of music technology. Prerequisite: FPA 145 and prior approval.

**FPA 246-3 Music Composition II**

This course is a continuation of FPA 245. Prerequisite: FPA 140, 245 and prior approval from the area.

**FPA 247-3 Electroacoustic Music I**

The theory and practice of electroacoustic music technology and composition. In addition to expanding upon the issues introduced in FPA 147, the course will examine through lecture and studio work the following topics: analog and digital synthesis, microcomputer use, the multi-track studio, signal processing, communication protocols such as MIDI and sampling techniques. Prerequisite: FPA 147. Quantitative.

**FPA 248-3 Conducting I**

Introduces basic elements of conducting technique including metrical patterns, quality of beat, cueing, score preparation, rehearsal technique, showing expression and dynamics, and score reading. The course is primarily designed for composers or prospective music teachers. Students will gain regular practical experience through conducting ensembles comprised of members of the class. Prerequisite: FPA 245 or prior approval. Students who have received credit for FPA 249-3 Selected Topics in Music I: Conducting I may not receive further credit for FPA 248.

**FPA 249-3 Selected Topics in Music I**

A specific topic in music which is not otherwise covered in-depth in regular courses. The work may be practical, theoretical or a combination of the two, depending on the particular topic in a given term. Prerequisite: FPA 140 and/or prior approval.

**FPA 250-3 Acting I**

Begins the concentrated work of training the actor in both the freedom and the control of voice and body. This is accomplished through: work on the self as a source of personal imagery and as a potential wellspring of characters, work with other actors in ensemble relationships, work on text as a blueprint for expression, scene study as a vehicle for the realization of the specific dramatic content and overall shape of a play. Prerequisite: prior to enrolment in this course, the student must pass a successful audition. Corequisite: FPA 254.

**FPA 251-3 Acting II**

Continues and expands upon the work undertaken in Acting I. Prerequisite: FPA 250 and 254. Corequisite: FPA 255.

**FPA 252-3 Playmaking I**

Introduces elements of playmaking such as self scripting, mask exploration, clowning and political theatre. The objective is to enable students to make their own theatre. Prerequisite: admission to FPA 250 or prior approval. Laboratory fee required.

**FPA 253-3 Playmaking II**

Expands the work undertaken in Playmaking I emphasizing writing skills and story structure. Prerequisite: FPA 150, 151 and prior approval.

**FPA 254-2 Theatre Laboratory I**

This is the first of four courses in performance research, each of which is 'attached' to one of the four courses: FPA 250, 251, 350 and 351. The work comprises voice and speech training. Prerequisite: prior approval. Corequisite: FPA 250 and 129.

**FPA 255-3 Theatre Laboratory II**

This is the second of four courses in performance research. The work comprises voice and speech training. Prerequisite: FPA 250 and 254. Corequisite: FPA 251.

**FPA 257-3 Context of Theatre I**

A conceptual approach to a selected body of dramatic work focussing on the detailed structural analysis of dramatic texts, their historical context, their development and production histories. Particular emphasis will be placed upon the evolving relationship between theatre and its audience. May be of particular interest to students in other departments.

**FPA 260-3 Studio in Visual Art I**

This course permits students to work extensively in a mature critical studio environment on a combination of freely chosen and assigned projects in various contemporary media. Reading will be required. Prerequisite: FPA 111, 161, 168 and prior approval. A course materials fee is required.

**FPA 261-3 Studio in Visual Art II**

Continues work done in FPA 260-3. Work will combine freely chosen and assigned projects in a variety of contemporary media. Readings will be required as an integral part of studio work. Prerequisite: FPA 260 and status as an approved visual art major. A course materials fee is required.

**FPA 262-3 Methods and Concepts:****Drawing-based Practices**

A studio course introducing drawing practices as they relate to practical, conceptual, aesthetic and historical issues in contemporary art. Prerequisite: FPA 161 and status as an approved major or extended minor in visual art. A course materials fee is required. Students will receive credit for either FPA 262 or 362, but not both.

**FPA 263-3 Methods and Concepts:****Painting-based Practices**

A studio course introducing painting practices as they relate to practical, conceptual, aesthetic and historical issues in contemporary art. Prerequisite: FPA 161 and status as an approved major or extended minor in visual art. A course materials fee is required. Students will receive credit for either FPA 263 or 363, but not both.

**FPA 264-3 Methods and Concepts: Sculptural Practices**

A studio course introducing sculptural practices as they relate to practical, conceptual, aesthetic and historical issues in contemporary art. Prerequisite: FPA 161 or 170. FPA 264 is identical to FPA 364 and students may not take both courses for credit. A course materials fee is required.

**FPA 265-3 Methods and Concepts:****Photo-based Practices**

A studio course introducing photographic practices as they relate to practical, conceptual, aesthetic and historical issues in contemporary art. Prerequisite: FPA 161 and status as an approved major or extended minor in visual art. A course materials fee is required. Students will receive credit for either FPA 265 or 365, but not both.

**FPA 268-3 Methods and Concepts: Spatial Presentation**

A studio course introducing spatial presentation practices as they relate to practical, conceptual, aesthetic and historical issues in contemporary art. Prerequisite: FPA 161 or 170. A course materials fee is required. Students can only receive credit for one of FPA 163, 268 or 368.

**FPA 269-3 Methods and Concepts: Selected Topics**

A studio course introducing topics in art-making practices as they relate to practical, conceptual, aesthetic and historical issues in contemporary art. This course may be taken more than once for credit under a different topic. Prerequisite: FPA 161 and status as an approved major or extended minor in visual art. A course materials fee is required.

**FPA 270-3 Production Ensemble I**

Students having a basic familiarity with elements of production and design participate in an in-depth theoretical and practical exploration of stage management, staging, audio and lighting for theatre, dance and music production. Students in this class will develop skills necessary to provide technical support for the School's productions. May be of particular interest to students in other departments. Prerequisite: FPA 170 or 171 or prior permission.

**FPA 271-3 Production Ensemble II**

Students having a basic familiarity with elements of production and design participate in an in-depth theoretical and practical exploration of stage management, staging, audio and lighting for theatre, dance and music production. Students in this class will develop skills necessary to provide technical support for the School's productions. May be of particular interest to students in other departments. Prerequisite: FPA 170 or FPA 171 or prior permission.

**FPA 272-3 Production Practicum I**

Provides students with the opportunity to learn and practise the technical and management skills and to take on the roles and responsibilities associated with creating a performing arts production. Individual assignments will vary according to the needs of the production season. Required of all second year production and design majors and extended minors. Fall term only. Prerequisite: FPA 170 or FPA 171 and prior approval. Corequisite: FPA 270 Production Ensemble I.

**FPA 273-3 Production Practicum II**

Provides students with the opportunity to learn and practise the technical and management skills and to take on the roles and responsibilities associated with creating a performing arts production. Individual assignments will vary according to the needs of the production season. Required of all second year production and design majors and extended minors. Spring term only. Prerequisite: FPA 170 or 171 or FPA 171(with STT in title) and prior approval. Corequisite: FPA 271-3 Production Ensemble II.

**FPA 289-3 Selected Topics in the Fine and Performing Arts**

A specific topic in fine and performing arts which is not otherwise covered in depth in regular courses and which is not appropriately placed within a single arts discipline. The work will be practical, theoretical, or a combination of the two, depending on the particular topic in a given term. Prerequisite: will vary according to the topic. May be of particular interest to students in other departments.

**FPA 290-3 Video Production I**

A hands-on introduction to the technical and aesthetic aspects of digital video production and post-production. Prerequisite: six units in FPA and prior approval. Laboratory fee required.

**FPA 305-3 Explorations in Contemporary Arts I**

Exploration of a disciplinary or interdisciplinary research topic with School for the Contemporary Arts faculty. Focuses on studio-based project(s), and attention will be paid to theoretical and historical contexts. Prerequisite: 60 units, including at least 30 units in FPA.

**FPA 308-4 Contemporary Arts Field School I (Theory/History)**

A scholarly exploration of artistic traditions and practices in the country being visited, with special attention to cultural, theoretical, historical and political contexts. Prerequisite: a minimum of 60 units and approval of Field School Director. Students with credit for FPA 289, 311, 329, 337, 388 or 389 offered under this topic may not take this course for further credit.

**FPA 309-4 Contemporary Arts Field School II (Studio)**

Students receive training in selected forms of dance, film, video, theatre, music, visual art and other forms of art production in the country being visited, with the opportunity of interacting with local people, artists and academics. Prerequisite: a minimum of 60 units and permission of Field School Director. Students with credit for FPA 289, 311, 329, 337, 388 or 389 offered under this topic may not take this course for further credit.

**FPA 310-4 Interdisciplinary Methods**

An examination of interdisciplinary methods that have been used to research the fine and performing arts. The course is an in-depth study of approaches to interdisciplinary research, including perceptual concerns, theoretical directions, contextual issues, and analytical processes. Prerequisite: FPA 210 and two of FPA 167, 168, 136, 137. Students who have taken FPA 310-5 prior to 1999-2 may take this course for further credit.

**FPA 311-4 Interdisciplinary Studies in the Arts**

An historical, theoretical or thematic topic in the fine and performing arts presenting an in-depth investigation of interdisciplinary approaches to the study of art and culture. Prerequisite: 45 units including six units in history or theory courses within the School for the Contemporary Arts. The course may be repeated when different topics are offered. Recommended: FPA 210.

**FPA 312-3 Intermediate Seminar in Art and Culture**

Investigates a selected thematic topic in art and culture studies, for example, postcolonial theory and the arts; perception and embodiment; art activism and resistance; or urban art and culture. Prerequisite: will vary according to the topic. Students who have taken FPA 312-5 prior to 1999-2 may take this course for further credit.

**FPA 313-5 Arts, Audience, Patronage, Institutions**

An investigation of the fine and performing arts, their audiences, patronage and institutions in a specific historical context. Students will gain an in-depth understanding of a selection of art works and their relationship to their specific cultural context. Prerequisite: 45 units which must include six units in the history or theory of the fine or performing arts. The course may be repeated when different topics are offered. Students who have completed FPA 313 prior to 1998 may take this course for further credit only if the topic differs from the former course. Recommended: FPA 210.

**FPA 314-3 Readings in the History of Art and Culture**

Investigates a selected historical topic in art and culture. Prerequisite: will vary according to the topic. Students who have taken FPA 314-5 prior to 1999-2 may take this course for further credit.

**FPA 319W-3 Critical Writing in the Arts**

Examines aspects of critical writing associated with the fine and performing arts and encourages students to participate as writers in the artistic and cultural debates of their day. Forms examined will include but not be limited to reviews, articles, descriptive synopses for exhibition and festival programs, curatorial essays, project proposals and artists' statements. Prerequisite: 60 units including at least six units in FPA history/theory courses. Writing.

**FPA 320-4 Contemporary Dance V**

The first of four upper division courses which build upon the movement vocabulary of contemporary dance. Prerequisite: FPA 221.

**FPA 321-4 Contemporary Dance VI**

Continues and expands upon the work undertaken in FPA 320. Prerequisite: FPA 320.

**FPA 322-3 Ballet I**

Explores the vocabulary and movement range of classical ballet technique at the intermediate level. Further attention will be given to the understanding of body placement, balance, flexibility and strength. Practical studio experience is offered within the context of specific theoretical principles. Prerequisite: acceptance into the dance major or extended minor program, or prior approval.

**FPA 323-3 Ballet II**

Continuation of FPA 322, with an emphasis on expanding the vocabulary and movement range of classical ballet technique at the intermediate level. Further attention will be given to the understanding of body placement, balance, flexibility and strength. Practical studio experience is offered within the context of specific theoretical principles. Prerequisite: FPA 322, or prior approval.

**FPA 324-3 New Dance Composition**

Students will be introduced to traditional choreographic structures and explore new directions in composition. Emphasis will be on the creation and analysis of work generated by extending the parameters of source, style and form in contemporary dance. Prerequisite: FPA 124, plus one of 224, 230, 240, 245, 252, 253 or 260.

**FPA 325-3 Special Project in Dance Composition**

A specific topic or set of ideas will form the basis for choreographic exploration. Students will create one or more works and participate in research and critical analysis, depending on the particular topic in a given term. Prerequisite: 40 units in FPA courses.

**FPA 326-4 Repertory I**

One of two courses which provide advanced level dance students the opportunity to work as an ensemble rehearsing and preparing for a series of public performances. Choreography will be created and/or selected by a faculty director. Prerequisite: acceptance into the dance major or extended minor, and prior approval. Corequisite: students must be concurrently enrolled in a technique course at an appropriate level.

**FPA 327-4 Repertory II**

One of two courses which provide advanced level dance students with the opportunity to work as an ensemble rehearsing and preparing for a series of public performances. Choreography will be created and/or selected by a faculty director. Prerequisite: acceptance into the dance major or extended minor and prior approval. Corequisite: students must be concurrently enrolled in a technique course at an appropriate level.

**FPA 329-3 Selected Topics in Dance II**

A specific topic in dance which is not otherwise covered in depth in regular courses. The work will be practical, theoretical or a combination of the two, depending on the particular topic in a given term. Prerequisite: FPA 221 or prior approval.

**FPA 332-3 Film Production Seminar**

Facilitates an in-depth understanding of the organizational aspects of film production, with emphasis on pre-production planning. The class will study methods of proposal writing, pre-production and production, developing production packages for short film and video projects. This course is strongly recommended for all students intending to take FPA 430. Prerequisite: FPA 231 or prior approval.

**FPA 333-3 Cinematography and Lighting**

This course emphasizes advanced 16 mm. production skills in cinematography and lighting. Students are expected to participate in intensive camera exercises, as well as to play significant crew roles on fourth year films. Prerequisite: FPA 231 and prior approval. Students who have taken FPA 331 The Crafts of Film III may not take this course for further credit. Laboratory fee required.

**FPA 335-4 Introduction to Film Theory**

This course is concerned with the systematic understanding of the general phenomenon called Cinema rather than with the properties or techniques of individual films. Various theoretical positions will be assessed and compared in terms of cinematic practice and its ideological functions. Prerequisite: six units from among FPA 136, 137, 211, 236, 237. Students who have taken FPA 234 for credit may not take FPA 335 for further credit. Recommended: FPA 210. May be of particular interest to students in other departments.

**FPA 337-3 Intermediate Selected Topics in Film and Video Studies**

An intermediate course in critical studies, addressing a variety of topics under this number; for instance, specific genre or area studies (comedy, film noir, science fiction, etc.); national cinemas; film analysis; Third World film, video art, experimental film, etc. The course may be taken again for credit if the topic changes. Prerequisite: will vary according to subject matter. Students who have taken FPA 339 Selected Topics in Film for credit may not take the same topic under FPA 337 for further credit.

**FPA 338-3 Screenwriting II**

This course will present advanced theory and techniques for writing dramatic, experimental and documentary film and video scripts. Additional topics covered include script analysis, production breakdown, and the writing of treatments and proposals. Prerequisite: one of FPA 238 or 353 or 457 and prior approval. Recommended: strongly recommended for all students developing projects for production in FPA 430.

**FPA 338W-3 Screenwriting II**

This course will present advanced theory and techniques for writing dramatic, experimental and documentary film and video scripts. Additional topics covered include script analysis, production breakdown, and the writing of treatments and proposals. Prerequisite: one of FPA 238 or 353 or 457 and prior approval. Recommended: strongly recommended for all students developing projects for production in FPA 430. Writing.

**FPA 339-3 Directing and Acting for Film and Video**

This course acquaints intermediate level students in film, video and theatre with techniques of dramatic film performance. Students will be expected to perform as both actors and directors on scene work in class. Topics covered include auditioning, script analysis, role preparation, rehearsal, blocking for the camera, and directing techniques. Prerequisite: FPA 131 or 151 and prior approval. Students who have completed Directing and Acting for Film as FPA 379 in spring 1990 or earlier, may not take this course for further credit. This course is not a duplicate of FPA 339 Selected Topics in Film, available in summer 1990 and earlier.

**FPA 340-3 Contemporary Music Performance II**  
A continuation of FPA 240. Prerequisite: FPA 240.

#### **FPA 341-3 World Music**

The relationship of music and culture, with emphasis on traditional and contemporary music in Asia, Africa, the Middle East, Latin America and the Caribbean, and indigenous cultures of North America. Specific cultural areas may be selected for intensive study in any particular term. Prerequisite: 45 units. May be of particular interest to students in other departments.

#### **FPA 343-3 Gamelan II**

Continuation of FPA 243, with increased emphasis on the theoretical and ethnomusicological aspects of gamelan. Prerequisite: FPA 243.

#### **FPA 344-3 Contemporary Music Analysis and Criticism**

An in-depth investigation of selected social, critical and theoretical issues associated with contemporary music, with special emphasis on the period c. 1945 to the present. Issues discussed might include such theoretical concerns as integral serialism; indeterminacy; process music; timbral concerns; or new approaches to melody, harmony and tonality. Critical topics such as music and technology; popular music and the mass media; or critical issues connected with world music might also be considered. The material of the course will be presented through the study of scores, recorded examples and when possible, live concerts. Prerequisite: FPA 244.

#### **FPA 345-3 Music Composition III**

This course is a continuation of FPA 246. Prerequisite: FPA 246 or 247, and prior approval.

#### **FPA 346-3 Music Composition IV**

This course is a continuation of FPA 345. Prerequisite: FPA 345.

#### **FPA 347-3 Electroacoustic Music II**

An advanced examination of the aesthetics, technology, and compositional approaches of electroacoustic music. Topics may include computer music programming, performance systems, compositional strategies and their relationship to technology, synthesis and processing techniques and the analysis of works. Prerequisite: FPA 247. Students with credit for FPA 347 under its former title may take this course for further credit.

#### **FPA 348-3 Conducting II**

Continuation of FPA 248, with an increased emphasis on more advanced conducting projects. Prerequisite: FPA 248 or FPA 249-3 Selected Topics in Music I: Conducting I. Students who have received credit for FPA 349-3 Selected Topics in Music II: Conducting II may not receive further credit for FPA 348.

#### **FPA 349-3 Selected Topics in Music II**

A specific topic in music which is not otherwise covered in depth in regular courses. The work may be practical, theoretical or a combination of the two, depending on the particular topic in a given term. Prerequisite: FPA 245 and/or prior approval. (Prerequisite may vary according to the topic.)

#### **FPA 350-3 Acting III**

Continues and expands work undertaken in FPA 250 and 251, with an increased emphasis on work with established texts. Prerequisite: FPA 251 and 255. Corequisite: FPA 354.

#### **FPA 351-3 Acting IV**

Continues and expands on the work undertaken in Acting III. Prerequisite: FPA 350 and 354. Corequisite: FPA 355.

#### **FPA 352-3 Playmaking III**

Continues the development of playmaking research through intensive studio work consisting of the deconstruction or adaptation of a major dramatic text. Provides the basis for a public presentation in the subsequent term. Prerequisite: FPA 251 and 255.

#### **FPA 353-3 Playmaking IV**

Black Box Theatre. Students will continue playmaking research through the creation of an ensemble season in a series of public presentations. Prerequisite: second year standing in a studio discipline and prior approval from the instructor. May be repeated for credit if course content is different.

#### **FPA 354-2 Theatre Laboratory III**

This is the third of four courses in performance research comprising voice and speech training. Prerequisite: FPA 251, 255. Corequisite: FPA 350.

#### **FPA 355-2 Theatre Laboratory IV**

This is the fourth of four courses in performance research, comprising voice and speech training. Prerequisite: FPA 350, 354. Co-requisite: FPA 351.

#### **FPA 357-3 Context of Theatre II**

A conceptual approach to a selected body of dramatic work. The detailed structural analysis of dramatic texts, their historical context, their development and production histories. Particular emphasis will be placed upon the evolving relationship between theatre and its audience. Prerequisite: 24 lower division units or prior approval. May be of particular interest to students in other departments.

#### **FPA 359-3 Selected Topics in Theatre**

A specific topic in theatre which is not otherwise covered in-depth in regular courses. The work may be practical, theoretical or a combination of the two, depending on the particular topic in a given term. Prerequisite: FPA 250 and/or prior approval.

#### **FPA 360-3 Studio in Visual Art III**

An open critical studio course. Students are required to have a program of work prepared at the beginning of the term. This program will constitute the basis of the student's work in the course, and will be the subject of continuing critical discussion. This discussion will be integrated with theoretical studies in the parallel seminar course, FPA 366. Those students who have satisfactorily completed the lower division requirements for the major may apply for entry into the third year studio/seminar stream. Admission is by portfolio assessment and course achievement review in the spring term before third year. Prerequisite: FPA 167, 168, 210, and prior approval. A course materials fee is required. Corequisite: FPA 366.

#### **FPA 361-3 Studio in Visual Art IV**

An open critical studio course. It will continue and extend work done in FPA 360. Students are required to have a program of work prepared at the beginning of the term. This program will form the basis of the student's work in the course, and will be the subject of continuing critical discussion. This discussion will be integrated with theoretical studies in the parallel seminar course, FPA 367. Prerequisite: FPA 360 and 366. Corequisite: FPA 367. A course materials fee is required.

#### **FPA 362-3 Methods and Concepts:**

##### **Drawing-based Practices**

Presents drawing practices as they relate to practical, conceptual, aesthetic and historical issues in contemporary art. Additional assignments will be required for students taking the course at this level. Prerequisite: FPA 161 and status as an approved major or extended minor in visual art. A course materials fee is required. Students will receive credit for either FPA 262 or 362, but not both.

#### **FPA 363-3 Methods and Concepts: Painting Practices**

Presents painting practices as they relate to practical, conceptual, aesthetic and historical issues in contemporary art. Additional assignments will be required for students taking the course at this level. (studio) Prerequisite: FPA 161 and status as an approved major or extended minor in visual art. A course materials fee is required. Students will receive credit for either FPA 263 or 363, but not both.

#### **FPA 364-3 Methods and Concepts: Sculptural Practices**

Presents sculptural practices as they relate to practical, conceptual, aesthetic and historical issues in contemporary art. Additional assignments will be required for students taking the course at this level. Prerequisite: FPA 161 and status as an approved major or extended minor in visual art. A course materials fee is required. Students will receive credit for one of FPA 264, 170, or 364.

#### **FPA 365-3 Methods and Concepts: Photo-based Practices**

Presents photo-based practices as they relate to practical, conceptual, aesthetic and historical issues in contemporary art. Additional assignments will be required for students taking the course at this level. Prerequisite: FPA 161 and status as an approved major or extended minor in visual art. A course materials fee is required. Students will receive credit for either FPA 265 or 365, but not both.

#### **FPA 366-3 Seminar in Visual Art I**

A seminar course to be taken by all students in FPA 360. It deals with visual art topics of an historical, critical and theoretical nature which concern practising artists in the contemporary context. Students will be required to present research papers. Each research subject will be studied in connection with the student's own artistic work. Senior students in other disciplines with appropriate background may request approval to take this course. Those students who have satisfactorily completed the lower division requirements for the major may apply for entry into the third year studio/seminar stream. Admission is by portfolio assessment and course achievement review in the spring term before third year. Prerequisite: FPA 167, 168, 210, and prior approval. Corequisite: FPA 360.

#### **FPA 367-3 Seminar in Visual Art II**

A seminar course to be taken by all students in FPA 361. It deals with visual arts topics of an historical, critical and theoretical nature which concern practising artists in the contemporary context. Students will be required to present research papers. Each research subject will be studied in connection with the student's own artistic work. Senior students in other disciplines with appropriate background may request approval to take this course. Prerequisite: FPA 366. Visual art major students transferring into third year may request approval to take FPA 211 concurrently. Corequisite: FPA 361.

#### **FPA 368-3 Methods and Concepts: Spatial Presentation**

A studio course introducing spatial presentation practices as they relate to practical, conceptual, aesthetic and historical issues in contemporary art. Prerequisite: FPA 161 or 170. Students can receive credit for only one of FPA 163, 268 or 368. A course materials fee is required.

#### **FPA 369-3 Methods and Concepts: Selected Topics**

A studio course presenting topics in art-making practices as they relate to practical, conceptual, aesthetic and historical issues in contemporary art. This course may be taken more than once for credit under a different topic. Prerequisite: FPA 161 and status as an approved major or extended minor in visual art. A course materials fee is required.

#### **FPA 370-3 Production Ensemble III**

Provides students with training and an historical and contemporary context for their related practicum roles as production heads and stage management and design personnel. Issues will be drawn from the School's current production season and from national and international forums in related fields. Prerequisite: FPA 270 and 271 or prior approval. Students who received credit for FPA 372 prior to 2005 may not take FPA 370 for further credit.

**FPA 371-3 Production Ensemble IV**

Provides students with training and an historical and contemporary context for their related practicum roles as production heads and stage management and design personnel. Issues will be drawn from the School's current production season and from national and international forums in related fields.

Prerequisite: FPA 270 and 271 or prior approval. Students who received credit for FPA 373 (Technical Production II) prior to 2005 may not take FPA 371 for further credit.

**FPA 372-3 Production Practicum III**

Provides students with the opportunity to learn and practise the technical and management skills and to take on the roles and responsibilities associated with creating a performing arts production. Individual assignments will vary according to the needs of the production season. Required of all upper division production and design majors and extended minors working in production and design. Students can expect to devote approximately 150 hours to their FPA 372 production practicum assignments.

Prerequisite: FPA 272 and 273, and prior approval.

**FPA 373-3 Production Practicum IV**

Provides students with the opportunity to learn and practise the technical and management skills and to take on the roles and responsibilities associated with creating a performing arts production. Individual assignments will vary according to the needs of the production season. Required of all upper division production and design majors and extended minors working in production and design. Students can expect to devote approximately 150 hours to their FPA 373 production practicum assignments.

Prerequisite: FPA 272 and 273, or FPA 272 (with STT title) and FPA 273, and prior approval.

**FPA 374-3 Stage Lighting**

Explores contemporary stage lighting for theatre, dance and opera. Participants will review the principles of theatrical lighting instruments and control systems and will experiment with the components of lighting design in a variety of studio projects. This course will require a practicum in an actual performance. Prerequisite: FPA 270 or FPA 271 or prior approval. Students with credit for FPA 371 prior to 2005 may not take FPA 374 for further credit. Laboratory fee required.

**FPA 375-3 Stage Design**

Explores the numerous complex processes and practices needed to create two and three dimensional designs for stage and performance. Students will engage in a series of creative projects, research, analysis and presentations to enable them to develop and realize their design solutions. Prerequisite: FPA 270 or FPA 271 or prior approval. Students with credit for FPA 370 prior to 2005 may not take FPA 375 for further credit. Laboratory fee required.

**FPA 387-3 Digital Art**

Focuses on digital technology and its impact on contemporary art. Explores the history and practice of digital art through the creation of artworks in which the compute is intimately involved from inception through to realization. Prerequisite: FPA 347, or CMNS 358, or permission of the instructor. Students with credit for FPA 389 offered under this topic may not take this course for further credit.

**FPA 389-3 Selected Topics in the Fine and Performing Arts II**

A specific topic in fine and performing arts which is not otherwise covered in depth in regular courses and which is not appropriately placed within a single arts discipline. The work will be practical, theoretical, or a combination of the two, depending on the particular topic in a given term. Prerequisite: will vary with the topic. May be of particular interest to students in other departments.

**FPA 390-3 Video Production II**

This course is intended for students interested in video as a means of artistic expression. Students will be encouraged to challenge accepted notions of the video medium and explore the creative possibilities of multi channel presentations. The course comprises a series of technical workshops, screenings and group seminars whose purpose is to develop an awareness of the creative and conceptual possibilities of the medium of video. Students will be expected to initiate and complete a short video project based on an idea of their own choosing. Projects which involve school-wide interdisciplinary collaborations will be encouraged. Prerequisite: prior approval through written proposal for a ten minute video project or installation; an interview; plus FPA 290 or equivalent video experience. A laboratory fee is required. Students should be advised that video production may require personal funding beyond the lab fee.

**FPA 400-3 Directed Studies (Studio)**

An opportunity for advanced students to carry out an independent project which is planned and completed in close consultation with the supervisory instructor. Before enrolment, the student must submit a written proposal outlining the project in detail to the chosen supervisor for approval. Directed studies courses may not be used as a substitute for existing courses. Prerequisite: 60 units plus a minimum standing of completion of second year in any of the programs offered in the School for the Contemporary Arts and prior approval.

**FPA 401-3 Directed Studies (Theory/History)**

This course is intended to provide opportunity for advanced students to carry out an independent project which is planned and completed in close consultation with the supervisory instructor. Before enrolment, the student must submit a written proposal outlining the project in detail to the chosen supervisor for approval. Directed studies courses may not be used as a substitute for existing courses. Prerequisite: 60 units plus a minimum standing of completion of second year in any of the programs offered in the School for the Contemporary Arts and prior approval.

**FPA 402-4 Directed Studies (Studio)**

Provides an opportunity for advanced students to carry out an independent project which is planned and completed in close consultation with the supervisory instructor. Before enrolment, the student must submit a written proposal outlining the project in detail to the chosen supervisor for approval. Directed studies courses may not be used as a substitute for existing courses. Prerequisite: 60 units plus a minimum standing of completion of second year in any of the programs offered in the School for the Contemporary Arts and prior approval.

**FPA 403-4 Directed Studies (Theory/History)**

This course is intended to provide opportunity for advanced students to carry out an independent project which is planned and completed in close consultation with the supervisory instructor. Before enrolment, the student must submit a written proposal outlining the project in detail to the chosen supervisor for approval. Directed studies courses may not be used as a substitute for existing courses. Prerequisite: 60 units plus completion of second year in any of the programs offered in the School for the Contemporary Arts and prior approval.

**FPA 404-5 Directed Studies (Studio)**

Provides an opportunity for advanced students to carry out an independent project which is planned and completed in close consultation with the supervisory instructor. Before enrolment, the student must submit a written proposal outlining the project in detail to the chosen supervisor for approval. Directed studies courses may not be used as a substitute for existing courses. Prerequisite: 60 units plus a

minimum standing of completion of second year in any of the programs offered in the School for the Contemporary Arts and prior approval.

**FPA 405-5 Explorations in Contemporary Arts II**

Exploration of a disciplinary or interdisciplinary research topic with School for the Contemporary Arts faculty. Focuses on studio-based project(s), and attention will be paid to theoretical and historical contexts. Prerequisite: 60 units, including at least 36 units in FPA. Students with credit for FPA 389 under this topic may not take this course for further credit.

**FPA 408-4 Contemporary Arts Field School III (Theory/History)**

A scholarly exploration of artistic traditions and practices in the country being visited, with special attention to cultural, theoretical, historical and political contexts. Prerequisite: a minimum of 60 units and approval of Field School Director. Students with credit for FPA 289, 311, 329, 337, 388 or 389 offered under this topic may not take this course for further credit.

**FPA 409-4 Contemporary Arts Field School IV (Studio)**

Students receive training in selected forms of dance, film, video, theatre, music, visual art and other forms of art production in the country being visited, with the opportunity of interacting with local people, artists and academics. Prerequisite: a minimum of 60 units and approval of Field School Director. Students with credit for FPA 289, 311, 329, 337, 388 or 389 offered under this topic may not take this course for further credit.

**FPA 411-3 Interdisciplinary Studies in the Contemporary Arts**

An interdisciplinary investigation of key issues in the contemporary arts. Prerequisite: At least 55 units, which must include FPA 210 and one of FPA 310 or 311.

**FPA 412-4 Advanced Seminar in Art and Culture Studies**

Provides an in-depth investigation of a selected theoretical, historical or thematic topic in art and culture studies. This course requires independent research leading to a substantial paper, as well as directed reading preparation for seminars. Topics will vary from term to term. The course may be repeated when different topics are offered. Prerequisite: eight upper division units and FPA 210. May be of particular interest to students in other departments.

**FPA 414-3 Advanced Topic in the History of Art and Culture**

An in-depth investigation of a selected topic in the history of art and culture. Prerequisite: will vary according to the topic.

**FPA 416-3 Practices in Art and Culture**

Investigates specific practices in art and culture, and combines work on a project with theoretical and historical research. The course will focus on the history, theory, and practices of, for example, curating, writing, or making audio-visual artworks. Prerequisite: will vary according to the topic.

**FPA 420-4 Contemporary Dance VII**

The third of four upper division courses which build upon the movement vocabulary of contemporary dance. Prerequisite: FPA 321.

**FPA 421-4 Contemporary Dance VIII**

Continues and expands the work undertaken in FPA 420. Prerequisite: FPA 420.

**FPA 425-4 Intensive Studies in Performance**

Advanced performance studies in intensive specialized workshops and/or participation in choreographic projects culminating in public performance. Course content may include interdisciplinary collaborations and a variety of performance styles and techniques. Prerequisite: FPA 326 or 327 with prior approval by application.

Students must be concurrently enrolled in a dance technique course at the appropriate level.

### **FPA 426-3 Dance/Movement Analysis**

An introduction into the theory and practice of movement analysis based on recognized theories of analysis. Experiential work may be included in the course and a dance or similar movement background is necessary. Prerequisite: FPA 124 or 151 or prior approval.

### **FPA 427-3 Ballet III**

An extension of classical ballet technique on an upper intermediate level. Understanding of basic principles is assumed and attention will be focused on combinations of movement, musicality and performance. Prerequisite: FPA 323, or prior approval.

### **FPA 428-3 Ballet IV**

An advanced course. Students must have a thorough background in the vocabulary and techniques of classical ballet. Attention will be given to movement sequences from the ballet repertoire. Prerequisite: FPA 427, or prior approval.

### **FPA 430-5 Filmmaking IV**

The first half of a two term project in advanced film and/or video production. Students are expected to participate in the realization of one or more projects during the two terms. Students seeking entry into this course are required to present a completed script (for a drama) or detailed proposal (for a documentary or experimental film) prior to enrolment. The exact nature of each student's participation will be determined in consultation with the instructor. Prerequisite: FPA 231 and 10 units in film or video studies plus prior approval. This course is open only to approved film majors. Students should be advised that film production will probably incur significant financial costs in addition to required lab fees.

### **FPA 432-5 Filmmaking V**

This course is intended for completion of film and video projects begun in FPA 430. Particular emphasis will be given to advanced film craft in the post-production phase. The exact nature of each student's participation will be determined in consultation with the instructor. Prerequisite: FPA 430. A laboratory fee is required. Students should be advised that film production will probably incur significant costs in addition to lab fees.

### **FPA 436-3 Advanced Seminar in Film and Video Studies**

This course features intensive study and analysis of selected topics in film theory, history, criticism and aesthetics. Examples include: work of specific directors or periods; theories of narrativity; ideological analysis; particular aspects of national cinemas, etc. is taught. Prerequisite: FPA 335 or permission of instructor.

### **FPA 443-3 Gamelan III**

Continuation of FPA 343 with emphasis on the technique of the elaborating instruments of the gamelan ensemble. Prerequisite: FPA 343.

### **FPA 445-3 Music Composition V**

This course is a continuation of FPA 346. Prerequisite: FPA 346.

### **FPA 446-5 Senior Project in Music Composition**

Students will undertake a large-scale project in music composition as the culmination of their undergraduate composition studies. Prerequisite: FPA 445.

### **FPA 447-3 Computer Music Composition**

The theory and practice of digital techniques and computer systems as applied to sound synthesis and music composition. The course will consider the major types of hardware and software systems developed for music from 1955 to the present, and will discuss such issues as machine programmability,

user interaction, acoustic models for sound synthesis, and compositional algorithms. Students will have the opportunity for practical compositional work.

Prerequisite: FPA 347. Recommended: CMPT 001 or 110. Quantitative.

### **FPA 450-3 Advanced Studio Skills**

A course in public performance, with the option of focusing on other advanced studio skills. Integrates and implements the techniques acquired in the earlier studios. Prerequisite: prior approval from the instructor or audition. May be repeated for credit if course content is different.

### **FPA 453-3 Theory and Practice of Directing**

A course in the fundamentals of directing leading to public performance of student directed projects. Allows the option of public performance with a professional director. Integrates and implements the techniques acquired in the earlier studios.

Prerequisite: FPA 150, 151, and prior approval from the instructor. May be repeated for credit if course content is different.

### **FPA 457-3 Context of Theatre III**

An analytical approach to a selected body of dramatic work. Course content includes an intensive consideration of practical dramatic techniques such as story structure and dramaturgy. Prerequisite: 45 units and prior approval from the instructor. May be repeated for credit if course content is different.

### **FPA 460-3 Studio in Visual Art V**

This course permits students to work in an open studio situation. Students propose an independent program of work in the media of their choice at the beginning of the term and develop it in critical dialogue with the instructor(s). Prerequisite: FPA 361, 367 and status as an approved major in visual art. A course materials fee is required.

### **FPA 461-5 Studio in Visual Art VI**

Permits students completing the visual art major to work in an open and critical studio situation. Students continue to develop a body of work begun in FPA 460 for their graduating exhibition at the end of the term. Preparation and installation of the exhibition is part of the course requirement. Prerequisite: FPA 460 and status as an approved major in visual art. A course materials fee is required.

### **FPA 470-3 Production Ensemble V**

Provides senior students with training and an historical and contemporary context for their related practicum roles as production heads and stage management and design personnel. Issues will be drawn from the School's current production season and from national and international forums in related fields. Prerequisite: FPA 370 or 371 and prior approval.

### **FPA 471-3 Production Ensemble VI**

Provides senior students with training and an historical and contemporary context for their related practicum roles as production heads and stage management and design personnel. Issues will be drawn from the School's current production season and from national and international forums in related fields. Prerequisite: FPA 370 or 371 and prior approval.

### **FPA 472-3 Production Practicum V**

Provides students with the opportunity to learn and practise the technical and management skills and to take on the roles and responsibilities associated with creating a performing arts production. Individual assignments will vary according to the needs of the production season. Required of all upper division production and design majors and extended minors working in production and design. Students can expect to devote approximately 150 hours to their FPA 472 production practicum assignments. Prerequisite: FPA 372 or 373 and prior approval.

### **FPA 473-6 Production Practicum VI**

Provides students with the opportunity to learn and practise the technical and management skills and to take on senior roles and responsibilities associated with creating a performing arts production. Individual assignments will vary according to the needs of the production season. Students can expect to devote approximately 250 hours to their FPA 473 production practicum assignments. Prerequisite: one of FPA 372, FPA 372 (with STT title), FPA 373, FPA 472, FPA 472 (with STT title) and prior approval.

### **FPA 489-5 Interdisciplinary Project in FPA**

This course permits students to explore the relationships among the arts by undertaking creative projects involving more than one art form. Students will work under the close supervision of one or more faculty and will be required to discuss their work on a regular basis with others involved in the course. Prerequisite: will vary according to the topic.

### **FPA 811-5 Interdisciplinary Graduate Seminar I**

Critical study of contemporary issues in the fine and performing arts, with emphasis on concerns common to diverse artistic disciplines and the interaction between art and society.

### **FPA 812-5 Interdisciplinary Graduate Seminar II**

Continuation of FPA 811. Prerequisite: FPA 811.

### **FPA 813-5 Interdisciplinary Graduate Studio**

A selected topics studio course with an emphasis on interdisciplinary artistic projects. Prerequisite: FPA 811 or 812.

### **FPA 877-5 Selected Topics in Fine and Performing Arts**

Study of particular artistic techniques or issues. The topic varies from term to term.

### **FPA 883-5 Studio in Fine and Performing Arts I**

Intensive studio work, concentrated in a particular art discipline, but with opportunity to involve interdisciplinary materials and techniques.

### **FPA 885-5 Studio in Fine and Performing Arts II**

Continuation of FPA 883. Prerequisite: FPA 883.

### **FPA 887-5 Selected Topics in Fine and Performing Arts**

Study of particular artistic techniques or issues. The topic varies from term to term.

### **FPA 889-5 Directed Study in Fine and Performing Arts**

### **FPA 898-10 Master of Fine Arts Graduating Project**

## **Criminology CRIM Faculty of Arts and Social Sciences**

### **CRIM 101-3 Introduction to Criminology**

Topics will include: examination of different terms and concepts commonly used in criminology, such as crime, delinquency, deviance, criminal, victim, rehabilitation and treatment. Criminology as a body of knowledge and as a profession. Position and subject matter of criminology. Relationship between criminology and other academic disciplines. Specificity of criminology. Relationship between theory and practice. History and evolution of criminological thought. Elements of continuity and discontinuity between classical and modern theories of criminality. Levels of explanations in criminology. Practical applications of criminology. The foundations of a modern criminal policy. Breadth-Social Sciences.

### **CRIM 103-3 Psychological Explanations of Criminal and Deviant Behavior**

An introduction to, and critical examination of, biogenetic, psychiatric, and psychological explanations of criminal and deviant behavior. Special

attention will be given to the hypothesized links between criminality and genetics, physiology, the endocrine system, mental disorders, personality, moral development, and other forms of social learning. Recommended: PSYC 100 and 102. Breadth-Social Sciences

### **CRIM 104-3 Sociological Explanations of Criminal and Deviant Behavior**

A survey of some major sociological perspectives on crime and deviance that will include both mainstream and critical theories. These will include: anomie, neutralization, control, group conflict, sub-cultural, ecological, functionalist and critical theories. Critical analysis of the assumptions upon which each theory is based. Examination of the similarities and differences between/among the various explanations. Recommended: SA 150. Breadth-Social Sciences

### **CRIM 131-3 Introduction to the Criminal Justice System – A Total System Approach**

Introductory analysis of the structure and operation of the Canadian criminal justice system. Examination of the patterns of crime and victimization; police operations, discretion and decision making; the criminal courts, including sentencing; the corrections system, including correctional institutions and community-based models; the youth justice system. Patterns of contact and conflict between various social groups and the criminal justice system. Breadth-Social Sciences.

### **CRIM 135-3 Introduction to Canadian Law and Legal Institutions: A Criminal Justice Perspective**

A general introduction to the fundamental and competing principles of jurisprudence and to the basic legal institutions of Canada. Prepares students for those law and law related courses offered within the School of Criminology and will consider the history of Canadian law, the development of the Canadian constitution, the system of Canadian courts and the roles and responsibilities of members of the legal profession. In addition, the course will consider the nature of legal reasoning, the doctrine of precedent, principles of statutory interpretation and will also introduce the fields of contract, torts, administrative law, and family law. Also examines the process of law reform in Canada. Breadth-Social Sciences.

### **CRIM 161-3 Practicum I**

First term of work experience in the Criminology Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: 30 units (at least fifteen completed at Simon Fraser University) including CRIM 101, 220, 131, 135 and one of PSYC 210, STAT 101 or 203, with a cumulative grade point average of not less than 2.75. Students should apply to the Faculty of Arts co-op co-ordinator one term in advance.

### **CRIM 203-3 Historical Reactions to Crime and Deviance**

Historical review of society's reaction to crime and deviance, relating this history to religious, political, social and philosophical movements and schools of thought. Consideration of the history and evolution of punishment and penal methods and the historical forces influencing the development, implementation, and modification of these methods. Prerequisite: any 100 division CRIM course.

### **CRIM 210-3 Law, Youth and Young Offenders**

An analysis of the definition and control of youthful misconduct in an historical and contemporary context. Attention is focused upon: the social construction of 'juvenile delinquency', the decline of the concept, and the emergence of the concept of the 'young offender'; the Young Offenders Act and related legislation; the growth of the welfare state and the role of social workers in 'policing' youth and families; explanations for the criminal behavior of young persons; state and

private sector programs designed to deal with such behavior. Prerequisite: any 100 division CRIM course.

### **CRIM 213-3 Women and Criminal Justice**

This course offers an historical and analytical overview of women and crime, taking into account the role of gender in both criminality and social responses to crime. Specific emphasis will be given to feminist theories. Attention will focus on the specific crimes and patterns of control and punishment. Prerequisite: any 100 division CRIM course.

### **CRIM 220-3 Research Methods in Criminology**

An introduction to criminological research that is intended to develop the student's research and analytical skills. Specifically, the course will focus on the theory of inquiry, the logic, and structure of criminological inquiry, research design, data gathering, analysis and reporting. Students with credit for CRIM 120 may not take CRIM 220 for further credit. Recommended: any 100 division CRIM course. Quantitative.

### **CRIM 230-3 Criminal Law**

Nature, purpose, scope, sources and basic principles of the criminal law. Study of certain fundamental legal concepts such as mens rea, negligence and strict liability. Analysis of the concept of criminal responsibility in Canada. Critical examination of the legislative policies expressed in the Criminal Code. Study of the basic elements of a criminal offence. Examination of the legal principles relating to certain specific crimes and to certain major defences. Impact of Canadian Charter of Rights and Freedoms on the criminal law. Prerequisite: CRIM 135.

### **CRIM 241-3 Introduction to Corrections**

An examination of the organization, structure and operation of contemporary Canadian corrections. A consideration of the history and development of provincial and federal correctional systems. The role of sentencing in the correctional process and alternatives to confinement. Discussion of the social organization of correctional institutions, including the inmates, correctional officers, correctional treatment staff and administrators. Parole board decision making and the issues surrounding the re-entry of offenders into the community. Community-based corrections programs and outcomes. Prerequisite: CRIM131.

### **CRIM 251-3 Introduction to Policing**

An examination of the organization and operation of contemporary Canadian policing. Consideration of the history and development of policing in Canada, the role of the police in Canadian society and the police occupation, including recruitment and training. Discussion of police decision making and the exercise of discretion, police powers, and structures of accountability. Managing the police organization. Examination of police-community relations and crime prevention initiatives. Prerequisite: CRIM 131. Students with credit for CRIM 151 may not take CRIM 251 for further credit.

### **CRIM 261-3 Practicum II**

Second term of work experience in the Criminology Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of CRIM 161 and 45 units with a minimum CGPA of 2.75.

### **CRIM 300W-3 Current Theories and Perspectives in Criminology**

A detailed examination of current theories and perspectives in criminology. The content of the course will change with developments in the area. Students can expect to study biological, psychological and sociological theories and perspectives, as well as those from other relevant disciplines and fields of inquiry (e.g. geography, political science and cultural studies). Prerequisite: CRIM 101. Writing.

### **CRIM 301-3 Crime in Contemporary Society**

Contemporary issues, problems and themes pertinent to the field of criminology. Development, character and function of criminology as an academic and professional discipline. Status of criminology in the Canadian context. Selected issues of the study of crime, law and justice which will vary depending on instructor. This course may not be taken by students who are majoring or minoring in Criminology. Breadth-Social Sciences.

### **CRIM 302-3 Critical Approaches to Crime and Deviance**

Critique of traditional criminological theory and of the conventional approaches to the problems of crime and punishment. Critique of classical etiological criminology. Examination of the relationships between crime, class and power. The criminal as a scapegoat for the system. The stereotype of the criminal. Street crime vs. corporation and state crime. Criticism of treatment ideology and techniques. Comparison of conservative and radical criminal policy. The controversy about the possibility of a value-free social science and about the political commitment of the social scientist. Prerequisite: CRIM 101.

### **CRIM 310-3 Young Offenders and Criminal Justice: Advanced Topics**

Examines some of the more complex contemporary issues relating to young offenders and justice. For any given term, the content of the course will reflect current controversies as well as faculty and student interests. Topics may include social control theory and juvenile justice; an assessment of theories of rehabilitation; the legal philosophy of the young offenders legislation and its impact on juvenile justice; and an evaluation of diversion, deinstitutionalization and de-legalization in Canada and the United States. Prerequisite: CRIM 101.

### **CRIM 311-3 Minorities and the Criminal Justice System**

An analysis of political, economic, and ethnic minorities and their relationship with the criminal justice system. Critical analysis of possible discordance, disharmony or conflict between ethnic and racial minorities such as Native Indians, Inuit, Metis, Doukhobor and others and the legal and social norms of the 'host' majority. Women and the criminal justice system. Prerequisite: CRIM 101.

### **CRIM 312-3 Criminological Perspectives on Social Problems**

Involves detailed study of forms of deviance that have been commonly defined as constituting 'social problems'. Consideration of drug abuse (alcohol, nicotine, heroin and others), suicide, prostitution, obscenity, gambling and abortion. Justifications for present legislative policy and the relationship between these activities and the criminal justice system. Prerequisite: CRIM 101.

### **CRIM 313-3 Specific Types of Crimes**

Critical analysis of a specific type of crime with particular emphasis on the nature, the incidence, correlates, control and prevention. Special attention may be given to white collar crime, computer crime, organized crime, violent crimes, political crimes, sexual offence, professional crimes, morality crime, etc. Prerequisite: CRIM 101.

### **CRIM 314-3 Mental Disorder, Criminality and the Law**

Critical examination of the impact of psychiatry and related clinical professions on the criminal justice system. Relationship between institutions of mental health and legal control. The relevance of psychiatric theory and decision-making for the processing of mentally disordered offenders. The role of forensic clinicians in the courts, prisons, mental hospitals and related agencies. Specific issues addressed in this course will include psychiatric assessment, criminal responsibility, fitness to stand trial, prediction of

dangerousness, treatment of mentally ill criminals and the penal and therapeutic commitment of the insane. Prerequisite: CRIM 101. Recommended: CRIM 131.

#### **CRIM 315-4 Restorative Justice**

An examination and analysis of the principles, assumptions, key concepts and applications of restorative (Transformative) justice. The course will contrast restorative justice with the dominant retributive/punitive model of justice and provide an introduction to a variety of both established and emerging expressions of restorative justice including, victim/offender reconciliation programs, family/group conferencing and circle remedies. Breadth-Social Sciences.

#### **CRIM 316-3 Sexual Offenders and Sexual Offences**

Provides an overview of current theoretical, clinical, and legal issues related to sexual offenders and sexual offences. For each of these issues, consideration will be given to different approaches and perspectives, and debates characterizing them. The topics to be covered include: explanatory models of sexual offending; developmental risk factors of sexual offending; typologies of sexual offenders; criminal careers of sexual offenders; phallometric assessment; actuarial and clinical risk assessment; treatment programs and their effectiveness, and criminal justice system initiatives. Prerequisite: CRIM 101 and 103. Students who have taken CRIM 417 in Spring or Summer 2005 may not take this course for further credit.

#### **CRIM 317-3 Prostitution in Canada**

Examines the history of prostitution; research on sex sellers, sex buyers, and managers; theories of prostitution; models of prostitution law; the history of prostitution law and its enforcement; the findings and recommendations of various Committees, Commissions and Task Forces examining prostitution in Canada. Prerequisite: CRIM 101. Students who have taken CRIM 313 (Specific Types of Crime) prior to Summer 2007 may not take this course for further credit.

#### **CRIM 318-3 Special Topics in Criminology**

A critical analysis of specific areas of criminology or criminal justice. The subjects covered will change from term to term depending on the specific interests of faculty, or students and current issues in criminology. Prerequisite: CRIM 101.

#### **CRIM 319-3 Special Topics in Criminology**

A critical analysis of specific areas of criminology or criminal justice. The subjects covered will change from term to term depending on the specific interests of faculty, or students and current issues in criminology. Prerequisite: CRIM 101.

#### **CRIM 320-3 Quantitative Research Methods in Criminology**

A detailed examination of the quantitative research methods and techniques most frequently used in criminological research. Advantages and shortcomings of each method and the appropriateness of each technique for criminological research. Problems of pure and applied research. Specific issues of interdisciplinary research. Critical evaluation of the quantitative methods used in certain major criminological studies. Prerequisite: CRIM 101; one of CRIM 120 or 220. CRIM 320 may be taken concurrently with CRIM 321. Quantitative.

#### **CRIM 321-3 Qualitative Research Methods in Criminology**

A detailed examination and application of qualitative research methods and techniques most frequently used in criminological research. Advantages and disadvantages of each method and the appropriateness of each technique for criminological research. Ethics of criminological research. Specific issues of interdisciplinary research. Critical evaluation

of qualitative methods used in certain major criminological studies. Prerequisite: CRIM 101; one of CRIM 120 or 220. This course may be taken concurrently with CRIM 320.

#### **CRIM 330-3 Criminal Procedure and Evidence**

Critical examination of selected topics in criminal procedure and evidence, including jurisdiction, police powers of search and seizure, the right to counsel and pre-trial and trial procedures. Brief survey of the system of rules and standards by means of which the admissibility of evidence is determined. Close examination of the Charter of Rights and Freedoms and its impact on criminal procedure and evidence. Prerequisite: CRIM 101 and 230.

#### **CRIM 331-3 Advanced Criminal Law**

An extension of CRIM 230, this course will examine Canadian criminal law in greater depth as well as in comparison with other jurisdictions. Each term several substantive areas will be analysed closely. The areas to be examined will be determined by student interest but may include sexual offences, public order offences, mental disorder and the criminal process, property offences, etc. Prerequisite: CRIM 101 and 230.

#### **CRIM 332-3 Sociology of Law**

Introduction to the theory of sociology of law. Law and social structure. Law as a product of a social system and as an instrument of social change. Social functions of the law. Relationship between law and the structure and function of various other social institutions. The process of law-making. Process by which various interests become translated into legal rules. The social reality of the law; the law in action. Social sciences findings into the operation and practice of the law. Critical and feminist perspectives on law. Public knowledge, awareness, opinions and attitudes to the law, sanctions and the criminal justice system. Prerequisite: CRIM 101 and 135.

#### **CRIM 333-3 Women, Law and the State**

Provides an in-depth consideration of feminist perspectives on the relationship of women to the state and the law. The nature of the contribution of criminal and family law to the reproduction of gender relations will be analyzed. The implications of legal intervention and non-intervention in family relations, sex-specific and sex-related legislation will be examined. Theoretical concepts and issues such as patriarchal relations, sexuality and reproduction, and formal and informal control will be addressed. Prerequisite: CRIM 101; 135. Recommended: CRIM 213.

#### **CRIM 334-3 Law and Human Reproduction**

Overview of theoretical perspectives and available research on debates linked with human reproduction. Reconsideration of the effects of legislation, social policy and social change on contraception, birth, abortion, adoption, eugenics policies, new reproductive technologies, sexualities, and other topics. Historical and contemporary examples will be used. Feminist perspectives will be featured along with other approaches to human reproduction. Prerequisite: this course is identical to WS 334 and students may not take both courses for credit. Students who have taken CRIM 416, 417, 418 under the title Law and Reproduction may not take this course for further credit.

#### **CRIM 335-3 Human Rights and Civil Liberties**

A study of the relationship between the government and the individual. Focus upon the Canadian Charter of Rights and Freedoms and its interpretation by the judiciary. Examination of the issues of equality before the law, freedom of speech, freedom of religion and freedom of expression. A study of human rights at the international, federal and provincial levels. Prerequisite: CRIM 330.

#### **CRIM 336-3 Corporate Crime and Corporate Regulation**

An examination and analysis of the nature, scope and impact of corporate crime, the principal organizational, social, political and economic factors involved in the definition and commission of such crime, and the ways in which governments and organizations respond to the problem. Particular types of corporate crime will be used as vehicles for exploring the legal and administrative framework that defines and regulates corporate wrongdoing. Prerequisite: CRIM 101; 135. Recommended: CNS 280 or ECON 101.

#### **CRIM 338-3 Philosophy of Law**

Introduction to the philosophy of law. Concepts of law, constitution and sovereignty. The nature and sources of the law. Examination of natural law, legal positivism, Kelsen's pure theory of law, legal realism, modern normative and analytical theories, critical legal theory and feminist theory. Prerequisite: CRIM 101 and 135.

#### **CRIM 340-3 Criminal Justice Policy Making and Policy Analysis**

Examines alternative approaches to developing and evaluating public policy in criminology through the use of case studies. Prerequisite: CRIM 101 and 220. Students who have taken CRIM 415 under this topic may not take this course for further credit.

#### **CRIM 343-3 Correctional Practice**

An in-depth consideration of a range of factors influencing contemporary correctional practice. The fundamental tension between the interests of offenders and the requirements of those managing correctional programs; the context provided by underlying theoretical assumptions about correctional practice and by influences such as public perceptions, politics and the economy. Prerequisite: CRIM 101. Recommended: CRIM 241.

#### **CRIM 345-3 Theoretical Perspectives on Punishment**

Examines theories of punishment in Western societies, with a particular emphasis on the 'revisionist' literature i.e. that which explains punishment techniques in terms of social-structural relationships rather than the rhetoric of reformers. The course also examines competing explanations of the demise of corporal punishment and the ascendance of incarceration at the end of the eighteenth and beginning of the nineteenth century, the advent of various kinds of 'community corrections' through the twentieth century, and changes in punishment and social control with the advent of 'risk society.' Prerequisite: CRIM 101.

#### **CRIM 350-3 Techniques of Crime Prevention I**

Techniques of mobilizing community resources for crime prevention. Organizing, implementing and managing citizen efforts to reduce crime. Recruiting citizen assistance, training requirements, establishing and operating citizen organizations, evaluating results. Organizing programs for reducing criminal opportunity, programs for education, employment and recreation. Operating youth services centres, residential programs, crisis intervention and emergency centres. Prerequisite: CRIM 101.

#### **CRIM 351-3 Police Accountability and Ethics**

Examines police accountability including the expected ethical conduct of police, police powers, police decision-making, the exercise of discretion, and the structure of accountability. Specific emphasis on police codes of ethics, core values of police agencies, the function of internal investigations, and the role of civilian review. Prerequisite: CRIM 101 and 251.

#### **CRIM 352-3 Environmental Criminology: Theory and Practice**

Explores the history of the field of environmental criminology and critically examines the theoretical

approaches within the field. Special emphasis is placed upon the relationship between crime, fear and the environment, the criminality of place and the decision processes involved in criminal events. Prerequisite: CRIM 101.

### **CRIM 355-3 The Forensic Sciences**

Examines the use and interpretation of physical forensic evidence in court. It will critically examine and evaluate the major forensic sciences used in criminal investigations today, as well as look at the crime scene. Subjects examined will include forensic pathology, odontology, biology, DNA evidence, firearms evidence, toxicology chemistry and questioned documents. Techniques will be illustrated with case studies. Breadth-Social Sciences.

### **CRIM 356-3 The Forensic Sciences II**

Introduces the methodological principles of analytical procedures and applications relevant to 21st century criminalistics as applied to skeletonized remains. Prerequisite: CRIM 101.

### **CRIM 357-3 Forensic Anatomy**

An introduction to human anatomy and physiology relevant to the biological aspects of human forensics. Examines different body systems including form, function and development in the human adult and child, and discusses post mortem alteration to anatomical structures in the context of forensic anthropology and pathology. Prerequisite: CRIM 101.

### **CRIM 361-3 Practicum III**

Third term of work experience in the Criminology Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of CRIM 261 and 60 units with a minimum CGPA of 2.75.

### **CRIM 369-4 Professional Ethics and Interpersonal Skills in Criminal Justice**

Immediate ethical issues confronting the professional in the criminal justice system are examined. Such concerns include privileged communications and confidentiality in fields and research situations; the conflict between the professional's duty to protect society and her/his duty to the client; ethics of decision-making; research ethics; situation ethics; professional ethical codes and legal constraints on professional conduct. Different modes of personal interaction in selected parts of the criminal justice system are examined and taught. Mixed problems of skill and ethics are explored in controlled laboratory settings. Prerequisite: CRIM 101; reserved for criminology majors and honors. This course is a prerequisite for CRIM 462. Completion of this course does not guarantee admission to field practice.

### **CRIM 370-3 Directed Readings**

Independent readings in a selected field of study, under the direction of a single faculty member. Papers will be required. Prerequisite: CRIM 320 and 330, and written application to the school no later than the last day of classes of the preceding term. CRIM 370 and 470 may not be taken concurrently.

### **CRIM 384-3 Crime and Literature**

Questions of crime and criminal justice in novels and other forms of fiction are explored. Includes a critical discussion about crime plots, their social settings and outcomes, the psychology and sociology of criminal characters and their victims, and whether justice was achieved or denied in the course of the plot. Writing intensive. Prerequisite: students who have taken CRIM 416 or 417 or 418 as Crime and Literature may not take this course for further credit. This course is identical to ENGL 384 and students may not take both courses for credit.

### **CRIM 402-3 Biological Explanations of Crime**

Examines possible biological factors that could result in a predisposition towards criminal behavior. These include not only the genetic factors that affect

behavior and therefore could potentially predispose towards crime, but also biochemical, neurological, nutritive and accidental effects such as head injuries. This course will look critically at all evidence both for and against any possible biological predispositions for criminogenic behaviors, together with the interaction with the environment. In particular, moral and ethical issues will be considered and debated. Prerequisite: CRIM 101. Students with credit for CRIM 416 in the summer 2000 or 2001 term may not take CRIM 402 for further credit.

### **CRIM 410-3 Decision-making in Criminal Justice**

Examination of the factors which influence decision making in the criminal justice system. The exercise of discretion by criminal justice personnel; the role of organizational policies and priorities in decision making; the involvement of victims and the public. Consideration of decision making at specific stages of the criminal justice process. Prerequisite: CRIM 131.

### **CRIM 412-3 Crime, the Media and the Public**

Focus is upon the relationship among the content of media, especially books, films and TV. There will be an examination of the type and frequency of crimes associated with displays in the media, either coincidentally or causally, and the perception by and impact upon the public of such relationships (physically and psychologically). In addition, there will be an examination of the nature of political efforts by members of the public to alter this inferred relationship through law enforcement and legislative measures. Prerequisite: CRIM 101.

### **CRIM 413-3 Terrorism**

Considers the nature, extent, and basis of terrorism as an official crime throughout the world and its impact upon criminal justice systems. Theoretical explanations in a comparative perspective will be employed to examine the impact of terrorism on various countries and the response of governments to it. Prerequisite: CRIM 101.

### **CRIM 414-3 Special Topics in Criminology**

A critical analysis of specific areas of criminology or criminal justice. The subjects covered will change from term to term depending on the specific interests of faculty, or students and current issues in criminology. Prerequisite: CRIM 101.

### **CRIM 415-3 Special Topics in Criminology**

A critical analysis of specific areas of criminology or criminal justice. The subjects covered will change from term to term depending on the specific interests of faculty, or students and current issues in criminology. Prerequisite: CRIM 101.

### **CRIM 416-3 Current Issues in Criminology and Criminal Justice**

A critical analysis of certain 'hot' issues in criminology and criminal justice. The topics covered change from term to term. Prerequisite: CRIM 101. A student may not take for credit toward the degree more than three special topics courses (i.e. CRIM 416, 417 418).

### **CRIM 417-3 Current Issues in Criminology and Criminal Justice**

A critical analysis of certain 'hot' issues in criminology and criminal justice. The topics covered change from term to term. Prerequisite: CRIM 101. A student may not take for credit toward the degree more than three special topics courses (i.e. CRIM 416, 417 418).

### **CRIM 418-3 Current Issues in Criminology and Criminal Justice**

A critical analysis of certain 'hot' issues in criminology and criminal justice. The topics covered change from term to term. Prerequisite: CRIM 101. A student may not take for credit toward the degree more than three special topics courses (i.e. CRIM 416, 417 418).

### **CRIM 419-3 Aboriginal/Indigenous Justice**

An in-depth examination of Aboriginal/indigenous conceptions of justice in dealing with crime and other

trouble in indigenous communities, and in relations among peoples. Prerequisite: CRIM 101 or FNST 101 or 201 or permission of the instructor. Students who took this course as CRIM 416 or 418 may not take this course for further credit. Students who take FNST 419 cannot take CRIM 419 for further credit.

### **CRIM 420-3 Advanced Topics in Criminological Research**

An extension of CRIM 220 and 320, this course will examine one or more of the following: evaluative research in the criminal justice context; techniques and efficacy of predicting delinquency and recidivism; survey research; archival, historical or legal methods; field research, etc. Prerequisite: CRIM 101; 320 and 321.

### **CRIM 429-3 Indigenous Peoples and International Law**

An examination of how relations between indigenous and non-indigenous peoples framed and were framed by the development of international law from the 15th century onward. Prerequisite: CRIM 101 or FNST 101 or 201 or permission of instructor. Students who have taken this course under CRIM 416, or 418 under the title "Indigenous Peoples and International Law" or "Indigenous Peoples and Evolving International Relations" may not take this course for further credit. Students may not take FNST 429 for further credit.

### **CRIM 431-3 Comparative Criminal Justice Systems**

Critical examination of the theory and method of comparative criminal justice. Review of common law systems, civic law systems, and socialist law systems. Specific consideration of the development, structure and operation of the criminal justice systems in selected countries, which may include England, France, Federal Republic of Germany, the former Soviet Union, the People's Republic of China, and Japan. Focus on the impact of historical, social, political, religious and cultural factors on the criminal justice process. Consideration, of the structure and operation of various components of the criminal justice process in selected countries, including the police, criminal courts, and corrections. Prerequisite: CRIM 101.

### **CRIM 432-3 Gender in the Courts and the Legal Profession**

The gendered nature of law will be addressed through an examination of its underlying factual assumptions, and the use of social science research as evidence in equality litigation. The use of the charter, human rights legislation, and other legal means to achieve gender equality through the legal system in the areas of work, employment and pay equity, and compensatory schemes for personal injuries will also be examined. This course will also examine women's struggles to gain admittance to the legal profession, and the barriers which may still prevent them from participating equally in the profession today. Prerequisite: CRIM 330.

### **CRIM 433-3 Communities and Crime**

Examines communities and neighborhoods as contexts for thinking about a wide range of criminological issues including crime, fear, victimization, policing, and policy. Theoretical explanations and applied research will be used to explore how and why "community" is important for understanding crime and criminal justice. Prerequisite: CRIM 101. Students who have taken this course as CRIM 418-3 may not take this course for further credit.

### **CRIM 435-3 Adult Guardianship Law**

A comprehensive exploration of the law affecting adult guardianship, substitute decision-making, and adult protection in Canada, including a detailed examination of the form, content and philosophical underpinnings of the relevant legislation in British Columbia. Topics include assessing mental

incapability, powers of attorney, living wills and health care directives, end of life decision-making, the law affecting consent to health care, and court-ordered guardianship for adults. Prerequisite: CRIM 101. Recommended: one of CRIM 330 or 335. This course is identical to GERO 435 and students cannot take both courses for credit. Students with credit for CRIM 418 when offered as Adult Guardianship Law, and GERO 410 when offered as Adult Guardianship Law, may not take CRIM 435 or GERO 435 for further credit.

#### **CRIM 436-3 Corporate Crime and Corporate Regulation: Advanced Topics**

A detailed examination and analysis of particular types of corporate wrongdoing and the nature and impact of the relevant legal and administrative framework. The topics will be selected by the particular course instructor and will, therefore, vary according to the instructor's interests as well as topicality. The areas of corporate crime which are chosen may include one or more of the following: 'economic crimes' such as violations of statutes which regulate competition, protect intellectual property, and safeguard stock market investors; crimes against the environment such as air and water pollution; and, crimes against consumers including the marketing of hazardous products, contaminated food, or dangerous drugs and devices. Prerequisite: CRIM 101. Recommended: CRIM 336.

#### **CRIM 437-3 Crime and Misconduct in the Professions**

Examines the use of self regulation by professional organizations (e.g. law societies, colleges of physicians and surgeons, stock exchanges) and the increasing demand by other occupational groups and social and economic entities to be governed by these internal controls in addition to, or in lieu of, the criminal and other state law. It will specifically examine how the criminal law is used in the context of self-regulation and how professionals can bypass the criminal law through self-regulating organizations. The professions will be examined in the context of administrative, civil and criminal law. Implications for self regulation in other areas and the future of self-regulation will also be considered. Prerequisite: CRIM 330.

#### **CRIM 440-3 Correctional Administration and Planning**

Theory and practice of organization and administration of correctional agencies. Particular attention is given to the political/bureaucratic interface in correctional administration, management styles, labour relations, management support systems and program planning. Identification and assessment of corrections management objectives. The relationship between corrections administration and other components of the criminal justice system. Prerequisite: CRIM 101; 131 and 241. Recommended: POL 251

#### **CRIM 442-3 Restorative Justice Practice: Advanced Topics**

An in-depth examination of the various community-based and institutional practices in promoting restorative processes, based on an examination and comparison of the values, philosophical approaches and outcomes of selected western and non-western models. Practices examined will include a range of restorative justice initiatives, including victim-offender mediation, family-group conferencing, multi-party mediation, and various circle remedies. This examination will include the application of restorative justice in the community, in schools and at all levels of the legal process (pre-arrest to post-incarceration and reintegration). Recommended: CRIM 315 and 343.

#### **CRIM 450-5 Techniques of Crime Prevention II**

Introduction to the modern techniques of crime prevention. Emphasis will be on crime prevention and reduction in fear of crime. Crime prevention through social change. Crime prevention through environmental design. Crime prevention through physical planning and architectural design. The concept of 'defensible space.' Obstructing and reducing the opportunities for the commission of crimes. Evaluating crime prevention programs. Prerequisite: CRIM 101.

#### **CRIM 451-3 Advanced Techniques in Forensic Science**

Looks at the advanced and sometimes more controversial areas of forensic science used in the criminal justice system today. Most areas are those outside the crime lab and require extensive and in-depth training in a very focused field. Seminars may cover areas such as the use of polygraph, blood spatter pattern analysis, entomology, pathology, odontology, anthropology, genocide investigation, facial approximation, crime scene analysis on land, underwater and mass homicide scenarios. Prerequisite: CRIM 101. Students with credit for CRIM 420 in 01-3, 00-3, 99-3, 98-3 or 97-3 may not take CRIM 451 for further credit. Recommended: CRIM 355.

#### **CRIM 452-3 Skeletal Pathology and Criminalistics**

The examination of disease processes which affect and reveal themselves in the human skeleton at the level of surface morphology, radiology and histology and other relevant analytical methodologies relevant to criminalistics and human identification. Prerequisite: CRIM 101. Recommended: CRIM 357. Students who have taken this course as CRIM 417 may not take this course for further credit.

#### **CRIM 453-3 Policing Illegal Drug Markets**

Provides an overview of the theoretical, analytical, and ethical issues related to drug law enforcement. Examines the strategies used by the police in responding to the challenges posed by illegal drug markets. Prerequisite: CRIM 101.

#### **CRIM 454-3 Criminal Profiling**

Provides an overview of the advanced issues relating to the scientific study, development and evaluation of criminal profiling. Outlines the criminological and psychological principles upon which criminal profiling is based, including classification of violent behaviour, behavioural change and consistency. Prerequisite: CRIM 101.

#### **CRIM 455-3 Advanced Issues in Policing**

Covers the major issues surrounding policing in the 21st century. The topics to be examined will include the challenges confronting police services in a global community; police leadership; recruiting and training of police officers; the planning and delivery of police services; models of deployment; policing the multi-cultural society; use of force by police officers; the effectiveness of police interventions; the use of technology in police work; and community policing. Prerequisite: CRIM 101, 131 and 251.

#### **CRIM 456-3 Investigative Psychology in Policing**

Advanced issues relating to the empirical and scientific study of investigative psychology in policing. Outlines the main applications of investigative psychology, including police interrogation techniques, confession, false allegation, lie detection, crisis negotiation, risks and threats assessment, and psychological autopsies. Prerequisite: CRIM 101 and 251. Students who have taken CRIM 414 under this topic may not take this course for further credit.

#### **CRIM 457-4 Crime and Criminal Intelligence Analysis**

Examines data handling, data quality and analysis of various criminal justice system information sources common to police services, government agencies and academic researchers. Develops skills in tactical, strategic and administrative crime analysis functionality. Prerequisite: CRIM 320 and 352. Recommended: CRIM 321, 350, 450. Students who have taken CRIM 418 under this topic may not take this course for further credit.

#### **CRIM 461-3 Practicum IV**

Fourth term of work experience in the Criminology Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of CRIM 361 and 75 units with a minimum CGPA of 2.75.

#### **CRIM 462-15 Field Practice**

Supervised three month field practicum in selected criminal justice agencies. Students are required to complete a series of reports addressing theoretical and practical issues relating to their placement as well as to attend regular feedback seminar discussions with faculty supervisors and other field practicum students. Prerequisite: prior approval of the school and a minimum CGPA of 2.5 is required. Applicants must be formal criminology majors or honors students, and must be enrolled in or have completed CRIM 320, 321 and 369. In extraordinary circumstances, students may be accepted with CRIM 320 or CRIM 321, with the approval of the field practice co-ordinator. A minimum grade of B- in CRIM 369 is required. Only under exceptional circumstances, to a limit of three units, and with the formal written approval of the director of the undergraduate program, will enrolment for course work in addition to CRIM 462 be permitted.

#### **CRIM 465-3 Crime, Economics, and the Economy**

Considers the study of crime from an economic perspective and the relationship between crime and the economy. Theoretical frameworks and empirical examples from both economic and criminology will be discussed. Prerequisite: CRIM 101. Students who have taken CRIM 414, 415, 416, 417 or 418 under this topic may not take this course for further credit.

#### **CRIM 470-5 Directed Studies**

Independent research in a selected criminological area, under the direction and supervision of at least one faculty member. A research report is required. Prerequisite: CRIM 320, 321 and 330. Written application to the school no later than the last day of classes of the preceding term. Reserved for criminology honors and majors. Recommended: CRIM 370.

#### **CRIM 490-5 Honors Thesis I**

An in-depth investigation of a selected topic in criminology, including a comprehensive review of the literature as well as initial and partial completion of the thesis research. Open only to students who have been admitted to the criminology honors program.

#### **CRIM 491-5 Current Theory and Research in Criminology: Advanced Topics**

A detailed and comprehensive examination of the dominant theoretical research programs currently found in criminology. The subject matter of the seminars may change from year to year according to topicality and may include the following: biological theory and research; social psychological research programs (e.g., social learning theory); environmental criminology; left realism; feminism; post structuralism and post modernism. Students are also required to attend a weekly pro-seminar. Prerequisite: normally open only to students who have been admitted to the criminology honors program. Other students may be admitted under exceptional circumstances with the

written permission of the director of undergraduate programs.

#### **CRIM 499-12 Honors Thesis II**

An honors thesis is a research report written under the supervision of a faculty member, a copy of which is to be permanently lodged in the School of Criminology. Students are required to attend a weekly seminar at which various issues associated with the linking of theory and method are examined and where students can both discuss their progress and share their research experiences. On completion, the thesis is to be orally defended in a school seminar. Open only to students who have been admitted to the criminology honors program. Students are not permitted to take other courses while enrolled in this course. Prerequisite: a minimum grade of B in CRIM 490 and 491 is required.

#### **CRIM 800-3 Theories of Crime**

A comprehensive overview of theories and the development of theoretical knowledge in criminology. This seminar will familiarize students with competing levels of understanding vis-à-vis crime and deviance phenomena. The course will emphasize the integration of historical and contemporary theory, theory construction and testing, and the impact of factors such as ideology, politics and social structure on the emergence of criminological thought.

#### **CRIM 801-3 Theories of Crime II**

Intensive exposure to the major streams of criminological theory. Topics for in-depth analysis will be selected according to the availability and interest of specific course instructors. Emphasis will be placed on the relationship between ideas and social forces, as well as the interplay of theory and practice.

#### **CRIM 810-3 The Phenomena of Crime I**

Designed for the beginning graduate student, this course covers a wide variety of topics all of which deal with what we know about the phenomena of crime historically, temporally and geographically. This course will look at the patterns of crime and victimization, and will explore crime patterns at local, provincial, national and international levels. Known characteristics of specific forms of crime will be studied.

#### **CRIM 811-3 The Phenomena of Crime II**

Topics for in-depth analysis will be selected according to the availability and interest of specific course instructors and selected from but not limited to one or more of the following topics: historical criminology; the ecology of crime; environmental criminology; the media and crime; fear of crime; victimization; organized crime; or corporate crime.

#### **CRIM 820-3 Criminal Justice Policy Analysis**

An introduction to policy development and policy analysis in the field of criminal justice, including a general review of the function of bureaucratic agencies in the public sector and the particular role of government ministries providing criminal justice services. Major topic areas include: organization theory; policy planning theory; decision theory; inter-governmental analysis as it applies to the administration of justice; and comparative analyses of criminal justice policies especially related to international or trans-national crime.

#### **CRIM 821-3 Criminal Justice Analysis: A Systems Approach**

The course will emphasize the systems approach in criminal justice problem analysis, policy development and planning. Program evaluation techniques will be applied to the major types of planning and program initiatives taken within or across criminal justice systems. Topics for in-depth analysis will be selected according to the availability and interest of specific course instructors and may be selected from any area of criminal justice practice including: law enforcement;

the judiciary; court administration; corrections; or legal services.

#### **CRIM 830-3 Law and Social Control I**

An examination of the social utility of legal intervention in the instance of criminal law; the relationship between law and social order; and the process of law making and the social efficacy of specific criminal sanctions.

#### **CRIM 831-3 Law and Social Control II**

Topics for in-depth analysis will be selected according to the availability and interest of specific course instructors and selected from but not limited to one or more of the following themes: theoretical perspectives on punishment and social control; theoretical perspectives on policing; law and mental health; law and the environment; and law and gender.

#### **CRIM 840-3 Proseminar**

Examination of current theory and research by faculty in the School of Criminology.

#### **CRIM 860-3 Research Methods I**

The course will cover basic research design for criminological problems and basic techniques for the conduct of research in criminology and socio-legal study. The research methods covered will comprise both quantitative and qualitative techniques. The course is intended to establish fundamental research skills to be applied in advanced research methods seminars, in other core area courses, and in the preparation of theses and dissertations.

#### **CRIM 861-3 Research Methods II**

This course covers both parametric and non-parametric statistical techniques with an emphasis on parametric analysis. Basic descriptive and inferential statistics will be covered, including univariate measures, analyses of cross classified data, correlation, t-tests, analysis of variance, regression, and related measures. Also discussed are the experimental and statistical research strategies which produce those data. The approach will be conceptual and will emphasize the strengths, weaknesses, selection and application of various statistical, experimental and quasi-experimental techniques.

#### **CRIM 862-3 Research Methods III**

This course will address a range of research techniques generally subsumed under the rubric of 'qualitative' research including field research, interview techniques, historical and legal research, and documentary analysis. Emphasis will be on the logic underlying such inquiry, the advantages and limitations associated with different sources of information and procedures, and the processes by which analytical rigor is achieved.

#### **CRIM 863-3 Research Methods IV**

Advanced topics, issues and techniques in criminological and socio-legal research. The subject matter of this course will vary according to instructor interests and specialization. Specific areas of concentration may include the following: advanced multivariate statistical techniques, documentary and historical methods, evaluative and predictive research, participant observation/ethnography, systems analysis, and computer simulation modelling. Prerequisite: CRIM 860, 861, 862, or by permission of the instructor.

#### **CRIM 869-3 Professionalism and Criminal Justice**

This course is designed for students entering a field practicum placement via CRIM 880 and is a required component of the MA by Coursework, Project and Practicum option. It introduces the student to the legal and ethical issues relevant to professionalism and leadership in the field of Criminology. Related professional roles and functions are examined. The course integrates theory and practice from a case study perspective.

#### **CRIM 870-3 Directed Readings**

Intensive readings under the supervision of a faculty member, in areas of interest related to the student's program.

#### **CRIM 871-3 Selected Topics**

Concentrated studies in areas of student specialization.

#### **CRIM 872-3 Selected Topics**

Concentrated studies in areas of student specialization.

#### **CRIM 873-3 Selected Topics**

Concentrated studies in areas of student specialization.

#### **CRIM 880-3 Field Practicum**

A term of full-time advanced and intensive practicum experience supervised by selected faculty and justice system personnel. Students will assume a large measure of responsibility and participate in a range of activities related to the placement. Prerequisite: CRIM 869.

#### **CRIM 885-3 Master's Project**

MA by coursework, project and practicum paper. Prerequisite: CRIM 869.

#### **CRIM 898-6 MA Thesis**

#### **CRIM 899-6 PhD Thesis**

## **Undergraduate Semester in Dialogue DIAL**

### **DIAL 390W-5 Undergraduate Semester: Dialogue**

The Dialogue component of the Undergraduate Semester in Dialogue will immerse students in the art and practice of thinking and communicating. The focus will be on strategies and methods to use in understanding diverse perspectives. Students will have an opportunity to expand their verbal and written communication skills as well as explore dialogue as a developing academic field. Prerequisite: 45 units. Students should apply prior to the term in which they wish to enrol. Students can be accepted into either the Summer Institute in Dialogue (DIAL 390 and 391, 10 units) or the Undergraduate Semester in Dialogue (fall or spring term, DIAL 390, 391 and 392, 15 units), but not both. Writing/Breadth-Social Sciences.

### **DIAL 391W-5 Undergraduate Semester: Seminar**

Topics covered each term will vary, but generally each course will examine a subject that encourages broad approaches and probes provocative issues. The course will consist of discussions led by faculty, frequent visits from relevant off-campus experts, a heavy reading load, and a number of individual and group student projects. Learning will be active rather than passive, stimulating students to research, explore and discuss rather than following a lecture format. Prerequisite: 45 units. Students should apply prior to the term in which they wish to enrol. Students can be accepted into either the Summer Institute in Dialogue (DIAL 390 and 391, 10 units) or the Undergraduate Semester in Dialogue (fall or spring semester, DIAL 390, 391 and 392, 15 units) but not both. Writing/Breadth-Social Sciences.

### **DIAL 392W-5 Undergraduate Semester: Final Project**

For their final project, each student will produce a manuscript suitable for submission to a major public media outlet on a topic relevant to the course focus for that term. Prerequisite: 45 units. Students should apply prior to the term in which they wish to enrol. Students can be accepted into either the Summer Institute in Dialogue (DIAL 390 and 391, 10 units) or the Undergraduate Semester in Dialogue (fall or spring semester, DIAL 390, 391 and 392, 15 units), but not both. Writing/Breadth-Social Sciences.

**DIAL 460-4 Seminar in Dialogue and Public Issues**

Focuses on the practical tools and conceptual approaches used in dialogue, with comparisons of the role and impact of dialogue among community, government, corporate, union, First Nations, legal-regulatory, advocacy groups and organizations. Emphasis is on interaction among interest groups and stakeholders, cultures of negotiation and decision-making, techniques of facilitation, and strategies for effective outcomes. Prerequisite: 75 units including either at least two of CMNS 332, 347, 425, 432, 437, 447 or DIAL 390, 391, 392.

**DIAL 461-3 Field Placement in Dialogue**

Students work under faculty supervision in a placement where dialogue is planned or where dialogue occurs. Arrangements are the responsibility of the student, and enrolment is limited. Prerequisite: 75 units including CMNS/DIAL 460, and permission of instructor.

## Earth Sciences EASC Faculty of Science

**EASC 101-3 Physical Geology**

An introduction to the origin and character of minerals, rocks, earth structure, earth surface processes and plate tectonic theory. Students with credit for GEOG 112 cannot take this course for further credit. Breadth-Science.

**EASC 103-3 The Rise and Fall of the Dinosaurs**

Class Dinosaurs and how our understanding of this extinct group continues to evolve in the light of new discoveries. Topics include the rise of the dinosaurs, criteria for the recognition of the different groups, fossil data regarding dinosaur metabolism, evidence of dinosaur behavior, possible evolutionary relationships with birds, and theories of dinosaur extinction. Students may not take EASC 103 for credit towards EASC major or minor program requirements. Breadth-Science.

**EASC 104-3 Geohazards – Earth in Turmoil**

An introduction to the range of geological hazards that affect the Earth, the environment and humanity. Topics covered will include the hazards and risks related to volcanic eruptions, earthquakes, landslides and avalanches, tsunamis, geomagnetic storms and other potentially cataclysmic events. The forecasting and possible mitigation of these geohazards will also be investigated. Students with credit for GEOG 312-4 may not take this course for additional credit. Students may not take EASC 104 for credit towards EASC major or minor program requirements. Breadth-Science.

**EASC 106-3 Earth Through Time**

An introduction to the changes that the Earth has experienced, from its initial formation to the present day, intended for non-majors. Topics include changes in plate tectonic style, mountain building periods, glaciations during Earth history, formation of life, the fossil record and evolution, major extinctions, and the rise of man. Students with credit in EASC 102 may not take EASC 106 for additional credit. Students may not take EASC 106 for credit towards EASC major or minor program requirements. Breadth-Science.

**EASC 107-3 Economic Geological Resources**

An overview of the Earth's major economic resources of the Earth for non-Earth Science majors or minors. Background will be provided on major Earth processes which cause significant natural resources including metallic resources, hydrocarbon and other energy resources, industrial mineral and groundwater resources. Much of the focus will be on the changing nature of how resources have been found and exploited through history and how this may evolve in the near to distant future. Students may not use

EASC 107 for credit towards earth sciences major or minor program requirements. Breadth-Science.

**EASC 108-3 Exploring the Solar System**

An introduction to the geology of our solar system through a comparative survey of the planets. Emphasis will be on the geology of the Earth and how we can use this knowledge to learn more about the neighboring planets. A wealth of accessible information now exists from which we can attempt to reconstruct the geological history of each planetary surface in our solar system. Comparative planetology will be used to explore such topics as the structure and origin of the solar system, the origin and fate of the Earth, the importance of water in the solar system, the formation and geological history of planetary lithospheres and atmospheres.

**EASC 201-3 Stratigraphy and Sedimentation**

An introduction to the nature, origin and interpretation of stratified earth materials. Principles of lithostratigraphy, biostratigraphy and chronostratigraphy, sequence stratigraphy, the facies concept. Prerequisite: EASC 102 or 210.

**EASC 202-3 Introduction to Mineralogy**

Introduction to crystallography, crystal chemistry and chemical properties and chemical principles necessary for the study of minerals. Prerequisite: EASC 101 and CHEM 121.

**EASC 204-3 Structural Geology I**

Description, classification and interpretation of earth structures: folds, faults, joints, cleavage and lineations. Elementary rock mechanics. Prerequisite: EASC 102 or 210, and PHYS 125 or 120 or 140, (or PHYS 101 with a grade of B or higher).

**EASC 205-3 Introduction to Petrology**

Optical phenomena related to the use of the polarizing microscope in the identification of minerals in thin section. Petrogenesis and classification of igneous sedimentary and metamorphic rocks. Hand specimen and thin section identification of rocks and minerals. Prerequisite: EASC 202, CHEM 122, PHYS 121 (or PHYS 102 with a grade of B or higher), and PHYS 131 (or PHYS 130 with a grade of B or higher). PHYS 126 may be substituted for PHYS 121.

**EASC 206-2 Field Geology I**

Seven days of field excursions to demonstrate the geology of British Columbia. Prerequisite: EASC 101 and prerequisite/corequisite EASC 210.

**EASC 207-3 Introduction to Applied Geophysics**

An introduction to geophysics emphasizing seismic, magnetic and gravimetric observations of the Earth. Applied geophysics. Prerequisite: MATH 152, PHYS 121, 131, all with a grade of C- or higher, or MATH 152, with a grade of C- or higher and PHYS 102, PHYS 130 both with a grade of B or higher. Quantitative.

**EASC 208-3 Introduction to Geochemistry**

Distribution and cycles of elements, minerals and rocks on and within Earth. Understanding and evolution of Earth systems through high and low temperature fluid-rock interaction, aqueous geochemistry, stable and radiogenic isotopes. Prerequisite: EASC 202, CHEM 121, 122 and 126. Quantitative.

**EASC 210-3 Historical Geology**

The study of the evolution of the Earth, the geological time scale, fossils and evolution, stratigraphic concepts, geological history of western Canada. Prerequisite: EASC 101 or GEOG 111. Students with credit for EASC 102 prior to 05-3 may not take this course for credit. Breadth-Science.

**EASC 300-3 Selected Topics in Earth Sciences**

An in-depth treatment of selected topics of earth sciences. Prerequisite: to be determined by instructor.

**EASC 301-3 Igneous and Metamorphic Petrology**

Mineralogy, phase relations, origin of igneous rocks; classification of igneous rocks. Mineralogy and textures of metamorphic rocks; hand sample and thin sections. Prerequisite: EASC 205 and 208.

**EASC 302-3 Sedimentary Petrology**

Description and classification, field and microscopic identification of sedimentary rocks; petrogenesis and paleoenvironmental reconstruction. Prerequisite: STAT 101 or STAT 201, EASC 201 and 205.

**EASC 303-3 Environmental Geoscience**

Environmental geology is a branch of earth science that deals with the relationship of people to their geological habitat. Topics covered will include environmental impact of mineral extraction and logging; erosion and sedimentation in rural and urban environments; and mass movements in mountainous terrain. The course includes two 1-day field trips that usually occur on Saturdays. Prerequisite: 60 units including six units in Earth Sciences and GEOG 213.

**EASC 303W-3 Environmental Geoscience**

Environmental geology is a branch of earth science that deals with the relationship of people to their geological habitat. Topics covered will include environmental impact of mineral extraction and logging; erosion and sedimentation in rural and urban environments; and mass movements in mountainous terrain. The course includes two 1-day field trips that usually occur on Saturdays. Prerequisite: 60 units including six units in Earth Sciences and GEOG 213. Writing.

**EASC 304-3 Hydrogeology**

An introduction to the basic concepts and principles governing the flow of groundwater in the subsurface environment. These are used to develop an understanding of aquifers and their physical properties, groundwater sustainability and management, and interaction of groundwater with surface water. In addition, as a foundation course in fluids in geologic media, this course has relevance to the oil and gas and mining industries, as well as to engineering applications such as dewatering. Prerequisite: One of EASC 101 or GEOG 111, and PHYS 126 or 121 (or PHYS 102 with a grade of B or higher). Quantitative.

**EASC 305-3 Quantitative Methods for the Earth Sciences**

Implementation of mathematical methods and numerical techniques for problem solving in the Earth Sciences. Examples and lab assignments will use Excel spreadsheets and/or Matlab computer programming/display software. Concepts covered include quantitative techniques for field data and error analysis in the geosciences, basic computer programming concepts and numerical modeling of Earth processes. Prerequisite: EASC 101, MATH 152 (grade of C or higher), PHYS 121 (grade of C or higher), STAT 101 or STAT 201 (grade C or higher), and six units in any 200 division or higher EASC courses.

**EASC 306-3 Field Geology II**

A 12 day field camp held after final exams in the spring term. Students will learn how to observe, record and interpret geological features, and will carry out geological mapping and analysis. Approximately five 1-hour lectures on field methods, equipment and safety will precede the field camp. Field locations may vary from year to year. Prerequisite or corequisite: EASC 201, 204, 205, 206 and GEOG 213.

**EASC 307-3 Applied Geophysics**

Application, instrumentation and limitations of electrical, electromagnetic, ground penetrating radar and seismic methods for engineering and geoscience applications. Prerequisite: EASC 207. Quantitative.

**EASC 309-3 Global Tectonics**

The study of motion and deformation of the earth's crust and upper mantle at a regional and global scale. A detailed examination of plate tectonic theory: plate boundary types, mechanics of plate movements, basin formation and mountain building. Case studies of major orogenic belts of the world highlighting regional structural deformation processes in response to tectonic stresses. Students are required to attend a weekend field trip during this course. Prerequisite: EASC 201, 204, 205, 206 and 207. Students who completed EASC 407 prior to fall 1998 may not take this course for credit.

**EASC 310W-3 Paleontology**

Principles of classification, morphology and development of the major groups of animals and plants in the geological record; the paleoecologic significance of fossils. Prerequisite: EASC 102 or 210. Recommended: BISC 102. Students with credit for EASC 203 may not take EASC 310 for additional credit. Writing.

**EASC 312-3 Stratigraphy**

The principles of stratigraphy, and their integration with sedimentary facies analysis. Techniques applicable to outcrop and subsurface correlation, as well as the principal stratigraphic paradigms and their application to the rock record are discussed. Prerequisite: EASC 201 and 204. Recommended: EASC 206, 302.

**EASC 313-3 Introduction to Soil and Rock Engineering**

An introduction to the engineering properties and behavior of soil and rock. Laboratory and field measurements of soil and rock properties. Applications in engineering design will be illustrated with case studies of slope stability, road design, foundations and underground excavations. Emphasis will be placed on the importance of soil and rock mechanics in the resources sector. Prerequisite: EASC 101, 204 or permission of instructor.

**EASC 314-3 Principles of Glaciology**

An introduction to the study of ice in the environment from a geophysical perspective, with attention to glaciers and ice sheets as (1) components of the global climate system, (2) indicators and archives of environmental conditions, (3) agents of catastrophic change, and (4) resources. Topics include the physical and chemical properties of ice, glacier and ice-sheet thermomechanics, dynamics of Greenland and Antarctica, ice cores, subglacial lakes, unstable ice flow, and resource exploitation in glacierized areas. Prerequisite: 60 units, including MATH 152 (with grade C or higher), PHYS 126 or PHYS 121 (with grade of C or higher), and GEOG 213 or permission of the instructor. Quantitative.

**EASC 317-3 Global Geophysics**

Application of geophysical methods to the study of the Earth's evolution and its interior structure: geometrical nature of plate tectonics on a sphere; the Earth's magnetic field and its use in reconstruction of past plate motions; earthquake seismology and understanding the deep interior, gravity and lithospheric flexure, radioactive decay and an absolute geological time scale; heat loss and mantle convection; structure of oceanic lithosphere; structure of continental lithosphere; the early Earth and the tectonics of other planets. Prerequisite: EASC 207 or permission of instructor. Quantitative.

**EASC 400-3 Selected Topics in Earth Sciences**

An advanced, in-depth treatment of a specialized area of earth sciences. Prerequisite: to be determined by instructor.

**EASC 401-3 Mineral Deposits**

The petrology and genesis of metalliferous ore deposits; description of classic ore deposits; the occurrence and exploitation of industrial and

non-metallic minerals. Prerequisite: EASC 201, 204, 208 and 301.

**EASC 402-3 Sedimentology**

Sediment transport in fluids, the formation, character and classification of internal structures in sediments and paleoenvironmental analysis. Prerequisite: EASC 302.

**EASC 403-3 Quaternary Geology**

Stratigraphy and history of the Quaternary Period with emphasis on glaciation, glacial sediments, and landforms. The course includes several field trips, including one or two weekend trips. (2-0-3) Prerequisite: EASC 201 and GEOG 313 or permission of instructor.

**EASC 404-3 Structural Geology II**

Application of advanced concepts in structural geology to a variety of tectonic problems; deformation mechanisms; flow concepts applied to ductile deformation; description and interpretation of microstructural fabrics; strain partitioning from grain scale to global scale. Prerequisite: EASC 204, 301 and 309.

**EASC 406-3 Field Geology III**

An advanced field study course that provides real-world examples of major topics in the earth sciences. The course includes both a classroom component throughout the term and a field component of about 2-3 weeks. The field component is usually held shortly after the spring examination period (generally late April to early May). The field component is an excursion to a variety of field sites that change yearly. Prior to student enrolment, the faculty member, in consultation with the students, will determine the field course location, and determine the mandatory supplementary course fees for that offering. Some offerings of EASC 406 may require overseas travel and possibly a significant change in the timing and cost of the field component. Students should be aware that they must also cover the costs of food and personal items on the field course. Prerequisite: EASC 306 and a minimum of nine other units in upper division earth science courses (or permission of the instructor). Recommended: EASC 309.

**EASC 408-3 Regional Geology of Western Canada**

The stratigraphy, structure and historical geology of western Canada. Terrane analysis. Important mineral and fossil sites will be discussed. Prerequisite: EASC 309. Students who completed EASC 305 prior to fall 1998 may not take this course for credit.

**EASC 410-3 Groundwater Contamination and Transport**

An introduction to contaminant hydrogeology and mass transport processes in groundwater regimes. Topics include natural groundwater quality, sources of contamination, for example from mine waste, agriculture, saltwater intrusion, and industrial activities, and the processes and principles governing mass transport, including advection, dispersion and diffusion. The course also explores methodologies for site investigation as well as various remediation methods. Prerequisite: EASC 412. Quantitative.

**EASC 411-3 Terrain Analysis**

Application and role of Quaternary Geology in terrain mapping and terrain analysis and will emphasize the British Columbia Terrain Classification System. Applications of terrain maps, including landslide, earthquake and volcanic hazard mapping will be discussed. The lab sessions will cover morphological mapping, surficial material genesis, geomorphic processes and finally, production of a terrain and terrain stability map. The course includes three days in the field to ground truth the map. Prerequisite: EASC 206, 303. Recommended: GEOG 252, 313.

**EASC 412-3 Groundwater Geochemistry**

Emphasis is on the fundamentals of water-rock interactions and the chemistry of natural waters, developing an understanding of the physical and chemical principles that govern the geochemistry of water within Earth's crust. Topics will include water sample collection and analysis, chemical thermodynamics, gas-water-rock interactions and geochemical modelling. The applications range from weathering and recharge to acid mine drainage, diagenesis and hydrothermal ore deposit formation. Prerequisite: EASC 208. Corequisite or prerequisite: EASC 304.

**EASC 413-3 Resource Geotechnics**

Application of geotechnics to the resource sector with particular emphasis on forestry and minerals. Topics covered will include: Engineering geological characterization, slope failure mechanisms in soil and rock, methods of slope stability analysis, techniques of slope reinforcement and stabilization, slope monitoring, road construction and deactivation, underground excavations and petroleum geotechnics. Brief case studies will be used to illustrate the influence of geotechnics in the forestry, mining and the petroleum industries. Prerequisite: EASC 313 or permission of instructor.

**EASC 416-3 Field Techniques in Hydrogeology**

This course is intended to complement the theoretical aspects of hydrogeology by providing students with hands-on experience using hydrogeological equipment, and implementing sampling and testing protocols. The course involves a series of pre-field session assignments consisting of the analysis and interpretation of geophysical, geochemical and surficial geology data, and a week at a hydrogeology field site on the Fraser River delta, British Columbia. After the field work, students will conduct extensive analysis and interpretation of data gathered during the field session, complete exercises and prepare a written report. The course runs for about three weeks following spring term final examinations. Prerequisite: EASC 304. Corequisite: EASC 410. Recommended: EASC 207 and/or 307. Quantitative.

**EASC 418-1 Terrain Stability: Assessment and Mitigation**

A field-based course dealing with site specific assessment of the areas to be logged or impacted by road construction. Topics covered will include terrain stability assessment field procedures, environmental impact and mitigation in forest terrains, forestry-related landslides, forest road construction and deactivation. Rock slope stability assessment. Prerequisite: EASC 313, 411 and 413.

**EASC 419-1 Forest Harvesting Technology**

A field-based course dealing with techniques used in the harvesting of timber; their impact and mitigation. Topics covered will include forest harvesting techniques (ground-based systems, cable systems, aerial systems, hand logging and horse logging), elements of operational logging (layout of cut blocks and road systems), and forest development plans. Prerequisite: EASC 313, 411 and 413.

**EASC 420-3 Petroleum Geology**

Elements of the petroleum system, including basin type, source rock origination, migration, and trapping mechanisms. Techniques used to identify and map potential hydrocarbon reservoirs in the subsurface, including geophysical methods, surface mapping, well log correlation, and core/chip sample descriptions will be discussed. This material will be presented in a context that demonstrates the life cycle of a hydrocarbon field from exploration (early), delineation (assessment), and production (mature) stages. Datasets available during different stages of development will be discussed in light of their pertinence to optimal reservoir performance. Prerequisite: EASC 304, 309.

**EASC 421-3 Volcanology**

An introduction to physical and chemical volcanology through a comprehensive examination of volcanic eruptions and their consequences. The main topics covered are the rheological properties of magmas and lavas, structure of volcanic landforms, eruption dynamics, monitoring and hazard assessment, the emplacement of volcanic deposits, extraterrestrial volcanism and the effects of eruptions on the environment. Prerequisite: EASC 207. Co/Prerequisite: EASC 301.

**EASC 491-1 Directed Readings**

A course in which reading and research, and/or field work will be supervised by a faculty member. Prerequisite: units including 30 units in earth sciences courses and permission of the department.

**EASC 492-2 Directed Readings**

A course in which reading and research, and/or field work will be supervised by a faculty member. Prerequisite: 75 units including 30 units in earth sciences courses and permission of the department.

**EASC 493-3 Directed Readings**

A course in which reading and research, and/or field work will be supervised by a faculty member. Prerequisite: 75 units including 30 units in earth sciences courses and permission of the department.

**EASC 499-9 Honors Thesis**

Will include experimental and/or theoretical research in earth sciences or a related discipline, and the preparation of a thesis (research report). Selection of a research topic and preparation of the thesis will be done in consultation with a faculty member in earth sciences. A research seminar will be delivered at the end of the semester. Prerequisite: 105 units, admittance to the honors program and consent of a thesis supervisor.

**EASC 600-0 Introduction to Graduate Studies**

A required course designed to acquaint new graduate students with the research strengths of the program, research facilities in the University, and its vicinity. Procedures and policies relating to preparation, conduct and presentation of thesis research will be discussed. Graded satisfactory/unsatisfactory.

**EASC 603-3 Field Techniques in Hydrogeology**

This course is intended to complement the theoretical aspects of physical hydrogeology and aqueous geochemistry covered at an undergraduate (or early MSc) level by providing students with hands-on experience using hydrogeological equipment (data loggers, pumps, chemical sampling equipment), implementing sampling and testing protocols, and observing state-of-the-art monitoring and geophysical tools. The course entails preparatory research and data interpretation on the hydrogeology of the Fraser delta (including surficial geology, regional geochemistry and geophysical characteristics), a week at a hydrogeology field site on the Fraser River delta (early May), the extensive analysis and interpretation of data gathered during the field session complemented with regional data acquired during preliminary investigations, the development of a large-scale simulation model of the groundwater flow system at the site, and the completion of a comprehensive hydrogeological report. The course normally runs for about three weeks following spring session final examinations. Note: This course has limited enrollment. Prerequisite: undergraduate courses in physical and chemical hydrogeology (or equivalent) and consent of the department.

**EASC 604-3 Deformation Mechanisms and Continental Tectonics**

This course will focus on increasing the level of understanding of the mechanisms by which rocks deform and the effect of environmental variables (effective pressure, temperature, strain rate, chemical environment, etc.) on these deformation mechanisms.

Lectures will cover flow concepts applied to ductile deformation, grain-scale to crustal-scale strain partitioning, and models of exhumation of metamorphic rocks. The link between far-field effects such as lithosphere rheology, climate and erosion, and orogenic style will also be discussed. Prerequisite: undergraduate level courses in structural geology and global tectonics, equivalent to EASC 204 and 309 (or permission of the instructor).

**EASC 605-3 Advanced Glaciology**

An advanced introduction to theoretical glaciology within a continuum mechanical framework. The course focuses on fundamentals of glacier and ice-sheet flow and the key surface and subsurface processes that drive them. Course content includes a brief review of tensor analysis and continuum mechanics, glacier mass and energy balance, the material properties and rheology of ice, the basic equations of glacier deformation, ice-sheet and shelf flow, basal processes, glacier hydrology, and unstable modes of flow. Prerequisite: permission of instructor.

**EASC 606-3 Advanced Field Methods in Earth Sciences**

Focuses mainly on the field description, measurement and interpretation of geological, geochemical and geophysical features, and may concentrate on certain aspects of bedrock or surficial geology. Includes methods of data acquisition, display and modeling. Field exercises may be augmented by directed readings and laboratory studies. Course costs depend on the location and duration of field work and the nature of related investigations. Prerequisite: permission of the instructor.

**EASC 607-3 Exploration Seismology**

Application of seismic methods of the delineation of hydrocarbon deposits and crustal structure. Travel time expressions for a layered Earth; Zoeppritz' equations; 2-D and 3-D seismic surveying methods; reflection data processing, including deconvolution and migration; amplitude versus offset methods and direct hydrocarbon detection; seismic wave propagation in Earth's crust; refraction inversion; principles of seismic interpretation. Prerequisite: EASC 417 or equivalent.

**EASC 608-3 Advanced Metamorphic Petrology**

Field relations, nature and origin of metamorphic and metasedimentary rocks, graphical treatment and interpretation of mineral assemblages and heat-flow regimes in the framework of global tectonics, with special emphasis on derivation of pressure-temperature-fluid conditions ranging from low-grade rocks through granulites to partial melts. Laboratory: petrographic techniques applied to the study of rock suites. Prerequisite: permission of the instructor.

**EASC 610-3 Petroleum Geology**

An introduction to the practical application of geological and geophysical concepts in the petroleum industry. The course will focus on the use of facies models, porosity and permeability, geophysical logs, drillstem tests, drilling, and production strategies in petroleum exploration and exploitation. Particular emphasis is placed on the geologist's role in the industry, both in discovering new hydrocarbons, and in improving recovery (through waterflooding and carbon-dioxide flooding) from existing hydrocarbon reservoirs. Prerequisite: Knowledge and/or experience in sedimentary geology, stratigraphy, and facies models.

**EASC 611-3 Sedimentology**

An advanced treatment of topics which may include processes of sedimentation, facies model concepts, applications of ichnology, and depositional environments with an emphasis on siliciclastic successions. Course content will be tailored to student interest, but generally will include both non-marine and marine processes of sedimentation

and resultant depositional systems. The development of effective field criteria for the interpretation of the sedimentary record will be emphasized.

**EASC 612-3 Stratigraphy**

Stratigraphic concepts of lithostratigraphy, biostratigraphy, chronostratigraphy and genetic stratigraphy. The course concentrates on genetic stratigraphy, with emphasis on allostratigraphy, genetic stratigraphic sequences and sequence stratigraphy. Students will critically assess each paradigm and its applicability to both the subdivision and the interpretation of the sedimentary record. Relative sea level changes and their effects on deposition will be discussed in relation to the preserved sedimentary record. Students will examine the utility of facies analysis in the various genetic stratigraphic frameworks and the viability of reconstructing the depositional history of sedimentary successions.

**EASC 613-3 Groundwater Modelling**

An introduction to groundwater modelling providing the relevant theory and practical experience to develop and test conceptual models, to recognize data requirements, and to identify the limitations of numerical models. State-of-the-art groundwater modelling software will be used. An emphasis is placed on modelling flow in the saturated zone, but unsaturated zone hydrology, solute transport, and density dependent flow are also covered.

**EASC 614-3 Subsurface Techniques**

Advanced topics in subsurface exploration methods. Methods of drilling; core description and analysis; well logging.

**EASC 615-3 Applied Geophysics**

Instrumentation, application and limitations of electrical, seismic, radar and gravity methods in the exploration for mineral resources and in engineering applications.

**EASC 616-3 Fluvial Systems**

Fluid mechanics of open channel flow; physical sedimentology and sediment transport in aqueous environments. Prerequisite: appropriate standing in Applied Mathematics and in Physics.

**EASC 617-3 Quaternary Geology**

Environments of glacial and proglacial deposits. Quaternary stratigraphy and dating methods with emphasis on the Cordillera.

**EASC 618-3 Tectonics of Sedimentary Basins**

Regional processes of subsidence and basin formation from a plate tectonics viewpoint. The course will examine the origins and general characteristics of convergent, divergent, intraplate and hybrid basins. Methods of discriminating basin origins from an understanding of depositional systems, stratigraphic analysis, provenance and compositional variations will be examined.

**EASC 619-3 Environmental Geoscience**

An examination of the concepts, methods and techniques used in advanced case studies of environmental geology, in fields including forestry, environmental geochemistry, earthquake and volcanic hazard, and urban planning.

**EASC 620-3 Volcanology**

Physical, chemical and tectonic aspects of volcanology examined with emphasis on processes of magma generation and evolution, styles of eruption, environments of deposition, and interpretation of volcanic facies. Prerequisite: undergraduate course in petrology and structural geology.

**EASC 621-3 Tectonics and Magmatism Convergent Plate Margins**

Geological processes at convergent plate margins are considered in the context of plate tectonic principles. Topics to be addressed include: driving forces of tectonic plates, mantle convection, geometry

of subducted slabs, ridge-trench intersections, generation of volcanic arcs, causes of anomalous magmatism, accretion of terranes, and transpression of orogenic float. Prerequisite: undergraduate structural geology and petrology courses.

#### **EASC 622-3 Principles of Ichnology**

The conceptual framework of ichnology with particular emphasis on the ethological (behavioral) classification of biogenic structures, as well as its applications to the ichnofacies concept and paleoenvironmental interpretation of the sedimentary record. Environmental stresses and organism responses will be integrated with conventional sedimentology to highlight the complex inter-relationships between infauna and the environments they inhabit. The genetic stratigraphic applications of ichnology will also be addressed. Prerequisite: advanced undergraduate sedimentology course.

#### **EASC 623-3 Groundwater Resource Evaluation**

In addition to examining groundwater resources (exploration, evaluation and management), this course expands upon the theory and use of aquifer tests and their respective methods of analysis for evaluating groundwater resources. Advanced methodologies for partially penetrating wells, leaky aquifers, anisotropic aquifers, double porosity type and fractured aquifers will be included. Computer applications will be emphasized. Prerequisite: undergraduate course in groundwater

#### **EASC 624-3 Geology of the Canadian Cordillera**

The stratigraphy, structure and historical geology of the Canadian Cordillera, examined from a plate tectonic perspective. Models of development of the various terranes and related entities, and their amalgamation to form the present Cordillera, will be examined in detail. Prerequisite: an undergraduate background that includes courses at any level in structural geology, plate tectonics, geochemistry, geophysics, petrology (sedimentary, metamorphic, and igneous), plus permission from the instructor.

#### **EASC 625-3 Issues in Canadian Cordillera Geology and Tectonics**

A reading and seminar course on topics related to the development and ongoing evolution of the Canadian Cordillera. Topics will be based on both graduate student areas of interest and on current 'hot topics' concerning this orogenic belt. One or more field trips might be conducted if there is sufficient interest and such trips would complement the topics of discussion. Prerequisite: an undergraduate background that preferably includes courses at any level in structural geology, plate tectonics, geochemistry, geophysics, petrology (sedimentary, metamorphic, and igneous). This background will be assessed by the instructor, whose specific permission must be obtained before enrolment.

#### **EASC 627-3 Carbonate Depositional Systems**

Focuses on the modern and ancient carbonate depositional system, including platform geometry, grain types, diagenesis, porosity development, climatic influence, and eustatic influence. Petrology of outcrops, cores, and thin sections will be discussed and applied to characterization of carbonate systems in the subsurface. Presents a combination of academic theory and practical applications used in the petroleum industry, especially in directed study exercises. Mandatory weekend field trip to classic carbonate outcrops in western Canada. Prerequisite: permission of instructor.

#### **EASC 703-3 Special Topics in Earth Sciences III**

#### **EASC 704-708-3 Special Topics**

Prerequisite: permission of the instructor.

#### **EASC 709-1 Directed Readings**

Prerequisite: permission of the instructor.

#### **EASC 710-2 Directed Readings**

Prerequisite: permission of the instructor.

#### **EASC 711-3 Directed Readings**

Prerequisite: permission of the instructor.

#### **EASC 898-6 MSc Thesis**

#### **EASC 900-901-1 PhD Research Seminar**

Prerequisite: enrolment in PhD program. Graded satisfactory/unsatisfactory.

#### **EASC 998-6 PhD Thesis**

Prerequisite: enrolment in PhD Program.

## **Economics ECON Faculty of Arts and Social Sciences**

#### **ECON 102-3 The World Economy**

An overview of the broad economic trends in the development of the world economy over the last five decades with reference to the major debates related to economic interdependence, development and growth, globalization, and the role of the major multilateral economic institutions (IMF, World Bank, OECD, ILO, UN). (lecture/tutorial) Students with credit for Economics courses at the 200 (or higher) division (excluding ECON 200 and 205) may not take ECON 102 for further credit. Breadth-Social Sciences.

#### **ECON 103-4 Principles of Microeconomics**

The principal elements of theory concerning utility and value, price and costs, factor analysis, productivity, labor organization, competition and monopoly, and the theory of the firm. Students with credit for ECON 200 cannot take ECON 103 for further credit. Quantitative/Breadth-Social Sciences.

#### **ECON 104-3 Economics and Government**

An introduction of broad, basic economic ideas applied to government finance, allocation, and procurement. Topics covered may include government size, health care, debt, social insurance, trade, and redistribution policies. Breadth-Social Sciences.

#### **ECON 105-4 Principles of Macroeconomics**

The principal elements of theory concerning money and income, distribution, social accounts, public finance, international trade, comparative systems, and development and growth. Students with credit for ECON 205 cannot take ECON 105 for further credit. Quantitative/Breadth-Social Sciences.

#### **ECON 110-3 Foundations of Economic Ideas**

A preliminary approach designed to familiarize students with economic ideas and methods of economic analysis. The focus will vary from term to term. Students with credit for ECON 100 cannot take ECON 110 for further credit. Breadth-Social Sciences.

#### **ECON 210-3 Money and Banking**

Banking theory and practice in a Canadian context; the supply theory of money; the demand for money and credit creation; monetary policy in a centralized banking system and in relation to international finance. Prerequisite: ECON 103 or 200 and 105 or 205. Students with credit for ECON 310 cannot take ECON 210 for further credit. Quantitative.

#### **ECON 250-3 Economic Development in the Pre-Industrial Period**

The pre-industrial period. History of the economic development of civilization from ancient times until the industrial revolution. Emphasis will be placed on the influence of geographical factors, discoveries and inventions, religion, and social organization and customs. Prerequisite: ECON 103 or 200 and ECON 105 or 205. Students with credit for ECON 150 cannot take ECON 250 for further credit. Quantitative.

#### **ECON 260-3 Environmental Economics**

Economic analysis of environmental problems (water and air pollution, etc.). Evaluation of market failures due to externalities and public goods. Market and non-market regulation of environmental problems. Prerequisite: ECON 103 or 200. Students with credit for ECON 360 cannot take this course for further credit. Quantitative.

#### **ECON 278-3 Economics Practicum I**

First term of work experience in the Economics Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: 30 units including ECON 103 or 200 and ECON 105 or 205. At least 12 of these 30 units must be completed at Simon Fraser University with a minimum CGPA of 2.75. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the third week of the preceding term.

#### **ECON 279-3 Economics Practicum II**

This is the second term of work experience in the Economics Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: economics lower division requirements and completion of 45 units at least 12 of which must be completed at Simon Fraser University, with a CGPA of 2.75. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the third week of the preceding term.

#### **ECON 282-3 Selected Topics in Economics**

The subject matter will vary from term to term. Prerequisite: to be determined by the instructor subject to approval by the department chair.

#### **ECON 290-3 Canadian Microeconomic Policy**

A general survey of Canadian microeconomic policy issues. The course covers topics such as regulation, taxation, environmental and resource policy, health care, education and income distribution. Prerequisite: ECON 103 or 200 and ECON 105 or 205. Quantitative.

#### **ECON 291-3 Canadian Macroeconomic Policy**

A general survey of Canadian macroeconomic policy issues. Topics will include the costs of inflation and unemployment, monetary and fiscal policy, the effects of government debt and exchange rate policy. Prerequisite: ECON 103 or 200 and ECON 105 or 205. Quantitative.

#### **ECON 300-3 Introduction to Economic Concepts and Issues**

The objective of this course is to introduce students to the economic approach to decision-making by individuals, firms and institutions. They will see how economic analysis can be used to interpret current economic issues and as an aid to the formation and evaluation of government policy. The course will focus on both microeconomic and macroeconomic concepts. By exploring economic issues, the course will encourage critical thinking and develop problem-solving skills. Prerequisite: this course is available only to students who are enrolled in the Integrated Studies Program. Breadth-Social Sciences.

#### **ECON 301-4 Microeconomic Theory I: Competitive Behavior**

Aspects of microeconomic theory involving competitive markets. Topics include the behavior of households and firms, partial equilibrium analysis of product and factor markets, and general equilibrium. Prerequisite: ECON 103 or 200 and ECON 105 or 205; MATH 157; two 200 division ECON or BUEC courses (excluding BUEC 232), 60 units. Students with a minimum grade of A- in both ECON 103 and ECON 105 can take ECON 301 after 30 units and are not required to meet the 200 division ECON or BUEC course requirements. Students seeking permission to

register based on ECON 103 and 105 grades must contact the Undergraduate Advisor in Economics. Quantitative.

### **ECON 302-4 Microeconomic Theory II: Strategic Behavior**

Aspects of microeconomic theory concerned with strategic behavior, imperfect information, and market failure. Topics include game theory and oligopoly; uncertainty and insurance; asymmetric information and market power, externalities and public goods, together with related issues in welfare economics. Prerequisite: ECON 301. Students who have taken ECON 383-3 in 1998-3 and 1999-3 cannot take this course for further credit. Quantitative.

### **ECON 305-5 Intermediate Macroeconomic Theory**

Concepts and methods of analysis of macroeconomic variables -- consumption, investment, government and foreign trade. Classical and Keynesian models compared; analysis of economic statics and dynamics. Prerequisite: ECON 103 or 200; ECON 105 or 205; MATH 157; two 200 division ECON or BUEC courses (excluding BUEC 232), 60 units. Students with a minimum grade of A- in both ECON 103 and ECON 105 can take ECON 305 after 30 units and are not required to meet the 200 division ECON or BUEC course requirements. Students seeking permission to register based on ECON 103 and 105 grades must contact the Undergraduate Advisor in Economics. Quantitative.

### **ECON 309-5 Introduction to Marxian Economics**

Examination of Marx's economic theory, with particular emphasis on capital, theories of surplus value, and the Grundrisse. Consideration of earlier work as the basis for studying the above. Identification of the critical differences between Marxian economic theory and the dominant schools of economic theory in North America. Prerequisite: ECON 103 or 200 and 105 or 205, or permission of the department; 60 units.

### **ECON 325-3 Industrial Organization**

Introduces students to the economics of imperfect competition. Topics covered include the theory of the firm, market structure, and various aspects of firm strategy such as pricing, advertising, product differentiation, and innovation. Related questions of public policy will also be addressed. Prerequisite: ECON 301; 60 units. Quantitative.

### **ECON 331-5 Introduction to Mathematical Economics**

The mathematical interpretation of fundamental economic concepts; demand, supply, competitive equilibrium. Application of the calculus to production and distribution theory, growth models and investment theory. Differential and difference equations in dynamic economic models. Introduction to activity analysis. Prerequisite: ECON 103, 105 and MATH 157 or 151; 60 units. Students who have completed MATH 232 or 251 cannot take ECON 331 for further credit. Quantitative.

### **ECON 342-3 International Trade**

Topics discussed in this course are: gains from trade in a classical world; the modern theory of international trade; factor price equalization; empirical tests and extensions of the pure theory model; economic growth and international trade; the nature and effects of protection; motives and welfare effects of factor movements; multinational enterprises; the brain drain; customs union theory; pollution control and international trade. Prerequisite: ECON 103 or 200 and 105 or 205; 60 units or permission of the department. Students with credit for ECON 442 cannot take this course for further credit. Quantitative.

### **ECON 345-3 International Finance**

Foreign exchange markets; determination of spot and forward exchange rates; Euro currency markets; balance of payments statistics; international adjustment theory; income price and exchange rate effects; the role of international short term capital flows; the international monetary system: gold standard, freely floating rates, dollar gold exchange standard, centrally created reserves. Prerequisite: ECON 103 or 200 and 105 or 205; 60 units or permission of the department. Students with credit for ECON 445 cannot take this course for further credit. Quantitative.

### **ECON 353-4 Economic History of Canada**

Analysis of leading issues in Canadian economic history. The historical experience of other areas will be examined when useful contrasts can be made. Prerequisite: ECON 301; 60 units.

### **ECON 354-3 Comparative Economic Institutions**

People in small scale societies face numerous economic problems and have devised a variety of institutions to solve them. Using detailed case studies as a source of empirical information, we will develop economic concepts and models that help to make sense of these institutional arrangements. Prerequisite: ECON 103 and 105; 60 units. Students who have taken ECON 387 in fall 1998 or fall 1999, or ECON 383 in fall 2001 or fall 2003 may not take this course for further credit.

### **ECON 355W-4 Economic Development**

Analysis of theories of economic development. Consideration will be given to the requirements of successful development, to aspects of international co-operation, and to procedures of economic planning. Problems of emerging countries and models of various developing economies will be studied. Prerequisite: ECON 103 or 200 and 105 or 205; 60 units. Students with credit for ECON 455 may not take ECON 355 for further credit. Writing/Quantitative.

### **ECON 362-4 Economics of Natural Resources**

Application of economic analysis to natural resource problems and efficient management practice; public policy considerations in respect to development and conservation; benefit-cost analysis. Prerequisite: ECON 301; 60 units. Quantitative.

### **ECON 368-3 Regional Economic Analysis**

Introduction to regional impact analysis. Analysis of economic models of industrial location and spatial equilibrium. Examination of regional growth theories and their policy implications. Presentation of techniques for analysis of regional economic structure and performance. Prerequisite: ECON 103 or 200 and 105 or 205; 60 units. Students with credit for ECON 365 may not take this course for further credit.

### **ECON 378-3 Economics Practicum III**

This is the third term of work experience in the Economics Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: economics lower division requirements and completion of 60 units, at least 12 of which must be completed at Simon Fraser University with a CGPA of 2.75. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the third week of the preceding term.

### **ECON 379-3 Economics Practicum IV**

This is the last term of work experience in the Economics Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: ECON 301-4 or ECON 305-5 and 75 units with a CGPA of 2.75. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the third week of the preceding term.

### **ECON 381-3 Labor Economics**

Analysis of the economics of the labor market with particular emphasis on wage determination, the concept of full employment, and manpower policies. Prerequisite: ECON 301; 60 units. Quantitative.

### **ECON 382-3 Selected Topics in Economics**

The subject matter will vary from term to term depending upon the interests of faculty and students. Prerequisite: to be determined by the instructor subject to approval by the department chair.

### **ECON 383-3 Selected Topics in Economics**

The subject matter will vary from term to term. Prerequisite: to be determined by the instructor subject to approval by the department chair.

### **ECON 387-3 Selected Topics in Economics**

The subject matter will vary from term to term. Prerequisite: to be determined by the instructor subject to approval by the department chair.

### **ECON 388-3 Introduction to Law and Economics**

An introduction to the economic analysis of law, emphasizing the concepts of transaction costs and property rights. A variety of topics will be analysed, ranging from the allocative effects of alternative property rights to contract tort and nuisance law, out-of-court settlements and alternative legal fee structures. Prerequisite: ECON 103 or 200; ECON 105 or 205; 60 units.

### **ECON 389-3 Selected Topics in Economics**

The subject matter will vary from term to term. Prerequisite: to be determined by the instructor subject to approval by the department chair.

### **ECON 390-3 Canadian Public Policy**

Theories of government policy making as applied to the Canadian economy. Specifically, behavioral theories and current Canadian case studies are used to explore both private and public decision processes and the role of policy analysts in that context. Prerequisite: ECON 103 or 200 and 105 or 205; 60 units. Quantitative.

### **ECON 392-3 Public Economics: Role of Government**

The study of the normative rationale for government in a market economy through an analysis of distributional issues, public goods, externalities, non-competitive market structures, and asymmetric information. Prerequisite: ECON 301. Quantitative.

### **ECON 393-3 Public Economics: Taxation**

The study of the public economics of taxation including the efficiency and distributional aspects of taxation, the incentive effects of taxation, tax incidence, tax evasion and fiscal federalism. Prerequisite: ECON 301. Quantitative.

### **ECON 398-3 Directed Studies**

Independent reading and research on topics selected in consultation with the supervising instructor. This course can only be taken once for credit towards a degree or diploma. Prerequisite: ECON 103 or 200 and ECON 105 or 205; 60 units.

### **ECON 402-3 Advanced Microeconomic Theory**

Advanced coverage of microeconomic theory for students intending to pursue graduate study in economics. Topics may include general equilibrium, game theory, and asymmetric information. Prerequisite: ECON 302 and 331. Students who have completed both MATH 232 and MATH 251 may substitute these courses for ECON 331. Entry into this course requires a minimum CGPA of 3.0 or a minimum grade of A- in both 301 and 302. Students seeking permission to enrol based on ECON 301 and 302 grades must contact the Undergraduate Advisor in Economics. Quantitative.

**ECON 403-3 Advanced Macroeconomic Theory**

Advanced coverage of macroeconomic theory for students intending to pursue graduate study in economics. Topics may include economic growth, business cycles, and monetary theory. Prerequisite: ECON 302, 305 and 331. Students who have completed both MATH 232 and MATH 251 may substitute these courses for ECON 331. Entry into this course requires a minimum CGPA of 3.0 or a minimum grade of A- in both ECON 302 and 305. Students seeking permission to enrol based on 302 and 305 grades must contact the undergraduate advisor in economics. Quantitative.

**ECON 404-3 Methodology of the Social Sciences**

Critical discussion of contemporary and original papers in the social sciences. Emphasis will be on the objectives, the logical aspects, and the testability of social science theories and models. Prerequisite: 70 units.

**ECON 409W-3 Seminar in Economic Thought**

Consideration of particular economic theorists, schools of thought or themes in economic thought. Focus will vary from term to term. Prerequisite: ECON 301 and 305, or permission of the department; 60 units. Writing.

**ECON 410-3 Seminar in Monetary Theory**

Analysis of money as an economic variable; role of money in micro and macroanalysis. Prerequisite: ECON 301 and 305. Quantitative.

**ECON 425-3 Industrial Organization: Imperfect Competition**

An in depth examination of firm behavior in the context of imperfect competition. Topics covered may include: monopoly and oligopoly pricing; product differentiation; market power; entry deterrence; antitrust laws; and regulation. Emphasis will be given to covering a limited number of issues in detail rather than attempting a broad survey of industrial organization theories. Prerequisite: ECON 302.

**ECON 426W-3 Industrial Organization: Governance and Institutions**

A study of how markets, firms and other institutions are organized using information and transaction cost theories. Topics covered may include: theories of the firm (governance, structure, ownership, signaling and screening behavior); theories of non-market institutions (marriage, non-profit organizations, governments); institutional theories of growth and economic history; and the organization of markets (reputations, contracts, vertical control). Emphasis will be given to covering a limited number of issues and theoretical perspectives in detail rather than attempting a broad survey of new institutional economics. Prerequisite: ECON 302. Writing.

**ECON 428-3 Seminar in Behavioral and Applied Economics**

This is a research course covering topics in experimental economics, tests and economic behavior, and issues in applied economics. Experimental economic methods, results, and their implications for economic analyses will be reviewed. Individual projects will be designed and carried out by participants. Prerequisite: ECON 302 and 305. Quantitative.

**ECON 431-5 Intermediate Mathematical Economics**

The application of input-output studies, linear programming and the theory of games to economic analysis. Dynamic models, general equilibrium models and the mathematics of marginal analysis. Prerequisite: ECON 301, 305 and 331; 60 units. Students who have completed MATH 232 and MATH 251 may substitute these courses for ECON 331. Quantitative.

**ECON 435-5 Econometric Methods**

The application of econometric techniques to the empirical investigation of economic issues. Prerequisite: ECON 301 and BUEC 333. Entry into this course requires a minimum CGPA of 3.0 or a minimum grade of A- in both ECON 301 and BUEC 333. Students seeking permission to enrol based on ECON 301 and BUEC 333 grades must contact the Undergraduate Advisor in Economics. Quantitative.

**ECON 443-3 Seminar in International Trade**

Focus will vary from term to term. Prerequisite: ECON 301, 305 and 342; or permission of the department; 60 units.

**ECON 446-3 Seminar in International Finance**

Focus will vary from term to term. Prerequisite: ECON 301, 305 and 345, or permission of the department; 60 units. Quantitative.

**ECON 448W-3 Seminar in the Economics of Crime**

Explores the economics of crime. Topics will include statistical information on crime, economic theories of crime, deterrence, organized crime and related topics. Prerequisite: ECON 302 and BUEC 333. Writing.

**ECON 450W-3 Seminar in Quantitative Economic History**

Focus will vary from term to term. Prerequisite: ECON 301 and 305. Writing/Quantitative.

**ECON 451-3 Seminar in European Economic History**

A detailed examination of the major issues in European economic history. Prerequisite: ECON 301 and 305; 60 units. Students with credit for ECON 351 may not take ECON 451 for further credit.

**ECON 452W-3 Seminar in Economic Prehistory**

Topics will vary but may include the biological evolution of economic preferences, economic behavior in hunting and gathering societies, the transition from foraging to agriculture, the emergence of inequality, hierarchy, warfare, cities, and the state, and mechanisms of social collapse. Prerequisite: ECON 302. Students who have taken ECON 482 in the summer of 2004 may not take this course for further credit. Writing.

**ECON 453-3 Seminar in the Economics of Education**

The application of economic theory and empirical analysis to issues related to the role of education in economic growth and individual earnings, the organization of the education system and education policy. Specific topics covered will vary from term to term. Prerequisite: ECON 301. Students who have taken ECON 482 in fall 2005 may not take this course for further credit.

**ECON 454W-3 Seminar in the Economics of the Family**

An economic analysis of behavior within the family, institutional aspects of the family, and the economic role of families. Topics include bargaining, household production, intra-family transfers, fertility, marriage, divorce and other topics like dowries, footbinding and mate matching behavior. Prerequisite: ECON 301. Students who have taken ECON 496 in spring 2006 may not take this course for further credit. Writing.

**ECON 455W-3 Seminar in Economic Development**

Topics in economic development. Prerequisite: ECON 302 and 305. Writing/Quantitative.

**ECON 460-3 Seminar in Environmental Economics**

Focus will vary from term to term. Prerequisite: ECON 302. Quantitative.

**ECON 478-3 Economics Practicum V**

This is an optional term of work experience in the Economics Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: ECON 301, 305, one 400 division course and 90 units and a CGPA of 2.75. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the third week of the preceding term.

**ECON 480-3 Seminar in the Economics of Labor Market Policy**

Seminar focusing on public policy as it relates to employment and income security. Special emphasis will vary from term to term, but may include such topics as examinations of current manpower, welfare and public insurance programs, labor legislation, and private institutional practices (such as union-management pension arrangements) that may affect income security. Prerequisite: BUEC 333 and ECON 381.

**ECON 482-484-3 Selected Topics in Economics**

The subject matter will vary from term to term depending upon the interests of faculty and students. Prerequisite: to be determined by the instructor subject to approval by the department chair.

**ECON 490-3 Seminar in Public Choice**

The application of economic theory to political market place. Topics may include the economics of constitutions, voting, democracy, bureaucracy, rent-seeking, and redistribution. Prerequisite: ECON 301 and 305; 60 units. Quantitative.

**ECON 492-3 Seminar in Public Economics**

This seminar course considers topics such as the potential role for government through an analysis of distributional issues, public goods, externalities, non-competitive market structures, and asymmetric information. It may also include topics like the incentive effects of taxation, tax incidence, tax evasion and topics in fiscal federalism. Prerequisite: ECON 392 or 393 and ECON 302. Quantitative.

**ECON 496-3 Selected Topics in Economics**

The subject matter will vary from term to term depending upon the interests of faculty and students. Prerequisite: to be determined by the instructor subject to approval by the department chair.

**ECON 498-3 Directed Studies**

Independent reading and research on topics selected in consultation with the supervising instructor. This course may not be repeated for additional credit. Prerequisite: ECON 301 and 305 and permission of the undergraduate chair of the department; 60 units.

**ECON 499-6 Honors Seminar in Economics**

The purpose of this course is to permit the student to expand and develop a paper that has been prepared for a previous course into an honors paper. Prerequisite: ECON 302, 305, a minimum CGPA of 3.0; pre- or co-requisite: ECON 435. Joint Honors students may use ECON 301 in place of 302. Quantitative.

**ECON 750-0 Practicum I**

First term of work experience in the Co-operative Education Program. Prerequisite: completion of core MA degree requirements of ECON 802, 807 (or 808), 835, and 836 with a minimum GPA of 3.0.

**ECON 751-0 Practicum II**

Second term of work experience in the Co-operative Education Program. Prerequisite: ECON 750.

**ECON 752-0 Practicum III**

Third term of work experience in the Co-operative Education Program. Prerequisite: ECON 751 and department approval.

**ECON 798-4 Introduction to Mathematical Economics**

Applications of static optimization techniques, matrix algebra, differential and difference equations in economic models.

**ECON 802-4 Microeconomic Theory I**

An examination of the economic theory of market prices with reference to behavior of individual households, firms, and markets. Special emphasis will be placed on the implications of individual behavior for the allocation of resources. Prerequisite: ECON 331. Offered once a year.

**ECON 803-4 Microeconomic Theory II**

The course subsequent to ECON 802 which covers advanced Microeconomic theory on a dynamic and general equilibrium basis. Prerequisite: ECON 802. Offered once a year.

**ECON 804-4 Advanced Topics in Microeconomic Theory**

The course following ECON 802 and 803 which covers such topics as equilibrium theory, axiomatic analysis, stability analysis, income distribution, dynamic micro models, and models of non-market economics. Prerequisite: ECON 802 and 803 or equivalent.

**ECON 807-4 Macroeconomic Theory and Policy**

An examination of basic macroeconomic theory, empirical macroeconomic data and models, macroeconomic analysis, and application to economic developments and policy issues. Prerequisite: ECON 798 or equivalent. Offered once a year.

**ECON 808-4 Macroeconomic Theory**

An analysis of current theories of aggregate economic behavior. Topics covered in this course may include long-run growth, dynamic general equilibrium models, and business cycle analysis. Prerequisite: ECON 798 and 403 (or equivalent). Students who have taken ECON 805 cannot take ECON 808 for further credit. Offered once a year.

**ECON 809-4 Advanced Macroeconomic Theory**

This course covers advanced macroeconomic theory topics. Emphasis will be placed on current research techniques. Topics covered may include: capital and growth theory, real business cycle models, models of fiat money, asset pricing models, endogenous growth models, development traps, macroeconomic complementarities, co-ordination failures, and adaptive behavior in macroeconomic models. Prerequisite: ECON 808. Students who have taken ECON 806 cannot take 809 for further credit.

**ECON 810-4 Monetary Theory**

An examination of theories of the supply and demand for money in micro- and macro-contexts, from the classical analysis to the most recent developments. Emphasis will be placed upon the role of money in economic activity, the precise nature of its demand and supply conditions, and policy-implications of theoretical conclusions with regard to money.

**ECON 811-4 Advanced Monetary Theory**

Selected topics in monetary theory and policy.

**ECON 815-4 Portfolio Theory**

A study of optimum portfolio selections and diversification of financial assets including cash vis-a-vis different classes of utility functions of final wealth. Also, an examination of the behavior of speculative prices and rates of return. Prerequisite: ECON 331. Offered once a year. This is the same course as BUS 815.

**ECON 817-4 Theory of Capital Markets**

A study of capital market equilibrium theories, risk allocation, valuation models under perfect and imperfect markets and their empirical testing.

Prerequisite: ECON 331, 835. Offered once a year. This is the same course as BUS 817.

**ECON 818-4 Advanced Topics in Finance**

Extensions of advanced topics beyond those covered in BUEC 815 and 817. Prerequisite: BUEC 815, 817. This is the same course as BUS 818.

**ECON 825-4 Industrial Organization**

A presentation and critical examination of the industrial organization models; includes a review of mainstream and current theoretical literature, and important empirical work in the field. Prerequisite: ECON 802.

**ECON 826-4 Industrial Organization II**

This course examines topics specific to the theory of the firm. Classes will focus on theories of transaction cost, principal-agency, and the theory of contracts. Particular attention will be given to the strategic interaction of the agents.

**ECON 828-4 Experimental Economics**

The course will deal with experimental methodology and design. A number of topics will be covered in the three main areas of experimental economics: markets, games and strategic interaction, and individual decision-making. Students will be expected to design and conduct their own experiments under the supervision of the instructor.

**ECON 831-4 Mathematical Economics**

Various equilibrium models of micro and macro theory will be examined with emphasis on their solution, stability conditions and the uniqueness of solutions. Prerequisite: ECON 331.

**ECON 832-4 Computational Methods in Economics**

The first part of the course will focus on dynamic optimization problems, with an emphasis on dynamic programming. Applications may include growth, business cycles, monetary and fiscal policy, and optimal contracts. The second part of the course will focus on models of learning and bounded rationality. Genetic and stochastic approximation algorithms will be studied. Applications may include the stability of rational expectations equilibria, the evolution of institutions and social conventions, and models of robust control and Knightian uncertainty. Prerequisite: ECON 802, 807 or 808, or with the approval of the instructor.

**ECON 835-4 Econometrics**

An introduction to econometric theory. Applications of econometric methods to both time series and cross-section data. Prerequisite: ECON 435 and ECON 798. Offered once a year.

**ECON 836-4 Applied Econometrics**

A 'hands-on' course in implementing econometric techniques for empirical investigation of economic issues. Prerequisite: ECON 835 or equivalent.

**ECON 837-4 Econometric Theory I**

The theory of the general linear model and the implications of basic econometric problems such as multicollinearity, autocorrelated residuals, errors in variables and heteroscedasticity. The use of dummy and lagged variables, simultaneous equation models. The identification problem. Estimation of over-identified equations. Prerequisite: ECON 835 or equivalent. Offered once a year.

**ECON 838-4 Econometric Theory IIA**

This course presents advanced topics in time series econometrics, with an emphasis on model building, estimation, inference and forecasts in finance and macroeconomics. Univariate and multivariate models of stationary and nonstationary time series in time and frequency domains will be studied. General topics will include specification testing, method of moments estimators, applications of maximum likelihood, simulation and bootstrap methods, and estimation and inference in nonlinear models. These will be

presented in the context of ARMA models, impulse-response functions, vector autoregressions and state space models, frequency domain methods, unit roots, cointegration, models of volatility, extreme value analysis and risk management, long-memory models, structural change, hidden-markov models, high frequency finance and wavelets. Prerequisite: ECON 837.

**ECON 839-4 Econometric Theory IIB**

Presents advanced topics in econometric theory in a microeconomic setting. Topics will include specification testing, method of moments estimators, applications of maximum likelihood, simulation and bootstrap methods, and estimation and inference in nonlinear models. These will be presented in the context of cross-sectional and panel data, including discrete choice models, limited-dependent variable models, and duration models. Prerequisite: ECON 837.

**ECON 840-4 Theory of International Trade**

The analytical course dealing with the pure theory of international trade. The motivation of supply and demand in international trade, the dynamic basis of trade, the role of the price mechanism and of income changes in international trade. Specific problems may be considered, such as the theoretical case for free and multilateral trade, and the theory of customs unions.

**ECON 842-4 International Monetary Economics**

Balance of payments theory, foreign exchange theory, and adjustment processes. A range of applied problems will be dealt with such as the operation of exchange rates, analysis of exchange rate systems, exchange control and the processes of short and long term capital movements in international trade.

**ECON 843-4 Current Problems in International Trade**

Detailed studies of a limited number of international economic problems. The selection of topics will depend to some extent upon the expressed interests of the students.

**ECON 850-4 Methodology and Sources in Economic History**

A close examination of the work and methodology of leading economic historians. Study of methodology of selected works in economic history, with special emphasis on the identification of implicit theories and assumptions. Application of quantitative approaches and economic theory to selected problems. Independent work.

**ECON 851-4 Economic History of Europe**

An examination of theories and controversies from the transition of feudalism to capitalism. Comparative study of the emergence and subsequent evolution of industrialization. How economic institutions affect the character and pace of economic development. Regional disparities and economic growth in given countries. Relationship between economic growth and international expansion. Examination of declining sectors, stagnation, institutional changes in the 20th century.

**ECON 853-4 Economic History of North America**

Effects of the North Atlantic economy on the pace and character of Canadian and American economic development. The role of staple exports and the linkages to manufacturing and transportation developments. Canadian national policy, with emphasis on regional effects, internal consistency and comparison to similar policies in the United States. Factors for growth and cyclical changes in the 20th century. In all the above areas, an attempt will be made to apply quantitative techniques of the new economic history to the problems of economic change.

**ECON 855-4 Theories of Economic Development**

Characterization of non-growing economies; mechanics of the process of economic development; the role of economic and non-economic factors; structural transformation in economic development.

**ECON 856-4 Theories of Economic Growth**

Equilibrium analysis and economic growth; determinants of growth; steady state and steady growth; technical progress and equilibrium growth. Prerequisite: ECON 808.

**ECON 857-4 Studies in Economic Development**

Examination of the characteristics of a given underdeveloped economy; allocation of resources and factor strategies; historical or contemporary comparisons of public policy and development.

**ECON 859-4 Population Economics**

An examination of the determinants and consequences of population growth. Population projections. Fertility and mortality differentials. The impact of the business cycle on fertility and migration. The theory of the optimum population under static and dynamic conditions. Neo-Malthusianism. The economics of high fertility in densely populated and underdeveloped areas.

**ECON 860-4 Environmental Economics**

The analysis of the role of the natural environment in economic system. All economic activity creates waste products (pollution) which must be disposed of back into the natural environment. The socially efficient amount of waste generation and disposal is determined and methods of reaching this level evaluated. This involves the theoretical and empirical determination of the costs and benefits of waste generation and a thorough discussion of the role of government policies: taxes, standards, tradeable emission permits versus private market initiatives (bargaining and green goods) under a variety of assumptions about the economic system.

**ECON 861-4 Natural Resource Economics**

Basic issues of intertemporal valuations. The economic theory of natural resource management for non-renewable resources, fisheries and forests. The effects of market structure and taxation on intertemporal supply patterns will be considered.

**ECON 863-4 Fisheries Economics**

Theoretical analysis of fisheries exploitation, emphasizing the characteristics of a common property resource and the economic expression of biological factors. Problems of productivity against the background of national fisheries regulations and international agreements. Public policies in respect of the fisheries, with their social and economic implications.

**ECON 864-4 Studies in Economic Fisheries Management**

Analysis of economic fisheries management techniques derived from the study of a variety of actual fisheries management projects. Prerequisite: ECON 863, or permission of the instructor.

**ECON 865-4 Regional Economic Theory**

The theoretical aspects of regional economics, particularly the following topics; the concept of a region, location theory, theories of regional economic growth, and techniques for regional analysis. Prerequisite: ECON 331 recommended.

**ECON 867-4 Regional Development Problems**

An applied course in regional economics. Topics include the following: concepts of regional planning, development planning techniques, study of Canadian regional development problems. Prerequisite: ECON 865.

**ECON 869-4 Transportation Economics**

Emphasis on costs, demand and pricing of transportation services. Additional topics to be studied include government promotion of transport, transport regulation and the economic effects of transportation improvements. Recommended: ECON 331.

**ECON 877-4 Methodology in Economic Theory**

Topics to be discussed include theories of rationality; social theories involved in the economic concept of equilibrium; the role and status of economic theories and models; methodology versus sociology of economics; theories of economic knowledge; realism of assumptions and value premises in economics.

**ECON 878-4 History of Economic Thought Prior to 1870**

The origins and development of economic thought from early times until 1870 with special emphasis on mercantilist, physiocratic, classical, Malthusian and socialist doctrines.

**ECON 879-4 History of Economic Thought Since 1870**

The development of economic thought since 1870 will be examined with special emphasis on the evolution of marginal utility theory, general and partial equilibrium analysis, business cycle theories, Keynesian and post-Keynesian economics.

**ECON 881-4 Labor Economics**

Theoretical analysis of labor in the context of a national resource. Critical examination of the aspects of quantity, quality, allocation and utilization of human resources. Topics given particular attention include labor force participation, structural employment, human capital, incomes policies and the concept of an active manpower policy. Prerequisite: ECON 835.

**ECON 886-4 Industrial Relations**

Collective bargaining: process, content, consequences. Bargaining organizations: goals, structure, decision-making processes. Industrial relations systems in varying economic and institutional environments. Public policy and industrial relations.

**ECON 888-4 The Economics of Legal Relationships**

An analysis of the economic effects of constraints imposed by common, statute and constitutional law. Topics will include: transaction cost, common property, regulation, negligence and torts, 'free' goods, price controls, non-profit agencies, crime and malfeasance, custom, nature of the firm under various legal guises and the anarchy state dichotomy.

**ECON 889-4 Seminar in Law and Economics**

An enquiry into the resource allocational and distributional implications of current and alternative legal arrangements. The economic rationale for and effects of the development of various legal doctrines will be considered. Topics may include anti-combines legislation, compensation and public regulation, and market regulation for purposes of safety, consumer information and income maintenance of producers.

**ECON 890-4 Public Economics: Expenditure**

The study of the role of the public sector in a market economy. Topics may include social choice, issues of inequality, public goods, externalities, asymmetric information, and political economy.

**ECON 891-4 The Economics of Public Choice**

Applies economic theory to the analysis of non-market, political choice. Some of the topics studied will be coalition formation and rational voter behavior; allocations under various property rights systems; optimal constitutions; public sector externalities; federalism; discrimination, nationalism and crime.

**ECON 892-4 Public Economics: Taxation**

The study of the public economics of taxation including income taxation, commodity taxation, and capital taxation. The focus is on the efficiency and distributional aspects of taxation which include the incentive effects of taxation, tax incidence, tax evasion, tax competition, and fiscal federalism.

**ECON 893-4 Introduction to Marxian Economics**

Examination of Marx's economic theory, with particular emphasis on capital, theories of surplus value and the Grundrisse.

**ECON 895-4 Comparative Economic Systems**

Comparative study of capitalist, communist, socialist and mixed forms of national economic organization, with emphasis on the allocation of resources and distribution of income.

**ECON 900-0 PhD Field Paper**

In the summer term following the completion of a PhD student's theory comprehensive exams, the student will enrol in this course. In consultations between the student, the graduate chair, and faculty, the student will be assigned a supervisor for the course. During the term, the student will write a research paper in their field of interest. A satisfactory completion of the course is through the presentation of the paper as an economics department thesis proposal seminar. Graded as satisfactory or unsatisfactory.

**ECON 911-913-4 Selected Topics in Economics**

Offered by arrangement.

**ECON 921-923-4 Directed Readings**

Supervised reading in a particular field of specialization. Offered by arrangement.

**ECON 990-6 PhD Thesis****ECON 991-6 MA Thesis****ECON 997-6 MA Exam**

Prerequisite: ECON 802, 807 or 808, and 836 and significant written work in one or more MA courses (e.g. A term paper).

**ECON 998-6 MA Essays****ECON 999-6 MA Project****Education EDUC Faculty of Education****EDUC 100-3 Selected Questions and Issues in Education**

An introduction to a small but representative sample of basic questions and issues in education. Students will examine questions relating to: the concept or idea of education; learning and the learner; teaching and the teacher; and more generally, the broader contexts of education. This course also introduces students to different ways of exploring educational questions and issues — from philosophical and critical analysis, to historical and cross-cultural studies, to empirical research. Cannot be taken for credit by students with credit for 300 and 400 level education courses. Breadth-Humanities.

**EDUC 100W-3 Selected Questions and Issues in Education**

An introduction to a small but representative sample of basic questions and issues in education. Students will examine questions relating to: the concept or idea of education; learning and the learner; teaching and the teacher; and more generally, the broader contexts of education. This course also introduces students to different ways of exploring educational questions and issues from philosophical and critical analysis, to historical and cross-cultural studies, to empirical research. Cannot be taken for credit by students with credit for 300 and 400 level education courses. Writing/Breadth-Humanities.

**EDUC 211-3 Mathematical Experience I: Numbers and Beyond**

Utility and aesthetics of mathematical experience is presented through the exploration of selected topics. Prerequisite: Students who have credit for MATH 151, MATH 154, MATH 157 need special permission to participate in EDUC 211 and EDUC 212. Quantitative/Breadth-Science.

**EDUC 212-3 Mathematical Experience II: Shape and Space**

Utility and aesthetics of mathematical experience is presented through the exploration of selected topics. Prerequisite: Students who have credit for MATH 151, MATH 154, MATH 157 need special permission to participate in EDUC 211 and EDUC 212. Quantitative/Breadth-Science.

**EDUC 220-3 Introduction to Educational Psychology**

A survey of educational research and theories concerning motivation, learning, development, and individual differences in classroom settings. May be applied towards the certificate in liberal arts.

**EDUC 222-3 Research Methods in Educational Psychology**

An introductory survey of research methods used in developing and testing theories in educational psychology. Illustrations are drawn from published research in educational psychology. Corequisite: EDUC 220-3 Quantitative.

**EDUC 230-3 Introduction to Philosophy of Education**

Provides prospective teachers and others interested in education an opportunity to examine a variety of educational problems from a philosophical perspective. The central concern of the course is to elucidate the nature of education as a phenomenon distinct from such activities as training, schooling, and socialization. May be applied towards the certificate in liberal arts. Breadth-Humanities.

**EDUC 240-3 Social Issues in Education**

Social functions of the school; education and socialization; social, political, economic and cultural influences on the institutions and practices of education. May be applied towards the certificate in liberal arts.

**EDUC 250-3 Studies in the History of Education in the Western World**

A study of major trends in educational practice from antiquity to the present. May be applied towards the certificate in liberal arts. Breadth-Humanities/Social Sciences.

**EDUC 252-4 Introduction to Reflective Practice**

Provides opportunities for prospective educators to begin their development as reflective practitioners. Through readings, classroom activities and discussions, and interactions with students and practicing teachers, students will be exposed to various educational issues and questions. They will be given time to explore their own values and beliefs about education and teaching. Time may be spent observing in a selection of educational settings, and there may be opportunities to work with learners individually, and in small and large groups. Students with credit for EDUC 401 or holding a teaching certificate may not take this course for credit.

**EDUC 260W-3 Learning and Teaching through Technology**

Provides a practical and theoretical exploration of technology use in K-12 classroom settings. Introduces current technologies that potentially impact student learning as well as a variety of issues and problems surrounding the use of learning technologies in schools. Also offers opportunities to explore technology-based innovations not yet broadly used in schools. Prerequisite: 30 units. Writing.

**EDUC 298-299 Special Topics**

Course will explore issues of current concern. Subjects to be taught and the exact assignment of units (2 or 3) will be announced prior to the beginning of each term. Course may be on a pass/fail basis. Variable units: 2, 3. A maximum of 12 units in education special topics courses may be used towards a bachelor of education degree.

**EDUC 311-3 Foundations in Aboriginal Education, Language, and Culture**

An introduction to Aboriginal education in Canada and BC. There will be a critical examination of historical and contemporary issues in education and an exploration of culturally based Aboriginal education grounded in Aboriginal philosophies. Prerequisite: 60 units. Breadth-Humanities.

**EDUC 313-3 Numeracy and Society**

Conceptions of numeracy in contemporary society; consequences of innumeracy; enhancing personal numeracy skills; examination of numeracy across the curriculum. Prerequisite: EDUC 401/402. This course is designed for students NOT working in a Mathematics or Science specialization. Quantitative.

**EDUC 315-3 Individual and Developmental Differences in Language Acquisition**

A review of theories of language acquisition and their relationship to child communication disorders. Topics include: theories of language acquisition; individual and developmental differences in language acquisition; language structure and use in children with diverse disabilities, autism spectrum disorder, sensory disabilities and emotional and behavioral disabilities, interdisciplinary approaches to early intervention in the home, school and community. Prerequisite: EDUC 220 or PSYC 250

**EDUC 320-3 Instructional Psychology**

Examines theories of instruction and research about learning, motivation, individual differences, and social environments as foundations for designing instruction. Topics include: models of cognition; models of motivation and beliefs; metacognition, self-regulated learning, and learning skills; problem solving and transfer; cognitive processing models of instruction in mathematics, science, social studies, reading and composition. Prerequisite: EDUC 220.

**EDUC 322-3 The Social Lives of School Children**

An overview of theory, research and practice concerning social emotional development and social interactions and relationships in the school context. Emphasis on the role of peer relationships in development and the role of the school in supporting positive interactions. Prerequisite: EDUC 220 or PSYC 250.

**EDUC 323-3 Introduction to Counselling Theories**

Survey of theories undergirding counsellor and teacher interventions aimed at promoting emotional growth, development and personal change. Examination of theories and their sociological, cultural and philosophical contexts. Exploration of links between frequently used interventions and the implicit theories underlying these strategies. Students who have credit for EDUC 425 cannot take EDUC 323 for further credit. Prerequisite: EDUC 220 or equivalent, and 60 units.

**EDUC 324-3 Foundations of Multicultural Counselling**

Provides an introduction to multicultural counselling and human diversity with an emphasis on culture, gender, ethnicity, socioeconomic status, religion, age, and abilities. Prerequisite: EDUC 220 or PSYC 250 and 60 units.

**EDUC 325-3 Assessment for Classroom Teaching**

A survey of assessment methods that contribute to improving teaching and learning, and for making judgements and decisions about qualities of teaching, the classroom environment, and student achievement and growth. Topics include: goal and task analysis, validity and reliability, observing and assessing classroom processes and environments, self-report methods, assessing student achievement, published tests of achievement and aptitude, marking and reporting. Prerequisite: EDUC 220.

**EDUC 326-3 Classroom Management and Discipline**

An examination of contemporary approaches to classroom management and discipline, including a consideration of legal, organizational and administrative issues. The major goal of the course is to enable students to comprehend the basic principles and tenets of a number of management approaches and to translate these principles into specific teaching strategies and skills. Prerequisite: EDUC 401/2 or one of EDUC 100, 220, 230, 240.

**EDUC 327-3 Self, Psychology and Education**

A critical examination of theoretical and empirical programs of inquiry in educational psychology that are concerned with the self (e.g., self-esteem, self-concept, self-directed or self-regulated learning). Students will participate in a wide-ranging seminar that considers topics such as the relationship between personal and social being, historical perspectives on the self, the formation of social identity, the roles of memory, imagination, and narrative in selfhood, the development of agency and self, and education and personhood. Prerequisite: 60 units, including one of EDUC 220, 230, 240 or 250.

**EDUC 328-3 Career Education and Career Counselling**

An introduction to theories of career choice, adjustment and development. Emphasis on critical evaluation of established theories that are influential in the development of career education curricula and in the practice of career counselling. Prerequisite: EDUC 220 or 401/402.

**EDUC 330-3 Movement Language Elements for Dance in Education**

In this experiential course students will develop an understanding of the movement concepts (action, space, time, force, relationship) which are the framework for making and teaching dance. This course will explore dance as a non-verbal expressive language, and will introduce students to a variety of aspects of dance within the curriculum. Previous dance training is not required. Prerequisite: 60 units including six units in EDUC courses.

**EDUC 332-3 Naturalistic Observations in Early Learning Settings**

Investigates the use of naturalistic observation and photo documentation techniques that can be used as a method of formative assessment leading to responsive ECE curriculum planning. Prerequisite: PSYC 250 and 45 units.

**EDUC 339-3 Practicum 1**

First term of work experience for the Faculty of Education Co-Operative Education Program. Provides opportunity to integrate theory and practice. This course is open only to co-op students. The co-op coordinator must be contacted at the beginning of the term prior to enrolment for this course. Units from this course do not count towards the units required for an SFU degree.

**EDUC 341-3 Literacy, Education and Culture**

An introduction to the study of literacy from an interdisciplinary perspective, one which explores the role of literacy in social development, the economic and cultural values of literacy, and the effects of

literacy on cognitive processes. The particular concern of this course is with the formal transmission of literacy in educational institutions. The course will especially address the varying conceptions of literacy that educators have traditionally valued, and the research that aims to explain, justify, and prescribe educational practices intended to increase literacy. This course is required for the certificate in literacy instruction. Prerequisite: 60 units.  
Breadth-Humanities.

#### **EDUC 349-3 Practicum II**

Second term of work experience for the Faculty of Education Co-operative Education Program. Provides opportunity to integrate theory and practice. This course is open only to co-op students. The co-op coordinator must be contacted at the beginning of the term prior to enrol in this course. Units from this course do not count towards the units required for an SFU degree.

#### **EDUC 351-3 Teaching the Older Adult**

This is a basic course in adult education for students from all disciplines, of particular interest to those working (or preparing to work) with older adults. The goal is to assist students to develop more effective strategies for meeting the needs of an aging population through education. Prerequisite: 60 units.

#### **EDUC 352-4 Building on Reflective Practice**

Building on the experience of EDUC 252, prospective educators will continue to develop their reflective practice. Various educational issues related to the caring for learners and the creation of learning communities will be explored. Students will spend time in educational settings exploring the importance of connected educational experiences for learners. Students with credit for EDUC 401 or holding a teaching certificate may not take this course for credit. Prerequisite: EDUC 252.

#### **EDUC 355-4 Theatre in an Educational Context**

Deals with teaching theatre in an educational context. It will develop knowledge of theatre skills, and a variety of approaches and techniques for teaching theatre and theatre in the schools. Prerequisite: 60 units.

#### **EDUC 358-3 Foundations of Educational Technology**

A survey of major traditions of research and development in educational technology, including the arguments and assumptions they make about what constitutes a valuable educational outcome. Focus on analyzing and understanding educational technologies as cultural tools that are both shaped by and in turn shape teaching and learning in K-12 schools. Prerequisite: 60 units.

#### **EDUC 367-4 Teaching Children from Minority Language Backgrounds in Elementary Classrooms**

For prospective or practicing elementary school teachers who are interested in enhancing educational practice for children of minority language backgrounds (those often labelled as ESL students) within the context of their mainstream classrooms. Participants will consider theory and research in second language learning, examine recommendations for classroom practice and develop plans for practice relevant to their own educational milieu. Prerequisite: 60 units.

#### **EDUC 370-4 International and Intercultural Education**

Practical and theoretical approaches to international and intercultural education, including examinations of the relationships between culture, learning and schooling, and contemporary issues in teacher education from an international perspective. Prerequisite: completion of at least 60 units, including 3 units in Education.

#### **EDUC 371-4 School Health Education**

Explores health concepts, health behaviors, and health concerns of school-aged children and youth. Focuses on comprehensive and co-ordinated school health programs, innovative instructional strategies, and health-promotion initiatives to create healthy school communities. Prerequisite: 60 units; or permission of instructor.

#### **EDUC 371W-4 School Health Education**

Explores health concepts, health behaviors, and health concerns of school-aged children and youth. Focuses on comprehensive and co-ordinated school health programs, innovative instructional strategies, and health-promotion initiatives to create healthy school communities. Prerequisite: 60 units; or permission of instructor. Writing.

#### **EDUC 378-3 Teaching Core French with Special Emphasis on Authentic Documents**

A modern language methodology course designed to develop skills necessary to instruct a basic Core French program. Begins at SFU and is completed at Laval University in Quebec City. Curricular emphasis includes the practical use of authentic documents. Prerequisite: EDUC 401/402. Corequisite: EDUC 480 or 481. Basic knowledge of French recommended.

#### **EDUC 380-4 Introduction to Teaching French in Canadian Contexts**

For students contemplating becoming teachers of Immersion, Core French at the secondary level, or for intermediate and middle school generalists who want to have an introductory overview of second language teaching in general and French education in British Columbia specifically. The general objective is to help prospective French teachers to better understand Canadian bilingualism, its historical, sociopolitical and cultural context, as well as gain a basic understanding of French education programs in British Columbia. The language of instruction will be French, but the class will be "English-friendly". Prerequisite: FREN 301 or 304 or 370 or equivalent.

#### **EDUC 382-4 Diversity in Education: Theories, Policies, Practices**

An examination of the impact of social diversity on schooling in Canada exploring contemporary issues and perspectives on diversity education as they relate to cultural, ethnic, racial, linguistic, religious, economic, and gender differences. Prerequisite: 60 units. Students who have received credit for EDUC 441, EDUC 382-4 Special Topics from Fall 2003-3 on, cannot take EDUC 382 for further credit.

#### **EDUC 383-399 Special Topics**

Explores major issues of present concern. Subjects to be taught and the exact assignment of units and prerequisites will be announced prior to the beginning of each term. Course may be given on a pass/fail basis. A maximum of 12 units in education special topics courses may be used toward a bachelor of education degree. Variable units 2,3,4,6.

#### **EDUC 401-8 Introduction to Classroom Teaching**

A half term of observation and experience in a BC school during which two students work as a team with a teacher selected by school authorities and appointed by Simon Fraser University as a school associate. Students observe, teach and participate in school routines and programs. Grading is on a pass/withdraw basis. (Not offered in summer term.)

#### **EDUC 401W-8 Introduction to Classroom Teaching**

A half term of observation and experience in a BC school during which two students work as a team with a teacher selected by school authorities and appointed by Simon Fraser University as a school associate. Students observe, teach and participate in school routines and programs. Grading is on a pass/withdraw basis. Writing.

#### **EDUC 402-7 Studies of Educational Theory and Practice**

A half term of study which provides students with workshops, seminars, and lectures designed to introduce them to basic curriculum and methods appropriate for the age/grade level in which they expect to teach. Students will also be given an introduction to generic teaching skills, as well as to current issues in educational theory and practice. Grading is on a pass/withdraw basis. (Not offered in summer term.) Corequisite: EDUC 401.

#### **EDUC 402W-7 Studies of Educational Theory and Practice**

A half term of study which provides students with workshops, seminars, and lectures designed to introduce them to basic curriculum and methods appropriate for the age/grade level in which they expect to teach. Students will also be given an introduction to generic teaching skills, as well as to current issues in educational theory and practice. Grading is on a pass/withdraw basis. Corequisite: EDUC 401. Writing.

#### **EDUC 404-0 Coursework Semester**

Students undertake 15 upper division units in Education to complete the professional development program requirements. Prerequisite: EDUC 401/402.

#### **EDUC 405-15 Teaching Semester**

A full term of classroom experience supervised by University appointed school associates. The school placement is appropriate to the grade level and subject specialties which the student expects to teach after graduation. Grading is on a pass/withdraw basis. (Not offered in summer term.) Prerequisite: EDUC 401/402.

#### **EDUC 406-12 Supervised Observation and Teaching**

Education 406 is designed for those who need to meet BC certification requirements. It is a supervised orientation/observation/teaching sequence of approximately ten weeks, in a BC public school. This practicum is designed as an opportunity to familiarize students with the British Columbia school system and update their teaching skills. Prerequisite: permission will not be given to students without previous teaching experience. Grading will be on a pass/withdrawal basis. Students with credit for EDUC 407 may not take EDUC 406. EDUC 406 is not applicable toward the credit requirements for a degree or diploma, i.e. not counted in total units.

#### **EDUC 411-3 Investigations in Mathematics for Secondary Teachers**

Students examine secondary mathematics from an advanced standpoint, focusing on problem solving, investigating connections among various topics and representations, and situating secondary mathematics in a broader context, both mathematical and historical. Prerequisite: One of MATH 152, 155 or 158. Corequisite: EDUC 415 or appropriate math background and permission of instructor. Quantitative.

#### **EDUC 412-4 Designs for Learning: Secondary Language Arts**

Focuses on teaching secondary school language arts and addresses aspects of the theory and practice of language arts education. Students examine their own thinking about language arts education through critical reflection, work with the prescribed curriculum, and explore various ways to develop engaging learning experiences for young adults within a consistent framework using appropriate instructional materials and methods. Prerequisite: EDUC 401/402. Students who have credit for EDUC 472 prior to the 2001-2 term cannot take EDUC 412 for further credit.

**EDUC 412W-4 Designs for Learning: Secondary Language Arts**

Focuses on teaching secondary school language arts and addresses aspects of the theory and practice of language arts education. Students examine their own thinking about language arts education through critical reflection, work with the prescribed curriculum, and explore various ways to develop engaging learning experiences for young adults within a consistent framework using appropriate instructional materials and methods. Prerequisite: EDUC 401/402. Students who have credit for EDUC 472 prior to the 2001-2 term cannot take EDUC 412 for further credit. Writing.

**EDUC 414-4 Designs for Learning: Secondary Social Studies**

Focuses on teaching secondary school social studies and addresses aspects of the theory and practice of social studies education. Students examine their own thinking about social studies education through critical reflection, work with the prescribed curriculum, and explore various ways to develop engaging learning experiences for young adults within a consistent framework using appropriate instructional materials and methods. Prerequisite: EDUC 401/402. Students who have credit for EDUC 474 cannot take EDUC 414 for further credit.

**EDUC 415-4 Designs for Learning: Secondary Mathematics**

Focuses on teaching secondary school mathematics. Students explore mathematical learning, their own mathematical thinking and curriculum; and plan mathematical instruction within a consistent framework using appropriate instructional materials and methods. Prerequisite: EDUC 401/402 and one of MATH 152, 155 or 158. Students who have credit for EDUC 475 prior to the 2001-2 term cannot take EDUC 415 for further credit. Quantitative.

**EDUC 416-4 Designs for Learning: Secondary Science**

Focuses on teaching secondary school science. Students explore the sciences and aspects of learning science; examine their own scientific thinking; work with the prescribed curriculum; and plan science learning experiences within a consistent framework using appropriate instructional materials and methods. Prerequisite: EDUC 401/402. Students who have credit for EDUC 476 prior to the 2001-2 term cannot take EDUC 416 for further credit.

**EDUC 422-4 Learning Disabilities**

A study of conceptual and historic foundations of learning disabilities and an introduction to the methodologies of diagnosis and of learning disabilities. Prerequisite: PSYC 250 or corequisite of EDUC 315 or 473.

**EDUC 423-4 Helping Relationships**

Introduction to the rationale for and the practice of basic counselling skills. Emphasis on the development of counselling skills as a means of establishing effective helping relationships in educational settings. Prerequisite or Corequisite: EDUC 323.

**EDUC 424-4 Learning Disabilities: Laboratory**

Supervised experience in analysis and evaluation of treatment strategies to be used with classroom students having learning disabilities. Prerequisite or corequisite: EDUC 422.

**EDUC 426-4 Teaching Children and Youth with Special Needs**

An introduction to the field of special education including studies of the definitional criteria and characteristics of major categories of special need, and the distinctive instructional challenges associated with these categories. The course focuses on the special learning needs of school age students, both elementary and secondary school levels, and

emphasizes both the analysis of issues and treatment needs across the array of special needs. Prerequisite: 60 units.

**EDUC 427-4 Teaching Students with Special Needs in Inclusive Settings.**

A review of classroom teaching practices that support learning for children with high-incidence disabilities (e.g., learning disabilities, Attention Deficit Disorder, mild intellectual disabilities, moderate behavior disorders). Topics include: introduction to inclusive teaching, collaboration partnerships and procedures, teaching students with high-incidence disabilities, developing effective teaching skills, improving classroom behavior and social skills, promoting inclusion with peers, enhancing motivation and affect, assessment and teaching in the content areas. Prerequisite: EDUC 422 and either 401/402 or permission of the instructor for students with experience working with children with high-incidence disabilities.

**EDUC 428-4 Nature and Nurture of Gifted Students**

Concepts and practices related to the nature and nurture of the potential for giftedness in educational settings will be introduced. Theoretical and historical foundations of common practices in gifted education will be covered. Grading will be on a pass/fail basis. Prerequisite: EDUC 220 or PSYC 250 or PYSC 302 and EDUC 401/402.

**EDUC 428W-4 Nature and Nurture of Gifted Students**

Concepts and practices related to the nature and nurture of the potential for giftedness in educational settings will be introduced. Theoretical and historical foundations of common practices in gifted education will be covered. Grading will be on a pass/fail basis. Prerequisite: EDUC 220 or PSYC 250 or PYSC 302 and EDUC 401/402. Writing.

**EDUC 430-4 Designs for Learning: Dance**

For students and teachers with some movement and dance experience who are planning to teach dance in school or recreational settings. Students will continue experiential and theoretical explorations of movement language framework concepts with increasing emphasis on expressive, formal and critical aspects of dance and movement education. Prerequisite: EDUC 401/402.

**EDUC 433-4 Philosophical Issues in Curriculum**

Examines fundamental philosophical issues involved in designing, evaluating, or changing educational curricula. Such issues as the nature and justification of educational curriculum, the components of a rational curriculum, the nature of knowledge and its differentiation, curriculum integration and the education of the emotions. Also deals with such current issues as the place of behavioral objectives in education, the hidden curriculum and the sociology of knowledge. Prerequisite: 60 units including six units in EDUC courses or EDUC 401/402.

**EDUC 435-4 Infusing Global Perspectives into Curriculum**

An examination of the rationale for and concepts of global education including its content, methods and skills objectives, and its place in existing provincial curricula. Prerequisite: 60 units, including three of which must be in Education.

**EDUC 437-4 Ethical Issues in Education**

Ethical problems in education are identified and examined. Four major areas of concern are explored: 1. the normative character of education as a whole; 2. the justification of education; 3. ethical questions related to equality, autonomy, interpersonal relationships, and rights in education; 4. moral education and values education. Prerequisite: EDUC 230 or EDUC 401/402 or permission of the instructor.

**EDUC 439-3 Practicum III**

Third term of work experience for the Faculty of Education Co-operative Education Program. Provides opportunity to integrate theory and practice. This course is open only to co-op students. The co-op co-ordinator must be contacted at the beginning of the semester prior to registration for this course. Units from this course do not count towards the units required for an SFU degree.

**EDUC 441-4 Multicultural and Anti-racist Education**

Focuses on developing approaches for multicultural and anti-racist teaching. Topics include: diversity of race, language and culture among learners; identifying the operation of racism, prejudice and discrimination in classrooms and schools; becoming familiar with a variety of approaches such as: co-operative learning, culturally appropriate assessment, and community involvement to counteract and prevent negative classroom and school dynamics; identifying bias in curriculum resources; and locating entry points in selected curriculum areas (e.g. language arts, social studies, art, music, etc.) for integrating approaches which employ a range of multicultural/anti-racist curriculum resources. Prerequisite: EDUC 401/402. Students who have received credit for EDUC 382: Diversity in Education: Theories, Policies, Practices cannot take EDUC 441 for further credit.

**EDUC 445-4 Legal Context of Teaching**

Designed to provide education students, teachers, counsellors and school administrators with a comprehensive understanding of the legal issues and potential legal liabilities encountered in the BC public school system. Special attention is devoted to the legal dimensions and consequences of routine classroom and administrative activity. Topics include: sexual abuse by school board employees; negligence and supervision; private lifestyles and community standards; discipline and corporal punishment; sexual harassment in the workplace; responsibility for curriculum fulfillment; liability outside school hours; and the AIDS controversy. Prerequisite: 60 units.

**EDUC 446-4 Law for the Classroom Teacher**

Provides a fundamental knowledge of law to teach law-related content in the BC curriculum: social studies, science, personal planning, language arts, P.E., social responsibility, and business. Topics: Canadian legal system, legal history, legal reasoning, dispute resolution strategies, the role of the courts, and family, environmental, property and contract laws. Prerequisite: 60 units.

**EDUC 448-4 Teaching about Justice, Law and Citizenship**

The justification and practise of law-related education in the K-12 curriculum are the subjects of this methodology course. Students will examine the place of law in the curriculum, existing resources and appropriate teaching strategies and will have the opportunity to develop unit plans and curriculum materials. Emphasis is on developing and implementing law-related programs in the classroom. Prerequisite: 60 units including six in education courses. Teaching experience is recommended.

**EDUC 449-3 Practicum IV**

Fourth term of work experience for the Faculty of Education Co-operative Education Program. Provides opportunity to integrate theory and practice. This course is open only to co-op students. The co-op co-ordinator must be contacted at the beginning of the term prior to enrolment for this course. Units from this course do not count towards the units required for an SFU degree.

**EDUC 450-4 Classroom French Curriculum Studies**

Intended for students who would like to gain insight into teaching French as a second language while

improving their knowledge of the French language and of the associated culture in a classroom context. The language of instruction will be French. Corequisite: EDUC 401/402.

#### **EDUC 451-4 Classroom French Curriculum Practices**

Helps prospective and practicing French teachers better understand the pedagogical and cultural relevance of a variety of French language registers and of their significance to second language teaching. Prerequisite: When the course is offered in French, 60 units and 12 units of French or equivalent. When the course is offered in English, 60 units.

#### **EDUC 452-8 Environmental Education**

Examines the educational problems entailed in developing human awareness and understanding of the environment. Explores environmental issues through a multi-disciplinary approach and relates historical and contemporary problems in human-environment interactions to school curricula from the elementary to the secondary level. Includes a laboratory component. Grading will be on a pass/fail basis. A \$46 field activity fee will be levied in this course. Normally offered in summer session only. Prerequisite: EDUC 401/402. Breadth-Science.

#### **EDUC 456-4 Models of Contemporary Arts in Education**

Major conceptions of educational value in the contemporary arts, and application of these ideas to the development of visual arts programs in the schools. Prerequisite: 60 units.

#### **EDUC 457-4 Drama and Education**

Deals with theory, curricula and methodologies in drama education. Topics will include a selection from the following: aims of drama education; drama as methodology; role of the teacher in the drama classroom; evaluating students in drama classes; creative drama; the use of improvisation and storytelling; incorporating film and video work into drama classes; developing major projects with students such as choral dramatization, docudrama, anthology, and readers theatre; introducing scene work, stagecraft, and theatre history. Prerequisite: EDUC 401/402.

#### **EDUC 459-4 Instructional Activities in Physical Education**

Focuses on theory and curriculum of school physical education programs. Emphasis is given to the movement education orientation as it pertains to the various program activities and approaches applicable to primary, intermediate and secondary levels. Prerequisite: EDUC 401/402.

#### **EDUC 464-4 Early Childhood Education**

Current trends, issues and research relating to the education of young children. Prerequisite: EDUC 401/402 or PSYC 250.

#### **EDUC 465-4 Children's Literature**

Historical, sociological and literary perspectives on literature for children. Prerequisite: 60 units.

#### **EDUC 466-4 Early Childhood Education: Curriculum and Instruction**

Designed to expand on the theoretical foundations provided in EDUC 464 engaging students in the critical analysis of programming for early learners by surveying a variety of program types and providing both an overview of content areas for further discussion and inquiry specific to curriculum and instruction. Prerequisite/Corequisite: EDUC 464.

#### **EDUC 467-4 Curriculum and Instruction in Teaching English as an Additional Language**

Designed for prospective and beginning teachers to learn more about theory, research, and practice in teaching English as an additional language (EAL) in today's multilingual classrooms. Exploring an integrated approach working with learners to develop language skills through designing and delivering

curriculum, instruction and assessment. Prerequisite: 90 units including three EDUC units.

#### **EDUC 468-4 Sociocultural Perspectives on Language, Cognitive Development and EAL Instruction**

Designed for prospective and beginning teachers to learn more about theory and research in language acquisition, sociocultural understandings of language development and thought, bilingualism and cognition, linguistic multicompetence. Exploring the implications of research and theory for the teaching and learning of EAL in classroom contexts. Prerequisite: 60 units including 6 units in Education courses.

#### **EDUC 469-4 Music Education as Thinking in Sound**

Understanding the language of music, both historical and contemporary, and use of electronic and acoustic instruments in the general music classroom. Prerequisite: 60 units.

#### **EDUC 471-4 Curriculum Development: Theory and Practice**

Explorations of curriculum theory and processes of development with applications at different levels and in several subject areas. Prerequisite: 60 units.

#### **EDUC 472-4 Designs for Learning: Elementary Language Arts**

Focuses on developing knowledge, skills and strategies to create a rich and stimulating language arts program in the elementary classroom. Issues in reading, writing, speaking and listening will be examined through current theory and teaching practice. Prerequisite: EDUC 401/402. Students who have credit for EDUC 472 prior to 2001-2 term cannot take EDUC 472 for further credit.

#### **EDUC 472W-4 Designs for Learning: Elementary Language Arts**

Focuses on developing knowledge, skills and strategies to create a rich and stimulating language arts program in the elementary classroom. Issues in reading, writing, speaking and listening will be examined through current theory and teaching practice. Prerequisite: EDUC 401/402. Students who have credit for EDUC 472 prior to 2001-2 term cannot take EDUC 472 for further credit. Writing.

#### **EDUC 473-4 Designs for Learning: Reading**

Offers theoretical and practical information about teaching reading in K-12 general education settings. Prerequisite: EDUC 401/402.

#### **EDUC 473W-4 Designs for Learning: Reading**

Offers theoretical and practical information about teaching reading in K-12 general education settings. Prerequisite: EDUC 401/402. Writing.

#### **EDUC 474-4 Designs for Learning: Elementary Social Studies**

Focuses on teaching elementary school social studies and addresses aspects of the theory and practice of social studies education. Students examine their own thinking about social studies education through critical reflection, work with the prescribed curriculum, and explore various ways to develop engaging learning experiences for children within a consistent framework using appropriate instructional materials and methods. Prerequisite: EDUC 401/402. Students who have credit for EDUC 474 prior to 2001-2 term cannot take EDUC 474 for further credit. Students with credit for EDUC 414 cannot take EDUC 474 for further credit.

#### **EDUC 475-4 Designs for Learning: Elementary Mathematics**

Focuses on teaching elementary school mathematics. Students explore mathematical learning, their own mathematical thinking, and curriculum; and plan mathematical instruction within a consistent framework using appropriate instructional materials and methods. Prerequisite: EDUC 401/402. Students

who have credit for EDUC 475 prior to 2001-2 term cannot take EDUC 475 for further credit. Quantitative.

#### **EDUC 476-4 Designs for Learning: Elementary Science**

Focuses on teaching elementary school science. Students explore science, aspects of learning science, and their own scientific thinking; work with the prescribed curriculum; and plan science learning experiences within a consistent framework using appropriate instructional materials and methods. Prerequisite: EDUC 401/402. Students who have credit for EDUC 476 prior to 2001-2 term cannot take EDUC 476 for further credit.

#### **EDUC 477-4 Designs for Learning: Art**

Introduces students to the main ideas, skills, materials, resources, understandings and organizational concerns involved in teaching art in schools. Prerequisite: EDUC 401/402.

#### **EDUC 478-4 Designs for Learning: Music**

Designed for in-service and pre-service teachers who would like to acquire the skills that will allow them to teach music competently and creatively. They will learn basic conducting techniques, design their own curriculums and have an opportunity to prepare and teach their own lesson plans. Previous musical experience is welcome, but not required. Prerequisite: EDUC 401/402.

#### **EDUC 479-4 Designs for Learning: Physical Education**

Consideration is given to the pedagogical principles underlying the development of inclusive physical programs at the primary, intermediate and secondary levels. Involves practical consideration of instructional strategies and curriculum planning in physical education, particularly as they apply to alternative environment activities. Prerequisite: EDUC 401/402. Corequisite: EDUC 459.

#### **EDUC 480-4 Designs for Learning: French as a Second Language**

Deals with a variety of approaches, teaching strategies and curricula, for teaching French as a second language in elementary and secondary schools. Prerequisite: EDUC 401/402. Instruction given in French.

#### **EDUC 480W-4 Designs for Learning: French as a Second Language**

Deals with a variety of approaches, teaching strategies and curricula, for teaching French as a second language in elementary and secondary schools. Prerequisite: EDUC 401/402. Instruction given in French. Writing.

#### **EDUC 481-4 Designs for Learning: French Immersion Programs and Francophone Schools**

Focuses on research and theories of language learning in bilingual programs and minority contexts, pedagogical approaches and curricula for teaching in French Immersion programs and Francophone elementary and secondary schools. Prerequisite: EDUC 401/402 (French Immersion). Instruction given in French.

#### **EDUC 481W-4 Designs for Learning: French Immersion Programs and Francophone Schools**

Focuses on research and theories of language learning in bilingual programs and minority contexts, pedagogical approaches and curricula for teaching in French Immersion programs and Francophone elementary and secondary schools. Prerequisite: EDUC 401/402 (French Immersion). Instruction given in French. Writing.

#### **EDUC 482-4 Designs for Learning: Information Technology**

Students will develop a critical understanding of information technologies in education and learn how to integrate these technologies into classroom

settings. An emphasis is on teaching strategies and methods as they complement the guidelines set forth in the BC Information Technology Curriculum. Prerequisite: 60 units.

### **EDUC 483-8 Designs for Learning: Curriculum Studies**

Development of conceptual and technical skills through workshops, seminars, and directed and independent study. Deals with human development and learning in the school. Stress will be placed on approaches to individualizing instruction and to integrating the curriculum in different subject areas. It will normally be taught by two or more faculty members. Prerequisite: EDUC 401/402.

### **EDUC 485-8 Designs for Learning: Writing**

Designed to help students become better teachers of writing. Students will be involved in four aspects of teaching writing: teacher as writer, teacher as teacher of writing skills, teacher as researcher, teacher as developer of curriculum. Techniques for providing effective writing experiences will be studied, demonstrated and practised. Students will observe, use and evaluate these techniques. Course content: teacher as writer -- writing skills, audience, purpose, writing process, self-evaluation. Teaching writing -- research, skill acquisition, self-disclosure, risk and creativity, thought and discipline, evaluation. Teacher as researcher -- reflective observation, analysis of data, program evaluation, peer support systems. Teacher as developer of curriculum -- student writing, drama, literature, use of texts. Prerequisite: EDUC 401/402.

### **EDUC 485W-8 Designs for Learning: Writing**

Designed to help students become better teachers of writing. Students will be involved in four aspects of teaching writing: teacher as writer, teacher as teacher of writing skills, teacher as researcher, teacher as developer of curriculum. Techniques for providing effective writing experiences will be studied, demonstrated and practised. Students will observe, use and evaluate these techniques. Course content: teacher as writer -- writing skills, audience, purpose, writing process, self-evaluation. Teaching writing -- research, skill acquisition, self-disclosure, risk and creativity, thought and discipline, evaluation. Teacher as researcher -- reflective observation, analysis of data, program evaluation, peer support systems. Teacher as developer of curriculum -- student writing, drama, literature, use of texts. Prerequisite: EDUC 401/402. Writing.

### **EDUC 486-488 Special Topics**

Sections will deal with major issues of present concern. Subjects to be discussed will be announced during the term prior to that in which the course is to be offered. The exact assignment of units (3, 4 or 6) and prerequisites for the special topics offering will be announced prior to the beginning of each term. A maximum of 12 units in education special topics courses may be used toward a bachelor of education degree. Variable units 3, 4, 6.

### **EDUC 490-492 Directed Study**

Directed study in education under the supervision of a faculty member. Prerequisite: 60 units and a CGPA of 3.0, consent of supervising faculty member, and approval of the director of undergraduate programs. A maximum of three directed studies courses will be approved for a maximum of 12 units. Directed studies courses may not parallel regularly taught courses. A student may take a maximum of two directed studies courses with the same faculty member. Applications are available in the undergraduate programs office. Variable units 2, 4.

### **EDUC 493-4 Directed Studies in Environmental Education**

A multidisciplinary approach for educators in formal and informal settings with an interest in learning more about environmental issues. Students will consider

multiple perspectives on the goals, values and interdisciplinary nature of environmental education, review locally available curricular materials and obtain a grounding in appropriate models for learning and teaching environmental topics. Prerequisite: 60 units and a CGPA of 3.0, EDUC 452, consent of supervising faculty member, and approval of the director of undergraduate programs. Applications are available in the undergraduate programs office.

### **EDUC 495-498 Special Topics**

Sections will deal with major issues of present concern. Subjects to be discussed will be announced during the term prior to that in which the course is to be offered. The exact assignment of units (3, 4, or 6) for the special topics offering will be announced prior to the beginning of each term. Prerequisite: this will be announced prior to the beginning of each term. A maximum of 12 units in education special topics courses may be used toward a bachelor of education degree. Please refer to SA 333 Sociology of Education, as this course is also accepted as education credit. Variable units 3, 4, 6.

### **EDUC 702-2 Directed Readings**

### **EDUC 703-3 Directed Readings**

### **EDUC 704-4 Directed Readings**

### **EDUC 705-5 Directed Readings**

### **EDUC 710-714 Special Topics**

Variable units 3, 4, 5.

### **EDUC 720-5 Special Topics**

Variable units 3, 4, 5.

### **EDUC 799-3 Supervised Counselling Clinic I**

An initial clinical course where students develop their basic and beginning counselling skills and increase their conceptual understanding of theoretical perspectives of counselling through practice, including counselling processes and case conceptualizations. Graded on a satisfactory/unsatisfactory basis. Prerequisite: EDUC 870, 874.

### **EDUC 800-3 Supervised Counselling Clinic II**

An advanced clinical courses where students further develop their counselling skills and increase their conceptual understanding of theoretical perspectives of counselling through practice, including counselling processes and case conceptualizations. Graded on a satisfactory/unsatisfactory basis. Prerequisite: EDUC 799.

### **EDUC 801-3 Counselling Practicum I**

Supervised clinical experience for students enrolled in the MEd or MA Counselling Psychology Program. Graded on a satisfactory/unsatisfactory basis. Prerequisite: EDUC 800.

### **EDUC 802-3 Counselling Practicum II**

Advanced supervised clinical experience for students enrolled in the MEd or MA Counselling Psychology Program. Graded on a satisfactory/unsatisfactory basis. Prerequisite: EDUC 801.

### **EDUC 803-5 Educational Program Supervision**

The course systematically examines school-based variables amenable to administrative manipulation and associated with student achievement.

### **EDUC 804-5 Selected Problems in Educational Uses of Technology**

### **EDUC 805-5 Social Development in the School Context**

This course involves an examination of theoretical, empirical and practical literature on social and emotional development in young children and its application to education and school settings.

### **EDUC 806-5 Selected Problems in Higher Education**

### **EDUC 807-5 The Foundations of Action Research**

Surveys the philosophical and sociological dimensions, moral and ethical considerations, and

empirical findings of action research. Only students admitted by Field Programs are allowed to enrol for this course.

### **EDUC 809-5 Graduate Seminar**

### **EDUC 811-5 Fieldwork I**

Graded on a satisfactory/unsatisfactory basis.

### **EDUC 812-5 Fieldwork II**

Graded on a satisfactory/unsatisfactory basis.

### **EDUC 813-5 Organizational Theory and Analyses**

This course critically examines organizations in which educational leaders work from different theoretical perspectives and in light of research evidence. It also critiques several past and current reform initiatives, and explores specific topics in-depth. A central and pervasive question of the course concerns organizational purposes, especially with respect to learning, and how these purposes are served by organizational structures and processes.

### **EDUC 815-5 Administrative Processes**

This course examines the administrative world in which educational leadership occurs, including: administrative ideologies, theories of practice and institutional arrangements; values analysis; and technical fields such as financial, legal and human resources. This is complemented by an introduction to current research findings and to distinct theoretical traditions (e.g. structural-functional, interpretive and critical) in which research examining administrative processes is conducted. Topical issues and problems will be explored within the conceptual framework of the course.

### **EDUC 816-5 Developing Educational Programs and Practices for Diverse Educational Settings**

Investigates theories and issues associated with developing educational programs and practices in various educational contexts. Addresses the development of new programs and their implementation in schools and other educational settings.

### **EDUC 817-5 Policy Processes**

This course examines three interrelated aspects of policy studies as a critical function of the educational leadership role: conceptual and theoretical foundations concerning policy, policy actors, and policy processes; current research in the field; and topical issues and problems. It also considers social, economic and political contexts (e.g. technologization, corporatization, pluralism) and how they affect education.

### **EDUC 818-5 Leadership Studies**

This course examines three interrelated aspects of educational leadership studies of conceptual and theoretical foundations, with a particular emphasis on ethics of leadership; current research in the field, including feminist and cultural critiques; and topical issues and problems of leadership practice. Considerations of leadership character and role, power and authority in organizational relationships, and organizational goal achievement are central to the course.

### **EDUC 819-5 Studies in Teacher-Student Interaction**

Consideration of systems for analysing teacher interaction and their use in analysing the student's own classroom teaching. The course will also deal with models of instruction designed to achieve various categories of educational objectives.

### **EDUC 820-5 Current Issues in Curriculum and Pedagogy**

Focuses on educational issues, trends and practices which impact teaching and learning in schools and other educational settings.

**EDUC 821-5 Philosophical Issues in Classroom Practices**

Philosophical examination of assumptions underlying practical problems in classroom teaching. Some of the main issues examined include: distinguishing teaching, indoctrination, and conditioning; the use of compulsion, manipulation, and discipline; student/teacher relationships; child-centered education; alternative education; punishment and behavior modification. It also focuses on assumptions underlying such practices as play, learning by discovery, individualized instruction, and open education.

**EDUC 822-5 Evaluation of Educational Programs**

Processes used in program evaluation; including test and other measurement devices; and political, social and philosophical issues relating to the evaluation of educational programs.

**EDUC 823-5 Curriculum and Instruction in an Individual Teaching Speciality**

An intensive examination of developments in a curriculum area selected by the student. In addition the course will deal with major philosophical and historical factors that influence the present state and future directions of curriculum and instruction.

**EDUC 824-5 Seminar in Second Language Teaching**

Theories of sentence, discourse, and context in second language education; teaching scientific genres and humanities genres, use of dictionaries and glossaries, use of standardized and alternative forms of assessment.

**EDUC 825-5 Second Language Acquisition and Schooling**

Academic factors that impact language learning, the universal grammar model of language, speech perception and production in first and second languages.

**EDUC 826-5 The Reading Process**

This course has a decidedly theoretical emphasis. Topics for study include: reading as a physiological process; psychological models of word processing; models for language and reading comprehension. The literature for this course will draw heavily upon current educational, psycholinguistic and psychological writings. Prerequisite: EDUC 473.

**EDUC 827-5 Individual Differences in Learning**

Students will examine current conceptions of individual differences that characterize the heterogeneity of students' abilities in school. Educational implications will also be addressed.

**EDUC 828-5 Instructional Practices in Reading**

The history of reading materials and methods will be discussed, and past and present instructional practices in reading evaluated in terms of state-of-the-art knowledge of instructional research; methods of analysing reading materials will be critiqued. Prerequisite: EDUC 826 or consent of the instructor.

**EDUC 829-5 Contemporary Issues in Learning Disabilities**

Selective issues important and current in the learning disabilities field are examined in depth. The objective is to enable students to master a significant body of knowledge in the learning disabilities field, and to identify areas of interest for their eventual thesis research. Prerequisite: EDUC 422.

**EDUC 830-5 Implementation of Educational Programs**

Problems and practices associated with innovation and implementation including the nature of change in the educational context, the roles of teachers, administrators, change agents, and evaluators.

**EDUC 832-5 Teaching Composition: Research and Practice**

This course leads students to understand, examine, and evaluate research and practice in the teaching of English composition, stressing a writing process and the integration of literature and language study.

**EDUC 833-5 Social and Moral Philosophy in Education**

An in-depth study of the ethical foundations of education. Areas in education where ethical questions arise are identified and elucidated. Classical and modern moral positions are examined for their adequacy as theories of moral justification. The topics include the value of education, freedom and equality, and moral and values education.

**EDUC 834-5 Multilingualism, Language Acquisition, and Language Learning in the School Context**

A critical examination of key aspects of bi- and multilingualism from the double perspectives of sociolinguistics and language education. Current issues and theoretical developments in the study of multilingualism, identity, and language teaching provide a solid foundation to understand second and third language acquisition and literacy development in bilingual settings, including new perspectives on plurilingualism in language planning in education. The language of instruction will be French.

**EDUC 837-5 Seminar in Education, Social Philosophy, and Sociological Theory**

An in-depth study of selected topics in education and social philosophy and sociological theory.

**EDUC 838-5 Judgment in Administrative Decision-making**

Students examine the exercise of judgment (discretion) as a key element in administrative decision-making, and investigate the various dimensions of the exercise of discretion: conceptual, empirical, normative and prescriptive using perspectives drawn from diverse administrative contexts.

**EDUC 839-5 History of Childhood and Education in the Western World**

This course will consist of a study of origins of 20th century concepts of childhood and their relationship to child-rearing and education in Europe and North America.

**EDUC 840-0 Graduate Seminar**

Graded on a satisfactory/unsatisfactory basis.

**EDUC 841-3 Graduate Seminar****EDUC 842-5 Sociocultural Perspectives on the Psychology of Development and Education**

Sociocultural criticisms of traditional views of psychological development and learning are examined, and alternatives advanced by an array of sociocultural theories and research pertaining to individual and collective development are explored with particular attention to their relevance for educational contexts, practices, and aims.

**EDUC 843-5 Embodiment and Curriculum Inquiry**

The scholarship on embodiment and its implications for the body as a site for knowledge and its relationship to contemporary curriculum inquiry will be studied with specific emphasis on the area of performative and narrative inquiry and arts education. Central to this course will be the investigation of embodiment from both a philosophical perspective and a literary/poetic perspective.

**EDUC 844-5 Research Basis of Mathematics Education**

An examination of critical issues, current research and research practices in mathematics education.

**EDUC 845-5 Learning Mathematics with Computers**

Experience in incorporating computers in mathematical problem solving, adaptation of materials for use in mathematics classroom.

**EDUC 846-5 Foundations of Mathematics Education**

An examination of historical, cultural, and psychological forces shaping the secondary school mathematics curriculum. Current developments in mathematics curriculum and in mathematics education research.

**EDUC 847-5 Teaching and Learning Mathematics**

The theory and practice of mathematics teaching at the secondary level. Emphasis on the nature of the learner and the function of the teacher.

**EDUC 848-5 Ideas and Issues in Aesthetic Education**

This course relates critical ideas in aesthetics to questions concerning the nature, purpose, and provision of the arts (visual art, music, drama, dance, literature) in education.

**EDUC 849-5 Artists, Society and Arts Education**

A major survey of the educational theories and practices of musicians and artists generally from medieval times to the present. The special focus will be on modern responses of musicians and artists to modern demands for mass arts education. Material will be drawn from Europe, North America, Asia, and other parts of the world where mass arts education provision occurs.

**EDUC 850-5 Creativity and Education**

This course involves an exploration of the concept of creativity used in educational theory and practice. Through an examination of philosophical writings, psychological studies, first hand accounts of creators, biographical and historical material, and works of art and science themselves, an attempt will be made to come to grips with some of the problems which surround this concept and thereby to evaluate views about creativity put forth in theoretical accounts and exhibited in educational practice.

**EDUC 851-5 Perspectives on Technology-supported Learning**

Examines applications of technology in teaching and learning emphasizing the progression of theory and research in this area from the early 20th century through the present to predictions about the future. Related fields of inquiry to be examined include: educational technology, artificial intelligence (AI), computer assisted instruction (CAI), computer-supported collaborative learning (CSCL), distance education, and socio-political perspectives on technology.

**EDUC 852-5 Education and Dramatic Art**

This course involves an exploration of basic issues and questions which underlie the nature and provision of drama education in the schools. It includes a critical examination of the claims made in the theoretical literature regarding the nature and aims of drama education and an exploration of the implications for drama education curriculum and pedagogy.

**EDUC 853-5 Tools, Theories and Practices of Computer Supported Collaborative Learning**

Computer-supported collaborative learning environments are designed with three principal objectives: to upgrade the conceptual quality of what is learned; to increase students' abilities to monitor, control and improve their own learning; and to provide improved support for social aspects of learning. In this course students will critically examine the theoretical underpinnings of the design of such learning environments, and examine and contribute to

developing practices in K-12 classrooms and other educational settings that make use of them.

#### **EDUC 854-5 Teachers as Agents of Change**

The narratives of teachers of minority and Anglo-European ancestry will provide insights into how teachers work within and beyond normative institutionally prescribed roles to define and implement positive social and educational changes for their students.

#### **EDUC 855-5 Multicultural and Race Relations Education: Policy Development and Program Implementation**

Theory, research, policy development and program implementation in multicultural and race relations education encompass a wide spectrum of areas of educational inquiry.

#### **EDUC 856-5 Sociocultural Perspectives on Education and Identity**

Course activities will be structured for participants to consider recent formulations of learners as agents as well as subjects of culturally constructed, socially imposed worlds. Participants will examine a number of ethnographic descriptions of the experiences of learners in a variety of communities, noting in particular their use of diverse mediations/tools, including language. Participants will consider these ideas in relation to their own educational communities and develop plans for research activity in those sites.

#### **EDUC 857-5 Issues and Topics in Environmental Education**

Examines the origins of environmental education, the range of program offerings, and the educational concepts which appear to underlie them. Prerequisite: consent of the instructor.

#### **EDUC 858-5 Contemporary Research and Classroom Practices in French Immersion**

Students examine studies, reports and articles relating to French Immersion methodology, curriculum and program exploration. Students derive classroom applications and curriculum changes from these studies. Prerequisite: EDUC 481.

#### **EDUC 859-5 Philosophy of Science and Perspectives on Education**

An introductory examination of various philosophical positions about the nature of science, including logical positivism, naive realism, instrumentalism, relativism and social constructionism, and their relation to curriculum and instruction in science.

#### **EDUC 860-3 Foundations of Educational Psychology**

An advanced survey of core topics in educational psychology. Prerequisite: An undergraduate course in educational psychology or a cognate field of psychology.

#### **EDUC 861-5 Study of Learning Environments**

This course reviews research on learning environments (also known as classroom climates or classroom ecologies) in terms of psychological and social perspectives on educational experience. Implications for student learning, professional development and evaluating education innovations are examined.

#### **EDUC 862-4 Individual Assessment in Counselling**

Assessment procedures used in educational and community counselling settings, including intake assessment, case conceptualization, observational procedures, diagnostic categories, ethics, bias and multicultural and diversity issues.

#### **EDUC 863-5 Quantitative Methods in Educational Research**

Focus on critical analysis of quantitative research in education. Research studies examined will be based on exploratory and confirmatory data analysis, including group comparisons and correlations.

Students will use calculators and computers for data analysis and display. Prerequisite: EDUC 864.

#### **EDUC 864-5 Research Designs in Education**

Designing and interpreting research about education. Introduction to survey techniques, correlational designs, classic experimental and evaluation designs for investigating causal relations, case study methods, interpretive approaches to research. Students with credit for EDUC 814 may not take this course for further credit.

#### **EDUC 866-5 Advanced Qualitative Research in Education**

Students will study in depth various qualitative methodological approaches to educational research, will develop competence to contribute significantly to knowledge in their particular field of study, and will engage in intensive practice of various methodological approaches to qualitative research introduced in EDUC 867. Prerequisite: EDUC 864 and 867.

#### **EDUC 867-5 Qualitative Methods in Educational Research**

This course introduces students to qualitative research in education and examines topics such as identifying problems, using conceptual frameworks, coding, data analysis, drawing interpretations, and constructing arguments. Prerequisite: EDUC 864 (prerequisite not required for students in M.Ed. in Educational Practice stream).

#### **EDUC 868-5 Curriculum Theory and Art Education**

The course examines and relates conceptions of creativity and response in the visual arts to the fundamental questions of curriculum theory.

#### **EDUC 869-5 Music Education as Thinking in Sound**

This course presents the theory and practice of music education based on theories of auditory perception, musical theory, and various cross-cultural perspectives on musical behavior.

#### **EDUC 870-4 Theories of Counselling**

Students examine analytic, phenomenological, existential, behavioral and cognitive approaches to counselling, and the philosophical and personality theories upon which they are based.

#### **EDUC 871-4 Family Counselling**

Students discuss models of family dynamics and instructional interventions applicable by school personnel in family counselling interactions. Concepts and techniques will be explicated through discussion and simulation. Prerequisite: EDUC 870.

#### **EDUC 872-3 Ethics in Counselling Psychology**

Issues related to foundational ethical principles and systems, professional and legal standards for counselling psychology, review of ethics codes, ethical decision-making, and other topics including professional boundaries, competence, service across cultures, social justice, consulting and private practice, and ethical guidelines around evaluation, assessment, supervision, and research.

#### **EDUC 873-4 Vocational Counselling**

Major theorists will be discussed to provide a theoretical basis for career counselling activities. Using an integrated framework and multi-modal approaches, techniques will be practiced to assist clients seeking vocational, job search, and occupational placement information.

#### **EDUC 874-5 Counselling Skills and Strategies**

Counselling skills and strategies are analysed, practiced, and critically examined. Counsellor decision-making, counselling effectiveness, and professionalism in counselling are also considered. Prerequisite: EDUC 870.

#### **EDUC 876-5 Cognitive Intervention Research**

Examines issues in research designed to enhance learners' cognitive processes. This research is subsumed under the broad term 'cognitive interventions,' which in turn, refers to research purported to increase learners' success in learning. The issues examined include the historical context, problems and prospects of cognitive interventions.

#### **EDUC 877-4 Contemporary School Counselling**

An examination of contemporary approaches to school counselling. Program development, consultation skills, counselling interventions in school counselling are considered.

#### **EDUC 878-5 Group Counselling**

An examination of contemporary approaches to group counselling. Prerequisite: EDUC 874.

#### **EDUC 879-5 Lev Vygotsky's Theories in Education**

Covers all major aspects of Lev Vygotsky's cultural-historical activity theory of human development and its contemporary applications in education. Concepts include the zone of proximal development of higher psychological functions, language and consciousness, interfunctional relations, analysis according to units, and "tool-and-result" methodology.

#### **EDUC 880-2.5 Master's Project (Completion)**

##### **EDUC 881-5 Project**

The project is a study that may take a variety of different forms including a survey, case study, extended essay, curriculum development project inter alia; central to its character is a concern with the application of relevant academic knowledge to professional practice. The project should normally be completed and approved in two terms.

#### **EDUC 883-5 MEd Comprehensive Examination**

The examination is graded on a satisfactory/unsatisfactory basis.

#### **EDUC 884-2.5 MEd Comprehensive Examination (Completion)**

Students who do not complete EDUC 883-5 in one term must enrol for this course in all subsequent terms.

#### **EDUC 890-4 Educational Media as Foundations of Curriculum**

Provides a historically-grounded treatment of the constructive role of technologies in the transmission and production of cultural knowledge and understanding. Students develop a grasp of the ways in which technologies have mediated and transformed the nature of knowledge, the knower, and processes of coming to know.

#### **EDUC 891-4 Learning Design in Technology-Mediated Environments**

Engages students in a critical analysis of learning design theory, including the underlying assumptions these embrace about knowledge, learning, the learner, learning technologies and the nature of instruction. Students will examine the appropriateness of media and learning technologies to support teaching and learning, and create a learning design according to a principled approach.

#### **EDUC 892-4 Cognitive Tools and Multimedia Learning**

Design principles for multimedia learning are derived from the theories and research of cognitive science. Topics include: tutorial interactions, history of adaptive learning systems, adapting to individual differences, dialogues with teachers (and other agents), problem solving and cognitive load, learning from multimedia, cognitive principles for document design, tools for self-regulated learning, intrinsic and situational motivation, simulations and self-regulated inquiry, inquiry with microworlds and cognitive tools, multimedia scenarios for anchored instruction.

### **EDUC 893-4 Organizational and Social Aspects of Learning Technology Design**

Reviews constructive approaches to integrating learning technologies, provides analysis tools from cultural historical activity theory, reviews impact of organizational culture and draws on visualization of social activity networks. Organization and change strategies are examined in higher, school and workplace learning; providing a source for designing organizational learning technologies.

### **EDUC 894-4 Methods for Research and Inquiry in Learning Technologies**

Examines methods, practices and thinking of direct value in improving quality and use of learning technologies. Students experience leading software tools for observational analysis, qualitative research and digital ethnography. We consider computer-supported methods for learning technology professionals and for assessing learning technology programs.

### **EDUC 897-5 Master's Thesis (Completion)**

### **EDUC 898-10 Master's Thesis**

The thesis is a research investigation designed to generate and/or examine critically new knowledge in the theory and/or practice of education. The thesis should normally be completed and approved in three terms.

### **EDUC 899-10 Doctoral Thesis**

Prerequisite: EDUC 983.

### **EDUC 901-5 Seminar in the History of Educational Theory**

The historical roots of educational thought are examined from a broad cultural perspective. Major works in disciplines such as philosophy, psychology and sociology which have had significant impact on educational theorizing will be studied. Special attention will be paid to the relationship between theory and educational practice.

### **EDUC 902-5 Interdisciplinary Seminar in Contemporary Educational Theory**

Contemporary educational theories and theories from supporting disciplines (e.g., psychology, sociology, philosophy) will be examined and analysed. The relationships among contemporary theories, current practice and educational change will be focal.

### **EDUC 903-5 Research Apprentices**

The apprenticeship is designed to provide the student with practical experience in scholarly inquiry in close co-operation with a faculty member in the student's area of specialization.

### **EDUC 904-5 Fieldwork III**

### **EDUC 905-5 Fieldwork IV**

### **EDUC 907-5 Selected Topics**

### **EDUC 908-5 Selected Topics**

### **EDUC 910-5 Directed Readings**

### **EDUC 911-5 Colloquium in Curriculum Theory (I)**

### **EDUC 912-5 Colloquium in Curriculum Theory (II)**

### **EDUC 921-5 Seminar in Philosophy and Educational Theory**

Philosophical examination of issues related to the school as an educational institution with social and political connections. Issues examined include: the education/training distinction; the justification of education; compulsory curriculum; freedom and authority in education; equality of educational opportunity; legal-moral questions central to educational administration; teachers'/parents'/students' rights and duties; accountability; and the logic of decision-making.

### **EDUC 922-5 Advanced Seminar in Epistemology and Education**

An in-depth study of epistemological issues in education, including: concepts of perception, cognition, imagination, memory, understanding,

learning and the assessment of learning. Other questions dealt with are: What are the various forms of knowledge? What are the implications for core curriculum? What epistemological assumptions underlie current educational practices? Is the relativity of knowledge thesis defensible? Are the claims of sociology of knowledge sound? What is meant by: objectivity/knowledge/belief/truth? In what sense can 'rationality' be defended as a central educational objective?

### **EDUC 923-4 The Politics of Difference: Coalition Building and Critical Pedagogy**

Students will become familiar with current theories, practices and research about anti-racist and critical pedagogies, and democratic dialogue for coalition-building in educational contexts.

### **EDUC 924-4 Multilingual Societies and Identities in a Globalizing World**

The course will introduce participants to theoretical perspectives and developments in the fields of multilingualism, identity formation and globalization, and to their impacts inside and outside of classrooms. Participants will be encouraged to employ, adapt, and challenge analytic paradigms, and to apply them to the contexts of the classrooms in which they teach and/or the societies in which they have lived.

### **EDUC 925-4 Critical Literacies in Multilingual Contexts**

Students will become familiar with current theory, practice and research in multiliteracies and multimodal literacies in multilingual contexts, in critical literacy pedagogies, and critical discourse analysis with respect to interaction as well as text. Participants will also discuss current critical literacy research practices, and demonstrate the design and execution of such studies.

### **EDUC 926-2 Doctoral Seminar A: Anthropological Approaches to Educational Research**

This seminar is designed for the first term of the doctoral program in Languages, Cultures, and Literacies in the Faculty of Education. It will provide students with opportunities to examine and practice analytical research procedures that are currently in the forefront of socio-cultural, transformative educational scholarship. Students will become familiar with and discuss anthropological approaches in education research.

### **EDUC 927-2 Doctoral Seminar B: Sociolinguistic Approaches to Educational Research**

Participants will discuss methodological approaches in sociolinguistic research in educational and other social contexts. Courses instructors will introduce a range of sociolinguistic research following different methodologies, as well as presenting their own research. Participants will be involved in discussions and analysis in three areas: analysis of data from instructors' research; applicability of methodologies in participants' own social and educational contexts; relevance and applicability of methodologies in terms of participants' emerging research plans.

### **EDUC 928-2 Doctoral Seminar C: Critical and Sociocultural Approaches to Educational Research**

Participants will discuss examples of critical and sociocultural research in multiliteracies and multimodal literacies in multilingual contexts. Course instructors will present their own as well as others' research, and course discussion will centre on methods and techniques for this approach to critical educational research. Participants will be involved in analyzing data from instructors' projects.

### **EDUC 930-4 Considering the Future of Learning Communities**

Considers what it means to build and have membership in a learning community, and how the use of computing and telecommunications technologies may contribute to these goals. Students will critically examine reports from a variety of traditions (including anthropology, sociology, cognitive science) about how traditional and "wired" learning communities function. Each student will apply insights from the class readings and activities to produce a design proposal for a future learning community.

### **EDUC 931-4 Group and Organizational Learning Technologies**

An advanced class engaging candidates in research toward social and organizational factors and designs. Projects are determined through student study plans and faculty research.

### **EDUC 932-4 Learner-Centred Design**

Examines a new paradigm for designing learning environments that integrates research on the experience of learning complex material with the rigor of systematic design processes. Students will design and carry out a learner-centred study and will be expected to contribute to the development of this new design paradigm in class discussions and in reflective writing.

### **EDUC 941-5 Mathematical Learning and Thinking: Historical, Philosophical, and Psychological Dimensions**

Focuses on motivations and rationales guiding seminal thinkers in the historical development of mathematical thinking, mathematical cognition and learning, with an eye toward foundational issues in contemporary educational research, theory and practice.

### **EDUC 942-5 Contemporary Theories and Methodologies in Mathematics Education**

Contemporary theories and methodologies in mathematics education will be examined and analysed. Developing an overview of mathematics education as an evolving research domain will be focal.

### **EDUC 945-5 Doctoral Seminar in Arts Education**

The course provides a broad theoretical overview of problems and ideas associated with the nature and provision of arts education in the schools.

### **EDUC 946-5 Doctoral Seminar in Mathematics Education**

This seminar is designed to extend and deepen students' understanding of the discipline of mathematics education. It will examine international developments, research programs, special interest groups, recent theories in learning and teaching mathematics, and issues in mathematics teacher education. Prerequisite: EDUC 942.

### **EDUC 950-5 Approaches to Educational Research**

The broad paradigms encompassing much current educational research are examined, with emphasis on their philosophical and assumptional bases, as well as general ethical and methodological issues. Particular attention is paid to the critical reading of research and the implications for educational leadership. In addition, students begin to identify a research topic and to develop a defensible research orientation.

### **EDUC 960-5 Ethics, Law and Professional Leadership**

This seminar examines the ethical and legal environment of professional leadership. Specifically, the course addresses moral issues and dilemmas embedded in professional practice including occupational and ordinary morality, issues of deception and honesty, informed consent, privacy

and confidentiality, conflict of interest, individual and collective responsibility, inter alia. The course will use cases and personal experience as heuristics for learning.

### **EDUC 961-5 Educational Governance, Reform and Diversity**

The nature and impact of recent wide-ranging systemic educational reform in several different countries are critically examined, through two major themes. One theme is the politics and dynamics of governance, with a particular emphasis on participatory forms of political life in a heterogeneous society. The other theme is the politics and culture of difference, and the development of community which respects these differences.

### **EDUC 962-5 Leadership, Accountability and the Public Interest**

The special responsibilities of leaders in educational institutions for accountability both to learners and to the wider community with respect to policies, practices and programs are the focus of this seminar. Contemporary approaches to program assessment and to ensuring cost-effectiveness in educational management are applied to cases emerging from student experience.

### **EDUC 963-5 Approaches to Problematising**

This course examines how problems in practice are identified, defined and understood from a variety of different theoretical perspectives. Within the common framework of the course, students will investigate a problem or issue of significance to their individual workplaces or to their individual research endeavors.

### **EDUC 964-5 Seminar in Educational Theory EDUC 970-4 Systems and Paradigms in Educational Psychology**

A survey of major 20th century systems and paradigms that underlie research and theories in instructional psychology; addresses learning, cognition, motivation, methods of inquiry, and other cornerstones of the field. Prerequisite: one of EDUC 826, 829, 860, 870 or equivalent graduate course.

### **EDUC 971-4 Advanced Topics in Educational Psychology**

In-depth critical analysis of select topics in educational psychology. Prerequisite: EDUC 860. Students who have taken EDUC 865 in previous terms may not take this course for further credit.

### **EDUC 972-4 Colloquium in Psychology of Education**

Survey of methods for synthesizing knowledge gleaned from primary and secondary research, including meta-analysis and integrative reviewing. Assignments culminate in presenting a colloquium about a topic of the student's choice to the faculty.

### **EDUC 975-4 Advanced Quantitative Methods in Educational Research**

Methods for analyzing multivariate data in educational research, meta-analytic methods, and applications and frailties of advanced quantitative analysis. Illustrations from educational research are used throughout. Prerequisite: EDUC 863 and 864 or permission of instructor.

### **EDUC 983-5 Doctoral Comprehensive Examination**

The examination is graded on a satisfactory/unsatisfactory basis.

## **Education Professional EDPR Faculty of Education**

### **EDPR 393-394 Special Topics**

This field based course will explore issues of concern to experienced practising educators. Course may be offered on a pass/withdrawal basis. Variable units 2, 3, 4, 5, 6. Prerequisite: EDUC 405 or special permission of the instructor.

### **EDPR 410-413 Field Based Studies in Curriculum Development**

This course is intended for practising teachers, school administrators or other practising educators who are involved in curriculum development. The course provides opportunities for members of the teaching profession to work on curriculum development projects under the supervision of faculty members and/or distinguished practitioners designated by the faculty. Those wishing to undertake a field based studies course must submit a proposal form, available from the Office of Field Programs, before the end of the term prior to the one in which the student intends to commence the study. The proposal must be approved by the director of field programs prior to enrolment in the course. Field based studies courses may have a unit value of 2, 3, 4 or 5 depending upon the nature of the proposed project. Evaluation is based on a pass-withdraw system. Field based studies in curriculum development may not form a component of EDUC 404. The course may form a component of an approved program of studies for the post baccalaureate diploma. Prerequisite: teaching certificate or permission of the director of field programs.

### **EDPR 414-417 Field Based Studies in Educational Practice**

This course is intended for practising teachers who wish to upgrade their professional work in a specific area of instruction or educational service. The field work is completed by individuals or groups of teachers under the supervision of a faculty member or field studies supervisor designated by the faculty. Those wishing to undertake a field based studies course must submit a proposal form, available from the Office of Field Programs, before the end of the term prior to the one in which the student intends to commence the study. The proposal must be approved by the director of field programs prior to enrolment in the course. Field based studies courses may have a unit value of 2, 3, 4 or 5 depending upon the nature of the project proposal. Evaluation is based on a pass/withdraw system. Field based studies in educational practice may not form a component of EDUC 404. The course may form a component of an approved program of studies for the post baccalaureate diploma. Prerequisites: teaching certificate or permission of the director of field programs.

### **EDPR 418-421 Group Field Studies in Selected Professional Topics**

This course is intended for small groups of practising educators who wish to investigate a specific topic in education through focused inquiry. Seminars, readings and related field work are directed by a faculty member or field studies supervisor designated by the Faculty of Education. The designated supervisor, on behalf of the group, must submit a proposal form, available from the Office of Field Programs, before the end of the term prior to the one in which the students intend to commence the study. The proposal must be approved by the director of field programs prior to enrolment in the course. Field studies courses may have a unit value of 2, 3, 4 or 5, depending upon the nature of the project proposal. Evaluation is based on a pass/withdraw system. Group field studies in selected professional topics may not form a component of EDUC 404. The course may form a component of an approved program of studies for the post baccalaureate diploma. Prerequisite: teaching certificate or permission of the director of field programs.

### **EDPR 492-499 Special Topics**

This field based course will explore issues of concern to experienced practising educators. Course may be offered on a pass/withdrawal basis. Variable units: 2, 3, 4, 5, 6. Prerequisite: EDUC 405 or special permission of the instructor.

### **EDPR 501-520 Special Topics**

This course requires students to investigate current theory, research and pedagogy related to a particular theory. Graded on a satisfactory/unsatisfactory basis. Variable units 2, 3, 4, 5.

### **EDPR 521-540 Special Topics**

This course involves students in critical examination of policy, curricular, instructional and assessment practices related to a particular theme. Graded on a satisfactory/unsatisfactory basis. Variable units 2, 3, 4, 5.

### **EDPR 541-550 Advanced Field Studies in Curriculum Development I**

In this course, students read for, plan and develop a conceptual framework for action that connects theme studies to the individual's professional context. Graded on a satisfactory/unsatisfactory basis. Variable units 2, 3, 4, 5.

### **EDPR 551-560 Advanced Field Studies in Curriculum Development II**

In this course, students read for, plan and develop a conceptual framework for action that connects theme studies to the individual's professional context. Graded on a satisfactory/unsatisfactory basis. Variable units 2, 3, 4, 5.

### **EDPR 561-570 Advanced Field Studies in Educational Practice I**

In these courses, students implement plans for action, conduct classroom inquiry, and document their individual learning related to the theme of the course sequence. Graded on a satisfactory/unsatisfactory basis. Variable units 2, 3, 4, 5.

### **EDPR 571-580 Advanced Field Studies in Educational Practice II**

In this course, students implement plans for action, conduct classroom inquiry, and document their individual learning related to the theme of the course sequence. Graded on a satisfactory/unsatisfactory basis. Variable units 2, 3, 4, 5.

### **EDPR 581-590 Advanced Field Studies in Collaborative Inquiry I**

In this course, students work in groups to investigate topics of mutual interest within the diploma theme, with an emphasis on their contributions to both the cohort learning group and the individual's broader educational community. Graded on a satisfactory/unsatisfactory basis. Variable units 2, 3, 4, 5.

### **EDPR 591-599 Advanced Field Studies in Collaborative Inquiry II**

In this course, students work in groups to investigate topics of mutual interest within the diploma theme, with an emphasis on their contributions to both the cohort learning group and the individual's broader educational community. Graded on a satisfactory/unsatisfactory basis. Variable units 2, 3, 4, 5.

## **Educational Technology and Learning ETEC Faculty of Applied Sciences**

### **ETEC 600-1 Learning with Asynchronous Communication**

This course will introduce graduate students to teaching and learning with asynchronous, computer-mediated conferences. It will survey related learning theory, research on effectiveness, design of learning activities, facilitation, assessment, and features of conferencing systems.

### **ETEC 601-1 Problem Based Learning**

This course will introduce graduate students to teaching and learning with problem-based learning (PBL). Delivered using PBL, the course includes related learning theory, research on effectiveness,

design of learning activities, assessment, facilitation, and computer-mediated delivery.

**ETEC 691-693-1 Directed Studies**  
**ETEC 694-699-3 Directed Studies**

## Engineering Science ENSC Faculty of Applied Sciences

### ENSC 100-3 Engineering Technology and Society

This course is designed to provide an introduction to the practice of engineering, surveying its history and its current state. The social and political aspects of engineering decisions will be illustrated by a number of case studies. Corequisite: ENSC 101. Breadth-Science.

### ENSC 100W-3 Engineering Technology and Society

This course is designed to provide an introduction to the practice of engineering, surveying its history and its current state. The social and political aspects of engineering decisions will be illustrated by a number of case studies. Corequisite: ENSC 101. Writing/Breadth-Science.

### ENSC 101-1 Writing Process, Persuasion and Presentations

This course provides a general introduction to the principles of effective communication with special emphasis on the writing process, persuasive writing, research papers, and oral presentations. In conjunction with ENSC 100-3, the course also explores current social and ethical issues in engineering. Corequisite: ENSC 100.

### ENSC 101W-1 Writing Process, Persuasion and Presentations

This course provides a general introduction to the principles of effective communication with special emphasis on the writing process, persuasive writing, research papers, and oral presentations. In conjunction with ENSC 100-3, the course also explores current social and ethical issues in engineering. Corequisite: ENSC 100. Writing.

### ENSC 102-1 Form and Style in Professional Genres

The major focus of this course is on the style and format of technical writing with attention to laboratory reports and project documentation. This course also examines resumes, cover letters, interview skills and formal reports to help students prepare for their first internship term. Corequisite: PHYS 131.

### ENSC 150-3 Introduction to Computer Design

Digital design concepts are presented in such a way that students will learn how basic logic blocks of a simple computer are designed. Topics covered include: system of binary numbers, Boolean Algebra, combinational logic design, sequential logic design, and basic Von Neumann computer architecture. Students with credit for CMPT 150 or 290 cannot take this course for further credit. CMPT 150 can be substituted for this course. Quantitative.

### ENSC 182-3 Mechatronics Design I

First year project course designed to provide students with a first exposure to the challenges of project organization. Students are responsible for designing and constructing a mechanical robot optimized to solve a particular chosen task. The engineering challenges of the project are expected to focus half on mechanical design and half on control algorithm design and implementation.

### ENSC 194-3 Optional Job Practicum

Four month internship of a non-technical nature. May be taken at any point during the program but will not count toward one of the three mandatory co-op work terms. Credit is awarded as in ENSC 195. Units from this course do not count towards the units required for an SFU degree.

### ENSC 195-3 Industrial Internship I

First four month internship in industry. Credit is given as pass/withdraw/fail (P/W/F) only, based on the employer's and co-operative education co-ordinator's evaluations. Units from this course do not count towards the units required for an SFU degree.

### ENSC 196-3 Special Internship I

Four month internship in industry or university research environment. Credit is awarded as in ENSC 195. Prior approval of Internship Co-ordinator required. Units from this course do not count towards the units required for an SFU degree.

### ENSC 201-3 The Business of Engineering

This course covers the business, management and entrepreneurial concepts that are important to engineers who manage projects, run businesses, or need to decide on the most efficient method for accomplishing a task. The topics to be covered include: financial accounting, rates of return, taxes, cost-benefit analyses, marketing, financing methods, and business plans. Prerequisite: 45 units

### ENSC 204-1 Graphical Communication for Engineering

An introduction to the use of graphical communication in engineering. Objectives are to improve the students' literacy in the use of graphics to communicate engineering information, and their ability to visualize and to think in three dimensions. Specific application areas discussed include 2D and 3D geometry in mechanical drawing, electronics-related drawings, block diagrams, and flow charts. The use of CAD tools will be discussed, and demonstrations of some tools will be provided.

### ENSC 215-3 Microcontroller Interfacing and Assembly-Language Programming

A common microcontroller will be presented such that students will be able to create a small project by interfacing with a variety of devices using assembly language. Topics include: the central processing unit (CPU) and memory, how the CPU executes machine code in the memory, how the programming task is simplified by the use of an assembler, the operation of the stack, writing subroutines, interfacing with input/output devices, and handling interrupts. Coding, testing, debugging, and other laboratory techniques will be introduced as needed. Prerequisite: ENSC 150 and CMPT 128. CMPT 128 can be taken concurrently. Students who have taken ENSC 151 cannot take this course for further credit.

### ENSC 220-3 Electric Circuits I

This course will cover the following topics: fundamental electrical circuit quantities, and circuit elements; circuits laws such as Ohm law, Kirchoff's voltage and current laws, along with series and parallel circuits; operational amplifiers; network theorems; nodal and mesh methods; analysis of natural and step response of first (RC and RL), as well as second order (RLC) circuits; real, reactive and rms power concepts. In addition, the course will discuss the worker safety implications of both electricity and common laboratory practices such as soldering. Prerequisite: PHYS 121 and 131, or PHYS 126 and 131, or PHYS 141, and MATH 232 and 310. MATH 232 and/or 310 may be taken concurrently. Students with credit for ENSC 125 cannot take this course for further credit. Quantitative.

### ENSC 224-3 Electronic Devices

The essential physics of silicon semiconductor devices that form the heart of integrated circuits today. An introduction to semiconductor device physics upon which device models are based leading to the development of the drift-diffusion equations. The static and dynamic behavior of PN junction diodes, bipolar junction transistors, and field effect transistors will be covered along with the application of the developed device models to integrated circuit design. Prerequisite: ENSC 220 or equivalent.

Students who have taken PHYS 365 cannot take this course for further credit.

### ENSC 225-4 Microelectronics I

This course teaches analog/digital electronics and basic device physics in the context of modern silicon integrated circuits technology. Topics include: qualitative device physics and terminal characteristics; implementations and models of basic semiconductor devices (diodes, BJTs and MOSFETs); circuit simulation via SPICE; basic diode circuits; transistors as amplifiers and switching elements; temperature effects and compensation; single-stage transistor amplifiers; biasing, current sources and mirrors. Prerequisite: ENSC 150 or CMPT 150, and ENSC 220. Quantitative.

### ENSC 226-4 Electronic Circuits

Introduces the basic electronic components, amplifiers, diodes, and oscillators. Fundamentals of logic design. Prerequisite: ENSC 220. Students who have taken this course may not take ENSC 225 for further credit.

### ENSC 230-4 Introduction to Mechanical Design

This course presents the elements and principles involved in design and analysis of basic mechanical structures and mechanisms. Mechanical elements such as gears, cams and bearings and fundamental relationships between the forces and corresponding motion or deflection are investigated through examples and experiments. This background can then be used in the design, analysis and development of computer controlled machines such as robotic devices. Prerequisite: PHYS 120, MATH 310.

### ENSC 231-3 Engineering Materials

Materials, their structures, properties and performance; crystal structures and instruments for structure determination; polymers, ceramics, and composites; quality control and reliability. Prerequisite: CHEM 120 or 121; PHYS 140 or 121. Students who have taken ENSC 330 may not take this course for further credit.

### ENSC 250-3 Introduction to Computer Architecture

This course deals with the main concepts embodied in computer hardware architecture. In particular, the organization, design and limitations of the major building blocks in modern computers is covered in detail. Topics will include: processor organization; control logic design; memory systems; and architectural support for operating systems and programming languages. A hardware description language will be used as a tool to express and work with design concepts. Prerequisite: CMPT 150 or ENSC 150. This course is identical to CMPT 250 and students cannot take both courses for credit. Quantitative.

### ENSC 263-3 Special Topics in Engineering Science

Prerequisite: permission of the undergraduate curriculum chair.

### ENSC 264-4 Special Topics in Engineering Science

Prerequisite: permission of the undergraduate curriculum chair.

### ENSC 281-3 Statics and Strength of Materials

Covers basic concepts of mechanics, vectors. Statics of particles. Rigid bodies and force systems, equilibrium of rigid bodies. Analysis of trusses and frames. Distributed forces, centroids and moments of inertia. Friction. Internal shear and bending moments in beams. Strength of material: introduction to mechanical response of materials and stress-strain transformations. Virtual work and energy methods. Prerequisite: PHYS 140, MATH 152.

**ENSC 282-3 Kinematics and Dynamics of Rigid Bodies and Mechanisms**

Planar and 3D motions kinematics and kinetics of rigid bodies and mechanisms; linkages, gears, cams; synthesis and analysis of mechanisms; consideration of the static and dynamic forces in machines; vibration analysis, response to shock, motion and force transmissibility, vibration isolation. Prerequisite: PHYS 140, MATH 152, and 310.

**ENSC 283-3 Introduction to Fluid Mechanics**

Physical properties of fluids and fundamental concepts in fluid mechanics. Hydrostatics. Conservation laws for mass, momentum and energy. Flow similarity and dimensional analysis as applied to engineering problems in fluid mechanics. Laminar and turbulent flow. Engineering applications such as flow measurement, flow in pipes and fluid forces on moving bodies. Prerequisite: PHYS 141, MATH 152, and 310.

**ENSC 295-3 Industrial Internship II**

Second four month internship in industry. Credit is awarded as in ENSC 195. Units from this course do not count towards the units required for an SFU degree. Prerequisite: ENSC 195 or 196.

**ENSC 296-3 Special Internship II**

Four month internship in industry or university research environment. Credit is awarded as in ENSC 195. Units from this course do not count towards the units required for an SFU degree. Prerequisite: ENSC 195 or 196 and approval of internship co-ordinator required.

**ENSC 303-3 Directed Studies in Engineering Science**

Directed reading and research in a topic chosen in consultation with a supervisor. Admission requires agreement by a proposed faculty supervisor and submission of a proposal to the school at least one month prior to the start of the term in which the course will be taken. Upon completion of a directed study course, the student must submit a copy of the 'deliverables' to the chair of the undergraduate curriculum committee. Prerequisite: a minimum of 70 units and permission of the chair of the undergraduate curriculum committee.

**ENSC 304-1 Human Factors and Usability Engineering**

The user is often overlooked in the engineer's quest for a functional and efficient design. This course examines the factors that make designs more or less usable and how to integrate usability constraints and testing procedures into the design process.

**ENSC 305-1 Project Documentation and Team Dynamics**

This course is integrated with an ENSC project course (either ENSC 340 or 440) that provides practical experience with the design process for development projects. Topics include project management, team writing, project documentation (proposals, functional and design specifications, progress reports, and users manuals), group dynamics and dispute resolution. Corequisite: ENSC 440 or 441.

**ENSC 305W-1 Project Documentation and Group Dynamics**

This course is integrated with an ENSC project course (either ENSC 340 or 440) that provides practical experience with the design process for development projects. Topics include project management, team writing, project documentation (proposals, functional and design specifications, progress reports, and users manuals), group dynamics and dispute resolution. Corequisite: ENSC 440 or 441. Writing.

**ENSC 311-3 The Business of Engineering I**

Provides fundamentals of the business, management and entrepreneurial concepts important to Canadian

engineers who manage projects, run businesses, or need to decide on the most efficient method for accomplishing a task. Topics include the Canadian business environment, theories of management thought, forms of ownership, corporate structure and growth, the process of management — planning, organization theory, motivation, control and communication. Additional topics include financial accounting, rates of return, taxes, cost-benefit analysis, marketing, financing methods, and business plan. Prerequisite: students must have completed a minimum of 75 units. Students who have taken this course may not take ENSC 201 for further credit.

**ENSC 312-3 The Business of Engineering II**

Offered in conjunction with ENSC 384 Mechatronics Design II. Concepts covered include project management skills such as budgeting, scheduling earned value analysis as well as facilitation, communication and negotiation. Students will experience what it is like to be part of a diverse project team while working on a specific project. The business topics covered in ENSC 311 are reinforced in this course. These topics include financial accounting, rates of return, taxes, cost-benefit analysis, marketing, financing methods, and business plan. Prerequisite: ENSC 311. Corequisite: ENSC 384.

**ENSC 320-3 Electric Circuits II**

This course is a second course on electric circuits and the topics covered include: the use of Laplace transform in circuit analysis, including poles and zeros, the frequency response and impulse response; convolution as a method for computing circuit responses; resonant and bandpass circuits; magnetically coupled circuits; three-phase circuits; two port circuits; and filtering. Prerequisite: ENSC 220.

**ENSC 325-4 Microelectronics II**

This course introduces Students to analog integrated circuit design in the context of modern silicon integrated circuits technology. Topics included: integrated circuit technology and design tools; integrated component characteristics and limitations, differential amplifiers; multi stage amplifiers; feedback amplifiers; stability and frequency compensation; integrated operational amplifiers; bipolar and MOS digital circuits; analog aspects of digital electronics. Prerequisite: ENSC 225.

**ENSC 327-4 Communication Systems**

This course represents and introduction to analog and digital communications systems. The main topics are: a review of Fourier Transform; the representation of bandpass signals; random signals in communications, including stationarity, ergodicity, correlation, power spectra and noise; amplitude and frequency modulation; circuits and techniques for modulation and demodulation; frequency division multiplexing; baseband digital communication; time division and multiplexing; an introduction to basic digital modulation schemes such as BPSK, FSK and QPSK. Laboratory work is included in this course. Prerequisite: ENSC 380 and STAT 270.

**ENSC 328-1 Random Processes in Engineering**

An introduction to continuous-valued random processes, including first and second order statistics. Topics: definitions of random processes taking complex values in continuous time; autocorrelation and autocovariance functions in the time domain; stationarity, ergodicity; power spectral density in frequency domain; effect of linear filters; cross correlation functions and cross-power spectral densities. Prerequisite: ENSC 380 and STAT 270. STAT 270 may be taken concurrently. Students who have taken ENSC 327 may not take ENSC 328 for further credit.

**ENSC 329-4 Introduction to Digital Logic**

Conveys the essential principles of digital logic systems which are the building blocks of many electronic systems including computer systems. These principles form the basis of the electronics component of the mechatronics curriculum and therefore a good understanding of the material is crucial. Prerequisite: ENSC 226, CMPT 128.

**ENSC 330-4 Engineering Materials**

An introductory course in materials science which covers materials — their structures, properties, and performance; crystal structures and instruments for structure determination; polymers, ceramics, composites; quality control and reliability. Prerequisite: CHEM 121, PHYS 121.

**ENSC 331-3 Introduction to Microelectromechanical Systems**

An introduction to microelectromechanical systems, covering thin film processing technologies, bulk and surface micromachining, and MEMS applications. Prerequisite: ENSC 282, 283, 226.

**ENSC 332-4 Microprocessors and Interfacing**

Covers basic microcomputer architecture, design and analysis of address decoders and memory systems, design and analysis of assembly language programs and microcomputer system design. Prerequisite: ENSC 329.

**ENSC 350-3 Digital Systems Design**

This course deals with advanced topics in digital design such as advanced state machine concepts, asynchronous design, hardware description languages, bus interfacing and DSP architecture. It also covers both the architecture and programming of field programmable logic devices. Some laboratory work is expected. Prerequisite: ENSC 215, and either ENSC 250 or CMPT 250.

**ENSC 351-4 Real Time and Embedded Systems**

This course concentrates on the problems encountered when attempting to use computers in real time (RT) and embedded applications where the computer system must discern the state of the real world and react to it within stringent response time constraints. Both design methodology and practical implementation techniques for RT systems are presented. Although some hardware will be involved, it should be noted that this course concentrates on real time software. Prerequisite: CMPT 128, and either CMPT 250 or ENSC 250, and a minimum of 60 units. ENSC 215 is highly recommended. Students who have taken ENSC 451 cannot take this course for further credit.

**ENSC 363-3 Special Topics in Engineering Science**

Prerequisite: permission of the undergraduate curriculum chair.

**ENSC 364-4 Special Topics in Engineering Science**

Prerequisite: permission of the undergraduate curriculum chair.

**ENSC 370-3 Biomedical Engineering Directions**

An overview of the discipline of biomedical engineering, including its purpose and scope. Typical discussion topics: goals and limitations of biomedical engineering, the nature and relevant technologies of selected application areas, common aspects of biomedical practice, current trends and new directions in biomedical engineering. Students conduct extended investigations of biomedical practice, new biomedical techniques or possible new products, then prepare reports and present seminars. Prerequisite: completion of at least 25 units of engineering science (ENSC) courses and KIN 208. KIN 208 can be taken concurrently.

**ENSC 372-4 Biomedical Instrumentation**

Instrumentation techniques for measuring common physiological signals. Bioelectric and biochemical sensors. Biostimulation. Electronic design issues: electrical safety, signal conditioning and protection against noise, digital signal acquisition. Live subject ethical considerations. Laboratory work to include use of data acquisition packages in conjunction with various sensors, as well as design and construction of a full signal acquisition chain, from sensor to RAM. Prerequisite: ENSC 225, 320, 380 and KIN 308. KIN 308 can be taken concurrently.

**ENSC 374-4 Biomedical Image Acquisition**

Provides an understanding of the scientific principles, physics and engineering technology that provide the basis for the various techniques (radiography, sonography, computed tomography, magnetic resonance imaging), by which medical images are acquired. Prerequisite: ENSC 220, 225. Recommended: ENSC 224.

**ENSC 376-4 Introduction to Optical Engineering and Design**

In this course students learn basic of designing optical instruments. Lectures cover the principles of operation of optical devices using linear (ray) optics and Fourier optics as well as optical metrology. Hands-on practice is provided by extensive laboratory activities. Prerequisite: PHYS 121, MATH 254.

**ENSC 380-3 Linear Systems**

The objectives of this course are to cover the modelling and analysis of continuous and discrete signals using linear techniques. Topics covered include: a review of Laplace transforms; methods for the basic modelling of physical systems; discrete and continuous convolution; impulse and step response; transfer functions and filtering; the continuous Fourier transform and its relationship to the Laplace transform; frequency response and Bode plots; sampling; the Z-transform. Prerequisite: ENSC 220 and MATH 310.

**ENSC 381-3 Systems Modeling and Simulation**

Introduction to systems modeling and analysis. Application to engineering systems including: mechanical, electrical, thermal, and fluid systems. Allows the student to acquire, in a time-efficient and uncomplicated manner, knowledge in the formation and construction of dynamic models. The simulation models that the student will design in this course accommodate these analyses, with the construction of realistic hypotheses and elaborate behavior models. Prerequisite: ENSC 226, 281, 282, 283, MATH 251. Corequisite: PHYS 344.

**ENSC 382-3 Machine Design**

Review of stress and strain in solids, superposition, energy theorems, theories of failure, elastic and inelastic analysis of symmetrical bending, torsion of circular members, and virtual work. Adequacy assessment and synthesis of machine elements with a focus on the design process. Static failure of ductile and brittle materials, fatigue analysis of structures. Topics include the design of welds, bolted connections, springs and shafts. Solution strategies include both analytical and finite element methods. Prerequisite, ENSC 281 and 282.

**ENSC 383-4 Feedback Control Systems**

This course is an introduction to the analysis, design, and applications of continuous time linear control systems. Topics include transfer function representation of open and closed loop systems, time domain specifications and steady state error, sensitivity analysis, time and frequency response, and stability criteria. It includes a treatment of methods for the analysis of control systems based on the root locus, Bode plots and Nyquist criterion, and their use in the design of PID, and lead-lag compensation. Lab work is included in this course. Prerequisite: ENSC 380.

**ENSC 384-4 Mechatronics Design II**

Interweaves mechanisms, electronics, sensors, and control strategies with software and information technology to examine the demands and ideas of customers and find the most efficient, cost-effective method to transform their goals into successful commercial products. Most of the term is devoted to a significant design project in which student groups work independently and competitively, applying the design process to a project goal set by the faculty co-ordinator. Prerequisite: ENSC 382, 381, and 182. ENSC 312, 332 and 387 can either be taken as prerequisites or concurrently.

**ENSC 387-4 Introduction to****Electro-Mechanical Sensors and Actuators**

This course provides an introduction to sensors and actuators for electromechanical, computer-controlled machines and devices. Topics include operating principles, design considerations, and applications of analog sensors, digital transducers, stepper motors, continuous-drive actuators, and drive system electronics. Component integration and design considerations are studied through examples selected from applications of machine tools, mechatronics, precision machines, robotics, aerospace systems, and ground and underwater vehicles. Laboratory exercises strengthen the understanding of component performance, system design and integration. Prerequisite: ENSC 380.

**ENSC 388-3 Engineering Thermodynamics and Heat Transfer**

Energy transfer as work and heat, the First Law of thermodynamics. Properties and states of simple substances. Control-mass and control-volume analyses. Entropy, the Second Law of thermodynamics. Carnot cycle. Energy conversion systems; internal combustion engines, power plants and refrigeration cycles. Heat transfer by conduction, convection, and radiation. Formulation and solution of steady and transient problems. Cooling of microelectronics, thermal solutions. Prerequisite: MATH 152, 251, PHYS 141. Students with credit for PHYS 344 cannot take this course for further credit.

**ENSC 395-3 Industrial Internship III**

Third four month internship in industry. Credit is awarded as in ENSC 195. Units from this course do not count towards the units required for an SFU degree. Prerequisite: ENSC 295 or 296 and a minimum of 75 units.

**ENSC 396-3 Special Internship III**

Four month internship in industry or university research environment. Approved entrepreneurial projects will also be accepted. Credit is awarded as in ENSC 195. Units from this course do not count towards the units required for an SFU degree. Prerequisite: ENSC 295 or 296, a minimum of 75 units and approval of internship co-ordinator required.

**ENSC 400-402-4 Directed Studies in Engineering Science**

Directed reading and research in a topic chosen in consultation with a supervisor. Admission requires agreement by a proposed faculty supervisor and submission of a proposal to the school at least one month prior to the start of the term in which the course will be taken. Upon completion of a directed study course, the student must submit a copy of the 'deliverables' to the chair of the undergraduate curriculum committee. Prerequisite: a minimum of 100 units and permission of the chair of the undergraduate curriculum committee.

**ENSC 403-3 Directed Studies in Engineering Science**

Directed reading and research in a topic chosen in consultation with a supervisor. Admission requires agreement by a proposed faculty supervisor and submission of a proposal to the school at least one month prior to the start of the term in which the course

will be taken. Upon completion of a directed study course, the student must submit a copy of the 'deliverables' to the chair of the undergraduate curriculum committee. Prerequisite: a minimum of 100 units and permission of the chair of the undergraduate curriculum committee.

**ENSC 406-2 Engineering Ethics, Law, and Professional Practice**

This course provides an introduction to the engineering profession, professional practice, engineering law and ethics, including the issues of worker and public safety. It also offers opportunities to explore the social implications and environmental impacts of technologies, including sustainability, and to consider engineers' responsibility to society. Prerequisite: 100 units or permission of the instructor.

**ENSC 424-4 Multimedia Communications Engineering**

This course covers the technical basis for multimedia communications systems. The main topics are as follows: methods for audio and visual signal compression and processing; the communications requirements of multimedia systems, such as synchronization, quality of service and bandwidth; the architectures and protocols associated with multimedia communications networks. Prerequisite: ENSC 380.

**ENSC 425-4 Electronic System Design**

The principles and processes involved in designing analog circuits, emphasizing the functional blocks that comprise subsystems of a larger analog signal processing system. Topics include linear and nonlinear amplifiers, active filters, signal generators, signal modulators, switchmode power converters and analog/digital data conversion. The effects of non-ideal aspects of IC operational amplifiers on system performance are discussed and verified using laboratory projects. Students should be familiar with the behaviour and application of discrete semiconductor devices. Prerequisite: ENSC 320, 325 and 380.

**ENSC 426-4 High Frequency Electronics**

Transmission lines and waveguides, microwave devices, travelling wave devices. An introduction to the theory of radiation, antennae and wave propagation, and microwave scattering theory. The design of complete communication systems incorporating microwave, optical and satellite channels. Laboratory work is included in this course. Prerequisite: PHYS 221 or 321.

**ENSC 427-4 Communication Networks**

Quantitative performance analysis and design of data and integrated services networks. Re-transmission error recovery schemes, networks of queues, congestion control, routing strategies. Multiple access techniques in data networks, design for specified throughput and delay performance. Wireless networks, routing approaches in mobile networks. Analysis and design of broadband integrated services digital networks, asynchronous time division multiplexing. Laboratory work is included in this course. Prerequisite: ENSC 327 or permission of instructor.

**ENSC 428-4 Digital Communications**

This course will cover the physical-layer design issues in digital communication systems. The major topics covered are: information measures and the notion of channel capacity; link budgets; digital modulation techniques, including the signal space concept and optimal detectors, error performance in noise, suboptimal detectors, pulse shaping, synchronization, and equalization; error control techniques such as block and convolutional codes, as well as comparisons between FEC and ARQ. Laboratory work is included in this course. Prerequisite: ENSC 327.

**ENSC 429-4 Digital Signal Processing**

Discrete time signals and systems, sampling and quantization. The Discrete Fourier Transform and fast transforms. Digital filters, IIR and FIR, design procedures and implementations. Quantization noise in digital filters and transforms. Random signals, the response to linear systems to random signals. Introduction to adaptive systems. Introduction to system architectures for digital signal processing. Laboratory work includes familiarization with digital signal processing software packages. Prerequisite: ENSC 327 or 328, and 380.

**ENSC 440-4 Capstone Engineering Science Project**

This capstone design course is based around a group project that consists of researching, designing, building, and testing the hardware implementation of a working system. The course also includes material on how to design for safety, engineering standards, and human factors. Prerequisite: at least 100 units. Corequisite: ENSC 305. Students with credit for ENSC 340 cannot take ENSC 440 for further credit.

**ENSC 440W-4 Capstone Engineering Science Project**

This capstone design course is based around a group project that consists of research, designing, building, and testing the hardware implementation of a working system. The course also includes material on how to design for safety, engineering standards, and human factors. Prerequisite: at least 100 units. Corequisite: ENSC 305. Students with credit for ENSC 340 cannot take ENSC 440 for further credit. Writing.

**ENSC 441-3 Capstone Design Technical Project I**

Students will combine their technical, marketing, and entrepreneurship knowledge to conceive, and design a product. Also includes project documentation and project management. At the end of the term a comprehensive report is required. Prerequisite: ENSC 312 and 100 units. Corequisite: ENSC 305.

**ENSC 442-3 Capstone Design Technical Project II**

Students will apply their technical, marketing and entrepreneurship knowledge to develop a product that was designed earlier in ENSC 441. Students will then present and be able to see it to a panel of engineers, business and investment community members. Prerequisite: ENSC 441.

**ENSC 450-4 VLSI Systems Design**

An introduction to the design of Very Large Scale Integrated (VLSI) circuits and systems (System-on-Chip, SoC) using mainly CMOS technology. SoC design techniques and applications will be covered. Basic topics will include: CMOS technology and circuit layout rules; combinational and sequential logic; logic simulation; systems design; design for verification and testability; and embedded-processor design and application. An advanced digital design flow based on the VHDL hardware description language will be introduced and exercised in the labs. Prerequisite: ENSC 225 and ENSC 350.

**ENSC 451-4 Real-Time and Embedded Control Systems**

Focuses on implementation and design of embedded computer control systems used in mechatronics and other applications. Many of these systems are real-time in nature, meaning that the computer system must discern the state of the world and react to it within stringent response-time constraints. Upon completion of the course, the student will have a basic understanding of how to design, build and integrate hardware and software for an embedded control application. Hands-on experience will be gained by performing laboratory experiments and doing an embedded computer control project on a mechatronic system. Prerequisite: ENSC 332, 383, and

completion of 90 units. Students who have taken ENSC 351 cannot take this course for further credit.

**ENSC 452-4 Advanced Digital System Design**

Digital system design considerations including methodologies, specification, SoC partitioning, fault tolerance, design reuse, debugging and verification. Prerequisite: ENSC 350 and 351.

**ENSC 460-462-4 Special Topics in Engineering Science**

Studies in areas not included within the undergraduate course offerings of the engineering science program. Prerequisite: permission of the instructor.

**ENSC 470-4 Optical and Laser Engineering Applications**

A practical, hands-on introduction to optical engineering and lasers. Covers the concepts of light, optics (geometric optics, Gaussian optics, multiple optical elements, lens aberrations), laser concepts, operational details of major laser types, laser interactions with optical systems, laser applications in engineering and medicine, complex optical system design and fiber optics. Labs cover optical systems, lasers measurements, optical CAD design, holography. Prerequisite: PHYS 121 or 126 or 141, and MATH 310.

**ENSC 472-4 Rehabilitation Engineering and Assistive Devices**

Provides students with exposure to essential topics in rehabilitation engineering and the design of assistive devices. The course is organized into weekly modules, each of which includes a basic patho-physiology component, an introduction to related rehabilitation engineering technology, and a laboratory/project component. All modules will provide students with (a) an understanding of the scientific basis for a specific area of rehabilitation engineering, (b) experience in the application of standard medical techniques for disability assessment, (c) exposure to biomechanical and physiological measurement techniques, (d) experience in the design (including ISO standards), construction, and evaluation of technological solutions to enhance mobility, communication, sensory function, cognition, and independence in daily activities. Prerequisite: ENSC 372, KIN 201, 308, 448.

**ENSC 474-4 Biomedical Signal and Image Processing**

Develops signal processing techniques of wide applicability, presented in the context of processing and analysis of biomedical images. Forms a sequel to the course ENSC 374-4, Introduction to Biomedical Imaging, which covers acquisition of medical images. The subsequent visualization, processing and analysis tools applied to multidimensional signals such as 2D/3D medical images are covered. Students will become proficient in several basic tools used in signal processing by looking at their multidimensional counterparts for image processing. Prerequisite: ENSC 380-4 and either ENSC 327-4 or ENSC 328-1.

**ENSC 476-4 Biophotonics**

Basic physics of light-biomatter interactions and tissue optics. With this background students will embark on practical issues such as light-induced effects in bio-systems, diagnostic techniques and instrumentation, therapeutic instrumentation and applications, introduction to optical tomography, and finally they will learn about recent developments in optical sensors and applications. Lectures are accompanied by laboratory activities ending with a few basic evaluation projects and a final design and fabrication project. After this course the students will be able to evaluate feasibility of new photonic-based medical devices, such as diagnostic tools and light treatment technologies, and design and optimize these devices. Prerequisite: ENSC 376.

**ENSC 481-4 Designing for Reliability**

Aspects of quality control and reliability in manufacturing environments will be discussed, including stress and strain, failure modes, reliability testing, statistical and experimental methods, and destructive/non destructive testing. Prerequisite: ENSC 330.

**ENSC 483-4 Modern Control Systems**

Analytical representation of the finite dimensional linear systems, analysis and design of linear feedback control systems based on the state space model, and state/output feedback. Topics include: review of the linear spaces and operators, mathematical modelling, state space representation and canonical forms, controllability, observability, realization of transfer function, and solution of the state equation.

Applications include: stability concepts and definitions. Lyapunov's Direct Method, design of the state and output feedback control systems, eigenspectrum assignment, and state estimator design. Prerequisite: ENSC 383.

**ENSC 484-4 Industrial Control Systems**

Examines modern industrial control systems and applications. Topics include: review of industrial sensors and actuators; computer interfacing; ladder logic and programmable logic controllers; industrial computer and programming methods; industrial networks; human-machine interfaces; supervisory control and data acquisition (SCADA); manufacturing execution systems; and enterprise-wide integration. Prerequisite: ENSC 332, 383.

**ENSC 488-4 Introduction to Robotics**

Fundamentals of robotics: mathematical representation of kinematics, dynamics and compliance. Planning and execution of robot trajectories. Feedback from the environment: use of sensors and machine vision. A brief introduction to robot languages. Different application domains for manipulator robots, e.g., assembly, manufacturing, etc. Prerequisite: ENSC 383. Recommended: ENSC 230 is strongly recommended for Systems Option students.

**ENSC 489-4 Computer Aided Design and Manufacturing**

Survey of methods for computer aided design and manufacturing (CAD/CAM), including experience with basic systems in the laboratory component of the course. The student will be introduced to computer integrated manufacturing and flexible manufacturing systems concepts. The use of finite element modeling and analysis will be presented through examples from thermal studies as well as mechanical stress analysis. Issues in constructing and using integrated CAD/CAM in a production environment will be discussed. Emphasis will be on the use of such techniques in light industry, particularly related to electronics manufacturing. A manufacturing cell consisting of several robots and computer control systems will be available for student projects. Prerequisite: ENSC 380.

**ENSC 491-1 Special Project Laboratory**

This course is intended for students wishing to pursue laboratory research on a specific topic outside the standard course offerings. Each student must be sponsored by a faculty member who will oversee the project. A proposal of the student's special project must be submitted to the school at least one month prior to the start of the term in which the course will be taken. The unit value of the project will be assessed during this review phase and the student will be directed to enrol in the appropriate course. Upon completion of a special project laboratory course, the student must submit a copy of the 'deliverables' to the chair of the undergraduate curriculum committee. Prerequisite: permission of the undergraduate curriculum committee chair.

**ENSC 492-2 Special Project Laboratory**

This course is intended for students wishing to pursue laboratory research on a specific topic outside the standard course offerings. Each student must be sponsored by a faculty member who will oversee the project. A proposal of the student's special project must be submitted to the school at least one month prior to the start of the term in which the course will be taken. The unit value of the project will be assessed during this review phase and the student will be directed to register in the appropriate course. Upon completion of a special project laboratory course, the student must submit a copy of the 'deliverables' to the chair of the undergraduate curriculum committee. Prerequisite: permission of the undergraduate curriculum committee chair.

**ENSC 493-3 Special Project Laboratory**

This course is intended for students wishing to pursue laboratory research on a specific topic outside the standard course offerings. Each student must be sponsored by a faculty member who will oversee the project. A proposal of the student's special project must be submitted to the school at least one month prior to the start of the term in which the course will be taken. The unit value of the project will be assessed during this review phase and the student will be directed to register in the appropriate course. Upon completion of a special project laboratory course, the student must submit a copy of the 'deliverables' to the chair of the undergraduate curriculum committee. Prerequisite: permission of the undergraduate curriculum committee chair.

**ENSC 494-4 Special Project Laboratory**

This course is intended for students wishing to pursue laboratory research on a specific topic outside the standard course offerings. Each student must be sponsored by a faculty member who will oversee the project. A proposal of the student's special project must be submitted to the school at least one month prior to the start of the term in which the course will be taken. The unit value of the project will be assessed during this review phase and the student will be directed to register in the appropriate course. Upon completion of a special project laboratory course, the student must submit a copy of the 'deliverables' to the chair of the undergraduate curriculum committee. Prerequisite: permission of the undergraduate curriculum committee chair.

**ENSC 495-4 Introduction to Microelectronic Fabrication**

This provides an introduction to the practice and theory of semiconductor integrated circuit fabrication. The practical area will be covered in lectures and reinforced with laboratory experience where the students will manufacture diodes, transistors and small circuits. Major areas covered will be: clean room technology and economics, silicon wafer production, thermal oxidation, photolithography, thin film deposition (evaporation, sputtering, chemical vapor deposition, epitaxy), etching (wet, plasma, sputtering, reactive ion), diffusion, ion implantation, multi-layer conductor technology, packaging, device yields, plus examples in CMOS and bipolar IC's. This course is directed at any student with a basic background in transistor operation and is also an optional course for those in engineering physics. Prerequisite: ENSC 225 and permission of the instructor.

**ENSC 498-3 Engineering Science Thesis Proposal**

Supervised study, research and preliminary work leading to a formal proposal for the thesis project work in ENSC 499. This activity can be directly augmented by other course work and by directed study. The locale of the work may be external to the University or within a University laboratory, or may bridge the two locations. Supervision may be by technical personnel at an external organization, or by

faculty members, or through some combination. At least one of the supervisors must be a registered professional engineer. A plan for the student's ENSC 498 activities must be submitted to the school at the time of enrolment in the course. Completion of the undergraduate thesis project proposal is the formal requirement of this course and the basis upon which it is graded. Grading will be on a pass/fail basis. Prerequisite: at least 115 units or permission of the academic supervisor.

**ENSC 499-9 Engineering Science Undergraduate Thesis**

A thesis is based on the research or development project that incorporates a significant level of engineering design. This work is typically undertaken in the student's final year, but in no case before the student has completed 115 units. Registration for ENSC 499 takes place in the term in which the thesis will be presented and defended. The locale of the work, supervision and other arrangements follow those for ENSC 498. Grading of the thesis will be on a pass/fail basis, but recognition will be given to outstanding work. Prerequisite: ENSC 498.

**ENSC 801-3 Linear Systems Theory**

State-space analysis of finite dimensional continuous and discrete time linear systems. Linear vector spaces, linear operators, normed linear spaces, and inner product spaces. Fundamentals of matrix algebra; generalized inverses, solution of  $Ax=y$  and  $AXB=Y$ , least square and recursive least square estimation, induced norm and matrix measures, functions of a square matrix, Cayley-Hamilton and Sylvester's theorems, Singular Value Decomposition (SVD) with applications. Analytical representation of linear systems, state-space formulation, solution of the state equation and determination of the system's response. Controllability, observability, duality, canonical forms, and minimal realization concepts. Stability analysis and the Lyapunov's method. Prerequisite: graduate standing.

**ENSC 802-3 Stochastic Systems**

The application of theories in probability, random variables and stochastic processes in the analysis and modelling of engineering systems. topics include: a review of probability and random variables; random deviate generation; convergence of random sequences; random processes; auto correlation and power spectral-density; linear systems with stochastic inputs; mean-square calculus; AR and ARMA models; Markov chains; elementary queueing theory; an introduction to estimation theory. Areas of application include digital communications, speech and image processing, control, radar and Monte Carlo simulations. Prerequisite: graduate standing.

**ENSC 803-3 Writing for Publication**

Through discourse analysis and simulation of the publication process, ENSC 803 enables the analysis and refinement of writing processes and written styles when preparing journal articles, oral conference presentations, and poster presentations in professional contexts. Students will write and revise an article suitable for publication in a professional journal, design a poster presentation, and design and deliver an oral conference presentation. Additionally, students will blind review a peer's journal article and will participate in a series of team-based discourse analysis exercises. ENSC 803 will also cover departmental requirements and University regulations related to thesis completion and submission. This course will not count towards the student's CGPA but will appear as a grade on the transcript. This course cannot be used as one of the course requirements towards the degree.

**ENSC 805-3 Advanced Digital Communications**

This course discusses the fundamental techniques used in the physical layer of a digital communication

system. The main topics are as follow: digital modulation, including complex baseband representations, the concept of the signal space, optimal demodulation, bit error probability analysis, as well as timing and carrier recovery; error control techniques, including soft decision decoding and the Viterbi algorithms; and various kinds of equalization (linear, decision feedback, and maximum likelihood sequences estimation). Sub topics of the equalization section include pulse shaping and eye diagrams. The emphasis may vary slightly in different offerings. Prerequisite: ENSC 428 or equivalent. ENSC 802 (as a corequisite) or permission of instructor.

**ENSC 806-3 Spread-Spectrum Communications**

This course first overviews the characteristics of spread-spectrum systems (S3) in view of the trade-off between signal bandwidth and benefits that result from wideband signaling. The basic S3 techniques such as direct-sequence (DS), frequency-hopping (FH), time-hopping (TH), and hybrid of above, are introduced and compared in details. A performance consideration is given for the DS and FH cases to illustrate the processing gain with respect to narrowband signaling in the presence of interference and jamming. Next, it covers all aspects of spread-spectrum transmission over a physical multiple-access channel: signal generation, synchronization, modulation, and error-correcting coding of spread spectrum multiple access, known as CDMA (Code Division Multiple Access), signals. It relates these physical layer functions to link and network layer properties involving cellular coverage, Erlang capacity, and network control. Prerequisite: ENSC 802 or permission of instructor.

**ENSC 808-3 Information Theory**

Information measures: entropy, relative entropy, mutual information, entropy rate, differential entropy. Asymptotic Equipartition Property. Lossless data compression: Kraft inequality, Huffman code, Shannon code, Arithmetic coding. Channel capacity: binary symmetric channel, binary erasure channel, Shannon's channel coding theorem, Gaussian channel, feedback. Prerequisite: STAT 270 or equivalent.

**ENSC 810-3 Statistical Signal Processing**

Processing techniques for continuous and discrete signals with initially unknown or time-varying characteristics. Parameter estimation; Bayes, MAP, maximum likelihood, least squares the Cramer-Rao bound. Linear estimation, prediction, power spectrum estimation, lattice filters. Adaptive filtering by LMS and recursive least squares. Kalman filtering. Eigenmethods for spectral estimation. Implementation issues and numerical methods of computation are considered throughout. Prerequisite: ENSC 802 and 429 or their equivalents.

**ENSC 815-3 Multirate Signal Processing**

An advanced digital signal processing course. Topics include: sampling rate conversion; multirate and polyphase representations and implementations; multirate filter banks and the discrete wavelet transform; modulated filter banks. Applications are drawn from areas such as transmultiplexing, echo suppression, signal compression and modulation. Prerequisite: ENSC 429 or equivalent.

**ENSC 820-3 Engineering Management for Development Projects**

This course focuses on the management and reporting activities of typical engineering development projects. Through seminars and workshops it builds the student's skills at estimating project cost and schedule, keeping a project on track, and handing over the completed project to a customer or another team. A writing workshop emphasizes techniques for writing proposals, and writing and controlling documentation. Note that ENSC 820 will not count

towards the course work requirement of students enrolled in the MASc and PhD programs.

### **ENSC 832-3 Mobile and Personal Communications**

Propagation phenomena, modulation techniques and system design considerations for mobile and personal networks. Topics include: fading and shadowing, noise and interference effects, analog and digital transmission, cellular designs, multiple access techniques. Prerequisite: ENSC 802 or permission of instructor.

### **ENSC 833-3 Network Protocols and Performance**

This course covers the techniques needed to understand and analyse modern communications networks. The main topics are as follow: practical techniques for the design and performance analysis of data communication networks; performance analysis of error control, flow and congestion control, and routing; networks of queues using stochastic and mean value analysis; polling and random access LANs and MANs; wireless networks; broadband integrated services digital networks and asynchronous transfer mode; optical networks. Prerequisite: ENSC 802 or permission of instructor.

### **ENSC 834-3 Fundamentals of Optical Communication**

This course discusses modern fibre optics communication systems. The major topics to be covered are as follow: the analysis of optical transmission media, including multimode and single mode technology; bandwidth limitations imposed by dispersive behavior of fibre; modified fibre profiles for third generation fibre communication systems; solitons; semiconductor laser diodes; external modulation; PIN photo diodes and avalanche photo detectors; bandwidth and noise limitations; optical amplifiers; semiconductor laser amplifiers; doped fibre amplifiers; optical receiver and transmitter circuits; quantum limited receiver performance; BER performance; optical communication networks.

### **ENSC 835-3 Communication Networks**

Techniques needed to understand and analyze modern data communications networks. Basic architecture of packet networks and their network elements (switches, routers, bridges), and the protocols used to enable transmission of packets through the network. Techniques for collection, characterization, and modeling of traffic in packet networks. Aspects of traffic management, such as call admission control and congestion control algorithms in packet networks and the influence of traffic on network performance. Prerequisite: ENSC 427 or permission of the instructor.

### **ENSC 850-3 Semiconductor Device Theory**

Detailed treatment at the graduate level of semiconductor fundamentals and theory. Electronic properties and characteristics of selected semiconductor devices: pn junctions, Schottky barrier junctions, silicon-based heterojunctions and ohmic contacts; bipolar junction transistors; field effect transistors; heterostructures; charge coupled devices and microwave devices. Prerequisite: PHYS 365 or permission of instructor.

### **ENSC 851-3 Integrated Circuit Technology**

Review of semiconductor physics. Technology of semiconductor devices and integrated circuits: material evaluation, crystal growth, doping, epitaxy, thermal diffusion, ion implantation, lithography and device patterning, and thin film formation. Design and fabrication of active and passive semiconductor devices, packaging techniques and reliability of integrated circuits.

### **ENSC 852-3 Analog Integrated Circuits**

Models for integrated circuit activity and passive devices and their implementation; computer aided

design tools and their use in designing analog integrated circuits; analysis of single transistor amplifiers; current sources, current mirrors, and voltage references; op-amps characteristics, analyses and circuit design examples; frequency response of integrated circuits; noise in integrated circuits; low power integrated circuits; non-linear analog integrated circuits. The students will be required to either design, fabricate and test simple analog ICs in the microelectronics lab, or do a project which involves the design, analysis, modeling and simulation of an analog integrated circuit. Prerequisite: ENSC 850 or permission of instructor.

### **ENSC 853-3 Digital Semiconductor Circuits and Devices**

MOS device electronics. Second Order Effects in MOS transistors. BJT device electronics. Static and transient analysis of inverters. Digital gates, circuits and circuit techniques. Speed and power dissipation. Memory systems. Gate arrays, semicustom and customized integrated circuits. CAD tools. Students are required to complete a project.

### **ENSC 854-3 Integrated Microsensors and Actuators**

Microelectronic transducer principles, classification, fabrication and application areas. Silicon micromachining and its application to integrated microelectronic sensors and actuators. CMOS compatible micromachining, static, dynamic and kinematic microactuator fabrication. Integrated transducer system design and applications. Students will be required to complete a micromachining project in the microfabrication lab at ENSC. Prerequisite: ENSC 370, 453, 495 or permission of instructor.

### **ENSC 855-3 Modern Semiconductor Devices**

The course will present the physical concepts required to participate in (or gain appreciation for) the field of high performance, high speed semiconductor devices used in telecommunication systems. Topics include: basic semiconductor energy band structure, low and high field transport in semiconductors, ballistic transport, the depletion approximation and beyond, heterostructures, band line-ups, lattice mismatched heterostructures – strain as design parameter, charge recombination, operating principles of modern semiconductor devices such as SiGe or III-V HBTs, MESFETs/HEMTs, photodetectors, quantum well lasers.

### **ENSC 856-3 Compound Semiconductor Device Technology**

The course will present the necessary tools and techniques required in the fabrication of compound semiconductor devices. Because of the wide disparity between III-V and silicon semiconductor devices, the course is orthogonal to the silicon device fabrication course ENSC 851. Topics to be covered include: basics of HBTs and HEMTs, elements of III-V compound semiconductor materials science, III-V substrate preparation and properties, doping of III-V compounds and amphoteric behavior, epitaxial growth by MBE, MOCVD, characterization of epitaxial layers, lithography: optical and electron beam, Schottky and ohmic contact formation, plasma processing techniques such as RIE and PECVD.

### **ENSC 857-3 Electronics for Digital Imaging**

This course is targeted towards graduate level engineering students and covers major aspects of the electronic circuit design and device fabrication of digital imaging circuits and devices used in imaging applications stemming from silicon semiconductor technology. These integrated image sensors are appearing in a wide variety of applications ranging from amorphous silicon flat panel imagers for medical imaging to low cost, crystalline silicon integrated circuit cameras. Integrated image sensor technology offers the benefits of a cost-effective, imaging system capable of performing on-chip signal processing

functions leading to higher image quality.

Prerequisite: ENSC 224, or equivalent, ENSC 325 or equivalent.

### **ENSC 858-3 VLSI Systems Design**

Topics of relevance to the design of very large scale integrated (VLSI) circuits in CMOS technologies are covered. Key design techniques and fundamental limitations for high-speed computer and communication circuits are discussed. Most of the material will be presented through a series of case studies. The main topics are: CMOS technology, cell library design, memory design (SRAM, DRAM, ROM, PLA), arithmetic unit design, and embedded processor design. Parallelism, pipelining, and clocking are also discussed. Prerequisite: ENSC 450 or equivalent, or permission of the instructor.

### **ENSC 859-3 Biomedical Microdevices and Systems**

This course introduces students to microdevices and systems with applications in biology, chemistry, and medicine. Topics include microfabrication techniques of biocompatible materials including polymers; microfluidic theory and components; electro-osmotic flow and separation techniques; system integration; and a selection of key applications including micro total analysis systems, cell and tissue applications, implantable/transdermal devices, biosensors, and biotechnology (PCR, DNA chips). Recommended, ENSC 330; ENSC 495/851 or ENSC 854.

### **ENSC 861-3 Source Coding in Digital Communications**

This course presents basics of information theory and source coding with applications to speech/audio, images/video and multimedia. The course first covers the topics of entropy, information, channel capacity and rate-distortion functions. Various techniques used in source coding, such as entropy coding, scalar and vector quantization, prediction, transforms, analysis by synthesis, and model based coding are then discussed. Prerequisite: ENSC 802 or equivalent.

### **ENSC 883-3 Optimal Control Theory**

Review of finite dimensional linear systems represented in state space formulation. Bellman's principle of optimality and dynamic programming with applications to control of discrete and continuous time systems. Introduction to variational calculus, Pontryagin's maximum principle, Hamilton-Jacoby-Bellman Equation, and variational treatment of control problems. Several optimal control problems such as optimal linear quadratic regulator (LQR), optimal tracking and suboptimal output controllers will be discussed. Prerequisite: ENSC 483 or 801.

### **ENSC 887-3 Computational Robotics**

A main goal of computational robotics is to automatically synthesize robot motions to achieve a given task. This course discusses geometric and algorithmic issues that arise in such an endeavour. For example: how can a robot plan its own collision-free motions? How does it grasp a given object? How do we account for uncertainty? The course employs a broad range of tools from computational geometry, mechanics, algorithms and control. The material covered also finds applications in designing devices for automation and in computer animation. The course involves a substantial project which exposes students to practical and implementation issues involved in building automatic motion planning capabilities for robotic systems. Prerequisite: ENSC 488 and a basic course in data structures and algorithms, or permission of the instructor.

### **ENSC 888-3 Finite-Element Methods in Engineering**

Overview of FEM and its use in industry mathematical foundations of FEM; Galerkin method; finite element interpretation of physical problems in one, two and

three dimensions; numerical techniques for storing and solving sparse matrices; checking for convergence, error estimation; pre- and post-processing; automatic mesh generation.

### **ENSC 890-3 Advanced Robotics: Mechanics and Control**

Robotic applications are extensively involved in various fields such as manufacturing and health care with new, efficient tools and methods having been developed for modelling and co-ordinating such devices. The main focus of this course is to introduce these tools and methods for kinematic and dynamic modelling approaches. These new approaches allow more intuitive and geometrical representation of motion and interaction in any articulated multi-body system such as robotics devices. The course offers valuable background for students involved in computer graphics (e.g. animation), human/machine interface (e.g. haptic interface), control engineers (e.g. trajectory planning, master/slave system) and robotic designers. The course involves individual projects in modelling and co-ordination of a robotic device. Prerequisite: introductory course in robotics (ENSC 488) or permission of the instructor.

### **ENSC 891-3 Directed Studies I**

### **ENSC 892-3 Directed Studies II**

### **ENSC 893-3 Special Topics I**

### **ENSC 894-3 Special Topics II**

### **ENSC 895-3 Special Topics III**

### **ENSC 896-1.5 MEng Project (Completion)**

Students who do not complete ENSC 897 in one term must enrol for this course in all subsequent terms.

### **ENSC 897-3 MEng Project**

### **ENSC 898-6 MASc Thesis**

### **ENSC 899-6 PhD Thesis**

## **English ENGL Faculty of Arts and Social Sciences**

### **ENGL 101W-3 Introduction to Fiction**

Examines selected works of literature in order to develop a critical awareness of literary techniques and contexts in the representation of experience. May include the comparative study of works in related literary and artistic genres, and will pay some attention to literature of the 20th century. Includes attention to writing skills. Writing/Breadth-Humanities.

### **ENGL 102W-3 Introduction to Poetry**

Examines selected works of literature in order to develop a critical awareness of literary techniques and contexts in the representation of experience. May include the comparative study of works in related literary and artistic genres, and will pay some attention to literature of the 20th century. Includes attention to writing skills. Writing/Breadth-Humanities.

### **ENGL 103W-3 Introduction to Drama**

Examines selected works of literature in order to develop a critical awareness of literary techniques and contexts in the representation of experience. May include the comparative study of works in related literary and artistic genres, and will pay some attention to literature of the 20th century. Includes attention to writing skills. Writing/Breadth-Humanities.

### **ENGL 104W-3 Introduction to Prose Genres**

The literary study of a variety of prose genres, such as the essay, biography, autobiography, travel narrative, and journalistic writing. May include works which challenge the boundary between fiction and non-fiction. The course is intended to develop a critical awareness of literary techniques and contexts in the representation of experience. Includes attention to writing skills. Writing/Breadth-Humanities.

### **ENGL 105W-3 Introduction to Issues in Literature and Culture**

An introduction to the study of literature within the wider cultural field, with a focus on contemporary issues across genres and media. Writing/Breadth-Humanities.

### **ENGL 199W-3 Introduction to University Writing**

An introduction to reading and writing in the academic disciplines. Prerequisite: 12 units. Writing.

### **ENGL 201-3 Medieval Literature**

Anglo-Saxon literature and Middle English literature, in translation when necessary. Prerequisite: two 100 division English courses. Students who have taken ENGL 204 may not take this course for further credit. Breadth-Humanities.

### **ENGL 203-3 Early Modern Literature**

A survey of the literature of the period from 1485 to Milton. Prerequisite: two 100 division English courses. Students who have taken ENGL 204 may not take this course for further credit. Breadth-Humanities.

### **ENGL 205-3 Restoration and Eighteenth Century Literature**

A survey of the literature of the period from 1660 to 1800. May include writing from North America. Prerequisite: two 100 division English courses. Breadth-Humanities.

### **ENGL 206-3 Nineteenth Century Literatures in English**

The study of nineteenth century North American, British, and/or Post-colonial literatures. May include some writing from North America. Prerequisite: two 100 division English courses. Breadth-Humanities.

### **ENGL 207-3 Twentieth Century Literatures in English**

The study of twentieth century North American, British, and/or Post-colonial literatures. Prerequisite: two 100 division English courses. Breadth-Humanities.

### **ENGL 210W-3 Writing and Critical Thinking**

Advanced practice of writing critical, expository prose in a rhetorical context. Prerequisite: two 100-level English courses, one of which must be 199 or 3 transfer credits in English writing. Writing.

### **ENGL 212-3 Metrics and Prosody**

A study of different historical methods of measuring poetry in English, with practice in scanning and analyzing poems using different methods of quantitative analysis (e.g. Syllabic, rhythmic, alliterative). Prerequisite: two 100 division English courses. ENGL 102 is recommended.

### **ENGL 214-3 History and Principles of Rhetoric**

Introduction to the history and principles of rhetoric, and their application to the creation and analysis of written, visual, and other forms of persuasion. Prerequisite: two 100 division English courses.

### **ENGL 216-3 History and Principles of Literary Criticism**

The study of selected works in the history of literary criticism, up to and including modern and contemporary movements in criticism. Prerequisite: two 100 division English courses.

### **ENGL 300-4 Old English**

The study of the basics of the Old English language and the reading of several texts of relative simplicity. Prerequisite: two 100 division English courses, and two 200 division English courses.

### **ENGL 304-4 Studies in Medieval Literature**

Studies of medieval authors, genres or issues, from 500-1500. Texts will be studied in the original language or in translation. Prerequisite: two 100 division English courses, and two 200 division English courses.

### **ENGL 306-4 Chaucer**

The study of selected works by Geoffrey Chaucer, especially *The Canterbury Tales*, read in the language in which they were written and situated in the context of 14th century European culture. Prerequisite: two 100 division English courses, and two 200 division English courses.

### **ENGL 310-4 Studies in Early Modern Literature Excluding Shakespeare**

The study of non-Shakespearean Early Modern Literature. May be defined by genre, theme, or author. Prerequisite: two 100 division English courses, and two 200 division English courses.

### **ENGL 311-4 Early Shakespeare**

A study of the works of William Shakespeare performed before 1601. Prerequisite: two 100 division English courses, and two 200 division English course. Students may take both ENGL 311 and 313 for credit towards the English major. Students with credit for ENGL 312 may not take this course for further credit without permission of the department.

### **ENGL 313-4 Late Shakespeare**

A study of the works of Shakespeare performed after 1600. Prerequisite: two 100 division English courses, and two 200 division English courses. Students may take both ENGL 311 and 313 for credit towards the English major. Students with credit for ENGL 312 may not take this course for further credit without permission of the department.

### **ENGL 315-4 Studies in 17th Century Non-Dramatic Literature**

Selected works of seventeenth-century poetry and/or prose, situated in their cultural context. May include some writing from North America. Prerequisite: two 100 division English courses, and two 200 division English courses. Students with credit for ENGL 314 may not take this course for further credit.

### **ENGL 320-4 Studies in 18th Century Literature (1660-1800)**

The study of selected works of late seventeenth century and eighteenth century literature, with an emphasis on genres other than the novel. May include some writing from outside Britain, and may be organized by various critical issues or approaches. Prerequisite: two 100 division English courses, and two 200 division English courses.

### **ENGL 322-4 Studies in the Eighteenth Century British Novel**

The study of selected 18th century novels, situated in their cultural context. Prerequisite: two 100 division English courses, and two 200 division English courses.

### **ENGL 327-4 Studies in Romantic Literature**

Addresses issues in Romantic literature in English. May include texts in a variety of genres and be organized according to various critical approaches. Prerequisite: two 100 division English courses, and two 200 division English courses.

### **ENGL 330-4 Studies in Victorian Literature**

Addresses specific issues in Victorian literature in English. May be organized by author, genre, or critical approach and may include literature from outside of Britain. Prerequisite: two 100 division English courses and two 200 division English courses. Students with credit in ENGL 329 or 333 may not take this course for further credit.

### **ENGL 340-4 Studies in 20th Century British Literature before 1945**

The study of selected works of British literature written from 1900 to 1945. May be organized by various critical issues or approaches. Prerequisite: two 100 division English courses, and two 200 division English courses.

**ENGL 342-4 Studies in British Literature since 1945**

The study of selected works of British literature written since 1945. May be organized by various critical issues and approaches. Prerequisite: two 100 division English courses, and two 200 division English courses.

**ENGL 347-4 Studies in American Literature before 1900**

The study of selected works of American literature written before 1900. This course may survey a particular era or topic, and may be organized by various critical issues or approaches. Prerequisite: two 100 division English courses, and two 200 division English courses. Students with credit for ENGL 344 or 348 may not take this course for further credit.

**ENGL 349-4 Studies in American Literature since 1900**

Addresses issues in American literature. May be organized by various critical issues or approaches. Prerequisite: two 100 division English courses and two 200 division English courses.

**ENGL 354-4 Studies in Canadian Literature before 1920**

The study of selected works of Canadian literature written before 1920. Prerequisite: two 100 division English courses, and two 200 division English courses.

**ENGL 357-4 Studies in Canadian Literature since 1920**

The study of selected works of Canadian literature written after 1920. Prerequisite: two 100 division English courses, and two 200 division English courses. Students with credit for ENGL 356 or 358 may not take this course for further credit.

**ENGL 359-4 Studies in the Literature of British Columbia**

The study of selected works of British Columbian literature. Prerequisite: two 100 division English courses, and two 200 division English courses.

**ENGL 360-4 Popular Writing by Indigenous Authors**

Examines works of popular fiction by Indigenous authors, and their use of specific genres (e.g. the mystery novel, vampire thriller, sci fi, comic book). Prerequisite: two 100 division English courses, and two 200 division English courses. Students who have taken FNST 322 under this topic may not take this course for further credit. ENGL 360 and FNST 360 are identical and students may not take both courses for credit.

**ENGL 364-4 Literary Criticism: History, Theory, and Practice**

The study and application of select literary theories. Prerequisite: two 100 division English courses, and two 200 division English courses. Recommended: ENGL 216.

**ENGL 371-4 Writing: Theory and Practice**

Students will engage in theoretically informed practice of writing in various non-academic genres. Emphasis will be placed on the kinds of writing that students are likely to use after graduation. Prerequisite: two 100 division English courses and two 200 division English courses. Recommended: one of English 199, 210, or 214.

**ENGL 372-4 Creative Writing**

A seminar-workshop in creative writing for students who have an interest and some writing experience in poetry, fiction, or drama. The emphasis of the course may vary from term to term. Prerequisite: two 100 division English courses and two 200 division English courses. Particular prerequisites: permission of the department is required.

**ENGL 375-4 Studies in Rhetoric**

Advanced study in the theory and/or history of rhetoric. Prerequisite: two 100 division English courses, and two 200 division English courses. Recommended: one of English 199, 210, or 214.

**ENGL 376-4 Special Studies**

Prerequisite: two 100 division English courses, and two 200 division English courses.

**ENGL 377-4 Italy Field School I**

Studies in the history, art, and letters of Italy as they inform the study of literature in English. Course may be organized by theme, critical approach, historical period, or individual author, and will be supplemented with related field trips. Prerequisite: 45 units, including two 100 division English courses, and two 200 division English courses; or permission of the field school director. Corequisite: ENGL 378. Students who participated in the English Department Field School in Italy prior to 1087 may not take this course for further credit.

**ENGL 378-4 Italy Field School II**

Studies in the history, art, and letters of Italy as they inform the study of literature in English. Course may be organized by theme, critical approach, historical period, or individual author, and will be supplemented with related field trips. Prerequisite: 45 units, including two 100 division English courses, and two 200 division English courses; or permission of the field school director. Corequisite: ENGL 377. Students who participated in the English Department Field School in Italy prior to 1087 may not take this course for further credit.

**ENGL 383-4 Studies in Popular Literature and Culture**

A study of popular literature and its cultural contexts. May be defined by genre, author, period, or critical approach. Prerequisite: two 100 division English courses, and two 200 division English courses. Students with credit for ENGL 363 may not take this course for further credit.

**ENGL 384-3 Crime and Literature**

Questions of crime and criminal justice in novels and other forms of fiction are explored. Includes a critical discussion about crime plots, their social settings and outcomes, the psychology and sociology of criminal characters and their victims, and whether justice was achieved or denied in the course of the plot. Writing intensive. Prerequisite: for students in an approved English plan only: two 100 division ENGL courses and two 200 division ENGL courses. This course is identical to CRIM 384 and both courses cannot be taken for credit. Students who have taken CRIM 416/417/418 as Crime and Literature may not take this course for further credit.

**ENGL 387-4 Studies in Children's Literature**

The study of selected works of children's literature from different periods and places. The works will be considered in relation to literary theory, and may be organized by different critical issues or approaches. Prerequisite: two 100 division English courses, and two 200 division English courses. Students with credit for ENGL 367 may not take this course for further credit.

**ENGL 392-4 Studies in World Literatures in English**

The study of a selection of literary works in English, mainly from regions other than Canada, Britain and the United States. The course may focus on one or several literatures. Prerequisite: two 100 division English courses, and two 200 division English courses.

**ENGL 394-4 Studies in Asian Diasporic Literatures**

Studies a selection of literary works in English from the Asian Diaspora. May be organized by cultural movements, critical issues, or theoretical approaches.

The historical and regional focus of the course will vary. Prerequisite: two 100 division English courses, and two 200 division English courses.

**ENGL 399-3 Big Stories**

The tracing of a specific narrative, type of narrative, or theme across a broad expanse of time and/or a variety of cultures. Designed for non-English majors. Prerequisite: 60 units. This course may not be counted for credit toward an English major or minor. Breadth-Humanities.

**ENGL 400W-4 Advanced Old English**

Intensive study of several Old English poems. Prerequisite: ENGL 300. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 404W-4 Topics in Medieval Literature**

Advanced study of specific aspects of Medieval literature. May be defined by author, genre, or critical approach. Prerequisite: ENGL 304 or 306. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 407W-4 Topics in Early English Drama**

The study of selected dramatic works written in English prior to the Reformation. May be organized by author, genre, or critical approach. Does not include Shakespeare. Prerequisite: one of ENGL 304, 306, 310, 311, 313, or 315. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 410W-4 Topics in Early Modern English Non-Dramatic Literature**

The study of selected works of Early Modern poetry and prose written in English, and situated in their cultural context. May be organized by author, genre, or critical approach. Prerequisite: one of ENGL 304, 306, 310, 311, 313 or 315. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 416W-4 Milton**

The intensive study of selected works by John Milton, situated in their cultural context. Prerequisite: One of ENGL 304, 306, 310, 311, 313, or 315. Students who have taken ENGL 316 may not take this course for credit. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 420W-4 Topics in 18th Century Literature**

Addresses specific issues in 18th century literature in English. May be organized by author, genre, or critical approach. Prerequisite: ENGL 320 or 322. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 427W-4 Topics in the Romantic Period**

Addresses specific issues in romantic literature in English. May be organized by author, genre, or critical approach. Prerequisite: ENGL 327. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 434W-4 Topics in the Victorian Period**

Examines issues in Victorian literature and culture in a variety of genres and media from diverse geopolitical regions organized by various critical questions and approaches. Prerequisite: ENGL 330. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 435W-4 Topics in the Literature of the Long 19th Century**

Explores issues across nineteenth century literature and culture in a variety of genres and media from diverse geopolitical regions organized by various critical questions and approaches. Prerequisite: ENGL 330 or 340. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 436W-4 Topics in Literature of Transition**

Examines changes in society, culture and literature in the transition from the late-nineteenth to early-twentieth century, through a selection of works in a variety of genres and media from diverse geopolitical regions organized by various critical issues and approaches. Prerequisite: one of ENGL 330, 340, 347, or 354. Students who have taken ENGL 336 may not take this course for further credit. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 438W-4 Topics in Modernism**

Addresses issues in Modernism. May include Canadian, British, American and other literatures. Prerequisite: ENGL 340, 347, or 354. Reserved for English honors, major, joint major and minor students. Students who have taken ENGL 338 may not take this course for further credit. Writing.

**ENGL 440W-4 Topics in British Literature Post 1945**

The intensive study of selected works of British literature written after 1945. May be organized by author, genre, or critical approach. Prerequisite: ENGL 342. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 441-4 Directed Studies A**

Prerequisite: two 100 division English courses, two 200 division English courses and two 300 division English courses. Reserved for English honors, major, joint major and minor students. Admission is by permission of the instructor and the Department.

**ENGL 442-2 Directed Studies B**

Prerequisite: two 100 division English courses, two 200 division English courses and two 300 division English courses. Reserved for English honors, major, joint major and minor students. Admission is by permission of the instructor and the department.

**ENGL 443-4 Directed Studies C**

Prerequisite: two 100 division English courses, two 200 division English courses, and two 300 division English courses. Reserved for English honors, major, joint major and minor students. Admission is by permission of the instructor and the department.

**ENGL 444-2 Directed Studies D**

Prerequisite: two 100 division English courses, two 200 division English courses and two 300 division English courses. Reserved for English honors, major, joint major and minor students. Admission is by permission of the instructor and the department.

**ENGL 447W-4 Topics in American Literature before 1900**

The intensive study of selected works of American literature written before 1900. May be organized by author, genre, or critical approach. Prerequisite: ENGL 347. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 449W-4 Topics in American Literature since 1900**

The intensive study of selected works of American literature written since 1900. May be organized by author, genre, or critical approach. Prerequisite: ENGL 349. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 453W-4 Aboriginal Literatures**

The intensive study of selected works of aboriginal writers. May be organized by author, genre, or critical approach. Prerequisite: one 300 division English course. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 454W-4 North American Poetry and Poetics**

The intensive study of selected works of North American poets and/or poetry theorists. May be organized by author, genre, or critical approach.

Prerequisite: one 300 division English course.

Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 455W-4 Topics in Canadian Literature**

Advanced seminar in Canadian literature. May be organized by author, genre, or critical approach. Prerequisite: one of ENGL 354, 357, or 359. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 457W-4 Topics in Asian North American Literature**

Investigates topics in Asian-Canadian and/or Asian-American literature. The course may vary according to theoretical, historical or geographical focus. Prerequisite: one 300 division English course. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 461-3 Practicum I**

First term of work experience in the English Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: normally 30 units with a CGPA of 3.0; credit or standing in any two of ENGL 101, 102, 103, 104, 105, and 199, and two 200 division English courses, one of which must be ENGL 204 or 205. Students should apply to the Faculty of Arts co-operative education co-ordinator by the end of the third week of the term preceding the employment term.

**ENGL 462-3 Practicum II**

Second term of work experience in the English Co-operative Education Program. Units for this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of ENGL 461 and normally 45 units with CGPA of 3.0; credit or standing in any two of ENGL 101, 102, 103, 104, 105, and 199, and two 200 division English courses, one of which must be ENGL 204 or 205. Students should apply to the Faculty of Arts co-operative education co-ordinator by the end of the third week of the term preceding the employment term.

**ENGL 463-3 Practicum III**

Third term of work experience in the English Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of ENGL 462 and normally 60 units with CGPA of 3.0; credit or standing in any two of ENGL 101, 102, 103, 104, 105, and 199, and two 200 division English courses, one of which must be ENGL 204 or 205. Students should apply to the Faculty of Arts co-operative education co-ordinator by the end of the third week of the term preceding the employment term.

**ENGL 464-3 Practicum IV**

Fourth term of work experience in the English Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of ENGL 463 and normally 75 units with CGPA of 3.0; credit or standing in any two of ENGL 101, 102, 103, 104, 105, and 199, and two 200 division English courses, one of which must be ENGL 204 or 205. Students should apply to the Faculty of Arts co-operative education co-ordinator by the end of the third week of the term preceding the employment term.

**ENGL 465W-4 Topics in Critical Theory**

Advanced seminar in literary theory. Prerequisite: ENGL 364. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 468W-4 Topics in Drama**

Advanced seminar in drama. May be organized by author, genre, or critical approach. Prerequisite: one 300 division English course. Reserved for English

honors, major, joint major and minor students. Writing.

**ENGL 470W-4 Studies in the English Language**

Focussed studies within linguistic, pragmatic, historical and social theories of the English language. Prerequisite: one 300 division English course. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 475W-4 Topics in Rhetoric**

Seminar in a particular topic, approach, or author in the field of rhetoric and writing. Prerequisite: ENGL 214 and one 300 division English course; or ENGL 375. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 482W-4 Topics in Cultural Studies**

Investigates interconnections between literature and culture through the study of selected texts. Prerequisite: one 300 division English course. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 484W-4 Topics in Literature and Media**

Investigates and theorizes the relation of literature and media (manuscript, print, visual, aural, electronic, and/or oral). Prerequisite: one 300 division English course. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 486W-4 Topics in Gender, Sexuality and Literature**

The study of selected literary works as they intersect with and are shaped by issues of gender and sexuality. May be organized by theme, critical approach, historical period, or individual author. Prerequisite: one 300 division English course. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 487W-4 Topics in Children's Literature**

Advanced seminar in children's literature. May be organized by author, genre, or critical approach. Prerequisite: ENGL 387. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 492W-4 Topics in World Literatures in English**

The intensive study of a selection of literary works in English, mainly from regions other than Canada, Britain and the United States. The course may focus on one or several literatures or individual, authors, and will be organized according to specific critical methodologies. Prerequisite: one 300 division English course. Reserved for English honors, major, joint major and minor students. Writing.

**ENGL 494-4 Honors Research and Methods Seminar**

Introduces students enrolled in the English honors program to the basic methodological issues and procedures that define the field, and provides them with the opportunity to work with a faculty supervisor in researching a specific topic for their honors graduating essay. Prerequisite: permission of the department, plus normally a minimum of 90 units, including credit or standing in two 100 division English courses, two 200 division English courses, and four 300 or 400 division English courses, one of which must be ENGL 364.

**ENGL 496-4 Honors Graduating Essay**

Prerequisite: lower division requirements for the English major. Open only to students who have been accepted into the English honors program, and who have completed ENGL 494.

**ENGL 810-4 Studies in Theory I**

Provides a detailed and contextual overview of critical debates in twentieth-century literary and cultural theory. The critical lineage explored will vary according to theoretical focus.

**ENGL 811-4 Studies in Theory II**

Explores specific critical issues, approaches, or movements in literary and cultural theory. The course will vary according to theoretical and historical focus.

**ENGL 820-4 Studies in Print Culture Theory**

Introduces the history of print culture along with a variety of theoretical approaches. Students enrolled in the Print Culture program are required to take this course.

**ENGL 821-4 Studies in Manuscript, Print and Media Culture**

Explores critical issues, approaches, or movements in manuscript, print, and media culture. The course will vary according to geographical and historical focus and theoretical approach.

**ENGL 830-4 Studies in Medieval Literature**

Examines selected medieval works in a variety of genres from Britain and Europe, organized by critical issues or theoretical approaches. May include works in a variety of media and study texts in the original language or in translation.

**ENGL 831-4 Studies in Early Modern Literature**

Examines selected works of the sixteenth and seventeenth centuries organized by critical issues or theoretical approaches. May include some writing from outside Britain.

**ENGL 832-4 Studies in Eighteenth-Century Literature**

Examines selected eighteenth-century works in a variety of genres organized by cultural movements, critical issues, or theoretical approaches. May include works in a variety of media and from diverse geopolitical regions.

**ENGL 833-4 Studies in Nineteenth-Century Literature**

Examines selected nineteenth-century works in a variety of genres organized by cultural movements, critical issues, or theoretical approaches. May include works in a variety of media and from diverse geopolitical regions.

**ENGL 834-4 Studies in Twentieth-Century Literature**

Examines selected twentieth-century works in a variety of genres, organized by cultural movements, critical issues, or theoretical approaches. May include works in various media and explore Canadian, British, American and other literatures.

**ENGL 835-4 Studies in Contemporary Literature**

Examines selected contemporary literary works in a variety of genres, organized by cultural movements, critical issues, or theoretical approaches. May include works in various media and explore Canadian, British, American and other literatures.

**ENGL 840-4 Studies in American Literature**

Examines selected works of American literature in a variety of genres, organized by cultural movements, critical issues, theoretical approaches, or historical periods. May include works in various media, and explore relations between American and other national or regional literatures.

**ENGL 841-4 Studies in Canadian Literature**

Examines selected works of Canadian literature in a variety of genres, organized by cultural movements, critical issues, theoretical approaches, or historical periods. May include works in various media, and explore relations among Canadian, Quebec, American, British, World literatures.

**ENGL 842-4 Studies in British Literature**

Examines selected works of British literature in a variety of genres, organized by cultural movements, critical issues, or theoretical approaches. May include works in various media. The historical and geographical focus of the course will vary.

**ENGL 843-4 Studies in Colonial, National, and Diasporic Literatures**

Examines selected colonial, national, and diasporic literatures in a variety of genres, organized by cultural movements, critical issues, or theoretical approaches. May include works in various media. The historical and geographical focus of the course will vary.

**ENGL 844-4 Studies in Aboriginal Literature**

Examines selected Aboriginal writings in a variety of forms and contexts, organized by cultural movements, critical issues, or theoretical approaches. May include works in various media, and explore relations between Aboriginal and relevant national literatures. The historical and regional focus of the course will vary.

**ENGL 850-4 Studies in Globalization, Literature, and Culture**

Examines the debates and interconnections among globalization, literature, and culture. May explore other media in relation to globalization. The course will vary according to theoretical and historical focus.

**ENGL 851-4 Studies in Popular Literature and Culture**

Investigates interconnections between literature and popular culture through a variety of texts. The course will vary according to theoretical and critical approach, selection of media, and geographical and historical focus.

**ENGL 852-4 Studies in Gender, Sexuality, and Literature**

Investigates intersections among gender, sexuality, and literature in a variety of writings and cultural contexts. The course will vary according to theoretical and critical approach, selection of media, and geographical and historical focus.

**ENGL 853-4 Studies in Postcolonial Literature**

Examines postcolonial theories and literatures in a variety of genres. The course will vary according to critical approach, selection of media, and geographical and historical focus.

**ENGL 854-4 Studies in Poetics**

Examines theories of poetic production and issues related to the history and distribution of poetry through literary communities. May emphasize active practice alongside theories of poetic production, and may also draw upon the resources of the SFU Library's Contemporary Literature Collection. The historical and geographical focus of the course will vary.

**ENGL 860-4 Studies in Writing and Rhetoric**

Focuses on the study and application of rhetorical theories. May include theories and topics in writing and composition.

**ENGL 870-874-4 Topics in Language and Literature**

Specific topics will vary from offering to offering.

**ENGL 875-4 Directed Studies****ENGL 880-4 Pro-seminar I**

A professional seminar that provides students with a grounding in pedagogy and introduces professional aspects of English studies. Course will be graded Satisfactory/Unsatisfactory.

**ENGL 881-4 Pro-seminar II**

A professional seminar that provides students with a grounding in pedagogy and introduces professional aspects of English studies. Course will be graded Satisfactory/Unsatisfactory.

**ENGL 890-4 MA Thesis****ENGL 891-4 MA Paper/Project****ENGL 892-4 PhD Field Exam One****ENGL 893-4 PhD Field Exam Two****ENGL 899-6 PhD Thesis****English Bridge Program EBP  
EBP XX1-0 English Bridge Program****Environmental Science EVSC  
Faculty of Environment****EVSC 200-3 Introduction to Environmental Science**

Introduction to the multi-disciplinary subject of environmental science. The course is presented in two parts. Basic concepts and application of the scientific method to problems in environmental science are presented in part I. Case studies which highlight the basic concepts covered in part I are presented in part II. Students with credit for ENPL 200 may not take EVSC 200 for further credit. Recommended: REM 100 Breadth-Science.

**EVSC 380-3 Practicum I**

First term of work experience in the Environmental Science Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: acceptance in the science co-operative education program.

**EVSC 381-3 Practicum II**

Second term of work experience in the Environmental Science Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: EVSC 380 and re-admission to the science co-operative education program.

**EVSC 401-1 Current Topics in Environmental Science**

This seminar course will expose students to a variety of speakers who will discuss a wide range of topics in environmental science. This course is required by all students wishing to graduate with a major in Environmental Science. Prerequisite: declared major in environmental science; completed third year course requirements of environmental science major.

**EVSC 480-3 Practicum III**

Third term of work experience in the Environmental Science Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: EVSC 381 and readmission to the science co-operative education program.

**EVSC 481-3 Practicum IV**

Fourth term of work experience in the Environmental Science Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: EVSC 480 and re-admission to the science co-operative education program.

**EVSC 482-3 Practicum V**

Optional fifth term of work experience in the Environmental Science Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: EVSC 481 and readmission to the science co-operative education program.

**EVSC 491W-3 Advanced Field Studies in Environmental Science**

Apply the theories and methods of environmental science to evaluate quantitatively the environmental impact of an industry on a selected site. The site can vary from year to year. This laboratory course brings together students from all streams of the Environmental Science Program, and the field work will be conducted by small groups of students. Prerequisite: standing in the environmental science program, with at least 30 upper division units, or with permission of the program director. Writing.

## Explorations EXPL Faculty of Arts and Social Sciences

### EXPL 110-3 Organizing Society

An interdisciplinary introduction to the analysis of social organization, with specific attention to identity, institutions, and environment. Enrolment restricted to students accepted into the Explorations program. Breadth-Social Sciences.

### EXPL 120-3 Experiencing Society

An interdisciplinary approach to creative and cultural forms of expression that reflect on an individual's perception of social experience. Enrolment restricted to students accepted into the Explorations program. Breadth-Humanities.

### EXPL 130-3 Global Development: Issues and Patterns

An interdisciplinary survey of issues and patterns in development across the globe since European industrialization. Enrolment restricted to students accepted into the Explorations program. Breadth-Social Sciences.

### EXPL 140-3 Global Identities

A study of migration, culture and identity through thematic or historical topics, selected case studies, and interdisciplinary scholarship in the Arts. Enrolment restricted to students accepted into the Explorations program.

### EXPL 145-3 Selected Topic

An interdisciplinary study of a selected topic in the arts and/or social sciences. Prerequisite: enrolment is restricted to students who are accepted into the Explorations program.

### EXPL 150-3 Introduction to Research Approaches in the Social Sciences

An interdisciplinary examination of the nature and processes of social research, with a focus on research conducted in the local community. Enrolment restricted to students accepted into the Explorations program. Breadth-Social Sciences.

### EXPL 160-3 Introduction to Research and Interpretation in the Arts

An interdisciplinary introduction to research and interpretation in Arts based scholarship. Enrolment restricted to students accepted into the Explorations Program. Breadth-Humanities.

### EXPL 310-3 Selected Topic I

Provides an in-depth, interdisciplinary investigation of a selected thematic, theoretical, historical, or contemporary topic, primarily from social science perspectives. Topics, research approaches, assignments, and projects will vary from term to term. Prerequisite: 30 units in the Faculty of Arts and social sciences including EXPL 150, 160 and a minimum six units at the 200 division; or 45 units in the Faculty of Arts and Social Sciences.

### EXPL 320-3 Selected Topic II

Provides an in-depth, interdisciplinary investigation of a selected thematic, theoretical, historical, or contemporary topic primarily from Arts perspectives. Topics, research approaches, assignments, and projects will vary from term to term. Prerequisite: 30 units in the Faculty of Arts and Social Sciences including EXPL 150, 160 and a minimum of six units at the 200 division; or 45 units in the Faculty of Arts and Social Sciences.

## First Nations Studies FNST Faculty of Arts and Social Sciences

### FNST 101-3 The Cultures, Languages and Origins of Canada's First Peoples

An introduction to the nature and goals of First Nations studies as an academic discipline; survey of prehistory, traditional cultures and aboriginal languages of Canada's First Nations. Breadth-Humanities/Social Sciences

### FNST 201-3 Canadian Aboriginal Peoples' Perspectives on History

An examination of fact and ideology in history and historic events involving contact between native and European peoples. The course will also address questions of research methodologies in studying Native/European relations, such as the evaluation of oral history and written ethnohistoric sources. An additional focus will be on gender as it influences perspectives. Breadth-Social Sci.

### FNST 301-3 Issues in Applied First Nations Studies Research

Involves a survey and examination of method, theory and related topics associated with contemporary First Nations Studies research in applied contexts. Ethical conduct and protocols for working within First Nations communities are reviewed. Prerequisite: FNST 101 or 201 or by permission of the department.

### FNST 322-3 Special Topics in First Nations Studies

Prerequisite: will vary according to the topic.

### FNST 325-4 History of Aboriginal Peoples of North America to 1850

Examines selected themes in the history of Aboriginal peoples of North America from first contact with Europeans to the mid-nineteenth century. Prerequisite: 45 units including FNST 101 or 201. FNST 325 and HIST 325 are identical and students may not take both courses for credit.

### FNST 326-4 History of Aboriginal Peoples of North America Since 1850

Examines selected themes in the history of Aboriginal peoples of North America in the nineteenth and twentieth centuries. Prerequisite: 45 units including FNST 101 or 201. FNST 326 and HIST 326 are identical and students may not take both courses for credit.

### FNST 327-4 Aboriginal Women in Canada

Themes and issues relating to the historical and contemporary experiences of aboriginal women in Canada: indigenous theories of gender; evolution and political function of stereotypes of indigenous women in Canada; history of Canadian legislation regulating indigenous identity; relevance of feminist analysis; and history of activism. Prerequisite: 45 units. Students who have taken FNST 322 under this topic may not take this course for further credit. FNST 327 and WS 327 are identical and students may not take both courses for credit.

### FNST 329-3 Sexuality and Gender: Indigenous Perspectives

Examines written works on sexuality and gender including the history of representations of the sexualized savage; the discussion of indigenous concepts of gender, including discussions of two-spirit versus gay identity; homophobia and sexual violence as tools of colonization; the emancipatory potential of erotica. Prerequisite: 45 units. Students who have taken FNST 322 may not take this course for further credit.

### FNST 332-3 Ethnobotany of British Columbia First Nations

This course is an introduction to the study of plant knowledge and use by First Nations peoples in British Columbia. It provides students with information about

the role of plants in First Nations' cultures including such areas as foods, medicines, technology, ceremony, ecological indicators, and within First Nations' knowledge and classification systems. Special focus may be placed on the ethnobotany of one or more Aboriginal groups or culture areas. Prerequisite: FNST 101 or by permission of the department.

### FNST 360-4 Popular Writing by Indigenous Authors

Examines works of popular fiction by indigenous authors and their use of specific genres (e.g. the mystery novel, vampire thriller, sci fi, comic book). Prerequisite: 45 units. Students who have taken FNST 322 under this topic may not take this course for further credit. ENGL 360 and FNST 360 are identical and students may not take both courses for credit.

### FNST 363-5 Indigenous Poetry, Poetics, Printmaking

Examines various art forms and aesthetic expressions of select indigenous peoples of the Americas including aboriginal poetry and poetic forms. A research and creation studio course. Prerequisite: 45 units; no previous artistic training and/or experience are required. Students who have taken this course under FNST 322 under the topic 'Poetics/Poetry: Bookmaking' or 'Indigenous Expressive Arts' may not take this course for further credit.

### FNST 383-5 Indigenous Technology: Art and Sustainability

Examines various art forms and aesthetic expressions of select indigenous peoples of the Americas. Reviews techniques and protocols for the gathering and preparation of materials and the use of ethnographic materials, and provides learning through hands-on practice. Prerequisite: 45 units and permission of instructor; no previous artistic training and/or experience is required. Students who have taken this course as FNST 322 under the topic 'Indigenous Expressive Arts' with a focus in crafts may not take this course for further credit.

### FNST 401-3 Aboriginal Rights and Government Relations

An examination of First Nations and aboriginal peoples' perspectives on political, social and legal issues involving their rights as first citizens of Canada and North America, and the practical and political relations with various levels of government. Issues examined include: aboriginal rights and title questions, self government models and concepts, constitutional matters, the impact of federal government policies, including their impact on women's lives, and native community and First Nations politics. Prerequisite: FNST 101 and 201. Recommended: POL 221.

### FNST 402-3 The Discourse of Native Peoples

Style and content of aboriginal people's discourse about their culture, world view, history and matters affecting their lives. Includes the analysis of selections from native oral literature, autobiography, expository writing, modern poetry and fiction. Prerequisite: FNST 101 and 201.

### FNST 403-3 Indigenous Knowledge in the Modern World

This course explores the subject of traditional indigenous knowledge and its contemporary implications for First Nations programs in such areas as economic development, ecotourism, spiritualism, language retention, biodiversity, ethnoscience, environmentalism, and heritage conservation. First Nations perspectives on patents, copyrights, and other creative products from traditional culture will also be examined through lecture, guest speakers and seminar presentation. Prerequisite: FNST 201 or by permission of the department.

**FNST 419-3 Aboriginal/Indigenous Justice**

An in-depth examination of Aboriginal/indigenous conceptions of justice in dealing with crime and other trouble in indigenous communities, and in relations among peoples. Prerequisite: FNST 101 or 201, or CRIM 101, or permission of the instructor. Students who took this course as CRIM 416 or 418 may not take this course for further credit. FNST 419 and CRIM 419 are identical and students cannot take both courses for credit.

**FNST 429-3 Indigenous Peoples and International Law**

An examination of how relations between Indigenous and non-Indigenous peoples framed and were framed by the development of international law from the 15th century onward. Prerequisite: FNST 101 or 201, or CRIM 101, or permission of instructor. Students who have taken this course under CRIM 416-3 or 418-3 under the title "Indigenous Peoples and International Law" or "Indigenous Peoples and Evolving International Relations" may not take this course for further credit. FNST 429 and CRIM 429 are identical and students may not take both courses for credit.

**FNST 433-5 Indigenous Environmental Activism**

Examines contemporary writings regarding indigenous environmental logic and environmental concerns of contemporary times. Studies effects of resource extraction upon indigenous nations, globalization, genetic modifications, health, intellectual property, spiritual beliefs, culture and society, art and language and compares these with specific indigenous logic at the time of contact. Prerequisite: 45 units; no previous artistic training and/or experience is required. Students who have taken this course as FNST 322 under the topic 'Poetics/Poetry: Bookmaking' or 'Indigenous Expressive Arts' with a focus in environmental activism may not take this course for further credit.

**FNST 442-3 Directed Readings in First Nations Studies**

Directed readings for upper level students in First Nations Studies who wish to study selected topics in depth. Prerequisite: nine units in First Nations Studies. Corequisite: permission of an instructor and program chair.

## Foundations of Academic Literacy FAL Faculty of Education

**FAL X99-4 Foundations of Academic Literacy**

An introduction to the kinds of reading and writing students will encounter in lower-division courses across the university disciplines. Important aspects of the writing process are discussed and illustrated in class, and students receive individual feedback on their academic writing. Students who wish to use the course to meet the language proficiency prerequisite of a writing-intensive course must obtain a C or better. Enrolment priority is given to undergraduate students who have not yet met the language proficiency prerequisite of a writing-intensive course. Students who receive less than a C grade on their first attempt at the course may re-enroll. No student may attempt the course more than twice. Units from this course do not count toward the units required for an SFU degree; however, the course grade is included in calculation of the student's cumulative GPA.

## Foundations of Analytical and Quantitative Reasoning FAN Department of Mathematics

**FAN X99-4 Foundations of Analytical and Quantitative Reasoning**

Designed for students who need to upgrade their mathematical background in preparation for SFU Q courses. Also recommended for students who wish to refresh skills after several years away from mathematics. An in-depth look at what mathematics is; mathematical reasoning, problem solving and math study skills. Review of fundamental topics and concepts of mathematics and their real-world applications. This course aims to develop students' math study skills, confidence in their quantitative abilities, and to learn how understanding mathematics is both one of the keys to mastering other disciplines, and useful in everyday situations. Units from this course do not count towards the 120 units required for an SFU degree; however, the course grade is included in the calculation of the student's cumulative GPA. Prerequisite: students who have taken, have received transfer credit for, or are currently taking MATH 150, 151, 154 or 157 may not take FAN X99 for credit without the permission from the Department of Mathematics.

## French FREN Faculty of Arts and Social Sciences

**FREN 120-3 French for Beginners**

An introduction to basic vocabulary, grammatical structures, and speech patterns. Emphasis on oral expression and listening comprehension. Instruction in class and in lab. Prerequisite: never studied or experienced French before. Students with credit for FREN 099 may not take this course for further credit.

**FREN 121-3 Introductory French I**

A comprehensive introduction to basic grammatical structures, vocabulary and pronunciation. Emphasis on oral communication skills. Instruction in class and in lab. Prerequisite: FREN 099 or 120 or less than grade 11 French (or equivalent based on placement test). Students with credit for FREN 100 may not take this course for further credit.

**FREN 122-3 Introductory French II**

Continuation of FREN 121. Designed to improve speaking and writing abilities by introducing more complex structures and vocabulary. Instruction in class and in lab. Prerequisite: FREN 100 or 121 or grade 11 French (or equivalent based on placement test). Students with credit for FREN 101 may not take this course for further credit.

**FREN 185-3 Practicum I**

First term of work experience in the French Co-operative Education program. Students should apply to the Faculty of Arts and Social Sciences Co-op Education co-ordinator two terms in advance. Units from this course do not count towards the units required for an SFU degree. Prerequisite: a minimum of 30 units including French courses to the level of FREN 215 (or equivalent placement) and a minimum CGPA of 2.75.

**FREN 198-3 French for Reading Knowledge I**

For students with little or no background in French who wish to acquire the ability to read periodicals, journals and basic literary and academic texts. May not be taken by students with French 12 or with FREN 151 (or 210) or higher (or their equivalents).

**FREN 210-3 Intermediate French I**

Designed to consolidate and expand knowledge of the language. Strong emphasis on oral expression and listening comprehension to develop communicative skills. Instruction in class and in lab.

Prerequisite: FREN 101 or 122 or grade 12 French (or equivalent based on placement test). May not be taken by students from French immersion, programme cadre or IB students. Students with credit for FREN 151 may not take this course for further credit.

**FREN 211-3 Intermediate French II**

Designed to improve listening and reading comprehension. Emphasis on accuracy in oral and written communication. Instruction in class and in lab. Prerequisite: grade 12 French with a grade of A or FREN 151 or 210 (or equivalent based on placement test). May not be taken by FREN 212 or 216 students. Students with credit for FREN 201 may not take this course for further credit.

**FREN 212-3 French for Immersion Program Students**

Designed for French immersion program students who wish to refine their oral and written language competence. Instruction in class and in lab. Prerequisite: for French immersion program students or those who have studied in a Francophone milieu. Placement test required. Students with credit for FREN 201 or 211 or 216 may not take this course for further credit.

**FREN 215-3 Intermediate French: Oral Practice**

Designed to develop listening comprehension and oral expression. Instruction in class and in lab. Prerequisite: FREN 201 or 211. May be taken concurrently with FREN 212. Students with credit for FREN 205, 300 or 330 may not take this course for further credit.

**FREN 217-3 French Pronunciation**

Designed to improve pronunciation. Instruction in class and in lab. Prerequisite: FREN 201 or 211. May be taken concurrently with FREN 212. Students with credit for FREN 312 may not take this course for further credit.

**FREN 221-3 French Writing I**

A reading and writing course with emphasis on vocabulary and logical structure in written expression. Instruction in class, in lab and online. Prerequisite: FREN 201 or 211, or FREN 212 or 216, or with a grade of A, FREN 151 or 210. In the latter case, FREN 211 and 221 may be taken concurrently. Students with credit for FREN 202 may not take this course for further credit.

**FREN 222-3 French Writing II**

Focusing on grammar and grammatical analysis, and the process of writing. Instruction in class, in lab and online. Prerequisite: FREN 202 or 221, or, with a grade of A, FREN 201 or 211, or, with a grade of A, FREN 212 or 216. Students with credit for FREN 206 may not take this course for further credit.

**FREN 225-3 Topics in French Language**

The topic will vary: French for Business, French for Professional Purposes, Practice in Translation, or French and the Media. Prerequisite: FREN 206 or 222 (or equivalent based on placement test). Students with credit for FREN 220 may not take this course for further credit.

**FREN 230-3 Introduction to French-Canadian Literature**

This will serve to introduce the student to French Canadian thought through literature and the arts. The course will be conducted in French. Prerequisite: any one of FREN 206, 222, 299 or 301. Breadth-Humanities.

**FREN 240-3 Introduction to French Literature: Modern French Literature**

This will serve to introduce the student to French contemporary thought through literature. This course will be conducted in French; the object is to acquire a reading facility and a critical appreciation of modern French literature. Prerequisite: any one of FREN 206, 222, 299 or 301. Breadth-Humanities.

**FREN 270-3 Introduction to French Linguistics I**

An introduction to the phonetics of French and to the linguistic concepts upon which phonological and morphological descriptions of French are based. Prerequisite: FREN 206 or 222, or FREN 301. Quantitative.

**FREN 285-3 Practicum II**

Second term of work experience in the French Co-operative Education program. Students should apply to the Faculty of Arts and Social Sciences Co-op Education co-ordinator two terms in advance. Units from this course do not count towards the units required for an SFU degree. Prerequisite: a minimum of 45 units including French courses to the level of FREN 215 (or equivalent placement), successful completion of FREN 185, and a minimum CGPA of 2.75.

**FREN 300-3 Advanced French: Oral Practice**

Designed to develop ability in oral expression. Instruction in class and in lab. Prerequisite: FREN 206 or 222 or, with a grade of A and permission of instructor, FREN 205 or 215.

**FREN 301W-3 Advanced French Composition**

A writing course to improve organization and argumentation, paragraph structures and lexical accuracy. Instruction in class and online. Prerequisite: FREN 206 or 222, or, with a grade of A, FREN 202 or 221. Writing.

**FREN 304-3 Advanced French Grammar**

Continuation of FREN 222, with emphasis on grammatical analysis. Instruction in class and online. Prerequisite: FREN 206 or 222 (or equivalent based on placement test). Students with credit for FREN 302 may not take this course for further credit.

**FREN 307-3 French Vocabulary**

Designed to expand vocabulary and optimize the use of dictionaries and electronic language resources. Instruction in class and in lab. Prerequisite: FREN 206 or 222. Students with credit for FREN 311 may not take this course for further credit.

**FREN 320-3 Field School: Special Topics in French I**

Selected studies in French language, linguistics, literature or civilization. Prerequisite: FREN 206 or 222, and FREN 230 or 240, and 270. May be taken only by field school participants. Corequisite: FREN 321, 322.

**FREN 321-3 Field School: Special Topics in French II**

Selected studies in French language, linguistics, literature or civilization. Prerequisite: FREN 206 or 222, and FREN 230 or 240, and FREN 270. May be taken only by field school participants. Corequisite: FREN 320, 322.

**FREN 322-3 Field School: Special Topics in French III**

Selected studies in French language, linguistics, literature or civilization. Prerequisite: FREN 206 or 222, and FREN 230 or 240, and FREN 270. May be taken only by field school participants. Corequisite: FREN 320, 321.

**FREN 330-3 Francophone World**

A multidisciplinary analysis of socio-cultural aspects of French speaking countries, involving written word and oral participation. Prerequisite: FREN 206 or 222 or permission of instructor. Breadth-Humanities.

**FREN 342-4 Literature in Translation from the Francophone World**

A study of representative and significant works (from one or more French speaking countries) from literature and cinema originally produced in French in their socio-cultural context. Prerequisite: knowledge of French is not required; two courses in literature. This course does not count towards the degree

requirements for an extended minor, major or honors in French. With permission of the Department of English, may count towards the requirements of an English major or honors.

**FREN 360-3 Intermediate French Literature**

Introduction to critical analysis based on the study of texts from the Middle Ages to the 19th century. Prerequisite: FREN 230 or 240.

**FREN 370-3 Introduction to French Linguistics II**

An introduction to the fundamental concepts and techniques used in the linguistic analysis of the morphosyntax, lexicology and semantics of French. Prerequisite: FREN 270. Quantitative.

**FREN 385-3 Practicum III**

Third term of work experience in the French Co-operative Education program. Students should apply to the Faculty of Arts and Social Sciences Co-op Education co-ordinator two terms in advance. Units from this course do not count towards the units required for an SFU degree. Prerequisite: a minimum of 60 units including French courses to the level of FREN 222 (or equivalent placement), successful completion of FREN 285, and a minimum CGPA of 2.75.

**FREN 410-3 French Stylistics**

Introduction to the application of linguistic concepts, pragmatics, discourse analysis, translation theory to the study of a variety of French texts. Prerequisite: all of FREN 301, 360 and 370. Students with credit for FREN 406 may not take this course for further credit.

**FREN 411-3 Aspects of French Morphology**

Analysis of selected topics of the morphological system of modern French. Prerequisite: FREN 301 and 370.

**FREN 412-3 Aspects of French Syntax**

Analysis of selected grammatical problems in French syntax. Prerequisite: FREN 301 and 370.

**FREN 413-3 Aspects of French Phonetics and Phonology**

Analysis of selected topics of the sound system of modern French. Prerequisite: FREN 301 and 370.

**FREN 415-3 Aspects of French Semantics and Lexicology**

Study of diachronic and synchronic organization of semantic and lexical fields. Formation and evolution of French vocabulary. Prerequisite: FREN 301 and 370. Students with credit for FREN 420 may not take this course for further credit.

**FREN 416-3 French Applied Linguistics**

This course studies the applications of various branches of linguistics to the problem of second language acquisition and the teaching of French as a second language. Prerequisite: FREN 301 and 370. Students with credit for FREN 310 may not take this course for further credit.

**FREN 423-3 Topics in the History of French**

Studies of selected topics in French historical linguistics. Subject matter may include external history, history of sound changes, morphological and syntactic changes. Prerequisite: FREN 301 and 370. Students with credit for FREN 407 and/or 408 may not take this course for further credit.

**FREN 424-3 Topics in French Linguistics**

The subject matter will vary according to faculty and student interests. Selected aspects of French linguistic theories as they apply to the study, teaching and/or learning of French. Prerequisite: FREN 301 and 370. Students with credit for FREN 414 may not take this course for further credit.

**FREN 425-3 Topics in the Varieties of French**

Study of selected topics in French dialectal variation. Subject matter may include, but is not limited to, French Dialects, Canadian French and French Creoles. Prerequisite: FREN 301 and 370. Students

with credit for FREN 421 and/or 422 may not take this course for further credit.

**FREN 430-3 Topics in French-Canadian Literature**

Prerequisite: FREN 301 and 360.

**FREN 452-3 Topics in French Culture**

Study of selected topics relating to French cultures. Topics may include, but are not limited to, French culture in British Columbia, Studies in Bilingualism, Sociolinguistics of French. Prerequisites: FREN 301, FREN 230 or FREN 240, and FREN 270

**FREN 461-3 French Medieval Literature**

Medieval French literature with special emphasis on a genre, on an author, or on a region. Prerequisite: FREN 301 and 360.

**FREN 462-3 French Renaissance Literature**

A study of French Renaissance works and literary genres in their historical and cultural contexts. Prerequisite: FREN 301 and 360.

**FREN 463-3 Literature of the Seventeenth Century**

Prerequisite: FREN 301 and 360.

**FREN 465-3 Literature of the Eighteenth Century**

Prerequisite: FREN 301 and 360.

**FREN 467-3 Romanticism**

Prerequisite: FREN 301 and 360.

**FREN 470-3 Realism to Naturalism**

Prerequisite: FREN 301 and 360.

**FREN 472-3 The Contemporary Theatre**

Prerequisite: FREN 301 and 360.

**FREN 474-3 French Poetry**

Prerequisite: FREN 301 and 360.

**FREN 475-3 The Contemporary Novel**

Prerequisite: FREN 301 and 360.

**FREN 476-3 Interdisciplinary Approaches in French Literature**

A study of French and francophone literature from an interdisciplinary point of view. Topics will vary to include different disciplines: history, cultural studies, gender studies, psychology or the study of the relationships between literature and other media, i.e. cinema. Prerequisite: FREN 301 and 360.

**FREN 480-2 Seminar I**

Study in depth of an area covered by a French literature or linguistics course in the 400 division. Prerequisite: FREN 230 or 240, and FREN 360; or FREN 301 and FREN 306 or 370, or by permission of the course chair. To be taken in conjunction with a 400 division course in French linguistics or literature.

**FREN 485-3 Practicum IV**

Fourth term of work experience in the French Co-operative Education program. Students should apply to the Faculty of Arts and Social Sciences Co-op Education co-ordinator two terms in advance. Units from this course do not count towards the units required for an SFU degree. Prerequisite: a minimum of 75 units including French courses to the level of FREN 301 (or equivalent placement), successful completion of FREN 385, and a minimum CGPA of 2.75.

**FREN 491-3 Readings in French Linguistics and/or Literary Criticism**

Guided readings in selected topics. May only be taken during the last terms of study; required as a preparation for the honors essay but may be taken by other students with consent of the instructor.

**FREN 492-3 Honors Essay**

Candidates for honors will be required to submit a major paper on a topic of a comprehensive nature in literature or linguistics to be approved by the course chair. Prerequisite: FREN 491 and at least nine 400

division courses in French literature and/or French linguistics.

### **FREN 803-5 Research Methods in French Linguistics and/or French Literature**

The study of research methods and tools used in French linguistics and/or French literature. Planning a long term research project.

### **FREN 804-5 Topics in the Structure of French I**

Explores a selection of classic problems of the structure of French (phonology, morphology, syntax, lexicology or semantics) applying a variety of theoretical viewpoints, from a diachronic or synchronic perspective.

### **FREN 805-5 Topics in the Structure of French II**

Explores, from a variety of diachronic or synchronic theoretical viewpoints, a selection of classic problems of the structure of French not covered in FREN 804.

### **FREN 806-5 Topics in the Acquisition of French**

New trends and theoretical developments in the acquisition of French as a second language. Study of the contribution of linguistic theory to the teaching and learning of French.

### **FREN 810-5 Pragmatics and the Structure of French**

Explores a selection of themes in the pragmatics of French, for example paralinguistic features of French, phonostylistics, contrastive structures (French/English). A variety of practical applications may be envisaged: pedagogy, translation, stylistic analysis, etc.

### **FREN 811-5 Topics in the Varieties of French**

An in-depth study of one of the many varieties of French (in France and in the world) from linguistic and/or sociolinguistic viewpoints, i.e. popular French, Canadian French, French-based Creoles.

### **FREN 812-5 Approaches to the Linguistic Analysis of French**

Studies the contributions made by a selection of French language specialists to the evolution of various aspects of linguistic theory.

### **FREN 816-5 Sociolinguistic Approaches to French Studies**

Explores the relationship between language, society and identity in France and/or in the French-speaking world. The study, from an integrative point of view, of social markers in speech, conversational rules, objective versus subjective norms, attitudes towards language variation and their implications among French speakers. French bilingualism, language planning and the place of French in the world.

### **FREN 820-5 Types of Discourse**

A study of the language in use, discourse strategies, the enunciation devices of various types of texts, both traditional and non-traditional genres such as oral or para-literary texts.

### **FREN 821-5 Theories and Methods of Literary Analysis**

A study of a selection of significant works by contemporary French critics (Barthes, Genette, Kristeva). The application of their theories and models to the analysis of specific works. May concentrate on one area, e.g. narratology, semiotics, etc.

### **FREN 822-5 Socio-Cultural Approaches to French Literature**

Provides a framework for a detailed study of French literature within its socio-cultural context.

### **FREN 823-5 Interdisciplinary Approaches to French Literature**

Explores the relationships between French literature and other arts or applies concepts and models developed in other disciplines to the study of French literature.

### **FREN 824-5 Topics in French Canadian Literature**

An in-depth study of a theme or an aspect of French Canadian Literature through different literary works.

### **FREN 825-5 Topics in French Literature**

An in-depth study of a topic relating to a period or a movement in French literary history, such as: Middle Ages, Renaissance, Classical Period, Enlightenment, Romanticism, Realism, Naturalism, Existentialism.

### **FREN 826-5 Monographic Studies**

An in-depth study of one writer from a specific theoretical perspective (psychological, historical, linguistic).

### **FREN 897-6 MA Project**

### **FREN 898-6 MA Thesis**

### **FREN 999-6 Field Examination**

## **Gender Studies GDST Faculty of Arts and Social Sciences**

### **GDST 200-3 Thinking About Gender**

An introduction to the major critical debates on gender from an interdisciplinary and cross-cultural perspective. Topics include the construction and regulation of gender and the relation between gender and ideologies of sexuality, race, class and nation. Breadth-Humanities.

### **GDST 300-4 Mapping Masculinities**

Maps the field of masculinity studies and explores its intersections with feminist, postcolonial, queer, and critical race theories. Prerequisite: GDST 200.

### **GDST 301-4 Queer Genders**

Introduces students to current debates on gender identity and gender difference from the perspectives of queer subjects. Explores recent theoretical and cultural works on gender from queer, transgender, and feminist perspectives, while examining the challenges they pose to current understanding of sex, gender, sexuality, and the body. Prerequisite: GDST 200. Students who have taken WS 301 Special Topic: Theorizing Queer Genders may not take this course for further credit.

## **General Studies GS Faculty of Arts and Social Sciences**

### **GS 420-429 Selected Topics for Integrated Studies**

These selected topics are offered only through integrated studies programs within the Bachelor of General Studies degree. They explore fields of professional practice through interdisciplinary approaches not available in regular academic departments. Prerequisite: admission to an integrated studies program. Variable units 3, 4, 5.

## **Geography GEOG Faculty of Environment**

### **GEOG 100-3 Human Geography**

This course introduces the basic systematic approaches in the study of contemporary human geography including the distribution of population, spatial aspects of economic, cultural and political development, landscape and resource study. Breadth-Social Sciences.

### **GEOG 102-3 World Problems in Geographic Perspective**

Current world-scale problems are examined in their regional and global contexts, with emphasis being placed on the importance of dynamics of the natural environment in human affairs. Breadth-Social Sciences.

### **GEOG 111-3 Earth Systems**

An introduction to landforms, climates, soils and vegetation; their origins, distributions, interrelationships and roles in the ecosystem. Laboratory work and field trips are included. Breadth-Science.

### **GEOG 162-3 Canada**

The geographical character of Canada; the Canadian environment; regional differences in socio-economic growth. Breadth-Social Sciences.

### **GEOG 213-3 Introduction to Geomorphology**

An examination of landforms, processes, laws, and theories of development; types and distributions. Prerequisite: GEOG 111 or EASC 101.

### **GEOG 214-3 Climate and Environment**

A review of the basic principles and processes involved in physical and dynamic climatology, with particular emphasis on global distributions and change. Prerequisite: GEOG 111. Quantitative.

### **GEOG 215-3 Biogeography**

An examination of the abiotic and biotic factors that control the distribution and development of plant communities, including climatic and geological change. Prerequisite: GEOG 111. Students granted credit for GEOG 215 may not be granted credit for BISC 204.

### **GEOG 221-3 Economic Geography**

The basic concepts of economic geography, involving consideration of the spatial organization and development of economic and resource based systems. Prerequisite: GEOG 100.

### **GEOG 241-3 Social Geography**

Systematic consideration of the spatial and environmental bases of societies, in historical and cultural perspective. Prerequisite: GEOG 100.

### **GEOG 250-3 Cartography I**

An introduction to the interpretation of maps and air photographs. Prerequisite: GEOG 100 or 221 or 241; and 111.

### **GEOG 251-3 Quantitative Geography**

An introduction to basic quantitative methods and software for the solution of geographic problems. Topics include spatial data measurements, central tendency measures, simple probability theory and distributions, inferential methods, and correlation analysis. Prerequisite: GEOG 100 or 221 or 241; and 111. Quantitative.

### **GEOG 253-3 Aerial Photographic Interpretation**

Uses of aerial photography and air photo interpretation in geography. The course is divided into four sections: (1) technical background regarding aerial photography and photo interpretation; (2) air photo interpretation and mapping; (3) application of air photo interpretation; and (4) introduction to remote sensing. Prerequisite: GEOG 100 or 221 or 241; and 111. Quantitative.

### **GEOG 255-3 Geographical Information Science I**

A basic overview of Geographical Information Systems and Science; GIS software, hardware, data structures and models; spatial data, operations and algorithms; practical applications and limitations. Prerequisite: GEOG 100 or 111 or permission of instructor. Students with credit for GEOG 354 may not take this course for further credit. Quantitative.

### **GEOG 261-3 Introduction to Urban Geography**

This course will introduce basic concepts in the study of urban geography by systematically identifying and examining major components of urban structure. Prerequisite: GEOG 100 or 102 or 30 units. Breadth-Social Sciences.

### **GEOG 263-3 Selected Regions**

A study of the geographical character of a major world region. Prerequisite: at least nine units. This course

may not be counted more than once toward a degree. Breadth-Social Sciences.

#### **GEOG 264-3 Canadian Cities**

This course will provide a systematic introduction to urbanization in Canada. Topics addressed will include Canadian urbanization as compared with other nations, especially the United States, metropolitan centres, resource towns, and the internal structure of cities. Prerequisite: GEOG 100 or 162 or permission of instructor.

#### **GEOG 265-3 Geography of British Columbia**

An examination of the physical landscape, the migration process, resource exploitation and the development of the settlement patterns. Prerequisite: at least nine units.

#### **GEOG 300-4 Possible Worlds: The Rise of Geographical Thinking**

A survey of geographical thinking within the Western tradition, from the Greeks to modern times. This course looks at efforts, both mainstream and eccentric, to describe and explain the world (places, peoples, environments, Earth). Extensive use of primary texts. Prerequisite: completion of 45 units.

#### **GEOG 301-4 Geographic Ideas and Methodology**

A study of contemporary geographical concepts in historical perspective. The course will examine traditional approaches to the subject matter of geography, giving particular attention to present day methodological debate and foci of interest. Prerequisite: completion of 30 units, including 15 in geography.

#### **GEOG 302-3 Geography Practicum I**

This is the first term of work experience in a co-operative education program available to students who plan to pursue a career in geography or related areas. Credits from this course do not count towards the credits required for an SFU degree. Prerequisite: completion of the requirements for acceptance into the Science and Environment co-operative education program. Students in the BA program and the BSc program should apply to the Science and Environment co-operative education program. Applications are due by the end of the third week of the preceding term.

#### **GEOG 303-3 Geography Practicum II**

This is the second term of work experience in the Geography Co-operative Education Program. Credits from this course do not count towards the credits required for an SFU degree. Prerequisite: GEOG 302 and acceptance by the Science and Environment co-operative education program. Students should apply to a co-op co-ordinator in the Science and Environment co-op program by the end of the third week of the preceding term.

#### **GEOG 310-4 Physical Geography Field Course**

A twelve-day field camp with a focus on various measuring, surveying, recording and mapping skills in branches of physical geography. A selected project will be completed either by a team or by an individual. Field camp locations will vary from year to year. The camp will be held immediately following the end of final examinations in April. Prerequisite: GEOG 213 and one of GEOG 214 or 215. Pre- or Co-requisite: one of GEOG 311, 313, 314, 315, 316 or 317.

#### **GEOG 311-4 Hydrology**

Introduction to the hydrologic cycle, with an emphasis on the hydrology of British Columbia; description and analysis of the processes of water movement and storage; effects of climatic variations and land use on the hydrologic cycle. Prerequisite: GEOG 213 or 214; STAT 101 or 270 or 201 or GEOG 251; PHYS 100 or 101 or 120; or permission of the instructor. Quantitative.

#### **GEOG 312-4 Geography of Natural Hazards**

An introduction to the occurrence and origin of natural hazards such as volcanic eruptions, landslides, etc. Interaction between the relevant natural processes and society will be examined, as well as prediction of natural events and the amelioration of the effects of such events within different cultural contexts. Prerequisite: GEOG 111 or EASC 101. Students with credit for GEOG 212 may not take this course for further credit.

#### **GEOG 313-4 River Geomorphology**

Intermediate analysis in fluvial and coastal geomorphology with particular reference to British Columbia. Prerequisite: GEOG 213. Quantitative.

#### **GEOG 314-4 Weather and Climate**

An introduction to atmospheric science with emphasis on processes in the boundary layer; examination of the radiation, energy and water balances; description and analysis of heat and mass transfer. Prerequisite: GEOG 214 or permission of instructor. Recommended: MATH 151 and 152 or MATH 154 and 155 or MATH 157 and 158. Quantitative.

#### **GEOG 315-4 World Ecosystems**

Physical and biological characteristics of regional ecosystems; historical evolution of biomes, management of biotic resources. Prerequisite: GEOG 215 or BISC 204.

#### **GEOG 316-4 Ecosystem Biogeochemistry**

Introduction to the cycling of essential chemical elements through ecosystems. Interactions among biological, hydrological, and geological controls on the structure and function of ecosystems and the spatial-temporal scales of elemental cycling are emphasized. Environmental problems resulting from disturbance to natural equilibria in the elemental cycles are examined. Prerequisite: GEOG 215 or BISC 204 or permission of the instructor. Quantitative.

#### **GEOG 317-4 Soil Science**

An introduction to the study of soils: physical, chemical and biological properties of soils; soil formation, description, classification, survey and use. Field and laboratory techniques of soil analysis. Prerequisite: GEOG 111 and one of GEOG 213, 214, 215, CHEM 121.

#### **GEOG 322-4 World Resources**

An analysis of the use and development of natural resources from a geographic, economic and institutional perspective. Prerequisite: at least 30 units including GEOG 221.

#### **GEOG 322W-4 World Resources**

An analysis of the use and development of natural resources from a geographic, economic and institutional perspective. Prerequisite: at least 30 units including GEOG 221. Writing.

#### **GEOG 323-4 Industrial Location**

An examination of the factors affecting industrial location and the geographic organization of production systems within and among firms from the perspectives of national, regional and urban development. Prerequisite: GEOG 221.

#### **GEOG 324-4 Geography of Transportation**

An empirical and theoretical examination of the geographical aspects of transportation systems. Prerequisite: GEOG 221 and 241.

#### **GEOG 325-4 Geographies of Consumption**

Spaces, places, landscapes, and scales of consumption emphasizing commodity cultures, marketing, retail, ideology, subjectivity, objects, technology, and tourism. Prerequisite: GEOG 221 or 261.

#### **GEOG 327-4 Geography of Tourism**

Factors underlying the changing geography of tourism. Issues of demand, supply and impact are examined. Prerequisite: GEOG 221 or 241, or permission of the instructor.

#### **GEOG 351-4 Cartography and Visualization**

Elements of cartographic analysis, design and visualization, with an emphasis on digital mapping, animation techniques, cartographic software and internet mapping. Prerequisite: GEOG 255. Quantitative.

#### **GEOG 352-4 Spatial Analysis**

Advanced quantitative techniques for spatial analysis of geographic data and patterns. Topics include geostatistics, spatial interpolation, autocorrelation, kriging, and their use in geographic problem solving with spatial analysis software. Prerequisite: GEOG 251 or STAT 270 or 201. Quantitative.

#### **GEOG 353-4 Remote Sensing**

Applied remote sensing and image analysis. Topics include air photo interpretation, multispectral and color photography, thermal imagery, multispectral scanners, microwave applications, satellite imagery. The relation of remote sensing information and Geographic Information Systems is discussed. Digital interpretation and photogrammetric analysis will be emphasized. Prerequisite: GEOG 253. Quantitative.

#### **GEOG 355-4 Geographical Information Science II**

An examination of technical components of GIS. Topics include spatial representations, generalization and data management; computational algebra and set theory; digital surfaces and terrain models. Prerequisite: GEOG 255. Quantitative.

#### **GEOG 356-4 3D Geovisualization**

3D geovisualization methods, concepts and theory. Bridges conventional geographic visualization with emerging 3D methods. Emphasizes user-centered design and cognitive implications. Prerequisite: GEOG 253 or 255.

#### **GEOG 362-4 Geography of Urban Development**

This course will apply the principles of urban geographical analysis to the study of urbanization as exemplified in the development of cities in Europe and North America. Prerequisite: at least 30 units including either GEOG 241 or 261.

#### **GEOG 362W-4 Geography of Urban Development**

This course will apply the principles of urban geographical analysis to the study of urbanization as exemplified in the development of cities in Europe and North America. Prerequisite: at least 30 units including either GEOG 241 or 261. Writing.

#### **GEOG 363-4 Urban Planning and Policy**

An introduction to the major approaches and key ideas of the professions of urban governance; urban planning and urban policy. Through a focus on contemporary theory, process-based understanding, and specific issues and examples, the course examines key trends and interventions and promotes critical reflection on urban development. Prerequisite: 30 units, including one of GEOG 241 or 261.

#### **GEOG 377-4 Environmental History**

Examines the reciprocal influences between humans and nature through time. Topics may include settlement, agriculture, technology, politics, urbanization, science, and conservation. Prerequisite: 45 units with nine of lower division Geography units. This course is identical to HIST 377 and students cannot take both courses for credit.

#### **GEOG 381-4 Political Geography**

Theoretical approaches to problems of the interactions of political decisions and power structures with territorial organization. Prerequisite: GEOG 241.

#### **GEOG 381W-4 Political Geography**

Theoretical approaches to problems of the interactions of political decisions and power

structures with territorial organization. Prerequisite: GEOG 241. Writing.

#### **GEOG 382-4 Population Geography**

A survey — from geographic perspective — of data, concepts, themes, and debates in the study of population. Particular concern for population numbers, fertility, mortality, and migration over space and time. Prerequisite: GEOG 221 or 241.

#### **GEOG 383-4 Regional Development and Planning I**

Theories and concepts of regional development and planning in the advanced capitalist and third worlds; methods of spatial analysis. Prerequisite: GEOG 221 and 241.

#### **GEOG 385-4 Agriculture and the Environment**

An examination of the relationship between agricultural production systems and the biophysical environment, with emphasis on the origins of, and potential solutions to, agri-environmental degradation. Prerequisite: GEOG 221.

#### **GEOG 386-4 Geography, Health and Health Care**

An introduction to the study of health and health care issues from a geographic perspective covering: major spatial influences shaping the health status of populations, the distribution of disease, and the delivery of health care services. Prerequisite: GEOG 241 or GERO 300 or SA 218.

#### **GEOG 387-4 Geography and Gender**

Geographical perspectives on gender and sexuality. This course investigates feminist theory in geography and its analysis of home, city, nation, state, global economy, colonialism, and migration. Prerequisite: GEOG 241.

#### **GEOG 389W-4 Nature and Society**

Examines the relationship between nature and society, covering the dominant geographical approaches to human-environment interaction, and their social, spatial, and political economic effects. Prerequisite: GEOG 221 or EVSC 200 (formerly ENPL 200). Writing.

#### **GEOG 391-4 Qualitative Research Methods**

Research design process and qualitative research methods for human geographers with emphasis on case study and survey-based research. Provides the rationale, tools, and skills students need to design, conduct and analyze qualitative research. Prerequisite: One of GEOG 221 or 241 and 8 units of upper division geography courses.

#### **GEOG 402-3 Geography Practicum III**

This is the third term of work experience in the Geography Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: GEOG 303 and acceptance by the Science and Environment co-operative education program. Students should apply to a co-op co-ordinator in the Science and Environment co-op program by the end of the third week of the preceding term.

#### **GEOG 403-3 Geography Practicum IV**

This is the last term of work experience in the Geography Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: GEOG 402 and acceptance by the Science and Environment co-operative education program. Students should apply to a co-op co-ordinator in the Science and Environment co-op program by the end of the third week of the preceding term.

#### **GEOG 404-2 Directed Readings**

Designed for upper level geography major and honors students who wish to continue research started in conjunction with an earlier course. Prerequisite: permission to enter directed readings courses requires written consent of both the faculty member

willing to supervise the research, and the chair of the department.

#### **GEOG 405-4 Directed Readings**

Designed for upper level geography major and honors students who wish to continue research started in conjunction with an earlier course. Prerequisite: permission to enter directed readings courses requires written consent of both the faculty member willing to supervise the research, and the chair of the department.

#### **GEOG 409-3 Geography Practicum V**

This is an optional term of work experience in the Geography Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: GEOG 403 and acceptance by the Science and Environment co-operative education program. Students should apply to a co-op co-ordinator in the Science and Environment co-op program by the end of the third week of the preceding term.

#### **GEOG 411-4 Advanced Hydrology**

An examination of hydrologic processes via experimental and observational studies; measurement and analysis of hydrologic data; application of hydrologic models; recent research developments in selected sub-fields of hydrology. Prerequisite: one of GEOG 311, 313, or 314; one of GEOG 251, STAT 101, 102 or 203 (formerly 103). Quantitative.

#### **GEOG 412-4 Glacial Processes and Environments**

An examination of glacial processes and environments emphasizing landscapes and sediments resulting from the movement of ice, water, and sediment; application of field techniques. Prerequisite: GEOG 313; EASC 201 recommended.

#### **GEOG 412W-4 Glacial Processes and Environments**

An examination of glacial processes and environments emphasizing landscapes and sediments resulting from the movement of ice, water, and sediment; application of field techniques. Prerequisite: GEOG 313; EASC 201 recommended. Writing.

#### **GEOG 413-4 Advanced River Geomorphology**

Advanced treatment of topics in glacial and fluvial geomorphology with emphasis on current research problems. Prerequisite: GEOG 313.

#### **GEOG 414-4 Advanced Climatology**

An examination of recent advances in climatology and application of atmospheric process models. Prerequisite: GEOG 314. Quantitative.

#### **GEOG 415-4 Advanced Biogeography**

A survey of advanced biogeographic theory, and techniques of vegetation analysis. The application of these theories and techniques to biotic resources management is also examined. Prerequisite: GEOG 315.

#### **GEOG 416W-4 Pleistocene Geography**

An examination of the physical geomorphic, pedologic and biotic processes and evidence from human geography of the period will be studied as they affect landscape changes. Prerequisite: one of GEOG 213, 214, 215, 317. Writing.

#### **GEOG 417-4 Advanced Soil Science**

Advanced treatment of topics in soil science: soil physics, soil chemistry, soil biology, soil classification and/or forest soils. Prerequisite: GEOG 317.

#### **GEOG 417W-4 Advanced Soil Science**

Advanced treatment of topics in soil science: soil physics, soil chemistry, soil biology, soil classification and/or forest soils. Prerequisite: GEOG 317. Writing.

#### **GEOG 420-4 Cultural Geography**

A critical study of selected cultural landscapes, practices and meanings in light of recent theoretical

developments in geography. Prerequisite: GEOG 325 or 381 or 387.

#### **GEOG 422-4 Theories and Practices of Development**

A geographic study of 'development' and 'underdevelopment' with particular references to selected lesser developed regions. Prerequisite: at least 60 units including GEOG 111, 221, and 241. This course is identical to LAS 422 and students cannot take both courses for credit.

#### **GEOG 426-4 Industrial Change and Local Development**

Relationships between multinational corporations and local development with reference to resource based towns in British Columbia. An analysis of the implications of changes in employment, organization, technology and resource utilization for community economic development. Prerequisite: at least 60 units including GEOG 323 or 383.

#### **GEOG 427-4 Selected Topics in the Geography of Tourism**

Selected topics in the geography of tourism. Topics emphasize policy, planning and management issues associated with tourism. Prerequisite: GEOG 327, or permission of the instructor.

#### **GEOG 428-4 World Forests**

Comparative analysis of forest industries, ecosystems and policies, and their lessons for forest management in British Columbia. Topics include tropical deforestation and carbon sequestration, the wilderness debate, and forests in culture and the visual arts. Prerequisite: GEOG 315, or 322, or 389.

#### **GEOG 429-4 Environment and Inequality**

Examination of the particular challenges associated with production in nature; of the geography of environmental 'goods' and 'bads' across different social and biophysical landscapes; and of the environmental conflicts that frequently arise. Prerequisite: GEOG 322 or 389.

#### **GEOG 432-4 Problems in Environmental History**

An investigation into the major themes and arguments in the environmental histories of North America, emphasizing how different individuals and groups have used, perceived, and managed their environments over time. Prerequisite: 60 units including eight of upper division geography. This course is identical to HIST 432 and students cannot take both courses for credit. Students with credit for HIST 485 in 2001-3 cannot take this course for further credit.

#### **GEOG 440-4 Law and Geography**

An examination of the emergent field of law and geography. Topics will include the legal-geographic dimensions of property; the regulation of public space; rights; nature; colonial dispossession; and globalization and the law. Prerequisite: GEOG 381.

#### **GEOG 440W-4 Law and Geography**

An examination of the emergent field of law and geography. Topics will include the legal-geographic dimensions of property; the regulation of public space; rights; nature; colonial dispossession; and globalization and the law. Prerequisite: GEOG 381. Writing.

#### **GEOG 441-4 Cities, Space, and Politics**

An evaluation of the nature of urbanization, having specific reference to theories of urban spatial structure and to comparisons of urbanization in Canada and abroad. Prerequisite: at least 60 units including GEOG 362.

#### **GEOG 444-4 Regional Development and Planning II**

The evaluation of regional development planning and practice; case study analysis of regional development programs with particular reference to Canadian

experience. Prerequisite: 60 units including GEOG 383.

#### **GEOG 445-4 Resource Planning**

This course introduces the student to the principles and practices of resource planning within a Canadian context. Special attention is paid to land-use planning as it relates to major resource sectors. Prerequisite: one of GEOG 322, 363, 383, or 389.

#### **GEOG 446-4 Migration and Globalization**

This course explores sites of socio-cultural change in a global context. Particular emphasis is placed on regional and international migration and the territorial and geopolitical bases of conflict. Prerequisite: 60 units including eight of upper division geography.

#### **GEOG 449-4 Environmental Processes and Urban Development**

An examination of environmental processes as they influence, and are influenced by, urban development, with attention to implications for urban policy and planning. Prerequisite: enrolment in the Post Baccalaureate Program in Sustainable Community Development or 60 units; and one of GEOG 351, 362, 383, 389 or SCD 301 (formerly CED 301).

#### **GEOG 451-4 Spatial Modeling**

Spatial models for the representation and simulation of physical, human and environmental processes. GIS and spatial analysis software are used in the laboratory for model development, from problem definition and solution to visualization. Prerequisite: GEOG 251 and one of GEOG 351, 352, 353 or 355. Quantitative.

#### **GEOG 453W-4 Remote Sensing of Environment**

Computational aspects of environmental remote sensing. Topics include digital image processing, image enhancement, sensor systems, statistical extraction, and environmental analysis. Prerequisite: GEOG 352 and 353. Quantitative/Writing.

#### **GEOG 455-4 Theoretical and Applied GIS**

A critical examination of advanced topics in GIS, such as: boundary definition, expert systems and artificial intelligence, error and uncertainty, and scale in a digital context. Examines social applications and the roles of GIS in society. Students will design original projects, including data acquisition, analysis, and web site development. Prerequisite: GEOG 355 and pre- or co-requisite GEOG 352. Students with credit for GEOG 452 may not take this course for further credit. Quantitative.

#### **GEOG 457-4 Geovisualization Interfaces**

The concepts, theories, and technology behind interactive and immersive interface technologies used for geospatial visualization. Applications and implications for GIScience and spatial knowledge acquisition. Combines GIScience, spatial cognition, and virtual environments/interface research perspectives. Prerequisite: GEOG 351 and 356 (or permission of instructor). Students who have taken GEOG 457 (STT) Geospatial Virtual Environments in fall 2005 or fall 2006 may not take this course for further credit.

#### **GEOG 460-4 Selected Regions**

A study of the geographical character of a major world region. Prerequisite: at least 60 units including eight of upper division geography courses.

#### **GEOG 462-4 The Geography of the United States**

Selected themes in the geography of the United States, addressing the biophysical environment, culture and landscape, resources and livelihood, population and settlement. Prerequisite: at least 60 units including eight of upper division geography courses.

#### **GEOG 466-4 Latin American Regional Development**

The course introduces students to a geographical analysis of patterns of Latin American development and planning. It is divided into two sections: geographical/historical development of selected countries; and analysis of common Latin American developmental models. A geographical perspective is used which stresses the interconnectedness of spatial and socio-economic structures. Prerequisite: 60 units including eight of upper division geography.

#### **GEOG 468-4 Society and Environment in China**

An examination of environmental issues facing rural people and their livelihoods in China from a political ecology perspective. Topics include: environmental history and concepts of nature; property rights in land and trees; agriculture; forests; wildlife and biodiversity; grasslands; and water. Prerequisite: GEOG 389.

#### **GEOG 469-4 The Canadian North and Middle North**

Special attention will be given to resource appraisal and utilization, spatial organization, and the consideration of future development; comparisons will be made with experience of sub-arctic development in other parts of the world. Prerequisite: at least 60 units including eight of upper division geography courses.

#### **GEOG 489-4 Selected Topics**

The topics will vary from term to term depending on the interests of faculty and students. Prerequisite: 75 units including 30 in geography.

#### **GEOG 490-4 Selected Topics**

The topics will vary from term to term depending on the interests of faculty and students. Prerequisite: 75 units including 30 in geography.

#### **GEOG 491-4 Honors Essay**

All candidates for honors will be required to submit a major paper on a geographical topic to be selected in consultation with the department. Prerequisite: 105 units and consent of supervisor. See a departmental academic advisor for details.

#### **GEOG 497-5 International Field Study**

A fieldwork based study of a selected region conducted in an international setting. Emphasis is placed on how to understand landscapes by relating concepts and models with direct observation, inference and collection of field evidence, as well as published literature on the selected region. Prerequisite: at least 60 units including 12 units of upper division geography courses.

#### **GEOG 600-0 Introduction to Graduate Studies: Fall Semester**

Introduction to graduate studies in the Department of Geography at Simon Fraser University, covering formal requirements and practical considerations.

#### **GEOG 601-0 Introduction to Graduate Studies: Spring Semester**

Completion of GEOG 600, with an emphasis on the preparation and presentation of the research proposal.

#### **GEOG 604-5 Research Design and Analytical Techniques in Human Geography**

Qualitative and quantitative techniques relevant to human geographic research.

#### **GEOG 605-4 Geographic Ideas and Methodology**

Contemporary and historical modes of analysis in human geography.

#### **GEOG 606-5 Research Design and Analytical Techniques in Physical Geography**

Research design, data collection and quantitative methods in physical geography.

#### **GEOG 611-4 Hydrology**

Conceptual and methodological bases of current hydrologic research.

#### **GEOG 612-4 Glacial Geomorphology**

Glacial landform-process models; field study of glacial landforms and sediments.

#### **GEOG 613-4 Fluvial Geomorphology**

An examination of current conceptual and methodological issues in fluvial geomorphology based on analyses of the primary research literature.

#### **GEOG 614-4 Climatology**

Recent theoretical developments in physical climatology.

#### **GEOG 615-4 Quaternary Environments**

Recent developments in paleoecology and the study of Quaternary environments.

#### **GEOG 617-4 Soil Science**

Soil physics, soil chemistry, soil biology and/or forest soils.

#### **GEOG 620-4 Selected Topics: Economy, Environment and Development**

Geographic perspectives on selected topics in economy and environment in Canadian and international contexts.

#### **GEOG 622-4 Theories and Practices of Development**

Conditions in the Third World: a review of theories and geographical solutions.

#### **GEOG 626-4 Multinational Corporations and Regional Development**

The influence of the policies and structures of multinational corporations on regional economic change.

#### **GEOG 640-4 Selected Topics in Social and Urban Geography**

Geographic perspectives on society and the city in Canadian and international contexts.

#### **GEOG 641-4 Morphogenesis and the Built Environment**

Evolution of built environments in urban contexts: morphological change and societal processes.

#### **GEOG 644-4 Regional Development and Planning**

Regional development in theory and practice with particular reference to resource based hinterland regions.

#### **GEOG 645-4 Resource Management**

Economic, social and political aspects of conservation and resource management.

#### **GEOG 646-4 Cultural Geography**

Relationships between cultural geography and related fields, particularly social theory and current philosophy.

#### **GEOG 651-4 Advanced Spatial Analysis and Modeling**

Perspectives on the description, analysis and prediction of geographical processes using spatial modeling and decision-making in a GIS environment.

#### **GEOG 653-4 Theoretical and Applied Remote Sensing**

Theory and applications of analytical processing procedures used with multispectral remote sensing data.

#### **GEOG 655-4 Advanced Principles of Geographic Information Science**

Examines data, data structures and computational methods that underlie GIS description and analysis. Illustrates the social science and science links between computers and geography.

#### **GEOG 656-4 Aerial Reconnaissance for Remote Sensing**

Theoretical and practical training in the acquisition of airborne multispectral remote sensing data.

**GEOG 666-4 Geography, Development Theory, and Latin America**

Geographic aspects of theories of development as they have been applied in Latin America.

**GEOG 681-4 Law and the Geographies of Power**

Case studies of the inter-relations between the social and political construction of law and space.

**GEOG 685-4 Resources, Environment and Food Production**

A global survey of the geographical context of food production.

**GEOG 691-4 Directed Readings**

Students may only take this course once during their program.

**GEOG 697-6 MSc Thesis****GEOG 698-6 MA Thesis****GEOG 699-6 PhD Thesis****German GERM****Faculty of Arts and Social Sciences****Department of Linguistics Language Training Institute****GERM 102-3 Introductory German I**

Emphasis on the acquisition of spoken fluency, correct pronunciation, and reading facility. This course will be for all students who have not taken BC grade 12 German or its equivalent.

**GERM 103-3 Introductory German II**

Continues the work of GERM 102. It should be taken, wherever possible, in the term immediately following GERM 102. Prerequisite: GERM 102 or equivalent.

**GERM 104-3 German for Reading Knowledge I**

This is a first year German course intended for absolute beginners who want to acquire some rudimentary reading knowledge of German. Prerequisite: no knowledge of German is required.

**GERM 201-3 Intermediate German I**

Emphasis on oral command, accurate and idiomatic expression; reading of intermediate texts. Prerequisite: GERM 103 or equivalent.

**GERM 202-3 Intermediate German II**

Continues the work of GERM 201. Considerable emphasis will be placed on reading, oral and written command of the language. Prerequisite: GERM 201 or equivalent.

**GERM 300-3 Advanced German: Composition and Conversation**

Practice in comprehension, reading, speaking and writing, combined with a review of the essential points of grammar. Prerequisite: GERM 202 or consent of the instructor.

**Gerontology GERO  
Faculty of Arts and Social Sciences****GERO 300-3 Introduction to Gerontology**

Examination of the aging process from a multi-disciplinary perspective. Physical and health factors in aging, economic and vocational factors in aging, family and community relations of older people, social policy and politics of aging. Throughout the course, emphasis will be placed on normal aging. Prerequisite: 60 units. Breadth-Social Sciences.

**GERO 301-3 Research Methods in Gerontology**

This course examines research methodology applied to the field of gerontology. Key areas covered include: operationalizing gerontological concepts; sampling older populations; longitudinal designs; outcome and

process evaluation of seniors' programs; and elementary data analyses. Prerequisite: 60 units. Recommended: STAT 203 (or equivalent).

**GERO 302-3 Health Promotion and Aging**

This course includes an examination of the development of contemporary understanding and practice of health promotion. Students will be given the opportunity to explore theories and models designed to explain health related behaviors and the determinants of health. Strategies for behavioral change and development of socio-environmental approaches will be discussed in the context of an aging Canadian population. Prerequisite: 60 units. Recommended: GERO 300.

**GERO 400-4 Seminar in Applied Gerontology**

Discussion of current issues in applied gerontology. Interdisciplinary orientation, drawing upon resource persons from within the University and practitioners in the community. Course requirements include participation in a group research project. Prerequisite: 60 units. GERO 300, 301 and two of PSYC 357, GERO 420 or KIN 461.

**GERO 401-3 Environment and Aging**

Impact of the macro- and microenvironment as it affects the aged. Discussion of planned housing and institutional living arrangements, territoriality and the need for privacy, home range and use of space, urban planning, responsive design of housing and care facilities, effects of relocation and institutionalization. Prerequisite: 60 units. Recommended: GERO 300.

**GERO 402-3 Drug Issues in Gerontology**

Considers pharmacological issues as they apply to older people; uses and abuses of commonly prescribed and non-prescribed medication; medication reviews; government subsidy programs. Prerequisite: 60 units, GERO 300.

**GERO 403-3 Counselling Issues with Older Adults**

An examination of the ways of adapting counselling theory and practice to meet the needs of older adults and their families. Emphasis will be placed on counselling techniques and outcomes appropriate to the needs of persons living independently, with their families, or in institutional settings. Prerequisite: GERO 300 and PSYC 357 or GERO 420.

**GERO 404-3 Health and Illness in Later Life**

An examination of issues related to health and illness among older adults, drawing upon theories and concepts from biological, social and public health sciences. An introduction to assessment and intervention skills useful to persons working with older adults in a broad range of practice settings. Prerequisite: 60 units, GERO 300.

**GERO 405-3 Aging in Small Communities and Rural Areas**

An examination of the demographic trends in aging in small communities and rural areas of Canada, the geographical and social contexts in which these are occurring and the experience of rural communities in assessing needs and providing support services and housing. Prerequisite: 60 units, GERO 300.

**GERO 406-3 Death and Dying**

The focus of this course is to provide the student with an in-depth understanding of the process of dying. By examining the process of dying, one's personal response to death as well as society's reaction and responsibilities toward dying, the student will gain new insights in caring for the dying person. Prerequisite: 60 units. Recommended: GERO 300.

**GERO 407-3 Nutrition and Aging**

This course examines specific nutritional conditions and concerns of the aging population. It does so by exploring the nutrient needs of the elderly as determined by physiological changes of aging, metabolic effects of common diseases, and biochemical interactions of medications. The course

includes a broad investigation of the psychological, sociological, and physical factors which influence food choice and ultimately nutritional status in aging. Prerequisite: 60 units. Recommended: GERO 300.

**GERO 408-4 Families over the Life Course**

This course entails a comprehensive interdisciplinary study of families and aging. In addition to providing an overview of theory and research on this topic, a variety of substantive issues will be critically examined, including: families in mid life, sibling relationships, divorce and remarriage, dating in later life, care giving, poverty, elder abuse, and policy development. Prerequisite: 60 units. Recommended: GERO 300.

**GERO 409-3 Mental Health and Aging**

Psychopathology often presents in distinct ways among older adults. The intent of this course is to examine disorders with their onset in later life and those that extend into later years. Students will derive an understanding of the diagnostic criteria for various disorders, prevalence, theories of etiology, and selected empirically validated interventions. Prerequisite: GERO 300. Recommended: GERO 403, PSYC 241. Students who received credit for GERO 411, when the course was offered under this title, may not take this course for further credit.

**GERO 410-3 Special Topics in Gerontology I**

Selected psychological, sociological, economic, biological and practical aspects of the aging of individuals and populations. Prerequisite: 60 units. Recommended: GERO 300.

**GERO 411-3 Special Topics in Gerontology II**

Selected psychological, sociological, economic, biological and practical aspects of the aging of individuals and populations. Prerequisite: 60 units. Recommended: GERO 300.

**GERO 412-3 Special Topics in Gerontology III**

Selected psychological, sociological, economic, biological and practical aspects of the aging of individuals and populations. Prerequisite: 60 units. Recommended: GERO 300.

**GERO 420-4 Sociology of Aging**

The structural and behavioral implications of aging. Topics include demographic aspects of aging; the relationship of aging to political, economic, familial and other social institutions; the psychological significance of aging. Prerequisite: 60 units. Recommended: GERO 300. This course is identical to SA 420 and students cannot take both courses for credit.

**GERO 435-3 Adult Guardianship Law**

A comprehensive exploration of the law affecting adult guardianship, substitute decision-making, and adult protection in Canada, including a detailed examination of the form, content and philosophical underpinnings of the relevant legislation in British Columbia. Topics include assessing mental incapability, powers of attorney, living wills and health care directives, end of life decision-making, the law affecting consent to health care, and court-ordered guardianship for adults. Prerequisite: 60 units. Recommended: GERO 300. This course is identical to CRIM 435 and students cannot take both courses for credit. Students who have taken CRIM 418 or GERO 410 may not take this course for further credit.

**GERO 801-4 Health Policy and Applied Issues in Gerontology**

The aim of this course is to examine linkages between long term care and other service sectors as well as to compare programs and services across community, provincial and national boundaries. A number of key policy issues will be discussed that pertain to the provision of health related services to older adults.

**GERO 802-4 Development and Evaluation of Health Promotion Programs for the Elderly**

This course deals with the design, implementation and evaluation of health promotion programs and services for older persons. Students will participate in the development and critical analysis of a variety of health initiatives aimed at healthful aging.

**GERO 803-4 Analytical Techniques for Gerontological Research**

This course has been specifically designed to provide training in quantitative data analysis using SPSSx Programming Language with a focus on behavioral research problems in gerontology.

**GERO 804-4 Advanced Qualitative Methods in Gerontology**

Examines qualitative research methods used in social science research with special emphasis on gerontology. Specific focus will be placed on conducting interviews and participant-observations; field-notes, analyzing text-based data; and writing of qualitative studies.

**GERO 805-4 Advanced Statistics for Behavioural Analysis in Gerontology**

Provides advanced statistical training for graduate students. Statistical techniques consistent with contemporary research will be highlighted with emphasis on continuous variables and the analysis of change and stability with older adult samples. Examples of techniques to be covered include: linear regression; analysis of variance; exploratory and confirmatory factor analyses; structural equation modelling; invariance analyses; and latent growth curve modelling.

**GERO 806-4 Interdisciplinary Theories in Gerontology**

Reviews major theories used in gerontology from diverse fields covering the individual and society, including environment and aging; health and aging; social and family relationships; social change; and behavioural change. Emphasis will be placed on understanding the fundamental assumptions of human aging experience underlying the theories; critical assessment of theoretical propositions; research evidence; and potential for synthesis.

**GERO 810-4 Community Based Housing for Older People**

This course presents an in-depth examination of theory, research and policy related to planning, designing, developing and managing housing for independent and semi-independent older adults.

**GERO 811-4 Institutional Living Environments**

This course focuses on design issues, theory, research and policy relevant to planning, developing and managing institutional living environments for dependent adults.

**GERO 820-4 Principles and Practices of Health Promotion**

This course is designed to cover and critically evaluate concepts, models and theories of health promotion and wellness in the aging population. These methods of implementation will be discussed in relation to individual and structural health system issues facing the aged.

**GERO 822-4 Families, Communities and Health**

Critically evaluates and synthesizes key theory, research and health promotion policy related to the intersection of aging families, communities and health. The principal theoretical perspectives will include: life course theory; social, human and cultural capital; ecological models; political economy; and community empowerment approaches.

**GERO 823-4 Mental Health and Illness in Later Life**

Provides an overview of the range of mental illnesses affecting older adults, their respective diagnostic

criteria, and empirically validated treatments (disorders with their onset in later life and those that extend into later years). Particular emphasis will be placed on the manner in which psychopathology presents differently among older adults, various theories of aetiology, barriers to diagnosis and treatment, and the social context in which mental illness is understood and treated across cultures.

**GERO 830-4 Human Factors, Technology, and Safety**

This course covers theoretical, research and industry literature pertaining to designing home, work, institutional and public environments that are ergonomically functional, safe, and satisfying to the older adult.

**GERO 840-4 Special Topics in Gerontology**

This course offers an opportunity to offer a specialized course in an area germane to the program but on a topic that is outside of the regular courses.

**GERO 850-0 Co-op Internship**

The internship consists of one full-time work term. Arrangements for the work terms are made through the Faculty of Arts Co-op Co-ordinator at least one term in advance. For further details, students should refer to the Co-operative Education section of the Calendar. Prerequisite: MA students in good standing with a minimum GPA of 3.0 may apply to enter the co-op internship after satisfactory completion of 16 units.

**GERO 889-4 Directed Studies**

This course consists of supervised readings in a particular field of specialization relevant to the selected area of concentration.

**GERO 898-6 Project**

A project must be written under committee supervision for formal examination as part of the program requirements for students in the project stream.

**GERO 899-6 Thesis**

A thesis must be written under committee supervision for formal examination as part of the program requirements for students in the thesis stream.

**GERO 998-6 PhD Thesis**

## Global Health GLOH Faculty of Health Sciences

**GLOH 540-4 A Global Perspective on the Organization and Delivery of Health Services**

Principles and concepts of organization and delivery of health services worldwide, including ambulatory, hospital, long-term, and mental health care. Problems in developed and resource-constrained nations and the feasibility of solutions. A case studies approach.

## Graduate Studies GRAD Faculty of Graduate Studies

**GRAD 800-0 Visiting Research Student**

Graduate students visiting SFU under the Canadian Graduate Student Research Mobility Agreement enrol in this course.

## Greek GRK Faculty of Arts and Social Sciences

**Department of Linguistics  
Language Training Institute****GRK 104-3 Modern Greek for Reading Comprehension I**

Modern Greek intended for beginners who desire to acquire basic reading comprehension skills. (distance

education) Students who complete this course successfully will be able to enrol in LANG 110. Students who in addition to completing this course also have more advanced verbal skills, will be able to enrol in LANG 160 or 210.

**GRK 110-3 Modern Greek for Beginners I**

An introduction to the Greek language that helps beginners to help develop survival skills in the most frequently encountered communicative situations. Prerequisite: permission of the instructor. Students with credit for LANG 110 when offered with the same title may not take this course for further credit.

**GRK 160-3 Modern Greek for Beginners II**

The aim of the course is to give those who have acquired the basic language skills a better understanding of the basic grammar of the Greek, and to develop their speaking and comprehension skills so that they are able to carry out small conversations. Reading comprehension, and the ability to write small paragraphs will also be emphasized. Prerequisites: GRK 110 or permission of the instructor. Students with credit for LANG 160 when offered with the same title may not take this course for further credit.

**GRK 210-3 Modern Greek Intermediate I**

The aim of the course is to continue developing students' Greek language skills so that they communicate in situations that extend beyond the basic level. The mediopassive voice for verbs, irregular classes of nouns, and the structure of subordinate sentences are some of the grammatical topics covered. Students will also receive extensive training in speaking, reading and writing at the level of a simple newspaper article. Prerequisite: GRK 160 or permission of the instructor. Students with credit for LANG 210 when offered with the same title may not take this course for further credit.

**GRK 260-3 Modern Greek Intermediate II**

Continues the work developed in GRK 210 including further training in speaking, reading and writing at an intermediate level. Prerequisite: GRK 210 or permission from the instructor. Students with credit for LANG 260 when offered with the same title may not take this course for further credit.

## Health Sciences HSCI Faculty of Health Sciences

**HSCI 100-3 Human Biology**

An examination of the biological processes that underlie human health and well-being, with emphasis on the evolutionary and ecological influences affecting human populations. Students with credit for BISC 101 and 102 may not take HSCI 100 for further credit.

**HSCI 120-3 Introduction to Human Sexuality and Sexual Behavior**

Introductory information about human sexuality across a broad spectrum of topic areas. Sexual function is a fundamental part of a full and healthy life, but misinformation, concerns, problems, and dysfunctions are prevalent. An evidence-based introduction to human sexual function and dysfunction, and normal psychosexual development across a range of sexual behaviors. A perspective on the effects of socialization on sexual attitudes and behavior. Breadth-Social Sciences

**HSCI 130-3 Foundations of Health Science**

How health, illness and disease are defined and measured for individuals and populations. Research strategies used to identify how health, illness and disease are distributed across human populations and how environmental, socio-economic, demographic, biological, behavioural and political factors influence individual and population health.

**HSCI 140-3 Complementary and Alternative Medicine**

A scientific, critical, and evidence-based examination of integrative, complementary, and alternative approaches to health. Why so many people are skeptical of conventional medicine and contemporary treatment modalities. Incorporation of traditional medicines into mainstream medicine. the need to investigate, and to protect the public from fraud. The extent to which both complementary and mainstream medicine can withstand the scrutiny of an evidence-based approach. Breadth-Social Sciences

**HSCI 150-3 Current Topics in Human Sexuality**

Current issues and controversies and their impact on the sexual behaviour and well-being of individuals at different ages and circumstances. Typical topics might include sexually transmitted diseases and AIDS, sexual orientation and cultural differences in tolerance, abuses of power, and sexually explicit media. Differing perspectives and a diversity of views will be presented in a non-prescriptive manner. As a result, many of the opinions expressed in this course will be controversial.

**HSCI 160-3 Global Perspectives on Health**

An introduction to the differences in health and health services among the nations of the globe. Vulnerable sub-populations worldwide and their special health needs. Mechanisms whereby events in one country can impact health in another. Future worldwide health risks, their economic and health consequences. SARS, avian 'flu,' West Nile virus, 'mad cow disease,' antibiotic resistant malaria or tuberculosis. Dangers to rich and poor nations from ignoring health problems in developing world. Breadth-Social Sciences

**HSCI 170-3 Working for Health**

Concepts including professionalism, professional ethics, interdisciplinarity, and knowledge translation will be explored along with types of health-related work, components of health care systems and public health, and workforce trends and tensions in Canada and internationally. Writing skills will be emphasized.

**HSCI 180-3 Drugs and Society**

Substance use within societies. Licit and illicit drug pharmacology, drug effects, risk factors, opportunities for intervention, drug policies and their implementation, and populations with unique vulnerabilities or needs. Major theories of substance use and addiction. Strengths and limitations of alternative approaches to managing substance use as a component of public health in Canada and globally.

**HSCI 199-3 Special Topics in Health Sciences**

A specific topic in health sciences which is not otherwise covered in-depth in regular courses. Prerequisite: will vary according to topic. Corequisite: will vary according to topic.

**HSCI 211-3 Perspectives on Cancer, Cardiovascular, and Metabolic Diseases**

An interdisciplinary overview of the major non-communicable diseases — cancers, cardiovascular and metabolic diseases — from a public health perspective. Review of biological mechanisms, risk factors, historical and cultural contexts, and global distribution. Prerequisite: HSCI 100 or BISC 101, HSCI 130.

**HSCI 212-3 Perspectives on Infectious and Immunological Diseases**

An integrated survey of infectious diseases and their social and economic causes and consequences. Infectious agents, including bacteria, protozoa, fungi and viruses -- how they spread, how they work, and how they can be stopped. Surveillance, prevention, and management of infectious diseases and epidemics. Prerequisite: HSCI 100 or BISC 101, HSCI 130.

**HSCI 214-3 Perspectives on Mental Health and Illness**

An interdisciplinary overview of mental health and mental illness among populations. A review of the distribution and risk factors of mental illnesses as well as the historical and cultural context of their development. Prerequisite: HSCI 100 or BISC 101, HSCI 130.

**HSCI 215-3 Perspectives on Disability and Injury**

An interdisciplinary overview of injury and disability. Review of global distribution and risk factors. Examination of disability and injury across multiple levels of analysis. Prerequisite: HSCI 100 or BISC 101, HSCI 130.

**HSCI 216-3 Ecological Determinants of Human Growth, Development and Health**

Effects that social and ecological factors have on human growth, development and health. Challenges such as epidemics, natural catastrophes, industrialization, globalization, migration, poverty, war, global warming, etc, leading to evolution and adaptations. Relationships between socio-ecological challenges, their health consequences and related gene-population variations and effects on growth, development, sexual maturation, reproductive investment, and senescence and health. Prerequisite: HSCI 100 or BISC 101.

**HSCI 301-3 Foundations of Health Promotion and Health Communication**

The role of health communication and education in the improvement of health and mitigation of disease. Strategies and methodology for public education regarding health maintenance, and preventive measures. New approaches in health promotion — legislation and the use of print media and web technology in health communication. Prerequisite: 45 units, including either HSCI 130 or KIN 140.

**HSCI 302-3 Evidence-based Decision Making in Health**

Decision making based on proven data. Effective criteria for rigorously evaluating health information and practices. Evaluation of health decisions influenced by political, commercial, or cultural factors. Prerequisite: one prerequisite and one corequisite from HSCI 211, 212, 214, 215.

**HSCI 303-3 Perspectives on Behavioral Risks**

An interdisciplinary overview from a public health perspective of behaviors and conditions associated with leading causes of morbidity and mortality. Prerequisite: 45 units, including either HSCI 130 or KIN 140.

**HSCI 304-3 Perspectives on Environmental Health**

Environmental risks and the impact of human activity on health. Chemical and biological hazards. Methodological approaches to their detection, assessment, management, and mitigation. Prerequisite: two HSCI 200-level courses one of which may be taken concurrently.

**HSCI 305-3 The Canadian Health System**

A comparative analysis of the Canadian health care and delivery systems. Organizational principles, health resources, access to care, service utilization, health care planning, and health promotion strategies. Societal and political issues that affect the Canadian health system. Prerequisite: 45 units, including either HSCI 130 or KIN 140.

**HSCI 306-3 Principles of Health Economics**

A study of micro- and macro-economic concepts used in the pursuit of better health and health care. Choices within limited resources, economic evaluation of efficiency, equity, elasticity of health systems, policy and regulatory issues. Prerequisite: two HSCI 200-level courses one of which may be taken concurrently.

**HSCI 307-3 Research Methods in Health Sciences**

Principles and applications in the contemporary research methodology in health sciences — strengths and weaknesses, successes and failures. Includes research methods associated with systematic health assessment and health planning. Prerequisite: two HSCI 200-level courses one of which may be taken concurrently.

**HSCI 308-3 Sickness and Wealth: Health in Global Perspective**

New formations of wealth and power that contribute to international health disparities and consideration of the relations of power both between and within nation-states that make some people sick and keep others well. Economic and political collusions that make people sick. Infectious disease and child survival, health implications of war, biotech, and the politics of food and water. Prerequisite: 45 units. Recommended: HSCI 130.

**HSCI 310-3 Exploratory Strategies in Data Analysis**

A foundation in computing and analytical skills for independent analysis of epidemiologic data. It includes a mandatory SAS computing laboratory. Prerequisite: STAT 302.

**HSCI 319W-3 Applied Health Ethics**

Practical ethical and legal issues in health sciences, emphasizing population and public health. Case studies approach highlighting current ethical dilemmas and decision-making in the context of global to local legal frameworks. Prerequisite: 30 units of completed course work. HSCI 319 is identical to PHIL 319 and students cannot receive credit for both courses. Writing.

**HSCI 321-3 Human Pathophysiology**

Molecular, cellular and systemic approach to examine topics in human pathophysiology. Prerequisite: MBB 231, or permission of the instructor.

**HSCI 323-3 Principles of Pharmacology and Toxicology**

Biological, molecular and biochemical actions of drugs and toxicants. Genetic and environmental risk determinants. Understanding the broad spectrum of toxicological problems encountered in clinical practice, drug development and regulation, and medical research. Prerequisite: MBB 231, CHEM 282, BISC 313.

**HSCI 324-3 Human Population Genetics and Evolution**

Human variation and human health in the context of population genetics, epidemiology, demography, and human evolution. Prerequisite: BISC 202.

**HSCI 329-3 Exploitation and Vulnerable Populations**

Competing understandings of the moral wrong of exploitation. Application to practices and relationships that are the focus of concern over exploitation in the context of public and population health. Prerequisite: PHIL 120W or HSCI 319W or PHIL 319W, or permission from the instructor.

**HSCI 330-3 Exploratory Strategies in Epidemiology**

The concepts and measurements of human population dynamics in epidemiological inference. Identification of causes and prevalence of disease. Demographic and molecular methodology to assess the determinants of health and disease. Prerequisite: STAT 302 and two HSCI 200-level courses one of which may be taken concurrently.

**HSCI 340-3 Social Determinants of Health**

Social determinants of health and health inequities. Explores how and why the social advantages and disadvantages that people experience — based on their social position(s) and social circumstances — determine their health status and overall well-being.

Prerequisite: 60 units and two HSCI 200-level courses, one of which may be taken concurrently.

### **HSCI 350-3 Co-op Practicum I**

First term of work experience in the Health Sciences Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Work terms are graded as Pass/Fail. Prerequisite: students must be accepted into the Health Sciences Co-op program and complete Bridging Online.

### **HSCI 351-3 Co-op Practicum II**

Second term of work experience in the Health Sciences Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Work terms are graded as Pass/Fail. Prerequisite: completion of HSCI 350 Co-op Practicum I.

### **HSCI 371-2 Special Topics in Health Sciences**

A specific topic in health sciences which is not otherwise covered in depth in regular courses. Prerequisite/Corequisite: will vary according to topic.

### **HSCI 372-3 Special Topics in Health Sciences**

A specific topic in health sciences which is not otherwise covered in depth in regular courses. Prerequisite/Corequisite: will vary according to topic.

### **HSCI 373-4 Special Topics in Health Sciences**

A specific topic in health sciences which is not otherwise covered in depth in regular courses. Prerequisite/Corequisite: will vary according to topic.

### **HSCI 399-3 Special Topics in Health Sciences II**

A specific topic in health sciences which is not otherwise covered in depth in regular courses. Prerequisite/Corequisite: will vary according to topic.

### **HSCI 401-3 Health Promotion: Individuals and Communities**

Behavior modification strategies and their applications in risk reduction, health promotion, and disease prevention. New approaches in behavior modification -- new media and new technology. Prerequisite: 60 units, including either HSCI 130 or KIN 140.

### **HSCI 402-3 Substance Use and Addiction**

Substance use and addiction within the context of public health. Determinants of substance abuse and dependence; varieties of substances and their associated health implication; compulsive and addictive behaviors; treatment approaches and their effectiveness for populations and groups; models of prevention; life-cycle and developmental considerations; identified populations; policies for prevention and control. Prerequisite: HSCI 214.

### **HSCI 403-3 Health and the Built Environment**

Relationships between the physical environment in which people live and their health and well being. How the built environment affects physical activity, obesity, exposure to pathogens and toxins, health status, mental health, and risk of illness and injury. How urban form, physical infrastructure, and landscape and building design can promote health. Prerequisite: 60 units. A course in epidemiology is recommended.

### **HSCI 404-3 Public Policy and Health Systems**

Major public policy issues affecting Canadian and international health care systems. How the public policy process affects financing, delivery, and regulation of health programs and services. Theories of policy development in the health sector. Evaluation of the extent to which evidence influences policy decisions. Controversies, including: finance, regulatory issue, system restructuring, models of governance, public vs. private service delivery and resource allocation. Prerequisite: 60 units.

### **HSCI 405-3 Global Health Ethics**

Ethical issues related to public health as they are located in and influenced by a global context. Consideration of several ethical approaches including utilitarianism, deontic ethics, and the capabilities approach, as well as theories of justice. Application of approaches to topics ranging from global markets in human organs to international migration of health workers and pharmaceutical testing in the Developing World. Prerequisite: 60 units and HSCI 319 or PHIL 319.

### **HSCI 406-3 Global Perspectives in Indigenous Health**

Examination of the health and health problems of Indigenous peoples from a global perspective. Comparative study of social and historical factors affecting Indigenous peoples that contribute to health conditions and health status. Efforts of Indigenous peoples to restore health to their Nations. Prerequisite: 45 undergraduate units.

### **HSCI 421-4 Health Survey Methods**

The utility of surveys in health research and practice. Strategies for design, administration, and analysis of data from qualitative and quantitative health surveys. Practical tools for exploratory analysis. Problems and limitations, and how to avoid them. Prerequisite: STAT 302 and 45 units.

### **HSCI 422-4 Diffusion Pathways in the Spread of Disease**

The dynamics of disease distribution processes, and the mechanisms and pathways by which diseases spread. Representation and analysis by computational and cartographic methods. Prerequisite: HSCI 330.

### **HSCI 423-3 Health Policy in Disease Mitigation and Public Health**

An overview of the tools of policy analysis as the means of shaping health care policy and the health of the public. The application of philosophical, political, and economic concepts to health policy debates and the improvement of health care delivery. Prerequisite: HSCI 305, 306.

### **HSCI 424-4 Strategic Applications of GIS in Health**

The use of mapping strategies and geographic information systems in identifying disease patterns and health risks. The relation of health problems to the distribution of markers of exposure, susceptibility, and health impact, and resulting risk management strategies for intervention, mitigation, and disease prevention. Prerequisite: 60 units and two HSCI 200-level courses, or permission of instructor. Recommended: GEOG 255, CMPT 100.

### **HSCI 426-3 Immune System I: Basis of Innate and Adaptive Immunity**

The basic organization of the immune system, including structure, function and genetics of antibodies, T-cell receptors, innate immune receptors, and the complement system. Innate, antibody and cellular immune responses and their control, and development of the cells involved in these responses. Prerequisite: MBB 331. HSCI 426 is identical to MBB 426 and HSCI 325 and students cannot take MBB 426 for further credit.

### **HSCI 427-3 Immune System II: Immune Responses in Health and Disease**

The immunologic response to bacterial, viral and parasitic infections, immunological diseases, such as autoimmune diseases, immunodeficiency, hypersensitivity reactions (including asthma and allergy) and transplantation-rejection reactions. Immunotherapeutics and vaccine development. Prerequisite: HSCI 426 or MBB 426 or permission of the instructor. HSCI 427 is identical to MBB 427 and HSCI 425 and students cannot take HSCI 427 for further credit.

### **HSCI 430-3 Health of Vulnerable Populations**

A study of the relationships between socioeconomic conditions and health in vulnerable populations. Impact of living conditions and access to health services on health risks, mortality, and morbidity, and strategies for better outcomes in disadvantaged communities. Prerequisite: HSCI 330 or 340, or permission of instructor.

### **HSCI 431-3 The Global HIV/AIDS Epidemic**

A multidisciplinary and international focus on the transmission, impact, prevention, and human aspects of the global HIV/AIDS epidemic. Prerequisite: 45 units. Recommended: HSCI 212, 330.

### **HSCI 432-3 Infectious Disease Epidemiology**

Tools for the surveillance, prevention, and control of infectious diseases and their application in public health programs. Prerequisite: HSCI 212, 330.

### **HSCI 438-3 Animal Virology**

Animal virology in the context of viral diseases in humans and animals. Animal viruses, their replication, virus-host interactions and viral diseases. Prerequisite: MBB 331 and BISC 303, or permission of the instructor.

### **HSCI 439-3 Pathogenesis of Human and Animal Viral Infectious Diseases**

Mechanisms underlying viral infectious diseases in humans and animals at the levels of the molecule, cell, organ and the individual. Virus spread in a host, host responses to the viral infection, and virus-host interactions that result in disease. Prerequisite: HSCI 321, 438, or permission of the instructor.

### **HSCI 440-4 Cell Pathophysiology Laboratory**

A review of pathophysiological mechanisms of disease with an emphasis on the molecular, cellular and genetic bases of pathology. Laboratory includes cell-biology experiments, histological preparations, and microscopic examination of normal and diseased tissues. Prerequisite: MBB 308 and HSCI 321, or permission from instructor.

### **HSCI 441-4 Virology Laboratory**

Study, in a laboratory environment, of viruses as infectious agents that threaten human health and viral associated cancer as well as their use in gene therapy. Includes cell culture methods, virus isolation and quantification, virus purification, etc. Prerequisite: HSCI 438, MBB 308.

### **HSCI 442-4 Immunology Laboratory**

Study, in a laboratory environment, of the molecular and cellular basis of the immune system. Immunology overlaps with many other biological disciplines includes biochemistry, molecular biology, cell biology, genetics, physiology, microbiology and relies on laboratory methods and concepts derived from these disciplines. Prerequisite: HSCI or MBB 426, MBB 308.

### **HSCI 443-4 Environmental Health Toxicology Laboratory**

The scientific principles underlying the toxic actions of various substances important to human health. The chemical nature of toxic substances, their mode of action, uptake and metabolism. Analytical techniques for analyzing samples of toxicological importance in the work and general environment and short-term assays used in risk assessment will be introduced. Prerequisite: HSCI 323, MBB 308.

### **HSCI 450-3 Co-op Practicum III**

Third term of work experience in the Health Sciences Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Work terms are graded as Pass/Fail. Prerequisite: completion of HSCI 351 Co-op Practicum II.

### **HSCI 451-3 Co-op Practicum IV**

Fourth term of work experience in the Health Sciences Co-operative Education Program. Units

from this course do not count towards the units required for an SFU degree. Work terms are graded as Pass/Fail. Prerequisite: completion of HSCI 450 Co-op Practicum III.

#### **HSCI 452-3 Co-op Practicum V**

Fifth term of work experience in the Health Sciences Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Work terms are graded as Pass/Fail. Prerequisite: completion of HSCI 451 Co-op Practicum IV.

#### **HSCI 471-3 Special Topics in Health Sciences I**

Selected topics in areas not currently offered within the undergraduate course offerings. Prerequisite: will vary according to topic.

#### **HSCI 472-3 Special Topics in Health Sciences II**

Selected topics in areas not currently offered within the undergraduate course offerings. Prerequisite: will vary according to topic.

#### **HSCI 473-3 Special Topics in Health Sciences III**

Selected topics in areas not currently offered within the undergraduate course offerings. Prerequisite: will vary according to topic.

#### **HSCI 474-3 Seminar in Neuropharmacology**

Mechanisms of drug action in the brain, including several classes of drugs and neurotransmitter systems that are involved in mental health disorders, drug addiction and neurodegeneration. Prerequisite: HSCI 323 and MBB 331, or permission of the instructor.

#### **HSCI 475-3 Seminar in Molecular Mechanisms of Epigenetics**

Discussion of novel and advanced topics in chemical covalent modifications of chromatin that influence gene regulation. Prerequisite: MBB 331, or permission of the instructor.

#### **HSCI 476-3 Seminar in Molecular Basis of Drug Action and Environmental Exposure**

Current topics in molecular biology-based research into pathologies of disease related to drug and environmental exposures. Focus on systems pharmacology and the molecular determinants of drug and toxicant action as they relate to gene expression and signal transduction. Prerequisite: HSCI 323 and MBB 331, or permission of the instructor.

#### **HSCI 477-3 Seminar in Vaccine Immunology**

Immunological concepts of vaccines and vaccinology including vaccination, correlates of immune protection, humoral and mucosal immunity, adjuvants, recombinant vaccine technology, 'designer' vaccines, and HIV/AIDS vaccine design as a paradigm for modern vaccinology. Prerequisite: BISC 303 and HSCI 426 or MBB 426, or permission of the instructor. Recommended: HSCI 427 or MBB 427.

#### **HSCI 478-3 Seminar in Molecular Epidemiology of Infectious Diseases**

Application of modern molecular methods to epidemiological questions. Globally-relevant and emerging infectious diseases will be highlighted. Prerequisite: HSCI 330, BISC 303 and MBB 331, or permission of the instructor. Recommended: HSCI 324.

#### **HSCI 481-3 Senior Seminar in Social Health Science**

An in-depth overview of the sociocultural, epidemiological, and policy aspects of population and public health. Prerequisite: HSCI majors with 90 units, including at least 15 upper division HSCI units. Other prerequisites may vary according to topic.

#### **HSCI 482-3 Senior Seminar in Infectious Diseases**

An in-depth overview of newly emerging and re-emerging infectious diseases in the context of disease prevention, surveillance and control. Prerequisite: HSCI majors with 90 units, including HSCI 330 and HSCI 325, or permission from instructor.

#### **HSCI 483-3 Senior Seminar in Environmental Health**

An in-depth overview of environmental health, environmental risks and human activity in relation to environmental health in the context of disease prevention, surveillance and control. Prerequisite: HSCI majors with 90 units, including HSCI 304, 323 and 330, or permission from instructor.

#### **HSCI 484-3 Senior Seminar in Population Health Research**

Scientific research in population health. Developing and evaluating research protocols, taking a general research question and turning it into an analysis plan, carrying out the analysis, and writing up the findings for presentation and publication. Prerequisite: HSCI majors with 90 units, including HSCI 330 and STAT 302, or permission from instructor.

#### **HSCI 485-3 Senior Seminar in Mental Health and Addictions**

Treatment of current issues in mental health and addictions from a population and public health perspective. Students will examine several topics from theoretical, methodological and policy perspectives. Prerequisite: HSCI majors with 90 units, including at least 15 upper division HSCI units. Other prerequisites may vary according to topic.

#### **HSCI 486-3 Senior Seminar in Global Health**

Treatment of current global health issues. Students will examine several topics from theoretical, methodological and policy perspectives. Prerequisite: HSCI majors with 90 units, including at least 15 upper division HSCI units. Other prerequisites may vary according to topic.

#### **HSCI 488-3 Directed Studies in Health Sciences**

Independent studies on topics selected in consultation with the supervising instructor. A student will be permitted to enroll in this course only if she or he obtains the prior written agreement of a professor who will act as research supervisor.

#### **HSCI 489-3 Directed Research in Health Sciences**

Independent research on topics selected in consultation with the supervising instructor. A student will be permitted to enrol in this course only if she or he obtains the prior written agreement of a professor who will act as research supervisor.

#### **HSCI 490-5 Research Proposal**

Research proposal for the honors thesis. HSCI 490, 491 and 492 together form the honors thesis. Limited to honors students upon written agreement of the faculty supervisor.

#### **HSCI 491-5 Independent Research**

Research proposal for the honors thesis. HSCI 490, 491 and 492 together form the honors thesis. Limited to honors students upon written agreement of the faculty supervisor. Prerequisite/corequisite: HSCI 490.

#### **HSCI 492-5 Honors Research Thesis**

Independent honors research thesis. HSCI 490, 491 and 492 together form the honors thesis. Limited to honors students upon written agreement of the faculty supervisor. Prerequisite or corequisite: HSCI 491.

#### **HSCI 499-3 Special Topics in Health Sciences III**

A specific topic in health sciences which is not otherwise covered in depth in regular courses. Prerequisite/Corequisite: will vary according to topic.

#### **HSCI 774-3 Seminar in Neuropharmacology**

Mechanisms of drug action in the brain, including several classes of drugs and neurotransmitter systems that are involved in mental health disorders, drug addiction and neurodegeneration. Prerequisite: HSCI 323, MBB 331, or permission of the instructor.

#### **HSCI 775-3 Seminar in Molecular Mechanisms of Epigenetics**

Discussion of novel and advanced topics in chemical covalent modifications of chromatin that influence gene regulation. Prerequisite: MBB 331 or permission from the instructor.

#### **HSCI 776-3 Seminar in Molecular Basis of Drug Action and Environmental Exposure**

Topics in molecular biology-based research into pathologies of disease related to drug and environmental exposures will be discussed. Focus on systems pharmacology and the molecular determinants of drug and toxicant action as they relate to gene expression and signal transduction. Prerequisite: HSCI 323, MBB 331, or permission of the instructor.

#### **HSCI 777-3 Seminar in Vaccine Immunology**

Exposes current immunological concepts of vaccines and vaccinology including vaccination, correlates of immune protection, humoral and mucosal immunity, adjuvants, recombinant vaccine technology, 'designer' vaccines, and HIV/AIDS vaccine design as a paradigm for modern vaccinology. Current literature in these areas will be reviewed intensely. Prerequisite: BISC 303, MBB 426, or permission from the instructor.

#### **HSCI 778-3 Seminar in Molecular Epidemiology of Infectious Diseases**

Application of modern molecular methods to epidemiological questions. Globally-relevant and emerging infectious diseases will be highlighted. The course will emphasize critical review of the current literature in the field. Prerequisite: BISC 303, 330, MBB 331, or permission from the instructor.

#### **HSCI 800-3 Fundamentals of Biostatistics**

Introduction to the practice of statistics with examples from health sciences literatures. Emphasizes statistical thinking and basic statistical concepts. Coverage includes basic descriptive statistics, elementary probability concepts, probability and sampling models, exploratory data analysis for univariate and bivariate data, one sample and two sample tests for means and proportions. Prerequisite: admission to the graduate program or permission of the instructor. Students who have taken HSCI 800 Special Topics 'Introduction to Biostatistics' cannot take this course for credit.

#### **HSCI 801-4 Biostatistics for Population Health Practice I**

Basic statistical concepts as applied to diverse problems in epidemiologic and public health research. Emphasizes interpretation and concepts rather than calculations. Basic study designs' statistics. Descriptive and graphical methods, fundamentals of probability distribution, rates and standardization, contingency tables, odds ratios, confidence intervals, hypothesis testing, life tables, Linear regression. Prerequisite: an undergraduate course in statistics or completion of HSCI 800.

#### **HSCI 802-4 Principles of Epidemiology for Public Health**

The underlying concepts and methods of epidemiology in the context of population and public health. Study designs (clinical trials, cohort studies, case-control studies, and cross-sectional), measures

of disease frequency and effect, validity and precision, confounding and effect modification, analysis of two-by-two tables, and options for control. Students will acquire skills in the critical interpretation of the epidemiologic literature, methodology of estimating measures of disease frequency and effect and common measures of potential impact; evaluation of study design; analysis of bias and confounding; and options for control of extraneous factors. HSCI 801 may be taken concurrently.

### **HSCI 803-3 Qualitative and Survey Research Methods**

Methodologies and strategic research design for advances in knowledge and understanding in the health sciences. Problem definition, sampling, data collection, analysis, proposal writing, and ethical issues are addressed. Provides experiential and intellectual grounding in surveys, interviews, focus groups, and ethnography. Prerequisite: admission to the graduate program or permission of the instructor.

### **HSCI 804-3 Biostatistics for Population Health Practice II**

Statistical methods related to public health. Probability distributions, basic statistical inference on means and proportions and general concepts of hypothesis testing. Measures of association. Simple and multivariable linear regression models, dummy variables, and logistic regression models. Survival data analysis. Prerequisite: HSCI 801.

### **HSCI 805-3 Intermediate Epidemiologic Methods**

Follow-up course to HSCI 802. Designing, conducting, analyzing, and interpreting epidemiologic research. Theoretical frameworks, concepts of inference, measures of disease occurrence and effect, study designs, issues in measurement, bias, confounding, and interaction. Critical assessment of the epidemiologic and public health literature. Prerequisite: HSCI 801 and 802.

### **HSCI 806-3 Principles of Demographic Analysis**

This seminar course is designed to introduce students to demographic techniques and principles through the discussion of the applications of various measures, case studies, and software programs. The emphasis is on applying techniques and principles learned in class to undertake demographic analyses in the lab. Prerequisite: HSCI 801.

### **HSCI 807-3 Researching Health Inequities**

Critical examination of methodologies and methods for research on health inequities related to class, race, ethnicity, gender and other social axes of marginalization and power. Covers a range of disciplines (epidemiology, social sciences), methodologies (positivist, critical, feminist, indigenous) and methods (qualitative, quantitative, action-oriented). Emphasis on causes of and solutions to systemic health inequities. Prerequisite: HSCI 802 and 803, or permission of instructor.

### **HSCI 815-3 Concepts of Population and Public Health Practice**

Introduction to population health paradigms and the history of public health. Understanding the factors that influence health over the lifespan. Fundamentals of public health strategies including health promotion, public policy, disease prevention, communication in health, behavior change, and program planning and evaluation. Prerequisite: admission to the graduate program or permission of the Instructor.

### **HSCI 821-3 Problems in Global Health**

Problem-focused introduction to global health. Critical appraisal of current global health problems in the context of processes of globalization. Understanding and addressing health inequities, within and between countries. A case approach. Graded. Prerequisite:

admission to the graduate program or permission of the instructor.

### **HSCI 822-3 Globalization and Health Inequities**

The mechanisms by which globalization impacts health. Roles of technologies, politics, economics, legal structures, culture, and social environments. The positive and negative impacts of global trends in trade, ideology, governance, community building, conflict, poverty, and the environment. A case studies approach. Prerequisite: admission to the graduate program or permission of the instructor.

### **HSCI 823-3 Health, Gender and Development**

Central role played by gender in health and development. Relationship of gender inequities to access to and control of resources needed to protect health. Use of gender lens in evaluating health systems and economic outcomes. Practical application of gender in health development approach to health financing, resource allocation policy problems in resource-constrained nations. A case studies approach. Prerequisite: admission to the graduate program or permission of the instructor.

### **HSCI 824-3 Comparative Health Care Systems**

Concepts of health, illness, sickness and disease. History and development of health systems, and comparison of the social ethics, organization, and financing of different national health systems. The design of health systems — strengths and weaknesses of alternative systems for health care and delivery. Current strategies for health system reform in resource-rich and resource-constrained nations. A case studies approach. Prerequisite: admission to the graduate program or permission of the instructor.

### **HSCI 825-3 Advocacy and Communication in Global Health**

Health advocacy, the policy framework within which it operates, its key principles, skills, and practice issues. Role, theories, and methods of health communication and advocacy in global health from the community to global level. Useful means: media advocacy, community mobilization, and trans-national collaboration. Use of information technology to promote population health and pro-health policy change. A case studies approach. Prerequisite: admission to the graduate program or permission of the instructor.

### **HSCI 826-3 Program Planning and Evaluation in Global Health**

Practical approaches to health needs assessment, needs prioritization, health program planning, and health program evaluation in low-to-middle income countries and/or resource-poor settings. Gender-based analyses are emphasized throughout. A case study approach. Prerequisite: admission to the graduate program or permission of the instructor.

### **HSCI 827-3 Analysis of the Canadian Health Care Delivery System**

Components of health care systems, issues, and interactions between components. System outputs, medical services and the delivery of primary health care. The Canadian health system and alternatives that impact it or provide better models for delivery. Effecting change, policy development, health system design; criteria for evaluating alternatives. Comparison of different measures of health status; trend analysis for predicting future health care and funding. Components of expenditure. Prerequisite: admission to the graduate program or permission of the instructor.

### **HSCI 828-3 Health, Human Security, and Social Justice**

Global health issues which are fundamental to human security, but outside the scope of international security studies. Focus on vulnerable populations, especially gender perspectives on globalization and

health. Conflict, humanitarian emergencies and public health. A case studies approach. Prerequisite: admission to the graduate program or permission of the instructor.

### **HSCI 829-3 Health Policy Making in a Global Context**

A case-study based approach to policy analysis, formation, decision-making and evaluation in global health contexts. Frameworks for developing policy. Program planning and evaluation methodologies. Prerequisite: admission to the graduate program or permission of the instructor.

### **HSCI 830-3 Health Promotion**

Population health promotion and disease prevention theories, frameworks, and techniques for planning, implementing and evaluating policy and programs in resource-constrained countries. Building collaborations and participatory community-based approaches. Addressing change at the individual, organizational, community, population, and global level. A case studies approach. Graded. Prerequisite: admission to the graduate program or permission of instructor.

### **HSCI 835-3 Social and Behavioural Contexts of Health and Disease**

Examination of the major social and behavioral variables -- social class, poverty, income distribution, gender, race, social networks/support, psychological stress, community cohesion, and the work and neighborhood environment -- that affect the public's health. Evaluation of the empirical research linking each construct to population health status. Methods are introduced to operationalize each construct for the purposes of application in public health research. Prerequisite: admission to the graduate program or permission of the instructor.

### **HSCI 838-3 Theorizing Social Inequities and Health**

Critical analysis of theories and frameworks central to research and practice on health inequities. Emphasis on mechanisms through which gender, race, ethnicity, social class and other social axes of marginalization and power intersect to influence health outcomes at the population level. Prerequisite: HSCI 835 or permission of instructor.

### **HSCI 839-3 Strategies for Reducing Health Inequities**

Critical application of theory and research on social inequities and health to the development of interventions, programs and policies for reducing health inequities at the population level. Emphasis on critical, collaborative, evidence-based, reflexive public health practice. Prerequisite: HSCI 807, 838, or permission of the instructor.

### **HSCI 845-3 Environmental and Occupational Health**

Globalization and industrialization impacts on the health of the environment, populations, and workers. Environmental hazards in consumables (food, air, and water) and waste (liquid, solid, and gaseous) with special reference to hazardous waste. Risk assessment in community, workplace, and residential settings. A case studies approach. Prerequisite: admission to the graduate program or permission of the instructor.

### **HSCI 846-3 Environmental Health Exposure Assessment and Analysis**

Assessment and analysis of exposure to physical, chemical, and biological contaminants in environmental and occupational settings. Theory and methods of assessing exposure through direct and indirect methods. Introduction to statistical and modeling techniques used in interpreting exposure data, describing sources of exposure variability, and identifying important determinants of exposure. Prerequisite: HSCI 845 or permission of the instructor.

**HSCI 847-3 Risk Assessment and Communication for Human Health**

Concepts and tools involved in human health risk assessment, with a particular emphasis on those aspects relevant to occupational and environmental exposures. The main steps involved in a risk assessment and application to basic risk/exposure situations. Identify the strengths and weaknesses of different approaches. Risk management and the policy process. Prerequisite: HSCI 802 or permission of the instructor.

**HSCI 848-3 Toxicology, Susceptibility and Environmental Health**

Provides students with an understanding of basic principles in toxicology and gives them an appreciation for the experimental efforts to address the physiologies and factors underlying morbidity and mortality in response to toxic insults. Material selected will highlight different biological systems that are sensitive to common environmental pollutants and the role that genes play in toxicant response. Prerequisite: HSCI 845 or permission of the instructor.

**HSCI 849-3 Environmental and Occupational Epidemiology**

Epidemiological studies of environmental and workplace exposures. Critical evaluation of epidemiological studies of environmental and occupational exposures. Prerequisite: HSCI 802, 845 or permission of the instructor.

**HSCI 850-3 Air Pollution and Human Health**

Basic air pollution concepts. Exploring the evidence of links between air pollution and adverse human health effects, including both mortality and morbidity. Air quality management at the international, national, and local levels. Focus includes airborne particles, traffic-generated pollution and indoor biomass burning. Prerequisite: HSCI 845 or permission of the instructor.

**HSCI 855-3 Disease Prevention and Control**

Infectious and chronic disease prevention and control strategies and program implementation. Components of disease prevention and control programs, including surveillance, epidemic preparedness, immunization, outbreak response. How they apply to specific diseases. A global perspective, including low and middle income countries. Case studies. Prerequisite: admission to the graduate program or permission of the instructor.

**HSCI 870-3 Global Health and International Affairs**

Intersection of international affairs and global health. Pressing global health issues are analyzed as they intersect with the global economy, international development, and security. Prerequisite: HSCI 822, or permission of the instructor.

**HSCI 880-3 Practicum**

Students participate in a workplace practicum to obtain experience in community public health practices. Practica are the equivalent of full-time course work, and may focus on local, regional, national or international health practices. Following completion of the practicum, students are expected to be on campus to prepare a poster presentation summarizing their practicum experience. Graded complete or incomplete. Prerequisite: students will consult with their senior supervisor on all courses that must be taken before going on practicum. All students are expected to complete at minimum the following courses: HSCI 801, 802, 803, 901. Under special circumstances students may request written permission from the director, public health practice, and the senior supervisor to substitute one of the prerequisite courses, or to carry out the practicum prior to completion of the required courses.

**HSCI 890-4 Special Topics in Health Sciences**

Special topics in areas not currently covered within the graduate program offerings. Prerequisites: depending on the special topic offered.

**HSCI 891-3 Special Topics in Health Sciences**

Special topics in areas not currently covered within the graduate program offerings. Prerequisite will depend on the special topic offered.

**HSCI 892-2 Special Topics in Health Sciences**

Special topics in areas not currently covered within the graduate program offerings. Prerequisite will depend on the special topic offered.

**HSCI 893-3 Directed Studies in Health Sciences****HSCI 894-4 Directed Studies in Health Sciences****HSCI 895-0 Project Completion**

Master's Project in progress. Prerequisite: HSCI 897-3.

**HSCI 896-0 Thesis Completion**

Master's Thesis in progress. Registration in this course is equivalent to full time course work. Prerequisite: HSCI 898.

**HSCI 897-3 Master's Project**

Graded incomplete/complete. Prerequisite: HSCI 880.

**HSCI 898-6 Master's Thesis**

Graded incomplete/complete.

**HSCI 900-1 Seminars in Population and Public Health**

Presentations will be given by faculty, students, and visiting scholars, followed by seminar discussions. This is a required course for all graduate students, and normally taken in the spring term. Graded satisfactory/unsatisfactory. Prerequisite: admission to a graduate program or permission of the instructor.

**HSCI 901-1 Practicum Preparation Seminar**

Seminars and lectures are designed to assist students to identify potential practicum sites and to develop their practicum plan. Normally students complete this course in the first term of their first year in residence. Graded complete or incomplete. Prerequisite: admission to the graduate program or permission of the instructor.

## History HIST

### Faculty of Arts and Social Sciences

**HIST 101-3 Canada to Confederation**

A survey of Canadian history to 1867. Breadth-Humanities.

**HIST 102W-3 Canada since Confederation**

A survey of Canadian history since 1867. Writing/Breadth-Humanities.

**HIST 104-3 The Americas from Colonization to Independence**

A comparative exploration of the colonization of North and South America by the various European empires together with the role of Native and African peoples in the Americas, from the late fifteenth century to the onset of political independence three hundred years later. Breadth-Humanities.

**HIST 106-3 The Making of Modern Europe**

An introduction to the major political, social, economic, cultural, and intellectual developments that have formed modern European society. Breadth-Humanities.

**HIST 110-3 Introduction to the History of Science**

Introduces the main themes and events in the development of science, including cosmology, physics, alchemy, chemistry and biology. Breadth-Humanities/Science.

**HIST 130-3 Modern World History**

A survey of the history of the world from circa 1405 to the present, with a focus on global historical phenomena. Topics may include political, economic, cultural, and environmental aspects of globalization, religious and scientific revolutions, industrialization, nationalism, decolonization, and the evolution of modernity. Breadth-Humanities.

**HIST 146-3 Africa after the Transatlantic Slave Trade**

An introductory survey of colonization, of social, political and environmental change under colonial rule, and of the stormy history of state-society relations in Africa since independence. Breadth-Humanities.

**HIST 151-3 The Modern Middle East**

An introductory survey of the changing societies of the Middle East since 1800. Emphasis will be placed on familiarizing students with the basic aspects of Islamic society, the influence of European imperialism, the modernization of traditional societies, the origins of the Arab-Israeli conflict, and the social and political ferment in the period since the Second World War. Breadth-Humanities.

**HIST 201-3 The History of Western Canada**

A history of the prairies and British Columbia dealing with the aboriginal cultures, the fur trade, the evolution of transportation and links with metropolitan areas, settlement and economic development, political evolution, evolving rural and urban systems, and intellectual and cultural identities.

**HIST 204-3 The Social History of Canada**

A survey of major themes in Canadian social history from the arrival of Europeans to the present day. Particular attention will be paid to the effects of gender, race and class on the experience of Canadians over time. Recommended: HIST 101 and 102. Breadth-Humanities.

**HIST 205-3 Japan to 1600**

A survey of Japanese history from antiquity until the late nineteenth century or early modern period. Prerequisite: students with credit for HIST 206 offered prior to 2002-2 cannot take this course for further credit. Breadth-Humanities.

**HIST 206-3 Japan Since 1868**

A survey of Japanese history from 1868 until 1952 which will examine, among other topics, the establishment of the Japanese colonial empire, the wars with Russia, China and the United States, and the post-war Allied Occupation. Recommended: HIST 205. Breadth-Humanities.

**HIST 208-3 Latin America: the Colonial Period**

A study of the process and institutions of Spanish colonial administration with emphasis on the clash of European and Amerindian cultures. Recommended: HIST 104. Breadth-Humanities.

**HIST 209-3 Latin America: the National Period**

A survey of Latin American history from Independence (1808-24) to the present: post-Independence political collapse and reconsolidation; Latin America in the world trade system and the changing conditions of economic dependency; nationalist reform (Mexico) and socialist revolution (Cuba), liberalism, populism, and the rise of modernizing military. Treatment by topics and broad historical period rather than country by country. Recommended: HIST 208. Breadth-Humanities.

**HIST 212-3 The United States to 1877**

The emergence and development of American civilization from the establishment of the colonies through the Civil War and Reconstruction. Recommended: HIST 104. Breadth-Humanities.

**HIST 213-3 The United States Since 1877**

An analysis of the transformation of American culture from post-Civil War to modern forms. Topics to be

discussed will include industrialization, urbanization, foreign policy, cultural and political antagonisms. Recommended: HIST 212. Breadth-Humanities.

### **HIST 214-3 Quebec Society, Culture, and Politics**

Covers Quebec history from the French regime to the recent past, focusing on the evolution of cultural identity, on the nationalist movement, and on the long-standing tension between tradition and modernity. Prerequisite: HIST 101. Students who have credit for HIST 328 may not take HIST 214 for further credit.

### **HIST 215-3 The Making of the British Isles**

A broad survey of some of the central developments that have shaped the history of the British Isles from Roman antiquity to the present. Breadth-Humanities.

### **HIST 220-3 Late Medieval and Renaissance Europe**

An introduction to the world of late Medieval and Renaissance Europe (c.1200-c.1500). Breadth-Humanities.

### **HIST 223-3 Early Modern Europe, 1500-1789**

A survey of early modern European history which will examine, among other topics, the wars of religion, the 17th century revolutions, 16th and 17th century economic development, the scientific revolution, the enlightenment and the political and social character of the old regime. Breadth-Humanities.

### **HIST 224-3 Europe from the French Revolution to the First World War**

A survey of European history emphasizing the French Revolution, and Napoleonic Europe and first Industrial Revolution, liberalism and its opponents, agrarian conservatism, liberalism and conservatism, the Revolutions of 1848, the struggles for political unification, the second Industrial Revolution and the origins of the First World War. Breadth-Humanities.

### **HIST 225-3 20th Century Europe**

A survey of European history from the First World War emphasizing the origins and effects of the World Wars, the emergence of the Soviet Union and of fascism. Breadth-Humanities.

### **HIST 231-3 History of Africa to the 19th Century: From Ancient Times to the Slave Trade**

A general, introductory survey of Africa's rich pre-colonial past, its vibrant cultures and sophisticated technologies, far-reaching commercial and political networks, and dynamic (and internally differentiated) social systems. Also discusses the trans-Atlantic trade in African slaves and the arrival of Europeans on African shores.

### **HIST 249-3 Classical Islamic Civilization**

This course offers a broad survey of the development of classical Islamic civilization. It begins with an examination of the origins of Islam in seventh century Arabia and concludes with the break-up of the Abbasid Caliphate of Baghdad in the 13th century. Emphasis will be placed on gaining an understanding of the doctrines of Islam, the significance of the rise and fall of the early Arab-Islamic empires, and the role of Islam in world history. Breadth-Humanities.

### **HIST 252-3 Islamic India**

A survey of the cultural patterns, social and political forces, and historical contexts that have shaped the Islamic period of Indian history. Special attention will be directed toward the Mughal empire and its decline. Breadth-Humanities.

### **HIST 254-3 China to 1800**

This course offers a broad survey of the history of China from antiquity to the eve of its modern transformations at the turn of the nineteenth century. It aims to challenge the perception of an unchanging China and to encourage students to develop a critical

understanding of the forces integrating and dividing this geo-cultural unit. Breadth-Humanities.

### **HIST 255-3 China since 1800**

A survey of the history of China from the end of the eighteenth century, when traditional Chinese society was arguably at its height of development, to the end of the twentieth century when the social revolutions promised by the Communist regime have clearly failed to materialize. The main objectives are to provide students with vocabularies and tools to understand and interpret the political, social and cultural transformations in modern China and to initiate them in the art and techniques of historical analysis. Breadth-Humanities.

### **HIST 256-3 The People's Republic of China**

An introduction to the politics, society, and economy of mainland China from the aftermath of the Sino-Japanese war to the rapid social, political, and economic changes of the last two decades.

### **HIST 277-3 History of Greek Civilization**

Surveys the history of Greek civilization from Mycenaean Greece to the twentieth century. Prerequisite: students who have taken HIST 307 under this topic may not take this course for further credit.

### **HIST 288-3 History of Christianity to 1500**

A survey of the history of Christianity from its origins to 1500. Breadth-Humanities.

### **HIST 299-3 Problems in History**

This course is designed to allow students to pursue in greater depth a particular historical problem. It will be offered either as an individual reading course or in small seminars, depending upon student and faculty interest. Admission only by prior consent of instructor. Students may not take this course more than once or after they have completed 60 units of course work. Recommended: at least four university level courses in history.

### **HIST 300-4 Approaches to History**

An examination of the conceptual problems involved in the historian's attempt to apprehend the past and its relationship to the present and future. Particular attention will be paid to the nature of historical knowledge and explanation, and to the broad systems and patterns in which history has been conceived. Prerequisite: 45 units including 9 units of lower division history.

### **HIST 304-4 Alexander the Great and the Quest for World Empire**

Examines Alexander in the context of ancient history as well as his legacy, which provides unique insight into why there have been and continue to be illusive and deadly quests for world domination. Prerequisite: 45 units including 9 units of lower division history. Students who have taken HIST 391-4 D200 in 1051, HIST 309-4 E100 in 1061 or HIST 486 E100 in 1074 may not take HIST 304-4 for further credit.

### **HIST 305-4 Honors Seminar**

Open only to honors students. An introduction to the honors program followed by detailed study of various philosophies and methodologies of historical writing. Prerequisite: 45 units including nine units of lower division history; admission to the honors program in history.

### **HIST 307-4 Selected Topics in Hellenic Studies**

Selected Topics. Prerequisite: 45 units including 9 units of lower division History.

### **HIST 308-4 Byzantium from Constantine to the end of the Dark Ages: 4th to the 9th Centuries**

Examines the first 5 centuries of the Byzantine history, focusing on the state that survived, by twelve hundred years, the collapse of the Western roman empire in the fifth century AD, and follows the evolution of its culture, language, political traditions

and religion. Prerequisite: 45 units including 9 units of lower division history.

### **HIST 315-4 Politics and Society in England, 1500-1707**

This course provides a general overview of the social and political history of Tudor and Stuart England. Prerequisite: 45 units including 9 units of lower division history.

### **HIST 316-4 English Society since the Mid 18th Century**

A study of English society, culture and politics from the accession of George III to the present. Prerequisite: 45 units including 9 units of lower division history.

### **HIST 317-4 From Reconstruction to Destruction: The Byzantine Empire from the 9th to the 15th Centuries**

Covers Byzantine history from the 9th century and the end of the "Dark Ages" to the end of the Empire in the 15th century and offers students an account of the Byzantine State's and its society's interaction with the Islamic and Christian European world of the west. Prerequisite: 45 units, including 9 units of lower division history.

### **HIST 319-4 The Modern French Nation**

An examination of the history of modern France from 1789 to the present with a focus on the social, political, and cultural divisions within the French nation resulting from the Revolutionary era, industrialization, the expansion and eventual decolonization of France's colonial empire, and the World Wars and their consequences. Prerequisite: 45 units including nine units of lower division history.

### **HIST 320-4 European Reformation**

An advanced examination of the complex history and patterns of the Religious Reformation in sixteenth century Europe. Emphasis will be placed on the religious thought of the period, and on its social and political context. Prerequisite: 45 units including nine units of lower division history. Strongly recommended: HIST 220 or 223. Students who have taken HIST 403-4 prior to 2005-3 cannot take this course for further credit.

### **HIST 321-4 State and Society in Early Modern Europe**

Examines major themes and developments in the political and social history of early modern Europe (1500-1789). Will consider various forces (e.g. religious, cultural, economic, military) that contributed to or challenged the strengthening of state power. While the focus of the course will usually be comparative in nature, it may on occasion also emphasize one particular state. Prerequisite: 45 units, including nine units of lower division History. Students who have taken HIST 318 or HIST 331 prior to 2005-3 may not take HIST 321 for further credit.

### **HIST 322-4 Atlantic and Pacific Migration**

Topics in the history of Atlantic and Pacific migrations to the Americas with attention given to the contexts from which the migrants came, why they migrated, and how they adjusted. Examples may be taken from the United States, Canada and Latin America. Prerequisite: 45 units including nine units of lower division history.

### **HIST 325-4 History of Aboriginal Peoples of North America to 1850**

Examines selected themes in the history of Aboriginal peoples of North America from first contact with Europeans to the mid-nineteenth century. Prerequisite: 45 units including nine units of lower division history. FNST 325 and HIST 325 are identical and students cannot take both courses for credit.

### **HIST 326-4 History of Aboriginal Peoples of North America Since 1850**

Examines selected themes in the history of Aboriginal peoples of North America in the nineteenth and

twentieth centuries. Prerequisite: 45 units including nine units of lower division history. FNST 326 and HIST 326 are identical and students cannot take both courses for credit.

#### **HIST 327-4 Canadian Labor and Working Class History**

An examination of the history of labor, primarily in English Canada, during the 19th and 20th centuries. The evolution of trade unions and labor-political movements will be examined together with the impact of industrialization, the rise of mass production, changing patterns of immigration and other contexts of working-class culture and material life. Special attention will be paid to British Columbia as a case study. Historically the course examines 'working class history' as a particular way of studying the past. What is the concept of 'the working class'? Prerequisite: 45 units including nine units of lower division history. Recommended: HIST 101, 102 and 204.

#### **HIST 329-4 Canadian Family History**

A detailed examination of the changing Canadian family, and its relationship to the state, since the eighteenth century. Prerequisite: 45 units including nine units of lower division history.

#### **HIST 332-4 Politics and Culture in Modern Germany**

An examination of major themes in German history from the establishment of a united German Empire in 1871 to the reunification of Germany in 1990. Emphasis will be placed on issues related to the formation of German national identity and the problems associated with modernization and militarism. Attention will be given to the difficulties of Weimar democracy, the nature of the Third Reich, and contrasting developments in East and West Germany after 1949. Prerequisite: 45 units including nine units of lower division history.

#### **HIST 333-4 Modern Italy: Risorgimento to Republic**

Surveys Italian society, politics and culture from the mid-nineteenth century to the present. Prerequisite: 45 units including nine units of lower division history. Students who have taken HIST 390 D100 in spring 2007 (1071) may not take this course for further credit.

#### **HIST 334-4 The Making of Imperial Russia**

An examination of major themes in Russian history up to the Revolution of 1917, including the emergence of the modern Russian state; the organization of the empire at the center and the periphery; the contest between imperial, national, and religious identities; social, economic, and cultural transformations; and the Russian Empire's involvement in world politics. Prerequisite: 45 units including nine units of lower division history. Recommended: HIST 105 and 106.

#### **HIST 335-4 The Soviet Project**

An examination of the history of the Soviet Union from its creation to its collapse, emphasizing its ideology, culture, role in global politics, and social and economic transformations. Prerequisite: 45 units including nine units of lower division history.

#### **HIST 336-4 Ideas and Society in Early Modern Europe**

An examination of intellectual developments of early modern Europe (sixteenth to eighteenth centuries) in their broader social, cultural, political or economic contexts. The course will focus on a particular subject e.g. Northern humanism, debates about the nature and social role of women (the querelle de femmes), the Enlightenment. Students will read excerpts from important contemporary sources. Prerequisite: 45 units including nine units of lower division history. Recommended: HIST 223 or 224.

#### **HIST 337-4 The Balance of Power in Europe**

An examination of the shift of power among competing European states from the late 19th century

until the mid-20th century. Attention will be given to the origins and consequences of the two great European wars and to the policies of Britain, France, Germany, and Russia which brought about the significant changes in the balances of power. Study will be based primarily upon documents from the Chanceries. Prerequisite: 45 units including nine units of lower division history credit. Recommended: HIST 225.

#### **HIST 338-4 World War II**

An introduction to the history of the origins and course of the second world war. Prerequisite: 45 units including nine units of lower division history. Recommended: HIST 225.

#### **HIST 339-4 The British Empire and Commonwealth**

This course provides an outline history of the British Empire, its rise and decline, and discusses the origin and significance of the Commonwealth. In addition there is a detailed account of the 'Westminster Model' of parliamentary democracy, on which the political institutions of many Commonwealth nations are based. Prerequisite: 45 units including nine units of lower division history.

#### **HIST 343-4 Africa and the Slave Trade**

An examination of the trade in slaves from Africa and the rise of slavery within that continent. Prerequisite: 45 units including nine units of lower division history. Students with credit for HIST 478 may not enroll in HIST 343. Recommended: HIST 146 or 231.

#### **HIST 344-4 Themes in Modern East Africa**

Examines the diversity of environments, cultures and livelihoods in East Africa and the Horn in the context of long-term trans-regional influences, especially slave trade, cash cropping, colonization and post-colonial politics, and the expansion of the world religions into East Africa. Prerequisite: 45 units including nine units of lower division history. Recommended: one of HIST 146 or 231.

#### **HIST 345W-4 Selected Topics in European History**

A writing-intensive examination of selected topics in European history. The content will vary from offering to offering. See department for further information. Prerequisite: 45 units including nine units of lower division history. Students may not take selected topics with HIST 345 for further credit if duplicating content of another history course and vice versa. Writing.

#### **HIST 348-4 A History of Twentieth Century South Africa**

An examination of the economic, social and political history of 20th century South Africa. Particular attention will be paid to the factors which led to the rise of apartheid. Prerequisite: 45 units including nine units of lower division history. Recommended: at least one of HIST 146, 231.

#### **HIST 350-4 The Ottoman Empire and Turkey**

A study of Ottoman society and the impact of Ottoman rule in the Middle East from the conquest of Constantinople to the death of Atatürk, the founder of the Turkish Republic. Emphasis will be on the conflict between preservation and reform in the nineteenth century and on the significance of the Ottoman legacy for twentieth century Turkey and the Arab world. Prerequisite: 45 units including nine units of lower division history. Recommended: one of HIST 151, 249, 251.

#### **HIST 352-4 Religion and Politics in Modern Iran**

The intellectual and social history of greater Iran from the Safavids to the twentieth century. Emphasis will be on the relationship between religion and politics. Prerequisite: 45 units including nine units of lower division history. Recommended: one of HIST 151, 249, 251.

#### **HIST 354-4 Imperialism and Modernity in the Middle East**

This course examines the role of imperialism in the transformation of societies in the Middle East and North Africa over the last two centuries. Focusing mainly on the cases of Ottoman, British and French empire building, the course discusses the socio-economic, cultural and political changes brought about by the interaction of various segments of local societies with these imperial powers. Prerequisite: 45 units including nine units of lower division history. Recommended: one of HIST 151, 249, 251.

#### **HIST 355-4 The Arab Middle East in the Twentieth Century**

An examination of this century's major themes in the history of Syria, Lebanon, Iraq, Jordan and Saudi Arabia, as well as other states of the Arabian peninsula. Topics to be investigated include the origins of Arab nationalism and Islamic reformism; the origins and development of the Lebanese question; the emergence of the politics of the military in Iraq and Syria, and the special role of the Jordanian and Arabian monarchies. Prerequisite: 45 units including nine units of lower division history credit. Recommended: one of HIST 151, 249, 251.

#### **HIST 360-4 History of Science: Greeks to Newton**

Traces the transformation of the study of the natural world from the Greek natural philosophers to the time of Isaac Newton. Prerequisite: 45 units including nine units of lower division history. Recommended: HIST 110.

#### **HIST 361-4 The History of Science: The Eighteenth Century to the Present**

Topics in the history of science and technology to be selected from the 18th/19th century chemistry, the history of the idea of evolution and of Darwinian science, physics to 1914, or 19th century industrial science. Prerequisite: 45 units including nine units of lower division history or science.

#### **HIST 362-4 Ireland from the Penal Era to Partition**

Examines key social, economic, political, and intellectual developments in Ireland from the 18th to the mid-20th centuries. It will also explore shifting understandings of the 'Irish nation' and consider how communal historical memory can be appropriated to serve different political agendas. Prerequisite: 45 units, including nine units of lower division history. Students who have taken HIST 390 D200 in spring term 2006 (1061) may not take this course for further credit.

#### **HIST 363-4 History of Technology**

Examines technology from ancient tool use, through the place of invention in the development of civilization. Prerequisite: 45 units including nine units of lower division history. Recommended: HIST 130.

#### **HIST 366-4 Social History of China since 1800**

A survey of Chinese society from circa 1800 to the early twentieth century. The course begins with an introduction to Chinese society in the mid-Qing period and then moves on to discuss intellectual, social, cultural, and political changes that are often associated with the 'impact of the West.' Prerequisite: 45 units including nine units of lower division history including HIST 255.

#### **HIST 368W-4 Selected Topics in the History of the Wider World**

A writing-intensive examination of selected topics in the history of Asia, Africa and/or the Middle East. The content will vary from offering to offering. See department for further information. Prerequisite: 45 units including nine units of lower division history. Students may not take selected topics within HIST

368 for further credit if duplicating content of another history course and vice versa. Writing.

### **HIST 370-3 Practicum I**

This is the first term of work experience in co-operative education. It is meant to be exploratory in nature. Units from this course do not count towards the units required for an SFU degree. Prerequisite: normally 60 units with a minimum CGPA of 2.75. Students should apply to the co-op co-ordinator one term in advance.

### **HIST 371-4 The Asia-Pacific War in Modern Japanese History**

Covers the period in Japan from the 1930s to the 1950s and will introduce students to topics such as wartime atrocities, the dropping of the atomic bombs and the prosecution of war criminals. It will also attempt to explain why so much controversy surrounds interpretations of events arising from Japan's last war, the Asia-Pacific War. Prerequisite: 45 units including nine units of lower division history. Recommended: at least one course on modern Japan.

### **HIST 373-4 Conquest in North America, 1500-1900**

A broad examination of attempts by aboriginal, imperial, and mercantile forces to claim and control the North American continent from the arrival of Spanish conquistadors in the early 1500s to the surrender of Geronimo in 1886. Explores the processes of colonization from many perspectives, including Aboriginal, American, English, French, Russian, and Spanish ambitions and activities. Prerequisite: 45 units including nine units of lower division History and one of HIST 101 or 212, or permission of the department. Breadth-Humanities.

### **HIST 374W-4 Selected Topics in the History of the Americas**

A writing-intensive examination of selected topics in the history of the Americas. The content will vary from offering to offering. See department for further information. Prerequisite: 45 units including nine units of lower division history. Students may not take selected topics within HIST 374 for further credit if duplicating content of another history course and vice versa. Writing.

### **HIST 375-3 Practicum II**

This is the second term of the Co-operative Education Program. Building on the experience of the first employment term, this term will provide a work experience that integrates and builds on the research and writing skills associated with the discipline of history. Units from this course do not count towards the units required for an SFU degree. Prerequisite: normally 75 units (including HIST 370) with a minimum CGPA of 2.75. Students should apply to the co-op co-ordinator one term in advance.

### **HIST 376-4 North American West**

Examines themes in the development of the western portions of North America, their incorporation into nation states, and the tensions between local, regional, and national systems during the last two centuries. Themes will include race, ethnicity, class labor, capital, and environment. Field Trip to Gulf of Georgia Cannery National Historical Site of Canada. Prerequisite: 45 units including nine units of lower division history. Students with credit for HIST 391 in 1057 may not take this course for further credit.

### **HIST 377-4 Environmental History**

Examines the reciprocal influences between humans and nature through time. Topics may include settlement, agriculture, technology, politics, urbanization, science, and conservation. Prerequisite: 45 units including nine units of lower division History. The course is identical to GEOG 377 and students cannot take both courses for credit.

### **HIST 378-4 The United States in the World since 1865**

Examines how the United States has influenced the world (and vice versa) from the American Civil War to the 'war on terror.' Topics include: the diplomatic and political history of American foreign relations; economics and the American roots of 'globalization'; race, racism and the movement of peoples; and the relationship between culture and the extension of American interests overseas. Prerequisite: 45 units including nine units of lower division History. Recommended: HIST 212 and 213, HIST 208 and 209. Students who have taken HIST 390 in 1051 may not take this course for further credit.

### **HIST 382-4 African-American History, since 1865**

Examines black history from the end of the American Civil War. The course focuses on the external and internal forces which shaped black communities across the nation. Special attention will be paid to these communities' struggles against the forces which sought to confine black people to an inferior place in society. Prerequisite: 45 units including nine units of lower division history.

### **HIST 388-4 Christianity and Globalization**

An examination of select topics in Christianity and globalization, with an emphasis on the early-modern period. Students will explore the connections between regions rather than individual regional histories. Prerequisite: 45 units, including nine units of lower division history credit.

### **HIST 390-4 Studies in History I**

Special topics. Prerequisite: 45 units including nine units of lower division history.

### **HIST 391-4 Studies in History II**

Special topics. Prerequisite: 45 units including nine units of lower division history.

### **HIST 400-4 Seminar in Historical Methods**

A study of methodology, including such subjects as principles of historical criticism, annotation and transcription of source material, generalization, and the techniques of history and the social sciences. Examples will be drawn from all areas in which the department teaches. Prerequisite: 45 units including nine units of lower division history credit.

### **HIST 401-4 Problems in Modern German History**

An examination of major debates concerning the history of late-nineteenth and twentieth century Germany. Themes may include the nature of German modernity, interpretations of the Third Reich, or German memory after the Second World War. Prerequisite: 45 units, including nine units of lower division history and one of HIST 224, 225, 332 or permission of the department. Students who have taken HIST 486 in 2002-3 or 2003-3 may not take HIST 401 for further credit.

### **HIST 402-4 Renaissance Italy**

An exploration of the history and historiography of the Renaissance Italy. Emphasis will be given to politics, religion, culture and the economy, and to a balanced study of the Italian peninsula, including Florence, Venice, Rome, Naples, the countryside and smaller urban centres. Prerequisite: 45 units including nine units of lower division history and one of HIST 220, 223, HUM 219, 305, 311, 312 or permission of the department.

### **HIST 404-4 Protestants, Papists and Puritans: Culture and Belief in Early Modern England, 1500-1640**

From the world of late-medieval piety to the outbreak of the English Civil War, this research seminar examines the changing nature of religious belief in early modern England with a particular focus on the origins, development and impact of Protestantism. Prerequisite: 45 units including nine units of lower

division history and one of HIST 223, 315, 320, 405, 439 or permission of the department.

### **HIST 405-4 Authority and Community in Early Modern English Society, 1500-1700**

Examines select problems in the social history of early modern England with a particular focus on the changing relationship of authority and local communities and the level of the village and parish. Prerequisite: 45 units including nine units of lower division history and one of HIST 215, 223, 315, 316, 404 or permission of the department.

### **HIST 407-4 Popular Culture in Great Britain and Europe**

This course will study culture in Great Britain and Europe since 1500. Themes may include the sixteenth century separation between popular and elite culture, Carnival, the witch craze, popular ballads, the institution of 'rational recreation' during the Industrial Revolution, the late Victorian Music Hall, the cultural emancipation of women, and the effects on working class culture of economic depression and world war. Prerequisite: 45 units including nine units of lower division history. Recommended: HIST 105 or 106.

### **HIST 412-4 Marxism and the Writing of History**

This course aims to provide a basic understanding of Marx's theory of history and to introduce students to some of the important ideas used by Marxists in the writing of history. Readings for the course will include some of Marx' original work, the writings of historians who have been influenced by Marx as well as selected writings from some of Marx's critics. Prerequisite: 45 units including nine units of lower division history.

### **HIST 413-4 Britain and Europe in the Twentieth Century**

An examination, by means of a series of case studies, of the ways in which Britain's ambiguous relationships with Europe, the Empire/Commonwealth and the United States have shaped its identity in the twentieth century. Prerequisite: HIST 225 plus 45 units including nine units of lower division History. Recommended: HIST 337.

### **HIST 414-4 The Impact of the Great War**

A brief look at the political, social, and territorial changes of the Versailles settlement, followed by an examination of the impact of the war upon Europe, particularly through the examples of fascism in Italy, national socialism in Germany and the general breakdown of the liberal order during the 1930's. In certain semesters additional attention may be given to the Soviet Union. Prerequisite: HIST 225 plus 45 units including nine units of lower division history. Recommended: HIST 337.

### **HIST 415-4 Victorian Britain**

A study of major developments and controversies -- social, cultural, political, religious, economic -- during the period of the rise of industrial and class society. Prerequisite: 45 units including nine units of lower division history. Recommended: one or more of HIST 224, 315, 316.

### **HIST 416-4 The French Revolution**

An analysis of the origins of the Revolution, of its changing nature, and of its impact on society. The Revolution will be examined in its European context. Prerequisite: 45 units including nine units of lower division history. Recommended: HIST 223, 224.

### **HIST 417-4 Problems in Modern French History**

An examination of a principal aspect of, or period in, the history of French society since the Revolution. For example, attention may be given to the 19th century French revolutionary tradition, or to society and culture in the Third, Fourth and Fifth Republics, or to colonialism and decolonisation. Prerequisite: 45 units

including nine units of lower division history. Recommended: HIST 224 or 225.

#### **HIST 419-4 Problems in Modern Russian History**

Advanced analysis of specific problems in social, intellectual, and political history of modern Russia. Prerequisite: 45 units including nine units of lower division history. Recommended: HIST 224 or 225.

#### **HIST 420-4 Russia as a Multiethnic Empire**

An examination of how the Russian Empire grew, was maintained, and came to an end, if it did end, through a study of imperial and colonial policies and practices and the responses to these by the area's diverse peoples. Prerequisite: 45 units including nine units of lower division history.

#### **HIST 421-4 Modern Greece, 1864-1925**

Greece and Greek society will serve as a case study of a Balkan country that underwent several political and social transformations. Prerequisite: 45 units including nine units of lower division history.

#### **HIST 422-4 Greece, 1935-1944: Occupation and Resistance**

Examines the cycle of violence that followed the Axis occupation of Greece and created a political schism that lasted until the 1980s. The course will focus on Greek resistance, foreign relations and relations with the British intelligence services. Prerequisite: 45 units including nine units of lower division history.

#### **HIST 424-4 Problems in the Cultural History of Canada**

Selected problems in Canadian ideas and attitudes on such topics as the arts, religion, education, minority and native cultures, nationalism, and Canadian historiography. Prerequisite: 45 units including nine units of lower division history. Recommended: HIST 101, 102.

#### **HIST 425-4 Gender and History**

Explores historical changes in masculinity and femininity. Using a thematic and transnational/comparative approach, it will examine how gender identities are formed and refashioned within different historical contexts. It will also explore the interaction between gender and other systems of power such as race, class, and ethnicity. Prerequisite: 45 units including nine units of lower division history.

#### **HIST 426-4 State Power and Social Regulation in North America**

An examination of the growth and evolution of the relationship between state and society in North America. It will examine the myriad direct and indirect ways in which the state has regulated the lives of North Americans and the equally diverse ways in which North Americans have sought to influence and shape state policy. Prerequisite: 45 units including nine units of lower division history. Recommended: PHIL 120 or 220.

#### **HIST 427-4 Problems in the History of Aboriginal Peoples**

Examination of selected themes in the history of Aboriginal peoples. Prerequisite: 45 units including nine units of lower division history.

#### **HIST 428-4 Problems in the Social and Economic History of Canada**

Selected problems in the history of Canadian agriculture and industrial development, migration and settlement, labor, native policy and class structure. Prerequisite: 45 units including nine units of lower division history. Recommended: HIST 101, 102.

#### **HIST 430-4 New France**

Social, cultural, intellectual, economic, military, and administrative aspects of New France. Prerequisite: HIST 101 plus 45 units including nine units of lower division history. Recommended: HIST 102.

#### **HIST 432-4 Problems in Environmental History**

An investigation into the major themes and arguments in the environmental histories of North America, emphasizing how different individuals and groups have used, perceived, and managed their environments over time. Prerequisite: 45 units including nine units of lower division history. This course is identical to GEOG 432 and students cannot take both courses for credit.

#### **HIST 433-4 Italian Films, Italian Histories**

Explores the representation of modern Italian history through the medium of film. Prerequisite: 45 units, including nine units of lower division history plus eight units of upper division history, or any one of the following courses: HIST 486 D100 (spring 2006 Italian Fascism); HIST 390 D100 (spring 2007 Modern Italy); HIST 486 D100 (spring 2008 Fascist Italy). Students who have taken HIST 486 D100 in fall 2007 (1077) may not take this course for further credit.

#### **HIST 436-4 British Columbia**

Selected problems in the social, cultural, economic and political development of British Columbia. Prerequisite: 45 units including nine units of lower division history. Recommended: HIST 101 and 102.

#### **HIST 439-4 Catholicism in Early Modern Europe**

An examination of the complex history of Catholicism in Europe in the period 1500-1789. By elucidating the diversity within and among institutions and religious experiences, it will challenge the traditional assumption that Catholicism constituted a religious monolith impervious to historical change. Subjects for particular focus may include historiographical approaches to Catholicism, the papacy, the Society of Jesus, popular religion, the role of art. Prerequisite: 45 units, including nine units of lower division history and one of HIST 220, 223 or 320.

#### **HIST 442-4 America's Empires**

Explores the various empires (Indigenous, Spanish, French, Dutch, British) that sought dominance in North America after 1500, and discusses the usefulness of 'empire' as a way of thinking about history and power. Prerequisite: 45 units including nine units of lower division history. Recommended: at least one of HIST 208, 209, 212, 213, and 223. Students with credit for HIST 487 in 1047 may not take this course for further credit.

#### **HIST 444-4 Conceptualizing Atlantic Canada**

Explores the social, political, economic, cultural, and intellectual environments in which the region of Atlantic Canada has been created and re-imagined over time. Prerequisite: 45 units, including nine units of lower division history. Recommended: HIST 101 or 102. Students who have taken HIST 485 D100 in fall term 2006 (1067) may not take HIST 444 for further credit.

#### **HIST 446-4 American Revolution and the Making of the Constitution**

Selected topics may include the Revolutionary War Era; the American Enlightenment; the New Nation; American Diplomacy in the Formative Period. Prerequisite: 45 units including nine units of lower division history. Recommended: HIST 212.

#### **HIST 450-4 Race, Expansion and War in the Early American Republic**

Explores the awkward relationship between racial diversity and territorial expansion in the early American republic, and examines the political, social, economic and cultural elements that led to the American Civil War. Prerequisite: 45 units including nine units of lower division history. Students with credit for HIST 447 under the same topic may not take HIST 450 for further credit. Recommended: HIST 212.

#### **HIST 451-4 Oral History: Theories and Practices**

Examines theoretical debates, ethical issues, and methodological challenges that revolve around the field of oral history. Prerequisite: 45 units including nine units of lower division history.

#### **HIST 454-4 The History of Sexuality**

Explores how ideas, practices and identities have changed over time in response to social, political and economic pressures. Emphasis on postmodern approaches to understanding sexuality, and the international historical scholarship it has generated. Chronological and geographical focus of this course may vary. Prerequisite: 45 units including nine units of lower division history.

#### **HIST 455-4 Race in the Americas**

An examination of the role of racial thinking in the history of the Americas, from the era of the Conquest to the present day. Topics may include African and Indigenous slavery, the development of scientific racism in the 18th and 19th centuries, and the persistence of racism in the present day. Prerequisite: 45 units including nine units of lower division history.

#### **HIST 456-4 The Late Ottoman Empire: State, Culture and Social Transformation, 1750-1923**

Focuses on major issues and trends in the history of the Ottoman Empire from the mid-eighteenth century to its demise in the aftermath of World War I. Prerequisite: 45 units including nine units of lower division history. Recommended: HIST 151 and 249. Students who have taken HIST 486 D200 in 1061 may not take this course for further credit.

#### **HIST 457-4 The Turkish Republic: Politics, Society, and Culture, 1918-Present**

Examines the political, social, and cultural transformation in Turkey from the end of World War I to the present. Topics may include the Ottoman legacy in the Turkish Republic, issues of nation building, national identity and ethnicity, the role of the military in Turkish politics, changing concepts of gender, the role of political Islam, and Turkish diasporas. Prerequisite: 45 units including nine units of lower division history. Recommended: HIST 151 and 249. Students with credit in HIST 486 D100 in 1057 may not take this course for further credit.

#### **HIST 458-4 Problems in Latin American Regional History**

Advanced concepts and methodology applied to the study of one or more Latin American regions. Examples are: pre-Columbian and colonial Middle America; revolutionary Mexico 1910-1970, Brazil from Slavery to Militarism, frontier society to hyper-urbanism in the La Plata countries. Prerequisite: 45 units including nine units of lower division history. Recommended: one of HIST 104, 208, 209, LAS 200.

#### **HIST 459-4 Problems in the Political and Social History Latin America**

Advanced concepts and methodology applied to the study of traditional and contemporary institutions (the church, the great estate, the peasantry, elite structures) and/or political movements (agrarian revolution, populism, the modernizing military). Emphasis placed on changing historiographical interpretations. Prerequisite: 45 units including nine units of lower division history. Recommended: one of HIST 104, 208, 209, LAS 200.

#### **HIST 460-4 Themes in Byzantine History**

Familiarizes the student with the main problems in the study of Byzantine social, political, economic and intellectual history. Students will be exposed to the main primary sources available to the Byzantinist and will read articles and books by the most influential scholars in the field of Byzantine studies. Prerequisite: 45 units, including 9 hours of lower division history.

**HIST 461-4 Oral History: Practicum**

A comprehensive oral history project for students who have completed HIST 451. Prerequisite: 45 units including nine units of lower division history and HIST 451.

**HIST 462-4 Religion, Ethnicity, and Politics in Twentieth Century Northern Ireland**

Explores the creation of Northern Ireland and the conflicting understandings of the past that led to discrimination and sectarian violence in the Twentieth Century. Prerequisite: 45 units including nine units of lower division history. Recommended: HIST 362.

**HIST 465-4 The Palestinian-Israeli Conflict**

A discussion of the modern history of nation-building in the context of the Arab-Israeli conflict. The topics discussed include Zionism, the British Mandate in Palestine, the creation of the state of Israel, the rise of modern Palestinian nationalism, and the role of the Palestinian-Israeli dispute in regional and international affairs. Prerequisite: 45 units including nine units of lower division history and one of HIST 151, 249, 251, 350, 354, 355 or permission of the department.

**HIST 466-4 Religion and Society in Africa, Nineteenth and Twentieth Centuries**

Explores the transition from the practice of indigenous religions to adherence to Christianity or Islam in Africa over the last two centuries. Examines through a series of case studies the growth of the world religions in Africa and the interaction of both with African religion. Prerequisite: 45 units including nine units of lower division history. Recommended: HIST 146. Students who have taken HIST 486 D100 in fall term 2006 (1067) may not take HIST 466 for further credit.

**HIST 467-4 Modern Egypt**

An interpretive discussion of the course of modern Egyptian history. This may range from the advent to power of Muhammad Ali Pasha until recent times, or may focus on specific periods of revolutionary change. Prerequisite: 45 units including nine units of lower division history and one of HIST 151, 249, 251, 350, 354, 355 or permission of the department.

**HIST 468-4 Problems in the History of Religion**

An advanced examination into the concepts and methodology of the history of religion. Prerequisite: 45 units, including nine units of lower division history.

**HIST 469-4 Islamic Social and Intellectual History**

Advanced analysis of specific problems in Islamic social and intellectual history, with an emphasis on traditional patterns and on their transformation in the modern world. Prerequisite: 45 units including nine units of lower division history. Recommended: one of HIST 249 or 352.

**HIST 470-3 Practicum III**

This is the third term of the Co-operative Education Program. The work experience will be focused in a specialized area of the student's choice. Units from this course do not count towards the units required for an SFU degree. Prerequisite: normally 90 units (including HIST 370 and 375) with a minimum CGPA of 2.75. Students should apply to the co-op co-ordinator one term in advance. Students entering 400 division seminars should have an appropriate background in 100 and 200 division and/or 300 division history. Normally, students should have completed 45 units (or the equivalent) prior to enrollment in any upper division history course.

**HIST 471-4 Women in Modern Japanese History**

The history of Japan from 1600 to the mid 20th century with a focus on the economic, social, cultural and political contributions of women. Prerequisite: 45 units including nine units of lower division history. Students with credit for HIST 485 in 2001-1 or HIST

488 in 2002-1 may not take this course for further credit.

**HIST 472-4 Problems in World History**

An advanced examination into the concepts and methodology of world history. Selected themes may include globalization, modernization, migration, religious expansion, colonialism, imperialism, and the teaching of world history. Prerequisite: 45 units including nine units of lower division history.

**HIST 473-4 The Making of South African Society**

An examination of the way in which South African society evolved in the 19th and 20th centuries. Particular attention will be paid to the problem of race relations. Prerequisite: 45 units including nine units of lower division history. Recommended: HIST 231, 348.

**HIST 475-3 Practicum IV**

This is the fourth term of the Co-operative Education Program. The work experience will require a high level of expertise in research and writing skills as well as an ability to exercise independent judgement. Units from this course do not count towards the units required for an SFU degree. Prerequisite: normally 105 units (including HIST 370, 375 and 470) with a minimum CGPA of 2.75. Students should apply to the co-op co-ordinator one term in advance. Students entering 400 division seminars should have an appropriate background in 100 and 200 division and/or 300 division history. Normally, students should have completed 45 units (or the equivalent) prior to enrollment in any upper division history course.

**HIST 479-4 Change, Conflict and Resistance in Twentieth-Century China**

Focuses on underprivileged and disenfranchised groups -- farmers, workers, women, ethnic minorities, etc. -- and on the mechanisms of inclusion and exclusion that structure modern Chinese society. Note that the seminar covers mainly continental China. Taiwan, Hong Kong, and the Chinese diaspora will be discussed only in passing. Prerequisite: 45 units including nine units of lower division history, including HIST 255 or 365, or permission of the department.

**HIST 485-4 Studies in History I**

Special topics. Prerequisite: 45 units including nine units of lower division history.

**HIST 486-4 Studies in History II**

Special topics. Prerequisite: 45 units including nine units of lower division history.

**HIST 489-4 Studies in History**

Allows students to pursue in greater depth a particular historical problem. It will be offered either as an individual reading course or as small seminars, depending upon student and faculty interest. Prerequisite: 45 units including nine units of lower division history. Recommended: at least three upper division courses in history.

**HIST 490-4 Studies in History**

Allows students to pursue in greater depth a particular historical problem. It will be offered either as an individual reading course or as a small seminars, depending upon student and faculty interest. Admission only by consent of instructor. Prerequisite: 45 units including nine units of lower division history. Recommended: at least three upper division courses in history.

**HIST 498-6 Honors Essay**

Written under the direction of an individual faculty member, the honors essay will reflect a familiarity with the events and literature of a particular area of study. Prerequisite: 45 units including nine units of lower division history. Students entering 400 division seminars should have an appropriate background in 100 and 200 division and/or 300 division history. Normally, students should have completed 45 units (or the equivalent) prior to enrollment in any upper division history course.

**HIST 805-5 The North American West****HIST 806-5 Themes in Canadian History****HIST 810-5 Themes in European History****HIST 812-5 History and Theory****HIST 814-5 Historical Methods****HIST 815-5 Prospectus Workshop**

Students will propose, revise, and present their thesis prospectus, in preparation for researching and writing their thesis.

**HIST 821-5 Early Modern World****HIST 822-5 Themes in British and Irish History****HIST 823-5 Modern Russia****HIST 824-5 Modern France****HIST 825-5 Modern Germany****HIST 826-5 International Relations****HIST 843-5 Themes in United States History****HIST 845-5 Themes in Latin American History****HIST 852-5 Themes in Middle Eastern History****HIST 864-5 Themes in African History****HIST 870-5 Themes in Asian History****HIST 871-5 Culture and Society in India****HIST 879-5 Environmental History**

Examines the role of the environment in history. Environmental factors can be understood both as agents of historical change and as framework within which change takes place. Environment in this sense is a continually constructed phenomena, but also an ideal around which current debates unfold.

**HIST 882-5 Oral History**

Examines the methods, theories, and epistemological issues associated with the practice of Oral History.

**HIST 883-5 Film and History**

Explores the use of film in the study of the past. Films are considered both as primary documents — that is, texts produced in the moment — and as interpretive tools that are themselves engaged in a discussion of the past.

**HIST 884-5 Science and Society****HIST 885-5 Law and Society****HIST 886-5 Migration and Settlement****HIST 887-5 Comparative Labor History****HIST 888-5 Indigenous Peoples****HIST 889-5 Colonialism/Post-Colonialism**

A trans-regional study of the colonial and post-colonial condition, focusing on the ways that colonial systems of knowledge and practices persist, albeit transformed, in societies long after formal systems of rule are ended.

**HIST 890-5 Gender and History****HIST 891-5 The French Experience in North America****HIST 892-5 Religion and Society****HIST 894-5 War and Society****HIST 895-5 Rural History****HIST 896-5 Race and Ethnicity****HIST 897-5 Supervised Readings****HIST 898-6 MA Thesis****HIST 899-6 PhD Thesis****HIST 900-6 Research Project****Humanities HUM****Faculty of Arts and Social Sciences****HUM 101W-3 Introduction to the Humanities**

An introduction to issues and concepts central to the study of the Humanities. Through exposure to primary materials drawn from different periods and disciplines, students will become acquainted with a range of topics and ideas relating to the study of human values and human experience. Writing/Breadth-Humanities.

**HUM 102W-3 Classical Mythology**

An introduction to the central myths of the Greeks and Romans. The course will investigate the nature, function, and meaning of myths in the classical world

and their considerable influence on western civilization. Writing/Breadth-Humanities.

**HUM 103-3 The Invention of the Book: Alphabets, Papyrus, Parchment, and Print**  
The book as we know it did not always exist; it was invented. This course will explore the creation and spread of writing, the emergence of scribal cultures, and the birth of the book, which came to be the greatest of all material, cultural and intellectual objects, one that shaped and transformed civilization. Breadth-Humanities.

**HUM 105-3 Western Civilization from the Ancient World to the Reformation Era**  
A study of some of the most important features of western civilization from its origins until the mid-16th century. Prerequisite: students who have taken HIST 105 prior to 2007 may not take this course for further credit. Breadth-Humanities.

**HUM 130-3 Introduction to Religious Studies**  
An introduction to concepts central to the academic study of religion exploring various relevant methodologies. Provides a framework for understanding the many ways in which humans experience the phenomenon of the sacred through symbol, ritual, doctrine and experience in a variety of religious traditions and cultures. Students who have taken HUM 230 prior to 2007 may not take this course for further credit. Breadth-Humanities

**HUM 151-3 Ancient Greek I**  
An introduction to the classical Greek language.

**HUM 152-3 Ancient Greek II**  
The continuation of Ancient Greek I. Prerequisite: HUM 151, or permission of the instructor.

**HUM 161-3 Latin I**  
An introduction to the Latin language.

**HUM 162-3 Latin II**  
The continuation of Latin I. Prerequisite: HUM 161 or permission of the instructor.

**HUM 201-3 Great Texts in the Humanities I**  
An intensive study of some of the major works which have had a formative influence on the structure and development of western thought. Reading and discussion of primary texts and the major themes which emerge from them will introduce students to essential philosophical, literary, social, and religious themes of western civilization. Texts for this course will be drawn from the Ancient World, Middle Ages and the Renaissance. Prerequisite: 30 units. Breadth-Humanities.

**HUM 202-3 Great Texts in the Humanities II**  
An intensive study of some of the major works which have had a formative influence on the structure and development of western thought. Reading and discussion of primary texts and the major themes which emerge from them will introduce students to essential philosophical, literary, social and religious themes of western civilization. Texts for this course will be drawn from the 17th century through to the modern period. Prerequisite: 30 units. Breadth-Humanities.

**HUM 203-3 Great Texts in the Humanities III**  
An introduction to classic texts which have endured as monuments of Asian thought and literature. Readings and discussions of primary texts and their central ideas will introduce students to philosophical, literary and religious themes in a selected, major Asian tradition. Prerequisite: 30 units. Breadth-Humanities.

**HUM 204-3 Great Religious Texts**  
A study of some of the key works which have had a formative influence on major religious traditions. Primary texts will be selected to illustrate core elements in the religious understanding of human life and its relationship to the sacred. Prerequisite: 30

units. HUM 130 (HUM 230 prior to 2007) is recommended.

**HUM 211-3 Art and Literature of the Italian Renaissance**  
An interdisciplinary introduction to the art and literature of the Italian Renaissance (c. 1300-c. 1500). Studies the major developments in Renaissance Italian painting, sculpture and architecture alongside some of the most influential texts of the period. Prerequisite: 30 units.

**HUM 216-3 The Ancient World**  
Aspects of the ancient history and culture of the Near East, Greece and Rome. Recommended: HUM 105 (formerly HIST 105 prior to 2007). Students who have taken HIST 216 may not take this course for further credit. Breadth-Humanities.

**HUM 219-3 The Early Middle Ages**  
An examination of Eastern and Western Christendom from Late Antiquity to the 12th-Century Renaissance emphasizing religious, political, cultural, and social change. Students who have taken HIST 219 may not take this course for further credit. Breadth-Humanities.

**HUM 240-3 Studies in Modern European Culture**  
A thematic approach to European culture through the examination of a selection from historical, literary, philosophical and/or aesthetic materials. Prerequisite: 30 units.

**HUM 301-4 Ancient Studies**  
A detailed interdisciplinary analysis of a selected topic, issue, or personality in the Ancient World. Prerequisite: 45 units. Students who have taken this course topic under HUM 382 or 383 cannot take this course for further credit.

**HUM 302W-4 The Golden Age of Greece: An Integrated Society**  
The study of Athenian society in the 5th century BC, a period unique in the record of human achievement during which virtually all the major humanistic fields were either initiated or received significant new impetus. Integrates the remarkable achievements of this 'Golden Age' in an interdisciplinary examination of its art, architecture and writings. Prerequisite: 45 units. Writing/Breadth-Humanities.

**HUM 303-4 The Latin Humanist Tradition**  
Studies in the writings of various Latin authors. Prerequisite: 45 units. Breadth-Humanities.

**HUM 305-4 Medieval Studies**  
A detailed interdisciplinary analysis of a selected topic, issue, or personality in the Middle Ages. Prerequisite: 45 units.

**HUM 307-4 Carolingian Civilization**  
A focused interdisciplinary study of the Carolingian civilization achieved in early medieval Europe under Charlemagne and his family. Prerequisite: 45 units. Breadth-Humanities.

**HUM 309-4 Literatures and the Arts Across Cultures**  
An interdisciplinary study of literary texts in translation and/or art forms across cultures and periods. Includes a variety of approaches and themes such as translation studies, narrative theory, cultural analysis, global citizenship, modernity, postmodernity. Prerequisite: 45 units. Students who have taken this topic under HUM 381 or 382 may not take this course for further credit.

**HUM 311-4 Italian Renaissance Humanism**  
A study of the major writings, cultural milieu, and influence of the humanist movement of the Italian Renaissance. Prerequisite: 45 units. Breadth-Humanities.

**HUM 312W-4 Renaissance Studies**  
A detailed interdisciplinary analysis of a selected topic, issue, or personality from the Italian and/or Northern Renaissance. Prerequisite: 45 units. Writing.

**HUM 320-4 The Humanities and Philosophy**  
An exploration of the characteristic ways in which the humanities, with its emphasis on expression, belief and tradition, presents the important philosophical concepts of western civilization. Based upon an interdisciplinary selection of texts drawn from history, philosophy, literature and the arts. Prerequisite: 45 units. Breadth-Humanities.

**HUM 321-4 The Humanities and Critical Thinking**  
A study of the counter-traditions within western civilization. Compares and contrasts diverse traditions within western culture that critique its central value systems. It will focus on the attempts of great artists and thinkers to break with tradition, and the subsequent creation of new ideas and forms of experience and expression. Prerequisite: 45 units. Breadth-Humanities.

**HUM 322-4 The Humanities and the Critique of Culture**  
Focuses on the role and practice of cultural critique in the humanities based upon a selection of materials and analytical texts across disciplines. Includes such topics as the dark side of culture and its role in establishing and maintaining relations of domination and subordination, repression and violence. Prerequisite: 45 units.

**HUM 323-4 The Humanities in Canada**  
A study of selected themes from debates in and about the humanities in Canada. Based upon a selection of texts from philosophy, literature, the arts, politics and/or the social sciences. Prerequisite: 45 units.

**HUM 325-4 The Humanities and the Natural World**  
A study of the humanistic, scientific, political, and ideological discourses deriving from concern with the natural environment. Using classic and contemporary sources, this course examines the interaction of humans with the non-human world, and includes such topics as human communities and nature, the immersion of the individual in nature, nature and the human habitat. Prerequisite: 45 units. Breadth-Humanities.

**HUM 327-4 Critical Issues in the Study of the Future**  
An exploration of central controversies and issues in the study of the future. Prerequisite: 45 units. Strongly recommended: HUM 227.

**HUM 330-4 Religion in Context**  
An in-depth investigation of a specific case of religious history and tradition. Religion will be studied through the cultural and historical contexts that pervade and structure religious meaning and expression. Prerequisite: 45 units. Breadth-Humanities.

**HUM 331-4 Studies in Asian Religions**  
Studies the history and traditions of specific Asian religions through the cultural and historical contexts that structure religious meaning. Prerequisite: 45 units.

**HUM 332-4 Mythology in Context**  
A detailed interdisciplinary study of the role of mythology within a particular culture or tradition. Prerequisite: 45 units. Recommended: HUM 102.

**HUM 340-4 Great Cities in Their Time**  
An exploration of the cultural and intellectual accomplishments of a specific city that achieved prominence in a particular time period, and had substantial impact and influence on human civilization. Examines the political, social, religious, and cultural factors that help to explain a city's

significance and investigates the achievements of its citizens. Prerequisite: 45 units.

#### **HUM 350-4 Great Figures in the Humanistic Tradition**

An interdisciplinary study of the life and works of a man or woman who has made a lasting contribution to the humanistic tradition in more than one field of endeavor (e.g. philosophy, politics, literature, economics, religion). Prerequisite: 45 units. Students who have taken this topic under another Humanities course number cannot take this course for further credit.

#### **HUM 360-4 Great Themes in the Humanistic Tradition**

An interdisciplinary study of a selected theme that has made a lasting contribution to the humanistic tradition in more than one field of endeavour (e.g. philosophy, politics, literature, economics, religion). Prerequisite: 45 units. Students who have taken a course with this content under another Humanities course may not take this course for further credit.

#### **HUM 375-4 The Woodsworth Seminar**

A special topic in the humanities to be offered by the Woodsworth chair. Prerequisite: 45 units.

#### **HUM 381-4 Selected Topics in the Humanities I**

Prerequisite: 45 units.

#### **HUM 382-4 Selected Topics in the Humanities II**

Prerequisite: 45 units.

#### **HUM 383-4 Selected Topics in the Humanities III**

Prerequisite: 45 units.

#### **HUM 385-4 Selected Topics in European Studies**

An interdisciplinary approach to a topic focusing on European thought and culture. Prerequisite: 45 units.

#### **HUM 390-4 Directed Studies in Humanities**

Prerequisite: two of any 300 division humanities courses or permission of the chair plus permission of instructor. This course may be used only once for credit towards a degree and is reserved for Humanities Major, Joint Major, Extended Minor, Minor and PBD students.

#### **HUM 400-5 Humanities Study Project**

A substantial research and writing project culminating in the completion of an essay on a humanities topic. Prerequisite: completion of 75 units which should include at least two 300 division humanities courses; the signature of a faculty member who is willing to supervise the project; approval of the humanities chair. This course may be used only once for credit towards a degree and is reserved for Humanities Major, Joint Major, Extended Minor, Minor and PBD students.

#### **HUM 471-3 Practicum I**

First term of work experience in the Humanities Co-operative Education Program. Students should apply to the Faculty of Arts and Social Sciences Co-op Education co-ordinator one term in advance. Units from this course do not count towards the units required for an SFU degree. Prerequisite: a minimum of 30 units with nine units in Humanities courses and a minimum CGPA of 2.75

#### **HUM 472-3 Practicum II**

Second term of work experience in the Humanities Co-operative Education Program. Students should apply to the Faculty of Arts and Social Sciences Co-op Education co-ordinator one term in advance. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of HUM 471, a minimum of 45 units with nine units in Humanities courses plus a minimum CGPA of 2.75.

#### **HUM 473-3 Practicum III**

Third term of work experience in the Humanities Co-operative Education Program. Students should apply to the Faculty of Arts and Social Sciences Co-op Education co-ordinator one term in advance. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of HUM 472, a minimum of 60 units with nine units in Humanities courses plus a minimum CGPA of 2.75.

#### **HUM 474-3 Practicum IV**

Fourth term of work experience in the Humanities Co-operative Education Program. Students should apply to the Faculty of Arts and Social Sciences Co-op Education co-ordinator one term in advance. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of HUM 473, a minimum of 75 units with nine units in Humanities courses plus a minimum CGPA of 2.75.

#### **HUM 495-2 Humanities Graduating Seminar**

A graduating course required for majors and joint majors, focusing on issues and texts in the humanities in the past, present and future. Prerequisite: 16 units in upper division humanities courses or permission of the department. Restricted to majors and joint majors in Humanities. Grading will be on a pass/fail basis.

## **Interactive Arts IART Faculty of Applied Sciences**

#### **IART 612-1 Multimedia Applications**

In this course students will explore multimedia applications to produce an interactive non-sequential work using graphics, sound, text, and typography. Through on-line collaborative exchanges, learners will research and analyze contemporary works and technical resources. Conceptual problem solving activities will be used in class to emphasize visual literacy and foster the development of a personal visual vocabulary.

#### **IART 898-6 MASc Project/Research Paper IART 899-6 PhD Thesis**

## **Interactive Arts and Technology Faculty of Communication, Art and Technology**

#### **IAT 100-3 Systems of Media Representation**

Systems of two dimensional, three dimensional and interactive visual representation are surveyed as they apply to both physical and digital media. Classical notions of 2D mark making and 3D linear perspective are introduced along with contemporary alternatives with digital media. Topics in interactivity include narrative concepts, color and composition as meaning, and modes of perception and reception. The course culminates with the development of an interactive time-based group project centered on multimedia, user interactions and medium of delivery. Students with credit for TECH 117, 118, 119 and 120 may not take this course for further credit. Breadth-Humanities.

#### **IAT 102-3 Graphic Design**

Introduction to fundamental design principles for visual communication. Organized as a continual interplay of theory and practice, students will examine historical, philosophical, perceptual and semiotic approaches to understanding graphic design, and will explore principles of form, such as structure and composition, hierarchy, form, color, space, scale, typography, and legibility and readability through hands-on projects. Traditional time-based and

interactive media forms will be compared and contrasted.

#### **IAT 201-3 Human-Computer Interaction and Cognition**

Introduces topics in human perception, cognition and embodied action as a foundation of design for human use. It explores the practical application of techniques for analyzing diverse interactive situations and designing effective user interfaces. Students will engage in the analysis and design of a simple user interface, gaining detailed knowledge and experience with the standard basic techniques for interface specification, prototyping and evaluation. Prerequisite: completion of 24 units.

#### **IAT 202-3 New Media Images**

Explores the computational nature of technology as applied to contemporary art and design. It is a studio-based, media production course that explores new forms of art and design that are mediated by or modeled after computing processes as opposed to transforming or digitizing existing forms. Prerequisite: Minimum of 18 units. Recommended: IAT 100. Students with credit for IAT 101, TECH 121, 122, 123 may not take this course for further credit. Students who have taken TECH 124 before January 2008 may not take this course for further credit. Breadth-Humanities.

#### **IAT 204-3 Encoding Media Practice**

Introduction to programming techniques for new media artists and designers using a visual dataflow language suitable for the rapid prototyping of expressive media systems. Programming techniques are explored within the task environment for music, speech, animation, cinema and their performance. An approach to the performative aspects of programmed media is developed through a series of composition and design projects in software across media. These projects will address the aesthetic, symbolic and poetic potentials of new media in the context of an encoded media practice.

#### **IAT 206-3 Media Across Cultures**

Introduces a discursive framework for media, design and cultural interfaces enabling students to interpret, negotiate, and engage with new media with an awareness of the significance of cultural and contextual difference. Assessment is based on written and project work. Prerequisite: completion of 18 units. Breadth-Humanities

#### **IAT 208-3 Drawing as Inquiry**

An overview of the various forms and languages of drawing as both a critical and creative research tool. Activities and projects in each unit offer opportunities to understand and apply drawing as a medium for visual thinking and conceptualization. Related social and gender concerns are investigated to contextualize figurative representations within a broader cultural framework. Students with credit for IART 216, 217 and 218 may not take this course for further credit.

#### **IAT 209-3 Critical and Creative Thinking**

Identifies characteristics of critical thinking and innovative and creative thinking, and develops a framework for discussing and understanding concepts of knowing, questioning, and developing and presenting ideas. Students learn to build an argument through rhetorical methods, explore the history and formulation of criticism, develop and formulate questions as a mechanism for constructing and supporting concept building. Students will explore the characteristics of innovation and creativity, including the importance of informational mediaries such as "opinion leaders" and "change agents." Prerequisite: minimum of 18 units. Students with credit for INTD 213, 214 and 215 may not take this course for further credit.

**IAT 209W-3 Critical and Creative Thinking**

Identifies characteristics of critical thinking and innovative and creative thinking, and develops a framework for discussing and understanding concepts of knowing, questioning, and developing and presenting ideas. Students learn to build an argument through rhetorical methods, explore the history and formulation of criticism, develop and formulate questions as a mechanism for constructing and supporting concept building. Students will explore the characteristics of innovation and creativity, including the importance of informational mediaries such as "opinion leaders" and "change agents." Prerequisite: minimum of 18 units. Students with credit for INTD 213, 214 and 215 may not take this course for further credit. Writing.

**IAT 222-3 Interactive Arts**

Introduces key concepts within contemporary digital art practices. Issues surrounding digital art will be explored through readings, the study of artworks, and the creation of their own artistic projects. Prerequisite: completion of 24 units. Students with credit for IAT 322, IAT 319, 320, or 321 cannot take this course for further credit. Breadth-Humanities

**IAT 233-3 Spatial Design**

Designing and understanding spaces used by people. The iterative process of making and criticizing, experiencing and analysing spatial form. Compositional ideas for form-making. Critical thinking applied to design. Computers are the principal medium used in this course for form-making and visualization. Prerequisite: IAT 102 or an approved course in design. IAT 102 can be taken as co-requisite from September 2008 to August 2009.

**IAT 235-3 Information Design**

Introduces theory and practice of designing visual representations of information. Students will learn to visually translate textual, numerical and evidentiary information so that it can be communicated to diverse user communities and contexts. An emphasis will be on understanding how the meaning of images can change over time and across contexts and cultures. Beginning with photographic images, interactive charts, graphs, and maps, projects progress to more complex information in media forms ranging from advanced aspects of the web to interactive 3D visualizations. The relationship between visual display is explored in relation to its technology of creation, including code and information architecture. Prerequisite: IAT 102. IAT 102 can be taken as co-requisite from September 2008 to August 2009.

**IAT 243-3 Sound Interaction**

An introduction to the acoustic and psychoacoustic properties of our sense of space as provided by sound and their digital mediation. Recording, editing and interactive audio design are introduced and used for the composition of audible spatial environments. Students learn the theory and practice of sound as it interacts with visible images and explore fundamental audio techniques for interactive audio-visual presentation. Students with credit for IAT 243, 244 and 245 may not take this course for further credit.

**IAT 244-3 Digital Photography I: Post Photography**

An introduction to digital photography and photographic image modification through the use of computer technology. Students will build skills and techniques in digital photography and image processing for digital printing, the web, and interactive multimedia. Emphasis is placed on acquiring digital photographic skills based on proficiency through the appropriate use of software and image editing tools. Image formatting possibilities are investigated, along with aesthetic/functional aspects of site navigation, design, sequence and consistency. Students with credit for IAT 222, 223 and 224 may not take this course for further credit.

**IAT 265-3 Multimedia Programming for Art and Design**

Using cases from topics such as animation, cinema, music and design, this course introduces a variety of programming tools and techniques. Practical use of multimedia scripting languages and authoring environments is covered in the context of a series of composition and design projects. Code libraries and programming techniques for specific media will be introduced. Assessment will be based on both programming and the expressive use of programs in their case context. Prerequisite: CMPT 120 (or equivalent first programming course). Students with credit for IAT 206, 207 and 208 may not take this course for further credit. Students will receive credit for one of, but not both of, CMPT 265 and IAT 265. Quantitative.

**IAT 267-3 Introduction to Technological Systems**

Introduction to the core technologies and systems used in media-rich interactive environments, including computer hardware, operating systems, input and output technologies, networking and media. The concepts will be examined by working in a high-level media programming environment. Prerequisite: CMPT 120 (or equivalent first programming course). Recommended: IAT 265 or other second year programming course. This course is equivalent to CMPT 267; students with credit for CMPT 267 may not take this course for further credit.

**IAT 309W-3 Writing for Design, Media, and Informatics**

Develops critical thinking and writing strategies adaptable to professional communications in design, media arts and technology. Prerequisite: 48 units including a lower division W course. Writing.

**IAT 312-3 Foundations of Game Design**

Examines the discipline of game design. Games are studied across three analytical frameworks: games as rules (formal system), games as play (experiential system), games as culture (social system). Includes analytical and practical exercises in game design. Prerequisite: Completion of 48 units. Students with credit for IAT 404, 405 or 406 cannot take this course for further credit.

**IAT 313-3 Narrative and New Media**

Explores the role of narrative in various media and New Media environments, from traditional linear environments and multi-linear and networked media environments. Examines the relationship of narrative elements in the light of the practice and the aesthetics of New Media. It will include an overview of New Media theorists. Prerequisite: completion of 48 units. Students with credit for IAT 325, 326, or 327 cannot take this course for further credit.

**IAT 320-3 Body Interface**

Explores ideas of embodiment, knowledge, and space within the human relationship to technology. Throughout this course, students will construct and analyze contemporary and historical models of bodily interaction with machines, understand physical practices of embodiment, and apply these concepts to representation, design, and the production of artistic interface. Prerequisite: completion of 48 units, including IAT 267, 301 or 222; students with credit for IAT 331, 332, or 333 cannot take this course for further credit.

**IAT 333-3 Interaction Design Methods**

Examines concepts of design practice and related design methods for interaction designers. Design methods include ethnography, personas, design games, role-playing, scenarios, participatory workshops, and prototyping. Prerequisite: completion of 48 units, including IAT 265. Recommended: IAT 102 or 233. Students with credit for IAT 316, 317 or 318 cannot take this course for further credit.

**IAT 334-3 Interface Design**

Provides an introduction to the art and design of human-computer interfaces, design methods, prototyping and evaluation of user interfaces. Examines issues of interactivity and its relation to human contexts and technological systems. The role of aesthetic, symbolic, affective and cultural factors will be assessed in concert with scientific and technological issues. The class is primarily focused on visual interfaces on computer monitors and hand-held devices, but culminates with considerations of increasingly physical interactions in ubiquitous environments. Prerequisite: Completion of 48 units, including IAT 235.

**IAT 335-3 Analysis of Design Situations**

Examines methods for analyzing and gathering requirements for design situations as they relate to the range of ubiquitous computing applications. Examines the conceptual frameworks for understanding human action and context in design situations. Students will review a range of methods for requirements gathering, interviews, observation, ethnographic, ethno-methodological, performance workshops and informance design techniques. Students will also study qualitative, quantitative, and interpretive modes of analysis of data and how to support design with these findings. Students will engage in a range of case-stories and projects focused on user analysis. Prerequisite: completion of 48 units, including IAT 232 and IAT 331. Recommended: IAT 302.

**IAT 336-3 Materials in Design**

Introduces material properties and performance in the context of interactive artifacts. Covers criteria for material selection, including durability, environmental effects, tactile properties, manufacturing processes, compatibility and effects of particular forms of use. Prerequisite: IAT 233 or 230.

**IAT 337-3 Representation and Fabrication**

Introduces computer-based tools for representing and fabricating designs. Covers the representation of work within a design process, the use of visualization techniques to communicate with clients, and the use of digital fabrication technology to build prototypes. Projects are chosen to highlight key representational issues in contemporary design practice. Prerequisite: IAT 233 or 230.

**IAT 338-3 Interactive Objects and Environments**

Develops programming and scripting skills for developing combined software, and hardware prototype versions of interactive objects and environments. Covers the art and design of interactive objects and environments. Methodologies emphasizing embodiment, kinesthetics and haptics are introduced by combining theory and practice. Students develop programming skills for developing working prototypes comprised of software, sensors, and hardware. Prerequisite: completion of 48 units, including IAT 233, 235 and 267, or IAT 230, 231, 232 and 204. Students with credit for IAT 313, 314 or 315 cannot take this course for further credit.

**IAT 340-3 Experimental Sound Design Studio**

Techniques in real-time audio digital signal processing appropriate for game development and virtual environments are explored including interactive speech, music and sound effects. In conjunction with a study of the theory of the interaction of sound with other media elements students will have the opportunity to pursue interests in the design of sound for moving images and the composition of dynamic, navigable and immersive aural settings embedded in 3D graphic environments. Prerequisite: Completion of 48 units, including IAT 243.

**IAT 343-3 Animation**

An introduction to techniques for 3D computer animation such as keyframing, performance

animation, procedural methods, motion capture, and simulation. The course also includes an overview of story-boarding, scene composition, lighting and sound track generation. The course will explore current research topics in computer animation such as facial animation, behavioral animation, artificial life and interactive systems. Prerequisite: minimum of 24 units, including MATH 130 or MACM 101 or MATH 151 or equivalent. Students with credit for IAT 241, or IART 219, 220 and 221 may not take this course for further credit.

#### **IAT 344-3 Moving Images**

Reviews and consolidates the fundamentals of digital video production, including camera and composition skills, the role of sound, lighting, and continuity and montage editing. Students will review and analyze works from traditional cinema and from contemporary digital video. The course will reinforce fundamental skills and extend the student's abilities to use a range of digital production, post-production, and presentation techniques. Prerequisite: minimum of 48 units and IAT 202 or 101 or other approved digital video course. Students with credit for IAT 242, IART 222, 223 and 224 may not take this course for further credit.

#### **IAT 351-3 Advanced Human-Computer Interaction**

Students will learn about and gain experience with a wide variety of interaction technologies, environments and architectures supporting user interaction with systems in work, learning and play. Applied topics may include, but are not limited to, collaboration and computers; ubiquitous and responsive environments; security, trust and privacy; networking; and distributed and heterogeneous interfaces. Emphasis is on practical experience, involving a group design/analysis project in advanced topics in human computer interaction. Prerequisite: completion of 48 units, including IAT 265 or other approved second year programming course, and IAT 201 or equivalent introductory HCI course. Strongly recommended: IAT 267.

#### **IAT 352-3 Knowledge Media Architectures**

Architectures and technologies that people use for creating, capturing, storing, sharing, and accessing knowledge and information are introduced. XML technologies, databases and data mining are reviewed as means for sharing, storing and extracting knowledge in the context of personalized systems. The server-client and service oriented architectures are examined from the perspective of building interactive systems. Internet computing and collaborative technologies, including video conferencing, chat systems, peer to peer systems, social networking, and portals are reviewed as means for creating and sharing knowledge and information. Prerequisite: completion of 48 units, including IAT 265 or other approved second year programming course.

#### **IAT 355-3 Introduction to Visual Analytics**

Focuses on the design and implementation of interactive computer visualization techniques for the analysis, comprehension, and explanation of large collections of abstract information. The application of principles from perception, information visualization, interaction and visual analytics will be covered. Introduces tools for programming geometric information and displaying the results. Emphasizes development of practical skills in using graphics libraries and tools: students will develop programming experience with relevant examples and techniques. Prerequisite: IAT 201 and IAT 267 and either IAT 265 or CMPT 225 or other approved second year programming course. Recommended: IAT 235.

#### **IAT 380-3 Special Topics in Interactive Arts and Technology (Arts)**

Specific details of courses to be offered will be published prior to registration each semester. Prerequisite: 48 units and permission of the School.

#### **IAT 381-3 Special Topics in Interactive Arts and Technology (Science)**

Specific details of courses to be offered will be published prior to registration each semester. Prerequisite: 48 units and permission of the School.

#### **IAT 386-3 Directed Studies**

Independent reading and research topics selected in consultation with individual members of the SIAT faculty. Prerequisite: Completion of 48 units, and permission of the instructor and of the School is required. No more than 6 units of Directed Studies may be taken.

#### **IAT 387-3 Directed Studies**

Independent reading and research topics selected in consultation with individual members of the SIAT faculty. Prerequisite: Completion of 48 units, and permission of the School and the instructor is required. No more than 6 units of Directed Studies may be taken.

#### **IAT 391-3 Italian Design History**

Part of the 9-12 Credit ItaliaDesign Field School curriculum. The first course of four is taught in Vancouver five weeks prior to departure for Italy. Students prepare research plans for use once they arrive at each of four destinations (Rome, Tuscany, Florence, Milan). The course covers histories of city planning, architecture and urban design in these venues that live on in contemporary Italian design. Field school instruction is in three phases: (1) Vancouver: methodology and preparatory research work; (2) field study on-site in Italy, and upon return to Vancouver; (3) synthesis and writing-up of research and final arguments. This course fulfills the first phase. All projects will be available for viewing at the ItaliaDesign Field School public website. Students will also present their work to a live audience. Prerequisite: completion of 48 units. Corequisite: IAT 392/IAT 393 (ItaliaDesign Field School).

#### **IAT 392-3 Italian Design in Context: Learning from La Citta**

Part of the 9-12 Credit ItaliaDesign Field School curriculum. Field school instruction is in three phases: (1) Vancouver: methodology and preparatory research work; (2) field study on-site in Italy, and upon return to Vancouver; (3) synthesis and writing-up of research and final arguments. This course fulfills one half of phase 2 fieldwork in Italy. Student work is primarily in Rome and the hill towns of Tuscany and Florence. It requires using design and social science field methodologies to organize observations made of daily life and its expression in cultural patterns. Pattern "languages" provide a taxonomy, linking prior scholarship to student field work. This work in turn provides historical roots to understanding contemporary Italian design and design industry. Prerequisite: completion of 48 units. Corequisite: IAT 391/IAT 393 (ItaliaDesign Field School).

#### **IAT 393-3 Interaction Design Workshop I**

Involves a sequential series of projects based on field studies in Florence and Milan. Students are required to examine and interpret the impact of design on Italian life and culture in each designated centre. The field studies are supported by a series of in-situ lectures to provide a context for further reflection. Minor independent projects are completed in Florence and Milan followed by a major collaborative project focusing on an interpretation and reflection of the impact of design on life in Italy. Prerequisite: completion of 48 units. Corequisite: IAT 391/392 (ItaliaDesign Field School).

#### **IAT 394-3 Interaction Design Workshop II**

An optional fourth course and directed study. Participants must receive approval for their topics from the Field School instruction team prior to departure to Italy. Students can work individually or in teams on research or applied projects. Research must contribute to the ongoing ItaliaDesign repository. Projects focus on furthering knowledge of Italian Design and Innovation practices and extending the course concepts. Prerequisite: Completion of 48 units, including IAT 391, 392 and 393.

#### **IAT 402-3 Interdisciplinary Design Studio I (Science)**

Covers the spectrum of the production process from problem definition to prototype. Emphasis is on the implementation and evaluation of the technical systems entailed by the project. Teams may be formed with students concurrently enrolled in IAT 403. Students continue working on the project in the follow-up course IAT 404. Students may not concurrently enrol in IAT 402 and 403. Prerequisite: for SIAT majors — completion of 63 units including upper division writing course and SIAT BSc lower division requirements plus nine upper division IAT units; for SIAT Joint Majors — 63 units including upper division writing course and specified lower division requirements plus nine upper division IAT units; for non-SIAT Majors — special permission of the instructor. Students with credit for IAT 400, INTD 401, 402, 403, 404, 405 or 406 cannot take this course for further credit. Recommended: IAT 404 in the subsequent semester.

#### **IAT 403-3 Interdisciplinary Design Studio I (Arts)**

Development and evaluation of a media, design or informatics project. Projects vary from year to year and relate to current social and technological issues in society as well as students' interests and affinities. Design methods used will vary with project type. Covers the spectrum of the production process from problem definition to prototype. Teams may be formed with students concurrently enrolled in IAT 402. Students continue working on the project in the follow-up course IAT 405. Students may not concurrently enrol in IAT 402 and 403. Prerequisite: for SIAT Majors — completion of 63 units including upper division writing course and SIAT BA lower division requirements plus nine upper division IAT units; for SIAT Joint Majors — 63 units including upper division writing course and specified lower division requirements plus nine upper division IAT units; for non-SIAT Majors — special permission of the instructor. Students with credit for IAT 400, INTD 401, 402, 403, 404, 405, or 406 cannot take this course for further credit. Recommended: IAT 405 in the subsequent semester.

#### **IAT 404-3 Interdisciplinary Design Studio II (Science)**

Development and evaluation of a media, design or informatics project. The actual projects vary from year to year and relate to current social and technological issues in society as well as students' interests and affinities. Design methods used will vary with project type. Covers the spectrum of the production process from problem definition to prototype. Teams may be formed with students concurrently enrolled in IAT 405. Students may not concurrently enrol in IAT 404 and 405. Prerequisite: IAT 402.

#### **IAT 405-3 Interdisciplinary Design Studio II (Arts)**

Development and evaluation of a media, design or informatics project. The project is a continuation of the project started in IAT 403. The actual projects vary from year to year and relate to current social and technological issues in society as well as students' interests and affinities. Design methods used will vary with project type. Covers the spectrum of the

production process from problem definition to prototype. Teams may be formed with students concurrently enrolled in IAT 404. Students may not concurrently enrol in IAT 404 and 405. Prerequisite: IAT 403.

#### **IAT 410-3 Advanced Game Design**

Students will design and develop a variety of electronic games, culminating in an advanced game project. They will continue to analyze the experience of play within the game, and the connections between the game experience and broader cultural phenomena. Prerequisite: completion of 63 units, including IAT 265 or equivalent programming course. Students with credit for IAT 404, 405 or 406 cannot take this course for further credit. Strongly recommended: IAT 312.

#### **IAT 431-3 Speculative Design**

Provides students with the opportunity to experiment with designing in various non-normative frameworks provided by cultural studies, critical theory and phenomenology. Students will examine design's potential for cultural, social and ethical critique of emerging technologies and society. Rather than merely illustrating theoretical positions, this examination involves enacting and embodying differing theoretical positions, thereby rendering criticism productive. Individual design expertise and voice is emphasized. Prerequisite: completion of 63 units.

#### **IAT 432-3 Design Evaluation**

Examines evaluation concepts and methods for designers. Introduces a range of evaluation approaches including informal usability studies, lab experiments, field studies, and analytically-based evaluations. Students will explore techniques for feedback including usability tests, observation, interviews, heuristic reviews, and discursive evaluations. Underlying concepts of evaluation including scientific experimentation, ethnography, phenomenology, and aesthetics will be discussed. Students will learn how to design and implement appropriate evaluation studies for a range of design projects. Prerequisite: completion of 63 units. Recommended: IAT 201 and 235. Students with credit for IAT 332 may not take this course for further credit.

#### **IAT 443-3 Interactive Video**

An intermediate level investigation of interactivity explored through media, in the context of current display technologies relevant to Interactive Arts and Design. Examines recombinant, computational and compositional structures related to image, sound and video. Students explore video within technologies ranging from cell phones and mobile locative media, and hand held and wearable devices, to 3D immersive virtual and/or networked environments, video art installations, multiple scales of display technology, and responsive spaces. Students will design, produce and critically appraise work. Prerequisite: IAT 344 or 242.

#### **IAT 445-3 Immersive Environments**

Introduces advanced 3D computer animation and virtual world building techniques. Integrates hands-on fundamentals with design praxis and theoretical and research concerns. Fundamentals are complemented with examples from current research and design praxis. The studio aspect of the course will include assignments focusing on specific animation and behaviour modeling techniques and a team-based design project. Prerequisite: IAT 343 or 241. Students with credit for IAT 416, 417, or 418 cannot take this course for further credit.

#### **IAT 451-3 Design of Ubiquitous Environments**

Ubiquitous environments are those in which information and control services are available for casual use. The design of such environments requires in-depth understanding of patterns of use, user-centred design processes and knowledge of

enabling technologies. This course covers all three areas, with particular emphasis on how technologies enable human action. The well-known example of a smart house is used to motivate and demonstrate how ubiquity can act as a design principle. Prerequisite: Completion of 48 units, including CMPT 225.

#### **IAT 452-3 Developing Design Tools**

Introduces approaches to customizing and developing software applications as design-support tools to be employed in dynamic design environments comprising people, other tools, and their interactions in relation to the tasks to be performed. Discusses effective strategies for software development to find the best matching solutions for a given situation and applies the select methods in software design, prototyping, and evaluation. Makes use of software development processes, languages, and notations in representing design of the tools being developed. Experiments with contemporary systems such as drafting tools (CAD), authoring applications (for games, Websites, animations), parametric design-modeling systems, etc.; and searches their potentials to enhance design environments. Prerequisite: completion of 48 units, including IAT 351.

#### **IAT 455-3 Computational Media**

The representation of media is introduced: specifically one dimensional (sound), two dimensional (images) and three dimensional (moving images). This course focuses on techniques and methods for creating digital video special effects, allowing students to explore their creativity while extending their graphics and programming skills in digital media. Computational techniques based on signal processing are developed that support the creation, manipulation, combination, transformation, compression, storage and display/performance of different media forms. An important aspect is representation in the temporal/spatial vs. the frequency domain and different transformation techniques. Students will be required to generate special effects, critique and analyze effects from movies, develop skills and abilities to manipulate digital video and audio, and implement their own algorithms to express their technical and artistic skills. Prerequisite: IAT 265 and MACM 101. Recommended: MATH 151 or equivalent.

#### **IAT 480-3 Special Topics in Interactive Arts and Technology**

Specific details of courses to be offered will be published prior to enrolment each term. Prerequisite: Completion of 69 units and permission of the School

#### **IAT 481-3 Special Topics in Interactive Arts and Technology (Science)**

Specific details of courses to be offered will be published prior to enrolment each term. Prerequisite: Completion of 69 units and permission of the instructor.

#### **IAT 482-3 Special Topics in Performance and Media Arts**

Specific details of courses to be offered will be published prior to enrolment each term. Prerequisite: completion of 69 units and permission of the instructor.

#### **IAT 483-3 Special Topics in New Media Environments**

Specific details of courses to be offered will be published prior to enrolment each term. Prerequisite: Completion of 69 units and permission of the instructor.

#### **IAT 484-3 Special Topics in Technology in Art and Design**

Specific details of courses to be offered will be published prior to enrolment each term. Prerequisite:

Completion of 69 units and permission of the instructor.

#### **IAT 485-3 Special Topics in Interactive Design**

Specific details of courses to be offered will be published prior to enrolment each term. Prerequisite: Completion of 69 units and permission of the instructor.

#### **IAT 486-487-3 Directed Studies**

Independent reading and research topics selected in consultation with individual members of the SIAT faculty. Prerequisite: Completion of 69 units, and permission of the instructor and School are required. No more than 6 units of Directed Studies may be taken.

#### **IAT 488-1 Directed Studies**

Independent reading and research topics selected in consultation with individual members of the IAT faculty. Prerequisite: completion of 69 units. No more than six units of Directed Studies may be taken, and permission of the instructor and school are required.

#### **IAT 490-6 Honors Project Proposal**

Preparation for Honors Thesis Project including literature review, ethics approval (if necessary), and presentation of work in progress at end of the term. Prerequisite: Students accepted into Honors Program only.

#### **IAT 491-6 Honors Project**

Intensive work related to a particular topic in the field of Interactive Arts and Technology. Involves an extensive individual project under direct supervision of at least two committee members (at least one of whom is a SIAT faculty member) who will provide guidance and critical feedback as necessary. Prerequisite: Successful completion of IAT 490.

#### **IAT 800-3 Foundations of Computational Art and Design**

Aims at a robust understanding of models for art and design and representations of these models as symbol systems. It meets these aims through a set of case studies that demonstrate how computational thinking can affect professional and research outcomes. Its outcomes are preparedness for further relevant study and developing skill in using computers to support research and professional work in art and design.

#### **IAT 801-3 Qualitative Research Methods and Design**

An introduction to qualitative research practices. Covers structures of research that are prevalent across and at the intersection of the areas of art, design, media, human-computer interaction and information studies, introduces research methodologies and tools, and teaches methods for interdisciplinary work. This course will foster a critical discourse among differences in approaches to research.

#### **IAT 802-3 Quantitative Research Methods and Design**

Introduction to the research enterprise from a quantitative perspective. It covers structures of research that are prevalent across fields, introduces research methodologies and tools, teaches methods for interdisciplinary work and fosters a critical discourse around differences among research in different areas. Prerequisite: Graduate student status.

#### **IAT 805-0 Research Colloquium**

Through an interdisciplinary speaker series, presents research topics relevant to the SIAT graduate program. Engages students in discussion and debate on the utility, results and methods of research. Prerequisite: Enrolment in the SIAT graduate program.

#### **IAT 810-3 New Media**

Theory, history and current research in the field of new media. Its methods are the interweaving of

design, social/cultural, learning and aesthetic theories. Historical views of the field are provided through an analysis of the histories of technology, moments of media emergence, social and cultural movements, design and aesthetics. Outcomes are exploration, analysis and development of applied methods in order to better understand, design, create and assess new media and future “newer media” developments.

#### **IAT 811-3 Computational Poetics**

The theory and practice of metacreation, i.e. the design of generative and pro-active computer software endowed with creative behaviour is presented. Tools and techniques from artificial intelligence, artificial life and machine learning are introduced and exemplified through their application in previous artistic works. The interweaving of related theoretical and practical issues situates metacreation within a larger perspective on art, science and technology.

#### **IAT 812-3 Cognition, Learning and Collaboration**

Addresses what it means to know something, how people gain and use knowledge and complex skills, how to determine what an individual knows, how humans learn, how humans solve complex problems, how knowledge is created within a social and group context, and how to model human capabilities and performance. It selects and studies theoretical perspectives that inform the design of computer-based mediated environments, products and experiences.

#### **IAT 813-3 Artificial Intelligence in Computational Art and Design**

Applications of computational intelligence to art and design are introduced through a set of motivating examples. Specific areas of application include knowledge representation, problem solving, rule based systems, ontologies and statistical reasoning.

#### **IAT 814-3 Knowledge, Visualization and Communication**

Provides a cognitive and computational framework for understanding and designing graphical and visual representations. Investigates several psychological and computational models of diagram processing, and explores diverse interactive graphical systems.

#### **IAT 830-3 Learning Design and Media**

Students will gain an understanding of instructional design as an evolving set of theories and practices based on learning research. They will develop detailed knowledge of design strategies for interactive learning media and will be able to explain how they relate to cognitive theories of learning. As an overarching goal, students will develop the knowledge and skills to conduct basic research projects relating to the design of learning media.

#### **IAT 831-3 Encoding Media Practice**

Studies conceptual, aesthetic, and computational issues and techniques involved in the encoding of interactive media objects. It includes study of theoretical and poetical backgrounds in computer-human interaction (Bush, Dinkla, De Landa, Grosz, Deleuze, Manovich, Murray, Laske, Hamman, Ascott, Penny, Kahn), basic tenets of programming for the arts (media representations, practical machine perception, algorithmic processes, database strategies, display techniques), and practical exercises in programming interactive computer art that may include interactive cinema, audio and narrative.

#### **IAT 832-3 Exploring Interactivity**

Analyses, designs and prototypes more effective and more appropriate products and systems to support interactivity. This course will examine these issues through an iterative modeling process.

#### **IAT 833-3 Embodiment and Electronic Performance**

Combines theoretical and practical explorations of physicality and live performance in technologically mediated environments. It offers an introduction to phenomenology as a methodology for analyzing and elaborating new physical and technological hybrids. Students devise a performance experiment, while simultaneously exploring critical discourses around embodiment, virtuality, gender, and communication. This course is designated as a research methods course.

#### **IAT 834-3 Mixed Methods in Design Research**

A range of ways of knowing and inquiring in design research are explored by providing comparisons of different traditions appropriate for empirical mixed method design evaluations. This is a second research methods course. Prerequisite: One research methods course, either quantitative or qualitative. Students who received credit for this course when offered as IAT 888 Special Topics in Spring 2007 cannot take this course for further credit.

#### **IAT 835-3 Sustainable Interaction Design**

Sustainable interaction design (SID) examines the role of design in digital artifacts that support environmental sustainability. SID considers digital artifacts with respect to recycling, reuse, and renewal. The aim of the course is to introduce and understand SID concepts, research, and practice.

#### **IAT 840-3 Models of Networked Practice**

Examines several social frameworks for describing mutual activity in work and learning particularly in computer supported networked environments. The frameworks are used to describe, analyze and design the tools and approaches for new communities of practice. This course is designated as a research methods course.

#### **IAT 842-3 Theory and Design of Games**

Games have become a major part of our culture, rivaling the popularity of movies. Drawing on a wide variety of examples and disciplines, this course examines theories and techniques for the analysis of existing games, and the design of new ones. It studies game design, and will provide students with the conceptual and technical tools necessary to critique and design games of all kinds.

#### **IAT 844-3 Spatial Computing**

Covers the concepts, algorithms and design principles underlying modern 3D computer animation and visualization from a user interface perspective. Research topics include 3D user interface constructs; information, data and knowledge visualization; 3D graphics and animation; spatial perception; and virtual and immersive environments.

#### **IAT 845-3 Methods for Research into Technological Systems**

Key models of research into technological systems are analysed and compared. Together, they frame diverse methodologies for art, social science, business, engineering and information technology. Focus will vary by instructor and disciplinary combination being examined. In contrast to the Research Methods and Strategies Course, this offering considers specialized, discipline specific research tools taken in combination. These may be qualitative, quantitative, laboratory-based, field based (as in survey research), actively experimental or based on secondary analysis of archival data. This course is designated as a research methods course.

#### **IAT 846-3 Interactive Systems for Design**

Introduces students to the design of computational systems that themselves support the design process. Prerequisite: IAT 800.

#### **IAT 861-0 Practicum I**

#### **IAT 862-0 Practicum II**

#### **IAT 871-3 Directed Readings I**

#### **IAT 872-3 Directed Readings II**

#### **IAT 873-3 Directed Readings III**

#### **IAT 881-3 Special Topics I**

#### **IAT 882-3 Special Topics II**

#### **IAT 883-3 Special Topics III**

#### **IAT 884-3 Special Topics IV**

#### **IAT 885-3 Special Topics V**

#### **IAT 886-3 Special Topics VI**

#### **IAT 887-3 Special Topics VII**

#### **IAT 888-3 Special Topics VIII**

#### **IAT 897-6 MA Thesis**

Students who are working on their Master of Arts thesis enrol in this course. This course will not count towards the course work requirements.

#### **IAT 898-6 MSc Thesis**

Students who are working on their Master of Science thesis enrol in this course. This course will not count towards the course work requirements.

#### **IAT 899-6 PhD Dissertation**

Students who are working on their PhD dissertation enrol in this course. This course will not count towards the course work requirements. PhD candidate status is neither required for nor implied by enrolment in this course.

## **International Leadership MIL Faculty of Arts and Social Sciences**

#### **MIL 800-5 Research Methods**

This course will develop understanding of research design from theoretical, analytical, and practical standpoints and provide hands-on experience in a range of social science research techniques. It is designed to prepare MIL students to conduct original, independent research for their internship projects and in their future careers. Greater emphasis will be placed on qualitative than on quantitative research methods.

#### **MIL 801-5 International Financial Policy**

An advanced course designed to introduce graduate students to international finance issues from a policy perspective. The general orientation of the course is that of the international political economy of finance. From a strong and practical knowledge base, students will be able then to begin to look at applied problems in either Latin America or Asia.

#### **MIL 802-5 Regional Focus: Asia**

Provides an outline of the main elements to be engaged in interpreting Asia. This course focuses on historical and philosophical issues relating to the understanding of Asia in the context of contemporary global issues.

#### **MIL 803-5 Regional Focus: Latin America**

Provides an outline of the main elements to be engaged in interpreting Latin America. This course focuses on historical and philosophical issues relating to the understanding of Latin America in the context of contemporary global issues.

#### **MIL 804-5 Directed Readings I**

#### **MIL 805-5 Directed Readings II**

#### **MIL 806-3 Internship I**

All students in the Master's program in International Leadership will undertake a year long internship. The work they undertake must be of sufficient depth and breadth to allow the student the opportunity to demonstrate his or her acquired knowledge and skills. Students will be required to produce a work report, which will be an appraisal of the student's work experience. Graded S/U.

#### **MIL 807-3 Internship II**

#### **MIL 808-6 Internship Project**

Students complete their internship project and work with their supervisory committee to bring it to a final acceptable form.

**MIL 809-3 Internship Project Completion**

Students will continue to complete their internship project and work with their supervisory committee to bring it to a final acceptable form. Prerequisite: MIL 808.

## International Studies IS

### Faculty of Arts and Social Sciences

**IS 101-3 Introduction to International Studies: Studying Global Conflict and Co-operation**

Introduces international studies historically, tracing the patterns of conflicts and co-operation between nations, states and social groups in the world of the last half of the twentieth century and into the twenty-first. Examines important problems in the contemporary world from the perspectives of different social science disciplines: poverty and development aid; war; and environmental change. Considers the challenge of global governance. Breadth-Social Sciences.

**IS 200-3 Historical Perspectives on Diplomatic Relations, International Security and Law**

An introduction to the study of diplomacy, security and the development of international law. Emphasis will be on the 19th and 20th centuries, preceded by a general survey of early notions of sovereignty, concepts of total war and primitive diplomatic institutions, as well as the role of religion in politics. Prerequisite: IS 101, or permission of the department.

**IS 210-3 Comparative World Politics: Trajectories, Regimes, Challenges**

Introduces students to the variety of systems of governance in the world today, examines the historical and cultural sources of their different developmental trajectories, and assesses the challenges they face in the future. Prerequisite: IS 101 or consent of the department. Breadth-Social Sciences.

**IS 220-3 Wealth and Poverty of Nations**

Introduces students to the basics of international economics. Topics are drawn from both international trade: the gains from trade, the consequences to impediments to trade and factor mobility; and from international macroeconomics: the basic Mundell-Fleming framework; understanding the role of international organizations like the IMF, World Bank and BIS, and a case study of the European Union and its common currency. Prerequisite: IS 101 and ECON 105. Students with credit for INTS 220 may not take this course for further credit.

**IS 230-3 Transnationalism and Society**

Provides a survey of the basic issues relating to the study of transnationalism and society. Topics covered include identity and ethnicity, urbanization, migration, social networks, politics, and religion. Prerequisite: IS 101 or permission of the department. Breadth-Social Sciences.

**IS 231-3 Introduction to South Asia**

Provides an introduction to religion, culture and society in South Asia, primarily from the perspective of social and cultural anthropology, developing specialization in the region. Prerequisite: IS 101 or permission of the department.

**IS 232-3 Introduction to Southeast Asia**

Provides an introduction to religion, culture and society in Southeast Asia, primarily from the perspective of social and cultural anthropology, developing specialization in the region. Prerequisite: IS 101 or permission of the department. Breadth-Social Sciences.

**IS 240-3 Research Methods in International Studies**

Provides an introduction to the research enterprise in international studies with a particular focus on

quantitative methods. Prerequisite: 12 units. Students who have taken POL 201 or SA 255 may not take IS 240 for further credit. Quantitative.

**IS 302-4 Introduction to Humanitarian Intervention**

Investigates complex emergencies and the outcomes of conflict, specifically forced migration by refugees and internally displaced people (IDPs). Prerequisite: IS 200 and 45 units.

**IS 303-4 Ethnic Minorities, Identity Politics, and Conflict in Southeast Asia**

Surveys the ethnic minorities of Southeast Asia, focusing on their relations with other ethnic groups, especially majority populations, and governments. Examines the treatment of ethnic minorities and the responses of the minorities, including ethnic-based secession movements. Reviews cross-border and broader international issues relating to minorities, such as their status as refugees and cross-border support for insurgencies. Prerequisite: IS 200 and 45 units.

**IS 304-4 Russian Foreign Policies and Security Policies**

Introduces the Russian Federation's foreign and security policies. Reviews key actors, institutions, and stages in the development of Russian foreign policy development as well as the gap between rhetoric and realities in Russian foreign policy. Prerequisite: IS 200 and 45 units.

**IS 311-4 Democratic Transition in Comparative Perspective**

Examines factors influencing democratic tradition and consolidation in different regional settings comparatively, and explores the complex factors that influence the process of democratization. Analyzes the domestic and external conditions (cultural, social, economic, and political) that historically and recently have fostered or impeded the maintenance of democracy, particularly in post-conflict environments, 'new states,' and states challenged by the decay or collapse of traditional authoritarian forms of rule. Prerequisite: IS 200 or 210, and 45 units.

**IS 312-4 Europe: Undivided but Plural**

Explores political development in Europe from a comparative perspective, including an examination of the political institutions and dynamics of both West European and Eastern European states, and the role played by the European Union (EU) as an integrating and transformative factor in the politics of Europe. Prerequisite: IS 210, one of IS 200, 220 or 230, or permission of the department.

**IS 313-4 Nationalism, Democracy and Development in Modern India**

An examination of the differing narratives of nation and modernity in the struggle for independence from colonial rule in India, and their implications for the post-colonial state, for politics and for India's economic development. Prerequisite: IS 210 and 45 units. Recommended: IS 231.

**IS 313W-4 Nationalism, Democracy and Development in Modern India**

An examination of the differing narratives of nation and modernity in the struggle for independence from colonial rule in India, and their implications for the post-colonial state, for politics and for India's economic development. Prerequisite: IS 210 and 45 units. Recommended: IS 231. Writing.

**IS 314-4 National, Regional, and International Politics in Southeast Asia**

Provides an overview of national and political issues in Southeast Asia. Surveying politics in individual countries and regional political institutions, focus is given to particular themes such as democratization and civil society, communism and other forms of authoritarianism, the role of the military, decentralization, religion and politics, the impact of

China on the region, and security concerns. Prerequisite: IS 210 and 45 units.

**IS 315-4 Introduction to Middle East Politics**

Introduces the political, economic, and ideological dynamics of contemporary Middle Eastern states. Examines the legacy of colonialism, state formation, central ideological trends such as Arab nationalism and political Islam, the dynamics of state-society contention, and the challenges of economic development. Prerequisite: HIST 151 and 45 units. Students who have taken IS 419 under this topic may not take this course for further credit.

**IS 320-4 Selected Problems in the International Economy**

Introduces students to selected problems in the international economy. Topics are drawn from both international trade and international macroeconomics. Agricultural subsidies, tariffs and quotas, the Multi-fiber Agreement, the evolution of the world's airline industries, and the "brain drain" are of interest. Macroeconomics topics include the theory and evidence associated with currency crises, economic integration including understanding the NAFTA, the EU and German reunification and, more speculatively, the potential for Korean unification. Why economic growth is successful in some countries and not others will round out the topics. Prerequisite: IS 220 and 45 units; ECON 342 or ECON 345. Students with credit for INTS 320 may not take this course for further credit.

**IS 400-4 State Building and State Failure: Comparative Perspectives**

Challenges posed by state failure and fragility, and the tasks of reconstructing or building viable states, involve critical security dimensions that are of both a military and non-military nature. The issues of security, development, stabilization and democratization are inextricably linked. Exploration of the extensive body of literature on state formation and decay in various regional settings with an emphasis on the causes of state failure, and the prospects of state rebuilding. Prerequisite: IS 200 and 45 units.

**IS 402-4 The Great Game: International Politics in Asia in Historical Perspective**

Examines the causes and impact of the Great Game on Asia as well as on the international relations of the major imperial powers. Due to multi-state region covered by the subject matter, the approach will be thematic and comparative. Prerequisite: IS 200, and one of IS 210, 220 or 230, and eight upper division units within stream 1, or permission of the department.

**IS 403-4 Gender, Conflict and Nationalism**

Provides a survey of social, economic and political relations at the intersection of gender and nationalism. Both theories and practices of nationalism are explored and their gender implications probed in historical perspective. Feminist perspectives of nationalism and related conflict are also explored, focusing on specific sites and scales of nationalism: the state, the home, and the body. From nationalism in a colonial context to contemporary liberation movements, the gendered politics of dissidence and territory are examined. Prerequisite: IS 200, and one of IS 210, 220 or 230, and eight upper division units within stream 1, or permission of the department.

**IS 406-4 Selected Topics – Complex Emergencies**

Explores the background, dynamics, and outcomes of complex humanitarian emergencies generated by widespread violence and national catastrophes, drawing on country and regional case studies of international intervention to implement post-conflict and post-disaster recovery. Prerequisite: IS 200 and 45 units.

**IS 407-4 Selected Topics – Terrorism**

Considers the national and international impact of terror and terrorist organizations both in historical context and as a function of current events.

Prerequisite: IS 200 and 45 units.

**IS 408-4 Directed Readings I**

Independent research in a selected international studies area, under the supervision of at least one faculty member. A research report is required.

Prerequisite: by application to the undergraduate chair. May only be taken once for credit towards a degree or diploma.

**IS 409-4 Special Topics I**

Specific details of courses to be offered will be published prior to enrolment each term. Prerequisite: IS 200 and 45 units.

**IS 410-4 Politics, Institutions and Development**

The quality of institutions' exercises a crucial influence on the prospects for development. Aims are to interrogate this claim through analysis of different paths of economic growth and change across the developing world. Examination of the ways in which politics influences economic growth and distribution; the relationships between political systems and patterns of development; and the politics of institutions and state formation. Prerequisite: IS 210 and 45 units.

**IS 412-4 Central Asia, the Transcaucasus and Russia: Democracy, Development and Conflicts**

Examines the new states of post-Soviet Central Asia, the Transcaucasus and Russia, with particular reference to the relationship among democratization, development, autocracy and conflict, and the role of external actors in transnational security issues in the region. Prerequisite: IS 200 or 210, and 45 units.

**IS 415-4 Islamist Trend in Middle East Politics**

Focuses upon the political Islamist movements that have swept much of the Middle East and North Africa since the mid-1970s. Examines a broad range of movements, from liberal to militant trends, drawing on the experiences of countries throughout the region. Prerequisite: HIST 151 and 45 units. Recommended: IS 315. Students who have taken IS 419 under this topic may not take this course for further credit.

**IS 418-4 Directed Readings II**

Independent research in a selected international studies area, under the supervision of at least one faculty member. A research report is required. Prerequisite: by application to the undergraduate chair. May only be taken once for credit towards a degree or diploma.

**IS 419-4 Special Topics II**

Specific details of courses to be offered will be published prior to enrolment each term. Prerequisite: IS 210 and 45 units.

**IS 421-4 The Economics of International Organizations and Development**

Develops an understanding of the interactions between international organizations, economic theory, and implementation of economic policies. Explores as well the impact of their interventions in some chosen countries. Prerequisite: IS 220, and one of IS 210, 200 or 230, and eight upper division units within stream 3; or permission of the department.

**IS 427-4 Selected Topics – Globalization, Poverty and Inequality**

Examines evidence and argument on the economic consequences of globalization, with regard to growth and to trends in equality/inequality, and to poverty; and considers the conceptualization and measurement of poverty, its causes and dynamics, and public policy for poverty reduction. Prerequisite: IS 220 and 45 units.

**IS 428-4 Directed Readings III**

Independent research in a selected international studies area, under the supervision of at least one faculty member. A research report is required.

Prerequisite: by application to the undergraduate chair. May only be taken once for credit towards a degree or diploma.

**IS 429-4 Special Topics III**

Specific details of courses to be offered will be published prior to enrolment each term. Prerequisite: IS 220 and 45 units.

**IS 450-4 Seminar on Global Problems in Interdisciplinary Perspective**

An interdisciplinary course which aims to bring together different disciplinary perspectives on international affairs through the study of in-depth particular contemporary problems. Prerequisite: International Studies major or honors students. Eight upper division units.

**IS 450W-4 Seminar on Global Problems in Interdisciplinary Perspective**

An interdisciplinary course which aims to bring together different disciplinary perspectives on international affairs through the study of in-depth particular contemporary problems. Prerequisite: International Studies major or honors students. Eight upper division units. Writing.

**IS 451-4 Seminar on Core Texts in International Studies**

An interdisciplinary course which aims to bring together different disciplinary perspectives on international affairs through the study of influential texts which, between them, involve study of core themes to the program: development, governance and civil society, war and peace, human rights and questions of culture and ethnicity. Prerequisite: International Studies major or honors students. Eight upper division units.

**IS 451W-4 Seminar on Core Texts in International Studies**

An interdisciplinary course which aims to bring together different disciplinary perspectives on international affairs through the study of influential texts which, between them, involve study of core themes to the program: development, governance and civil society, war and peace, human rights and questions of culture and ethnicity. Prerequisite: International Studies major or honors students. Eight upper division units. Writing.

**IS 452-4 Special Topics – Field School I**

A multidisciplinary study of a selected country or region. Prerequisite: completion of 45 units and permission of the department.

**IS 490-4 Honors Seminar**

Intended for the research and preparation of materials for the honors graduating essay. Prerequisite: Admission is by permission of the instructor and the School. Students must complete this course before taking IS 499. Open only to students who have been accepted into the honors program.

**IS 499-5 Honors Essay**

In addition to regular meetings with their supervisors, students will be required to submit a major paper on a topic to be selected in consultation with the School. Prerequisite: IS 490. Admission is by permission of the instructor and the School. Open only to students who have been accepted into the honors program.

**IS 800-4 Problems in International Development Policy and Practice**

An inter-disciplinary course which aims to bring together different disciplinary perspectives on problems of policy and practice in international development. The particular problems taken up will be changed over time, with current events. Prerequisite: graduate students enrolled in the MA in International Studies, or permission of the instructor.

**IS 801-4 Institutions, Policies and Development**

'The quality of institutions' is now said to exercise a crucial influence on the prospects for development, and the course interrogates this claim both through analysis of different paths of economic growth and change across the developing world, and in regard to public administration and development management. It examines development policies and institutional theories, the politics of institutions and state formation, and the relationships between political systems, institutions and patterns of development. Prerequisite: graduate students enrolled in the MA in International Studies, or permission of the instructor.

**IS 802-4 Directed Readings A**

Examines the historical political economy of development. Prerequisite: graduate students enrolled in Stream A of the MA in International Studies, or permission of the instructor.

**IS 803-4 Economics of International Organizations and Development**

Aims at providing a comprehensive understanding of the mandate and role of a selection of International Organizations with economically driven mandate and their impact on international and national economic issues in developing economies. Policies that involve the joint interaction of government, civil society and international organizations are studied in the light of economic theory, and their implementations within the organizations' respective mandates are analysed. Prerequisite: students enrolled in Stream A of the MA in International Studies, or permission of the instructor.

**IS 804-4 Historical Perspectives on Diplomacy and International Security**

Examines the evolution of the role of modern diplomacy in the 19th century and its application in the international relations of the 20th century; its practice and institutions. Prerequisite: graduate students enrolled in Stream B of the MA in International Studies, or permission of the instructor.

**IS 806-4 State Failure and Reconstruction: Comparative Perspectives**

The challenges posed by the 'new wars' and by state failure, and their consequences, the needs of humanitarian intervention, and the tasks of reconstructing or building viable states, involve critical security dimensions that are of both a military and non-military nature. It will explore the extensive body of literature on state formation and decay, and on intervention, in various regional settings with an emphasis on the causes of state failure, and the prospects of state rebuilding. Prerequisite: graduate students enrolled in Stream B of the MA in International Studies, or permission of the instructor.

**IS 807-4 Complex Emergencies and Humanitarian Intervention**

A multidisciplinary exploration of the background, dynamics, and outcomes of complex humanitarian emergencies, both those generated by conflict and war and by national disasters, drawing on country and regional case studies. The problems surrounding international intervention in such emergencies will be a particular focus. Prerequisite: graduate students enrolled in Stream B of the MA in International Studies, or permission of the instructor.

**IS 808-4 Directed Readings B**

A multi-disciplinary examination of the roles played by international organizations in addressing the difficulties of post-conflict recovery and external intervention in complex humanitarian emergencies. Prerequisite: graduate students enrolled in Stream B of the MA in International Studies, or permission of the instructor.

**IS 809-4 Selected Topics – Economic and Social Development of Selected Regions**

Examines the specific development experience of a selected region, taking account of the historical context, of state capacity, development strategies and of the political economy of development — as well as of the particular problems of development across different sectors of the economy, and the outcomes in regard to poverty and levels of well-being. Prerequisite: graduate students enrolled in Stream A of the MA in International Studies, or permission of the instructor.

**IS 816-4 Global Security Studies: Concepts, Theories and Issues**

Examines a range of perspectives about security and applies them to key international issues. Prerequisites: must be a graduate student enrolled in stream B of the MA in international studies program; or permission of the instructor.

**IS 887-3 Pre-project**

Preparatory course for IS 888 MA Project. Prerequisite: enrolment in the MA in International Studies program.

**IS 888-6 MA Project**

Students are expected to complete either two extended essays (each of not more than 8,000 words) based on core readings, or with the approval of the program director, a project. Prerequisite: graduate students enrolled in the MA in International Studies.

**IS 889-3 MA Project Completion**

Students are expected to complete either two extended essays (each of not more than 8,000 words) based on core readings, or with the approval of the program director, a project. Prerequisite: graduate students enrolled in the MA in International Studies continuing to work on their project.

## International Studies and Political Science

### Faculty of Arts and Social Sciences

**ISPO 337-4 Comparative Politics of Latin America**

Examines several Latin American nations from historical, political, and political economy perspectives. Prerequisite: six lower division units in political science or permission of the department. This course is identical to LAS 337 and POL 337 and students cannot take this course for further credit.

**ISPO 450-4 Globalization and Regional Politics in Latin America**

This seminar, designed for advanced undergraduate and graduate students, will discuss contemporary political issues arising from aspects of globalization, such as free trade agreements, international migration policies, and political reactions to the global media within particular regions of the world. The seminar will expose students to primary data research, and involve the development of a course project in line with their particular interests. Prerequisite: 30 units. This course is identical to POL 450 and LAS 450 and students cannot take this course for further credit.

**ISPO 450W-4 Globalization and Regional Politics in Latin America**

This seminar, designed for advanced undergraduate and graduate students, will discuss contemporary political issues arising from aspects of globalization, such as free trade agreements, international migration policies, and political reactions to the global media within particular regions of the world. The seminar will expose students to primary data research, and involve the development of a course project in line with their particular interests. Prerequisite: 30 units. This course is identical to POL

450W and LAS 450W and students cannot take this course for further credit. Writing.

**ISPO 483-4 Political Economy of Latin American Development**

Surveys theoretical and applied issues in Latin American development from a political economy perspective. Prerequisite: eight upper division units in political science or LAS 200 or permission of the department. This course is identical to POL 383, POL 483, LAS 318, 428, SA 328 and 428, and students cannot take more than one of these courses for further credit.

## Italian ITAL

### Faculty of Arts and Social Sciences

### Department of French

**ITAL 100-3 Introductory Italian I**

This course is designed to provide the student with the means of acquiring basic spoken fluency and reading facility.

**ITAL 101-3 Introductory Italian II**

This course continues the work of ITAL 100. Considerable emphasis will be placed on oral and reading facility as well as basic writing skills. Prerequisite: ITAL 100.

**ITAL 200-3 Intermediate Italian I**

An intermediate Italian course continuing the work of ITAL 101. In addition to consolidation of oral practice, grammar, reading and composition skills, a cultural component is included as well as selected readings from Italian authors. Prerequisite: ITAL 101.

**ITAL 201-3 Intermediate Italian II**

ITAL 201 continues the work of ITAL 200. Oral and written competence in Italian are extended through grammar review, oral practice, cultural studies, selected readings from Italian authors and multimedia activities. Prerequisite: ITAL 200.

**ITAL 300-3 Advanced Italian: Language and Culture**

Will continue the work of the 200-level courses with emphasis on the cultural aspects of Italian life. How does one live in Italy today? What are the cultural differences between the various regions? Fluency in language use, both oral and written, will be enhanced. Prerequisite: ITAL 201 or permission of Instructor.

## Japanese JAPN

### Faculty of Arts and Social Sciences

### Department of Linguistics

### Language Training Institute

**JAPN 100-3 Introduction to Japanese I**

A comprehensive introduction to the Japanese language providing basic oral and written communication skills through an emphasis on vocabulary, grammar, and culture. The three Japanese writing systems will also be introduced (Hiragana and Katakana for production; some Kanji for recognition only). Students with previous knowledge of Japanese should not enrol in this course without consulting a Japanese instructor.

**JAPN 101-3 Introduction to Japanese II**

Continues the work of JAPN 100. Prerequisite: JAPN 100 or equivalent.

**JAPN 200-3 Advanced Beginners' Japanese I**

Continues the work of JAPN 101. Emphasizes all four skills: listening, speaking, reading, and writing. Everyday language is emphasized. Prerequisite: JAPN 101 or equivalent.

**JAPN 201-3 Advanced Beginners' Japanese II**  
Continues the work of JAPN 200. Prerequisite: JAPN 200 or equivalent.

## Kinesiology KIN

### Faculty of Science

**KIN 105-3 Fundamentals of Human Structure and Function**

Basic anatomy and physiology of the skeletal, muscular, nervous, endocrine, cardio-respiratory, urinary, digestive, immune, and reproductive systems. (distance education). Kinesiology majors and honors students may not receive credit for KIN 105. KIN 205 or 208 may be used as a substitute for KIN 105 by students in the Kinesiology Minor and Certificate programs. No student may take both KIN 105 and KIN 208 for credit. Recommended: grade 11 biology, chemistry and physics.

**KIN 110-3 Human Nutrition: Current Issues**

An introduction of the principles of human nutrition with an emphasis on topics of current interest. The material is presented in a Canadian context to focus on nutrition practices and problems in this country. Students will gain an understanding of factors affecting food selection and the role of nutrition in maintaining good health. Students will develop the ability to discriminate between reliable and unreliable information on the subject of food and nutrition.

**KIN 111-3 Food and Food Safety**

This course includes basic information on food, the safety of the food supply and current issues around the production, storage and distribution of food. Students will gain an understanding of basic food components, the physical foundations of food science, and the elements of food processing and preservation. Food-borne disease, biotechnology, irradiation of food, contaminants and additives in food, Canadian food labelling and advertising regulations, and food consumption trends will be examined. Nutritional biochemistry concepts will be interfaced with practical questions of food choice and eating practices. Recommended: grade 11 chemistry.

**KIN 140-3 Contemporary Health Issues**

Explores health from a holistic perspective, in which health is viewed as physical, psychological, and social well-being. Considers genetics, environment, personal health behaviors (such as diet, exercise, stress management, and drug use), socioeconomic status, health care delivery systems, and aging with the intent to improve students' abilities to evaluate health information. Breadth-Science.

**KIN 142-3 Introduction to Kinesiology**

Basic procedures for the assessment of the status and performance of the individual according to the principles of anthropometry, functional anatomy, biomechanics, exercise physiology, and motor learning. Recommended: grade 11 biology, chemistry and physics. Breadth-Science.

**KIN 143-3 Exercise: Health and Performance**

Introduces the student to exercise physiology. Focuses on personal exercise prescription to improve aerobic capacity, muscular strength and endurance, and flexibility. Also discusses athletic conditioning, e.g. speed and power training. The effects of nutritional and environmental factors on exercise and the role of exercise in weight control and stress management are considered. Recommended: medical clearance from a personal physician. Breadth-Science.

**KIN 180-3 Introduction to Ergonomics**

Intended for students with a potential interest in ergonomics or human factors. The course surveys the design of work, the workplace environment, information systems, and consumer products. Topics include musculoskeletal disorders, manual materials

handling, workplace design, organization of work, design of human/machine interfaces, environmental ergonomics, industrial design, and legal and social issues. Prerequisite: Grade 12 Biology or Physics, Grade 12 Math.

### **KIN 180W-3 Introduction to Ergonomics**

Intended for students with a potential interest in ergonomics or human factors. The course surveys the design of work, the workplace environment, information systems, and consumer products. Topics include musculoskeletal disorders, manual materials handling, workplace design, organization of work, design of human/machine interfaces, environmental ergonomics, industrial design, and legal and social issues. Prerequisite: Grade 12 Biology or Physics, Grade 12 Math. Writing.

### **KIN 201-3 Biomechanics**

This course will cover the application of basic mechanics to human movement. It will provide students with a basic understanding of how forces act on body segments and how movements are produced. The subject matter of this course is relevant to quantifying all forms of physical activity, from activities of daily living, physically challenged movement patterns, to elite athletic performance. It also has applications in medical settings, including rehabilitation and sports medicine. Prerequisite: MATH 150, 151 or 154, MATH 152 or 155 (may be taken concurrently), PHYS 101 (or 120 or 125 or 140), KIN 142. Quantitative.

### **KIN 205-3 Introduction to Human Physiology**

An introductory survey of human physiology with an emphasis on mechanisms of regulation and integration. Anatomy of structures will be detailed only when it is critical to a functional understanding. Although this is intended as a survey course, some topics will be covered in reasonable detail in order to give insight into mechanisms of function. KIN 208 may not be used as a substitute for KIN 205 by students in the Kinesiology Major and Honors programs. Prerequisite: BISC 101, CHEM 281, PHYS 101 and 102. Kinesiology majors and honors students who have taken KIN 105 must also take KIN 205. For students taking both of these courses, credit will only be given for KIN 205.

### **KIN 207-3 Human Motor Systems**

Students are introduced to basic concepts in human motor systems underlying goal-direction movement. Topics including the problems of planning/control of movements, the role of the nervous system in integrating sensory and motor systems to produce movement, and motor learning are discussed. The course is taught from a behavioral and neurophysiological perspective and explores psychological influences on motor control. Research from a variety of distinct areas is integrated to provide a coherent picture of our understanding of human motor systems. Prerequisite: KIN 142 or permission of instructor.

### **KIN 208-3 Introduction to Physiological Systems**

An introduction to anatomy and physiological function of the major human systems, from a biomedical engineering perspective. Normally only available to students in the Biomedical Engineering Program. KIN 208 may be used as a substitute for KIN 105 by students in the Kinesiology Minor and Certificate programs. Kinesiology Major and Honors students may not receive credit for KIN 208. No student may take both KIN 105 and KIN 208 for credit, or both KIN 205 and KIN 208 for credit. Prerequisite: CHEM 180.

### **KIN 212-3 Food and Society**

Examines the relationship between society and the food we eat by evaluating how cultural, social, and economic forces interact to influence health and nutritional status. Attention is given to cultures in British Columbia. Impact of national policies and

marketing on food choice are discussed. Prerequisite: KIN 110.

### **KIN 221-3 Special Topics in Kinesiology**

Selected topics in areas not currently offered within the undergraduate course offerings in the School of Kinesiology. Prerequisite to be announced.

### **KIN 241-3 Sports Injuries – Prevention and Rehabilitation**

Includes delineation of the role of the sports therapist and will study the structural and functional characteristics of the body with regard to the prevention of injury in sport. A first aid approach to athletic injuries will be developed with practical experience in routine treatments. Prerequisite: KIN 142.

### **KIN 301-3 Biomechanics Laboratory**

A laboratory course on the quantitative biomechanical evaluation of human movement. Students will learn analysis techniques for quantifying kinematics and kinetics of body segments in athletes, normal populations, and special populations during activities such as walking and jumping. Experiments will look at the nature of muscular force generation, and the mechanical impedance properties of the musculoskeletal system, as well as patterns of muscle activation, using surface EMG. Prerequisite: PHYS 102 (or 121 or 126 or 141), KIN 201. Quantitative.

### **KIN 303-3 Kinanthropometry**

A study of human size, shape, proportion, composition, maturation and gross function related to basic concepts of growth, exercise, performance and nutrition. Prerequisite: KIN 105 or 142, and STAT 201 or an equivalent statistics course.

### **KIN 304-3 Inquiry and Measurement in Kinesiology**

This course covers the evaluation of measurement quality, test construction and assessment, and computer techniques for data capture and signal processing relevant to issues in Kinesiology. Prerequisite statistical knowledge will be put into practice when discussing typical research designs, modeling and hypothesis testing in kinesiology. Prerequisite: KIN 142, 201, 205, and STAT 201. Quantitative.

### **KIN 304W-3 Inquiry and Measurement in Kinesiology**

This course covers the evaluation of measurement quality, test construction and assessment, and computer techniques for data capture and signal processing relevant to issues in Kinesiology. Prerequisite statistical knowledge will be put into practice when discussing typical research designs, modeling and hypothesis testing in Kinesiology. Prerequisite: KIN 142, 201, 205, 207, and STAT 201. Writing/Quantitative.

### **KIN 305-3 Human Physiology I**

Deals with the physiology and pathophysiology of the cardiovascular, respiratory, and renal systems in detail. Prerequisite: KIN 205, MBB 231 (or 201), MATH 155 (or 152). Non-majors require KIN 205 (or BISC 305), MBB 231 (or 201) plus permission of the instructor.

### **KIN 306-3 Human Physiology II (Principles of Physiological Regulation)**

Examines the regulation of body functions with an emphasis on the endocrine, gastrointestinal and neuronal systems. The course focuses on integration of physiological mechanisms at the cellular and organ levels. Examples of abnormal human physiology are used to illustrate important principles. Prerequisite: KIN 201, 205, MBB 231 (or 201), MATH 155 (or 152). Non-majors require KIN 205 (or BISC 305), MBB 231 (or 201) plus permission of the instructor.

### **KIN 308-3 Experiments and Models in Systems Physiology**

Measurement, analysis and modeling of human physiological systems from a biomedical engineering perspective. Topics include data acquisition, muscle mechanics, nerves and reflexes, metabolism, movement, cardiovascular function, and pulmonary function. Prerequisite: KIN 208. Recommended: MATLAB Experience.

### **KIN 310-3 Exercise/Work Physiology**

The study of human physiological responses and adaptations to acute and chronic exercise/work. Cardiorespiratory, cellular and metabolic adaptations will be studied and discussed in detail. Prerequisite: KIN 205, MBB 201 (or 231). Recommended: KIN 201.

### **KIN 311-3 Applied Human Nutrition**

The principles of nutritional biochemistry are applied to nutrition in life cycle – pregnancy, lactation, infancy, childhood, adolescence and aging. The second part of the course deals with common disease conditions where nutrition plays an important role in prevention or treatment or both. The course is presented in the Canadian context featuring sources of help on Canadian practice, standards and regulations. Prerequisite: KIN 105 or 205 and 110. Students with credit for KIN 220 may not take KIN 311 for further credit.

### **KIN 312-3 Nutrition for Fitness and Sport**

This course examines the theory and application of nutrition for fitness and sport. Students will study issues around dietary practices commonly promoted for performance enhancement, including mechanisms, effectiveness, risks and regulations. Students will learn skills for critical evaluation of nutrition research and nutrition claims, and will employ these in several small group projects investigating specific nutrition issues and products. Prerequisite: KIN 105 (or 205), and 110.

### **KIN 313-3 Nutrition and the Life Cycle**

The factors that determine human nutritional requirements and health under a range of conditions throughout the human life span (pregnancy, lactation, infancy, childhood adolescence, aging) are evaluated. The role of nutrition is evaluated in response to the metabolic and physiologic changes during growth and development versus aging, touching upon eating disorders, depression, osteoporosis, epigenetics, and pharmacology and toxicology of commonly prescribed medications in aging adults. Prerequisite: KIN 105 or 205 and 110. Students with credit for KIN 220 or 311 may not take KIN 313 for further credit.

### **KIN 314-3 Nutrition and Chronic Disease**

Principles of nutrition are applied to common disease conditions where nutrition plays an important role in prevention, treatment or both. Nutrition in obesity, diabetes, cancer and cardiovascular disease are highlighted. The impact of dietary interventions such as DASH and the Diabetes Prevention Program upon chronic disease is evaluated. Pharmacology and toxicology of common medications with regard to alterations in metabolism in disease are discussed, as well as noncompliant and depressed patients. Prerequisite: KIN 105 or 205 and 110. Students with credit for KIN 220 or 311 may not take KIN 314 for further credit.

### **KIN 324-3 Principles of Human Anatomy**

Pursues a systematic study of human anatomy with emphasis on functional applications. A study of organs and body systems using computer software supported tutorials to provide an understanding of the three dimensional organization of the human body. Participation in all tutorials is required. This course may not be taken for credit by kinesiology majors. Prerequisite: KIN 142, 205 and at least 60 units of undergraduate credit. Students with credit for KIN 325 or 326 may not take KIN 324 for further credit.

**KIN 325-3 Basic Human Anatomy**

For students interested in physical education, health science professions and liberal arts. Brief discussions on applied anatomy, aging, common dysfunctions and diseases enable students to appreciate the relationship between structure and function. Prerequisite: KIN 142 and either KIN 105 (with a grade of C or higher) or KIN 205. Available only through correspondence, this course will not be counted as an upper level optional course for a major in kinesiology. Students with credit for KIN 326 may not take KIN 325 for further credit.

**KIN 326-4 Functional Anatomy**

Pursues a systematic study of human anatomy with emphasis on functional applications. A comparative study of organs and body systems using laboratory dissections to provide an understanding of the three dimensional organization of the human body. Participation in all labs is required. Prerequisite: KIN 142, 201, 205 and at least 60 units of undergraduate course credit. Students with credit for KIN 325 may not take KIN 326 for further credit.

**KIN 336-3 Histology**

Light and electron microscopic study of mammalian tissues and organs with emphasis on human systems. Prerequisite: one of KIN 325, 326, BISC 305, 316.

**KIN 340-3 Active Health: Behavior and Promotion**

Relationships among health, physical activity, and other health-associated behaviors are examined. In addition, the theories and models of health behavior, in the context of intervention and promotion strategies, are discussed. Pertinent background information is provided, concerning the influence of fitness on various disease states, as well as the epidemiology of health and exercise behaviors. Prerequisite: KIN 142, STAT 201 (or PSYC 201). Recommended: KIN 140.

**KIN 342-3 Active Health**

An extension of KIN 143, Exercise Management, this course parallels the on-campus course KIN 343. This course is designed for students completing the health and fitness certificate and/or a kinesiology minor. The goal of the course is to provide students with an opportunity to appreciate principles of exercise leadership, assess individual fitness needs, design programs and monitor effects of prescribed exercise. This course is available only through distance education. Prerequisite: KIN 105 (or 205), 142 and 143. Kinesiology majors and honors students may not receive credit for KIN 342.

**KIN 343-3 Active Health: Assessment and Programming**

An extension of KIN 143, Exercise Management, designed to provide students with an opportunity to appreciate principles of exercise leadership, assess individual fitness needs, design programs and monitor effects of prescribed exercise. The course includes a 34 hour practicum. Prerequisite: KIN 142, 143 and 205; STAT 201 or an equivalent statistics course, KIN 340 (may be taken concurrently). Students with credit for KIN 342 may not take KIN 343 for further credit. Quantitative.

**KIN 344-3 Exercise Prescription**

Scientific principles relevant to the design of safe and effective conditioning programs for both the general population and target groups. Students will learn effective training techniques for cardiovascular aerobic conditioning; muscular endurance, strength, and power; anaerobic conditioning, and flexibility. Safety, injury prevention, rehabilitation, reconditioning, and correct weightlifting mechanics will be discussed. Prerequisite: KIN 110, 201, and 343.

**KIN 351-3 Practicum I**

The first term of work experience in the Kinesiology Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: students must complete Bridging Online (visit [www.sfu.ca/coop/bol](http://www.sfu.ca/coop/bol) for further details) at least two terms before their anticipated co-op placement. Students must then apply to the Kinesiology Co-op Program by the first week of the term preceding the work term. Normally, students will have completed a minimum of 45 units by the end of the term of application, KIN 142, plus at least two other kinesiology courses and have a minimum GPA of 2.50. Work terms are graded as pass/fail (P/F).

**KIN 352-3 Practicum II**

The second term of work experience in the Kinesiology Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: KIN 351. Work terms are graded as pass/fail (P/F).

**KIN 367-3 Psychology of Motor Skill Acquisition**

An examination of phases of skill acquisition, transfer of training, training principles, retention of motor skills, and the influence of motivation, personality and social factors on the acquisition of skill. Prerequisite: KIN 207.

**KIN 375-3 Human Growth and Development**

The fundamentals of physiological growth and development from conception to maturity. Topics included form a strong foundation for those interested in designing appropriate activity programs for children of all ages. Prerequisite: KIN 105 or 205, and 142.

**KIN 380-3 Occupational Biomechanics**

This course will teach the principles of biomechanical analysis and their application in the workplace. Topics will include techniques for measurement and analysis of movement; analysis of forces and accelerations in three dimensions; work and power; simple biomechanical and biodynamic models; standards for lifting and carrying, their application and limitations. Prerequisite: KIN 180, 201, 205 and 326 which may be taken concurrently. Quantitative.

**KIN 381-3 Psychology of Work**

The application of psychological principles and methods to the study of human performance at work. A systems approach will be taken to study the interactions among the individual worker, his/her task, groups of workers, and the management structure of the organization. Prerequisite: PSYC 210 or both of KIN 207 and STAT 201. Corequisite: STAT 201 may be taken concurrently. Recommended: KIN 180.

**KIN 382-3 Workplace Health**

The focus of this course will be the study of the physical environment and its effects on the health, safety and performance of the worker. Physical problems associated with noise, vibration, lighting, radiation, dust and ventilation will be examined together with methods of recognition, treatment, protection and prevention. Prerequisite: KIN 142, 201, 205. Quantitative.

**KIN 383-3 Human-Machine and Human-Computer Interaction**

Human information processing and motor control factors are considered as factors relevant to effective, usable human-machine interfaces. A user-centred approach deals with task analysis, context of use, information processing demands, the interface, and the design, assessment and usability of tools, machines and computers. Prerequisite: KIN 180, 201 and 207.

**KIN 402-3 Mechanical Behavior of Tissues**

An extension of KIN 201, designed to provide students with an understanding of tissue structure-function relations in health and disease, from a biomechanical perspective. Topics include the

effect of disease (and aging) on tissue properties, the mechanics and prevention of tissue injury, and the design of implants and prostheses. While the focus will be primarily on analysis of the musculoskeletal system at the tissue and whole-body levels, we will also consider biomechanical models of the cardiovascular and respiratory systems. Prerequisite: KIN 201.

**KIN 405-3 Clinical Exercise Physiology I: Cardiorespiratory and Metabolic Disorders**

A study of the clinical aspects of exercise physiology by thoroughly examining the relationship between exercise and chronic disease. For each chronic disease state and condition, this course covers its physiology, pathophysiology, and pharmacotherapy along with exercise testing, prescription, safety, and programming issues. Prerequisite: KIN 305, 306, 324 or 326, 344.

**KIN 406-3 Clinical Exercise Physiology II: Musculoskeletal, Neuromuscular, and Immunological Disorders**

A study of the clinical aspects of exercise physiology by thoroughly examining the relationship between exercise and chronic disease. For each chronic disease state and condition, this course covers its physiology, pathophysiology, and pharmacotherapy along with exercise testing, prescription, safety, and programming issues. Prerequisite: KIN 305, 306, 324 or 326, 344.

**KIN 407-3 Human Physiology Laboratory**

Experiments dealing with the nervous, muscular, cardiovascular, respiratory, and renal systems are covered. Prerequisite: KIN 305 and 306, one of which must already have been completed and the other can be taken concurrently. Quantitative.

**KIN 412-3 Molecular and Cellular Cardiology**

This course entails a detailed analysis of the molecular and cellular basis of cardiac function. The material will be derived from myriad disciplines including: anatomy (histology and ultrastructure), biomechanics, physiology, electrophysiology, biochemistry and molecular biology. A particular emphasis will be placed on the mechanisms by which the heart responds to stresses such as ischemia and exercise. Prerequisite: KIN 305.

**KIN 415-3 Neural Control of Movement**

An in depth treatment of neurophysiology. Synaptic inputs and cell interactions in the spinal cord are used to illustrate the general principles of interaction in the nervous system. Other topics include central and peripheral motor control, the vestibular system and the visual system. Prerequisite: KIN 306 or BISC 305 and KIN 326.

**KIN 416-3 Control of Limb Mechanics**

Control of the human musculoskeletal system examined from the perspective of mechanical impedance. Mechanics of individual muscles, single joints spanned by multiple muscles and multi-joint limb segments are discussed in the context of physical interaction with the environment. Prerequisite: KIN 201 and 306.

**KIN 417-3 Obesity, Adipocyte Function and Weight management**

Discusses mechanisms of health and disease with respect to a range of molecular mechanisms of physiology and organ system function, including how adipokines have an effect on metabolic alterations in immunology and hormone production in diabetes, stress and cardiovascular disease. Health behavior change in obesity and impact of dietary habits upon hyperlipidemia and apolipoprotein metabolism are addressed in addition to nutritional challenges in weight management and obesity. Prerequisite: KIN 110, 306, 314 (or 311), 340.

**KIN 420-3 Selected Topics in Kinesiology I**

Selected topics in areas not currently offered as formal courses within the undergraduate course offerings in the School of Kinesiology. The topics in this course will vary from term to term, depending on faculty availability and student interest. Prerequisite: to be announced in the Undergraduate Schedule of Classes and Examinations.

**KIN 421-3 Selected Topics in Kinesiology II**

Selected topics in areas not currently offered as formal courses within the undergraduate course offerings in the School of Kinesiology. The topics in this course will vary from term to term, depending on faculty availability and student interest. Prerequisite: to be announced.

**KIN 422-3 Selected Topics in Kinesiology III**

Selected topics in areas not currently offered as formal courses within the undergraduate course offerings in the School of Kinesiology. The topics in this course will vary from term to term, depending on faculty availability and student interest. Prerequisite: To be announced

**KIN 423-3 Selected Topics in Kinesiology IV**

Selected topics in areas not currently offered as formal courses within the undergraduate course offerings in the School of Kinesiology. The topics in this course will vary from term to term, depending on faculty availability and student interest. Prerequisite: to be announced in the Undergraduate Schedule of Classes and Examinations.

**KIN 426-3 Neuromuscular Anatomy**

This course explores human neuromuscular anatomy using a lecture format supplemented by course readings, an anatomy atlas and tutorials which are presented in an interactive fashion via the Macintosh Computer Laboratory on campus. A strong grounding will be given in neuroanatomy with additional emphasis on the limb musculature and its innervation. Prerequisite: KIN 325 or KIN 326 or PSYC 280

**KIN 430-3 Human Energy Metabolism**

Pathways of energy flow in animals and man, and the relationship of biological energy transduction to the needs of the whole animal. Quantitative aspects of bioenergetics and adaptation to changes in energy supply and demand. Measuring techniques applied to adaptations to muscle activity and variations in food intake. Prerequisite: KIN 306 or 310 or MBB 321 (or BICH 321).

**KIN 431-3 Environmental Carcinogenesis**

An introduction to core concepts in the field of environmental carcinogenesis. Emphasis will be on the complex interactions of lifestyle factors, carcinogen exposure, genetic susceptibility and dietary habits as determinants of cancer risk. Class work will include discussions of new techniques to monitor exposure to environmental carcinogens and of regulatory aspects of governmental agencies towards carcinogenic agents, as well as approaches being used by such agencies in risk assessment. Prerequisite: MBB 231 (or MBB 201) and at least 90 units.

**KIN 442-3 Biomedical Systems**

Concepts and tools of systems analysis will be introduced. Since these involve a philosophy of problem-solving rather than a catalogue of techniques, they will be applied to a number of very different problems in biomedicine and kinesiology. Prerequisite: KIN 305 and 306.

**KIN 444-3 Cardiac Disease: Pathophysiology and Assessment**

Examines the etiology, prevention, and rehabilitation of cardiovascular disease. Involves the assessment of patient risk factors, and non-invasive cardiovascular assessments. Particular emphasis will be placed upon the recording and interpretation of the electrocardiogram in health and disease.

Prerequisite: KIN 305. Recommended: KIN 110, 306, 310 and 343.

**KIN 445-3 Advanced Cardiac Rehabilitation**

Builds upon the knowledge and skills learned in KIN 444 through advanced ECG interpretation, exercise stress testing, and patient counseling. Students will be required to complete a 30 hour practicum within a community or hospital-based cardiac rehabilitation program. In addition, this course will introduce students to relevant research questions in cardiac rehabilitation and how this field is expanding and evolving. Prerequisite: KIN 444.

**KIN 446-3 Neurological Disorders**

Examines neural and neuromuscular diseases, including Alzheimer's disease, amyotrophic lateral sclerosis, multiple sclerosis, stroke, and myasthenia gravis. Emphasizes currently favoured hypotheses, underlying evidence and pathogenic mechanisms. Prerequisite: KIN 306. Recommended: KIN 336 and/or KIN 415.

**KIN 448-3 Rehabilitation of Movement Control**

This course is aimed at students interested in neuromuscular rehabilitation. Students will learn about the pathological origins of movement disorders associated with impaired function of sensory and motor systems. The course will be focused on the stages and strategies for recovery of voluntary control of essential functions. The range of rehabilitation interventions available to assist recovery and restore voluntary control will be explored, with special emphasis on advanced techniques to restore control of movement and bodily functions in paralyzed people. Prerequisite: KIN 201, 207 and 306, or for biomedical engineering students, KIN 201, 208 and 308.

**KIN 451-3 Practicum III**

The third term of work experience for students in the Kinesiology Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: KIN 352. Work terms are graded as pass/fail (P/F).

**KIN 452-3 Practicum IV**

The fourth term of work experience for students in the Kinesiology Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: KIN 451. Work terms are graded as pass/fail (P/F).

**KIN 453-3 Practicum V**

Optional term of work experience for students in the Kinesiology Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: KIN 452. Work terms are graded as pass/fail (P/F).

**KIN 457-3 Behavioral Neuroscience**

**Undergraduate Honors Thesis Proposal**  
Directed study and research leading to an Honors thesis proposal (KIN459/PSYC 459). Prerequisite: 90 units, including PSYC 301 with a minimum grade of B and permission of the Chair of the Behavioral Neuroscience Coordinating Committee. This course is identical to PSYC 457 and students may not take both courses for credit.

**KIN 459-9 Behavioral Neuroscience Undergraduate Honors Thesis**

A written thesis based on research previously proposed in KIN 457/PSYC 457. Prerequisite: a minimum grade of B in KIN 457/PSYC 457. This course is identical to PSYC 459 and students may not take both courses for credit. Corequisite: must be enrolled in the Honors Program of the B.Sc. in Behavioral Neuroscience.

**KIN 461-3 Physiological Aspects of Aging**

Designed for those who require a serious but fairly broad discussion of specific physiological aspects of aging. The overall emphasis is on humans and other mammalian species and the varieties of aging

changes they manifest. Prerequisite: KIN 105 or 205, 142 and 90 units.

**KIN 467-3 Human Motor Control**

The advanced study of human motor control, primarily from a behavioral perspective. Course content will include sections on: Bernstein's approach to the problem of co-ordination and action, theories of action, studies of relatively recent empirical work in support of the theories. Prerequisite: KIN 205 and 207 or permission of instructor.

**KIN 481-3 Musculoskeletal Disorders**

Considers the prevalence, distribution, risk factors, mechanisms, management and prevention of disorders of muscle, connective tissue, joint, and bone. Covers tendonitis, bursitis, carpal tunnel syndrome and other overuse injuries from work and sport; whiplash-associated disorders; arthritis; osteoporosis; chronic pain; fibromyalgia. Prerequisite: KIN 201 and 326.

**KIN 484-3 Altitude and Aerospace Physiology**

The theme of this course is human physiology in environments of decreased atmospheric pressure, high G-force, and weightlessness. The course will deal with acute and chronic adaptations to these environments as well as life support systems and 'countermeasures' developed to expand the envelope of human performance. Developments of breathing apparatus and G-suits for high performance aircraft will be examined as they relate to solving the physiological problems of exposure to these environments. Effects of short and extended periods of weightlessness on cardiovascular, cerebrovascular, musculo-skeletal, neural, hormonal and vestibular systems will be explored. Prerequisite: KIN 305, 306. Recommended: KIN 407. Quantitative.

**KIN 485-4 Human Factors in the Underwater Environment**

The physiological effects of pressure on the human body and interfacing of humans and machine underwater are considered. Topics include the history of diving, decompression theory, decompression disorders, pulmonary function, underwater work, underwater breathing apparatus, narcosis, saturation diving, high pressure nervous syndrome, and atmospheric diving suits. Prerequisite: KIN 305. Quantitative.

**KIN 486-3 Ergonomics in the Design of Consumer Products**

Covers the role of human factors in the design process. Explains how human factors/ergonomics knowledge is incorporated into the design process in order to improve safety, comfort, usability and efficiency for consumer products and products used in the workplace. Biomechanical principles, concepts from human-computer interaction and basic ergonomics/human factors principles will be applied. An applied project will be undertaken by groups of students and will form a significant part of the course. This course is designed for students who are following the human factors/ergonomics stream of the undergraduate program. Prerequisite: KIN 180 and KIN 380 or 383.

**KIN 488-3 Ergonomics Laboratory**

A project based laboratory course that applies theoretical knowledge to industrial situations. Instruction will be provided in proposal development, evaluation techniques, and report writing. Students will complete projects in human-machine interaction, occupational ergonomics, and industrial design. Prerequisite: KIN 180, plus at least four of the following: KIN 380, 381, 382, 383, 481, 442, 486 and CMNS 354.

**KIN 496-3 Directed Study I**

Directed reading and literature research on topics selected in consultation with the supervising instructor. This course may not be repeated for

additional credit. A short proposal of the project, approved by the course supervisor, must be submitted for approval to the chair of the undergraduate program committee by the end of the first week of classes of the term. Prerequisite: permission from the chair of the undergraduate program committee. Usually, upper level standing with at least 75 units in the kinesiology program will be required. Honors students may count only one of either KIN 496 or KIN 498 towards their 27 upper division Kinesiology elective units.

### **KIN 497-3 Undergraduate Honors Thesis Proposal**

Supervised directed study and research leading to the development of a formal undergraduate thesis proposal for work to be conducted in KIN 499. The activity in KIN 497 may be augmented by other course work and a pilot study. In cases where an industrial/community partner is involved in the development of a project, the work need not be conducted at Simon Fraser University and may be completed external to SFU. Supervision of KIN 497 will be conducted by a suitable faculty member, but may be co-supervised by an industrial/community partner. Supervisor(s) must be approved by the undergraduate program committee. The plan of activities for each KIN 497 should be submitted to the chair of the undergraduate program committee for approval one month prior to the term in which the course will be taken. Prerequisite: only students in the honors program may enrol for KIN 497; 90 units, STAT 201, and permission of the chair of the undergraduate program committee.

### **KIN 498-3 Directed Study II**

Directed study and research selected in consultation with the supervising instructor. A short proposal of the project approved by the course supervisor, must be submitted for approval to the chair of the undergraduate program committee by the end of the first week of classes of the term. Prerequisite: STAT 201 and permission from the chair of the undergraduate program committee. Usually, upper level standing with at least 75 units in the kinesiology program will be required. Honors students may count only one of either KIN 496 or KIN 498 towards their 27 upper division kinesiology elective units.

### **KIN 499-12 Undergraduate Honors Thesis**

A thesis based on research previously proposed in KIN 497. Formal approval of the research topic is given by attaining a minimum grade of B in KIN 497. Regulations regarding the locale of the work, supervision and other arrangements, follow those for KIN 497. The written thesis should be submitted to the chair of the undergraduate program committee by the last day of exams of the term. The thesis will also be presented orally as a seminar in an open forum at the end of the term. Prerequisite: KIN 497. Only students in the honors program may enrol for KIN 499. A student may enrol for one other course concurrently with KIN 499 with permission from the faculty supervisor for KIN 499.

### **KIN 801-3 Seminar on Research in Kinesiology**

Required of all graduate students entering kinesiology. Students will gain perspective on how their research fits into the overall spectrum of departmental research. Presentations will be given by faculty and students, to be followed by seminar discussions. Students will be exposed to techniques available in the school, their strengths and weaknesses, what data the techniques yield, and how the scientific method is applied in interpreting the data. Students will learn how to give oral, poster, and web-based presentations, and how to facilitate discussions. Students with credit for this course when taught as KIN 808 may not take KIN 801 for additional credit.

### **KIN 802-3 Statistical Applications in Kinesiology Research**

A lecture-lab structured course, with one lecture per week and numerous non-scheduled lab assignments. Mini-exams are held every three weeks to monitor students' progress and assist students in keeping up with course materials. It will review fundamentals of descriptive statistics and hypothesis-testing. The remainder of the course will concentrate on analysis of variance and co-variance and an overview of correlation and regression. Students with credit for this course when taught as KIN 807 may not take KIN 802 for additional credit.

### **KIN 804-3 Project**

Required for MSc (course work) students only. The course provides an opportunity for concentrated research in a focused area with a faculty supervisor resulting in a research paper or experimental report.

### **KIN 805-3 Directed Studies**

An opportunity to develop with a faculty supervisor considerable depth of knowledge and expertise in a focused area of study. Normally, KIN 805 may not be taken for credit more than once and may not be taken for credit by MSc (course work) students.

### **KIN 806-808-3 Special Topics**

Special topics in areas not currently covered within the graduate program offerings. The course may be offered as a lecture or a seminar course.

### **KIN 809-1.5 Project Completion**

MSc Course Work students who do not complete KIN 804 in one term must register in this course in all subsequent terms until the project is completed. No additional credit will be given for this course.

### **KIN 810-3 Integrative Muscle Physiology**

Recent developments in the application of molecular biology, biochemistry and cell biology to study muscle function during exercise. Topics will include muscle-specific gene expression, energy metabolism and its control, biochemical plasticity of muscle, hypertrophy and signal transduction.

### **KIN 811-3 Special Topics – Anatomy**

### **KIN 812-3 Molecular and Cellular Cardiology**

This course involves biochemical and biophysical analyses of cardiac function. Topics for discussion include excitation, contraction, E-C coupling and the regulation of pHi. Prerequisite: introductory biochemistry and biophysics.

### **KIN 821-3 Environmental and Exercise Physiology**

Review course covering aspects of cardiovascular and respiratory physiology and discussion of environmental physiology topics such as hypoxia.

### **KIN 825-3 Behavioural Neuroscience**

Selected aspects of research and theory in the behavioural neurosciences. The focus will be on delineating the problems of developing viable theories of motor learning and action, and on seeking solutions to those problems. The course also includes sections on information processing and co-ordination of complex movement.

### **KIN 826-3 Motor Control: a Behavioral Perspective**

The study of selected aspects of research in motor behavior. The focus will be on delineating the problems of a viable theory of action, and on seeking solutions to the problems. Prerequisite: KIN 467, or equivalent.

### **KIN 831-3 Current Topics in Thermophysiology**

Provides a detailed understanding of physiological and behavioral mechanisms underlying temperature regulation in humans and other animals. Thermoregulation will be studied during acute and chronic exposure to hot and cold environments, from the cellular to whole body level. The course will

examine the relationship between thermoregulatory and other physiological systems (respiratory, muscular, cardiovascular, neural).

### **KIN 835-3 Neuromuscular Disorders**

Provides a broad understanding to the student as to the way nervous system disease is believed to occur, some of the mechanisms behind these processes, the ways that are used to study these mechanisms and the ability to think about these processes as expressed in a critique of a research paper. It will include discussions of ALS, Alzheimer's disease, stroke and myasthenia gravis among others. Students with credit for this course when taught as KIN 806 may not take KIN 835 for additional credit.

### **KIN 840-3 Human Biomechanics**

Review the theoretical basis and tools of biomechanics and to examine how biomechanics research can contribute to our understanding of the cause, prevention and treatment of disease and injury and how biomechanics relates to neural control of movement. Topics will include static equilibrium, equations of motion, stability, inverse and forward dynamics, vibration and impact, mechanical properties of tissues, muscle models, feedback and feedforward control, impedance control and internal dynamics models.

### **KIN 850-3 Control Systems in Health and Disease**

Biomolecular interactions exert or initiate substantive control thereby integrating cellular and physiological function. Defects in these biomolecular interactions frequently lead to altered control systems or responses of these systems in various disease states. Topics may include mechanisms of hormone action, cellular transport and signaling, immunoregulation, nutrition and metabolic control.

### **KIN 851-3 Recent Advances in Experimental Carcinogenesis**

This class will integrate current knowledge on the process of carcinogenesis in tissues in which cancer commonly occurs in North America. Discussions will focus on new techniques being developed to identify individuals at risk for cancer and new approaches being used to intervene to prevent development of the disease. Prerequisite: KIN 431.

### **KIN 861-3 Neuroscience**

Topics include the physiology of walking, cerebral and cerebellar cortical physiology, the generation of repetitive neural discharges, as well as hormonal control of neuron behaviour. The emphasis will be a broad introduction to neuroscience, as well as some neuroscience research methods and applications.

### **KIN 865-3 Neural Control of Movement**

The course covers the peripheral nervous system including reflexes and spinal cord organization in detail. This prepares the student with a thorough understanding of general functioning of the nervous system. In addition, the course covers the neurophysiology of the cerebellum, motor cortex, basal ganglia, vestibular system and other related structures involved in central control of movement. Laboratory demonstrations are part of the course.

### **KIN 870-3 Experiments and Models in Physiology**

Introduction to the basic principles of mathematical modeling of physiological systems and mathematical techniques that are commonly used in modeling. The course will provide students with an opportunity to learn and apply some of these techniques and to develop an appreciation for the utility of mathematical models, as well as limitations and potential pitfalls.

### **KIN 880-3 Internal Biomechanics**

To relate the laws of mechanics to the function and structure of tissues and systems of the human body. Emphasis will be in relation to internal events

occurring in normal and abnormal human states.  
Prerequisite: KIN 402.

### **KIN 885-3 Seminar on Human-Machine Systems**

A study of the principles involved in integrating human capabilities into complex machine systems.

### **KIN 890-3 Engineering Aspects of Human Function**

The application of engineering principles to the study of normal and abnormal human function.

**KIN 898-6 MSc Thesis**

**KIN 899-6 PhD Thesis**

## **Labor Studies LBST Faculty of Arts and Social Sciences Department of History**

### **LBST 101-3 Introducing Labor Studies**

Introduction to key concepts necessary for understanding the character and organization of work in contemporary society. The discussion of such issues as how our society decides who works, what the work will be, and under what conditions people work, will be situated in the context of current debates, trend and issues.

### **LBST 301-3 Labor Movements: Contemporary Issues and Images**

This course will give students a comprehensive understanding of the contemporary structure, issues, and perceptions of labor unions and other forms of working-class organization. It will focus on external and internal problems that the labor movement faces, such as labor law and state policy, employer strategies, bureaucracy, racism and sexism. The treatment of labor in the media and popular culture will provide an understanding of how labor is viewed in society, how labor views itself, and how working-class culture informs and is informed by the larger culture. Recommended: LBST 101.

## **Language LANG Faculty of Arts and Social Sciences Department of Linguistics Language Training Institute**

### **LANG 132-2 Introductory Fijian I**

An introduction to Fijian language and culture, LANG 132 is offered as part of the Linguistics Field School in Fiji and will be conducted on-site, in co-operation with local instructors from the region. Variable units: 1, 2, 3, 4, 5.

### **LANG 134-3 Introductory Arabic I**

### **LANG 148-3 Special Topics**

The acquisition of introductory language skills in a world language not separately designated in the Calendar. The specific course number and units assigned will vary with the language studied as well as the focus and method of instruction. Variable units: 1, 2, 3, 4, 5.

### **LANG 158-3 Introduction to a World Language (Haida Immersion Level 1)**

### **LANG 220-3 Ancient Greek III**

Continuation of HUM 152 Ancient Greek II. Focuses on reading Ancient Greek at an intermediate level. Prerequisite: HUM 152 or permission of the instructor. Students who have taken LANG 220 Intermediate Ancient Greek may not take this course for further credit.

### **LANG 222-3 Latin III**

Continues the work of HUM 162 Latin II. Focuses on reading classical Latin at an intermediate level, using mainly stories from Roman mythology. Prerequisite:

HUM 162 or permission of the instructor. Students who have taken LANG 222 Intermediate Language Study I – Latin III may not take this course for further credit.

### **LANG 224-3 Western Secwepemctsin Immersion I**

The development of fluent language skills in a world language not separately designated in the Calendar. The specific course number and units assigned will vary with the language studied as well as the focus and method of instruction. Prerequisite: LANG 150-199 in the same language, or placement on the basis of prior knowledge. Please inquire at the Language Training Institute for information on placement.

### **LANG 248-3 Intermediate Xaad-kil Haida I**

The development of fluent language skills in a world language not separately designated in the Calendar. The specific course number and units assigned will vary with the language studied as well as the focus and method of instruction.

### **LANG 270-2 Ancient Greek IV**

Continues the work of LANG 220 Ancient Greek III, focuses on reading Ancient Greek at an intermediate level. Prerequisite: LANG 220 Ancient Greek III. Students who have taken LANG 270 Intermediate Ancient Greek II may not take this course for further credit.

### **LANG 272-3 Latin IV**

Continues the work of LANG 222 Latin III. Focuses on reading classical Latin at a more advanced intermediate level. Prerequisite: please see instructor or inquire at the Language Training Institute for information on placement. Students who have taken LANG 272 Intermediate Language Study II – Latin may not take this course for further credit. Variable units 1, 2, 3, 4, 5.

## **Latin American Studies LAS Faculty of Arts and Social Sciences**

### **LAS 100-3 Introduction to Latin American Issues**

A multidisciplinary introduction to contemporary Latin America. The course is organized in three modules: people and the land, the human condition, and the political alternatives, each of which will be examined from the varying perspectives of history, geography, politics, the arts, etc. Students who have taken LAS 200 as Introduction to Latin American Development Studies, or LAS 200 Introduction to Latin American Issues, may not take this course for further credit. Breadth-Social Sciences.

### **LAS 300-3 Latin American Literature**

A study in English of significant contributions to Latin American literature. Breadth-Humanities.

### **LAS 312-3 Special Topics: Latin American Cultural Topics**

A cross-disciplinary focus on specific elements of contemporary Latin American culture. Topics such as indigenism, Afro-Latin culture, religion, literature, and folklore will be studied. Prerequisite: LAS 140 or 200.

### **LAS 380-3 Practicum I**

First term of work experience in the Latin American Studies Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: 30 units with a minimum CGPA of 2.75, including recommended courses LAS 100, 140, 200 and SPAN 102. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the second week of the term preceding the employment term.

### **LAS 390-3 Practicum II**

Second term of work experience in the Latin American Studies Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: completion of LAS 380 and 45 units with a minimum CGPA of 2.75. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the second week of the term preceding the employment term.

### **LAS 402-5 Field Study**

A multidisciplinary study of a selected country or region. This course will normally be part of the LAS Field School in Latin America, and will be conducted in co-operation with local lecturers from the host country. Prerequisite: LAS 200.

### **LAS 404-3 Special Topics: Field School I**

This course will be part of the LAS field school in Latin America. The selected region will be examined on site from a multidisciplinary perspective. Prerequisite: LAS 200 or permission of the department.

### **LAS 480-3 Practicum III**

Third term of work experience in the Latin American Studies Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: completion of LAS 390 and 60 units with a minimum CGPA of 2.75. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the second week of the term preceding the employment term.

### **LAS 490-3 Practicum IV**

Fourth term of work experience in the Latin American Studies Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: completion of LAS 480 and 75 units with a minimum CGPA of 2.75. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the second week of the term preceding the employment term.

### **LAS 493-3 Directed Readings**

Provides opportunity for individual reading and research under the supervision of a faculty member. Prerequisite: 90 units including LAS 200 and permission of the program advisor.

### **LAS 498-5 Capstone Project**

Independent reading and research under the supervision of a LAS associated faculty member. A research term paper will be required as the culmination of a LAS joint major. Prerequisite: 90 units, including LAS 200 and permission of the program advisor. Students who have taken LAS 498-5 prior to Fall 2006 may take this course for further credit.

### **LAS 800-4 Approaches to Research in Latin American Studies**

Provides an introduction to choosing a methodological framework for conducting the MA research project. Topics include epistemology of the human sciences, social research design and a review to qualitative, quantitative and mixed research methods. Students will gain experience in writing research proposals for external funding early in the term.

### **LAS 815-4 Theories of Latin American Development**

A synthetic introduction to historical and contemporary theories of development in Latin America. Topics include political economy of development, sociological theories of development, an introduction to neoliberalism, and the contemporary experience of globalization and development in Latin America.

### **LAS 825-4 Latin American History and Culture**

**LAS 835-4 Social and Political Change in Latin America**

A general overview of social and political change in Latin America, including revolutions, independence, transition to democracy, and contemporary social movements. Theoretical approaches may include social-movement theory, democratic theory, etc.

**LAS 851-5 Directed Readings in Latin American Studies**

Directed readings in a selected field of study under the direction of a single faculty member. An annotated bibliography and a term paper is required.

**LAS 898-6 MA Thesis**

## Liberal Arts LBRL Faculty of Arts and Social Sciences

**LBRL 101-3 Practicum I**

First term of work experience in the Liberal Arts Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: at least 30 units with a minimum CGPA of 3.0, including ENGL 099 and PHIL 001. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the third week of the term preceding the employment term.

**LBRL 201-3 Practicum II**

Second term of work experience in the Liberal Arts Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of LBRL 101 and at least 45 units with a minimum CGPA of 3.0. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the third week of the term preceding the employment term.

**LBRL 301-3 Practicum III**

Third term of work experience in the Liberal Arts Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of LBRL 201 and at least 60 units with a minimum CGPA of 3.0. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the third week of the term preceding the employment term.

**LBRL 401-3 Practicum IV**

Fourth term of work experience in the Liberal Arts Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of LBRL 301 and at least 75 units with a minimum CGPA of 3.0. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the third week of the term preceding the employment term.

**LBRL 402-3 Practicum V**

Optional fifth term of work experience in the Liberal Arts Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of LBRL 401 and at least 90 units with a minimum CGPA of 3.0. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinators by the end of the third week of the term preceding the employment term.

**LBRL 750-0 Practicum I**

First term of work experience in the Co-operative Education Program.

**LBRL 751-0 Practicum II**

Second term of work experience in the Co-operative Education Program.

**LBRL 752-0 Practicum III**

Third (optional) term of work experience in the Co-operative Education Program.

## Liberal Studies LS Faculty of Arts and Social Sciences

**LS 800-5 Thinking About Human Passion**

The first of two core courses that constitute an extended examination of the tension between reason and passion in human experience. This course will emphasize close reading and discussion of works, drawn from different cultures and epochs, that reflect on human passion.

**LS 801-5 The Capacity of Limits of Reason**

The second of two core courses that constitute an extended examination of the tension between reason and passion in human experience. This course will examine writings by some who have insisted on the indispensability of reasoning as a guide to action and the source of truth, as well as writings by some of those who on various grounds have cast doubt on this faith in human reason.

**LS 810-5 Self and Society**

This course will examine some aspects of the relationship between selfhood, as idea and experience, and social organization. Approaches to the topic will vary, but may involve scientific, social scientific, philosophical and aesthetic perspectives.

**LS 811-5 Tradition and Modernity**

This course will examine ways in which ideas of tradition and traditional societies conflict with forces of modernization and ideas of modernity.

**LS 812-5 Science and Human Values**

This course will deal with issues surrounding the nature of the scientific attitude, the growth of scientific knowledge and the impact of scientific and technological change. Specific attention will be given to the value implications of science and technology in relation to other forms of human understanding and experience.

**LS 813-5 Religious and Secular World Views**

This course will deal with the conflicts and continuities of secular and religious approaches to such fundamental issues as the origins of the universe and of the human species, human virtue, and human destiny.

**LS 814-5 Liberty and Authority**

This course will examine the tension between liberty and authority as expressed in some of the following: political and judicial ideas and systems; conflicting economic ideologies; personal relationships.

**LS 815-5 Organizing Social Realities: Gender, Class, Race, Nation**

This course will examine how distinctions among people create pattern and conflict, by studying some of the fundamental organizing concepts of society which both unite and divide people.

**LS 819-5 Selected Topics**

This course provides an opportunity for the occasional offering of a seminar course appropriate to the program but on a topic outside the regular courses.

**LS 829-5 Directed Study**

This course provides an opportunity for individual study on a topic of the student's choice, under the guidance of one or more faculty. Arrangements for this course must be approved by the graduate chair in advance of enrolment.

**LS 898-5 Liberal Studies Graduating Seminar**

The final seminar for those students in the graduate liberal studies program pursuing the course option MA. The seminar will revisit the themes raised in the two opening core seminars (LS 800 and 801).

**LS 990-2.5 Extended Essays (Completion)****LS 991-2.5 MA Project (Completion)****LS 998-5 MA Extended Essays**

Students will present two of their essays for formal examination in order to satisfy the Simon Fraser University requirements for a master's degree.

**LS 999-5 MA Project**

This course is for students choosing to satisfy part of the requirements for an MA in liberal studies by presenting a project for formal examination.

## Linguistics LING Faculty of Arts and Social Sciences

**LING 100-3 Communication and Language**

A non-theoretical approach to the study of language using examples from a variety of languages. Breadth-Social Sciences.

**LING 110-3 The Wonder of Words**

Study of the structure of words, the change of meaning of words, the change in form of words. Examples from English, French and other languages. A general interest course open to all students.

**LING 130-3 Practical Phonetics**

Practical training in the description of sounds used in language. Students in the First Nations Studies program should take LING 231 before LING 130.

**LING 160-3 Language, Culture and Society**

An introduction to language in its social and cultural dimensions. Students who have taken LING 260 prior to Fall 2008 may not take LING 160 for further credit.

**LING 200-3 Introduction to the Description of English Grammar**

A practical overview of English grammar based on linguistic principles, for those designing basic knowledge of language structure, grammatical categories and grammatical analysis. This course is particularly suited for students interested in the teaching of English as a second language.

**LING 220-3 Introduction to Linguistics**

An introduction to linguistic analysis.

**LING 221-3 Introduction to Phonetics and Phonology**

The principles of phonetic and phonological analysis. Prerequisite: LING 220.

**LING 222-3 Introduction to Syntax**

The principles of syntactic analysis. Prerequisite: LING 220.

**LING 231-3 Introduction to First Nations Language I**

An introductory course in the structure of a native language of the Americas, including phonetics, vocabulary, word formation, and grammatical constructions. The course will be based on a designated language to be named each time it is taught, and will usually be chosen from the Northwest Coast area. Students who have taken LING 431 in term 90-3 may not take this course for further credit. Recommended: students in the First Nations Studies program should take LING 231 before LING 130.

**LING 232-3 Introduction to First Nations Language II**

A continuation of the introductory course in a native language, including phonetics, vocabulary, word formation, and grammatical constructions. The course will be based on a designated language to be named each time it is taught, and will usually be chosen from the Northwest Coast area. Prerequisite: LING 231 in the same language. Students who have taken LING 432 in term 91-1 may not take this course for further credit.

**LING 241-3 Languages of the World**

A survey of the languages of the world. An examination of the linguistic structure of selected languages. Prerequisite: LING 220.

**LING 290-3 The Science of Speech**

Introduces the scientific study of speech, focusing on the mechanisms of speech production and perception, the ways in which speech is described and analyzed, the relationship between speech and technology, and the practical applications of phonetic science. Students who have taken LING 480 or 481 with similar content may not take this course for further credit.

**LING 295-3 Language and the Law**

An examination of how language is used by law enforcement, the courts, government, and the legal profession. Particular attention is paid to the contributions of linguistic science to a proper understanding of the role and usage of language in the legal domain.

**LING 301W-3 Linguistic Argumentation**

Advanced study of the styles of written argumentation that are used in linguistic research. Prerequisite: LING 222. Recommended: A lower division writing intensive (W) course. Writing.

**LING 309W-3 Sociolinguistics**

A systematic approach to the study of linguistic variation in different areal, social, and cultural settings. Prerequisite: LING 220 or 310. Recommended: LING 160 or 260. Students who have taken LING 409 may not take this course for further credit. Writing.

**LING 321-3 Phonology**

An overview of theoretical principles in phonology. Prerequisite: LING 221 or 310.

**LING 322-3 Syntax**

The study of sentence structure in language through a survey of constructions found in natural language data together with a consideration of syntactic theory. Prerequisite: LING 222 or 310.

**LING 323-3 Morphology**

Word structure in natural languages and its relationship to phonological and syntactic levels of grammar. Prerequisite: LING 221, 222; or 310.

**LING 324-3 Semantics**

Basic formal aspects of meaning (e.g. compositional semantics, truth conditional semantics and quantification in natural language) and how they are distinguished from pragmatic aspects of meaning. Prerequisite: LING 222 or 310. Quantitative.

**LING 330-3 Phonetics**

A survey of methods of speech sound description and transcription. Prerequisite: LING 221 or 310.

**LING 331-3 Description and Analysis of a First Nations Language I**

An intermediate course in the structure of a native language of the Americas, including writing systems, texts and examination of the general linguistic properties of the language and the language family in which it is situated. The course will be based on a designated language to be named each time it is taught, and will usually be chosen from the Northwest Coast area. Prerequisite: LING 232 or equivalent credit in the same language.

**LING 332-3 Description and Analysis of a First Nations Language II**

A continuation of the intermediate course in a native language of the Americas, including writing systems, texts, and examination of the general linguistic properties of the language and the language family in which it is situated. The course will be based on a designated language to be named each time it is taught, and will usually be chosen from the Northwest Coast area. Prerequisite: LING 331 or equivalent credit in the same language.

**LING 335-3 Topics in First Nations Language I**

Course content varies as required by First Nations language communities or learners. It will usually focus on having students gain insights into intermediate to advanced level topics on structural aspects of a particular First Nations language, with further emphasis on how those structural features of the languages can best be learned and taught in the classroom. Prerequisite: LING 130, 231, 332 or permission of instructor. Recommended: LING 360.

**LING 350-3 First Language Acquisition**

Introduction to the study of language acquisition from the point of view of linguistic structure. Prerequisite: LING 220, 221; or 310. Students who have taken LING 250 may not take this course for further credit.

**LING 360-3 Linguistics and Language Teaching**

Theoretical and practical aspects of second language learning. Prerequisite: LING 220; or 310.

**LING 362-3 English as a Second Language: Theory**

Application of linguistic principles to the teaching of English as a second language. Prerequisite: LING 220, 221; or 310.

**LING 363-3 English as a Second Language: Practice**

Implementation of linguistic principles in the teaching of English as a second language, including a practical experience with learners of English. Prerequisite: LING 360, 362. This course is graded on a pass/fail basis.

**LING 370-3 Linguistics Practicum I**

First semester of work experience in the Linguistics Co-operative Education Program. Credits from this course do not count towards the credits required for an SFU degree. Prerequisite: normally 30 units, including LING 220 and four other courses in Linguistics, with a minimum CGPA of 2.75.

**LING 371-3 Linguistics Practicum II**

Second term of work experience in the Linguistics Co-operative Education Program. Units from this course do not count towards the units for an SFU degree. Prerequisite: successful completion of LING 370 and 45 units with a minimum CGPA of 2.75.

**LING 400-3 Formal Linguistics**

Formal systems and their relation to linguistic methods and theory. Topics include the mathematical properties of natural languages, and rigorously defined frameworks for linguistic analysis and their formal properties. Prerequisite: LING 322. Recommended: PHIL 210 Quantitative.

**LING 401-3 Topics in Phonetics**

Advanced training in speech sound description and analysis in the impressionistic and instrumental modes. Prerequisite: LING 330.

**LING 406-3 Topics in Semantics**

Additional topics in formal semantics, such as intensionality, lambda abstraction, generalized quantifiers, dynamic semantics. Prerequisite: LING 322, 324, plus LING 301. Recommended: PHIL 210. Quantitative.

**LING 407-3 Historical Linguistics**

The development of languages and language families through time; genetic grouping, the comparative method, reconstruction, etymology, universals and language change. Prerequisite: LING 321, 322 and 323, plus LING 301.

**LING 408-3 Field Linguistics**

The investigation and description of an unfamiliar language. Prerequisite: LING 221 and 222; or 310.

**LING 410-3 Theories of Applied Linguistics**

Explores the range of theories that are used within applied linguistics, including issues of theory evaluation and application. Prerequisite: LING 360 and 9 units of upper division Linguistics. Students who

have taken LING 480 or LING 481 with this topic may not take this course for further credit.

**LING 411-3 Topics in Applied Phonetics**

Application of principles from phonetics to a number of practical problems in such areas as second language learning and teaching, forensics, communications, commerce and the arts. Prerequisite: LING 321 or 330, and 9 additional units of upper division Linguistics. Students who have taken LING 480 or LING 481 with this topic may not take this course for further credit.

**LING 412-3 Topics in Applied Grammar and Discourse**

Explores topics in applied grammar and discourse, including specific theoretical constructs and analyses, as well as applications to areas such as language learning, language teaching, and corpus studies. Prerequisite: LING 222, LING 350 or 360, and 9 units of upper division Linguistics. Students who have taken LING 480 with this topic may not take this course for further credit.

**LING 415-3 Neurolinguistics**

Explores language as a system of the human brain, including specific topics such as the neuroanatomy and neurophysiology of language; language production, perception and processing; bilingualism, language learning and brain plasticity; and aphasia, dyslexia, deafness and sign languages. Prerequisite: 12 units of upper division linguistic courses. Students who have taken LING 480 with this topic may not take this course for further credit.

**LING 430-3 Native American Languages**

Structural and genetic characteristics of Native languages of America, with special emphasis on languages of the Northwest. Detailed examination of one language or language family. Prerequisite: 12 upper division linguistics units. Recommended: LING 241 and 323.

**LING 431-3 Language Structures I**

Detailed examination of the structure of a selected language. Prerequisite: LING 221 and 222; or 310.

**LING 432-3 Language Structures II**

Detailed examination of the structure of a selected language. Prerequisite: LING 221 and 222; or 310.

**LING 433-3 First Nations Language Mentoring I**

Intended for advanced learners of a particular First Nations language. It will enable them to get advanced vocabulary and/or grammatical skills in the First Nations language through individualized practice with fluent speakers (usually elders) of that language. Enrollment in this course requires the prior approval of the Department of Linguistics and the local First Nations community. Students will be evaluated on the basis of the individualized goals and objects set at the beginning of the course. Prerequisite: LING 332 or permission of course supervisor. This course is graded on a pass/fail basis.

**LING 434-3 First Nations Language Mentoring II**

A follow up to LING 433. It will involve students, on an individualized basis, carrying out 39 hours of learning with a mentor, who is a fluent speaker (usually First Nations elder) or a particular First Nations language. Prerequisite: LING 433 or permission of course supervisor. This course is graded on a pass/fail basis. Recommended: LING 431 and 432.

**LING 435-3 Topics in First Nations Language II**

Course content varies as required by First Nations language communities or learners. It will usually focus on having students gain insights into intermediate to advanced level topics on structural aspects of a particular First Nations language, with further emphasis on how those structural features of the languages can best be learned and taught in the classroom. Prerequisite: LING 220, 332 or permission of instructor. Recommended: LING 360, 431 and 432.

**LING 441-3 Linguistic Universals and Typology**

A survey of the main language types found in the world with reference to their structural properties; the categorization of language types as a consequence of linguistic universals. Prerequisite: Two of LING 321, 322 or 323. Recommended: LING 241.

**LING 470-3 Linguistics Practicum III**

Third term of work experience in the Linguistics Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of LING 371 and 60 units with a minimum CGPA of 2.75.

**LING 471-3 Linguistics Practicum IV**

Fourth term of work experience in the Linguistics Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of LING 470 and 75 units with a minimum CGPA of 2.75.

**LING 480-3 Topics in Linguistics I**

Investigation of a selected area of linguistic research. Prerequisite: Requirements will vary according to the topic offered.

**LING 481-3 Topics in Linguistics II**

Investigation of a selected area of linguistic research. Prerequisite: Requirements will vary according to the topic offered.

**LING 482W-3 Topics in Linguistics III**

Investigation of a selected area of linguistic research. The course will be writing-intensive. Prerequisite: requirements will vary according to the topic offered. Writing.

**LING 490-3 Honors Essay**

Topic of a specific nature to be agreed upon by the student and a particular faculty member. Prerequisite: a minimum of 35 units of upper division linguistic courses counting toward the honors degree.

**LING 800-4 Phonology****LING 801-4 Syntax****LING 802-4 Semantics****LING 803-4 Theory****LING 804-4 Field Methods****LING 805-4 Historical and Comparative Linguistics****LING 806-4 Sociolinguistics****LING 807-4 Computational Linguistics****LING 809-4 Morphology****LING 810-4 Topics in Linguistics I****LING 811-4 Topics in Linguistics II****LING 812-4 Topics in Linguistics III****LING 813-4 Topics in Linguistics IV****LING 820-4 Formal Linguistics****LING 821-4 Phonetics****LING 850-4 Psycholinguistic Aspects of Language Learning****LING 851-4 Research Techniques and Experimental Design****LING 855-4 Applied Linguistics I****LING 890-3 Graduate Seminar****LING 896-4 Directed Research****LING 897-4 Research Seminar****LING 898-6 MA Thesis****LING 899-6 PhD Thesis****MTEC 601-1 Technology and Supply Chain Management**

This graduate course introduces students to the central ideas of supply chain management. The web enabled approach is emphasized and compared with traditional methods. Contemporary best practices are researched and discussed.

**MTEC 602-1 Developing New Products**

This course explores the strategic and operational aspects of new product development including critical success factors. It also provides a focus on the pre-development phase of product innovation.

**MTEC 603-1 Branding**

This course focuses on the ways that brands acquire and sustain value in the marketplace. Students study the meaning, uses, processes, and methodologies for creating effective and winning brands. The evolution of brand value strategies is also explored.

**MTEC 604-1 Internet Advertising**

The focus is on the issues, theories, tools, and practice of marketing communications in the Internet marketplace and the role of Internet advertising to businesses. Students will acquire the analytical skills that are needed to plan, design, implement and evaluate internet advertising campaigns.

**MTEC 605-1 Management of High Tech Professionals**

The course is focused on how to develop competitive advantage in e-business through leadership and the effective management of people. Topics examined include corporate culture, change management, learning organizations, and various human resource practices.

**MTEC 606-1 Global Business in Technology Industries**

The course is focused on key issues in conducting international business. Students study strategy formulation for international markets, as well as the important role of national culture in business. In addition, strategic alliances in technology companies are examined.

**MTEC 607-1 Strategic Management of Innovation**

This course reviews some fundamental concepts of strategy in the context of technological innovation, examines the role of core competencies in technology development, and identifies and discusses the various components or dimensions that make up a technology strategy. Case studies are used to illustrate theory with application in the e-business context.

**MTEC 608-1 High Tech Entrepreneurship**

In today's age of rapid technological progress, ventures are being created daily to satisfy new business needs. The creation of new technology-based ventures is becoming a more popular career choice for science and technology professionals with entrepreneurial ambition. This is a fast-paced, hands-on course that takes the student through the key stages of new venture creation including researching the product opportunity, protecting the venture's intellectual property, planning the venture's seed and start-up stages, determining the financial needs and resources, developing the business plan and valuing the venture.

**MTEC 609-1 E-Customer Relationship Management**

The course is focused on the evolution of customer relationship management from mortar and brick establishments to the Web. Focus is on issues of e-loyalty and customer services, as well as current practices.

**MTEC 610-1 The Social Context of E-Business**

The human element on the Web is important. In this course focus is on the development of trust in online communities, how virtual teams operate successfully,

and ethical issues that impact online interaction, with particular emphasis on e-business.

**MTEC 611-1 Knowledge Management Tools and Technologies**

This course investigates the various information systems and technologies used for implementing knowledge management practices within an organization. It describes a framework for analyzing these knowledge services (KSS). Industry examples of knowledge services are discussed in terms of infrastructure services, core services and packaged services.

**MTEC 613-1 E-Business Strategy and Models**

Effective strategy is central to e-business success. In this course, emphasis is on examination on various strategies and models as they apply in e-business. Issues, strategic choices and challenges are highlighted related to e-business implementation.

**MTEC 691-693-1 Directed Studies****MTEC 694-696-2 Directed Studies****MTEC 697-699-3 Directed Studies****Management and Systems Science  
MSSC****Faculty of Science****MSSC 180-1 Undergraduate Seminar in Management and Systems Science**

A seminar primarily for students undertaking a major or an honors program in management and systems science. Prerequisite: Major in Management and Systems Science or permission of the program director. Students with credit for MSSC 480 cannot receive credit for MSSC 180.

**MSSC 481-1 Undergraduate Seminar in Management and Systems Science**

A seminar primarily for students undertaking a major or an honors program in management and systems science. Prerequisite: MSSC 180.

**Marine Science MASC  
Faculty of Science****MASC 400-6 Directed Studies**

A course of directed studies under the supervision of a member of faculty. The study will involve a research project approved by the supervisor in the field of interest of the student, and will be designed to take maximum advantage of the laboratory and/or field opportunities offered by the Bamfield Marine Sciences Centre.

**MASC 401-3 Directed Studies in Marine Sciences**

A course of directed studies under the supervision of a member of faculty. The study will involve a research project approved by the supervisor in the field of interest of the student, and will be designed to take maximum advantage of the laboratory and field opportunities offered by the Marine Sciences Centre. Prerequisite: Offerings of the MASC courses may vary from summer to summer because instructors are drawn from different universities. For that reason, prerequisites may vary slightly. In general, upper division standing in biology is required, and admission is usually competitive. Students are encouraged to consult the brochure published each fall by the Bamfield Marine Sciences Centre for full and specific details. The brochure will be available from the Department of Biological Sciences.

**MASC 410-6 Marine Invertebrate Zoology**

A survey of the marine phyla, with emphasis on the benthic fauna in the vicinity of the Bamfield Marine Sciences Centre. The course includes lectures, laboratory periods, field collection, identification, and observation. Emphasis is placed on the study of living specimens in the laboratory and in the field.

**Management and Technology  
MTEC****Faculty of Applied Sciences****MTEC 600-1 Services Management**

This course introduces graduate students to the various services related business models, both B2C and B2B, that are established and evolving in the realm of e-Business. The issues of integration of web based services with traditional brick and mortar models are also explored.

Prerequisite: Offerings of the MASC courses may vary from summer to summer because instructors are drawn from different universities. For that reason, prerequisites may vary slightly. In general, upper division standing in biology is required, and admission is usually competitive. Students are encouraged to consult the brochure published each fall by the Bamfield Marine Sciences Centre for full and specific details. The brochure will be available from the Department of Biological Sciences.

#### **MASC 411-6 Comparative Embryology of Marine Invertebrates**

A comprehensive study of development of marine invertebrates available at the Bamfield Marine Sciences Centre including all major phyla and most of the minor phyla. Lectures will cover gametogenesis, fertilization, regeneration, cell lineage, mosaic and regulated development, larval development and metamorphosis of the different groups. Laboratory work will include methods and techniques of obtaining and handling gametes, preparation and maintenance of larval cultures and observation of development up to metamorphosis if possible. Some selected and clearly defined classical experiments will be performed. Efforts will also be made to study various pelagic larvae. Prerequisite: Offerings of the MASC courses may vary from summer to summer because instructors are drawn from different universities. For that reason, prerequisites may vary slightly. In general, upper division standing in biology is required, and admission is usually competitive. Students are encouraged to consult the brochure published each fall by the Bamfield Marine Sciences Centre for full and specific details. The brochure will be available from the Department of Biological Sciences.

#### **MASC 412-6 Biology of Fishes**

Classification, physiology, ecology, behavior and zoogeography of fishes with particular emphasis on those in the marine environment of the British Columbia coast. Local collections from a variety of habitats will be used for experimental studies. Prerequisite: Offerings of the MASC courses may vary from summer to summer because instructors are drawn from different universities. For that reason, prerequisites may vary slightly. In general, upper division standing in biology is required, and admission is usually competitive. Students are encouraged to consult the brochure published each fall by the Bamfield Marine Sciences Centre for full and specific details. The brochure will be available from the Department of Biological Sciences.

#### **MASC 415-3 Structure and Function in Animals**

The course will focus on the structure of marine animals and their adaptations to the marine environment. Neurobiology, developmental biology, functional morphology and other topics will be covered. Prerequisite: Offerings of the MASC courses may vary from summer to summer because instructors are drawn from different universities. For that reason, prerequisites may vary slightly. In general, upper division standing in biology is required, and admission is usually competitive. Students are encouraged to consult the brochure published each fall by the Bamfield Marine Sciences Centre for full and specific details. The brochure will be available from the Department of Biological Sciences.

#### **MASC 425-3 Ecological Adaptations of Seaweeds**

The course will explore morphological physiological, genetic and reproductive adaptations of seaweeds to their natural and man-altered environments. Prerequisite: Offerings of the MASC courses may vary from summer to summer because instructors are drawn from different universities. For that reason, prerequisites may vary slightly. In general, upper division standing in biology is required, and admission

is usually competitive. Students are encouraged to consult the brochure published each fall by the Bamfield Marine Sciences Centre for full and specific details. The brochure will be available from the Department of Biological Sciences.

#### **MASC 430-6 Marine Ecology**

An analytical approach to biotic associations in the marine environment. Opportunities will be provided for study of the intertidal realm in exposed and protected areas and of beaches and estuaries in the vicinity of the Bamfield Marine Sciences Centre; plankton studies and investigations of the sub-tidal and benthic environments by diving and dredging are envisaged. Prerequisite: Offerings of the MASC courses may vary from summer to summer because instructors are drawn from different universities. For that reason, prerequisites may vary slightly. In general, upper division standing in biology is required, and admission is usually competitive. Students are encouraged to consult the brochure published each fall by the Bamfield Marine Sciences Centre for full and specific details. The brochure will be available from the Department of Biological Sciences.

#### **MASC 437-3 Marine Population Ecology and Dynamics**

An analytical approach to the study of marine ecology and marine populations. Intertidal and subtidal communities will be examined, with emphasis on the biota of the Barkley Sound region. Prerequisite: Offerings of the MASC courses may vary from summer to summer because instructors are drawn from different universities. For that reason, prerequisites may vary slightly. In general, upper division standing in biology is required, and admission is usually competitive. Students are encouraged to consult the brochure published each fall by the Bamfield Marine Sciences Centre for full and specific details. The brochure will be available from the Department of Biological Sciences.

#### **MASC 440-6 Biology of Marine Birds**

The interrelationship of birds and the marine environment. Lectures will emphasize the systematics and ecological relationships, behavior, life histories, movements and conservation of marine birds. Census techniques and methods of studying marine birds in the field will be stressed during field trips in the Barkley Sound region. Seabird identification, classification, morphology, plumages and molt will be examined in the laboratory. Prerequisite: Offerings of the MASC courses may vary from summer to summer because instructors are drawn from different universities. For that reason, prerequisites may vary slightly. In general, upper division standing in biology is required, and admission is usually competitive. Students are encouraged to consult the brochure published each fall by the Bamfield Marine Sciences Centre for full and specific details. The brochure will be available from the Department of Biological Sciences.

#### **MASC 445-6 Biology of Marine Mammals**

A survey course covering systematics and distribution of marine mammals, their sensory capabilities and physiology, with special emphasis on the cetacea. The course includes lectures, laboratory periods and numerous field trips in the Barkley Sound region. The course will involve an independent field study. Prerequisite: offerings of the MASC courses may vary from summer to summer because instructors are drawn from different universities. For that reason, prerequisites may vary slightly. In general, upper division standing in biology is required, and admission is usually competitive. Students are encouraged to consult the brochure published each fall by the Bamfield Marine Sciences Centre for full and specific details. The brochure will be available from the Department of Biological Sciences.

#### **MASC 446-6 Comparative Ethology**

A comparative study of marine animals (vertebrate and invertebrate) emphasizing behavioral description, underlying physiological mechanisms, the biological significance of behavior and behavioral evolution. The course will include independent laboratory and field studies. Prerequisite: Offerings of the MASC courses may vary from summer to summer because instructors are drawn from different universities. For that reason, prerequisites may vary slightly. In general, upper division standing in biology is required, and admission is usually competitive. Students are encouraged to consult the brochure published each fall by the Bamfield Marine Sciences Centre for full and specific details. The brochure will be available from the Department of Biological Sciences.

#### **MASC 470-479 Special Topics in Marine Biology**

Offered, as opportunities arise, by visiting scientists who are working at the Bamfield Marine Sciences Centre and are prepared to offer a course of either three or six weeks. Courses will be of a specialized nature. Prerequisite: will vary and will be announced in advance of the course offering. Variable units 3, 6.

#### **MASC 480-3 Seminars and Papers in Marine Science**

A series of weekly seminars covering current topics of interest in the Marine Sciences. Seminars will be presented Bamfield Marine Sciences Centre researchers, graduate students and visiting scientists as well as by the students themselves. Prerequisite: Offerings of the MASC courses may vary from summer to summer because instructors are drawn from different universities. For that reason, prerequisites may vary slightly. In general, upper division standing in biology is required, and admission is usually competitive. Students are encouraged to consult the brochure published each fall by the Bamfield Marine Sciences Centre for full and specific details. The brochure will be available from the Department of Biological Sciences.

#### **MASC 500-3 Directed Studies**

A graduate level course of directed studies under the supervision of a member of faculty. The study will involve a research project approved by the supervisor in the field of interest of the student, and will be designed to take maximum advantage of the laboratory and/or field opportunities offered by the Bamfield Marine Sciences Centre.

#### **MASC 501-503-3 Special Topics**

Courses offered, as opportunities arise, by distinguished scientists who are visiting the Bamfield Marine Sciences Centre and are prepared to offer a course extending over a three week period.

#### **MASC 504-506-6 Special Topics**

Course offered, as opportunities arise, by distinguished scientists who are visiting the Bamfield Marine Sciences Centre and are prepared to offer a course extending over a six week period.

## **Mathematics MATH Faculty of Science**

#### **MATH 100-3 Precalculus**

Designed to prepare students for first year Calculus courses. Topics include language and notation of mathematics; problem solving; algebraic, exponential, logarithmic and trigonometric functions and their graphs. Prerequisite: BC principles of mathematics 11 (or equivalent) with a grade of at least B-, or BC principles of mathematics 12 (or equivalent) with a grade of at least C, or SFU FAN X99 course with a grade of at least B-, or achieving a satisfactory grade on the Simon Fraser University Quantitative Placement Test. Students with credit for MATH 150 or 151 or 154 or 157 may not take MATH 100 for further credit. MATH 100 may not be counted towards the

mathematics minor, major or honors degree requirements. Quantitative.

### **MATH 113-3 Euclidean Geometry**

Plane Euclidean geometry, congruence and similarity. Theory of parallels. Polygonal areas. Pythagorean theorem. Geometrical constructions. Prerequisite: BC principles of mathematics 11 (or equivalent) with a grade of at least B- or SFU FAN X99 with a grade of at least C, or achieving a satisfactory grade on the Simon Fraser University Quantitative Placement Test. Intended to be accessible to students who are not specializing in mathematics. Particularly recommended for students considering a career in teaching secondary or middle school mathematics. Quantitative.

### **MATH 130-3 Geometry for Computer Graphics**

An introductory course in the application of geometry and linear algebra principles to computer graphical representation. Vector and matrix algebra, two and three dimensional transformations, homogeneous coordinates, perspective geometry. Prerequisite: Principles of Mathematics 12 or Applications of Mathematics 12, both with a grade of at least B. Quantitative.

### **MATH 150-4 Calculus I with Review**

Designed for students specializing in mathematics, physics, chemistry, computing science and engineering. Topics as for Math 151 with a more extensive review of functions, their properties and their graphs. Recommended for students with no previous knowledge of Calculus. In addition to regularly scheduled lectures, students enrolled in this course are encouraged to come for assistance to the Calculus Workshop (Burnaby), or Math Open Lab (Surrey). Prerequisite: BC principles of mathematics 12 (or equivalent) with a grade of at least B+ (75%); or MATH 100 with a grade of at least B-, or achieving a satisfactory grade on the Simon Fraser University Calculus Readiness Test. Students with credit for either MATH 151, 154 or 157 may not take MATH 150 for further credit. Quantitative.

### **MATH 151-3 Calculus I**

Designed for students specializing in mathematics, physics, chemistry, computing science and engineering. Logarithmic and exponential functions, trigonometric functions, inverse functions. Limits, continuity, and derivatives. Techniques of differentiation, including logarithmic and implicit differentiation. The Mean Value Theorem. Applications of Differentiation including extrema, curve sketching, related rates, Newton's method. Antiderivatives and applications. Conic sections, polar coordinates, parametric curves. Prerequisite: BC principles of mathematics 12 (or equivalent) with a grade of at least A, or MATH 100 with a grade of at least B-, or achieving a satisfactory grade on the Simon Fraser University Calculus Readiness Test. Students with credit for either MATH 150, 154 or 157 may not take MATH 151 for further credit. Quantitative.

### **MATH 152-3 Calculus II**

Riemann sum, Fundamental Theorem of Calculus, definite, indefinite and improper integrals, approximate integration, integration techniques, applications of integration. First-order separable differential equations. Sequences and series, series tests, power series, convergence and applications of power series. Complex numbers. Prerequisite: MATH 150, 151 or 154. Students may also use MATH 157 with a grade of at least B. Students with credit for MATH 155 or 158 may not take MATH 152 for further credit. Quantitative.

### **MATH 154-3 Calculus I for the Biological Sciences**

Designed for students specializing in the biological and medical sciences. Topics include: limits, growth rate and the derivative; logarithmic, exponential and

trigonometric functions and their applications in population study; optimization and approximation methods. Prerequisite: BC principles of mathematics 12 (or equivalent) with a grade of at least B; or MATH 100 with a grade of at least C, or achieving a satisfactory grade on the Simon Fraser University Calculus Readiness Test. Students with credit for either MATH 150, 151 or 157 may not take MATH 154 for further credit. Quantitative.

### **MATH 155-3 Calculus II for the Biological Sciences**

The integral and its applications, partial derivatives, differential equations and their applications in ecology, mathematical models of biological processes. Prerequisite: MATH 150, 151 or 154; or MATH 157 with a grade of at least B. Students with credit for MATH 152 or 158 may not take MATH 155 for further credit. Quantitative.

### **MATH 157-3 Calculus for the Social Sciences I**

Designed for students specializing in business or the social sciences. Topics include: limits, growth rate and the derivative; logarithmic exponential and trigonometric functions and their application to business, economics, optimization and approximation methods; functions of several variables. Prerequisite: BC principles of mathematics 12 (or equivalent) with a grade of at least B; or MATH 100 with a grade of at least C, or achieving a satisfactory grade on the Simon Fraser University Calculus Readiness Test. Students with credit for either MATH 150, 151 or 154 may not take MATH 157 for further credit. Quantitative.

### **MATH 158-3 Calculus for the Social Sciences II**

Theory of integration and its applications; introduction to multivariable calculus with emphasis on partial derivatives and their applications; introduction to differential equations with emphasis on some special first-order equations and their applications to economics and social sciences; continuous probability models; sequences and series. Prerequisite: MATH 150 or 151 or 154 or 157. Students with credit for MATH 152 or 155 may not take MATH 158 for further credit. Quantitative.

### **MATH 160W-3 Mathematics in Action**

Students take an active role in modeling mathematics of change through a guided, investigative, discovery-based approach of learning that mimics past and present research methods in mathematics. The course is divided into several modules, each of which centers around a major application in mathematics using calculus such as logistic growth (e.g. spread of diseases), optimization (e.g. cost effective oil pipe line routes), approximation (e.g. security system design), area calculation (e.g. tile design) and volume calculation (e.g. optimal ice cream cone) as well as a function review module and calculus history module. The history module allows students to gain a broad understanding of the developments of calculus and how this branch of mathematics helped to shape other branches of mathematics as well as the sciences. The instructional approach emphasizes conceptual understanding over rote drill and student write, present, and defend their mathematical discoveries. Prerequisite: Either BC principles of mathematics 12 (or equivalent) or BC applications of mathematics 12, or MATH 100 with a grade of at least C-. Writing/Quantitative/Breadth-Science.

### **MATH 178W-3 Fractals and Chaos**

Introduction to fractal geometry and chaos theory, with a survey of applications of these topics in modern mathematics and in other areas outside of mathematics including music, art, computer graphics, finance, and the sciences. Designed to be accessible to students with only high school mathematics. Prerequisite: BC principles of mathematics 12 (or

equivalent), or MATH 100 with a grade of at least C-. Writing/Quantitative/Breadth-Science.

### **MATH 190-4 Principles of Mathematics for Teachers**

Mathematical ideas involved in number systems and geometry in the elementary school curriculum. Overview of the historical development of these ideas, and their place in contemporary mathematics. Language and notation of mathematics; problem solving; whole number, fractional number, and rational number systems. Plane geometry, solid geometry, metric geometry, and the geometry of the motion. Introduction to probability and statistics. Prerequisite: BC principles of mathematics 11 (or equivalent) with a grade of at least B- or SFU FAN X99 with a grade of at least C, or achieving a satisfactory grade on the Simon Fraser University Quantitative Placement Test. This course may not be counted toward the Mathematics minor, major or honors degree requirements. Students who have taken, have received transfer credit for, or are currently taking MATH 150, 151, 154 or 157 may not take MATH 190 for credit without permission from the Department of Mathematics. Intended to be particularly accessible to students who are not specializing in mathematics. Quantitative.

### **MATH 197-3 Hitchhiker's Guide to Everyday Math**

Should you buy a ticket for 6/49 or Super 7? If you tested positive for a rare disease, what is the chance that you actually do have it? What are likely to be the consequences of moving to a single transferable vote voting system from a "first past the post" voting system? What is the connection between Chinese dragging noodles, E. coli bacteria and interest on your credit card? These are some of the questions we will be investigating in this course. We will also look into the use, misuse and abuse of mathematics in the media and advertisements. Prerequisite: BC principles of mathematics 11 or equivalent. Students who have taken, have received transfer credit for, or are currently taking MATH 150, 151, 154 or 157 may not take MATH 197 for credit without permission from the Department of Mathematics. This course may not be counted toward the Mathematics minor, major or honors degree requirements. Quantitative.

### **MATH 198-4 Introduction to Quantitative Reasoning**

Designed specifically for students in the Integrated Studies programs to help them develop their abilities to interpret and reason with quantitative information. Topics covered include logical reasoning and problem solving, counting and probability, mathematics of finance, and linear and exponential modeling. Prerequisite: BC Principles of Mathematics 11 (or equivalent) with a grade of at least C, taken within the past 10 years, or Simon Fraser University FAN X99 course with a grade of at least C. This course is only open for credit to students in the Integrated Studies programs within the Bachelor of General Studies degree. Quantitative.

### **MATH 208-3 Introduction to Operations Research**

Introduction to methods of operations research: linear and nonlinear programming, simulation, and heuristic methods. Applications to transportation, assignment, scheduling, and game theory. Exposure to mathematical models of industry and technology. Emphasis on computation for analysis and simulation. Prerequisite: MATH 152 or 155 or 158, and CMPT 101 or 104 or 125 or 126.

### **MATH 210-3 Calculus for Design Sciences**

This course is designed for students specializing in arts and design technology. Topics include theory of integration and its applications; series; introduction to first- and second-order differential equations and their applications to signals and systems; Laplace integral

transform and introduction to Fourier integral transform as effective tools to analyze and design multimedia systems. Prerequisite: MATH 150 or 151. Students with credit for TECH 147, ITEC 274, ITEC 276, MATH 152, MATH 155, and MATH 158 may not take this course for further credit. Quantitative.

### **MATH 232-3 Applied Linear Algebra**

Linear equations, matrices, determinants. Introduction to vector spaces and linear transformations and bases. Inner products and orthogonality. Eigenvalues and eigenvectors; diagonalization. Inner products and orthogonality; least squares problems. Applications. The course emphasizes matrix and vector calculations and applications. Prerequisite: MATH 150 or 151 (or equivalent) or MACM 101 or MATH 154/157 with a grade of at least B. Students with credit for MATH 240 cannot take MATH 232 for further credit. Quantitative.

### **MATH 240-3 Algebra I: Linear Algebra**

Linear equations, matrices, determinants. Real and abstract vector spaces, subspaces and linear transformations; basis and change of basis. Eigenvalues and eigenvectors; diagonalisation. Inner products and orthogonality; least squares problems. Applications. The course has a more theoretical emphasis than MATH 232, including proving true statements and giving counterexamples. Prerequisite: MATH 150 or 151 (or equivalent) or MACM 101 or MATH 154/157 with a grade of at least B+. Students with credit for MATH 232 cannot take MATH 240 for further credit. Quantitative.

### **MATH 242-3 Introduction to Analysis I**

Mathematical induction. Limits of real sequences and real functions. Continuity and its consequences. The mean value theorem. The fundamental theorem of calculus. Series. Prerequisite: MATH 152 or 155. Quantitative.

### **MATH 251-3 Calculus III**

Rectangular, cylindrical and spherical coordinates. Vectors, lines, planes, cylinders, quadric surfaces. Vector functions, curves, motion in space. Differential and integral calculus of several variables. Vector fields, line integrals, fundamental theorem for line integrals, Green's theorem. Prerequisite: MATH 152 or 155; or MATH 158 with a grade of at least B. Recommended: It is recommended that MATH 240 or 232 be taken before or concurrently with MATH 251. Quantitative.

### **MATH 252-3 Vector Calculus**

Vector calculus, divergence, gradient and curl; line, surface and volume integrals; conservative fields, theorems of Gauss, Green and Stokes; general curvilinear coordinates and tensor notation. Introduction to orthogonality of functions, orthogonal polynomials and Fourier series. Prerequisite: MATH 240 or 232, and 251. Students with credit for MATH 254 may not take MATH 252 for further credit. Quantitative.

### **MATH 254-3 Vector and Complex Analysis for Applied Sciences**

Designed for students in the Engineering Science program. Combines a continuation of the study of vector calculus from MATH 251 with an introduction to functions of a complex variable. Vector functions of a single variable, space curves, scalar and vector fields, conservative fields, surface and volume integrals, and theorems of Gauss, Green and Stokes. Functions of a complex variable, differentiability, contour integrals, Cauchy's theorem. Taylor and Laurent expansion, method of residues, integral transform and conformal mapping. Prerequisite: MATH 240 or 232, and MATH 251. Students with credit for MATH 322 or MATH 252 may not take this course for further credit. Quantitative.

### **MATH 291-292-3 Selected Topics in Mathematics**

Topics will vary from term to term depending on faculty availability and student interest. Prerequisites will be specified according to the particular topic or topics offered.

### **MATH 302-3 Computing with Mathematics**

Computational techniques have become a cornerstone of modern mathematics. Each offering explores the mathematics of an area of advanced technology. Potential course topics include: image processing; codes and ciphers; bioinformatics; experimental mathematics; and modeling and simulation. Prerequisite: MATH 152 and 232 or 240. There may be additional prerequisites depending on the course's topics. Recommended: MACM 202 or equivalent computing experience. Department permission is required to complete this course more than once.

### **MATH 303-3 Perspectives on Geometry**

Geometry is the mathematics of form and space, and is vital to our understanding of both the physical and virtual worlds. Designing computer graphics is an example of using mathematics to encode spatial relationships. Potential topics include: Euclidean and non-Euclidean geometries, computational geometry, differential geometry, and symmetry. Prerequisite: MATH 152 and 232 or 240. There may be additional prerequisites depending on the course's topics. Department permission is required to complete this course more than once.

### **MATH 304-3 Quantifying Uncertainty**

Probability theory is the mathematics of uncertainty as in weather forecasting, genetics, the financial markets, and even your choice of line at the grocery. Here we explore models that quantify chance in daily life. Potential topics are: game theory, queueing theory, random processes, and the mathematics of finance. Prerequisite: MATH 152 and 232 or 240. There may be additional prerequisites depending on the course's topics. Department permission is required to complete this course more than once.

### **MATH 308-3 Introduction to Optimization**

Convex sets and convex functions. Minimization of convex functions. Lagrange multipliers. Linear programming and duality, Applications and computation. Prerequisite: MATH 240 or 232. Recommended: MACM 201. Intended to be particularly accessible to students who are not specializing in mathematics. Quantitative.

### **MATH 309-3 Continuous Optimization**

Theoretical and computational methods for investigating the minimum of a function of several real variables with and without inequality constraints. Applications to operations research, model fitting, and economic theory. Prerequisite: MATH 240 or 232, and 251. Recommended: MATH 308. Quantitative.

### **MATH 310-3 Introduction to Ordinary Differential Equations**

First-order differential equations, second- and higher-order linear equations, series solutions, introduction to Laplace transform, systems and numerical methods, applications in the physical, biological and social sciences. Prerequisite: MATH 152 or 155 (or MATH 158 with a grade of A or B) and MATH 240 or 232. Quantitative.

### **MATH 314-3 Introduction to Fourier Methods and Partial Differential Equations**

Fourier series, ODE boundary and eigenvalue problems. Separation of variables for the diffusion wave and Laplace/Poisson equations. Polar and spherical co-ordinate systems. Symbolic and numerical computing, and graphics for PDEs. Prerequisite: MATH 252 (or 254) and 310, and computing experience. Quantitative.

### **MATH 320-3 Introduction to Analysis II**

Sequences and series of functions, topology of sets in Euclidean space, introduction to metric spaces, functions of several variables. Prerequisite: MATH 242 and 251. Quantitative.

### **MATH 322-3 Complex Variables**

Functions of a complex variable, differentiability, contour integrals, Cauchy's theorem, Taylor and Laurent expansions, method of residues. Prerequisite: MATH 251. Students with credit for MATH 424 may not take MATH 322 for further credit. Quantitative.

### **MATH 336-3 Job Practicum I**

This is the first term of work experience in a co-operative education program available to mathematics students. Interested students should contact departmental advisors as early in their careers as possible, for proper counselling. Units from this course do not count towards the units required for an SFU degree. Prerequisite: students must apply to and receive permission from the co-op co-ordinator at least one, preferably two, terms in advance. They will normally be required to have completed 45 units with a GPA of 2.5. This course will be graded on a pass/withdraw basis. A course fee is required.

### **MATH 337-3 Job Practicum II**

This is the second term of work experience in a co-operative education program available to mathematics students. Units from this course do not count towards the units required for an SFU degree. Prerequisite: MATH 336 and permission of the co-op co-ordinator; students must apply at least one term in advance. This course will be graded on a pass/withdraw basis. A course fee is required.

### **MATH 338-3 Advanced Linear Algebra**

Linear Algebra. Vector space and matrix theory. Prerequisite: MATH 340 or 332 or permission of the instructor. Students with credit for MATH 438 cannot take MATH 338 for further credit. Quantitative.

### **MATH 340-3 Algebra II: Rings and Fields**

The integers and mathematical proof. Relations and modular arithmetic. Rings and fields, polynomial rings, the Euclidean algorithm. The complex numbers and the fundamental theorem of algebra. Construction of finite fields, primitive elements in finite fields, and their application. Prerequisite: MATH 240 (or MATH 232 with a grade of at least B). Students with credit for MATH 322 cannot take MATH 340 for further credit.

### **MATH 341-3 Algebra III: Groups**

Finite groups and subgroups. Cyclic groups and permutation groups. Cosets, normal subgroups and factor groups. Homomorphisms and isomorphisms. Fundamental theorem of finite abelian groups. Sylow theorems. Prerequisite: MATH 340 or 342 or 332. Students with credit for MATH 339 cannot take MATH 341 for further credit.

### **MATH 342-3 Elementary Number Theory**

The prime numbers, unique factorization, congruences and quadratic reciprocity. Topics include the RSA public key cryptosystem and the prime number theorem. Prerequisite: MATH 240 or 232, and one additional 200 level MATH or MACM course. Quantitative.

### **MATH 343-3 Applied Discrete Mathematics**

Structures and algorithms, generating elementary combinatorial objects, counting (integer partitions, set partitions, Catalan families), backtracking algorithms, branch and bound, heuristic search algorithms. Prerequisite: MACM 201 (with a grade of at least B-). Recommended: knowledge of a programming language. Quantitative.

### **MATH 345-3 Introduction to Graph Theory**

Fundamental concepts, trees and distances, matchings and factors, connectivity and paths,

network flows, integral flows. Prerequisite: MACM 201 (with a grade of at least B-). Quantitative.

### **MATH 348-3 Probabilistic Models in Operations Research**

Inventory theory, Markov decision process and applications, queueing theory, forecasting models, decision Analysis and games, probabilistic dynamic programming, simulation modeling, project planning using PERT/CPM, sequencing and scheduling. Prerequisite: STAT 270, MATH 308. Quantitative.

### **MATH 370-3 The Art and Craft of Problem Solving**

Covers the same topics as MATH 370W but without the W component. Prerequisite: MACM 201 with a grade of at least B. At least one of MACM 201, MACM 202, MATH 240, MATH 242, MATH 251 or MATH 252 with a grade of at least A, or permission of instructor. Quantitative.

### **MATH 370W-3 The Art and Craft of Problem Solving**

Designed for students with a strong interest in problem solving and the determination to persevere in seeking solutions to highly challenging mathematical problems. Intended as a preparation for the Putnam Competition, the most challenging and prestigious undergraduate mathematics competition in North America, in which effective presentation of solutions is as important as skill in problem solving. Develops problem solving skills, including confidence, persistence, and willingness to experiment freely as well as to pursue rigorous argument. Reviews strategic principles, tactical approaches, and specific technical tools for problem solving, and mathematical problem solving folklore. Emphasis is placed on clarity of exposition and persuasiveness of written argument, and on development of communication skills. Prerequisite: MACM 201 with a grade of at least B. At least one of MACM 201, MACM 202, MATH 240, MATH 242, MATH 251 or MATH 252 with a grade of at least A, or permission of instructor. Writing/Quantitative.

### **MATH 380W-3 History of Mathematics**

An account of the history of mathematics from ancient times through the development of calculus and the origins of modern algebra in the nineteenth century. Emphasis will be on developments which shaped the mathematics studied in high school and the first two years of university. Prerequisite: MATH 151 (or equivalent) and at least 6 units from MATH at the 200 division or above (includes STAT 270). Intended to be particularly accessible to students who are not specializing in mathematics. Writing/Quantitative.

### **MATH 381W-3 Mathematics Undergraduate Seminar**

A writing and presentation-intensive study of an area of mathematics. Students will read and prepare written and oral comments on material in the mathematics literature. Prerequisite: six units of mathematics at the 200 division or higher. Writing.

### **MATH 398-3 Selected Topics in Mathematics**

Topics in areas of mathematics not covered in the regular undergraduate curriculum of the department. Prerequisites will be specified according to the particular topic or topics offered.

### **MATH 402-4 Industrial Mathematics Project**

Applications of mathematical methods to industrial problems. Emphasis will be placed on the mathematical formulation of problems arising in an industrial context. Topics will be drawn from many areas, including (but not limited to): coding theory, continuum mechanics, optimal control and signal processing. Students will choose problems to work and present their solutions in the form of a written report, poster or oral presentation. Prerequisite: MACM 202, 316; MATH 251, 308, 310; STAT 285. Quantitative.

### **MATH 408-3 Discrete Optimization**

Model building using integer variables, computer solution, relaxations and lower bounds, heuristics and upper bounds, branch and bound algorithms, cutting plane algorithms, valid inequalities and facets, branch and cut algorithms, Lagrangian duality, column generation of algorithms, heuristics algorithms and analysis. Prerequisite: MATH 308 and MACM 201 (with a grade of at least B-).

### **MATH 418-3 Partial Differential Equations**

First-order linear equations, the method of characteristics. The wave equation. Harmonic functions, the maximum principle, Green's functions. The heat equation. Distributions and transforms. Higher dimensional eigenvalue problems. An introduction to nonlinear equations. Burgers' equation and shock waves. Prerequisite: MATH 314 (or PHYS 384) or permission of the department. Recommended: MATH 242 and 320. Quantitative.

### **MATH 419-3 Linear Analysis**

Convergence in Euclidean spaces, Fourier series and their convergence, Legendre polynomials, Hermite and Laguerre polynomials. Prerequisite: MATH 240 (or MATH 232 with a grade of at least B+) and MATH 320. Recommended: MATH 252. Quantitative.

### **MATH 424-3 Complex Analysis**

Conformal mapping, Cauchy Integral Formula, Analytic Continuation, Riemann Mapping Theorem, Argument Principle. Prerequisite: MATH 320 and either MATH 322 or 254, or permission of the instructor. Quantitative.

### **MATH 425-3 Real Analysis**

Metric spaces, normed vector spaces, measure and integration, an introduction to functional analysis. Prerequisite: MATH 320. Quantitative.

### **MATH 436-3 Job Practicum III**

This is the third term of work experience in a co-operative education program available to mathematics students. Units from this course do not count towards the units required for an SFU degree. Prerequisite: MATH 337 and permission of the co-op co-ordinator; students must apply at least one term in advance. This course will be graded on a pass/withdraw basis. A course fee is required.

### **MATH 437-3 Job Practicum IV**

This is the fourth term of work experience in a co-operative education program available to mathematics students. Units from this course do not count towards the units required for an SFU degree. Prerequisite: MATH 436 and permission of the co-op co-ordinator; students must apply at least one term in advance. This course will be graded on a pass/withdraw basis. A course fee is required.

### **MATH 439-3 Algebra IV: Selected Topics in Algebra**

Topics in advanced algebra not covered by other courses. Prerequisite: MATH 338 or 340 or 332, according to the particular topic or topics offered.

### **MATH 440-3 Galois Theory**

An introduction to the theory of fields, with emphasis on Galois theory. Prerequisite: MATH 340 or 332. Quantitative.

### **MATH 443-3 Combinatorial Theory**

Design theory: Steiner triple systems, balanced incomplete block designs, latin squares, finite geometries. Enumeration: generating functions. Burnside's Lemma, Polya counting. Prerequisite: MATH 340 or 332, and MACM 201 (with a grade of at least B-). Quantitative.

### **MATH 445-3 Graph Theory**

Graph coloring, Hamiltonian graphs, planar graphs, random graphs, Ramsey theory, extremal problems, additional topics. Prerequisite: MATH 345. Quantitative.

### **MATH 447-3 Coding Theory**

An introduction to the theory and practice of error-correcting codes. Topics will include finite fields, polynomial rings, linear and non-linear codes, BCH codes, convolutional codes, majority logic decoding, weight distribution of codes, and bounds on the size of codes. Prerequisite: MATH 340 or 332. Quantitative.

### **MATH 448-3 Network Flows**

Applications of network flow models; flow decomposition; polynomial algorithms for shortest paths, maximum flows and minimum costs flows; convex cost flows; generalized flows, multi-commodity flows. Prerequisite: CMPT 225, MATH 308, 345. Quantitative.

### **MATH 461-3 Continuous Mathematical Models**

Formulation, analysis and numerical solution of continuous mathematical models. Applications may be selected from topics in physics, biology, engineering and economics. Prerequisite: MATH 314 and MACM 316. Students with credit for MATH 361 may not take MATH 461 for further credit. Quantitative.

### **MATH 462-3 Fluid Dynamics**

Incompressible fluid flow phenomena: kinematics and equations of motion, viscous flow and boundary layer theory, potential flow, water waves. Aerodynamics. Prerequisite: MATH 314 or PHYS 384, MATH 322. Quantitative.

### **MATH 467-3 Dynamical Systems**

Stability and bifurcation in vector fields and discrete maps. Centre manifold theory and applications of normal forms. Introduction to chaos, Lyapunov exponents, and normal hyperbolicity. Prerequisite: MATH 310. Recommended: MATH 320. Quantitative.

### **MATH 470-3 Variational Calculus**

Procedures of Euler, Lagrange and Hamilton. Extremum problems, stationary values of integrals. Canonical equations of motion, phase space, Lagrangian and Poisson brackets. Prerequisite: MATH 314 or PHYS 384. Recommended: MATH 320. Quantitative.

### **MATH 486-3 Job Practicum V**

This is an optional fifth term of work experience in a co-operative education program available to mathematics and statistics students. Units from this course do not count towards the units required for an SFU degree. Prerequisite: MATH 437 and permission of the co-op co-ordinator. Students must apply at least one term in advance.

### **MATH 491-2 Honors Essay**

Selected topics. Prerequisite: written permission of the department undergraduate studies committee.

### **MATH 492-494-4 Directed Studies**

Independent reading or research in topics selected in consultation with the supervising instructor. Prerequisite: written permission of the department undergraduate studies committee.

### **MATH 495-3 Selected Topics in Applied Mathematics**

The topics included in this course will vary from term to term depending on faculty availability and student interest. Prerequisite: will be specified according to the particular topic or topics offered under this course number.

### **MATH 496-3 Selected Topics in Mathematics**

The topics included in these courses will vary from term to term depending on faculty availability and student interest. Prerequisite: will be specified according to the particular topic or topics offered under these course numbers.

### **MATH 497-3 Directed Studies**

Independent reading or research in topics selected in consultation with the supervising instructor.

Prerequisite: written permission of the department undergraduate studies committee.

#### **MATH 601-4 Discovering Mathematics I**

Arithmetic and Geometry form the core of the elementary school curriculum. The fundamental concepts in both these areas of mathematics will be approached through exploratory exercises and problems as well as in projects. The students will work both singly and in groups to explore the ideas of mathematics. The presentations will be non-theoretical. Prerequisite: acceptance into the master's program in mathematics education or permission of the department. Graduate students in Department of Mathematics cannot take this course to satisfy their degree requirements.

#### **MATH 602-4 Discovering Mathematics II**

Discrete mathematics is used in computer communications, scheduling and transportation problems. Statistics is encountered by each of us every day in the newspapers and on television as medical findings, sporting results and economic strategies are discussed. These are two of the most accessible areas of modern applied mathematics and many problems and the ideas behind their solution can be understood and appreciated by students with only a modest mathematical background. Several topics in these areas and their relationship to real world problems will be explored. The exploration will be done through a series of projects with students often working in teams and making presentations of their discoveries. The presentation will be non-theoretical. Prerequisite: MATH 601 and acceptance into the master's program in mathematics education or permission of the department. Graduate students in Department of Mathematics cannot take this course to satisfy their degree requirements.

#### **MATH 603-4 Foundations of Mathematics**

Crises in mathematics, their historical and philosophical background and their resolution. Prerequisite: acceptance into the MSc program in mathematics education or permission of the department. Graduate students in the Department of Mathematics cannot take this course to satisfy their degree requirements.

#### **MATH 604-4 Geometry**

Euclidean and non-Euclidean geometries. Klein's erlangen program. Prerequisite: entrance into the MSc in mathematics education program or permission of the department. Graduate students in the Department of Mathematics cannot take this course to satisfy their degree requirements.

#### **MATH 605-4 Mathematics in Context**

Mathematical modeling in the largest sense with a focus on topics and issues related to doing and discovering mathematics, including explorations of available computational resources, e.g. Maple. Prerequisite: acceptance into the MSc program in mathematics education and one year of university level calculus. Graduate students in the Department of Mathematics cannot take this course to satisfy their degree requirements.

#### **MATH 701-3 Computer Algebra**

Data-structures and algorithms for mathematical objects, including polynomials, general mathematical formulae, long integer arithmetic, polynomial greatest common divisors, the Risch integration algorithm. Other topics include symbolic differentiation, simplification of formulae, and polynomial factorization. Students will learn Maple for use on assignments. Prerequisite: CMPT 307 or MATH 332. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 708-3 Discrete Optimization**

Held jointly with MATH 408-3. See description for MATH 408-3. Prerequisite: Same as for MATH 408 or

equivalent. Exclusion: MATH 408-3. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 709-3 Numerical Linear Algebra and Optimization**

Held jointly with MACM 409-3. See description for MACM 409-3. Prerequisite: Same as for MACM 409 or equivalent. Exclusion: MACM 409-3. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 716-3 Numerical Analysis II**

The numerical solution of ordinary differential equations and elliptic, hyperbolic and parabolic partial differential equations will be considered. Prerequisite: MATH 310 (or 352) and MACM 316. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 718-3 Partial Differential Equations**

First-order linear equations, the method of characteristics. The wave equation. Harmonic functions, the maximum principle, Green's functions. The heat equation. Distributions and transforms. Higher dimensional eigenvalue problems. An introduction to nonlinear equations. Burgers' equation and shock waves. Prerequisite: MATH 314 (or PHYS 384), or permission of the department. Recommended: MATH 242 and 320. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 719-3 Linear Analysis**

Convergence in Euclidean spaces, Fourier series and their convergence, Legendre polynomials, Hermite and Laguerre polynomials. Prerequisite: MATH 232, 320 or permission of the instructor. Recommended: MATH 252. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 724-3 Applications of Complex Analysis**

Conformal mapping, application to boundary value problems, Schwarz-Christoffel transformation, integral formulas, analytic continuation, argument principle. Prerequisite: MATH 322. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 725-3 Real Analysis**

Metric spaces, normed vector spaces, measure and integration, an introduction to functional analysis. Prerequisite: MATH 320. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 738-3 Linear Algebra**

Linear Algebra. Vector space and matrix theory. Prerequisite: MATH 332 or 339 or permission of the instructor. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 739-3 Algebraic Systems**

Algebraic systems including, for example, groups, rings. Polynomial theory. Prerequisite: MATH 332. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 740-3 Galois Theory**

An introduction to the theory of fields, with emphasis on Galois theory. Prerequisite: MATH 332. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 742-3 Cryptography**

Held jointly with MACM 442-3. See description for MACM 442-3. Prerequisite: Same as for MACM 442 or equivalent. Exclusion: MACM 442-3. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 743-3 Combinatorial Theory**

Design theory: Steiner triple systems, balanced incomplete block designs, latin squares, finite geometries. Enumeration: generating functions. Burnside's Lemma, Polya counting. Prerequisite: MATH 343 and MATH 340 or 332. Recommended: MATH 345 and 440. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 745-3 Graph Theory**

Graph coloring, Hamiltonian graphs, planar graphs, random graphs, Ramsey theory, extremal problems, additional topics. Prerequisite: MATH 345. Recommended: MATH 343. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 747-3 Coding Theory**

An introduction to the theory and practice of error-correcting codes. Topics will include finite fields, polynomial rings, linear and non-linear codes, BCH codes, convolutional codes, majority logic decoding, weight distribution of codes, and bounds on the size of codes. Prerequisite: MATH 232. Recommended: MATH 332. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 748-3 Network Flows**

Held jointly with MATH 448-3. See description for MATH 448-3. Prerequisite: Same as for MATH 448 or equivalent. Exclusion: MATH 448-3. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 761-3 Continuous Mathematical Models**

Formulation, analysis and numerical solution of continuous mathematical models. Applications may be selected from topics in physics, biology, engineering and economics. Prerequisite: MATH 314 and MACM 316. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 762-3 Fluid Dynamics**

Incompressible fluid flow phenomena: kinematics and equations of motion, viscous flow and boundary layer theory, potential flow, water waves. Aerodynamics. Prerequisite: MATH 314 or PHYS 384, MATH 322. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 767-3 Dynamical Systems**

Stability and bifurcation in vector fields and discrete maps. Centre manifold theory and applications of normal forms. Introduction to chaos, Lyapunov exponents, and normal hyperbolicity. Prerequisite: MATH 310. Recommended: MATH 320. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

#### **MATH 770-3 Variational Calculus**

Held jointly with MATH 470-3. See description for MATH 470-3. Prerequisite: Same as for MATH 470 or equivalent. Exclusion: MATH 470-3. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

**MATH 795-3 Selected Topics in Applied Mathematics**

Held jointly with MATH 495-3. See description for MATH 495-3. Prerequisite: Same as for MATH 495 or equivalent. Exclusion: MATH 495-3. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

**MATH 796-3 Selected Topics in Mathematics**

Held jointly with MATH 496-3. See description for MATH 496-3. Prerequisite: Same as for MATH 496 or equivalent. Exclusion: Math 496. Students may not take a 700 division course if it is being offered in conjunction with a 400 division course which they have taken previously.

**MATH 800-4 Mathematics: Selected Topics****MATH 817-4 Groups and Rings**

A survey of graduate group and/or ring theory. Possible topics include generators and relations, composition series, Sylow theory, permutation groups, abelian groups, p-groups, nilpotent and solvable groups, aspects of simple groups, representation theory, group algebras, chain conditions, Jacobson radical, Chevalley-Jacobson density theorem, Wedderburn-Artin theorems.

**MATH 818-4 Algebra and Geometry**

An introduction to algebraic geometry with supporting commutative algebra. Possible topics include Hilbert basis theorem, Hilbert's Nullstellensatz, Groebner bases, ideal decomposition, local rings, dimension, tangent and cotangent spaces, differentials, varieties, morphisms, rational maps, non-singularity, intersections in projective space, cohomology theory, curves, surfaces, homological algebra.

**MATH 819-4 Algebra: Selected Topics****MATH 820-4 Graph Theory**

Algebraic graph theory, extremal graph theory, coloring problems, path and cycle structure of graphs, application of graphs, hypergraphs, and current research topics.

**MATH 821-4 Combinatorics**

An introduction to the theory of incidence structures (finite geometries, block designs) and their relation to linear codes. Algebraic techniques — finite group actions, orbit enumeration, generation of orbit representatives. Exact and asymptotic enumeration of labelled and unlabelled structures.

**MATH 826-4 Posets and Matroids**

An introduction to the theory of posets, geometric lattices and matroids.

**MATH 827-4 Discrete Mathematics: Selected Topics****MATH 831-4 Real Analysis I**

An intensive study of Lebesgue measure, integration and the Lebesgue convergence theorems together with the treatment of such topics as absolute continuity, the fundamental theorem of calculus, the  $L_p$ -spaces, comparison of types of convergence in function spaces, the Baire category theorem.

**MATH 833-4 Analysis: Selected Topics****MATH 836-4 Complex Analysis I**

Topics covered normally will include: Riemann surfaces, complex conjugate co-ordinates; the maximum principle, boundary value problems; conformal mappings, Schwartz-Christoffel formula; the symmetry principle, analytic continuation.

**MATH 841-4 Topology: Selected Topics**

**MATH 842-4 Algebraic Number Theory**  
Review of Galois theory, integrality, rings of integers, traces, norms, discriminants, ideals, Dedekind domains, class groups, unit groups, Minkowski theory, ramification, cyclotomic fields, valuations, completions, applications.

**MATH 843-4 Analytic and Diophantine Number Theory**

Arithmetical functions, distribution of prime numbers, theory of Dirichlet characters, Dirichlet series, theory of Riemann Zeta functions and Dirichlet L-functions, exponential sums, character sums, Diophantine equations, Diophantine approximations, applications.

**MATH 845-4 Number Theory: Selected Topics****MATH 877-1 Supplementary Reading****MATH 878-0 PhD Comprehensive Examination**

A comprehensive written examination covering a broad range of senior undergraduate and graduate material.

**MATH 879-0 PhD Thesis Proposal**

An open oral defence of a written thesis proposal presented to the student's supervisory committee.

**MATH 880-6 MSc Project**

A project leading to research in mathematics completed under the supervision of a faculty member. The project will consist of a written report and a public presentation. This course can only be used for credit towards the MSc project course option.

**MATH 882-0 MSc Final Examination**

A written examination covering senior undergraduate and basic graduate material.

**MATH 890-0 Practicum I**

First term of work experience in a co-operative education program.

**MATH 891-0 Practicum II**

Second term of work experience in a co-operative education program.

**MATH 892-0 Practicum III**

Third term of work experience in the Co-operative Education Program. Prerequisite: MATH 891.

**MATH 893-0 Practicum IV**

Fourth term of work experience in the Co-operative Education Program. Prerequisite: MATH 892.

**MATH 894-2 Reading****MATH 895-4 Reading****MATH 896-2 Introductory Seminar****MATH 897-2 Advanced Seminar****MATH 898-6 MSc Thesis****MATH 899-6 PhD Thesis****Mathematics and Computing****Science MACM****Faculties of Applied Sciences, and Science****MACM 101-3 Discrete Mathematics I**

Introduction to counting, induction, automata theory, formal reasoning, modular arithmetic. Prerequisite: BC high school mathematics 12. Entry into this course is obtained through the School of Computing Science. Quantitative/Breadth-Science.

**MACM 201-3 Discrete Mathematics II**

A continuation of MACM 101. Topics covered include graph theory, trees, inclusion-exclusion, generating functions, recurrence relations, and optimization and matching. Prerequisite: MACM 101. Quantitative.

**MACM 202-4 Mathematical Modeling and Computation**

A variety of continuous and discrete models such as difference equations, differential equations, networks, cellular automata, and fractals are introduced. Students will develop mathematical models for physical phenomena, and use the computer to simulate and analyze the models. A mathematical software package, such as Maple or Matlab, will be extensively used in a laboratory setting. Prerequisite: MATH 152 (or MATH 155 or 158), and CMPT 125 (or CMPT 101 or 104 or 126) and MATH 240 or 232 (co-requisite). Quantitative.

**MACM 300-3 Introduction to Formal Languages and Automata with Applications**

Languages, grammars, automata and their applications to natural and formal language processing. Prerequisite: MACM 201. Quantitative.

**MACM 316-3 Numerical Analysis I**

A presentation of the problems commonly arising in numerical analysis and scientific computing and the basic methods for their solutions. Prerequisite: MATH 152 or 155 or 158, and MATH 232 or 240, and computing experience. Quantitative.

**MACM 401-3 Introduction to Computer Algebra**

A first course in computer algebra — also called symbolic computation. It covers data-structures and algorithms for mathematical objects, including polynomials, general mathematical formulae, long integer arithmetic, polynomial greatest common divisors, the Risch integration algorithm. Other topics include symbolic differentiation, simplification of formulae, and polynomial factorization. Students will learn Maple for use on assignments. Prerequisite: CMPT 307 or MATH 332 or MATH 340. Quantitative.

**MACM 409-3 Numerical Linear Algebra:****Algorithms, Implementation and Applications**

Development of numerical methods for solving linear algebra problems at the heart of many scientific computing problems. Mathematical foundations for the use, implementation and analysis of the algorithms used for solving many optimization problems and differential equations. Prerequisite: MATH 251, MACM 316, programming experience. Quantitative.

**MACM 416-3 Numerical Analysis II**

The numerical solution of ordinary differential equations and elliptic, hyperbolic and parabolic partial differential equations will be considered. Prerequisite: MATH 310 and MACM 316. Quantitative.

**MACM 442-3 Cryptography**

An introduction to the subject of modern cryptography. Classical methods for cryptography and how to break them, the data encryption standard (DES), the advanced encryption standard (AES), the RSA and ElGamal public key cryptosystems, digital signatures, secure hash functions and pseudo-random number generation. Algorithms for computing with long integers including the use of probabilistic algorithms. Prerequisite: (CMPT 201 or 225) and one of (MATH 340 or 332 or 342); or CMPT 405. Cannot be repeated if taken MACM 498 1037-1061. Quantitative.

**MACM 498-3 Special Topics in Mathematics and Computing Science**

Topics will vary from term to term depending on faculty availability and student interest. Prerequisite: will be specified according to the particular topics offered under this course number.

**Molecular Biology and****Biochemistry MBB****Faculty of Science****MBB 151-3 Practicum I**

First term of work experience in the Molecular Biology and Biochemistry Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: acceptance in the Science Co-operative Education Program.

**MBB 201-3 Biochemistry of the Cell**

An introduction to cellular processes with an emphasis on protein structure and function. Topics that will be explored include transcription, translation and protein synthesis, basic metabolic pathways, biomembranes, organelles, vesicle transport, the cytoskeleton and cell signaling. Prerequisite: BISC 101; CHEM 281 as prerequisite or corequisite.

**MBB 222-3 Molecular Biology and Biochemistry**

An introduction to DNA replication and recombination, RNA transcription and protein synthesis in the context of their locations within the cell and their timing in the cell cycle. The relationship between structure and function of proteins and nucleic acids will be addressed. Prerequisite: CHEM 281 with a grade of C- or better. Corequisite or prerequisite: CHEM 282.

**MBB 231-3 Cellular Biology and Biochemistry**

A study of the molecular processes which underlie cell structure and function, integrating ultrastructural, physiological and biochemical approaches. Modern techniques used in the analysis of organelle and cell function are integral parts of the course. Prerequisite: MBB 222, BISC 101 with grades of C- or better. Students may not receive credit for MBB 221 and MBB 231.

**MBB 251-3 Practicum II**

Second term of work experience in the Molecular Biology and Biochemistry Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: acceptance in the Science Co-operative Education Program.

**MBB 300-1 Special Topics in Biotechnology and Business**

A survey of the legal, economic and social aspects of technology transfer in the areas of molecular biology, biochemistry, and biotechnology presented by a series of local experts. Topics will include patents, contracts, intellectual property, capitalization and others. The format will be a formal lecture followed by a workshop. Prerequisite: completion of the second year in the Molecular Biology and Biochemistry and Business Administration joint major or equivalent experience.

**MBB 308-3 Molecular Biology Laboratory**

Modern molecular biological and recombinant DNA methods such as DNA isolation, plasmid preparation, restriction enzyme digestion, Southern blots, cloning and polymerase chain reaction. Prerequisite: MBB 222, and MBB 221 or MBB 231, and MBB 331 as a co- or pre-requisite (the latter is recommended). Students with credit for BISC 357 may not take MBB 308 for further credit.

**MBB 309-4 Biochemistry Laboratory**

Contemporary techniques in biochemistry including protein purification, immunochemical methods, and lipid characterization. Prerequisite: MBB 222, and MBB 221 or MBB 231. Recommended: CHEM 215 and CHEM 286 precede MBB 309.

**MBB 309W-4 Biochemistry Laboratory**

Contemporary techniques in biochemistry including protein purification, immunochemical methods, and lipid characterization. Prerequisite: MBB 222, and MBB 221 or MBB 231. Recommended: CHEM 215 and CHEM 286 precede MBB 309. Writing.

**MBB 310-3 Genes, Biotechnology, and Society**

A Science Breadth course exploring current topics in Biotechnology and Genetic Engineering. Critical issues facing society will be examined from scientific, regulatory, and ethical points of view, with particular emphasis on acquiring enough of the scientific background to discuss and evaluate the issues. Prerequisite: 60 units. This course is not open to majors in MBB or Biological Sciences. Breadth-Science.

**MBB 321-3 Intermediary Metabolism**

Major catabolic and anabolic pathways and their regulation. Particular emphasis is placed on bioenergetics and experimental methods encountered in biochemical research. Prerequisite: MBB 222, and MBB 221 or MBB 231.

**MBB 322-3 Molecular Physiology**

Cellular and biochemical aspects of immunology, muscle contraction, cell motility, neural transmission, the action of hormones. The course will also explore the cellular and molecular bases of cancer. Prerequisite: MBB 222, and MBB 221 or MBB 231.

**MBB 323-3 Introduction to Physical Biochemistry**

Introduction to physical biochemistry including rigorous treatment of thermodynamics and molecular transport and interactions with specific emphasis on biochemical and molecular biological processes. CHEM 360 may be substituted as an alternative to this requirement for MBB majors. Prerequisite: MATH 152 (or 155), PHYS 121 (or 102, or 126, or 141), CHEM 122 (or 102), MBB 222.

**MBB 331-3 Molecular Biology**

The study of DNA and RNA in relation to gene structure and expression: DNA replication and the regulation of gene expression in bacteria and higher organisms. Introduction to recombinant DNA and cloning theory; natural vector structures and recombinant vector construction. Prerequisite: MBB 222, and MBB 221 or MBB 231, BISC 202.

**MBB 351-3 Practicum III**

Third term of work experience in the Molecular Biology and Biochemistry Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: acceptance in the Science Co-operative Education Program.

**MBB 402-3 Molecular and Developmental Genetics**

Selected aspects of developmental biology with an emphasis on genetic and molecular analyses in model systems such as *Drosophila*, *C. elegans* and mice. The focus will be on signal transduction pathways and their regulation of developmental processes. Prerequisite: BISC 333 and MBB 331 (or BISC 331). Students with credit for BISC 402 may not take this course for credit.

**MBB 413-2 Physical Biochemistry Laboratory**

The measurement of physical properties of macromolecules; studies with bio-membranes. Prerequisite: MBB 309 (or 312) and 321 (or BICH 321), and either MBB 323 or CHEM 360. Students with credit for BICH 413 may not take MBB 413 for further credit.

**MBB 420-3 Selected Topics in Contemporary Biochemistry**

The topics in this course will vary from term to term, depending on faculty availability and student interest. Prerequisite: will be announced before the start of the term and will depend upon the nature of the topic offered.

**MBB 421-3 Nucleic Acids**

Recent literature is examined for insights into the structure and properties of DNA and RNA, drawing on a variety of biochemical, chemical and molecular biological perspectives. Prerequisite: MBB 331 (or BISC 331). Students with credit for BICH 421 may not take MBB 421 for further credit.

**MBB 422-3 Biomembranes**

A review of recent research on the structure, dynamics, function and biosynthesis of membranes, membrane lipids and proteins. Prerequisite: MBB 322 (or BICH 321 and 322) and either MBB 323 or CHEM 360. Students with credit for BICH 422 may not take MBB 422 for further credit.

**MBB 423-3 Protein Structure and Function**

Recent research in transition state theory; specificity in enzyme catalyzed reactions, the use of recombinant DNA techniques to describe and modify enzyme catalysis, the function of enzymes in organic solvents, and the development of new catalytic activities through monoclonal antibody techniques.

Prerequisite: MBB 331 (or BISC 331) and either MBB 321 (or BICH 321) or MBB 322 (or BICH 322). Students with credit for BICH 423 may not take MBB 423 for further credit.

**MBB 424-3 Membrane Transport Mechanisms**

Structure and function of molecules that mediate transport across membranes including channels, carriers, and pumps. Primary literature from the fields of biochemistry and physiology will be explored through lectures and independent study. Prerequisite: MBB 321, 322 and either MBB 323 or CHEM 360. Students who have taken MBB 420 under the same topic may not take this course for further credit.

**MBB 426-3 Immune System I: Basis of Innate and Adaptive Immunity**

The basic organization of the immune system, including structure, function and genetics of antibodies, T-cell receptors, innate immune receptors, and the complement system. Innate, antibody and cellular immune responses and their control, and development of the cells involved in these responses. Prerequisite: MBB 331. Students who have taken HSCI 325 or 426 cannot take MBB 426 for further credit.

**MBB 427-3 Immune System II: Immune Responses in Health and Disease**

The immunologic response to bacterial, viral and parasitic infections, immunological diseases, such as autoimmune diseases, immunodeficiency, hypersensitivity reactions (including asthma and allergy) and transplantation-rejection reactions. Immunotherapeutics and vaccine development. Prerequisite: MBB 426 or HSCI 426. MBB 427 is identical to HSCI 427 and students cannot receive credit for both courses.

**MBB 428-3 Molecular Mechanisms of Microbial Pathogenesis**

The molecular strategies that bacterial, viral and fungal pathogens use to colonize the human body and cause disease will be studied. Using specific organisms as illustrations, emphasis will be placed on the structural biology of molecular systems such as acquisition and use of virulence factors, adhesion to and invasion of host cells, secretion of toxins and immune escape. Prions, zoonoses and emerging diseases will be included. Prerequisite: MBB 322. Students who have taken MBB 420 under the same title cannot take this course for further credit.

**MBB 430-3 Mechanisms of Secretory Transport**

Analysis of mechanisms of protein, lipid, and nucleic acid delivery and transport within cells; processes of protein targeting, exocytosis, and endocytosis; molecular mechanisms of vesicle transport and membrane fusion; role in signal transduction and disease. Prerequisite: MBB 322 and BISC 331/MBB 331 or permission of the instructor.

**MBB 431-3 Cells and Disease**

The cellular basis of selected chronic diseases such as cancer and polycystic kidney disease will be explored in-depth. Through the use of lectures and group discussions and an emphasis on the primary literature, the focus will be on recent developments in the study of these diseases. Prerequisite: MBB 322 and 331. Students who have taken MBB 440 under the same title cannot take this course for further credit.

**MBB 432-3 Advanced Molecular Biology Techniques**

Laboratory with accompanying lectures designed to give practical experience in advanced contemporary molecular biology techniques. Lab exercises will include site-directed mutagenesis, preparation and characterization of GST-fusion proteins, construction of transgenes and their expression in transgenic organisms, and use of the yeast two-hybrid assay to

study protein-protein interactions. Prerequisite: MBB 308 and 331, or permission of instructor.

### **MBB 435-3 Genome Biology**

The analysis of entire genomes of organisms has only been possible since 1995. This new area of study will be examined in detail with emphasis on current research. Prerequisite: MBB 331 (or BISC 331). Students with credit for BICH 435 may not take MBB 435 for further credit.

### **MBB 436-3 Gene Expression**

Lectures and student presentations will cover the wide range of ways in which organisms (primarily eukaryotes) regulate gene expression along the pathway from DNA to protein. Prerequisite: MBB 321, 322, and MBB 331 or BISC 331, or permission of instructor.

### **MBB 437-3 Selected Topics in Signal Transduction**

Signal transduction, the conversion of an extracellular signal into a cellular response, is presently one of the most intensively studied aspects of biology. Signaling pathways control a wide range of cellular processes and the characterization of these pathways is having a major impact on cell biology, developmental biology, biotechnology and medicine. In this course, we shall be examining the current literature in this rapidly developing field. We will look at how a combination of biochemistry, cell biology and genetics is being used to investigate the diverse mechanisms used in cell signaling, and examine how the various approaches to studying signal transduction complement each other. Classes will be in the form of lectures and student presentations. Prerequisite: MBB 321, MBB 322 and MBB 331 or BISC 331 or permission of the instructor.

### **MBB 438-3 Human Molecular Genetics**

The course will describe recent advances in human molecular genetics. Topics will include genome analysis, gene therapy, genetic testing, and studies of genetic disorders. Prerequisite: MBB 331 (or BISC 331).

### **MBB 440-3 Selected Topics in Contemporary Molecular Biology**

The topics in this course will vary from term to term, depending on faculty availability and student interest. Prerequisite: will depend upon the nature of the topic offered. Corequisite: will depend upon the nature of the topic offered.

### **MBB 441-3 Bioinformatics**

Lectures and hands-on instruction at the computer in the use of, and theory behind, bioinformatic software and algorithms for the analysis of macromolecular data. Prerequisite: MBB 331 (or BISC 331), and an introductory computer science course (e.g. CMPT 110 or 120), or equivalent.

### **MBB 442-3 Proteomics**

Proteomics concerns the analysis of the entire complement of proteins expressed by an organism. This course will consider protein sequence alignment, sequence database scanning, classification of protein structures, prediction of protein structure and function, and evolution of protein function. Prerequisite: MBB 321 (or BICH 321) and MBB 322 (or BICH 322); one introductory computer course (e.g. CMPT 102 or 120).

### **MBB 443-3 Protein Biogenesis and Degradation**

A consideration of protein biogenesis (folding, assembly, and targeting to cellular compartments), modification, and degradation, and their roles in protein and cellular function. Prerequisite: MBB 321 (or BICH 321) and MBB 322 (or BICH 322); or permission of the instructor.

### **MBB 444-3 Developmental Neurobiology**

Examination of recent literature on neuronal growth cones and axonal guidance. Cell cultural,

biochemical, and molecular genetic approaches will be emphasized in assessing guidance cues.

Prerequisite: BISC 331/MBB 331 and BISC 333, or permission of the instructor.

### **MBB 451-3 Practicum IV**

Fourth term of work experience in the Molecular Biology and Biochemistry Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: acceptance in the Science Co-operative Education Program.

### **MBB 452-3 Practicum V**

Fifth term of work experience in the Molecular Biology and Biochemistry Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: acceptance in the Science Co-operative Education Program.

### **MBB 481-5 Individual Study Semester – Research Design**

Part 1 of 3-part honors degree program, the individual study semester (ISS). The ISS provides students with the opportunity to carry out full time laboratory research in molecular biology and biochemistry. The grade for MBB 481 encompasses the research design aspect of the ISS, consisting of a written proposal and final report. Prerequisite: enrolment in the MBB or Biological Physics Honors Program, a minimum 3.0 CGPA and 3.0 UD GPA and permission of the MBB department. Students may not receive credit for both MBB 481-5 and MBB 493-15. Corequisite: MBB 482-5 and MBB 483-5.

### **MBB 482-5 Individual Study Semester – Research Performance**

Part 2 of a 3-part honors degree program, the individual study semester (ISS). The ISS provides students with the opportunity to carry out full time laboratory research in molecular biology and biochemistry. The grade for MBB 482 encompasses the research performance component of the ISS. Prerequisite: enrolment in the MBB or Biological Physics Honors Program, a minimum 3.0 CGPA and 3.0 UD GPA and permission of the MBB department. Students may not receive credit for both MBB 482-5 and MBB 493-15. Corequisite: MBB 481-5 and MBB 483-5.

### **MBB 483-5 Individual Study Semester – Research Reporting**

Part 3 of a 3-part honors degree program, the individual study semester (ISS). The ISS provides students with the opportunity to carry out full time laboratory research in molecular biology and biochemistry. The grade for MBB 483 encompasses the research reporting component of the ISS. Prerequisite: enrolment in the MBB or Biological Physics Honors Program, a minimum 3.0 CGPA and 3.0 UD GPA and permission of the MBB department. Students may not receive credit for both MBB 483-5 and MBB 493-15. Corequisite: MBB 481-5 and MBB 482-5.

### **MBB 490-2 Directed Study in Advanced Topics Biochemistry**

Directed reading in a topic of molecular biology or biochemistry chosen in consultation with a supervisor. Before seeking approval for enrolment in this course, the student should have already obtained the agreement of a faculty member that he/she is willing to supervise the project, and have prepared a written proposal (of approximately one page) stating the nature of the directed reading topic. The course will include the preparation of a written term paper on the topic chosen. Prerequisite: MBB 222, and MBB 221 or MBB 231 and permission of the molecular biology and biochemistry department. Usually, upper level standing with at least 60 units in a Biochemistry major, minor or honors program will be required.

### **MBB 491-5 Undergraduate Research**

Part time laboratory research in an area of molecular biology or biochemistry for preparation of a thesis in molecular biology and biochemistry. Before seeking approval for enrolment in this course, the student should already have obtained the agreement of a Simon Fraser University faculty member that he/she is willing to supervise the project, and have prepared a written proposal (of approximately 1-2 pages) stating the nature of the research project. The course will include the preparation of a written research report on the results of the project, and may also, at the discretion of the supervisor, include an oral presentation of the results. Prerequisite: MBB 222, and MBB 221 or MBB 231 and permission of the molecular biology and biochemistry department. Usually, upper level standing with at least 60 units in a molecular biology and biochemistry major, minor or honors program will be required.

### **MBB 492-10 Individual Study Semester (Option A)**

Full time laboratory research in an area of molecular biology or biochemistry for preparation of a thesis for the honors degree in molecular biology and biochemistry. This course is available to honors students who have already taken MBB 491 (or BICH 491-5), or who plan to break an individual studies project into two terms (see below). The course will include the preparation of a comprehensive written research report on the results of the project, and may also, at the discretion of the supervisor, include an oral presentation of the results. Prerequisite: permission of the department. Students with credit for BICH 492 may not take MBB 492 for further credit.

### **MBB 496-6 Joint Honors Undergraduate Directed Readings and Research**

Directed reading and part-time scientific research in an area of molecular biology or biochemistry. This course is intended only for those students taking a joint MBB/BUS or MBB/CS honors degree. Before seeking approval for enrolment in this course, the student should already have obtained the agreement of a faculty member that he/she is willing to supervise the project, and have prepared a written proposal (of approximately 1-2 pages) stating the nature of the research readings and project. The course will include preparation of a written report on the results of the project, and may, at the discretion of the supervisor, include an oral presentation of the results. Prerequisite: 75 units and upper division standing in an MBB joint honors program, and MBB 308. Students who take MBB 496 are not allowed to take MBB 491, 492 or 493 with the same faculty supervisor.

### **MBB 505-3 Problem Based Learning in Bioinformatics**

The problem-based learning course will develop students' ability to exchange ideas in small groups focused on real but simplified problems in bioinformatics. Problems will be carefully selected to cover multiple areas of bioinformatics research. This is an advanced bioinformatics course that assumes the student has previous bioinformatics training. Prerequisite: MBB 841 or equivalent bioinformatics course (undergraduate or graduate). This course is identical to CMPT 505 and students can not take both courses for credit.

### **MBB 506-3 Critical Research Analysis**

Advanced seminar series for bioinformatics. Prerequisites: enrolment in Graduate Diploma in Bioinformatics. This course is identical to CMPT 506 and students cannot take both courses for credit.

### **MBB 611-6 Research Rotation I**

One term of original bioinformatics research conducted in the lab of a designated mentor. Students are required to write their results in a scientific journal format and defend these results before a panel

consisting of the project mentor plus two other qualified faculty members. Prerequisite: Enrolment in Graduate Diploma in Bioinformatics. This course is identical to CMPT 611 and students can not receive credit for both courses.

#### **MBB 612-6 Research Rotation II**

One term of original bioinformatics research conducted in the lab of a designated mentor. Students are required to write their results in a scientific journal format and defend these results before a panel consisting of the project mentor plus two other qualified faculty members. Prerequisite: enrolment in Graduate Diploma in Bioinformatics. This course is identical to CMPT 612 and students cannot receive credit for both courses.

#### **MBB 613-6 Research Rotation III**

One term of original bioinformatics research conducted in the lab of a designated mentor. Students are required to write their results in a scientific journal format and defend these results before a panel consisting of the project mentor plus two other qualified faculty members. Prerequisites: Enrolment in Graduate Diploma in Bioinformatics. This course is identical to CMPT 613 and students can not receive credit for both courses.

#### **MBB 659-3 Special Topics in Bioinformatics**

Consideration of recent research literature on contemporary topics in bioinformatics. Prerequisites: MBB 441 or 841; or CMPT 341 or 881.

#### **MBB 669-3 Special Topics in Genomics**

Consideration of recent research literature on contemporary topics in genomics. Prerequisites: MBB 435 or 835.

#### **MBB 679-3 Special Topics in Proteomics**

Consideration of recent research literature on contemporary topics in proteomics. Prerequisites: MBB 442 or 842.

#### **MBB 721-3 Nucleic Acids**

An examination of recent literature about the structure and function of DNA and RNA.

#### **MBB 722-3 Biological Membranes**

A review of recent literature on the structure, dynamics, function and biosynthesis of membrane lipids and proteins.

#### **MBB 723-3 Protein Structure and Function**

Transition state theory; specificity in enzyme catalyzed reactions; use of recombinant DNA techniques to describe and modify enzyme catalysis, catalytic activities through monoclonal antibody techniques.

#### **MBB 724-3 Membrane Transport Mechanisms**

Structure and function of molecules that mediate transport across membranes including channels, carriers, and pumps. Primary literature from the fields of biochemistry and physiology will be explored through lectures and independent study. Prerequisite: MBB 321, 322 and either MBB 323 or CHEM 360 or permission of the instructor.

#### **MBB 726-3 The Immune System I: Basis of Innate and Adaptive Immunity**

The basic organization of the immune system, including structure, function and genetics of antibodies, T-cell receptors, innate immune receptors, and the complement system. Innate, antibody and cellular immune responses and their control, and development of the cells involved in these responses. Prerequisite: MBB 331 or permission of the instructor. Students with credit for MBB or HSCI 426, MBB 826 or HSCI 726 may not complete MBB 726 for credit.

#### **MBB 727-3 Immune System II: Immune Responses in Health and Disease**

The immunologic response to bacterial, viral and parasitic infections, immunological diseases, such as autoimmune diseases, immunodeficiency, hypersensitivity reactions (including asthma and

allergy\_ and transplantation-rejection reactions. Immunotherapeutics and vaccine development. Prerequisite: MBB HSCI 426 or permission of the instructor.

#### **MBB 730-3 Mechanisms of Secretory Transport**

Analysis of mechanisms of protein, lipid, and nucleic acid delivery and transport within cells. The course will examine processes of protein targeting, exocytosis, and endocytosis; molecular mechanisms of COP- and clathrin-mediated vesicle transport; and viral and SNARE-mediated membrane fusion. Lectures will present landmark experiments from classic papers, and student presentations will focus on recent research articles. The significance of these findings with respect to human disease and signal transduction will be considered. Prerequisite: MBB 322 and BISC 331/MBB 331 or permission of the instructor.

#### **MBB 736-3 Gene Expression**

A consideration of the mechanisms and regulation of gene expression in eukaryotes and prokaryotes.

#### **MBB 737-3 Molecular Genetics of Signal Transduction**

Consideration of recent literature dealing with mechanisms of signal transduction. The emphasis of the course varies from term to term. Past offerings have ranged from a specific focus on studying signaling using molecular genetics in model organisms, to an examination of diverse cell biological, biochemical, and genetic approaches being used in current signal transduction research.

#### **MBB 738-3 Human Molecular Genetics**

The course will consider recent advances in human molecular genetics. Topics will include genome analysis, genetic testing, and studies of genetic disorders. Prerequisite: MBB 331 (or BISC 331) or equivalent.

#### **MBB 741-3 Bioinformatics**

An overview of the newly emerging field of bioinformatics, which is loosely defined as the intersection between the fields of molecular biology and computer science. A combination of lecture format and hands-on instruction is provided in the use of, and theory behind, bioinformatic software tools used in genomic and computational biology research. An introduction to the development of bioinformatic software is included, though only basic computer science knowledge is required for this particular course. Prerequisite: one introductory computer programming course (e.g. CMPT 102, 103, 110, 120 or equivalent).

#### **MBB 742-3 Proteomics**

Since the completion of the human genome, the next step is to understand the function of these genes. Proteomics cover the integration of a number of topics with the aim of analyzing the complete complement of proteins expressed by a biological system. This course will give a general understanding of the proteome, describe many of the different aspects of proteomics that have been developed recently, identify the technologic limitations related to proteomics, and will also include likely future directions for the field. Prerequisite: one introductory computer programming course (e.g. CMPT 102, 103, 110, 120 or equivalent).

#### **MBB 743-3 Protein Biogenesis, Function and Degradation**

The central dogma of molecular biology (DNA to RNA to protein) underscores two fundamental biological processes, transcription and translation, that are essential to life. Protein biogenesis (folding, assembly, targeting to the proper cellular compartment), protein modification and protein degradation represent three other equally important cellular activities. The emphasis in this course will be

to review the literature on protein biogenesis, function, and degradation, and explore the new and exciting developments that are just starting to uncover how mechanistically complex these processes are.

#### **MBB 744-3 Developmental Neurobiology**

The course will examine recent literature on neuronal growth cones and axonal guidance. Cell cultural, biochemical, and molecular genetic approaches will be emphasized in assessing the roles and functions of guidance cues. Prerequisite: MBB/BISC 331 and BISC 333 or equivalent and permission of the instructor.

#### **MBB 801-3 Student Seminar in Molecular Biology and Biochemistry I**

Discussion of recent literature through student seminars and written reports. Introduction to professional skills for scientific careers.

#### **MBB 802-3 Student Seminar in Molecular Biology and Biochemistry II**

Discussion of recent literature through student seminars and written reports. Introduction to professional skills for scientific careers. Prerequisite: MBB 801 or an MSc degree.

#### **MBB 806-3 PhD Graduate Research Seminar**

Oral presentation and defence of a written PhD research proposal. Students will be examined on their progress and grasp of knowledge relevant to the proposed research and their capacity to complete the proposed thesis research. Open only to students in the PhD molecular biology and biochemistry graduate program.

#### **MBB 811-1 Techniques in Molecular Biology and Biochemistry**

Consideration of methods applied to research in molecular, cellular, and developmental biology; genetics; and biochemistry. Can be repeated with permission of the instructor.

#### **MBB 812-2 Techniques in Molecular Biology and Biochemistry**

Consideration of methods applied to research in molecular, cellular, and developmental biology; genetics; and biochemistry. Can be repeated with permission of the instructor.

#### **MBB 813-3 Techniques in Molecular Biology and Biochemistry**

Consideration of methods applied to research in molecular, cellular, and developmental biology; genetics; and biochemistry. Can be repeated with permission of the instructor.

#### **MBB 821-823-1 Cell and Molecular Biology Colloquium**

Recent research articles on the molecular mechanisms underlying cellular activities will be presented and discussed by students and faculty, with an emphasis on critical analysis of the concepts and experimental design and methods. Prerequisite: BISC 331/MBB 331 or equivalent. Students who have taken BISC 821, 822 or 823 may not receive credit for this course. A student may not take more than 3 units of Cell and Molecular Biology Colloquium courses, including BISC 821, 822, 823.

#### **MBB 824-3 Physical Biochemistry**

The physical properties of biomacromolecules; modern physical methods applied to biomolecules; properties and analysis of membrane systems.

#### **MBB 825-3 Bioenergetics**

Consideration of important processes for biological energy transduction. Structure/function relationships of membrane components and other interacting macromolecular systems. Cannot be taken for credit in addition to CHEM 825.

#### **MBB 827-3 Mechanisms in Enzyme Catalysis**

The study of enzyme mechanisms by a variety of techniques including spectroscopic, kinetic,

radioisotopic exchange, and site-directed mutagenesis.

#### **MBB 828-3 Spectroscopic Methods in Biochemistry**

Application of spectroscopic methods including multidimensional NMR, fluorescence, circular dichroism, and FTIR for determination of biomacromolecular structure. Includes elements of protein conformation.

#### **MBB 829-3 Special Topics in Biochemistry**

Consideration of recent literature concerning selected contemporary research topics. Can be taken more than once with permission of the instructor.

#### **MBB 831-3 Molecular Evolution of Eukaryote Genomes**

Examination of the dynamics of change in eukaryotic nuclear, mitochondrial, and chloroplast genome structure and organization.

#### **MBB 832-3 Molecular Phylogeny and Evolution**

Examination of the basic methods applicable to analyses of molecular phylogeny and evolution.

#### **MBB 833-3 Developmental Genetics**

Selected topics in the developmental genetics of drosophila.

#### **MBB 834-3 Topics in Developmental Biology**

Selected topics including pattern formation, morphogenetic determinants, inductive interactions, and differential gene expression in embryos.

#### **MBB 835-3 Genome Analysis**

Consideration of topics related to the structure and function of the genome with emphasis on genome mapping and sequencing projects, and computational methods for genomic sequence analysis.

#### **MBB 839-3 Special Topics in Molecular Biology**

Consideration of recent literature concerning selected contemporary research topics. Can be taken more than once with permission of instructor.

#### **MBB 861-1 Biomolecular Structure and Function Colloquium**

Recent research articles on the structure, function, and interactions of macromolecules including proteins, nucleic acids, and lipids, as well as their complexes, will be presented and discussed by students and faculty, with an emphasis on critical analysis of the concepts and experimental design and methods. Prerequisite: BISC 331/MBB 331 or equivalent.

#### **MBB 862-1 Biomolecular Structure and Function Colloquium**

Recent research articles on the structure, function, and interactions of macromolecules including proteins, nucleic acids, and lipids, as well as their complexes, will be presented and discussed by students and faculty, with an emphasis on critical analysis of the concepts and experimental design and methods. Prerequisite: BISC 331/MBB 331 or equivalent.

#### **MBB 863-1 Biomolecular Structure and Function Colloquium**

Recent research articles on the structure, function, and interactions of macromolecules including proteins, nucleic acids, and lipids, as well as their complexes, will be presented and discussed by students and faculty, with an emphasis on critical analysis of the concepts and experimental design and methods. Prerequisite: BISC 331/MBB 331 or equivalent.

#### **MBB 871-1 Directed Readings in Molecular Biology and Biochemistry**

Programs of directed reading and critical discussions offered by faculty or staff members to individual students according to their needs. Study programs

must be approved by the molecular biology and biochemistry graduate studies committee.

#### **MBB 872-2 Directed Readings in Molecular Biology and Biochemistry**

Programs of directed reading and critical discussions offered by faculty or staff members to individual students according to their needs. Study programs must be approved by the molecular biology and biochemistry graduate studies committee.

#### **MBB 873-3 Directed Readings in Molecular Biology and Biochemistry**

Programs of directed reading and critical discussions offered by faculty or staff members to individual students according to their needs. Study programs must be approved by the molecular biology and biochemistry graduate studies committee.

#### **MBB 898-6 MSc Thesis**

#### **MBB 899-6 PhD Thesis**

## **Nuclear Science NUSC Faculty of Science**

#### **NUSC 341-3 Introduction to Radiochemistry**

Brief description of the nucleus and its decays and reactions; interaction of radiation with matter; nuclear instrumentation; radioisotopes in chemistry; activation analysis and related analytical techniques; other applications of nuclear techniques; nuclear reactors and nuclear fusion. Prerequisite: completion of 60 units in a science program, including first year calculus, chemistry and physics. Quantitative.

#### **NUSC 342-3 Introduction to Nuclear Science**

Review of nuclear properties and systematics. Properties of the nuclear force; shell model and structure of complex nuclei, nuclear decay via particle emission and spontaneous fission; experimental description of nuclear reactions; nucleon-nucleus and heavy ion reactions. Prerequisite: NUSC 341 or permission of the department. Recommended: MATH 251 Quantitative.

#### **NUSC 344-3 Nucleosynthesis and Distribution of the Elements**

Formation and distribution of the chemical elements in the early universe, in present stellar environments and in the solar system; elemental abundances and isotopic ratios; and radiometric chronology techniques. Prerequisite: completion of 60 units in a science program, including first year calculus, chemistry and physics. Quantitative.

#### **NUSC 346-2 Radiochemistry Laboratory**

Introduction to the techniques of radiochemistry; proportional and Geiger counters; sample preparations and half-life measurement; synthesis and separation of labelled compounds; beta and gamma-ray spectroscopy. Prerequisite: NUSC 341. Quantitative.

#### **NUSC 444-3 Special Topics in Nuclear Science**

Advanced topics in nuclear science. Prerequisite: NUSC 342 or 442, or permission of the department.

## **Persian PERS Faculty of Arts and Social Sciences Department of Linguistics Language Training Institute**

#### **PERS 118-3 Introduction to Persian I**

An introduction to the Persian alphabet, phonology, morphology, and basic syntax, in relation to reading, writing and translating basic sentences. Students with any prior knowledge or experience in Persian beyond the level of this course may not register in this course. Students who have taken LANG 118-3 with this topic may not take this course for further credit.

#### **PERS 168-3 Introduction to Persian II**

Study of the vocabulary and syntax of standard Persian in preparation for reading, writing, and conversation. Students with any prior knowledge or experience in Persian beyond the level of this course may not enrol in this course. Prerequisite: PERS 118, or permission from the instructor. All students must attend a placement meeting and receive permission of the department. Students who have taken LANG 168-3 with this topic may not take this course for further credit.

## **Philosophy PHIL Faculty of Arts and Social Sciences**

#### **PHIL XX1-3 Critical Thinking**

An introduction to the evaluation of arguments as they are encountered in everyday life. The central aim will be to sharpen skills of reasoning and argumentation by understanding how arguments work and learning to distinguish those which actually prove what they set out to show from those which do not. Open to all students. Quantitative.

#### **PHIL 100W-3 Knowledge and Reality**

An introduction to some of the central problems of philosophy. Topics to be discussed include the different theories of reality; the nature and sources of knowledge, truth, evidence, and reason; the justification of belief and knowledge about the universe. These topics and problems will be considered as they arise in the context of issues such as: relativism versus absolutism; the existence of God; personal identity; the nature of the mind and its relation to the body; free will and determinism; the possibility of moral knowledge. Open to all students. Writing/Breadth-Humanities.

#### **PHIL 110-3 Introduction to Logic and Reasoning**

The aim of this course is to familiarize students with fundamental techniques of correct reasoning. Special attention is given to the methods of logic in particular, and to their role in the discovery of truth not only within science and philosophy but within all forms of rational enquiry. Open to all students. Quantitative.

#### **PHIL 120W-3 Introduction to Moral Philosophy**

An introduction to the central problems of ethics: for example, the nature of right and wrong, the objectivity or subjectivity of moral judgments, the relativity or absolutism of values, the nature of human freedom and responsibility. The course will also consider general moral views such as utilitarianism, theories of rights and specific obligations, and the ethics of virtue. These theories will be applied to particular moral problems such as abortion, punishment, distributive justice, freedom of speech, and racial and sexual equality. Sometimes the course will also focus on important historical figures such as Plato, Aristotle, Kant and Mill. Open to all students. Writing/Breadth-Humanities.

#### **PHIL 144-3 Introduction to the Philosophy of Natural and Social Science**

An introduction to philosophical issues concerning the nature of science. Topics to be discussed include the distinction between science and pseudo-science, the nature of scientific method, the nature of explanation in the natural and social sciences, the phenomenon of scientific change, the relationship between scientific theory and observation, and the objectivity of social science. Students who have completed PHIL 244 may not take this course for further credit. Breadth-Humanities/Science.

#### **PHIL 150-3 History of Philosophy I**

A survey of philosophic thought from late antiquity to the Renaissance. Special attention will be given to the works of Socrates, Plato, Aristotle, Augustine, and

Aquinas. The views of these great thinkers have helped to shape the ways in which we see the world. This course is therefore recommended to everyone with an interest in our intellectual heritage. Open to all students. Breadth-Humanities.

#### **PHIL 151-3 History of Philosophy II**

A survey of philosophic thought from the Renaissance to the 20th Century. Special attention will be given to the works of Descartes, Leibniz, Spinoza, Locke, Berkeley, Hume, Kant, Hegel and Mill. The views of these great thinkers have helped to shape the ways in which we see the world. This course is therefore recommended to everyone with an interest in our intellectual heritage. Open to all students. Breadth-Humanities.

#### **PHIL 201-3 Epistemology**

A critical overview of recent accounts of the nature and scope of human knowledge and of justified or rational belief, and of philosophical issues that these accounts are intended to address. Prerequisite: one of PHIL 100, 150, or 151, or COGS 100. Students who have taken PHIL 301 cannot take this course for further credit.

#### **PHIL 203-3 Metaphysics**

An examination of central problems of metaphysics such as space and time, universals and particulars, substance, identity and individuation and personal identity. Prerequisite: one of PHIL 100, 150, 151, or COGS 100.

#### **PHIL 210-3 Natural Deductive Logic**

This course studies a natural deductive system of propositional and quantificational logic, the first-order theory of identity and the first-order theory of relations. Topics include the metatheory of propositional logic and the application of formal theory to the assessment of natural language arguments. Quantitative.

#### **PHIL 214-3 Axiomatic Logic**

This course studies the metatheory of axiomatic propositional and quantificational logic. Topics include proof theory, the metatheory of propositional logic, the proof theory of first-order logic, first-order models, soundness and completeness. Prerequisite: one of PHIL 210, MACM 101, MATH 144, CMPT 205. Quantitative.

#### **PHIL 220-3 Introduction to Social and Political Philosophy**

An introduction to central problems of political and social philosophy: for example, the basis of political obligation, the proper limits of state power, the appropriate scope of individual liberty, and the nature of social justice. Sometimes the course will focus on the views of historically important political philosophers such as Plato, Aristotle, Hobbes, Locke, Rousseau, Burke, Bentham, Mill and Marx.

#### **PHIL 231-3 Selected Topics**

A specific topic, philosopher or philosophical work to be dealt with as occasion and demand warrant.

#### **PHIL 240-3 Philosophy of Religion**

A critical analysis of classic and contemporary arguments concerning the rationality of belief in God, and related issues.

#### **PHIL 241-3 Philosophy in Literature**

Philosophical themes in the writings of such authors as Voltaire, Turgenev, Dostoevski, Sartre, Camus, Conrad and Golding.

#### **PHIL 242-3 Philosophy of Art**

An examination of issues concerning the nature of works of art. The course will include a consideration of rival theories of art such as: art as expression, art as representation, and art as significant form. Theories of aesthetic criticism will be studied in relation to taste, personal experience, and truth.

#### **PHIL 280-3 Introduction to Existentialism**

A study of existentialist philosophers such as Kierkegaard, Nietzsche, Heidegger, Sartre, and Camus and a survey of precursors such as Kant and Hegel.

#### **PHIL 300-3 Introduction to Philosophy**

An introductory course specifically intended for students in other departments who have at least 60 units. This course is more advanced than 100 and 200 division courses and is of interest to students not only in the humanities, but also in the natural and social sciences. Prerequisite: at least 60 units. Normally, students with credit for PHIL 100 may not take this course for further credit. This course does not count towards the upper division requirements for a student pursuing a minor, major, or honors program in philosophy. Breadth-Humanities.

#### **PHIL 302-3 Topics in Epistemology and Metaphysics**

An exploration of philosophical issues concerning, e.g.: causation, time, modality, or the self; the realism/nominalism or realism/idealism debate; relativism; the concept of truth; naturalized epistemology; global epistemological skepticism or perhaps a 'local' form of skepticism such as skepticism about induction or about sensory belief. Prerequisite: PHIL 201 or 203.

#### **PHIL 314-3 Topics in Logic I**

An examination of one or more topics such as: philosophical logic; deontic logic; the logic of knowledge and belief; the logic of preference; tense logics; foundations of set theory; recursive functions; the history of logic. Recommended: PHIL 210, 214, or an otherwise suitable background.

#### **PHIL 319-3 Applied Health Ethics**

Practical ethical and legal issues in health sciences, emphasizing population and public health. Case studies approach highlighting current ethical dilemmas and decision-making in the context of global to local legal frameworks. Prerequisite: 30 units of completed course work. PHIL 319 is identical to HSCI 319, and students cannot receive credit for both courses. This course cannot be taken for credit as upper division philosophy.

#### **PHIL 319W-3 Applied Health Ethics**

Practical ethical and legal issues in health sciences, emphasizing population and public health. Case studies approach highlighting current ethical dilemmas and decision-making in the context of global to local legal frameworks. Prerequisite: 30 units of completed course work. PHIL 319 is identical to HSCI 319, and students cannot receive credit for both courses. This course cannot be taken for credit as upper division philosophy. Writing.

#### **PHIL 320-3 Social and Political Philosophy**

An examination of an issue or selection of issues in social and political philosophy. Contemporary or historical readings or a mixture of these will be used. Possible topics include: justice, the law and legal systems, sovereignty, power and authority, democracy, liberty and equality. Sometimes the course will focus on the views of historically important political philosophers, such as Plato, Aristotle, Hobbes, Locke, Rousseau, Burke, Bentham, Mill and Marx. Prerequisite: PHIL 120 or 220.

#### **PHIL 321-3 Moral Issues and Theories**

An advanced investigation of central issues and theories in moral philosophy. In any given term, the course may focus on a general theory or concept or concern, for example meta-ethics, utilitarianism, or theories of rights. Sometimes it will focus on a particular problem or problems, such as medical ethics, moral personhood, or free will and moral responsibility. Prerequisite: PHIL 120.

#### **PHIL 322-3 History of Ethics**

An examination of an issue or selection of issues in the history of moral or political philosophy. Historical readings will be the primary focus and may include important figures such as Aristotle, Hobbes, Locke, Hume, and Kant. Prerequisite: One of PHIL 120, 150, 151, 220.

#### **PHIL 331-333-3 Selected Topics**

Prerequisite: as stated by department at time of offering.

#### **PHIL 341-3 Philosophy of Science**

A study of the nature of scientific enquiry, classificatory systems, laws and theories, the role of observation in science, the demarcation between science and non-science, causality, the status of theoretical constructs, and teleological explanation. Prerequisite: PHIL 100; PHIL 210 or 214; and one of PHIL 201 or 203, or COGS 200.

#### **PHIL 343-3 Philosophy of Mind**

A study of theories of the mind, consciousness, and human action. Prerequisite: PHIL 100; and one of PHIL 201 or 203, or COGS 200.

#### **PHIL 344-200 Philosophy of Language I**

An introduction to the major philosophic theories of language. Topics to be considered include the relationship between language and mind, language and the world, language and society. Prerequisite: PHIL 100; and one of PHIL 201 or 203, or COGS 200.

#### **PHIL 350-3 Ancient Philosophy**

Prerequisite: PHIL 100 or 150.

#### **PHIL 352-3 17th Century Philosophy**

An examination of some central issues in 17th century philosophy. Themes may include: changing theories of causation, of the mind, and of the relation between mind and world. Historical readings will be the primary focus and may include important figures such as Descartes, Elisabeth of Bohemia, Malebranche, Spinoza, Leibniz, and Locke. Prerequisite: PHIL 100 or 151. Students who have completed PHIL 353 or PHIL 354 prior to Fall 2006 may not take this course for further credit.

#### **PHIL 356-3 18th Century Philosophy**

An examination of some central issues of 18th century philosophy. Themes may include the development of the theory of ideas and epistemology associated with it. The primary focus may include important figures such as Locke, Berkeley, Hume, and Condillac. Prerequisite: PHIL 100 or 151. Students who have completed PHIL 355 prior to Fall 2006 may not take this course for further credit.

#### **PHIL 357-3 Topics in the History of Philosophy**

Prerequisite: PHIL 100 or 151.

#### **PHIL 421W-4 Ethical Theories**

A highly focussed, advanced examination of a selection of topics in normative or meta-ethics. Prerequisite: one of PHIL 120, 320, or 321. Writing.

#### **PHIL 435-4 Selected Topics**

A specific topic, philosopher or philosophical work to be dealt with as occasion and demand warrant. Prerequisite: two 300 level Philosophy courses.

#### **PHIL 444W-4 Philosophy of Language II**

Advanced topics in recent work in philosophy of language, such as meaning, reference, speech acts, and language and thought. Prerequisite: PHIL 210 or 214. Writing.

#### **PHIL 451W-4 Kant**

Prerequisite: one of PHIL 352, 356, 357. Writing.

#### **PHIL 455W-4 Contemporary Issues in Epistemology and Metaphysics**

Prerequisite: two 300 division PHIL courses. Writing.

#### **PHIL 467W-4 Seminar II**

Prerequisite: two 300 division PHIL courses. Writing.

**PHIL 477-5 Honors Tutorial I**

Prerequisite: PHIL 477 is a requisite for all honors students, and must be taken in one of the last two terms of the student's philosophy program. It must be taken concurrently with or prior to PHIL 478. At least eight weeks prior to the term in which they wish to enrol in PHIL 477, honors students should obtain departmental approval of a proposed syllabus and arrange for faculty supervision of the course. Open only to honors students.

**PHIL 478-5 Honors Tutorial II**

Prerequisite: PHIL 478 is a requisite for all honors students, and must be taken in one of the last two terms of the student's philosophy program. It must be taken concurrently with or consecutively to PHIL 477. At least eight weeks prior to the term in which they wish to enrol in PHIL 478, honors students should obtain departmental approval of a proposed syllabus and arrange for faculty supervision of the course. Open only to honors students.

**PHIL 802-5 Selected Topics in Epistemology****PHIL 803-5 Selected Topics in Metaphysics****PHIL 804-5 Selected Topics in Philosophy of Science****PHIL 805-5 Selected Topics in Philosophy of Mind****PHIL 806-5 Selected Topics in Philosophy of Language****PHIL 812-5 Selected Topics in Logic I****PHIL 813-5 Selected Topics in Logic II****PHIL 814-5 Selected Topics in Philosophy of Mathematics****PHIL 815-5 Selected Topics in Formal Studies****PHIL 822-5 Selected Topics in Normative Ethics****PHIL 823-5 Selected Topics Meta-Ethics****PHIL 824-5 Selected Topics Moral Psychology****PHIL 825-5 Selected Topics in Social and Political Philosophy****PHIL 826-5 Selected Topics in Aesthetics****PHIL 852-5 Selected Topics in Ancient Philosophy****PHIL 853-5 Selected Topics in Medieval Philosophy****PHIL 854-5 Selected Topics in Seventeenth and Eighteenth Century Philosophy****PHIL 855-5 Selected Topics in Nineteenth and Twentieth Century Philosophy****PHIL 861-5 Directed Studies: Selected Topics I****PHIL 862-5 Directed Studies: Selected Topics II****PHIL 864-5 Directed Studies: Selected Topics IV****PHIL 865-5 Directed Studies: Selected Topics V****PHIL 880-5 Pro-Seminar****PHIL 898-6 MA Thesis****PHIL 899-6 Non-Thesis Project Completion****PHIL 998-6 PhD Thesis****Physics PHYS****Faculty of Science****PHYS 100-3 Introduction to Physics**

A course for students with relatively weak backgrounds in physics. Kinematics and dynamics; waves; optics; electricity and magnetism. Prerequisite: BC Principles of Mathematics 12 (or equivalent) or MATH 100 (may be taken concurrently). BC Physics 11 (or equivalent) is recommended. Students who have obtained a grade of C+ or better in BC high school Physics 12 (or its equivalent) or who have taken any further physics course normally may not take PHYS 100 for credit. Tutorials will be held in the open workshop format, i.e. unstructured periods each week when teaching assistants are available to answer questions and help with problem assignments.

**PHYS 101-3 Physics for the Life Sciences I**

Force and motion, conservation of energy and momentum, fluids, properties of soft matter and thermal physics with applications taken from the life sciences. Prerequisite: BC Principles of Physics 12 or PHYS 100 or equivalent. This prerequisite may be waived, at the discretion of the department, as determined by the student's performance on a regularly scheduled PHYS 100 final exam. Please consult the physics advisor for further details. Corequisite: MATH 150 or 151 or 154 or 157; BISC 100 or 101 or 102. Students with credit for PHYS 120, 125 or 140 may not take PHYS 101 for further credit. Tutorials will be held in the open workshop format, i.e. unstructured periods each week when teaching assistants are available to answer questions and help with problem assignments. Quantitative/Breadth-Science.

**PHYS 102-3 Physics for the Life Sciences II**

Waves and optics; electricity and magnetism; modern physics emphasizing radioactivity, with applications taken from the life sciences. Prerequisite: PHYS 101 or 120 or 125 or 140. Students with credit for PHYS 121, 126, or 141 may not take PHYS 102 for further credit. Recommended corequisite: MATH 152 or 155 or 158. Students are encouraged to take PHYS 130 at the same time as PHYS 102. Tutorials will be held in the open workshop format, i.e. unstructured periods each week when teaching assistants are available to answer questions and help with problem assignments. Quantitative/Breadth-Science.

**PHYS 120-3 Mechanics and Modern Physics**

A general calculus-based introduction to mechanics. Topics include translational and rotational motion, momentum, energy, gravitation, and selected topics in modern physics. Prerequisite: BC Principles of Physics 12 or PHYS 100 or equivalent. This prerequisite may be waived, at the discretion of the department, as determined by the student's performance on a regularly scheduled PHYS 100 final exam. Please consult the physics advisor for further details. Corequisite: MATH 150 or 151 or 154 must precede or be taken concurrently. Students with credit for PHYS 101, 125 or 140 may not take PHYS 120 for further credit. Quantitative/Breadth-Science.

**PHYS 121-3 Optics, Electricity and Magnetism**

A general calculus-based introduction to electricity, magnetism and optics. Topics include electricity, magnetism, simple circuits, optics and topics from applied physics. Prerequisite: PHYS 120 or 125 or 140 (or PHYS 101 with a grade of A or B). Students with credit for PHYS 102, 126 or 141 may not take PHYS 121 for further credit. Corequisite: MATH 152 or 155 must precede or be taken concurrently. Quantitative/Breadth-Science.

**PHYS 125-3 Mechanics and Special Relativity**

Newtonian mechanics and special relativity for students with good preparation in physics and mathematics. Topics include Newtonian particle mechanics, angular momentum, torque, conservation laws, gravitation, and special relativity. Prerequisite: greater than 85% in both BC Principles of Mathematics 12 and BC Principles of Physics 12, or a grade of A in PHYS 100, or equivalent. Corequisite: MATH 150 or 151 or 154 must precede or be taken concurrently. Students with credit for PHYS 101, 120 or PHYS 140 may not take PHYS 125 for further credit. Quantitative.

**PHYS 126-3 Electricity, Magnetism and Light**

Electricity, magnetism, and the electromagnetic character of light for students with good preparation in physics and mathematics. Topics include waves, simple electrical circuits, electricity, magnetism, the unifications of electromagnetism in relativity, light as an electromagnetic wave, and photons. Prerequisite: PHYS 125 or a grade of A or better in PHYS 120 or 140. Corequisite: MATH 152 or 155 must precede or

be taken concurrently. Students with credit in PHYS 102, 121 or 141 may not take PHYS 126 for further credit. Quantitative.

**PHYS 130-2 Physics for the Life Sciences Laboratory**

Elementary experiments in optics, electricity, mechanics and heat that are designed to augment the general survey course. Prerequisite: PHYS 102 should be taken concurrently or may precede; or by permission of the department. Students with credit for PHYS 131 or 141 may not take PHYS 130 for further credit. Quantitative.

**PHYS 131-2 Physics Laboratory I**

Elementary experiments in optics, electricity, and mechanics that are designed to augment the general survey courses. Prerequisite: PHYS 121 or 126 should be taken concurrently or may precede; or by permission of the department. Students with credit for PHYS 130 or 141 may not take PHYS 131 for further credit. Quantitative.

**PHYS 140-4 Studio Physics – Mechanics and Modern Physics**

A general calculus-based introduction to mechanics taught in an integrated lecture-laboratory environment. Topics include translational and rotational motion, momentum, energy, gravitation, and selected topics in modern physics. Prerequisite: BC Principles of Physics 12, or equivalent. Corequisite: MATH 150 or 151 or 154 must precede or be taken concurrently. Students with credit for PHYS 125 or 120 or 101 may not take PHYS 140 for further credit. Quantitative/Breadth-Science.

**PHYS 141-4 Studio Physics – Optics, Electricity and Magnetism**

A general calculus-based introduction to electricity, magnetism and optics taught in an integrated lecture-laboratory environment. Topics include electricity, magnetism, simple circuits, optics and topics from applied physics. Prerequisite: PHYS 140. Corequisite: MATH 152 or 155 must precede or be taken concurrently. Students with credit for PHYS 126 or 121 or 102 may not take PHYS 141 for further credit. Quantitative/Breadth-Science.

**PHYS 190-3 Introduction to Astronomy**

A survey of astronomy designed primarily for non-science students, with a strong emphasis on active learning outside the classroom. Covers the development of astronomy from the ancient Greeks through the Renaissance, to the modern view of the cosmos as revealed by the scientific method. Topics include naked-eye observation of the night sky, modern observational equipment and techniques, the solar system, stellar evolution, galaxies, the Hubble expansion, the Big Bang, dark matter, dark energy, and startling new theories of the origin and destiny of the universe. Experiential activities involve active observations of the moon, stars and planets, and introductory experiments in some of the basic physics that astronomers use to explore the cosmos. Students who have received credit for PHYS 130, 131 or 141 may not take PHYS 190 for further credit. Quantitative/Breadth-Science.

**PHYS 192-3 Logarithm and Blues**

An exploration of the production, propagation and perception of sound and music from an interdisciplinary perspective. The viewpoints of a professional musician and a physicist will be presented and compared. Topics include elementary acoustics, instrument characteristics, reproduction technologies, tonal anomalies and perception. Breadth-Science.

**PHYS 211-3 Intermediate Mechanics**

An intermediate mechanics course covering kinematics, dynamics, calculus of variations and Lagrange's equations, non-inertial reference frames, central forces and orbits, and rigid body motion.

Prerequisite: PHYS 126 or 121 or 141. Corequisite: MATH 251; MATH 232 or 240. Recommended: MATH 310 and PHYS 255. Quantitative.

### PHYS 221-3 Electromagnetism

Electrostatics, magnetostatics, capacitance, inductance, concepts of electric and magnetic fields, Maxwell's equations. Prerequisite: PHYS 126 or 121 or 141; MATH 251. Quantitative.

### PHYS 231-3 Physics Laboratory II

Introductory physics laboratory with experiments chosen from mechanics, heat, optics, electricity, magnetism, properties of matter, atomic and nuclear physics, along with lectures on the use of computers for data acquisition and data analysis in the physics laboratory. Prerequisite: PHYS 141 or 131 or 130. Students who have successfully completed PHYS 234 may not receive additional credit for this course. Quantitative.

### PHYS 233-2 Physics Laboratory III

Experiments chosen from among mechanics, heat, optics, electricity, magnetism, properties of matter, atomic and nuclear physics. Engineering Science students will do a selected set of experiments. Prerequisite: PHYS 231 or ENSC 220. Quantitative.

### PHYS 255-3 Vibrations and Waves

The physics of vibrations and waves. Topics include periodic motion, including free and forced oscillations, coupled oscillators, normal modes, and waves in one and higher dimensions. Prerequisite: PHYS 126 or 121 or 141; or PHYS 101 and 102 with a grade of B or better. Corequisite: MATH 251; MATH 232 or 240. Recommended concurrent: PHYS 211 and MATH 310. Quantitative.

### PHYS 285-3 Introduction to Relativity and Quantum Mechanics

Special relativity, including relativistic kinematics and dynamics; tests of relativity; matter waves and early quantum models; wave mechanics and its application to molecular, atomic and subatomic systems. Prerequisite: PHYS 255. Quantitative.

### PHYS 321-3 Intermediate Electricity and Magnetism

Development and application of Maxwell's equations in vector differential form. Notation and theorems of vector calculus; electric charge, fields, potentials, capacitance and field energy; conductors; methods for solving electrostatic problems; electric fields in matter; electrical current and the magnetic field; Ampere's law and the vector potential; magnetic fields in matter; electromotive force, electrical resistance, Faraday's law and inductance; Maxwell's correction to Ampere's law and electromagnetic waves. Prerequisite: PHYS 130 or 131 or 141; MATH 252 or 254; MATH 310. Students with credit for PHYS 221 may not take PHYS 321 for further credit. Quantitative.

### PHYS 326-4 Electronics and Instrumentation

Circuits and circuit theory, passive and active devices, amplifiers, feedback, modern measurement techniques and instrumentation. Prerequisite: PHYS 231 and 255. Quantitative.

### PHYS 332W-4 Optics Laboratory

Experiments in optics and modern physics, including diffraction, interference, spectroscopy, lasers and holography. Engineering Science students will do a selected set of experiments. Prerequisite: PHYS 233 and 285, or equivalent. Writing/Quantitative.

### PHYS 335-3 Practicum I

This is the first term of work experience in a co-operative education program available to students who are studying physics or related areas, such as biophysics, chemical physics or mathematical physics. Units from this course do not count towards the units required for an SFU degree. Prerequisite: completion of 30 units, with a minimum GPA of 2.75 in the physics program. Students should apply to the

department at least one term in advance. A course fee is required. This course is evaluated on a pass/withdrawal basis.

### PHYS 336-3 Practicum II

This is the second term of work experience in a co-operative education program available to students who are studying physics or related areas, such as biophysics, chemical physics or mathematical physics. Units from this course do not count towards the units required for an SFU degree. Prerequisite: PHYS 335 followed by 12 units. A minimum cumulative GPA of 2.75. Students should apply to the department at least one term in advance. A course fee is required. This course is evaluated on a pass/withdrawal basis.

### PHYS 344-3 Thermal Physics

Heat, temperature, heat transfer, kinetic theory, laws of thermodynamics, entropy, heat engines, applications of thermodynamics to special systems, phase transitions. Prerequisite: PHYS 126 or 121, MATH 251. Quantitative.

### PHYS 346-3 Energy and the Environment

The physical principles and limitations of renewable energy source utilization and energy conversion. A quantitative introduction to energy conversion and storage systems, including solar power and heating; wind, tidal, geothermal, hydroelectric and nuclear power, hydrogen technology, electrical and mechanical energy storage. Prerequisite: CHEM 120 or 121; PHYS 102 or 121 or 126 or 141; and MATH 155 or 152. Quantitative.

### PHYS 347-3 Introduction to Biological Physics

A physics perspective on cellular structure and composition; random walks and diffusion; properties of fluids, cell motion; entropy and the properties of soft materials; structure and function of proteins; signal propagation in nerves. Prerequisite: completion of 45 units including BISC 101, CHEM 122, MATH 152 (or 155), PHYS 121 (or 102 or 126 or 141). Quantitative.

### PHYS 365-3 Semiconductor Device Physics

Structure and properties of semiconductors, semiconductor theory, theory and operation of semiconductor devices, semiconductor device technology. Prerequisite: PHYS 321 or 221; PHYS 255 or ENSC 380. PHYS 321, ENSC 380, and PHYS 365 may be taken concurrently. Students with credit for ENSC 224 may not take PHYS 365 for further credit. Recommended: PHYS 285. Quantitative.

### PHYS 380-3 Introduction to Subatomic Physics

Comprehensive overview of nuclear and particle physics with emphasis on concepts: the constituents of matter and the fundamental forces; properties and structure of nuclei and the nucleon; the Standard Model; experimental techniques. Prerequisite: PHYS 285 or CHEM 260 or NUSC 341. Quantitative.

### PHYS 384-3 Methods of Theoretical Physics I

Applications of mathematical methods in physics, differential equations of physics, eigenvalue problems, solutions to wave equations. Prerequisite: MATH 252 or 254; MATH 310; PHYS 255 or ENSC 380. Corequisite: PHYS 211. Quantitative.

### PHYS 385-3 Quantum Mechanics I

Wave mechanics and the Schrodinger equation, the harmonic oscillator, introduction to Dirac notation, angular momentum and spin, the hydrogen atom, atomic structure, time-independent perturbation theory, atomic spectra, and applications. Prerequisite: MATH 252 or 254; PHYS 285 or ENSC 380 or CHEM 260. Corequisite: PHYS 211; MATH 310. Quantitative.

### PHYS 390-3 Introduction to Astrophysics

Characteristics of stars and their evolution, thermodynamics of stellar interior, origin of the elements, galaxies, cosmology, and origin of the

planets. Prerequisite: PHYS 211 and either CHEM 120 or 121. Quantitative.

### PHYS 395-3 Computational Physics

Computer based approaches to the solution of complex physical problems. A partial list of topics includes: Monte-Carlo and molecular dynamics techniques applied to thermal properties of materials; dynamical behavior of conservative and dissipative systems, including chaotic motion; methods for ground state determination and optimization, including Newton-Raphson, simulated annealing, neural nets, and genetic algorithms; the analysis of numerical data; and the use of relevant numerical libraries. Prerequisite: MATH 310, PHYS 211, CMPT 101 or 102. Recommended: PHYS 344 (or PHYS 244) or equivalent. Quantitative.

### PHYS 413-3 Advanced Mechanics

Central forces, rigid body motion, small oscillations. Lagrangian and Hamiltonian formulations of mechanics. Prerequisite: PHYS 384 or permission of the department. Non-physics majors may enter with MATH 252, 310 and PHYS 211. Quantitative.

### PHYS 415-3 Quantum Mechanics II

Foundations of quantum mechanics, time-dependent perturbation theory, radiation, variational methods, scattering theory, advanced topics, and applications. Prerequisite: PHYS 385 and either PHYS 384 or MATH 314 and 419. Quantitative.

### PHYS 421-3 Electromagnetic Waves

A continuation of PHYS 321: properties of electromagnetic waves and their interaction with matter. Transmission lines and waveguides; antennas, radiation and scattering; propagation of electromagnetic waves in free space and in matter; reflection and refraction at boundaries; polarization, interference and diffraction. Prerequisite: PHYS 321 or (PHYS 221 and either MATH 252 or 254); PHYS 255 or ENSC 380. Students with credit for PHYS 324 or 425 may not take PHYS 421 for further credit. Quantitative.

### PHYS 430-4 Digital Electronics and Interfacing

Digital logic design with particular apparatus. Construction and use of interface devices for various laboratory experiments. Prerequisite: PHYS 326 or permission of the instructor. Quantitative.

### PHYS 431-4 Advanced Physics Laboratory I

Advanced experiments in Physics. May include special projects. Prerequisite: PHYS 385 and either PHYS 332 or (PHYS 326 and 465). Quantitative.

### PHYS 432-5 Undergraduate Honors Thesis

Undergraduate research and preparation of an honors thesis. The research project may be in experimental or theoretical physics. Prospective students must obtain agreement of a faculty member willing to supervise the project, and submit the project to the physics department for approval at least two months prior to enrolling for the course. The research must be done during the term in which the student is enrolled for the course, and may not be part of a co-op practicum. The course will be graded on the basis of the honors thesis, which must be submitted before the end of the term. Prerequisite: all students interested in taking this course must consult with their faculty supervisor regarding prerequisites; normally requires PHYS 431.

### PHYS 433-3 Biological Physics Laboratory

Experiments in biological and soft condensed matter physics including investigation of Brownian motion, molecular order and biophysical forces using techniques such as optical trapping, NMR, spectroscopy and x-ray diffraction. Attention will also be given to more general skills, including experimental design, operating and troubleshooting experimental equipment, data analysis, and the presentation of experimental results. Prerequisite: PHYS 231 or MBB 309; PHYS 344 or PHYS 347 or

MBB 323 or CHEM 360, or permission of the department. Quantitative.

### PHYS 435-3 Practicum III

This is the third term of work experience in a co-operative education program available to students who are studying physics or related areas, such as biophysics, chemical physics or mathematical physics. Units from this course do not count towards the units required for an SFU degree. Prerequisite: PHYS 336 and 60 units with a minimum cumulative GPA of 2.75. Students should apply to the department at least one term in advance. A course fee is required. This course is evaluated on a pass/withdrawal basis.

### PHYS 436-3 Practicum IV

This is the fourth term of work experience in a co-operative education program available to students who are studying physics or related areas, such as biophysics, chemical physics or mathematical physics. Units from this course do not count towards the units required for an SFU degree. Prerequisite: PHYS 435 followed by 12 units. A minimum cumulative GPA of 2.75. Students should apply to the department at least one term in advance. A course fee is required. This course is evaluated on a pass/withdrawal basis.

### PHYS 437-3 Practicum V

This is an optional fifth term of work experience in a co-operative education program available to students who are studying physics or related areas such as biophysics, chemical physics or mathematical physics. Units from this course do not count towards the units required for an SFU degree. Prerequisite: PHYS 436 and a minimum cumulative GPA of 2.75. Students should apply to the department at least one term in advance. A course fee is required. This course is evaluated on a pass/withdrawal basis.

### PHYS 445-3 Statistical Physics

Postulates of statistical mechanics, partition functions, applications to gases, paramagnetism and equilibrium. Quantum statistics and applications. Prerequisite: PHYS 344 or CHEM 360. Recommended: PHYS 385. Quantitative.

### PHYS 455-3 Modern Optics

Optical physics, including geometrical and physical optics, waves in anisotropic media, coherence, image formation and Fourier optics, guided wave optics and selected advanced topics such as lasers, nonlinear optics, photonics and quantum optics. Prerequisite: PHYS 321 or 221; PHYS 385 (or equivalent). Quantitative.

### PHYS 465-3 Solid State Physics

Crystal structure, lattice vibrations and thermal properties of solids, free electron model, band theory, and applications. Prerequisite: PHYS 385. Quantitative.

### PHYS 484-3 Nonlinear Physics

Nonlinear mechanics, nonlinear lattice dynamics, competition phenomena, applications in optics and chemistry, forced oscillations, chaos. Prerequisite: PHYS 384 or permission of the department. Quantitative.

### PHYS 485-3 Particle Physics

Physics of elementary particles. Symmetries, strong interactions, electromagnetic interactions, weak interaction. Prerequisite: PHYS 385 or CHEM 464 or permission of the department. Recommended: PHYS 380. Students with credit for NUSC 485 may not take this course for further credit. Quantitative.

**PHYS 490-3 General Relativity and Gravitation**  
Gravity and space-time, Einstein's equations and their solution, tests of relativity, black holes, stellar equilibrium and collapse, and cosmological models. Prerequisite: PHYS 285 or MATH 471; PHYS 384. Quantitative.

### PHYS 492-493-3 Special Topics in Physics

Studies in areas not included within the undergraduate course offerings of the Department of Physics. Prerequisite: permission of the department.

### PHYS 801-2 Student Seminar

Discussion of recent developments in physics, based on student seminars. Attendance is required for all first and second year students proceeding toward MSc or PhD degrees in physics. Course offered regularly.

### PHYS 810-3 Advanced Quantum Mechanics

Advanced non-relativistic and some basic relativistic quantum mechanics: symmetries, Schrodinger/Heisenberg pictures, mixtures, variational and perturbative methods, Dirac equation. Prerequisite: PHYS 415, or equivalent.

### PHYS 811-3 Topics in Quantum Mechanics

A selection of topics which could include: foundations of quantum mechanics, quantum information theory, Bell's inequality, electron in a magnetic field, formal scattering theory, and others of current interest. Prerequisite: PHYS 810 or equivalent.

### PHYS 812-3 Introduction to Quantum Field Theory

A first course in relativistic Quantum Field Theory (QFT), specifically Quantum Electrodynamics (QED). The basic formalism underlying QED is developed, generalizing the canonical quantization procedure of Schrodinger quantum mechanics. Feynman diagrams and rules are derived and applied at leading order to several fundamental processes. An introduction to ultraviolet infinities and the renormalization of QED is given. Renormalization is illustrated by calculations of the anomalous magnetic moment of the electron and the Lamb shift. Prerequisite: PHYS 810 or equivalent.

### PHYS 821-3 Electromagnetic Theory

Advanced topics in classical electromagnetic theory: review of Maxwell's equations, wave propagation, radiation theory, special relativity and electromagnetic theory, magnetohydrodynamics and plasma physics, radiation damping. Course offered regularly. Prerequisite: PHYS 421, or equivalent.

### PHYS 841-3 Statistical Mechanics

Review of ensembles and thermodynamics, ideal gases, imperfect classical gases, classical and modern theories of phase transitions, renormalization group. Course offered regularly. Prerequisite: PHYS 345, or equivalent.

### PHYS 846-3 Nonlinear Physics

Nonlinear dynamics and chaos. Pattern formation and an introduction to turbulence. Prerequisite: PHYS 384 or equivalent.

### PHYS 847-3 Topics in Soft-Condensed Matter and Biological Physics

An introduction to one of several topics in soft-condensed matter and biological physics. Recent versions of this course have focused on polymers, liquid crystals, structures of biological membranes, and cell mechanics. Corequisite: PHYS 841.

### PHYS 861-3 Introduction to Solid State Physics

Free electron theory, crystal structure, band theory, Bloch's theorem, electron dynamics, phonons, semiconductors. Course offered regularly. Prerequisite: PHYS 465 or equivalent, and PHYS 415.

### PHYS 862-3 Solid State Physics II

Special topics in solid state physics such as superconductivity, magnetism, optical properties of solids, electron correlations. Course offered regularly. Prerequisite: PHYS 861.

### PHYS 863-3 Surface Science, Thin Films and Interfaces

Review of surface science techniques: Auger, XPS electron spectroscopies, low energy electron diffraction (LEED), high energy electron diffraction (RHEED), Scanning tunnelling microscopy (STM). Review of thin film deposition techniques: molecular beam epitaxy of metallic and semiconductor multilayer and superlattice structures. Physics and chemistry of surfaces and interfaces. Course offered occasionally. Prerequisite: PHYS 810, 821, 861 or permission of the department.

### PHYS 864-3 Structural Analysis of Materials

The application of transmission electron microscopy (TEM) and x-ray diffraction techniques to the study of the structure of materials. Hands-on instruction about the operation of a TEM and x-ray diffractometers is provided. The basic theory required for analyzing TEM and x-ray images and diffraction data is described. Prerequisite: Permission of instructor.

### PHYS 871-3 Introduction to Elementary Particle Physics

Elementary particle phenomenology; classification of particles, forces, conservation laws, relativistic scattering theory, electromagnetic interactions of leptons and hadrons, weak interactions, gauge theories, strong interactions. Course offered occasionally.

### PHYS 881-3 Special Topics I

### PHYS 882-3 Special Topics II

### PHYS 883-3 Special Topics III

### PHYS 884-2 Special Topics IV

### PHYS 885-2 Special Topics V

### PHYS 886-2 Special Topics VI

## Political Science POL Faculty of Arts and Social Sciences

### POL 100-3 Introduction to Politics and Government

A comprehensive introduction to the study of politics and government for both political science majors and students specializing in other disciplines. The course will explore the major concepts, methods, approaches and issues in political science, as well as the primary components of government structure and the political process. POL 101W is the Writing certified version of POL 100 and students cannot receive credit for both courses. Breadth-Social Sciences.

### POL 101W-3 Introduction to Politics and Government

A comprehensive introduction to the study of politics and government for both political science majors and students specializing in other disciplines. Explores the major concepts, methods, approaches and issues in political science, as well as the primary components of government structure and the political process. This course is identical to POL 100 and students may not take both courses for credit. Writing/Breadth-Social Sciences.

### POL 151-3 The Administration of Justice

The development of laws and their application to the citizen and social groups. Special consideration will be given to civil liberties. Breadth-Social Sciences.

### POL 201-3 Research Methods in Political Science

An introduction to quantitative research techniques in political science. Prerequisite: POL 100 or 101W or 151 or permission of department. Students with credit

for IS 240, POL 213 or SA 255 may not take POL 201 for further credit. Quantitative.

### **POL 202-3 Research Design**

Approaches to political science research design methods. Covers causality, conceptualization and analysis; literature reviews; and the logic behind different choices of methodology. Prerequisite: POL 100 or 101W.

### **POL 210-3 Introduction to Political Philosophy**

An examination of concepts presented by the major political thinkers of the western world. The course surveys those ideas which remain at the root of our political institutions, practices and ideals against a background of the periods in which they were expressed. Prerequisite: POL 100 or 101W or permission of department. Breadth-Social Sciences.

### **POL 211-3 Politics and Ethics**

An examination of selected contemporary political controversies that raise fundamental ethical issues. Discussion will be informed by contending perspectives in modern political philosophy. Prerequisite: POL 100 or 101W or permission of department. Breadth-Social Sciences.

### **POL 221-3 Introduction to Canadian Government**

An introduction to the institutional order and political structure of the Canadian state. The course will include topics such as the constitution, parliament, cabinet, judiciary, public service and federal-provincial relations. Prerequisite: POL 100 or 101W or 151 or permission of department.

### **POL 222-3 Introduction to Canadian Politics**

An introduction to the social and participatory basis of Canadian politics, covering topics such as political culture, regionalism and other political divisions, political parties, elections, interest groups and new social movements. Prerequisite: POL 100 or 101W or 151 or permission of department.

### **POL 223-3 Canadian Political Economy**

An introductory study of Canada's political economy, stressing the interrelated nature of Canada's economic and political life. The course focuses on current economic problems and policies, taking into account the geographical, historical and political environments. Topics include the resource and industrial structures, research and development, the public sector, fiscal and monetary policy, the role of the state, trade and foreign ownership, energy, regional disparity, corporate concentration and the political economy of federalism. This course is identical to CNS 280 and students cannot take both courses for credit. Recommended: POL 100 or 101W. Breadth-Social Sciences.

### **POL 231-3 Comparative Politics**

An introduction to political processes and structures in comparative perspective. Prerequisite: POL 100 or 101W or permission of department. Breadth-Social Sciences.

### **POL 232-3 US Politics**

An examination of the American political system, including the presidency, the congress, the courts, the bureaucracy and the party system. Prerequisite: POL 100 or 101W or permission of the department. Students who have credit for POL 332 may not take POL 232 for further credit.

### **POL 241-3 Introduction to International Politics**

Theory and practice of international politics, diplomacy, hot war, cold war, alliances and the role of leaders. Prerequisite: POL 100 or 101W or permission of department. Breadth-Social Sciences.

### **POL 251-3 Introduction to Canadian Public Administration**

An introduction to the basic elements of public administration in the government of Canada,

including the organization of the public service, planning and financial administration, personnel administration, collective bargaining and administrative regulation. Prerequisite: POL 100 or 101W or 151 or permission of department.

### **POL 252-3 Local Democracy and Governance**

The political process in the urban municipality from a comparative perspective. Prerequisite: POL 100 or 101W or 151 or permission of department. Breadth-Social Sciences.

### **POL 253-3 Introduction to the Public Policy Process**

Explores the political dimensions of public policy making in Canada. Reviews theories and techniques in policy analysis, and focuses on the contemporary dynamics of public policy in various economic and social sectors from the point of view of political ideas, interests, institutions, and decision-making. Prerequisite: POL 100 or POL 101W or permission of the department. Students who have taken POL 351 may not take this course for further credit.

### **POL 290-3 Political Science Practicum I**

First term of work experience in the Political Science Co-operative Education program. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the third week of the preceding term. Units from this course do not count towards the units required for an SFU degree. Prerequisite: 30 units with a CGPA of 3.0. Transfer students must complete at least 15 units at Simon Fraser University.

### **POL 291-3 Political Science Practicum II**

Second term of work experience in the Political Science Co-operative Education Program. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the third week of the preceding term. Units from this course do not count towards the units required for an SFU degree. Prerequisite: POL 290; 45 units with a CGPA of 3.0.

### **POL 300-4 Selected Topics: Comparative Politics**

### **POL 301-3 Political Science Practicum III**

Third term of work experience in the Political Science Co-operative Education program. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the third week of the preceding term. Units from this course do not count towards the units required for an SFU degree. Prerequisite: POL 291, 60 units, and a minimum CGPA of 3.0.

### **POL 312-4 Modern Political Thought**

A discussion of selected political philosophers in the western tradition from Hobbes to Rawls. Prerequisite: POL 210 or equivalent, or permission of the department.

### **POL 313-4 Political Ideologies**

Discussion of the major political ideologies in western political systems: liberalism, conservatism, the new right, socialism and social democracy, feminism and environmentalism. Emphasis is placed on their conceptual foundations and contemporary expressions. Prerequisite: POL 210 or 312 or permission of the department.

### **POL 314-4 Theory and Explanation in Political Science**

A discussion of issues in the philosophy of the social sciences which are relevant to the study of politics and a critical evaluation of contemporary approaches to political inquiry, including empirical theory, rational choice theory and hermeneutics. Prerequisite: six lower division units in political science or permission of the department. Quantitative.

### **POL 315-4 Quantitative Methods in Political Science**

An examination of the principal methods of empirical research in political science. This course is equivalent to SA 355. Prerequisite: POL 201, or SA 255 or STAT 203 (formerly 103). Students who have completed POL 315 may not take SA 355 for further credit. Quantitative.

### **POL 319-4 Selected Topics in Political Theory**

Prerequisite: six lower division units in political science or permission of the department.

### **POL 321-4 The Canadian Federal System**

Development of the federal system including topics such as the division of powers, parties, federal-provincial relations and theories of federalism. Prerequisite: six lower division units in political science or permission of the department.

### **POL 322-4 Canadian Political Parties**

Development of the Canadian party system. Party ideologies, organization, campaigns and elections. Prerequisite: six lower division units in political science or permission of the department.

### **POL 323-4 Provincial Government and Politics**

An examination of the historical development of the provinces and the role they have played in Confederation. The course surveys the evolution of provincial economies, societies and governments in order to understand the contemporary issues and problems faced by Canada's provincial states. Prerequisite: six lower division units in political science or permission of the department.

### **POL 324-4 The Canadian Constitution**

An analysis of the Canadian constitution from a theoretical and comparative perspective. Amendment, entrenchment, civil rights. Prerequisite: six lower division units in political science or permission of the department.

### **POL 327-4 Globalization and the Canadian State**

In an era of globalization, what scope remains for national politics? Does globalization lead to a deficit of democracy? This course examines the challenge that globalization poses for the Canadian political system. Emphasis is placed on globalization's impact on the organization, activities and role of Canadian State. Prerequisite: six lower division units in political science or permission of the department.

### **POL 329-4 Selected Topics in Canadian Government and Politics**

Prerequisite: six lower division units in political science or permission of the department.

### **POL 331-4 Campaigns and Elections in the United States**

Introduces the American electoral system. Prerequisite: POL 231 or 232.

### **POL 335-4 Government and Politics: People's Republic of China**

An examination of the political development of China in modern times with special emphasis on political culture and its relationship to political institutions, political processes and political behavior. Prerequisite: six lower division units in political science or permission of the department.

### **POL 339-4 Selected Topics in Comparative Government and Politics**

Prerequisite: six lower division units in political science or permission of the department.

### **POL 341-4 International Integration and Regional Association**

Theories of integration, and the empirical analysis of selected regional associations, historical and contemporary. Imperialism, federation, association. Prerequisite: six lower division units in political science or permission of the department.

**POL 342-4 Developing Countries in Global Politics**

Problems arising from the disparities in power and wealth between the highly industrialized countries of Europe and North America, and the under-industrialized countries of Asia, Africa and Latin America. Prerequisite: six lower division units in political science or permission of the department.

**POL 343-4 Global Political Economy**

An introduction to the study of the international political economy, with an emphasis on the interaction between the state and markets, and the basic political-institutional relationships of trade, money and finance, international investment, foreign debt and foreign aid. Prerequisite: six lower division units in political science or permission of the department.

**POL 344-4 International Law**

Sovereignty, nationality, jurisdiction, arbitration. Examination of selected cases exemplifying present trends in the international legal order. Prerequisite: six lower division units in political science or permission of the department.

**POL 345-4 The Nation-State and Multinational Corporation**

A study of relations between multinational enterprise and national interests in developed and developing countries. Prerequisite: six lower division units in political science or permission of the department.

**POL 346-4 International Organization**

An examination of the structures and processes and the main substantive decisions of the United Nations and related international organizations. Based upon in-depth study of the UN Charter, the Security Council, General Assembly, Secretary-general and Secretariat and their constitutional and political interactions since 1945, with special attention to the theory and practice of international organization advanced by the principal Western countries, the Soviet Union and Soviet bloc, the People's Republic of China and leading Third World countries. Prerequisite: six lower division units in political science or permission of the department.

**POL 347-4 Canadian Foreign Policy**

An overview of Canadian foreign policy post World War II. Various perspectives are discussed including realism, economic nationalism, liberal internationalism and political economy/dependency analysis. A variety of analytical perspectives are used to examine issue-areas such as foreign trade including the role of NAFTA, defence policy and alliance relations, foreign investment, foreign aid, immigration policy, energy policy and the role of domestic political factors in foreign policy decision-making. Prerequisite: six lower division units in political science or permission of the department.

**POL 348-4 Theories of War, Peace and Conflict Resolution**

Examines the origins and causes of several major conflicts during the last century. This course reviews various theories on the causes of conflict and war in the international system. It also examines the techniques of preventive diplomacy, peacekeeping, crisis management and coercive diplomacy as they have been used to try to forestall open warfare and maximize the opportunities for peaceful change and the negotiated resolution of international disputes. Both documentary and feature films will be used to illustrate many types of conflict and warfare in the international system. Course simulations, when employed, will concentrate on the problems and risks that are involved in international efforts to contain and reverse the proliferation of weapons of mass destruction. Prerequisite: six lower division units in political science or permission of the department.

**POL 349-4 Selected Topics in International Relations**

Prerequisite: six lower division units in political science or permission of the department.

**POL 353-4 Public Sector Management**

A detailed analysis of administrative planning in the public sector, particularly as it relates to the Canadian government. The significance of financial management and personnel management to the overall planning will be emphasized. Prerequisite: six lower division units in political science or permission of the department.

**POL 354-4 Comparative Metropolitan Governance**

A comparative analysis of regional metropolitan governance in Canada and selected other jurisdictions (such as the USA, UK, etc.). The course involves an examination of major policy dilemmas in urban development, and of the local, regional and senior intergovernmental relations within which much of the public policy making in metropolitan settings takes place. Prerequisite: six lower division units in political science or permission of the department.

**POL 356-4 The Political Economy of Labour**

Examines the ways in which economic and political forces are constantly changing the nature of work. The focus will be on both paid and unpaid labor; the problems of inequality; and the ways in which workers have organized to protect their interests. The course material will deal mainly, although not exclusively, with the political economy of labor in contemporary Canada. Prerequisite: six lower division units in political science or permission of the department.

**POL 357-4 Selected Topics in Urban and Local Government**

Prerequisite: six lower division units in political science or permission of the department.

**POL 358-4 Selected Topics in Public Policy**

Prerequisite: six lower division units in political science or permission of the department.

**POL 359-4 Selected Topics in Governance**

Prerequisite: six lower division units in political science or permission of the department.

**POL 360-4 Ethics and Governance**

Examines leadership, ethics and democracy and their implications for government and public administration. Discusses the need for ethical behaviour by professional and public servants and the means and mechanisms by which this can be achieved. Prerequisite: six lower division units in political science or permission of the department.

**POL 361-4 Policy Communities and Policy Networks**

Surveys approaches to understanding origins of influence in public policy making. Focuses on key actors involved in public policy making including interest groups, political parties, political leaders, civil servants, the media, experts and the public, and examines their interactions in policy communities and policy networks. Prerequisite: six lower division units in political science or permission of the department.

**POL 362-4 Comparative Public Policy**

A comparison of major trends in public policy across national and sectoral boundaries. Examples from selected policy areas and issues are examined in order to assess the effects of globalization, regional integration and other factors on policy convergence and divergence. Prerequisite: six lower division units in political science or permission of the department.

**POL 373-4 Human Security**

Explores what is involved in shifting the focus in the security realm from 'national interest' to the safety and needs of humans. Addresses several contemporary issues of human insecurity such as genocide, terrorism, civil wars and other complex

emergencies; the political economy of conflict (small arms, "blood" diamonds); 'new' inequalities (economic, gender, class, ethnicity); and new health risks (e.g. HIV/AIDS, SARS, ecological degradation). Considers recent initiatives and trends that have emerged to deal with these issues (e.g. humanitarian intervention, International Criminal Court, new coalitions of state and non-state actors such as the Ottawa Process on anti-personnel mines). Prerequisite: six lower division units in Political Science or permission of the department. Students who have taken POL 349 'Special Topics' for credit under this title may not take this course for further credit.

**POL 374-4 Africa in the Global Political Economy**

Considers Africa in the historical development of the modern global political economy, from the transatlantic slave trade to the present. Examines contemporary issues associated with Africa in the neo-liberal world order and the politics of resistance and alternative pathways or models of development. Prerequisite: six lower division units in political science or permission of the department.

**POL 381-4 Japanese Politics**

The political system of Japan, including an analysis of political culture, political institutions, political behavior and both formal and informal political processes. Emphasis will be placed on the pre-World War II political development of Japan. Prerequisite: six lower division units in political science or permission of the department.

**POL 401-3 Political Science Practicum IV**

Fourth term of work experience in the Political Science Co-operative Education Program. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the third week of the preceding term. Units from this course do not count towards the units required for an SFU degree. Prerequisite: POL 301, 75 units, and a minimum CGPA of 3.0.

**POL 411-4 Normative Political Theory**

Advanced seminar examining selected themes, debates and texts in recent normative political philosophy, with an emphasis on contemporary democratic theory. Prerequisite: POL 210 or 312 or 313; or permission of the department.

**POL 415-4 The Liberal Tradition**

A critical examination of the development of liberalism from classical liberalism (e.g. John Locke) to contemporary conflict between revisionist and neo-classical or libertarian currents. Prerequisite: eight upper division units in political science or permission of the department.

**POL 416-4 Feminist Social and Political Thought**

This course will examine the works of major feminist thinkers and the problems of developing feminist theory. Prerequisite: eight upper division units in political science or permission of the department.

**POL 417-4 Human Rights Theories**

This course introduces students to the problems involved in the assertion of universal moral standards across political and cultural divides. These issues will be explored at a theoretical level, and in the context of specific human rights controversies. Prerequisite: eight upper division units in political science or permission of the department. Recommended: PHIL 220 or 320.

**POL 418-4 Selected Topics in Political Theory**

Prerequisite: eight upper division units in political science or permission of the department.

**POL 419-4 Selected Topics in Political Theory II**

Prerequisite: eight upper division units in political science or permission of the department.

**POL 422-4 Canadian International Security Relations**

The course traces the evolution of Canadian thinking on national international security issues through an examination of pre-World War II isolationism, elite attitudes during the Cold War, the formative period of NATO, as well as Canadian involvement in the Korean and Indochina conflicts. More recent policies concerning ALCM testings, NORAD, and nuclear non-proliferation will also be explored in detail. Prerequisite: eight upper division units in political science or permission of the department.

**POL 423-4 BC Government and Politics**

The legislature, political parties, pressure groups, relations with other governments, and other aspects of the policy process. Prerequisite: eight upper division units in political science or permission of the department.

**POL 424-4 Quebec Government and Politics**

An examination of the political culture and institutions in the province of Quebec with particular emphasis on the period since 1960. Prerequisite: eight upper division units in political science or permission of the department.

**POL 426-4 Canadian Political Behavior**

The study of political attitudes and behavior in Canada. Topics will include political culture, public opinion, elections and voting behavior. Prerequisite: eight upper division units in political science or permission of the department. Quantitative.

**POL 426W-4 Canadian Political Behavior**

The study of political attitudes and behavior in Canada. Topics will include political culture, public opinion, elections and voting behavior. Prerequisite: eight upper division units in political science or permission of the department. Writing/Quantitative.

**POL 428-4 Selected Topics in Canadian Government and Politics I**

Prerequisite: eight upper division units in political science or permission of the department.

**POL 429-4 Selected Topics in Canadian Government and Politics II**

Prerequisite: eight upper division units in political science or permission of the department.

**POL 431-4 Comparative Western European Systems**

An advanced examination of the political life of Western European democratic systems, with special attention to issues of comparative and theoretical import, such as the causes and consequences of various types of party systems and the determinants of democratic stability. Prerequisite: eight upper division units in political science or permission of the department.

**POL 432-4 Comparative Communist and Post-Communist Political Systems**

A comparative examination of the emergence and development of communist political systems and also the impact of that experience on the various post-communist successor states undergoing the process of regime transition in Eurasia and eastern Europe. The course will focus on theoretical issues pertaining to the topics considered, and case studies of specific countries. Prerequisite: eight upper division units in political science or permission of the department.

**POL 433-4 Comparative Development**

A comparison of theories and models of development, exploring issues of economic growth and decline, governance, social cohesion and cleavages in selected countries and regions of the world. Prerequisite: eight upper division units in political science or permission of the department.

**POL 435-4 Comparative Federal Systems**

Comparative analysis of federations such as the Canadian, American, West German, Yugoslavian, Soviet, Indian and Swiss. Prerequisite: eight upper division units in political science or permission of the department.

**POL 436-4 Elections, Parties and Governments in Comparative Perspectives**

An examination of the processes by which governments are created, maintained, and destroyed in democratic systems. The effects of different regime types, electoral arrangements, and party systems will be highlighted. Prerequisite: eight upper division units in political science or permission of the department.

**POL 437-4 Governance and Globalization**

Explores the ways in which globalization is affecting processes of governance. By focusing on specific issue areas such as economics, security, human rights, basic need (health and environment), it considers alterations in the role and form of states as well as changes in relations among state, business and civil society sectors. Explores changes at the national level, but also examines the growing relevance of interactivity between the national and other levels of governance from local through international, regional and global, the enhanced role of non-state actors in formal governance procedures, and processes of "governance without government". Prerequisite: 8 upper division units in Political Science or permission of the department. Students who have taken POL 438 or 439 for credit under this title may not take this course for further credit.

**POL 438-4 Selected Topics in Comparative Government and Politics I**

Prerequisite: eight upper division units in political science or permission of the department.

**POL 439-4 Selected Topics in Comparative Government and Politics II**

Prerequisite: eight upper division units in political science or permission of the department.

**POL 440-4 Special Topics: Latin American International Relations**

A multidisciplinary study of bilateral issues between Latin America and a specific country or region, e.g. US and Latin America, the Pacific Rim. Historical, economic, and ideological perspectives as well as topics related to business, foreign aid, and immigration will be emphasized. Prerequisite: eight upper division units in political science or LAS 200 or permission of department. This course (POL 440) is identical to POL 340, LAS 311, 411 and 440, and students cannot take more than one of these courses for credit.

**POL 441-4 Comparative Foreign Relations: Selected Political Systems**

A comparison of the foreign policies of selected political systems. Subjects treated include the domestic and foreign determinants of foreign policy decisions, the mobilization and application of resources to influence international politics, and the consequences of foreign policy decisions and strategies. Prerequisite: eight upper division units in political science or permission of the department.

**POL 442-4 The Political Economy of International Trade**

Focuses on the political economy of international trade relations. Subjects of interest may include the evolution of the global trade regime from the GATT to the WTO, regional trade groupings such as the European union and NAFTA, the special trade problems of less developed countries and transition economies, and the growing role of civil society in international trade. Prerequisite: eight upper division units in political science or permission of the department.

**POL 443-4 Nuclear Strategy, Arms Control, and International Security**

Provides an overview of the evolution of US and Soviet strategic policies since World War II. The political and doctrinal bases of national strategic debates are closely examined, as are the various obstacles to a more stable international arms control regime for nuclear weapons. Prerequisite: eight upper division units in political science or permission of the department.

**POL 444-4 Politics and Foreign Policy of the European Union**

This course offers a comparative foreign policy analysis of EEC members, as well as an introduction to European political co-operation. Focuses on institutions of the EEC, including the Commission, Council of Ministers, European Council and European Parliament. Provides an analysis of both internal EC issues such as Common Agricultural Policy and European Monetary Union and external issues such as trade and security relations. Prerequisite: eight upper division units in political science or permission of the department.

**POL 445-4 American Foreign Policy**

Examines US foreign policy in the post World War II era. Topics to be covered will include the formation of foreign policy, 20th century American security issues, alliance relations, crisis management and international economic relations. Prerequisite: eight upper division units in political science or permission of the department.

**POL 446-4 International Relations in East Asia**

An overview and analysis of international relations in East Asia. Prerequisite: eight upper division units in political science or permission of the department.

**POL 447-4 Theories of Global Political Economy**

An examination of the major theories of international political economy, and their application to such issues as the politics of trade, aid, monetary relations, and transnational corporations. Prerequisite: eight upper division units in political science or permission of the department.

**POL 448-4 Selected Topics in International Relations**

Prerequisite: eight upper division units in political science or permission of the department.

**POL 449-4 Selected Topics in International Relations II**

Prerequisite: eight upper division units in political science or permission of the department.

**POL 451-4 Public Policy Analysis**

Examines the conceptual, philosophical and practical aspects of public policy analysis as it is conducted in government, universities, interest groups and policy research institutes. Specific attention is paid to the question of the role of policy research in the process of public policy making and the design of government programs and services. Prerequisite: eight upper division units in political science or permission of the department.

**POL 453-4 The Political Economy of Cities and City Regions**

Analyses the political economy of cities and city-regions and discusses the roles of cities/urban-regions in local, regional, national and global political economies. Provides an assessment of globalist vs. globalized cities and theories around such phenomena. Explores new strategies for city and city-regional responses to globalization. Prerequisite: eight upper division units in political science or permission of the department. Students are encouraged to have completed at least one other course in Urban politics/governance or with the Urban Studies certificate program.

**POL 454-4 Urban Public Policy Making**

This course will link differing theoretical perspectives and concepts currently used in public policy studies to an understanding of public policy making in urban governance. Prerequisite: eight upper division units in political science or permission of the department.

**POL 455-4 States and Markets**

Survey of the concepts and theoretical approaches, from Adam Smith's political economy to contemporary paradigms, used to understand the role and place of state institutions in a market economy and of the criteria that are used to design and implement economic and social policies. Particular attention is paid to the philosophical and normative questions that are raised by such an analysis. Prerequisite: eight upper division units in political science or permission of the department.

**POL 456-4 Governing Instruments**

Examines and compares the various means at the disposal of government for implementing policy options, including regulation, the creation or privatization of public enterprises, the delivery or contracting out of services, taxation and tax expenditures, and any other administrative or legislative processes that governments in Canada and/or in similar countries have used to manage the economy or effect social change. Prerequisite: eight upper division units in political science or permission of the department. Students who have completed POL 355 prior to September 2008 may not take this course for credit.

**POL 457-4 Controversies in Policy Innovation and Design**

This course is intended to offer students an opportunity to reflect upon the challenges posed by the development of new technologies, the emergence of new movements and the uncertainties attendant to social and political conflicts associated with policy issues about which experts differ in significant ways. Prerequisite: eight upper division units in political science or permission of the department.

**POL 458-4 Selected Topics in Local and Urban Governance**

Prerequisite: eight upper division units in political science or permission of the department.

**POL 459-4 Selected Topics in Governance**

Prerequisite: eight upper division units in political science or permission of the department.

**POL 460-4 Selected Topics in Public Policy**

Prerequisite: eight upper division units in political science or permission of the department.

**POL 461-4 The Risk Society and Risk Management**

Studies risk and calculations of acceptable risks by policy-makers due to factors such as rapid technological, demographic, climate, and other kinds of change. Explores sources of risk, and the behavior, conduct, and decisions of public and non-governmental actors involved in creating and implementing policy. Prerequisite: eight upper division units in political science or permission of the department.

**POL 462-4 Non-Profit and Alternative Service Delivery**

An introduction to nonprofit and alternative service delivery and how this transforms the way public services are delivered and the conception and definition of the public sector. Themes addressed include: control and accountability; the role of trust in contractual relationships; balancing accountability and risk; performance measurement. Prerequisite: eight upper division units in political science or permission of the department. Students are strongly advised to have taken POL 251, 252 or 253.

**POL 470-4 African Social and Political Thought**

Covers African social and political thought (including that of the Diaspora) since the nineteenth century. Includes approaches such as 'traditional' philosophy, the writing of history, and the specific problems of understanding the history of political thought in the context of a 'post-colonial' society. Prerequisite: eight upper division units in political science or permission of the department.

**POL 471-4 Political Economy of North America**

Deals with the governance implications of ongoing developments in political economy in the NAFTA area. Prerequisite: eight upper division units in political science or permission of the department.

**POL 481-4 Identity Politics**

Examines the impact of identity politics on the dynamics and organization of political systems. Topics include the impact of ethnic, racial and/or religious diversity on modes of political representation, the formation of public policy, and the quest for political stability and national identity. Prerequisite: eight upper division units in political science or permission of the department.

**POL 496-1 Political Science Extended Essay Option**

Students may extend a major term paper for a class with intensive instruction and feedback from the instructor to receive extra credit. May only be taken twice. Prerequisite: 90 units. By application to the undergraduate chair.

**POL 497-4 Directed Practice in Political Science**

This course involves interpretation of, and expansion on, practical experience in political life, under the supervision of a single faculty member. Students enrolling in the course must have their program of practical experience and academic writing assignments approved by both the supervisor and the department's undergraduate committee prior to enrolment. Prerequisite: Permission of the department; CGPA of 3.0; upper division GPA of 3.33. Students may count only one POL 497 towards meeting their upper division political science requirements. This course is available only for POL majors.

**POL 498-4 Directed Readings in Political Science**

Directed readings in a selected field of study under the direction of a single faculty member. A paper will be required. Students enrolling in this course must have their program of readings approved (by the supervising instructor and the undergraduate studies committee) prior to enrolment. Prerequisite: permission of the department. Students may count only one readings course as credit towards their upper division political science requirements.

**POL 499-5 Honors Essay**

Prerequisite: permission of the department (see regulations listed in the Department of Political Science section).

**POL 801-5 Theoretical Perspectives in Political Science**

Students with credit for POL 813 may not take this course for further credit.

**POL 802-5 Political Research: Design and Analysis****POL 812-5 Seminar in Modern Political Theory****POL 814-5 Normative Political Theory****POL 821-5 Canadian Government and Politics****POL 825-5 Canadian Political Economy****POL 826-5 Parties and Ideologies in Canada****POL 827-5 Issues in Canadian Government and Politics****POL 829-5 Internship****POL 830-5 Comparative Politics: Methods and Approaches****POL 837-5 Issues in Comparative Politics****POL 838-5 Government and Politics of Industrialized Countries****POL 839-5 Comparative Development****POL 841-5 International Relations****POL 842-5 International Law and Organizations****POL 843-5 Canadian Foreign Policy****POL 844-5 International Political Economy****POL 845-5 Foreign Policy Analysis****POL 846-5 International Security Studies****POL 847-5 Political Economy of North America**

Deals with the governance implications of ongoing developments in political economy in the NAFTA area.

**POL 848-5 Global Political Economy of Development**

Provides a perspective on global political economy informed by the historical experiences of the 'south.' Examines the making of the third world from a historical perspective and engages with key contemporary issues in understanding development through the global political economy.

**POL 849-5 Issues in International Relations**

This is a selected topics course.

**POL 851-5 Public Policy in Canada****POL 852-5 Urban Government and Politics****POL 853-5 Public Administration****POL 855-5 Science, Technology and Public Policy****POL 856-5 Issues in Social and Economic Policy****POL 861-5 Issues in Political Development**

Students with credit for POL 837-5 may not take this course for further credit.

**POL 870-5 African Social and Political Thought**

Introduces Africana social and political thought from the nineteenth century to the present. Examines a range of Africana political traditions, thinkers and texts, organized around specific themes: transatlantic slavery, the colonial encounter, self-determination and sovereignty, politics and society, questions of race and gender.

**POL 890-0 PhD Seminar****POL 891-0 Master's Seminar****POL 892-6 Research Project****POL 893-5 Readings in Political Sciences****POL 894-5 Readings in Political Science II****POL 895-6 Extended Essays****POL 896-6 PhD Comprehensive Exam****POL 897-6 Field Exam in Major Areas of MA Concentration****POL 898-6 MA Thesis****POL 899-6 PhD Thesis Research**

## Portuguese PORT

### Faculty of Arts and Social Sciences

### Department of Linguistics

### Language Training Institute

**PORT 102-3 Introductory Portuguese I**

Elementary-level skills and knowledge in Portuguese grammar, reading, vocabulary, listening, speaking and writing. Students with any prior knowledge or experience in Portuguese beyond the level of this course may not enrol in this course.

**PORT 103-3 Introductory Portuguese II**

Intermediate-level skills and knowledge in Portuguese grammar, reading, vocabulary, listening, speaking and writing. Students with any prior knowledge or experience in Portuguese beyond the level of this course may not enrol in this course. Prerequisite: PORT 102, or permission from the instructor. All

students must attend a placement meeting and receive permission to enrol.

## Psychology PSYC Faculty of Arts and Social Sciences

### PSYC X99W-3 Brain, Mind and Society

Introduces the student to issues in Psychology by surveying the research on brain and behaviour and the implications of this work for individuals and society. Beginning with neurons, this course explores the transition to human experience. Writing/Breadth-Science.

### PSYC 100-3 Introduction to Psychology I

Acquaints the student with the major issues in contemporary psychology and considers the historical antecedents. Special attention is given to questions of methodology and research design in psychology. Topics in physiological psychology, perception, learning and motivation are considered. Students with credit for PSYC 101 may not take PSYC 100 for further credit. Breadth-Social Sciences.

### PSYC 102-3 Introduction to Psychology II

Acquaints the student with major issues in contemporary psychology and considers their historical antecedents. Topics in learning, cognition, social psychology and abnormal psychology are considered. Recommended: PSYC 100 is recommended but not required. Students with credit for PSYC 101 may not take PSYC 102 for further credit. Breadth-Social Sciences.

### PSYC 106-3 Psychological Issues in Contemporary Society

Relates contemporary knowledge from psychology to current social problems. Provides relevant information from studies pertaining to problems such as attitude development, prejudice, race relations, addiction, behavior technology, and family pathology. Breadth-Social Sciences.

### PSYC 201W-4 Introduction to Research Methods in Psychology

An introduction to the procedures used in psychological research, and to the logic underlying them. Topics include the strengths and weaknesses of different approaches to research, the formulation of testable questions, the control of extraneous influences, the measurement of effects, and the drawing of valid conclusions from empirical evidence. Provides a background for senior psychology courses since it offers a basis for the critical evaluation and conduct of research. Prerequisite: PSYC 100 or 102 (or PSYC 101). See the Letters of Permission section within the undergraduate Department of Psychology. Writing/Quantitative.

### PSYC 207-3 Introduction to History of Psychology

Examines the development of modern psychology from the founding of the first laboratories in the late 19th century to the present. The development and revisions of the major theoretical systems of psychology are examined from a comparative and critical perspective. Prerequisite: PSYC 100 or 102 (or PSYC 101). Students with credit for PSYC 308 may not take PSYC 207 for further credit.

### PSYC 210-4 Introduction to Data Analysis in Psychology

Covers basic descriptive and inferential techniques most appropriately applied to the various forms of data from psychological research. Should be completed by majors and honors before the end of term 4. Prerequisite: PSYC 201 and BC high school Math 11 with a minimum grade of B-. See the Letters of Permission section within the undergraduate Department of Psychology. Quantitative.

### PSYC 221-3 Introduction to Cognitive Psychology

Introduction to the study of cognitive and perceptual processes. Topics include memory, perception, attention, language, mental imagery, creativity, judgement and decision-making, and an introduction to cognitive disorders such as Alzheimer's disease, dyslexia, aphasia and attention-deficit disorder. Prerequisite: PSYC 100 (or PSYC 101). Students with credit for PSYC 320 may not take PSYC 221 for further credit.

### PSYC 241-3 Introduction to Abnormal Psychology

Introduces students to the area of abnormal psychology. Topics include the definition and classification of pathological behavior, factors involved in the development of pathology, and evaluation of therapy outcome. Prerequisite: PSYC 102 (or 101). Students with credit for PSYC 340 may not take PSYC 241 for further credit.

### PSYC 250-3 Introduction to Developmental Psychology

Considers the psychological and physical aspects of human development from conception through middle childhood. Topics include social, emotional, language, cognitive, perceptual and physical development. Prerequisite: PSYC 102 (or 101). Students with credit for PSYC 350 or 351 may not take PSYC 250 for further credit.

### PSYC 260-3 Introduction to Social Psychology

Examines methodology and content in social psychology. Topics include: attitudes and values; social perception and cognition; group behavior; social inclusion; prejudice, discrimination, and sexism; aggression; altruism, interpersonal attraction and interpersonal relationships. Prerequisite: PSYC 102 (or 101). Students with credit for PSYC 360 may not take PSYC 260 for further credit.

### PSYC 268-3 Introduction to Law and Psychology

An introduction to the area of law and psychology. The role and influence of psychology in the legal system will be discussed. Topics include: social psychology and law, developmental psychology and law, juvenile justice, experimental psychology and law, mental disability and law. Prerequisite: PSYC 102 (or 101). Students with credit for PSYC 369 may not take this course for further credit.

### PSYC 270-3 Introduction to Theories of Personality

Introduces students to classic and contemporary theories, conceptual debates, and empirical research in the area of personality. Prerequisite: PSYC 102 (or 101).

### PSYC 280-3 Introduction to Biological Psychology

Surveys the major areas in biological psychology. Topics include the basics of neuroanatomy and nerve cell function, the behavioral and physiological effects of drugs and hormones in the nervous system, evolutionary perspectives on the brain and behavior, and the biopsychology of vision, the chemical senses, hearing, movement, biological rhythms, sex, and cognitive processes. Prerequisite: PSYC 100 (or 101). Recommended: BISC 101. Breadth-Science.

### PSYC 300W-3 Critical Analysis of Issues in Psychology

Trains students to evaluate critically important issues from the main area of Psychology (e.g. Biological, Cognitive, Developmental, Law and Psychology, Social, Theory and Methods) and to communicate their ideas clearly in written form. The content may vary in different offerings of the course. Prerequisite: PSYC 201. Writing.

### PSYC 301-4 Intermediate Research Methods and Data Analysis

A continuation of PSYC 201 and 210. Provides extensions of the basic theory and methods of research design and data analysis. Includes discussions of the analysis of substantive problems, the choice of appropriate research designs, and special problems that arise in the analysis of psychological data. Prerequisite: PSYC 201 and 210 and a minimum CGPA of 2.67. See the Letters of Permission section within the undergraduate Department of Psychology. Quantitative.

### PSYC 303-3 Perception

An introduction to the study of perceptual processes with an emphasis on seeing and hearing. Topics include the perception of features, objects, motion, depth, time, visual illusions, and individual differences in perceptual ability. Prerequisite: PSYC 201 and one of 221 (or 320) or 335.

### PSYC 325-3 Memory and Mind

Examination of the phenomena of memory and the retention and reproduction of information. Considers the conditions and principles of retention and recall in short- and long-term memory. Prerequisite: PSYC 201, and 221 (or 320).

### PSYC 330-3 Attention

Survey the different aspects of paying attention. Topics include the effects of selective and divided attention on perceptual and cognitive function; the role of attention in human performance; attentional dysfunction and attention-deficit disorder; and the development of attentional capacity across the life span from newborns to the elderly. Prerequisite: PSYC 201, and 221 (or 320).

### PSYC 335-3 Sensation

Examines the properties of the visual, auditory, olfactory, gustatory, and kinesthetic systems and receptor mechanisms with a strong emphasis on physiology. Topics include psychophysical measurement of sensations, cross-modal organization and computational modeling of sensory processes, and the interface between sensory and perceptual processes. Prerequisite: PSYC 201, 221, and one of 280 or 303.

### PSYC 342-3 Practicum I

First term of work experience in the Psychology Co-operative Education program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: PSYC 201 and 210. Students should apply to the co-op co-ordinator one term in advance.

### PSYC 343-3 Practicum II

Second term of work experience in the Psychology Co-operative Education program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of PSYC 342 and 45 units with a minimum CGPA of 3.0.

### PSYC 353-3 Infant Development

Examines research and theory concerning social, emotional, and cognitive development in infancy. Prerequisite: PSYC 201 and 250 (or 350 or 351).

### PSYC 354-3 Development of Children's Thinking

Examines research and theory concerning the origins and development of cognition in humans. Traces the development of language and children's thinking about the physical and social world from birth to adulthood, with a focus on infancy and childhood. Prerequisite: PSYC 201 and 250 (or 350 or 351).

### PSYC 355-3 Adolescent Development

Considers human development from the end of childhood to the beginning of the adult stage, from a bio-social point of view. Included among the topics are psychological effects of sexual maturation, choice of vocation and marriage partner, effects of participation in the gang and youth organization,

cultural variations in the patterns of growth.

Prerequisite: PSYC 201 and 250 (or 350 or 351).

### **PSYC 356-3 Developmental Psychopathology**

Examines theoretical approaches, research findings, and treatment outlooks concerning problems and disorders in childhood development. Prerequisite: PSYC 201, 241 (or 340), and 250 (or 350 or 351).

### **PSYC 357-3 Adulthood and Aging**

Considers human development from young adulthood to old age. Included are theories of adult development and aging; environmental and biological factors in aging; and the effects of aging on sensation, perception, learning, cognition, personality, psychopathology, and social relations. Prerequisite: PSYC 201 and 250 (or 350 or 351) or acceptance into the diploma program in gerontology.

### **PSYC 358-3 Language and Social Interaction**

Reviews the four major psychological models of talk and develops a new social pragmatic model of talk-as-social-interaction. The social pragmatic model is then applied to research in social development. Through lectures, course readings, and hands-on exercises in the tutorials (e.g., tape recording, transcription and analysis of natural talk) students will acquire competence in describing and analyzing talk from a social pragmatic perspective, and applying social pragmatics to an examination of central issues in social development. Prerequisite: PSYC 201 and 250 (or 350 or 351). Students who have taken PSYC 367 may not take this course for further credit.

### **PSYC 362-3 Close Relationships**

Reviews theory and research on the psychology of interpersonal relations, with particular attention to personal relationships. Topics include theoretical perspectives on relationships; interpersonal attraction; dating, marriage, and friendship; social networks; cognitive processes and communication dynamics within relationships; and power and aggression within relationships. Prerequisite: PSYC 201 and 260 (or 360).

### **PSYC 363-3 Intergroup Relations**

Provides an overview of the social psychological study of intergroup relations, considering classic and contemporary theory and research in the field. It includes discussions of the application of these ideas and findings to important social contexts, and explores ways in which the social psychological study of intergroup relations can help us understand and inform efforts to influence relevant social change. Prerequisite: PSYC 201 and 260 (or 360).

### **PSYC 365-3 Health Psychology**

Explores applications of psychological principles to health and health care. The development of the field of health psychology is traced and major topics introduced. Topics include health promotion, the hospital experience, communication in medical settings, coping with serious illness, psychoneuroimmunology, and field-specific methodology. Prerequisite: PSYC 201 and 260 (or 360).

### **PSYC 371-3 Intervention: Process and Outcome**

Reviews the major approaches to psychological intervention in terms of theory, practice and outcome evaluation. The course will examine both the scientific and practitioner components of intervention. Prerequisite: PSYC 201 and 241 (or 340). PSYC 270 (or 370) is recommended. Students with credit for PSYC 375 may not take PSYC 371 for further credit.

### **PSYC 376-3 Experimental Psychology and Law**

The roles of experimental developmental, cognitive, and social psychology in the understanding of behavior and perceptions of individuals in legal contexts. Topics include eyewitness testimony, autobiographical memory, interviewing, deception detection, and juror decision-making. Prerequisite:

PSYC 201 and 268. PSYC 210 and 325 are recommended. Students who have taken PSYC 368 may not take this course for further credit.

### **PSYC 379-3 Clinical Forensic Psychology**

Clinical approaches to the understanding of behavior in criminal and civil forensic settings. Topics related to the assessment, treatment, and management of people suffering from mental disorder. Prerequisite: PSYC 201 and 268. PSYC 241 is recommended.

### **PSYC 381-3 Behavioral Endocrinology**

Examines the ways in which hormones influence the nervous system, regulating essential behaviors such as eating, drinking, sex, parenting, sleep, emotional behavior and cognitive processes. Prerequisite: PSYC 201 and 280.

### **PSYC 382-3 Cognitive Neuroscience**

Examines the neurophysiological bases of cognitive and perceptual phenomena such as memory, attention, language, thinking, imagery, vision, audition, and sensory processes. The study of human cognitive performance with measurement techniques such as ERP, PET, and MRI is also discussed. Prerequisite: PSYC 201, 221, and 280.

### **PSYC 383-3 Psychopharmacology**

A survey of how psychoactive drugs affect brain function to alter consciousness and behavior. Topics will include cellular effects of drugs that affect the central nervous system and discussions of the psychological and social effects of those drug-induced changes in the brain. Research on drug abuse and addictions and means of treating them will be covered. Historical, social and legal aspects of non-medical drug use will be discussed, as will the use of medications for the treatment of anxiety, depression, schizophrenia, dementias and other psychological disorders. Prerequisite: PSYC 201 and 280. Students with credit for PSYC 483 may not take PSYC 383 for further credit.

### **PSYC 384-3 Developmental Psychobiology**

A survey of research on normal and abnormal brain development and its behavioral consequences, covering the fetal period through old age. Genetic, prenatal, nutritional, and experiential effects on brain and behavior will be discussed. Topics to include: bio-developmental aspects of sensory-motor, social, linguistic, intellectual, and sexual behavior. Effects of head trauma, disease, abnormal environments, and aging will also be covered. Prerequisite: PSYC 201 and 280. Recommended: PSYC 250.

### **PSYC 385-3 Evolutionary Psychology**

Topics such as altruism, parental care, mate choice, sex differences in behavior, aggression, dominance and territoriality are considered from an evolutionary perspective. The role of heredity and environment in the development of these behaviors is also discussed. Prerequisite: PSYC 201.

### **PSYC 386-4 Laboratory in Behavioral Neuroscience**

An overview of techniques used for studying the biological basis of behavior in humans and animals. Examines the logic and limitations of specific research methods. Provides an opportunity to master a set of techniques and to conduct supervised research projects in the laboratory. Prerequisite: PSYC 201 and 280. Students with credit for PSYC 481 may not take PSYC 386 for further credit.

### **PSYC 387-3 Human Neuropsychology**

Examines the neural processes that underlie cognitive functioning and behavior. Topics include neuroanatomy, neuropathology, brain damage, neurological diseases (e.g., schizophrenia, Alzheimer's, Parkinson's), and problems in spatial ability, memory, language, mood and anxiety. Prerequisite: PSYC 201, 221, and 280.

### **PSYC 388-3 Biological Rhythms and Sleep**

Behavior and physiology are regulated by biological clocks, which function to synchronize the organism optimally with its environment. In this course we examine the adaptive role of clocks in animal behavior, the neural and endocrine mechanisms of daily, monthly and yearly rhythms, and the relevance of clocks, rhythms and sleep to human performance and psychopathology. We will also consider the mechanisms and functions of sleep states. Prerequisite: PSYC 201 and 280. Students with credit for PSYC 488 may not take PSYC 388 for further credit.

### **PSYC 402-4 Selected Topics in History and Theoretical Psychology**

Examines the basic ideas concerning the relationship between mind and body and the empirical and rational foundations of scientific thought as applied to modern psychology. Students will be expected to analyze either the historical development of contemporary approaches or theoretical issues that are relevant to their area of interest in psychology. Prerequisite: PSYC 201, and one of 207 (or 308) or 307, 60 units, and a CGPA of 3.0.

### **PSYC 410-4 Research Design I**

Reviews the basic logic of controlled experimentation, and focuses on analysis of variance designs commonly used in psychological research. Particular emphasis is given to the relative merits of the several designs when there are multiple research questions to be answered. Prerequisite: PSYC 201, 210, 301, 60 units, and a CGPA of 3.0. Quantitative.

### **PSYC 411-4 Research Design II**

Focuses on multivariate regression and correlation models. Deals with ways of answering questions when direct experimental manipulation is not feasible, and demonstrates the utility of the principles involved for solving problems other than those for which they were first proposed. Prerequisite: PSYC 201, 210, 301, 60 units, and a CGPA of 3.0. Recommended: PSYC 410. Quantitative.

### **PSYC 415-4 Selected Topics in Measurement**

An intensive exposure to selected topics in measurement theory and psychometrics including, e.g., advanced classical test theory, modern test theory, and factor analysis. The content will vary, offering to offering. Prerequisite: PSYC 201, 210, 301, 60 units, and a CGPA of 3.0. Recommended: PSYC 410 and 411.

### **PSYC 430-4 Selected Topics in Cognition I**

Prerequisite: PSYC 201, 210, 221 (or 320), 280, 60 units, and a CGPA of 3.0.

### **PSYC 432-4 Selected Topics in Cognition II**

Prerequisite: PSYC 201, 210, 221 (or 320), 280, and 60 units, and a CGPA of 3.0.

### **PSYC 441-4 Selected Topics in Clinical Psychology**

An intensive examination of a selected topic in clinical psychology, varying to include offerings such as psychopathology (adult or child), individual differences in cognitive abilities, behavioral approaches to intervention, addiction, and other special topics. Prerequisite: PSYC 201, 210, 371 (or 375), and 60 units, and a CGPA of 3.0. Students with credit for PSYC 444 may not take PSYC 441 for further credit if similar topics are covered. See department for further information.

### **PSYC 442-3 Practicum III**

Third term of work experience in the Psychology Co-operative Education program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of PSYC 342 and 343 and 60 units with a minimum CGPA of 3.0.

**PSYC 443-3 Practicum IV**

Fourth term of work experience in the Psychology Co-operative Education program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of PSYC 442 and 75 units with a minimum CGPA of 3.0.

**PSYC 450-4 Selected Topics in Developmental Psychology I**

Prerequisite: PSYC 201, 210, 250 (or 350 or 351), and 60 units, and a CGPA of 3.0.

**PSYC 451-4 Selected Topics in Developmental Psychology II**

Prerequisite: PSYC 201, 210, 250 (or 350 or 351), and 60 units, and a CGPA of 3.0.

**PSYC 452-4 Selected Topics in Developmental Psychology III**

Prerequisite: PSYC 201, 210, 250 (or 350 or 351), and 60 units, and a CGPA of 3.0.

**PSYC 453-4 Selected Topics in Developmental Psychology IV**

Prerequisite: PSYC 201, 210, 250 (or 350 or 351), 60 units, and a CGPA of 3.0.

**PSYC 457-3 Behavioral Neuroscience Undergraduate Honors Thesis Proposal**

Directed study and research leading to an Honors thesis proposal (PSYC 459/KIN 459). Prerequisite: 90 units, including PSYC 301 with a minimum grade of B and permission of the Chair of Behavioral Neuroscience Coordinating Committee. This course is identical to KIN 457 and students may not take both courses for credit.

**PSYC 459-9 Behavioral Neuroscience Undergraduate Honors Thesis**

A written thesis based on research previously proposed in PSYC 457/KIN 457. Prerequisite: a minimum grade of B in PSYC 457/KIN 457. This course is identical to KIN 459 and students may not take both courses for credit.

**PSYC 461-4 Topics in Social Psychology I**

Prerequisite: PSYC 201, 210, 260 (or 360), 60 units, and a CGPA of 3.0.

**PSYC 462-4 Topics in Social Psychology II**

Prerequisite: PSYC 201, 210, 260 (or 360), 362, 60 units, and a CGPA of 3.0.

**PSYC 463-4 Topics in Social Psychology III**

Prerequisite: PSYC 201, 210, 260 (or 360), 60 units, and a CGPA of 3.0.

**PSYC 464-4 Topics in Social Psychology IV**

Prerequisite: PSYC 201, 210, 260, 60 units, and a CGPA of 3.0.

**PSYC 476-4 Topics in Psycholegal Psychology I**

Prerequisite: PSYC 201, 210, 268, 376, 60 units, and a CGPA of 3.0. Students who have taken PSYC 468 may not take this course for further credit.

**PSYC 477-4 Topics in Psycholegal Psychology II**

Prerequisite: PSYC 201, 210, 268, 376, 60 units, and a CGPA of 3.0. Students who have taken PSYC 468 may not take this course for further credit.

**PSYC 479-4 Topics in Psycholegal Psychology III**

Prerequisite: PSYC 201, 210, 268, 379, 60 units, and a CGPA of 3.0. Students who have taken PSYC 468 may not take this course for further credit.

**PSYC 480-4 Selected Topics in Biological Psychology I**

Prerequisite: PSYC 201, 210, 221, 280, 60 units, and a CGPA of 3.0.

**PSYC 482-4 Selected Topics in Biological Psychology II**

Prerequisite: PSYC 201, 210, 221, 280, 60 units, and a CGPA of 3.0.

**PSYC 490-4 Honors Project**

An in-depth investigation of a topic in psychology, culminating in a critical literature review and the formulation of a research proposal. Prerequisite: PSYC 300 and 301, both with a minimum grade of 3.0.

**PSYC 491-3 Selected Topics in Psychology**

Prerequisite: PSYC 201, 210, 60 units, a CGPA of 3.0, and permission of the department.

**PSYC 492-5 Selected Topics in Psychology**

Prerequisite: PSYC 201, 210, 60 units, a CGPA of 3.0, and permission of the department.

**PSYC 493-495-3 Directed Studies**

Independent reading or research in topics selected in consultation with the supervising instructor.

Prerequisite: PSYC 201, 210, 60 units, a CGPA of 3.0, and permission of the department. See the Directed Studies Courses section within the undergraduate Department of Psychology section.

**PSYC 499-6 Honors Project**

The research proposed in PSYC 490 is executed and the results are written up in thesis format.

Prerequisite: PSYC 490.

**PSYC 600-3 Biological Bases of Behavior****PSYC 601-3 Cognitive and Affective Bases of Behavior****PSYC 602-3 Developmental and Social Bases of Behavior****PSYC 603-3 Individual Differences****PSYC 700-3 Professional Issues in Psychology****PSYC 705-3 Proseminar in History and Systems****PSYC 715-1.5 Proseminar in Measurement****PSYC 720-3 Proseminar in Learning****PSYC 725-3 Proseminar in Cognition****PSYC 730-3 Proseminar in Perception****PSYC 740-3 Proseminar in Motivation****PSYC 744-3 Proseminar in Psychopathology****PSYC 750-3 Proseminar in Developmental Psychology****PSYC 760-3 Proseminar in Social Psychology****PSYC 770-3 Proseminar in Personality****PSYC 780-3 Proseminar in Physiological Psychology****PSYC 785-3 Proseminar in Animal Behavior****PSYC 790-3 Proseminar in Law and Psychology****PSYC 804-3 Seminar in Evaluation****PSYC 806-3 Advanced Topics in Assessment**

Prerequisite: PSYC 820, 821, 822, 823, 824, or permission of the instructor.

**PSYC 807A-3 Advanced Topics in Intervention: Child Therapy**

Current theoretical and empirical issues in the area of child and adolescent therapy. Prerequisite: PSYC 820, 821, 822, 823, 824 or permission of the instructor.

**PSYC 807B-3 Advanced Topics in Intervention: Family Therapy**

Provides an overview of the current theoretical and empirical issues in the area of family therapy. Prerequisite: PSYC 820, 821, 822, 823, 824 or permission of the instructor.

**PSYC 807C-3 Advanced Topics in Intervention: Group Therapy**

Conceptual and theoretical issues in group therapy. Prerequisite: PSYC 820, 821, 822, 823, 824 or permission of the instructor.

**PSYC 807D-3 Advanced Topics in Intervention: Marital Therapy**

Conceptual and theoretical issues in Marital Therapy. Prerequisite: PSYC 820, 821, 822, 823, 824 or permission of the instructor.

**PSYC 807E-3 Advanced Topics in Intervention: Cognitive-Behavior Therapy**

Conceptual and theoretical issues in Cognitive Behavior therapy. Prerequisite: PSYC 820, 821, 822, 823, 824 or permission of the instructor.

**PSYC 808-3 Advanced Topics in Evaluation**

Prerequisite: PSYC 820, 821, 822, 823, 824, or permission of the instructor.

**PSYC 809-3 Advanced Topics in Applied Psychology**

Prerequisite: PSYC 820, 821, 822, 823, 824, or permission of the instructor.

**PSYC 810-3 Seminar in Social Psychology and Law**

Prerequisite: PSYC 790.

**PSYC 815-3 Mental Health Law and Policy**

Prerequisite: PSYC 790.

**PSYC 819-3 Ethics and Professional Issues**

Prerequisite: graduate program standing. Graded on a satisfactory/unsatisfactory basis.

**PSYC 820-3 Seminar in Individual Assessment**

Prerequisite: admission to the clinical program or permission of the instructor.

**PSYC 821-2 Practicum in Individual Assessment**

Corequisite: enrolment in PSYC 820, graduate standing in the clinical program, or permission of the instructor. Graded on a satisfactory/unsatisfactory basis.

**PSYC 822-3 Seminar in Intervention**

Prerequisite: graduate standing in the clinical program, or permission of the instructor.

**PSYC 823-2 Practicum in Intervention**

Prerequisite: enrolment in PSYC 822, graduate standing in the clinical program, or permission of the instructor. Graded on a satisfactory/unsatisfactory basis.

**PSYC 824-3 Research Issues in Psychology**

Prerequisite: Admission to the Masters or Doctoral program.

**PSYC 825-2 Intervention (Ongoing)**

Prerequisite: admission to the clinical program. Required every term prior to internship except when granted 'on leave' status from PSYC 825, or when enrolled in PSYC 880 and also inactive at the Clinical Psychology Centre (CPC). Graded on a satisfactory/unsatisfactory basis.

**PSYC 830-3 Seminar in Child Evaluation and Treatment Formulation**

Prerequisite: PSYC 750, 820.

**PSYC 831-2 Practicum in Child Evaluation and Treatment Formulation**

Prerequisite: PSYC 750, 820. Corequisite: PSYC 830.

**PSYC 835-3 Special Topics in Civil Forensic Psychology**

Prerequisite: PSYC 790, 815.

**PSYC 836-3 Special Topics in Criminal Forensic Psychology**

Prerequisite: PSYC 790, 815.

**PSYC 860-5 Social****PSYC 870-5 Personality****PSYC 880-3 Practicum**

Full-time clinical work for four months in an approved setting. Prerequisite: PSYC 744, 770, 820, 821, 910, 911. Graded on a satisfactory/unsatisfactory basis.

**PSYC 881-3 Senior Practicum**

Prerequisite: admission to the doctoral clinical program. Graded on a satisfactory/unsatisfactory basis.

**PSYC 882-3 Neuropsychology Practicum**

Prerequisite: admission to the clinical program with a specialization in neuropsychology. Graded on a satisfactory/unsatisfactory basis.

**PSYC 883-3 Practicum III****PSYC 884-3 Practicum IV****PSYC 886-9 Internship**

Full-time clinical work for 12 months in an approved setting. Prerequisite: equivalent of the MA clinical program, three PhD level courses, successful completion of the PhD comprehensive examinations, and successful defence of the PhD research proposal. Graded on a satisfactory/unsatisfactory basis. Enrolment in PSYC 886 must be continued for a total of three consecutive terms.

**PSYC 890-3 Practicum in Clinical Forensic Psychology**

Prerequisite: PSYC 790, 835 or 836.

**PSYC 892-3 Research/Policy Practicum in Law and Psychology**

Prerequisite: PSYC 790.

**PSYC 897-3 Research****Project/Law&Psyc/Forensic Psyc**

Prerequisite: PSYC 790.

**PSYC 898-6 MA Thesis****PSYC 899-6 PhD Thesis****PSYC 905-3 Seminar in History****PSYC 907A-3 Advanced Topics in Biological Psychology: Mental Health Disorders****PSYC 907B-3 Neurocognitive Disorders****PSYC 907C-3 Advanced Topics in Biological Psychology: Neuropsychology of Recovery****PSYC 907D-3 Advanced Topics in Biological Psychology: Cognitive Aging and Dementia****PSYC 907E-3 Advanced Topics in Biological Psychology: Psychopharmacology****PSYC 907F-3 Advanced Topics in Biological Psychology: Cognitive Neuroscience****PSYC 910-3 Research Design I: Experiments**

Reviews the basic logic of controlled experimentation, and focuses on analysis of variance designs commonly used in psychological research. Particular emphasis is given to the relative merits of the several designs when there are multiple research questions to be answered.

**PSYC 911-3 Research Design II: Research Studies**

Focuses on multivariate regression and correlation models. Deals with ways of answering questions when direct experimental manipulation is not feasible, and emphasizes new applications.

**PSYC 912-914-1.5 Research Seminar****PSYC 915-3 Seminar in Measurement****PSYC 916-918-1.5 Research Seminar**

Research seminars are designed specifically to enable graduate students in Psychology to plan, execute, and analyse research including that leading to MA and PhD degrees. The seminars will provide directions for future research, critical discussion of pending designs, aid in resolving problems in ongoing studies, and alternative interpretations of results of completed projects. The research seminar courses are graded on a satisfactory/unsatisfactory basis.

**PSYC 920-3 Seminar in Learning****PSYC 925-3 Seminar in Cognitive Processes****PSYC 930-3 Seminar in Perception****PSYC 935-3 Seminar in Sensation****PSYC 940-3 Seminar in Motivation-Emotion****PSYC 944-3 Seminar in Psychopathology****PSYC 950-3 Seminar in Developmental Psychology****PSYC 960-3 Seminar in Social Psychology****PSYC 965-3 Seminar in Psycholinguistics****PSYC 970-3 Seminar in Personality****PSYC 980-3 Biological Psychology****PSYC 985-3 Seminar in Animal Behavior****PSYC 990-3 Seminar in Law and Psychology**

Prerequisite: PSYC 790.

**PSYC 997-3 Directed Studies****PSYC 998-3 Directed Readings**

Prerequisite: admission to the masters or doctoral program.

**PSYC 999-6 PhD Comprehensive Examination**

All students in the experimental and clinical psychology PhD programs are required to successfully complete the comprehensive exam.

## Public Policy Program MPP

### Faculty of Arts and Social Sciences

**MPP 800-5 Introduction to Public Policy Issues**

An introduction to a range of contemporary public policy issues that is designed to illustrate the complexity of good analysis and also to introduce alternative techniques of analysis. The course format is seminar presentations on topics linked to case studies introduced in other core courses in the MPP program. Seminars are presented by faculty, analysts from the public policy community, and students.

**MPP 801-5 Economic Foundations of Policy Analysis I**

An examination of the basic operation of a market economy and introduction to key economic concepts and techniques.

**MPP 802-5 Economic Foundations of Policy Analysis II**

Application of economic concepts and techniques to a variety of public policy issues.

**MPP 803-5 Political Foundations of Policy Analysis I**

The first of a two term sequence that examines the basic structures and processes of government in Canada and their context in the evolving Canadian political economy. It also introduces students to key actors in the policy process and examines their structure and behavior. Examples of relevant actors include federal, provincial and local state structures and agencies, and a variety of societal actors such as pressure groups, social movements, think tanks and other associations.

**MPP 804-5 Political Foundations of Policy Analysis II**

Building upon MPP 803, this course provides a detailed examination of the policy process – the stages through which public policies are developed. The course outlines the nature of the policy cycle and examines the formal and informal institutions and rules that affect policy actors in their deliberations and decisions. Specific attention is paid to the nature of policy communities and policy networks in Canada and their impact upon policy content and policy change.

**MPP 805-5 Research Techniques and Quantitative Methods I**

Research techniques will include survey design, implementation and analysis, statistical inference, and qualitative methods of analysis.

**MPP 806-5 Research Techniques and Quantitative Methods II**

Application of statistical quantitative methods for policy analysis, including analysis of variance, and regression techniques.

**MPP 807-5 Introduction to Policy Analysis**

An introduction to techniques of public policy analysis, evaluation, and simulation techniques. Group projects on current public policy issues will constitute a major portion of this course. Prerequisite: MPP 800, or permission of the instructor.

**MPP 808-5 Advanced Policy Analysis I**

Advanced policy analysis techniques, public affairs, communication, and client interaction are covered and applied by students to individual projects on current public policy issues. This course will constitute the project component of the program.

**MPP 809-5 Advanced Policy Analysis II**

Advanced policy analysis techniques are covered and applied by students to individual projects on current public policy issues. This course will constitute the project component of the program. Students are required to present and defend their projects in this course.

**MPP 810-5 Issues in Public Policy I**

This course provides an opportunity to cover topics appropriate to the program but not covered extensively in the core courses.

**MPP 811-5 Issues in Public Policy II**

This course provides an opportunity to cover topics appropriate to the program but not covered extensively in the core courses.

**MPP 812-5 Selected Topics in Public Policy I**

This course provides an opportunity to cover topics appropriate to the program but not covered extensively in the core courses.

**MPP 813-5 Selected Topics in Public Policy II**

Specialized study in topics germane to the field of public policy.

**MPP 814-5 Selected Topics in Public Policy III**

This course provides an opportunity to cover topics appropriate to the program but not covered extensively in the core courses.

**MPP 815-5 Selected Topics in Public Policy IV**

This course provides an opportunity to cover topics appropriate to the program but not covered extensively in the core courses.

**MPP 816-5 Selected Topics in Public Policy V**

This course provides an opportunity to cover topics appropriate to the program but not covered extensively in the core courses.

**MPP 825-5 MPP Directed Readings I****MPP 826-5 MPP Directed Readings II****MPP 850-0 MPP Internship**

Students who do not have prior work experience in public policy are placed in a public or private organization connected to public policy. The work they undertake must be of sufficient depth and breadth to allow the student the opportunity to demonstrate his or her acquired knowledge and skills. Students will be required to produce a work report that will be an appraisal of the student's work experience.

## Publishing Program PUB

### Faculty of Communication, Art and Technology

**PUB 600-4 Topics in Publishing Management**

An analysis of management issues essential to the daily operation of publishing firms. Emphasis will be placed on the distinctive nature of publishing as a cultural/information industry, the applicability of theory and practice in marketing and accounting and the legal underpinnings of publishing. Prerequisite: admittance to the program.

**PUB 601-4 Editorial Theory and Practice**

The theoretical component of this course focuses on theories of composition and rhetoric. The practical component focuses on the various types of editing that take place in publishing. Students are examined on both the theory and their attained competence in editing. Prerequisite: admittance to the program.

**PUB 602-4 Design and Production Control in Publishing**

A consideration of the theory, principles, traditions and current trends in publication design as applied to print and electronic publishing. Students will undertake design exercises in addition to learning the relationship between design, costing and print production. Prerequisite: admittance to the program.

**PUB 605-5 Book Publishing Project**

Students are assigned to groups (simulated book publishing companies) and are given a company profile for which they develop a season's titles. They form a team based on industry roles: publisher, editor, subrights manager, production manager, art director, promotion and marketing manager. Each team produces the editorial profile, costing and marketing plans for the list, designs the covers and makes a final presentation to an industry panel.

**PUB 606-4 Magazine Publishing Project**

Students are assigned to groups and form a team based on common roles in the industry: publisher, comptroller, editor, production manager, art director, advertising director, marketing and distribution manager. In consultation with faculty and industry speakers the team develops a magazine concept, creates a business plan including cost projections, and identifies the readership demographics and potential. Design mock-ups are produced and a final presentation made to an industry panel.

**PUB 607-4 Publishing Technology Project**

Students work in a team environment to explore particular publishing technologies that have yet to achieve widespread industry use. The teams design and develop a working implementation and produce documentation and written specifications on that implementation for industry review.

**PUB 800-4 Publishing Industry Structure, Functioning and Policy**

An examination of the contemporary state and developing trends in the Canadian publishing industry. Emphasis is placed on book publishing, business dynamics, government policy, and international trade. Attention is also given to magazine and online publishing and comparisons with other countries are drawn. Prerequisite: admittance to the program.

**PUB 801-4 History of Publishing**

A consideration of publishing from the time of Gutenberg to the present day including discussion of the medium of print and its influence on human expression and thought. Emphasis will be placed on the role of publishing and publishing policies in society. Prerequisite: admittance to the program.

**PUB 802-4 Technology and the Evolving Form of Publishing**

An examination of the nature of technology and the social, cultural, legal, economic and political implications of evolving publishing business forms, publication formats, markets, policies and especially technology. Opportunities for Canadian publishing in domestic and global markets will be emphasized. Prerequisite: admittance to the program.

**PUB 897-6 Internship Project Report (Completion)****PUB 898-6 Internship Project Report Supervision and Evaluation**

Students complete their internship project report and work with their supervisory committee to bring it to a final acceptable form.

**PUB 899-6 Publishing Internship or Project**

Students are placed in an applied setting. The work they undertake must be of sufficient depth and breadth to allow the student the opportunity to demonstrate his or her acquired knowledge and skills. Students will be required to produce two reports; the first, a work report which will be an appraisal of the

student's work experience, and the second, a project report which will be an investigation and analysis of a particular problem or case. Prerequisite: admittance to the program.

## Resource and Environmental Management REM

### Faculty of Environment

**REM 100-3 Global Change**

This course provides students with an overview of global environmental change and its causes from a social science perspective, historically and at the present time. Population growth, an increasing ecological footprint and changes in ideology, social organization, economy and technology will be critically reviewed. New ways of thinking in natural and social science will be considered in relation to specific issues such as land, soil and food; energy, raw materials and solid waste; air pollution and transportation; water, oceans and fisheries; climate change; forestry and biodiversity; urbanization, and alternative futures. Breadth-Social Sciences.

**REM 311-3 Applied Ecology and Sustainable Environments**

Students will learn to apply the ecological concepts introduced in prerequisite courses to applied ecological problems at the population, community, and ecosystem levels of organization. Emphasis will be placed on processes which drive ecological dynamics, on recognizing those processes and dynamics in applied contexts, and on interpreting ecological data. Prerequisite: REM 100 or EVSC 200, BISC 204 or GEOG 215, STAT 101 or GEOG 251 or equivalent. Quantitative.

**REM 356-3 Institutional Arrangements for Sustainable Environmental Management**

This course provides an overview of some basic legislation, agencies, and policies which currently are in use to regulate the natural environment at the international, nation, provincial, regional, and local levels. Its purpose is to present a basic set of evaluative questions which can be used to address the effectiveness and efficiency of the environmental regulatory and management systems currently in use. Prerequisite: REM 100.

**REM 412-3 Environmental Modeling**

Students receive hands-on experience in the construction and analysis of computer simulation models of environmental and ecological systems and problems. Prerequisite: BISC 204, REM 100 or EVSC 200, MATH 151 or 154 or 157, MATH 152 or 155, STAT 101 or 103 or 301 or equivalent. Quantitative.

**REM 445-3 Environmental Risk Assessment**

Students receive theory and practical experience in the control and management of hazardous substances in the environment. This includes the application of techniques used to assess toxicological, ecological and human health risks of contaminants within the current regulatory framework. Prerequisite: MATH 151, 154, or 157; STAT 101, 103, or 301 or GEOG 251.

**REM 471-3 Forest Ecosystem Management**

Students will examine the problems of managing forest ecosystems for a variety of societal goals and objectives. The course will start with an examination of the ecological characteristics of forest ecosystems and their dynamics. The second section will focus on the objectives and tools of forest management in an ecological context. The final section of the course will focus on the institutions, economics and policies of forest management, with a focus on British Columbia's historical and current management issues. This course will involve lectures, group discussions, field trips, and exercises. Prerequisite: At

least one of REM 311, BISC 304, BISC 310, BISC 404, GEOG 315, or GEOG 316.

**REM 601-5 Social Science of Natural Resources Management**

An introduction to the relevance of social science perspectives, data and analytical tools in resource management, especially as these complement, supplement or critique perspectives from natural science or economics.

**REM 602-5 Natural Resource Management II: Advanced Seminar**

A professional group workshop course focusing on specific resource and environmental problems. Prerequisite: eight REM courses or permission of instructor.

**REM 609-5 Evaluation of Management Strategies for Living Resources**

This course examines living-resource management as a control system, including open loop (set point) control, closed loop (feedback) control, passive and active adaptive management. We explore the processes for the design of living-resource management systems, including interpreting policy as operational objectives, iterative development and stakeholder consultation, assessment methods, decision rules, evaluation using closed loop simulations, performance measures, trade-off between multiple objectives and methods for the presentation of results. The course includes a laboratory project to evaluate a management approach for a selected resource using computer simulations. Prerequisite: REM 611, 612 or 613 or permission of instructor.

**REM 610-5 Applied Environmental Toxicology and Environmental Management of Contaminants**

A study of the environmental behavior and toxic effects of chemical substances in the environment and the application of methodologies for their assessment and management.

**REM 611-5 Population and Community Ecology**

A review of population, community, and ecosystem ecology; implications of these areas for methods of resource management and environmental assessment.

**REM 612-5 Simulation Modelling in Natural Resource Management**

Methods of constructing simulations models and analyzing them through sensitivity analysis. Application of simulation modelling to research and management of environmental and resource systems. Topics will include management of wildlife, forests, insect pests, fisheries, pollution problems, energy resources, and recreational land use. Prerequisite: REM 611 or permission of the instructor.

**REM 613-5 Methods in Fisheries Assessment**

Introduction to fishing methods, fisheries ecosystems and the effects of fishing. Application of models of fish population dynamics, methods of data analysis and the quantification of uncertainty. Introduction to selected methods for providing scientific advice on the productivity and status of fish stocks. Focus will be primarily on biological aspects of fisheries assessment while illustrating how these interface with economic, social and institutional concerns of managers.

**REM 614-5 Advanced Methods in Fisheries Assessment**

Combines fish population dynamics with statistical estimation to provide quantitative assessments of the status of fish populations and fisheries. The course builds upon REM 613 by developing a broader range of biological and mathematical models of fish populations and management procedures, as well as approaches for testing the reliability of these

methods. Lab tutorial sessions develop quantitative models, estimation, and simulation approaches for performing and evaluating stock assessment methods that are currently applied in fisheries and wildlife management. Prerequisite: REM 613 or permission of instructor.

#### REM 621-5 Ecological Economics

Introduction to economic concepts for management of the environment and specific natural resources. Key issues are definitions of sustainability, the substitution capability between human-made and natural capital, and the appropriate application of economics to sustainable development analysis and policies.

#### REM 625-5 Risk Assessment and Decision Analysis for Management of Natural Resources

Use of quantitative methods of risk assessment and decision analysis to explicitly take uncertainty into account when making decisions in management of natural resources. Methods of quantifying uncertainty and the resulting risks. Examples from management of forests, wildlife, fisheries, water resources, energy, and toxic chemicals. Communicating information about uncertainties and the resulting risks to resource managers, the public, and scientists. Advantages and limitations of various quantitative methods. Includes computer laboratories. Prerequisite: permission of instructor.

#### REM 631-5 Earth Systems and Global Change in Environmental Management

Reviews how human and natural processes across earth systems and over a range of scales interact to affect the hydrological cycle, climate, and land surface processes that are relevant to resource management.

#### REM 632-5 Terrain Evaluation

The extensive classification of a landscape based on geology, geomorphology, soils, vegetation, historic and current land use, and the assessment of qualitative values as an aid to multiple land use management.

#### REM 633-5 Introduction to Remote Sensing and Aerial Photographic Interpretation

The application of these techniques in the acquisition and display of selected resource data. Topics include air photo interpretation, multi-band photography, thermal infrared imagery, satellite imagery, orthophotography, topographic and thematic mapping, and computer cartography.

#### REM 636-5 Applications of GIS in Resource and Environmental Management

For students to understand the “general principles, opportunities, and pitfalls of recording, collecting, storing, retrieving, analyzing, and presenting spatial information” as it pertains to resource and environmental management.

#### REM 641-5 Law and Resources

A study of legal interventions related to resource planning and environmental control. The course looks at several aspects of environmental and recourse law including administrative and constitutional law, fisheries and forestry regulation, and native rights.

#### REM 642-5 Regional Planning I

Theory and techniques of regional analysis; planning models and their application to key resource sectors.

#### REM 643-5 Environmental Conflict and Dispute Resolution

This course examines theoretical aspects of conflict and dispute resolution in natural resource management settings and is designed to assist students in understanding the nature of environmental conflict and the role of environmental dispute resolution (EDR) techniques.

#### REM 644-5 Public Policy Analysis and Administration

Analysis of methods of policy-making and problem solving with particular emphasis on natural resource issues. Topics include goal setting, problem definition, program scheduling, policy evaluation, policy implementation and public administration. A practical analysis of the structure and processes surrounding major contemporary policy issues.

#### REM 645-5 Resource Development Communities

Examination of the impact of resource developments on communities in Canada. An overview of the social organization of resources-based communities and an analysis of the participatory process in decision making in resource management.

#### REM 646-5 Environmental and Social Impact Assessment and Environmental Management Systems

Evaluation and application of current methodologies for social, economic, and biophysical impact assessment and the ISO 14001 standard for environmental management systems.

#### REM 647-5 Parks and Outdoor Recreation Planning

The course examines a combination of both ecological and market-based resource assessment and planning techniques for conservation and use of parks, forests, and protected areas. Visitor behavior and management in recreation and protected areas settings will be examined.

#### REM 648-5 The Tourism System

This course will examine the social, environmental and economic components of tourism. Topics will include theoretical concepts and elements of tourism, historical evolution, spatial patterns, and case studies of tourism development in various parts of the world. Discussion of tourism planning and management will focus on the development of tourism as a renewable resource.

#### REM 649-5 Tourism Planning and Policy

The course provides frameworks and methodologies for understanding the policy and planning initiatives of public and private sector organizations. Foundations for resource assessment, market analysis, product-market matching and regional tourism strategy development are explored in detail. Prerequisite: permission of instructor.

#### REM 650-5 Energy and Materials Management and Policy

Management strategies and policies to achieve sustainable flows of energy and materials in the economy. Eco-efficiency strategies reduce these flows while resource substitution strategies seek more environmentally benign flows. Applies expertise from economics, ecology, thermodynamics, engineering, geology and behavioral sciences.

#### REM 651-5 Project Evaluation and Non-market Valuation Methods

This course extends environmental and ecological economics concepts to the field of project appraisal and non-market valuation. Includes the methods and limitations of standard cost-benefit analysis (CBA), as well as new techniques in the valuation of non-market environmental resources and ways to incorporate considerations such as the depletion of natural resources in project work. The course concludes with treatment of a number of alternatives to CBA, including multi-attribute techniques and the precautionary principle. Prerequisite: ECON 200, REM 621, or permission of instructor.

#### REM 652-5 Community Tourism Planning and Development

The course critically examines approaches employed by communities incorporating tourism into their development strategies. Techniques for optimizing the

resource potential of communities from economic, social, cultural and environmental perspectives are explored with a view toward developing policies for ‘appropriate’ community tourism. Prerequisite: permission of instructor.

#### REM 655-5 Water Planning and Management

Evaluation of theoretical models and management experiences; federal, provincial and international institutional arrangements and jurisdictional responsibilities; emerging problems and opportunities. This is primarily a field course in which water and environmental management systems in British Columbia are compared with those in the states of Washington, Oregon, and California.

#### REM 656-5 Environment and Development

Introduces students to issues of environmental resource use in developing countries. Covers environmental issues in development, integrated conservation and development projects, community-based resource management, and global and ecological economics perspectives. Includes a one-week field trip to Baja, Mexico.

#### REM 658-5 Energy and Materials Systems Modeling

Theory, background, and practical experience in the use of a range of techniques for policy modelling of energy and materials flows in society with the aim of demonstrating how more environmentally and socially sustainable trajectories can be achieved. Techniques include: simulation modelling, optimization modelling, econometric and other forms of parameter estimation, input-output modelling, game playing models, and integrated systems models. Prerequisite: permission of instructor.

#### REM 660-5 Special Topics in Natural Resources Management

Special topics in areas not currently offered within the offerings of the resource and environmental management program

#### REM 661-5 Special Topics in Resources Management

Special Topics in areas not currently offered within the offerings of the resource and environmental management program.

#### REM 662-663-5 Special Topics in Resource Management

Special topics in areas not currently offered within the offerings of the resource and environmental management program.

#### REM 664-5 Directed Studies

Special topics in areas not currently offered within the offerings of the resource and environmental management program.

#### REM 667-668-3 Special Topics

Special Topics in areas not currently offered within the offerings of the resource and environmental management program.

#### REM 670-5 Introduction to Forestry

Examines the theory and practice of forest management based on an understanding of the linkages between forest ecosystem dynamics, economics, policy and social management. Principles are illustrated with reference to contemporary forestry issues. Prerequisite: REM 611 or permission of instructor.

#### REM 671-5 Forest Ecology

Structure, function and development of forest ecosystems. Population, community, ecosystem and landscape approaches are used to enable students to understand the biology and management of forests in terms of the processes driving spatial and temporal dynamics.

#### REM 672-5 Silviculture

Principles and practice of silviculture; lecture and laboratory, with added emphasis on the state of the

art in British Columbia. Prerequisite: REM 671, equivalent course, or permission of instructor.

#### **REM 690-0 Practicum I**

First term of work experience in the School of Resource and Environmental Management's Co-operative Education Program.

#### **REM 691-0 Practicum II**

Second term of work experience in the School of Resource and Environmental Management's Co-operative Education Program. Prerequisite: students must have completed at least one term's courses and permission of REM's co-op co-ordinator.

#### **REM 698-3 Field Resource Management Workshop**

An intensive field course introducing students to the diversity of issues and viewpoints concerning management of natural resources. Problem areas will include forestry, mining, fisheries and wildlife management, energy, recreation and land use planning.

#### **REM 699-10 Research Project**

A research project dealing with a specific interdisciplinary problem in resource management, administration or allocation. The study must result in the preparation of a formal paper and the presentation of a seminar.

#### **REM 801-5 Principles of Research Methods**

Students will develop skills and insight into the design, implementation and analysis of interdisciplinary research in natural resource and environmental management. This will help prepare students to carry out their own research projects. Students who entered REM during or prior to the Fall 1994 term and who have received credit for any one of MRM 601, 611 or 621 may not take REM 801 for credit.

#### **REM 802-5 Research Approaches for REM PhD Students**

This course is designed for all REM PhD students, although considerable course material may be of interest and value to other REM students. The course will emphasize preparing PhD students for their breadth comprehensive exams by discussing and evaluating various viewpoints in published debates related to the three topic areas of comprehensive exams: resource and environmental economics, policy and planning and environmental science. The course will also cover planning and carrying out the PhD research, as well as effectively communicating research results.

#### **REM 899-10 PhD Thesis**

### **Science SCI Faculty of Science**

#### **SCI 300-3 Science and its Impact on Society**

The impact of science in our society. This course introduces upper level university students to all facets of science and their resulting technologies. Governmental policies often involve far-reaching scientific/technological decisions and this course attempts to provide a scientific perspective to help achieve rational and effective policies. Prerequisite: 60 units. Not open to students in the Faculty of Science or the Schools of Computing Science, Engineering Science and Kinesiology. Breadth-Science.

### **Sociology and Anthropology SA Faculty of Arts and Social Sciences**

#### **SA 100W-4 Perspectives on Canadian Society (S or A)**

An examination of Canadian society from the perspective of the social sciences -- an introduction both to the nature of Canadian society and to the use of sociological and anthropological concepts applied to the analysis of modern societies in general. This course is meant to appeal to those who specifically wish to expand their knowledge of Canadian Society, and also to those who may be considering further work in sociology and anthropology. Topics to be considered include class structure, the nature of Canada's population, regional variation, gender relations, multiculturalism, native issues. Writing/Breadth-Social Sciences.

#### **SA 101-4 Introduction to Anthropology (A)**

An introduction to the study of human social and cultural life from an anthropological perspective. The course will explore the scope and nature of the discipline of anthropology through study of selected cases drawn from both technologically simple communities and complex modern industrial societies. Students with credit for SA 170 may not take SA 101 for further credit. Breadth-Social Sciences.

#### **SA 141-3 Sociology and Anthropology Practicum I**

This is the first term of work experience in the Co-operative Education Program in sociology and anthropology. It is meant to be exploratory in nature. Units from this course do not count towards the units required for an SFU degree. Prerequisite: 29 units with a minimum cumulative GPA of 2.75 including SA 101 or 150 and SA 255. Students should apply to the Faculty of Arts co-op co-ordinator by the end of the third week of the term preceding the employment term.

#### **SA 150-4 Introduction to Sociology (S)**

The study of basic concerns of sociology, such as social order, social change, social conflict and social inequality. Breadth-Social Sciences.

#### **SA 201W-4 Anthropology and Contemporary Life (A)**

An introduction to the anthropological perspective as applied to the organization of everyday life in contemporary settings. Introduces positivist, interpretive, and critical interpretive approaches to the analysis of social actions, identities, and values as enacted in space and time. Students with credit for SA 291 may not take SA 201W for further credit. Recommended: SA 101. Writing.

#### **SA 203-4 Violence in War and Peace (S or A)**

A critical examination of the relationship between violence and structural inequalities. Focus will be on different forms that violence assumes in war and peace and how acts of violence are remembered, collectively denied or misrecognized. Particular case studies may include colonization of indigenous people, Holocaust, South African Apartheid, India's Partition, the genocide in Rwanda, the Israeli-Palestinian conflict, 9/11 and its aftermath along with everyday suffering, including gender violence. As well, special attention will be given to anthropological witnessing. Prerequisite: SA 101 or 150 or 201.

#### **SA 210-4 Introduction to Power and Regulation of Self and Others (S)**

Surveys the field of social and moral regulation of human subjects in both historical and contemporary contexts. It canvasses the wide range of ideas, policies and methods that have characterized state and civil projects aimed at imposing social order

through systems of law, politics, education, health, welfare, labour, religion, family, media, and other key social institutions. Students will learn about the profound impact of civil and state regulation projects in their many forms on societies past and present, and about the rich diversity of institutional, cultural and human experience that these social ordering ideologies, policies and practices encompass. Prerequisite: SA 101 or 150 or 201.

#### **SA 218-4 Illness, Culture and Society (S or A)**

The study of socio-cultural factors related to health and illness. Focus will be on patterns of health seeking activity, systems of health care, causal and symbolic factors involved in physical and mental illness, and the medicalization of life in contemporary society. The disciplinary focus of the course will vary from semester to semester. Prerequisite: SA 101 or 150 or 201. Students with credit SA 460 when offered as Medical Anthropology may not take SA 218 for further credit.

#### **SA 231-4 Sociology of Families (S)**

An examination of families and households in social, cultural, political and economic context. This course focuses on the diversity of family forms in contemporary societies (particularly Canada) in relation to various social institutions and processes, including demographic trends, ideology, gender inequality, the economy, the state and social policies. Prerequisite: SA 101 or 150 or 201.

#### **SA 241-3 Sociology and Anthropology Practicum II**

This is the second term of work experience in the Co-operative Education Program in sociology and anthropology. Building on the experiences of the first employment term, this term will provide a work experience that integrates theory and practice of the social sciences. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of SA 141 and normally the completion of at least 45 units with a minimum cumulative GPA of 2.75. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the third week of the term preceding the employment term.

#### **SA 245-4 Cultures and Images (A)**

This course introduces students to the principles and practices of visual anthropology through exploring the creation, circulation, and consumption of images among and between members of diverse cultures in the contemporary world. Topics to be covered include the use of photographs, film and video as a tool in ethnographic research; the use and implications of new information technologies; the 'reading' of photographs, film and video from an anthropological perspective; the emergence and development of non-Western visual media. Prerequisite: SA 101 or 150 or 201.

#### **SA 250-4 Introduction to Sociological Theory (S)**

An account of sociological theory, outlining the main ideas and concepts of the principal schools of thought. Prerequisite: SA 150.

#### **SA 255-4 Introduction to Social Research (S or A)**

An introduction to the conduct of sociological and anthropological research. Topics covered include: the relationship between theory and research, concept formation, operationalization, exploratory studies, hypothesis generation and testing, data collection techniques within both sociology and anthropology, the assessment of causality, the critical evaluation of research on both theoretical and methodological grounds, the definition of research problems, and ethical issues in social research. Prerequisite: SA 101 or 150. Quantitative.

**SA 260-4 Individual and Society (S)**

An examination of how self and identity (e.g. race, class, gender, sexual orientation) are socially derived within contemporary western culture, and of the ways that individuals shape their social environment. Prerequisite: SA 101 or 150 or 201.

**SA 275-4 China in Transition (S or A)**

An introduction to culture, social structure and the processes of social, economic, and political transformation in contemporary China. Topics may include recent development of Marxism, feminism and neoliberalism in China; Western debates on China's rise and images of China as threat; human rights. Prerequisite: SA 101 or 150.

**SA 286-4 Aboriginal Peoples and British Columbia: Introduction (A)**

Investigates contemporary social organization, cultural expression, and political representation among Aboriginal peoples in the province of British Columbia within an ethnohistorical framework. Topics may include: land rights, law, gender relations, inter-cultural relations; policy studies in education, health, justice, social and economic development; indigenous knowledge; Aboriginal art, media and performance. Emphasis may differ from term to term. Students with credit for SA 140 may not take SA 286 for further credit. Recommended: SA 101.

**SA 300-4 Canadian Social Structure (S)**

An analysis of the social institutions and structure of Canadian society. The focus of the course will vary from semester to semester, but typically it will examine different theoretical approaches to the study of Canada and, from these, develop a framework for the analysis of Canadian social institutions and class structure. Prerequisite: SA 101 or 150 or 201.

**SA 301-4 Contemporary Ethnography (A)**

A consideration of key themes in contemporary anthropology. This course addresses theoretical and methodological questions by examining the work of contemporary anthropologists conducting research in diverse locations around the world. Prerequisite: SA 201. Students with credit for SA 370 may not take SA 301 for further credit.

**SA 302W-4 Global Problems and the Culture of Capitalism (S or A)**

An introduction to the political economy and culture of capitalism in relation to global problems. Case studies may focus on issues of population, famine, disease, poverty, environmental destruction, social inequality, and nation-state violence. Resistance, rebellion and social movements in response to these problems also will be addressed. Highly Recommended: SA 101 or SA 150. Students who took SA 294 in 03-1, 04-1 and 04-2 may not take SA 302 for further credit. Writing/Breadth-Social Sciences.

**SA 304-4 Social Control (S)**

This course examines how the organization of control (formal and informal) affects both individuals and society. It will investigate how control takes form, how it functions, the ideologies supporting it, and the resistance it produces. We will ask the following questions: who are the agents of social control; who or what do they control; and how do they control? Prerequisite: SA 101 or 150 or 201.

**SA 315-4 New Information Technology and Society (S or A)**

Explores the new social spaces and social practices fostered by new information technology. Special attention will be paid to who is making decisions about what technologies to adopt and how, what social changes are resulting, and who benefits and who loses. A significant portion of activity in this course will involve direct engagement with new information technology. Recommended: SA 150.

**SA 316-4 Tourism and Social Policy (S or A)**

An examination of tourism from the perspectives of sociology and anthropology, focusing primarily upon the social and cultural impacts of tourism and the social policy implications of tourism development in different societies. Prerequisite: SA 101 or 150 or 201.

**SA 318-4 The Anthropology of Medicine (A)**

Explores the role of biomedicine in society and culture through inquiry into the social and ideological organization of health and healing. Special attention will be paid to how biomedical categories structure experiences of the body, how means of life and death are shaped through medical interventions, and how social relations organize the delivery of biomedical technologies. Prerequisite: SA 101 or 150 or 201.

**SA 319-4 Culture, Ethnicity and Aging (A)**

An examination of the effects of culture and ethnicity on the aging process and the treatment of the aged. Although the orientation of the course is cross-cultural and comparative, particular emphasis will be placed on the social aspects of aging among various ethnic groups in contemporary Canada. Prerequisite: SA 101 or 150 or 201 or acceptance into the gerontology diploma program.

**SA 321-4 Social Movements (S)**

A study of the sources, development and effects of social movements in transitional and modernized societies. Specific types of movements will be analysed. Prerequisite: SA 101 or 150 or 201.

**SA 322-4 Sociology of Religion (S)**

An examination of the development and social impact of religious institutions in modern industrial societies. Consideration will be given to the classical theoretical approaches to the sociology of religion, and further topics which may be considered include: denominational religion in Britain and North America; the secularization thesis; the relationship between science and religion, and the organization, structure and social appeal of sectarian groups in contemporary society. Prerequisite: SA 101 or 150 or 201.

**SA 323-4 Symbol, Myth and Meaning (A)**

An examination of myth, symbolism, ritual and cosmological systems. Anthropological theories of magic, possession, witchcraft, healing and religious movements analyzed in ethnographic context. Prerequisite: SA 101 or 150 or 201.

**SA 325-4 Political Sociology (S)**

An examination of the relations of power and authority. This course will analyze the interrelations of family, church, class, interest groups, etc., particularly as they influence and are influenced by the state. The relations of law and ideology to the structures of government will form the context for this analysis. The course may also focus on broad theoretical questions of contemporary political interest. Prerequisite: SA 101 or 150 or 201.

**SA 326-4 Ecology and Social Thought (S or A)**

An examination of recent social thought that is concerned with environmental and ecological themes. It will address a selection from the following themes: technology evaluation; technology and science as ideology; ecology and social inequality; the concepts of ecosystem, environment and wilderness; the self-world relationship; politics of environmental uses; environment and the economy. The disciplinary designation will change to reflect specific topics and whether sociology or anthropology designation: refer to each term's course outline or department advisor. Prerequisite: SA 101 or 150 or 201.

**SA 327-4 Sociology of Knowledge (S)**

An examination of sociological theories concerning the interaction of social structures, and meaning and belief systems. Prerequisite: SA 101 or 150 or 201.

**SA 331-4 Politics of the Family (S)**

A sociological examination of the contested nature of contemporary domestic and intimate relations. The course will focus on debates arising from equality movement politics (e.g. gender, sexuality, race). Prerequisite: SA 101 or 150 or 201.

**SA 332-4 The Anthropology of Childhood (A)**

A cross-cultural examination of the social and cultural relations that shape childhood in different settings. Topics to be considered could include: the social definition of childhood and child rearing; the institutional arrangements established for children and youth and the impact that these have on children, families, and society; the social construction of child and youth cultures. Prerequisite: SA 101 or 201.

**SA 333-4 Schooling and Society (S)**

A sociological analysis of the nature of the education system and its relationship to major social institutions in Western industrial societies, in particular Canada. Aspects studied may include: the classroom, teachers, student culture, bureaucratization, inequality (e.g. gender), employment, and social policy. Prerequisite: SA 101 or 150 or 201.

**SA 335-4 Gender Relations and Social Issues (S)**

A sociological study of the position of women and men in major social institutions in western industrial societies, in particular Canada. Social institutions that may be examined include: the family, education, the economy, the polity, law, and the mass media. Particular attention will be paid to social policy issues. Prerequisite: SA 101 or 150 or 201. Students with credit for SA 292 (when offered as gender relations) or WS 308 may not take SA 335 for further credit.

**SA 337-4 Sexuality and Society (S)**

The categories that organize our understandings of sex, gender and sexuality have powerful histories and roles in organizing social relations in western society. Social activists and academics contest the naturalness of these categories, particularly that of the binary opposition between male and female, and related assumptions about sexuality and sexual orientation. This course encompasses a range of perspectives on sex/gender identity, sexuality, and the relationship between the two. These perspectives include feminist, lesbian and gay, and queer and transgender challenges to traditional understandings of sex/gender identity and sexuality. Prerequisite: SA 101 or 150 or 201.

**SA 340-4 Social Issues and Social Policy Analysis (S or A)**

An examination of how sociological and anthropological theories and methods can be applied to the examination of social problems and issues which become the object of social policy. A central concern of the course is the question of how social issues are defined as problematic. Particular attention will be given to gender, ethnicity, class and generation. Substantive examples of social policy issues will be selected from a number of fields. Prerequisite: SA 101 or 150 or 201.

**SA 341-3 Sociology and Anthropology Practicum III**

This is the third term of work experience in the Co-operative Education Program in sociology and anthropology. The work experience will be focused in a specialized area of the student's choice. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of SA 241 and normally the completion of at least 61 units with a minimum cumulative GPA of 2.75. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the third week of the term preceding the employment term.

**SA 345-4 Race, Immigration and the Canadian State (S or A)**

An introduction to critical perspectives on the social construction of race, nation building and transnational migration, with an emphasis on state policies and the experiences of immigrants. The course will cover a review of colonialism and the construction of racialized labor market. Core topics may include: racialization of space, anti-racist feminist thought, immigration policy, settlement services, multiculturalism, citizenship, racial profiling, diasporas, and refugees. Comparative material will be used to complement the Canadian focus. The disciplinary designation will change to reflect specific topics and whether sociology or anthropology designation: refer to each term's course outline or department advisor. Prerequisite: SA 101 or 150 or 201.

**SA 350-4 Classical Sociological Thought (S)**

An examination of aspects of the work of one or more of the nineteenth or early twentieth century sociological theorists. Prerequisite: SA 250.

**SA 351-4 Classical Marxist Thought (S)**

A detailed study of classical Marxist social thought. Prerequisite: SA 250.

**SA 352-4 Games, Sports and Cultures (A)**

An anthropological examination of games and sports in cross-cultural perspective. Particular attention will be given to the social construction of games and athletic activities as well as the cultural, political and aesthetic meanings attached to these. Topics that may be examined include: the embodiment of culture in sporting activities; the impact of inter-cultural contact and globalization on games and sport; the shaping of gender, class and ethnic identities through sport involvement; appropriate methodologies for producing sport ethnographies. Prerequisite: SA 101 or 201.

**SA 353-4 Sociology of Sport (S)**

A sociological examination of sport focuses on the role of this important set of institutions and activities in shaping social relations and understandings about difference and identity. Sport has a long history of naturalizing racial and gender differences in such a way as to reinforce and reflect social inequality more broadly. Racial segregation in sport (at least in formal legal terms) is no longer considered acceptable in western societies or in the Olympic movement at the global level. But the power of sport in reinforcing and naturalizing racial inequality continues while the naturalness and inevitability of sex segregation in sport remains largely unchallenged. This course will explore the relationships between sport and social inequality, sport and nationalism, and sport and the economy. Prerequisite: minimum of 30 units including SA 150. Students who took SA 216 or SA 315 (when offered as Society of Leisure) may not take SA 353 for further credit.

**SA 355-4 Quantitative Methods (S or A)**

An examination of measurement issues within sociological and anthropological research, focusing on the logical and conceptual construction and interpretation of tables, and an examination of the uses and abuses of statistics. Through an introduction to 'hands on' use of the computer, this course emphasizes the applications, rather than the mathematics, of statistics. Prerequisite: STAT 203 or equivalent and SA 255. Students with credit for SA 355 may not take POL 315 for further credit. Quantitative.

**SA 356W-4 Ethnography and Qualitative Methods (S or A)**

An examination of qualitative field methods, including participant observation, interviewing, archival research, cross-cultural research, life histories, network analysis, mapping, and ethical problems of fieldwork. Prerequisite: SA 255. Writing.

**SA 357W-4 Survey Methods (S or A)**

Students will formulate a research problem suited to a quasi-experimental (survey) design, and perform all the research steps needed for its completion. Prerequisite: SA 255. Recommend: SA 355. Writing/Quantitative.

**SA 358-4 The Philosophy of the Social Sciences (S or A)**

An analysis of the nature of explanation in the social sciences: 'mind' and action, positivist and interpretive modes of explanation, sociological and historical explanation, objectivity, forms of relativism, the concept of rationality. Prerequisite: SA 101 or 150 or 201.

**SA 360-4 Special Topics in Sociology and Anthropology (S or A)**

A seminar exploring a topic not regularly offered by the department. The disciplinary designation will change to reflect specific topics and whether sociology or anthropology designation: refer to each term's course outline or department advisor. Prerequisite: SA 101 or 150 or 201.

**SA 362-4 Society and the Changing Global Division of Labor (S)**

An examination of the social and political implications of the global economy. Topics to be considered include the influence of neo-liberal economics, the decline of the national welfare state, transnational political agencies and public policy, the internationalization of culture, the global labor market, the 'world city' hypothesis, ethnic resurgence and alternatives to these developments. Prerequisite: SA 101 or 150 or 201.

**SA 363-4 Process of Development and Underdevelopment (S or A)**

An examination of sociological and anthropological theories of development and underdevelopment as applied to the Third World. The nature and consequences of world system linkages; colonialism and decolonization; patterns of social change in selected societies and regions. The disciplinary designation will change to reflect specific topics and whether sociology or anthropology designation: refer to each term's course outline or department advisor. Prerequisite: SA 101 or 150 or 201.

**SA 364-4 Urban Communities and Cultures (S or A)**

Anthropological approaches to urbanization, the nature of the city as a social system, and urban cultures and lifestyles. Prerequisite: SA 101 or 150 or 201. Students with credit for SA 464 may not take SA 364 for further credit.

**SA 365-4 Selected Regional Areas (A)**

An examination of selected aspects of the social structure, culture and the processes of social change in varying regional areas. The focus will vary from semester to semester. Prerequisite: SA 101 or 150 or 201.

**SA 368-4 Language, Ideology, and Power (A)**

Examines how language shapes and is shaped by culture, power, and social relations and introduces the major concepts, approaches, and theories used by anthropologists in the investigation of relations between language and cultural forms. Prerequisite: SA 101, 201, or 150.

**SA 371-4 The Environment and Society (S or A)**

An examination of environmental issues in their social context. Environmental issues are on the leading edge of contemporary public concern and public policy debates. This course will examine such issues as the relationship between social organization and mode of subsistence, the politics of hunger, and the way in which human societies in their particular social, historical, and cultural contexts view and interact with the natural world. The disciplinary

designation will change from term to term to reflect specific topics and whether sociology or anthropology designation: refer to each term's course outline or department advisor. Prerequisite: SA 101 or 150 or 201.

**SA 386-4 The Ethnography of Politics (S or A)**

An examination of the ways in which ethnographers seek to understand a world experiencing profound changes in the relationships between governments and the societies they govern. Topics to be considered may include: relations between indigenous peoples and governments; the social and cultural dynamics of public policy making; the articulation of human rights issues. The focus of the course will vary from semester to semester. Prerequisite: SA 101 or 150 or 201.

**SA 388-4 Comparative Studies of Minority Indigenous Peoples (S or A)**

The social and cultural patterns of aboriginal populations within various modern nation-states. Their relations with majority societies and with other indigenous groups across the world. The disciplinary designation will change from term to term to reflect specific topics and whether sociology or anthropology designation: refer to each term's course outline or department advisor. Prerequisite: SA 101 or 150 or 201.

**SA 392-4 Latin America (S or A)**

An introduction to the peoples and institutions of Latin America in historical and contemporary perspective, emphasizing macro-level patterns of similarity and diversity. Prerequisite: SA 101 or 150 or 201. Students with credit for SA 391 may not take this course for further credit. This course is identical to LAS 392 and students cannot take both courses for credit.

**SA 396-4 Selected Regional Areas (S or A)**

An examination of selected aspects of social structure, culture and processes of social change in a specific regional area. The focus will vary from term to term. The disciplinary designation will change from term to term to reflect specific topics and whether sociology or anthropology designation: refer to each term's course outline or department advisor. Prerequisite: SA 101 or 150 or 201.

**SA 401-4 The Politics of Culture in Contemporary Societies (A)**

Anthropological explorations of the relationship between political, cultural, and social processes in contemporary societies. Topics may include: social organization and symbolic systems; the use of political rhetoric and symbolism; the mobilization of social, cultural and political constituencies; the articulation of political processes between local, national, and international levels. Prerequisite: minimum of 72 units including SA 101 or 150 or 201. Recommended: SA 356.

**SA 402-4 The Practice of Anthropology (A)**

An examination of the ways in which anthropology and ethnography may be used to affect action in the world. Topics may include: advocacy anthropology; the development and practice of applied anthropology; the emergence of anthropology and ethnography and the arts. Prerequisite: minimum of 72 units including SA 101 or 150 or 201. Recommended: at least two upper division courses in anthropology.

**SA 403-4 Selected Topics in Latin American Economy and Society (LAS)**

This seminar will be taught co-operatively by LAS associated faculty or by a visiting professor. A topic will be chosen which can be examined profitably from a multidisciplinary perspective. Prerequisite: minimum of 72 units including LAS 200, or consent of instructor. Students who have taken LAS 403 cannot take this course for further credit.

**SA 410-4 Advanced Topics in Power and the Regulation of Self and Others (S)**

Offers specialized instruction on advanced topics pertaining to the social and moral regulation of human subjects in both historical and contemporary contexts. It explores the ideologies, policies and practices of regulation and governance in application to selected social contexts and subjects including, but not confined to, welfare, justice, medicine, the 'psy' sciences, immigration, labour, sexuality, pornography, racialization, gender and family. Students will acquire specialized knowledge about the profound impact of civil and state regulation projects on societies past and present, and about the rich diversity of institutional, cultural and human experience that these social ordering ideologies, policies and practices encompass. Prerequisite: minimum of 72 units including, either SA 101 or 150, and SA 210.

**SA 416-4 Sociology of Art Forms (S)**

This course may focus variously on one or all of the following: the social origins and functions of art, sociological theories of aesthetics, and contemporary issues in art, such as the fate of art in modern society, popular culture, mass media, ideology in art. Prerequisite: minimum of 72 units including SA 101 or 150 or 201.

**SA 417-4 Contemporary Issues in Medical Sociology (S)**

An examination of sociological approaches to the study of health and health care, emphasizing the connections between social theory and empirical data. Topics may include: the social determinants of health, health inequities, the structure and reform of health care systems, and the application of human rights frameworks to the study of health. Prerequisite: minimum of 72 units which must include SA 255, or must have graduate student status in the Faculty of Health Sciences. Students who have taken SA 360 Special Topics: Medical Sociology in 2006-3 may not take this course for further credit.

**SA 418-4 International Health: Global Policies and Local Realities (S or A)**

An investigation of the social, cultural, and political issues that contribute to problems of ill-health in resource-poor countries and the major efforts in international public health to address these problems. It explores the application of knowledge about social, and especially gender relations in international health, with particular attention to local perspectives and grassroots initiatives. Institutional frameworks intended to promote health development are examined in historical and contemporary perspective through case studies on topics such as: malaria, population control, maternal health, HIV/AIDS, and tuberculosis. Prerequisite: minimum of 72 units, including SA 101 or 150 or 201, or must have graduate student status in the Faculty of Health Sciences. Highly recommended: SA 218, 302 and 318. Breadth-Social Sciences.

**SA 420-4 Sociology of Aging (S or A)**

The structural and behavioral implications of aging. Topics included will be: demographic aspects of aging; the relationship of aging to political, economic, familial and other social institutions; the psychological significance of aging. Prerequisite: minimum of 72 units including SA 101 or 150 or SA 201, or acceptance into the diploma program in gerontology, or by consent of instructor. This course is identical to GERO 420 and students cannot take both courses for credit. Students may use GERO 420 to fulfil their major or minor requirements in lieu of SA 420.

**SA 421-4 Commodities and Substances: Bodies, Consumption and Ingestion (A)**

Addresses current theoretical and methodological approaches to the anthropological study of consumption and ingestion of diverse substances. Topics include historical perspectives on production,

distribution and consumption; power and meaning; inequality and governance of legal and illegal drugs, drug foods, medicines and diverse populations of consumers and ingesters. Prerequisite: minimum of 72 units including SA 101 or 150 or 201, or graduate student status in Faculty of Arts and Social Sciences or Faculty of Health Sciences. Students who have taken SA 460 in 04-1 and 05-1 may not take this course for further credit.

**SA 429-4 Sex, Work, and International Capital (S or A)**

Through a program of focused readings, films, and case studies, this course examines the experiences of women in the Third World in relation to the global economy and reorganization of states and cultures. The course challenges conventional ways of thinking about everyday life in households and workplaces, and emphasizes that issues which may seem specifically third World-based are shared by many around the world. An awareness of this commonality helps us assess the balance of structural constraints and opportunities, and stimulates a discussion on the organization of alternative ways of living. Prerequisite: minimum of 72 units including SA 101 or 150 or 201. Students who took SA 463 in 2003-1, SA 460 in 2003-3, and SA 360 in 2004-3 may not take this course for further credit.

**SA 430-4 States, Cultures and Global Transitions (S or A)**

Through a program of focused readings, case studies, and films, this course offers a new perspective on the study of globalization. It balances classical themes with contemporary approaches to global processes of economic, political, and cultural transformation. The course tackles such topics as the material aspects of cooperation and coercion, class relations in structures of capital accumulation and global governance, and cultural dynamics. Alternatives to Euro-American centrism are explored through the examples of citizenship, cultural politics, ethnic and religious conflicts, human rights, indigenous rights, and women's rights. Prerequisite: minimum of 72 units including SA 101 or 150 or 201. Highly recommended: SA 302. Students who took SA 463 in 2004-3 may not take this course for further credit.

**SA 441-3 Sociology and Anthropology Practicum IV**

This is the last term of work experience in the Co-operative Education Program in sociology and anthropology. The work experience will require a high level of expertise in both theoretical conceptions and practical endeavors. Units from this course do not count towards the units required for an SFU degree. Prerequisite: successful completion of SA 341 and normally the completion of at least 77 units with a minimum cumulative GPA of 2.75. Students should apply to the Faculty of Arts and Social Sciences co-op co-ordinator by the end of the third week of the term preceding the employment term.

**SA 447-4 Selected Issues in Social Policy Analysis (S or A)**

An advanced seminar devoted to an in-depth examination of an issue or topic in the field of social policy analysis which is not regularly offered by the department. Prerequisite: minimum of 72 units including SA 101 or 150 or 201. Recommended: SA 340.

**SA 450-4 Advanced Sociological Theory (S)**

A senior seminar on current perspectives in sociological theory. Emphasis will differ from semester to semester. Prerequisite: minimum of 72 units including SA 350, a GPA of at least 3.25 and consent of the instructor.

**SA 451-4 Issues in Anthropological Theory (A)**

A senior seminar on current perspectives in anthropological theory. Emphasis will differ from

semester to semester. Prerequisite: minimum of 72 units including SA 301, a GPA of at least 3.25 and consent of the instructor.

**SA 455-4 Special Topics in Applied Social Research (S or A)**

An advanced seminar devoted to special topics in applied social research. The disciplinary designation will change from term to term to reflect specific topics and whether sociology or anthropology designation: refer to each term's course outline or department advisor. Prerequisite: minimum of 72 units including SA 301 or 350.

**SA 460-4 Special Topics in Sociology and Anthropology I (S or A)**

An advanced seminar devoted to an in-depth examination of a topic not regularly offered by the department. The disciplinary designation will change from term to term to reflect specific topics and whether sociology or anthropology designation: refer to each term's course outline or department advisor. Prerequisite: minimum of 72 units including SA 101 or 150 or 201. Recommended: at least two upper division courses in sociology and/or anthropology.

**SA 463-4 Special Topics in Development Studies (S or A)**

An examination of processes of social change in selected Third World societies. Topics will change from semester to semester, but may include: liberation movements and colonialism, the comparative study of post-revolutionary societies; the persistence, transformation and disappearance of contemporary pleasantries; directed change programs. The disciplinary designation will change from term to term to reflect specific topics and whether sociology or anthropology designation: refer to each term's course outline or department advisor. Prerequisite: minimum of 72 units including SA 101 or 150 or 201. Recommended: SA 363.

**SA 472-4 Anthropology and the Past (A)**

Anthropologists frequently turn to historical documents (traveller's reports, missionary archives, etc.) in order to reconstruct the nature of past societies; likewise, every society has a sense of its own past and represents it in its own way. This course examines the relation between history and anthropology. Content may include: the use of historical material in anthropological research; construction of traditional knowledge as a cultural process; history and the politics of culture; the relation between individual and collective memory. Prerequisite: minimum of 72 units including SA 101 or 150 or 201.

**SA 486-4 Aboriginal Peoples and British Columbia: Advanced Seminar (A)**

An opportunity for senior undergraduates to participate in a seminar concentrating on particular subjects of interest in the fields of social and cultural research among Aboriginal peoples in British Columbia. The course will focus on special topics that will differ from semester to semester. This may include: historical ethnography; policy issues and debates; economic and social development; political and legal relations; gender and generational relations; health and healing; ethnographic film; arts, literature and popular culture; cultural performance; oral tradition; exhibition and representation; cultural property. Prerequisite: minimum of 72 units including SA 101 or 150 or 201. Recommended: SA 286.

**SA 496-4 Directed Readings in Anthropology (A)**

Directed readings in a selected field of study under the direction of a single faculty member. A paper will be required. Prerequisite: minimum of 72 units including SA 101 or 150 or 201. Students with credit for SA 497 may not take SA 496 for further credit.

**SA 497-4 Directed Readings in Sociology (S)**

Directed readings in a selected field of study under the direction of a single faculty member. A paper will be required. Prerequisite: minimum of 72 units including SA 101 or 150 or 201. Students with credit for SA 496 may not take SA 497 for further credit.

**SA 498-8 Field Study in Sociology and/or Anthropology (S or A)**

Advanced field project in a research setting. Admission dependent on availability of appropriate field placements and departmental supervisory capacity. Prerequisite: completion of all major course requirements with the exception of SA 301 for anthropology majors and SA 350 for sociology majors, which may be taken concurrently, and by application.

**SA 499-4 Independent Project Option (S or A)**

An honors essay to be written under the direction of a member of faculty, a copy of which is to be permanently lodged with the department. Applications should be submitted to the Undergraduate Curriculum Committee 4 weeks prior to the beginning of the term in which SA 499 is to be undertaken. Students should submit a paper proposal, a work plan, and confirmation of faculty supervisor.

**SA 840-1 Graduate Seminar I**

Orientation to university, professional development, and cohort building. Required course for the first year MA and PhD students in Sociology and Anthropology.

**SA 841-1 Graduate Seminar II**

Presentations by faculty members, senior graduate students, and guest speakers. Required course for first year MA and PhD students in Sociology and Anthropology.

**SA 849-5 Selected Topics in the History of Sociological Thought**

Examines the classical tradition of sociological thought, represented in the writings of a range of early leading theorists such as Karl Marx, Max Weber, Emile Durkheim, Georg Simmel and/or George Herbert Mead. Will also include a review of the writings and influence of thinkers such as Montesquieu, Rousseau, Descartes, Spinoza, Bacon, Hobbes, and/or Locke. Required course for MA and PhD students in Sociology. Students from other departments and faculties may enrol with permission of instructor. Offered each fall term.

**SA 850-5 Selected Topics in Contemporary Social Theory**

Examines at least two perspectives from the body of social theory that has developed since World War II. Perspectives to be discussed may include but are not limited to: symbolic interactionism, feminism, structuralism, post-structuralism, post-marxism, post-modernism, post-colonialism, queer theory and neo-functionalism. Required course for MA and PhD students in Sociology. Students from other departments and faculties may enrol with permission of instructor. Offered each spring term. Prerequisite: SA 849 or permission of instructor.

**SA 853-5 Readings in Sociology I****SA 854-5 Readings in Sociology II****SA 855-5 Advanced Quantitative Methods in Sociology**

Examines the use of quantitative methods and statistical analysis in social research. Students will develop the knowledge base and skills necessary to understand and critically evaluate contemporary sociological literature that utilizes advanced quantitative methods. Lab sessions offer students the opportunity to apply a variety of statistical techniques. Prerequisite: An upper division undergraduate course in quantitative methods which covers statistical analysis (including probability and significance, hypothesis testing, and univariate and bivariate techniques), or permission of the instructor.

**SA 856-5 Qualitative Methodology**

Examines contemporary approaches to qualitative methodology in Sociology and Anthropology including epistemological and ethical debates surrounding the practice of qualitative methodology in diverse contexts. Students will investigate qualitative research methods applicable to their graduate research projects. Required course for MA and PhD students in Sociology and Anthropology. Students from other departments and faculties may enrol with permission of instructor. Offered each spring term.

**SA 857-5 Research Design Seminar**

Guides students through the process of designing a prospectus for MA or PhD thesis research. Required course for MA and PhD students in Sociology and Anthropology. Students from other departments and faculties may enrol with permission of instructor. Offered each summer term. Prerequisite: SA 856 or permission of instructor.

**SA 870-5 Contemporary Theory in Anthropology**

Examines the dynamic relationship among conceptual aims, social relations in research, and the socio-political contexts of anthropological work through close study of selected works in anthropology since 1970. Required course for MA and PhD students in Anthropology. Students from other departments and faculties may enrol with permission of instructor. Offered each fall term.

**SA 871-5 Readings in Anthropology I****SA 872-5 Readings in Anthropology II****SA 874-5 Historical Perspectives on Anthropological Theory**

Examines anthropology in its historical context. An examination of the political, cultural, and intellectual factors that shaped disciplinary discourse of a particular period, and continue to affect present practice. Emphasis may be on particular theorists, and/or particular schools of thought, and/or persistent guiding themes. The goal is to think about anthropology anthropologically, thus complementing the more contemporary focus of SA 870. Prerequisite: SA 870, or equivalent, or permission of instructor.

**SA 875-5 Ethnographic Methodology: Social/Cultural Anthropology**

In depth study of ethnographic methodology as practiced, theorized and debated by social and cultural anthropologists. Course will include anthropological analyses of multi- and interdisciplinary approaches to, and adaptations of, ethnographic methodology and methods. Elective course for MA and PhD students in Sociology and Anthropology. Students from other departments and faculties may enrol with permission of instructor. Course will be offered in response to student demand, dependent on availability of departmental resources.

**SA 886-5 Selected Problems in Social Analysis  
SA 890-0 Practicum I**

Prerequisite: completion of core MA degree requirements SA 850 or 870, and SA 857 plus one (thesis option) or two (extended essay or research project option) of the following: SA 863, 854, 871, 872 and 886 (or equivalent) with a minimum GPA of 3.0. The recommendation of the student's supervisory committee and the approval of the departmental graduate program committee also is required.

**SA 891-0 Practicum II**

Prerequisite: SA 890.

**SA 892-0 Practicum III**

Prerequisite: SA 891 and departmental approval.

**SA 896-6 MA Research**

Operationalizes thesis prospectus completed in SA 857. Prerequisite: All required and elective courses for MA degree except SA 898.

**SA 897-6 PhD Qualifying Examinations**

Course objective is to provide a framework and process for students and supervisors to work within to facilitate students' satisfactory preparation for qualifying examinations; and to complete qualifying examinations required for admission to doctoral candidate standing. Prerequisite: All PhD course requirements, with the exception of SA 857 must be completed before student may enrol in SA 897.

**SA 898-6 MA Thesis****SA 899-6 PhD Thesis**

## Spanish SPAN Faculty of Arts and Social Sciences

### Department of Linguistics Language Training Institute

**SPAN 102-3 Introductory Spanish I**

First half of first year Spanish. Emphasis on developing conversation and comprehension skills as well as understanding how Spanish grammar works. Students will learn typical daily vocabulary and are introduced to cultural aspects of the language. By the end of the term, students will have acquired basic conversational skills and an elementary reading facility.

**SPAN 103-3 Introductory Spanish II**

Second half of first year Spanish. As in SPAN 102, the emphasis is on oral skills and grammar while continuing to develop reading and writing proficiency. By the end of the term, students will be able to communicate in Spanish using a wide range of grammatical structures and vocabulary. SPAN 103 should be taken in the term immediately following SPAN 102. Prerequisite: SPAN 102, grade 12 Spanish, or equivalent.

**SPAN 201-3 Intermediate Spanish I**

First half of second year Spanish. Students will transfer their knowledge of the structure of Spanish into performance and use the language in an accurate and idiomatic way. The emphasis is on further development of all four skills: listening, speaking, reading, and writing. By the end of SPAN 201, students will be able to function in a Spanish-speaking environment. Prerequisite: SPAN 103 or equivalent.

**SPAN 202-3 Intermediate Spanish II**

Continues the work of SPAN 201 with emphasis on oral command and writing skills. Reading of selected texts will be introduced to expose the students to Hispanic culture. Prerequisite: SPAN 201.

**SPAN 204-3 Spanish Vocabulary**

Builds students' receptive and productive vocabulary to prepare them for intensive work in upper level Spanish courses. Prerequisite: SPAN 201 or equivalent.

**SPAN 301-3 Advanced Spanish Grammar and Writing**

Detailed examination of contemporary Spanish grammar. Appropriate grammatical usage is reinforced by exercises and writing assignments. Both advanced learners and native speakers will benefit through intensive work on a wide range of grammatical phenomena. Prerequisite: SPAN 202.

**SPAN 302-3 Spanish Conversation Through Cinema**

Enhances students' conversational skills through activities centred on Spanish language films. A selection of films from different parts of the Hispanic world will expose students not only to dialectal and register differences, but also to cultural practices in a variety of settings. Prerequisite: SPAN 202 or equivalent.

**SPAN 303-3 Spanish Composition, Translation and Conversation**

First half of third year Spanish. Conversation and composition with emphasis on correct spelling, sentence and paragraph structure. Prerequisite: SPAN 202 or equivalent.

**SPAN 304-3 Advanced Spanish Composition, Translation and Conversation**

Second half of third year Spanish. Continues the work of SPAN 303 with emphasis on style. Reading and analysis of selected texts will serve as the basis for further practice in oral and written expression. Prerequisite: SPAN 303 or equivalent.

**SPAN 305-3 Spanish for Business**

Provides more advanced students and professionals with the specialized technical Spanish vocabulary needed to function in the business world. Cultural aspects will also be stressed. Prerequisite: SPAN 202.

**SPAN 306-3 Spanish-English Translation**

Introduction to the theory and practice of translation. Literary and academic translations. Analysis of different translating strategies. Cultural and political issues in translation. Prerequisite: SPAN 202 or equivalent.

## Special Arrangements SAR

### Dean of Graduate Studies

**SAR 891-892-3 Special Topics**

To be selected by the student and supervisory committee.

**SAR 893-4 Special Topics**

To be selected by the student and supervisory committee.

**SAR 894-5 Special Topics**

To be selected by the student and supervisory committee.

**SAR 895-3 Special Topics**

To be selected by the student and the supervisory committee.

**SAR 896-6 Special Topics**

To be selected by the student and the supervisory committee.

**SAR 897-5 Special Topics**

To be selected by the student and the supervisory committee.

**SAR 898-6 Master's Thesis****SAR 899-6 PhD Thesis**

## Statistics STAT

### Faculty of Science

**STAT 100-3 Chance and Data Analysis**

Chance phenomena and data analysis are studied through simulation and examination of real world contexts including sports, investment, lotteries and environmental issues. Intended to be particularly accessible to students who are not specializing in Statistics. Students with credit for STAT 101, 201, 203, 270 or BUEC 232 will not receive additional credit for this course. Quantitative/Breadth-Science.

**STAT 101-3 Introduction to Statistics**

The collection, description, analysis and summary of data, including the concepts of frequency distribution, parameter estimation and hypothesis testing. To receive credit for both STAT 100 and STAT 101, STAT 100 must be taken first. Intended to be particularly accessible to students who are not specializing in Statistics. Students with credit for ARCH 376, BUEC 232 (formerly 332) or STAT 270 (formerly MATH 272 and 371) may not subsequently receive credit for STAT 101-3. Students with credit for STAT 102, 201, 203 (formerly STAT 103), 301, MATH 101 or 102 may not take STAT 101 for further credit. Quantitative.

**STAT 201-3 Statistics for the Life Sciences**

Research methodology and associated statistical analysis techniques for students with training in the life sciences. Intended to be particularly accessible to students who are not specializing in Statistics. Prerequisite: 30 units. Students with credit for STAT 101, 102, 203 (formerly 103), 270 (formerly MATH 272) or 301 may not take STAT 201 for further credit. Quantitative.

**STAT 203-3 Introduction to Statistics for the Social Sciences**

Descriptive and inferential statistics aimed at students in the social sciences. Scales of measurement. Descriptive statistics. Measures of association. Hypothesis tests and confidence intervals. Students in Sociology and Anthropology are expected to take SA 255 before this course. Intended to be particularly accessible to students who are not specializing in Statistics. Students with credit for STAT 101, 102, 103, 201, 270, ARCH 376 or, BUEC 232 (formerly 332), may not subsequently receive credit for this course. Recommended: a research methods course such as SA 255, CRIM 120, POL 213 or equivalent is recommended prior to taking STAT 203. Quantitative.

**STAT 270-3 Introduction to Probability and Statistics**

Basic laws of probability, sample distributions. Introduction to statistical inference and applications. Corequisite: MATH 152 or 155 or 158. Students wishing an intuitive appreciation of a broad range of statistical strategies may wish to take STAT 100 first. Quantitative.

**STAT 285-3 Intermediate Probability and Statistics**

This course is a continuation of STAT 270. Review of probability models. Procedures for statistical inference from survey results and experimental data. Statistical model building. Elementary design of experiments and regression methods. Introduction to lifetime analysis. Introduction to time series. Introduction to stochastic processes. Prerequisite: STAT 270. Prerequisite or corequisite: MATH 232. This course may not be taken for credit by students who have credit for STAT 330 prior to the Fall 03-3 term. Quantitative.

**STAT 290-3 Selected Topics in Probability and Statistics**

Topics in areas of probability and statistics not covered in the regular undergraduate curriculum of the department. Prerequisite: dependent on the topic covered.

**STAT 300W-3 Statistics Communication**

Guided experiences in written and oral communication of statistical ideas and results with both scientific and lay audiences. Prerequisite: Admission to the major or honors programs in statistics or actuarial science at SFU. Corequisite: STAT 350. Writing.

**STAT 302-3 Analysis of Experimental and Observational Data**

The standard techniques of multiple regression analysis, analysis of variance, and analysis of covariance, and their role in experimental research. Prerequisite: any STAT course, or BUEC 232, or ARCH 376. Students cannot obtain credit for STAT 302 if they already have credit for STAT 350, or if they are simultaneously enrolled in STAT 302 and STAT 350. Statistics major and honors students may not use this course to satisfy the required number of elective units of upper division statistics. However, they may include the course to satisfy the total number of required units of upper division credit. Quantitative.

**STAT 330-3 Introduction to Mathematical Statistics**

Review of probability and distributions. Multivariate distributions. Distributions of functions of random variables. Limiting distributions. Inference. Sufficient statistics for the exponential family. Maximum likelihood. Bayes estimation, Fisher information, limited distributions of MLEs. Likelihood ratio tests. Prerequisite: STAT 285 and MATH 251. Quantitative.

**STAT 336-3 Job Practicum I**

This is the first term of work experience in a co-operative education program available to statistics students. Interested students should contact their departmental advisors as early in their career as possible for proper counselling. Units from this course do not count towards the units required for an SFU degree. Prerequisite: students must apply and receive permission from the co-op co-ordinator at least one but preferably two terms in advance. They will normally be required to have completed 45 units with a GPA of 2.5 before they may take this practicum course. The course will be graded on a pass/withdraw basis. A course fee is required.

**STAT 337-3 Job Practicum II**

This is the second term of work experience in a co-operative education program available to statistics students. Units from this course do not count towards the units required for an SFU degree. Prerequisite: STAT 336 or Job Practicum I from another department. Students must apply and receive permission from the co-op co-ordinator at least one term in advance. The course will be graded on a pass/withdraw basis. A course fee is required.

**STAT 350-3 Linear Models in Applied Statistics**

Theory and application of linear regression. Normal distribution theory. Hypothesis tests and confidence intervals. Model selection. Model diagnostics. Introduction to weighted least squares and generalized linear models. Prerequisite: STAT 285 and MATH 251. Quantitative.

**STAT 380-3 Introduction to Stochastic Processes**

Review of discrete and continuous probability models and relationships between them. Exploration of conditioning and conditional expectation. Markov chains. Random walks. Continuous time processes. Poisson process. Markov processes. Gaussian processes. Prerequisite: STAT 285 and MATH 251 or consent of instructor. Quantitative.

**STAT 390-3 Selected Topics in Probability and Statistics**

Topics in areas of probability and statistics not covered in the regular undergraduate curriculum of the department. Prerequisite: dependent on the topic covered.

**STAT 400-3 Data Analysis**

A problem-based course emphasizing the exploratory aspects of statistical analysis with emphasis on modern computer-oriented methods. Prerequisite: STAT 350. Quantitative.

**STAT 402-3 Generalized Linear and Nonlinear Modelling**

A skills oriented unified approach to a broad array of non-linear regression modelling methods including classical regression, logistic regression, probit analysis, dilution assay, frequency count analysis, ordinal-type responses, and survival data. Prerequisite: STAT 350. Quantitative.

**STAT 403-3 Intermediate Sampling and Experimental Design**

A practical introduction to useful sampling techniques and intermediate level experimental designs. Prerequisite: STAT 302 or 350. Students with credit for STAT 410 or 430 may not take STAT 403 for further credit. Statistics minor, major and honors students may not use this course to satisfy the

required number of elective units of upper division Statistics. However, they may include the course to satisfy the total number of required units of upper division credit. Intended to be particularly accessible to students who are not specializing in Statistics. Quantitative.

### **STAT 410-3 Statistical Analysis of Sample Surveys**

An introduction to the major sample survey designs and their mathematical justification. Associated statistical analyses. Prerequisite: STAT 350. Quantitative.

### **STAT 430-3 Statistical Design and Analysis of Experiments**

An extension of the designs discussed in STAT 350 to include more than one blocking variable, incomplete block designs, fractional factorial designs, and response surface methods. Prerequisite: STAT 350 (or MATH 372). Quantitative.

### **STAT 436-3 Job Practicum III**

This is the third term of work experience in a co-operative education program available to statistics students. Units from this course do not count towards the units required for an SFU degree. Prerequisite: STAT 337 or Job Practicum II from another department. Students must apply and receive permission from the co-op co-ordinator at least one term in advance. The course will be graded on a pass/withdraw basis. A course fee is required.

### **STAT 437-3 Job Practicum IV**

This is the fourth term of work experience in a co-operative education program available to statistics students. Units from this course do not count towards the units required for an SFU degree. Prerequisite: STAT 436 or Job Practicum III from another department. Students must apply and receive permission from the co-op co-ordinator at least one term in advance. The course will be graded on a pass/withdraw basis. A course fee is required.

### **STAT 438-3 Job Practicum V**

This is an optional fifth term of work experience in a co-operative education program available to statistics students. Units from this course do not count towards the units required for an SFU degree. Prerequisite: STAT 437 or Job Practicum IV from another department. Students must apply and receive permission from the co-op co-ordinator at least one term in advance. The course will be graded on a pass/withdraw basis. A course fee is required.

### **STAT 450-3 Statistical Theory**

Distribution theory, methods for constructing tests, estimators, and confidence intervals with special attention to likelihood methods. Properties of the procedures including large sample theory. Prerequisite: STAT 330. Quantitative.

### **STAT 460-3 Bayesian Statistics**

The Bayesian approach to statistics is an alternative and increasingly popular way of quantifying uncertainty in the presence of data. This course considers comparative statistical inference, prior distributions, Bayesian computation, and applications. Prerequisite: STAT 330 and 350. Quantitative.

### **STAT 490-3 Selected Topics in Probability and Statistics**

Topics in areas of probability and statistics not covered in the regular undergraduate curriculum of the department. Prerequisite: dependent on the topic covered.

### **STAT 495-3 Directed Studies in Probability and Statistics**

Independent reading or research on consultation with the supervising instructor. Prerequisite: written permission of the department undergraduate studies committee.

### **STAT 602-3 Generalized Linear and Nonlinear Modeling**

A methods oriented unified approach to a broad array of nonlinear regression modelling methods including classical regression, logistic regression, probit analysis, dilution assay, frequency count analysis, ordinal type responses, and survival data. A project will be assigned related to the student's field of study. Prerequisite: STAT 302 or 350 or permission of instructor. Open only to graduate students in departments other than Statistics and Actuarial Science.

### **STAT 650-5 Quantitative Analysis in Resource Management and Field Biology**

The use of statistical techniques and mathematical models in resource management with special emphasis on experimentation, survey techniques, and statistical model construction. Prerequisite: A course in parametric and non-parametric statistics. This course may not be used for the satisfaction of degree requirements in the Department of Statistics and Actuarial Science.

### **STAT 801-4 Statistics**

Advanced mathematical statistics. A survey of basic concepts in point estimation, interval estimation and hypothesis testing. Principles of inference.

### **STAT 802-4 Multivariate Analysis**

An advanced course in multivariate analysis. Factor analysis, discriminant analysis, principal components, canonical correlations. Multivariate regression and analysis of variance.

### **STAT 804-4 Time Series Analysis**

An introduction to time series models and their analysis. Both time-domain and frequency-domain techniques will be studied. Prerequisite: STAT 450 or equivalent or permission of the instructor.

### **STAT 805-4 Non-Parametric Statistics and Discrete Data Analysis**

Order statistics, rank statistics, procedures based on the empirical distribution function. Asymptotic efficiencies, goodness-of-fit, contingency tables, log-linear models and further topics will be offered. Prerequisite: STAT 330 or equivalent or permission of the instructor.

### **STAT 806-4 Lifetime Data Analysis**

Statistical methodology used in analysing failure time data. Likelihoods under various censoring patterns. Inference using parametric regression models including the exponential, Weibull, lognormal, generalized gamma distributions. Goodness-of-fit tests. The proportional hazards family, and inference under the proportional hazards model. Stratification and blocking in proportional hazards models. Time dependent covariates. Regression methods for grouped data. Prerequisite: STAT 450.

### **STAT 811-2 Statistical Consulting I**

This course is designed to give students some practical experience as a statistical consultant through classroom discussion of issues in consulting and participation in the department's Statistical Consulting Service under the direction of faculty members or the director.

### **STAT 812-2 Statistical Consulting II**

Students will participate in the department's Statistical Consulting Service under the direction of faculty members or the director.

### **STAT 870-4 Applied Probability Models**

Application of stochastic processes: queues, inventories, counters, etc. Reliability and life testing. Point processes. Simulation.

### **STAT 880-0 Practicum I**

First term of work experience in the Co-operative Education Program.

### **STAT 881-0 Practicum II**

Second term of work experience in the Co-operative Education Program.

### **STAT 882-0 Practicum III**

Third term of work experience in the Co-operative Education Program.

### **STAT 883-0 Practicum IV**

Fourth term of work experience in the Co-operative Education Program.

### **STAT 890-4 Statistics: Selected Topics**

#### **STAT 891-2 Seminar**

A course to be team taught by current and visiting faculty and with topics chosen to match the interests of the students.

#### **STAT 894-2 Reading**

#### **STAT 895-4 Reading**

#### **STAT 898-6 MSc Thesis/Project**

#### **STAT 899-6 PhD Thesis/Project**

## **Sustainable Community Development SCD Faculty of Environment**

### **SCD 201-3 Introduction to Sustainable Community Development**

First required course for the SCD Certificate. Builds an understanding of strengths and weaknesses of conventional approaches to development; rationale for alternative approaches; varying interpretations of community and of development; and essential components for creating local economic development strategies. Sustainable Community Development is introduced as a framework to meet current social and economic needs while ensuring adequate resources are available for future generations. Prerequisite: 30 units or SCD Certificate program approval or permission of the Director for SCD. Not permitted for credit toward the SCD Post Baccalaureate Diploma. Students who have taken CED or SCD 201 for credit may not take this course for further credit. Corequisite: students may not take this course concurrently with upper division SCD courses. Breadth-Social Sciences.

### **SCD 301-4 Sustainable Community Development Theory and Practice**

A theoretical foundation for understanding sustainable development at the community level; including an integrated approach to environmental, economic, and social aspects of development. Emphasizes economic and policy instruments, and planning tools, for engaging in and implementing SCD. Prerequisite: SCD certificate program approval and CED or SCD 201 or SCD diploma program approval or completion of 60 credit hours or permission of the Director for SCD. Students who have taken CED or SCD 301 for credit may not take this course for further credit. Breadth-Social Sciences.

### **SCD 401-4 Social Enterprise for Sustainable Community Development**

Third required course for the SCD Certificate. Introduction to the theory and practice of social enterprise within a SCD context, including the appropriate form of social enterprise for a particular purpose. Prerequisite: CED or SCD 301, or permission of the Director for SCD. Students who have taken CED or SCD 401 for credit may not take this courses for further credit.

### **SCD 403-4 Leadership in Sustainable Community Development**

Fourth required course for the SCD Certificate. Concerned with approaches SCD leaders require as agents of change, including: tackling complex community issues in addition to offering innovative tools for engaging others in meaningful collaboration processes. Prerequisite: CED or SCD 301, or

permission of the Director for SCD. Students who have taken CED or SCD 403 for credit may not take this course for further credit.

#### **SCD 404-4 Project in Sustainable Community Development**

Provides students an opportunity to apply ideas and models acquired in the program to a practical problem in sustainable community development. Required for SCD PBD students. Certificate students must apply for special permission to take this course. Enrollment is limited. Prerequisite: CED or SCD 301, 401, 403 and permission of the Director for SCD. Students who have taken CED or SCD 404 for credit may not take this course for further credit.

#### **SCD 410-4 Special Topics in Sustainable Community Development**

A specific topic within the field of sustainable community development, not covered by regularly scheduled, required courses in the program. Prerequisite: CED or SCD 301 or permission of the Director for SCD. Students who have taken CED or SCD 410 with the same topic for credit may not take this course for further credit.

#### **SCD 412-4 Directed Studies in Sustainable Community Development**

Designed to permit students to expand their knowledge base and apply their critical thinking in SCD. Open to all SCD PBD students. Certificate students must apply for special permission to take this course. Enrollment is limited. Prerequisite: CED or SCD 301, 401, and 403, and permission of the Director for SCD. Students who have taken CED or SCD 412 for credit may not take this course for further credit.

### **TechOne TECH Faculty of Communication, Art and Technology**

#### **TECH 101-3 Communication, Teamwork and Collaborative Process**

Teaches essential skills for negotiating first-year course work successfully. Covers the principles, practice and understanding of effective communication, research, critical thinking and teamwork needed within both face-to-face and virtual environments. Presents opportunities to practice and develop communication and interpersonal skills, and make that expertise transferable from the classroom to the workplace.

#### **TECH 101W-3 Communication, Teamwork and Collaborative Process**

Teaches essential skills for negotiating first-year course work successfully. Covers the principles, practice and understanding of effective communication, research, critical thinking and teamwork needed within both face-to-face and virtual environments. Presents opportunities to practice and develop communication and interpersonal skills, and make that expertise transferable from the classroom to the workplace. Writing.

#### **TECH 106-3 Spatial Thinking and Communicating**

Introduces the world of 3D thinking, representation and communication, with a focus on spatial thinking. Provides the foundational skills and knowledge needed to understand, create, and use computer-generated 3D representations. Covers the technical bases of representing 3D environments, as well as cognitive science theories of visual thinking.

#### **TECH 114-3 Technology in Everyday Contexts**

Introduces the role of technologies in an increasingly complex world. Explores the nature and evolution of technology. Provides firsthand experience with a variety of computer, communication and engineering technologies and assesses the impact and

consequences of technology on both the individual and societal levels. Themes examined in this course focus on the use of technologies in situated applications and everyday contexts, giving students experience in relating the achievements of technology to human needs. Breadth-Social Sciences

#### **TECH 124-3 Design Thinking**

Investigates the role that design and the designer play in the world around us, and explores how design facilitates our understanding of our environment and facilitates communication with others. Examines the importance of precedent in design and how examples, models, patterns or standards reflect learning and critical thinking. Throughout the course students will, individually and in teams, use design questioning processes as tools to develop their critical thinking skills and to explore the role that design plays in their lives and the daily functioning of their communities. Breadth-Social Sciences.

### **Urban Studies URB Faculty of Arts and Social Sciences**

#### **URB 610-4 Urban Design: Integrating Theory and Practice**

This course is an examination of urban design as a discipline that involves the environmental, aesthetic, social, economic, geographic, ecological, historical, political, and cultural aspects of the built environment. The importance of creative design, the interrelationship between the spatial organization of a city, its efficient delivery of services, the social, cultural and economic considerations of the public realm, as well as the process of change in our pluralistic society will all be considered.

#### **URB 620-4 Urban Communities and Cultures**

This course is an introduction to the anthropological and sociological study of complex urban societies in comparative perspective. It includes study of anthropological and sociological approaches to urbanization, the nature of the city as a social system, and urban communities and cultures.

#### **URB 630-4 Urban Development, Planning and Policy**

The focus of this course is the evolving relationship between state interventions into the city, and dynamics of urban development. The class emphasizes the historical context to urban planning and policy, with particular reference to the Canadian city.

#### **URB 635-4 Urban Inequality and the Just City**

Examines the forces that have created and perpetuated urban social inequality, along with its political, economic, and cultural impact on cities. Explores the social movements, planning efforts, and policy initiatives that have tackled urban poverty and social exclusion in the struggle to create just cities.

#### **URB 640-4 Urban Regions and Urban Change**

The aim of this course is to develop a perspective on the study of urbanization by applying systematic approaches to specific regional and case contexts. Major theoretical and conceptual themes will be reviewed. Some emphasis will be placed upon the Canadian experience in order to develop a common ground among members of the course and some emphasis will be also placed upon the United States and Western Europe because of the dominance of those collective urban experiences and literatures. However, members of the course will be expected to develop an interest in a particular region, assemble a personal bibliography and report to the class on their enquiries. The list of references given to the class may be perused for selected items to initiate this personal work. Emphasis will be placed upon individual and/or participatory research.

#### **URB 645-4 Urban Sustainable Development**

In this course, we begin to answer the question: what does the idea of sustainable development mean for cities? Using case studies from Vancouver and around the world, we will seek to understand how urban sustainable development innovations are developed, designed, and implemented. Special attention will be paid to the importance of sustainable development linkages between urban issues related to economic development, social justice, and environmental conservation and protection.

#### **URB 650-4 Urban Governance**

This course is intended to confront students with many of the current administrative, policy, inter-governmental and political challenges of local/urban/city-regional government in the 21st century. It will enable students to critically evaluate the varied nature and development of urban and metropolitan governance through an assessment of differing city-regional forms and responsibilities. The primary emphasis is on: social, economic and political sustainability; ethnic, gender and ecological re-definitions of the city; urban fiscal constraints and possibilities; urban governance and local democracy; intergovernmental challenges; urban responses to and re-definitions of re-globalization; case studies of agenda setting and other policy cycle stages. The primary seminar focus is on urban Canada but comparative cases will be drawn from the United States, the EU, Asia and other jurisdictions.

#### **URB 655-4 Global Cities**

Students will critically evaluate and apply various approaches and concepts in assessing the phenomenon of the global city. Assessment of current Canadian and comparative cases and settings provides a basis for this examination, as does the various stages of the policy cycle.

#### **URB 660-4 Transportation and Urban Development**

Explores the relationships between mobility, economic activity, and social interaction that influence urban development. Topics considered will include the spatial dynamics underlying travel behavior, the vehicle and infrastructure technology used in meeting mobility needs, the organizations that deliver transportation services and the public policies that govern an urban transportation system.

#### **URB 665-4 Urban Housing Policy**

Examination of the roles of housing in an urban society, the evolution of urban housing policy in Canada, the policies that shape the existing housing system, and proposals for modifying housing policies and programs. The role of affordable housing as an essential component of a sustainable community will be emphasized.

#### **URB 670-4 Urban Research Methods**

Offers a tip-to-all approach to researching urban public policy problems, from imagining projects, to gathering interpreting data and presenting findings to the public. The emphasis of this program is for students to be able to understand the work of others and design their own studies. In addition to this, students are trained in how to apply descriptive statistics such as means, measures of spread and cross-tabulation. Students wishing to deepen their quantitative skills, such as multivariate, qualitative or spatial analysis, will be encouraged to take advanced programs offered in affiliated departments.

#### **URB 675-4 Urban Economic Development**

Reviews several traditional and contemporary theories of urban economic development, exploring the historical context, content and policy implications of each.

#### **URB 680-4 Managing Cities**

Examines theories of public management in an urban context; how governments allocate resources,

distribute income and regulate public enterprise in both pure and applied contexts. Taking a 'champion vs. challenger' approach, the first segment of the course describes in detail the dominant theory in public management — new public management — and then contrasts this theory with others common to the discipline including traditional approaches, cultural theory, representative bureaucracy and new institutionalism. The theory is illustrated using examples from the municipalities within the Greater Vancouver Regional District and other Canadian and international cities.

#### **URB 685-4 Health Status and Health Policy in Urban Canada**

The focus of this course is the distribution of health status within urban centers in Canada, and related health policy developments. The course will emphasize the systematic nature of health status distribution, the historical pattern of health inequality, emerging analyses of the role of 'place' in shaping health patterns, housing and health, and attempts to reformulate social policy in urban contexts to address 'social determinants' of health inequality in Canada.

#### **URB 690-4 The City in Art, Culture and Politics**

The city has long been a subject of, and site for, cultural reflection. This course recognizes that cultural and political ideas are not context-free. The course focuses on modern and postmodern thought and their relation to the evolving city.

#### **URB 693-2 Directed Readings I**

Supervised readings in an aspect of urban studies. Enrolment in URB 693 requires the prior approval of the Urban Studies Graduate Program Committee.

#### **URB 694-4 Directed Readings II**

Supervised readings in an aspect of urban studies. Enrolment in URB 694 requires the prior approval of the Urban Studies Graduate Program Committee.

#### **URB 695-4 Selected Topics in Urban Studies**

This course provides an opportunity for students to study one or more urban studies topics that lie beyond the scope of the other courses. This course will normally provide a more research-intensive experience than other graduate urban studies courses.

#### **URB 696-4 Seminar in Urban Studies**

In-depth study of two or three areas of urban studies with particular attention to (1) the contributions of various disciplines and (2) the development of a proposal for research to explore a suitable area of particular interest to the student. Where feasible, students will be involved with external organizations in developing their research proposal.

#### **URB 697-4 Research Project**

A research project on some aspect of urban studies supervised by a faculty member with the participation of a supervisory committee. Prerequisites: URB 696.

#### **URB 699-2 Research Project Completion**

Completion of a research project on some aspect of urban studies supervised by a faculty member with the participation of a supervisory committee. This course is intended for students who do not complete URB 697 within one month of the end of the term in which they are enrolled in it. Prerequisite: URB 697.

## **Women's Studies WS Faculty of Arts and Social Sciences**

### **WS 101-3 Introduction to Women's Issues in Canada**

An interdisciplinary study of current issues related to women's experiences in Canada. The focus will be on women's interaction with social structures and public policy and how these differ for different women's circumstances. Students who have taken WS 100 at

SFU may not take WS 101 for further credit. Breadth-Social Sciences.

### **WS 102-3 Introduction to Western Feminisms**

An historical and comparative survey of feminisms in Western Europe and North America. Students who have taken WS 100 at SFU may not take WS 102 for further credit. Breadth-Humanities.

### **WS 200-3 Women in Cross-Cultural Perspective**

The focus will be on the situation of women in cross-cultural perspective using literary, historical, anthropological and other appropriate sources. Prerequisite: WS 101 or 102 (may be taken concurrently).

### **WS 201-3 Colonizing Women: Canadian Women in Historical Perspective, 1600-1870s**

Examines the lives of Canadian women in the colonial context, including the role of women in European-Aboriginal relations, the founding of New France, and settlement in British North America. Themes such as sexuality, race, work, religion and politics will be explored through the study of primary documents and historical literature. Students who have taken WS 201 under the title Women in Canada, 1600-1920 may not take this course for further credit.

### **WS 202-3 Modernizing Women: Canadian Women in Historical Perspective, 1870s-1970s**

Examines the historical development of women's experiences and identities in Modern Canadian history. Looks closely at the ways in which ethnicity, race, class and sexuality have shaped women's lives, and examines the continuity and changes in work, sexuality, politics and domesticity over the 19th and 20th centuries through the study of primary documents and historical literature. Students who have taken WS 202 under the title Women in Canada, 1920 to the Present may not take this course for further credit.

### **WS 205-3 Women and Popular Culture**

A study of women's place in society as revealed through the analysis of a variety of media. Prerequisite: WS 101 or 102 (may be taken concurrently).

### **WS 207-3 Introduction to Feminist Theory**

A study of concepts, controversies and processes of feminist social theory. Prerequisite: WS 101 or 102 (may be taken concurrently).

### **WS 208-3 Feminist Research Methods**

Explores a variety of feminist research methods including the definition of feminist research, the quantitative/qualitative controversy, action research, participant observation, survey, ethnography, case study, oral history, transnational study, interviews and research ethics. Prerequisite: WS 101 or 102 (may be taken concurrently). Students who have taken WS 208 under the title Researching Women's Issues or WS 400 Methodological Issues in Women's Studies may not take this course for further credit.

### **WS 301-303-4 Special Topics in Women's Studies**

A specific topic within the field of women's studies, not otherwise covered in depth in regularly scheduled courses, will be dealt with as occasion and demand warrant. Prerequisite: six units in women's studies including WS 101 and/or 102.

### **WS 304-4 Women and Religion**

This course examines critical issues of women's relationships to theology and religious practice in major religious traditions. Prerequisite: six units in women's studies including WS 101 and/or 102.

### **WS 305-4 Conceiving Creativity**

Through the lens of science fiction, this course focuses on scientific and religious accounts of creativity, and of responsibility for (and to) the outcomes of that creativity. In considering the range

of relations amongst science and religion, it draws upon theories from social justice studies, including such topics as representation, participation and motivation within professional and other community domains of creativity. Prerequisite: 30 units. Students who have taken WS 310 (Special Topics) under this title may not take WS 305 for further credit. Breadth-Humanities.

### **WS 306-4 Women's Autobiographies, Memoirs, Journals**

An examination of women's autobiographical writings, focusing on self images, self presentations and world views. Prerequisite: six units in women's studies including WS 101 and/or 102.

### **WS 307-4 Women in British Columbia**

Selected topics in the history of women's experience in British Columbia, with particular attention to women's work, political action, family life and education. Prerequisite: six units in women's studies including WS 101 and/or 102.

### **WS 308-4 Women in the Economy: Paid and Unpaid Labour**

Explores the nature and conditions of women's paid and unpaid labour in the economy as well as various theories which explain labour market discrimination, the impact of national public policies on women's labour and the transnational interconnections that affect women's paid and unpaid labour. Prerequisite: six units in women's studies including WS 101 and/or 102. Students who have taken SA 335 and/or WS 310 or WS 308 under the title Women and Work may not take this course for further credit.

### **WS 309-4 Gender and International Development**

Examines from interdisciplinary and international perspectives how development is gendered and creates differential impacts, meanings and processes for women and men around the world. Prerequisite: 30 units. Students who have taken WS 310 Special Topic: Women and Development or WS 301 Special Topic: Gender and Development or WS 309 under the title Gender and Development may not take this course for further credit.

### **WS 310-4 Special Topics in Women's Studies**

A specific topic within the field of women's studies, not otherwise covered in depth in regularly scheduled courses, will be dealt with as occasion and demand warrant. Prerequisite: 60 units.

### **WS 312-4 Immigrants, Women and Transnational Migration**

Examines the global division of labor where migrant women as well as immigrant women tend to be exploited in numerous forms, ranging from lack of citizenship rights and erosion of skills to the risk of sexual assault, due to immigration/migration and social policies of various countries. Prerequisite: 30 units. Students who have previously taken WS 320 Special Topic: Immigrant Women and Economic Security may not take this course for further credit.

### **WS 313-4 Women and the Environment**

Examines women's participation in environmentalism. Among the topics discussed will be the nature/nurture debate, the roots of environmentalism, ecofeminism and reproductive rights. Prerequisite: 30 units. Students who have taken this course as a women's studies special topics course may not enrol for WS 313. Breadth-Social Sci/Science

### **WS 314-4 Race, Class and Gender Relations**

An examination of feminist, Marxist and anti-racist theories pertaining to the historical development, social construction, and interactive nature of race, class and gender relations. Prerequisite: six units in Women's Studies, including WS 101 and/or 102. Students who have taken either WS 301 or 310 as Special Topics: Race, Class and Gender may not take this course for credit.

**WS 315-4 Gender, War and Health**

A critical examination of conceptualizations of, and interrelationships amongst, gender, war and health. The course will include such topics as total war, military-and medical-industrial complex, militarism and healthism, and professionalization in relation to societal constructions of gender roles in family, paid work and volunteer contexts. Prerequisite: One of WS 101 or 102, or GDST 200 (may be taken concurrently). Students who have taken WS 206 under these topics may not take WS 315 for further credit.

**WS 316-4 Disciplining Sex: Feminist Science Studies and Sociobiology**

Conceptualizations of sex have played a fundamental part in the development of evolutionary theories in biology and psychology. At the same time, feminist critiques of these conceptualizations have been a major factor in the development of Feminist Science Studies. The interactions amongst these three approaches are examined, including methodologies, communities of practice and societal implications. Prerequisite: 30 units. Breadth-Humanities/Social Sciences/Science.

**WS 317-4 Bread Riots to Riot Grrls: Gender, Resistance and Protest in Historical Perspective**

An examination of social protest from a historical perspective. Analyzes the relationships between race, class, gender, sexuality and religion within the formation of social movements. Focuses mainly on the North American context. Prerequisite: 60 units, including at least 3 units in either Women's Studies or History. Students who have previously taken WS 301 with the same title may not take this course for further credit.

**WS 320-4 Special Topics in Women's Studies**

A specific topic within the field of women's studies, not otherwise covered in depth in regularly scheduled courses, will be dealt with as occasion and demand warrant. Prerequisite: 30 units.

**WS 327-4 Aboriginal Women in Canada**

Themes and issues relating to the historical and contemporary experiences of aboriginal women in Canada: indigenous theories of gender; evolution and political function of stereotypes of indigenous women in Canada; history of Canadian legislation regulating indigenous identity; relevance of feminist analysis; and history of activism. Prerequisite: 45 units. Students who have taken FNST 322 under this topic may not take this course for further credit. FNST 327 and WS 327 are identical and students may not take both courses for credit.

**WS 334-3 Law and Human Reproduction**

Overview of theoretical perspectives and available research on debates linked with human reproduction. Reconsideration of the effects of legislation, social policy and social change on contraception, birth, abortion, adoption, eugenics policies, new reproductive technologies, sexualities, and other topics. Historical and contemporary examples will be used. Feminist perspectives will be featured along with other approaches to human reproduction. Prerequisite: this course is identical to CRIM 334 and students may not take both courses for credit. Students who have taken CRIM 416, 417, 418 under the title Law and Reproduction may not take this course for further credit.

**WS 398W-4 Feminist Currents**

Explores recent debates and future directions of feminist thought and introduces students to different models of feminist writing. The writing-intensive component of the course trains students to develop analytical, writing, and research skills through a variety of writing activities and assignments. Prerequisite: two of WS 101, 102, or GDST 200 (may be taken concurrently). Writing.

**WS 399-4 Numeracy, Gender and Cultures**

Through an examination of the social construction of numeracy, this course will provide an introduction to measurement and difference issues within social justice movements. In analyzing such topics as the relationship between professional, state and community conceptualizations of mathematical competence, students will make use of introductory statistical concepts, methods and argument. Prerequisite: 30 units. Quantitative.

**WS 401-5 Research Project**

Individual or small group studies of community problems. The students will submit a prospectus for the project at least two months before the study is undertaken. The project will be directed by one of the faculty members of the program. Prerequisite: nine units in women's studies including WS 101 and/or 102; permission of instructor; approval of course proposal by department.

**WS 402-2 Directed Readings**

Provides opportunities for individual tuition at an advanced level. Prerequisite: nine units in women's studies including WS 101 and/or 102; permission of instructor; approval of course proposal by department.

**WS 403-3 Directed Readings**

Provides opportunities for individual tuition at an advanced level. Prerequisite: nine units in women's studies including WS 101 and/or 102; permission of instructor; approval of course proposal by department.

**WS 405-4 Theoretical Issues in Women's Studies**

A study and critique of feminist theories as they apply to the study of women. Each offering of the course will focus on a particular subset of feminist theories and applications. Prerequisite: 60 units including two Women's Studies courses, one of which must be WS 101 or 102. Students who have taken WS 311 or 411 may not take this course for further credit when it is subtitled Feminist Psychoanalytic Theories.

**WS 412-5 Women and Film, Films and Theories**

An examination of film theory and practice from a feminist perspective. Prerequisite: 60 units including two women's studies courses, one of which must be WS 101 or 102. Students who have taken WS 312 or WS 412 under the title Women and Film may not take this course for further credit.

**WS 421-3 Practicum I**

First term of work experience in the Women's Studies Co-operative Education Program. Units from this course do not count toward the units required for an SFU degree. Prerequisite: 30 units with a CGPA of 3.0; WS 101, 102 and two 200 division women's studies courses. Students should apply to the Faculty of Arts and Social Sciences co-operative education co-ordinator by the end of the third week of the term preceding the employment term.

**WS 422-3 Practicum II**

Second term of work experience in the Women's Studies Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: 45 units with a CGPA of 3.0; WS 101, 102 and two 200 division women's studies courses. Students should apply to the Faculty of Arts and Social Sciences co-operative education co-ordinator by the end of the third week of the term preceding the employment term.

**WS 423-3 Practicum III**

Third term of work experience in the Women's Studies Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: 60 units with a CGPA of 3.0; WS 101, 102 and two 200 division women's studies courses. Students should apply to the Faculty of Arts and Social Sciences co-operative education

co-ordinator by the end of the third week of the term preceding the employment term.

**WS 424-3 Practicum IV**

Fourth term of work experience in the Women's Studies Co-operative Education Program. Units from this course do not count towards the units required for an SFU degree. Prerequisite: 90 units with a CGPA of 3.0; WS 101, 102 and two 200 division women's studies courses. Students should apply to the Faculty of Arts and Social Sciences co-operative education co-ordinator by the end of the third week of the term preceding the employment term.

**WS 800-5 Methodology in Women's Studies Research**

An interdisciplinary seminar in methods of research in women's studies. Students will examine theoretical issues in women's studies methodology and study examples of research and criticism from women's studies in history, art/literary criticism, philosophy, psychology and social and natural sciences. Emphasis will be placed on developing a rigorous and creative interdisciplinary approach to problems. Students will apply methods studied in the course to their own areas of concentration.

**WS 820-5 Graduate Seminar in Women's Studies History**

This course will examine one or two critical issues in the history of women. Canada, England and France are of special interest in this course, but students, with the permission of the instructor, may focus their work on North America and/or Europe generally.

**WS 821-5 Graduate Seminar in the Psychology of Women**

This course will consist of an in depth exploration of both traditional and feminist theories of the development of female personality. Special consideration will be given to the impact of social and economic factors on women's psychology and the extent to which such factors are or are not taken into account.

**WS 822-5 Graduate Seminar in Feminist Theory**

This course will analyse and compare major feminist social and political theories, including those that have emerged from liberal, socialist and radical feminist traditions. The relationship among theories of sexism and political goals and practices will be discussed.

**WS 823-5 Graduate Seminar in Feminist Art/Literary Criticism**

This course will examine the development of feminist aesthetic theories with particular reference to literary, cinematic and/or art forms. The fundamental assumptions of feminist literary and/or art criticism as well as the principles of art forms will be discussed.

**WS 824-5 Graduate Seminar on Women and Social Policy**

This course will focus on one or more social issues and policies in such fields as law, health, economics, social welfare, and science and technology.

**WS 825-5 Graduate Seminar in Women, Technology and Social Change**

This course will focus on relationships between changes in the technological and scientific bases of a society and changes in other major aspects of that society, particularly as they affect women's roles and ideas about women. Emphasis will be on Europe and North America.

**WS 830-5 Selected Topics Graduate Seminar I  
WS 831-5 Selected Topics Graduate Seminar II  
WS 840-5 Directed Studies****WS 898-6 MA Thesis****WS 899-6 MA Extended Essays****WS 997-0 PhD Comprehensive Examination****WS 998-6 PhD Thesis****WS 999-6 MA Field Exam**

Prerequisite: completion of six graduate courses.

## Work Term WKTM

### Co-operative Education

#### WKTM 100-3 Cooperative Work Term I

Units from this course do not count towards the units required for an SFU degree.

#### WKTM 200-3 Cooperative Work Term II

Units from this course do not count towards the units required for an SFU degree.

#### WKTM 300-3 Cooperative Work Term III

Units from this course do not count towards the units required for an SFU degree.

#### WKTM 400-3 Cooperative Work Term IV

Units from this course do not count towards the units required for an SFU degree.

## World Literature WL

### Faculty of Arts and Social Sciences

#### WL 100-3 Introduction to World Literature

Explores how texts resonate in other cultural contexts, influence foreign traditions, and become works of world literature. Breadth-Humanities.

#### WL 101-3 Writing Global Migration

Explores international migrancy in world literature. May compare the texts of migrants and citizens, focus on a case study of migrants to and from a particular city or nation, or compare immigrant writings across cultures.

#### WL 101W-3 Writing Global Migration

Explores international migrancy in world literature. May compare the texts of migrants and citizens, focus on a case study of migrants to and from a particular city or nation, or compare immigrant writings across cultures. Writing.

#### WL 102-3 Literature Across Cultures

Explores moments of cross-cultural interaction, encompassing the literature of exploration, empire, post-imperial culture, and canonical or contemporary travelogues. Breadth-Humanities

#### WL 103-3 Pre-Modern World Literature

Surveys pre-modern texts of world literature.

#### WL 104-3 Modern World Literature

Surveys poetry and prose from the seventeenth-century to the present, with a focus on the literary exploration of issues of humanity. Breadth-Humanities

#### WL 200-3 Literary Analysis and Interpretation

Introduces major theoretical approaches to literature and fundamental techniques of literary analysis. Develops students' critical skills for analytical writing about literature in comparative, cross-cultural contexts. Prerequisite: nine units in World Literature, including WL 100, 103, or 104.

#### WL 201-3 East/West

Explores the relationship between Eastern and Western narratives. The focus may include the mutual influence of Eastern and Western cultural traditions and modernities, the construction of the 'East' in the West and of the 'West' in the East, theories of Orientalism and Occidentalism, and forms of East/West syncretism. Prerequisite: three units in World Literature or six units of B-Hum designated courses. Breadth-Humanities

#### WL 202-3 North/South

Explores how European traditions have influenced and engaged the cultures of the global 'South'. The focus may encompass the cultures and counter-cultures of empire and globalization and the 'tropicalization' of European genres and cultural forms under the influence of artists from Africa, Latin-America, and South Asia. Prerequisite: three units in World Literature or six units of B-Hum designated courses.

#### WL 203-3 Selected Genres in World Literature

Explores the cross-cultural trajectory of a genre or genres of world literature. Prerequisite: three units in World Literature or six units of B-Hum designated courses. Breadth-Humanities

#### WL 204-3 Human Rights Literature

Examines a diversity of world literature concerning Human Rights. May focus on writing in the face of political oppression, censorship, political and economic displacement, terrorism and/or warfare. Prerequisite: three units in World Literature or six units of B-Hum designated courses.

#### WL 300-4 How Theory Travels

Explores the counterpoint of Western and non-Western approaches to world literature. May draw from disciplines including comparative literature, history and anthropology, and focus on how concepts of world literature are imported into new cultural contexts. Prerequisite: 12 units in World Literature, including WL 200.

#### WL 301-4 Imperial Cultures

Explores the cultures of imperialism in a cross-continental and comparative framework. May focus on chronicles of discovery, moments of colonial contact, critiques of empire, and the imperial engagement with pre-conquest cultures. Prerequisite: 45 units including nine units in World Literature or nine units of B-Hum designated courses.

#### WL 302-4 Post-Imperial Cultures

Explores post-imperial notions of culture and universality, tradition and modernity, or nation and cosmopolis. May focus on narratives of independence, postcolonial self-fashioning, and imperial nostalgia. Prerequisite: 45 units including nine units in World Literature or nine units of B-Hum designated courses.

#### WL 303-4 Global Culture and Its Others

Explores cultural expressions of sameness and difference in an age of globalization and its discontents. May focus on transnational expressions of secularism and faith or of the metropolis and suburbia, or on forms of cross-pollination in world literature, cinema and music. Prerequisite: 45 units including nine units in World Literature or nine units of B-Hum designated courses.

#### WL 304-4 Exiles and Emigres

Explores the culture of peoples and individuals displaced by force or migrating by choice. May focus on the plight of refugees in the work of playwrights, essayists and novelists, on the work of emigre artists in different cultural traditions, or on a comparison of the literary cultures of exiles and emigres. Prerequisite: 45 units including nine units in World Literature or nine units of B-Hum designated courses.

#### WL 305-4 Sages and Poets

Explores wisdom literature, poetry, or the resonance of faith in secular world literatures. May focus on cross-cultural mystical quests, secular re-castings of narratives of faith and conversion, or the interplay of the religious and the secular in comparative supernatural literatures. Prerequisite: 45 units including nine units in World Literature or nine units of B-Hum designated courses.

#### WL 400-4 Literary Perspectives on Ancient Cultures

Explores the discovery, resonance, and/or influence of ancient literature and culture. May focus on the role and poetics of ancient cultures in modern writing. Prerequisite: 60 units including two 300 level courses in World Literature, English, or Humanities.

#### WL 401-4 Early Modernities

Explores early modern literature across cultures. May compare Eastern and Western texts or focus on the cross-cultural influence of a single genre or author. Prerequisite: 60 units including two 300 level courses in World Literature, English, or Humanities.

#### WL 402-4 Other Modernities

Explores the mutual constitution of modernity in North and South. May focus on modernism and its enemies, case studies of alternative modernities, or the pre-modern in discourses of the modern and anti-modern. Prerequisite: 60 units including two 300 level courses in World Literature, English, or Humanities.

#### WL 403-4 After Modernities

Explores works of contemporary world literature in the second half of the twentieth century. May focus on the postmodern as a response to the modern, on prevalent postmodern genres, or on the postmodern engagement with developments in philosophy, science, and the media in East and West. Prerequisite: 60 units including two 300 level courses in World Literature, English, or Humanities.

#### WL 404-4 Literature in Translation

Explores how texts not only lose but gain in translation through a consideration of the discovery and reception of ancient and canonical texts in new cultural contexts. May compare several texts or focus on a single work that has been reconceived in several cultures. Prerequisite: 60 units including two 300 level courses in World Literature, English, or Humanities.

#### WL 410-4 Selected Topic in World Literature I

Advanced seminar on a topic in World Literature. Prerequisite: 60 units including two 300 level courses in World Literature, English, or Humanities.

#### WL 420-4 Selected Topic in World Literature II

Advanced seminar on a topic in World Literature. Prerequisite: 60 units including two 300 level courses in World Literature, English, or Humanities.

#### WL 430-4 Selected Topic in World Literature III

Advanced seminar on a topic in World Literature. Prerequisite: 60 units including two 300 level courses in World Literature, English, or Humanities.

#### WL 440-4 Selected Topic in World Literature IV

Advanced seminar on a topic in World Literature. Prerequisite: 60 units including two 300 level courses in World Literature, English, or Humanities.

#### WL 450-4 Directed Readings in Language and Literature

Independent study of literature in a language other than English. Prerequisite: Admission by permission of the instructor and department.

#### WL 480-4 Research Seminar for Honors Essay

Examines the methods and methodologies of world literature by focusing on case studies of influence, reception and translation. The case studies will be chosen in relation to students' approved topics for honors essays. Students will present research for their honors essay to the class. Prerequisite: Lower division and language requirements for the World Literature major plus 12 units of upper division requirements including WL 300. Open only to students who have been accepted into the World Literature honors program. Admission is by permission of the Instructor and the Department.

#### WL 490-4 Honors Graduate Essay

Examines the methods and methodologies of world literature by focusing on case studies of influence, reception and translation. The case studies will be chosen in relation to students' approved topics for honors essays. Students will present detailed research and well-developed drafts of their essay to the class. In addition to the weekly seminar, honors students will meet regularly with their supervisors. Prerequisite: Lower division and language requirements for the World Literature major plus 12 units of upper division requirements including WL 300. Open only to students who have been accepted into the World Literature honors program. Admission is by permission of the Instructor and the Department.

# Academic and Campus Services

## Alumni Association

007 Diamond Alumni Centre, 778.782.GRAD (4723)  
Tel, 778.782.6776 Fax, alumni@sfu.ca,  
www.sfu.ca/alumni

Students who complete a degree, certificate, diploma or professional development program become a lifetime member of the Alumni Association. Membership benefits include communications; social, networking and professional development events; campus privileges; group discounts on quality products and services; and belonging to a community of over 100,000 graduates worldwide. Alumni Relations works closely with the Alumni Association to keep alumni informed, involved and invested in the alumni community and future of Simon Fraser University.

## Archives and Records Management

0400 Maggie Benston Student Services Centre,  
778.782.3261 Tel, 778.782.4047 Fax,  
archives@sfu.ca, www.sfu.ca/archives

Archives' mandate is to acquire original archival materials that document all University programs and activities or that enhance its teaching and research. The University archives acquires three major categories of materials as follows.

- official University records including those of the board of governors, senate, University committees, faculties, departments and administrative offices
- materials documenting the wider University community including private papers of the Simon Fraser University Faculty Association, Simon Fraser Student Society, University labor organizations and the private papers of prominent individual faculty, staff and students
- private historical research collections including the Association of Canadian Publishers (ACP), John Howard Society (JHS), W.A.C. Bennett and collections relating to the women's movement

Archives also holds non-circulating original copies of all theses and dissertations.

The University archives is a multimedia collection including film, video and sound recordings, maps, plans and architectural drawings, documentary art, photographs, and digital records.

## Services to Researchers

The reference area is equipped with audio and video equipment. Arrangements can be made for viewing films. Reproduction requests for photocopies and photographic copy prints are accommodated whenever possible. Finding aids to various collections are available in hard copy or on the archives' website. Information is available about archival collections at other repositories.

## Services to the Institution

To help fulfil its mandate, archives administers a records management program. The department also operates the University Records Centre (URC), providing temporary storage for official, semi-active University records. Staff provide consulting and training support to campus offices concerning record-keeping policy, practices, records retention and disposal. The department also co-ordinates copyright compliance, administers the access to information and privacy program, and responds to all formal access requests submitted under the *Freedom of Information and Protection of Privacy Act*.

## Service Hours

Archives is open for researchers 9 am – 12:30 pm and 1:30 pm – 4 pm, Tuesday to Friday.

## Athletics

Chancellor's Gymnasium, 778.782.4906 Tel,  
www.athletics.sfu.ca

Since its inception in 1965, Clan athletics has established a high performance tradition. The program is perhaps best epitomized by its six consecutive United States Sports Academy Director's Cups which are awarded annually to the top National Association of Intercollegiate Athletics (NAIA) program, by its 80 alumni who have represented Canada at the Olympic Games, and 100 alumni who have competed in the Canadian Football League.

The University has chosen to compete in both the US-based NAIA and Canadian Inter-university Sport (CIS) to provide its high performance athletes with the right competition. Varsity sports include: men's and women's basketball, cross-country/track and field, wrestling, golf, soccer, swimming and diving; men's football; women's softball and volleyball.

The student recreation and athletic fee provides free admission to all University athletics regular season competitions. See www.athletics.sfu.ca.

## Canada Post

Located inside 8961 Cornerstone Mews, Burnaby, BC  
V5A 4Y7, 778.782.3098 Tel, 778.782.4783 Fax,  
post\_office@sfu.ca

The post office is a full service Canada Post Outlet offering the sale of stamps, packaging, shipment tracking, and other material to ensure your package arrives at its destination.

Post office hours are Monday to Friday,  
10 am – 4:30 pm.

## Centre for Students with Disabilities

1250 Maggie Benston Student Services Centre,  
778.782.3112 Tel, 778.782.5457 TTY,  
www.sfu.ca/disabilityaccess

The centre's mission is to create, foster and advocate for a non-discriminatory, inclusive and welcoming environment, free of physical, programmatic, informational and attitudinal barriers, and to provide students with disabilities an equal opportunity to experience full, productive and successful academic lives. The centre supports this mission by developing and updating University policies, procedures and programs. It provides direct services to academically qualified students with documented disabilities to ensure full, fair and equal access to all University services, programs and facilities. Academic support services include, but are not limited to: exam and lecture modifications; adaptive technology access; note-taking assistance; advising; general advocacy, etc. Students requiring any of these services will supply current documentation at their own expense. To avoid possible delays in receiving services, contact the centre at least three months prior to term start.

The centre also works with other University departments to ensure access to services, programs and facilities, including on-campus housing, parking, library access, etc.

## Chartwells Dining Services

Administrative Office, 2028 Academic Quadrangle,  
778.782.4481 Tel, foodservices@sfu.ca,  
www.compass-canada.com/Simon Fraser University

Chartwells Dining Services is pleased to be a part of the academic community and is proud to serve its staff, faculty and students.

Chartwells provides a variety of food outlets offering well-balanced, nutritional meals, fast food services, catering, and a convenience store. The meal plan enables students, faculty and staff to purchase meals on a prepaid account from any dining location. The program works just like a debit card; you prepay by depositing a chosen dollar amount into the Chartwells meal plan account. For further information, visit our office or refer to the dining plan brochure.

Contact the centre for more information during office hours, Monday to Friday, 9 am – 4 pm.

## Diamond Alumni Centre

778.782.4794 Tel, thedac@sfu.ca, www.sfu.ca/dac

The Diamond Alumni Centre, located on the north slope of Burnaby Mountain, is in the absolute idyllic setting. This beautiful facility is further enhanced by natural timbers, stone fireplaces and abundant greenery to complement the panoramic view of the North Shore mountains, Deep Cove and Indian Arm. Our professional services and gourmet food ensure that your experience with us will be special and memorable. We offer catering for up to 400 people for stand-up receptions and special events. We can accommodate up to 200 people seated for special events including business meetings, dinners, retirement parties and wedding receptions.

We also offer *Local Grown* products such as Ocean Wise Seafood and Sustainable Food Programs.

The Administration and Catering Office is open  
8 am – 4:30 pm, Monday to Friday,  
778.782.4795/4796 Tel, 778.782.4796 Fax

## The Residence Dining Hall

This facility offers traditional and not-so-traditional favorites including special theme meals and surprises. Enjoy breakfast specialties, grill (short order cooking), hot entrées, a carvery station, and a specialty culinary cooking station with an international variety of nutritious features made to order. We also offer *Local Grown* products such as Ocean Wise Seafood and Sustainable Food Programs. Check out Pizza Galore, fresh daily salads and soups, The Deli Corner, and a beverage island featuring special blends of Ritazza coffee, teas and cold beverages.

We have a convenience store, and accept cash or debit payment for these convenience store items.

## CJSF 90.1 FM Radio

216 Transportation Centre, 778.782.3727 Tel,  
778.782.3695 Fax, www.cjsf.ca

Funded by its students, CJSF 90.1 FM is Simon Fraser University's campus radio station providing programming that is rarely available from mainstream media. CJSF offers non-commercial music from all genres as well as special interest spoken word programming. The station airs public service announcements from campus groups about events and issues of interest to the campus and off-campus community. CJSF, currently operated by over 150 student and community volunteers, offers interesting volunteer opportunities. New volunteers should visit

www.cjsf.ca for volunteer orientation times. Listen to CJSF on 90.1 FM, 93.9 FM on cable, and on the Internet at www.cjsf.ca. CJSF programming is now also available as podcasts that can be downloaded from the website. Call or drop by the studios.

## School for the Contemporary Arts

778.782.3363 Tel, 778.782.5907 Fax, www.sfu.ca/sca

Information about the school's teaching programs can be found on page 152 and page 280. The school also sponsors the following campus community services.

### Public Events

The school presents free performance, film screening, concert or artist's demonstrations in the SFU Theatre on Thursdays at 12:30 pm during fall and spring terms. In addition, more than 100 performances and visual art shows are scheduled throughout the year in the SFU Theatre, Studio II, the Martin Bartlett Performance Space at Alexander Centre downtown, and the school's studios. Programming for both the noon series and evening events features a mix of professional touring artists and the school's students. For information, contact the SFU Theatre box office at 778.782.3514.

### Professional Development Offerings

Praxis Film Development Workshop, 778.782.7880, offers a resource centre, intensive workshops, public seminars, and courses on film-related topics.

## Bureau des affaires francophones et francophiles (BAFF) /Office of Francophone & Francophile Affairs (OFFA)

Cornerstone Building, 198-8960 University High Street, 778.782.6927 Tel, Burnaby, www.sfu.ca/baff-offa

BAFF/OFFA's mission is to develop, co-ordinate and promote programs and courses taught in French at Simon Fraser University (see below) in order to meet post-secondary education needs of Francophone and Francophile communities in British Columbia. It also provides the university community with opportunities to participate in cultural activities in French both on and off campus. We invite you to visit our websites for further information about the office and its programs.

### Faculty of Arts and Social Sciences

www.sfu.ca/frohort

- French Language Cohort Program in Public Administration and Community Services (FCP)

### Faculty of Education

www.sfu.ca/educfr

- Professional Development Program
- master's and doctorate programs
- Undergraduate courses and degrees
- Field Programs

## Graduate Student Society

2205 Maggie Benston Student Services Centre, 778-782-3899 Tel, 778-782-6594 Fax, www.sfugradsociety.ca

The Graduate Student Society (GSS) represents each graduate student at Simon Fraser University, and each graduate student is a member.

Graduate students are eligible to stand for election within their department as their department's representative to the GSS's graduate council, which oversees the society, as well as for election by the

graduate student body as officers of the GSS, who do much of the society's work.

Each term, the GSS collects various fees and levies to fulfil its responsibility to represent and service graduate students. Each of these fees has been approved by a referendum of graduate students, and a referendum must be held to change them. The general membership fee covers the cost of providing representation, running graduate student social events, and providing services such as access to legal advice and the ombudsperson. The cost of providing the U-Pass (page 33) and the health and dental benefits plan to graduate students are covered by GSS fees. Fees are also collected on behalf of a number of affiliated organizations operated by and for students such as The Peak (campus newspaper), CJSF (campus radio station), SFPIRG (public interest research group), etc. The complete breakdown of GSS membership is as follows (subject to change).

Graduate Student Activity Fee Breakdown	full time \$60.65	part time \$30.33
Graduate Student Society membership fee	\$33.00	\$16.50
Capital Levy	\$15.00	\$7.50
Peak Publication Society	\$4.90	\$2.45
Simon Fraser Public Interest Research Group	\$3.00	\$1.50
Simon Fraser Campus Radio Society (CJSF)	\$3.00	\$1.50
World University Service of Canada Student Refugee Program (WUSC)	\$1.00	\$0.50
First Nations Student Association	\$0.75	\$0.38

### Graduate Benefit Plan

Graduate Student Society Benefit Plan Office, 2201 Maggie Benston Student Services Centre, 604.268.6994 Tel, 604.268.7195 Fax, info@sfsbenefits.com, www.sfsbenefits.com

A service provided by the Graduate Student Society (GSS), the Graduate Benefit Plan provides eligible graduate students with dental, extended health and travel coverage benefits. The plan is mandatory. Therefore, graduate students are automatically enrolled provided the student is

- a member of the Graduate Student Society
- a graduate student (in a graduate career)
- completing at least one Simon Fraser University graduate course
- possesses basic medical coverage (MSP or the equivalent)

Based on the above criteria, the Graduate Benefit Plan fees are charged to all eligible graduate students at the time of course enrolment and are included in the student account fees. The current fee rates are \$59.76 per term for extended health coverage and \$67.90 per term for dental coverage.

On-leave students who wish to continue their benefits coverage while on leave can opt in to the benefit plan and should contact the Benefit Plan Office prior to the applicable deadline as follows: if a student goes on leave for the spring term, the deadline is January 30th to opt in; for the summer term the deadline is May 30th; for the fall term the deadline is September 30th.

Once per year, students may opt in/out or add family/couple coverage. Eligible students who have existing comparable coverage may waive the benefits by completing the online opt out form before the applicable deadline. The deadline is 30 days from the initial benefit plan enrolment date or on the anniversary of benefit plan enrolment. For example, a new graduate student who started in September 2007

can opt in/out or add family/couple coverage between September 1st and September 30th each year.

For forms, booklets, additional fees or more information, please visit www.sfsbenefits.com

## George and Ida Halpern Centre

Halpern Centre, 778.782.4910 Tel, 778.782.3420 Fax

The Halpern Centre was donated to the University as a setting for cultural and intellectual endeavors which are not part of the scheduled University credit offerings. It is a venue for events of the highest scholarly, social and cultural value, including lectures by distinguished visitors, discussion groups, seminars, learned conferences, dissertation defences, art exhibits, musical performances, etc.

The centre may be booked by University departments and community groups whose activities are consistent with the centre's stated purposes. There is no rental fee for University-sponsored events. Space bookings, reserved by a University individual, require sponsorship of the individual's department or, in the case of student clubs or unions, through the Simon Fraser Student Society.

## Health and Counselling Services

0164 Maggie Benston Student Services Centre, 778.782.4112 Tel, 778.782.5888 Fax

For more information regarding any service, visit <http://students.sfu.ca/health>

### Mission

To promote and provide holistic and innovative health care and health promotion that is readily accessible and sensitive to the diverse needs of our students and campus communities. Key services include health clinics, health promotion, physiotherapy, counselling and outreach.

### Counselling

0101 Maggie Benston Student Services Centre, 778.782.4615 Tel

2566 Simon Fraser University Surrey, 250 – 13450 102nd Avenue, Surrey, BC, V3T 0A3, 778.782.8022 Tel, [surrey\\_counsellor@sfu.ca](mailto:surrey_counsellor@sfu.ca)

Health and Counselling Services staff recognize the unique pressure and stress that students endure. The counsellors help manage university life challenges, and academic and personal goals with free short-term counseling, group discussions, and workshops. Discussions are confidential. Same day appointments are available for initial visits and for students in crisis. If you want to talk, we are here. Visit <http://students.sfu.ca/health/counselling>.

### Health Clinics

0101 Maggie Benston Student Services Centre, 778.782.4615 Tel,

medical emergencies 778.782.4500 Tel

300 Simon Fraser University Vancouver,

778.782.5200 Tel,

medical emergencies (via Security) 604.522.5252 Tel

After hours physicians: 604.522.2311 Tel, 6 pm – 7 am, Monday to Friday, weekends, holidays

Visit one of the doctors or nurses for all medical needs in a strictly confidential environment. Book an appointment or walk in. Services for students include primary health care, urgent care, vaccinations, allergy shots, travel medication, birth control, pregnancy testing, sexually transmitted infection screening, and minor procedures, etc. Urgent medical care is also available for Simon Fraser University staff and faculty.

## Health Promotion

0164 Maggie Benston Student Services Centre,  
health\_promo@sfu.ca, 778.782.4674 Tel

The health promotion team works hard to foster healthy students and a healthy campus community. We offer healthy living sessions and events, and work with other campus groups to build a healthy campus environment. The focus areas are active living, nutrition, sexual health, substance use and abuse prevention, mental health and stress management, illness and injury prevention. See <http://students.sfu.ca/health/healthpromotion>.

## Physiotherapy

070 Chancellor Gymnasium Complex,  
778.782.3284 Tel, hcs\_physio@sfu.ca

For those dealing with injuries or pain, don't wait for it to get worse. The physiotherapist is available to all Simon Fraser University students, staff and faculty, and UniverCity residents. The physiotherapy clinic is located at the Burnaby campus on the bottom floor of the gym complex (one floor down from the pool). No doctor's referral required (except WCB and ICBC claims). See <http://students.sfu.ca/health/physiotherapy>.

## SFU Nightline

604.857.7148 evenings, weekends and holidays

Nightline is an after-hours referral telephone service operated by a team of trained student volunteers. Callers are invited to ask questions that they may be reluctant or embarrassed to ask others, or seek advice about friends, family or other areas of concern. Nightline is completely anonymous. The service operates on weekdays from 4:30 pm to 8:30 am, and 24 hours on weekends and holidays. Call 604.857.7148. For more information, visit [www.students.sfu.ca/nightline](http://www.students.sfu.ca/nightline).

## Customized Workshops

0164 Maggie Benston Student Services Centre

Health and Counselling Services extend beyond the centre into the campus community. Many services that we provide 'in-house' can also be delivered to the campus location of your choice. Contact us to arrange a professional staff or peer educator presentation, workshop or outreach session.

Popular topics include nutrition, work/life balance, stress management, and healthy relationships. For more information or to book a workshop online, visit <http://students.sfu.ca/health/workshops>.

## Human Rights Office

3045 Academic Quadrangle, 778.782.4446 Tel,  
778.782.5468 Fax, betaylor@sfu.ca, www.sfu.ca/hro

On April 7, 2003 the Simon Fraser University Board of Governors approved changes to GP 18, the Harassment Policy, which expanded the policy's scope to include discrimination as a proscribed behavior. As such, the Human Rights Policy responds to the University's obligations under the BC Human Rights Code to provide a discrimination and harassment free environment for the students, faculty and employees. The objectives of the expanded policy are to educate the University community about human rights issues and to provide procedures by which complaints of discrimination and harassment can be addressed, mediated and resolved.

To reach the Director of Human Rights, visit, telephone, fax or email at the numbers and addresses shown above. Normal business hours are Monday to Friday, 8:30 am – 4:30 pm but the office is frequently closed when mediation sessions, meetings or seminars are in process. Appointments are necessary

but can often be scheduled on the same day that contact is made with the office.

The principles of natural justice and impartiality govern the complaint process. The director can offer advice and assistance to those dealing with situations on their own, or mediation services can also be provided. In exceptional circumstances, formal complaints are referred to an external investigator who is an experienced administrative lawyer.

For more information about the Human Rights Policy, including the definition of discrimination and harassment and the types of harassment it covers, please visit our website.

## Indigenous First Nations Student Centre

1500 Maggie Benston Student Services Centre,  
778.782.6929 Tel, 778.782.5682 Fax,  
Monday to Friday, 8:30 am – 4:30 pm,  
<http://students.sfu.ca/firstnations>

The centre offers an indigenous, culturally respectful, relevant, responsible and reciprocal environment, including a study lounge/computer room, and student support services to self-identified Aboriginal students (First Nations, Métis, Inuit). Support programs include workshops about scholarship and bursary awards application processes, Refdesk, tutoring, and alumni mentoring. Cultural events include beginning University terms with welcoming events, drum making/drum group workshops, and the annual Simon Fraser University Traditional Graduate Honoring Ceremony.

The centre also provides referrals to, and information regarding the University's Student Services, Aboriginal community resources, and band/agency liaison through long distance phone and fax services.

The First Nations student life co-ordinator offers students the opportunity to acquire knowledge and tools for academic success. Call the co-ordinator at 778-782-5663 for assistance.

The centre's staff work closely with the First Nations student recruitment co-ordinator (telephone 778.782.6891) to successfully transition Aboriginal students from the application and enrolment process to the community of the Indigenous First Nations Student Centre and the University.

## Interfaith/Chaplaincy Centre

3200 Academic Quadrangle, 778.782.3180 Tel,  
<http://students.sfu.ca/interfaith>

The University is served by an interfaith chaplaincy comprising numerous chaplains representing the Christian faith and other religions. They provide a wide spectrum of social and spiritual services, and help anyone including students, staff and faculty.

For special events, weekly services and meetings, call the office. Students are warmly invited to visit between 10 am – 3 pm, Monday to Friday.

## IT Services

1001 Strand Hall, 778.782.3234 Tel,  
778.782.4242 Fax, [www.sfu.ca/itservices](http://www.sfu.ca/itservices)

IT Services (ITS) provides all students, faculty and staff with access to the SFU Email system, eLearning systems, web publishing space, research systems, library systems, campus labs, campus wireless network, student enrolment system, and the university's business systems, to support all educational, research and business endeavors at SFU. Computing IDs are automatically created for all incoming students, faculty and staff to access all electronic resources. Specialty software is provided

for instructional uses, statistical analysis, and for web and database programming. A 24 hour help line is available at 778.782.3230 or via [help@sfu.ca](mailto:help@sfu.ca). In-person student assistance is available in the campus labs in the library and at AQ3148, or telephone 778.782.3930.

## Learning and Instructional Development Centre (LIDC)

7560 Education Building, 778.782.3910 Tel,  
778.782.4900 Fax, [www.sfu.ca/lidc](http://www.sfu.ca/lidc), Monday to  
Thursday, 8:30 am – 4:30 pm, Friday 8:30 am – noon,  
1 – 4:30 pm.

Our mission is to help create an enriched academic environment by supporting and promoting effective teaching, stimulating and conducting research and scholarly activity, assisting in the integration of instructional technologies, and providing media services and classroom support.

## Educational Support & Innovation (ESI), LIDC

7560 Education Building, 778.782.3910,  
778.782.4900

This group provides a wide variety of services to faculty and other instructional staff, including instructional development and support by

- delivering workshops to various groups
- consulting on the design, development and evaluation of learning
- teaching evaluation
- assisting teachers with face-to-face teaching or on-line teaching
- supporting technology integration in courses
- providing a consultation on the preparation of teaching portfolios, teaching evaluations, and student assessment methods
- helping to develop a resource centre on teaching, learning and technology in teaching

ESI also co-ordinates and organizes instructional development and educational technology programs (workshops, seminars, lecture series, symposia and conferences) and provides services (consultations, publications, and resource library) for Simon Fraser University's academic community to enhance the quality of teaching and learning at the University.

Some of our programs include

- certificate program in university teaching and learning
- annual fall and spring term TA/TM days
- instructional skills workshop
- ISW facilitator development workshop
- certificate in web-based instruction
- voice and presentation skills series
- teaching and learning with technology
- conversations about teaching
- teaching and learning readers' group
- teaching portfolio development series

## Classroom Technology Assistance, LIDC

P9301 Shrum Science Centre, 778.782.4828 Tel,  
778.782.4616 Fax, Monday to Thursday,  
8 am – 10 pm, Friday 8 am – 4:30 pm

2622 West Mall Centre, 778.782.5538 Tel, Monday to  
Thursday, 8 am – 8 pm, Friday 8 am – 4:30 pm

The Classroom Technology Assistance Centre has two locations. Audio, visual and computer equipment for classroom projects is available for loan to students as well as advice and instruction about proper equipment use. When requested by faculty, audio recordings of lectures are produced for student use. Access lectures on the web at [www.sfu.ca/lectures](http://www.sfu.ca/lectures).

## Media Design Group, LIDC

7760 Education Building, 778.782.3910 Tel,  
778.782.4900 Fax, [www.sfu.ca/lidc](http://www.sfu.ca/lidc)

We provide leadership and service in media and communications technology for the advancement of university teaching and learning. Our media staff provides comprehensive media capability in both conventional and digital formats using the current technology. We find creative solutions to problems, we offer guidance and support through consultation, and we are pleased to assist with your projects.

## Technical Services, LIDC

7528 Education Building, 778.782.4755 Tel,  
778.782.3199 Fax

Technical Services keeps the University's classrooms as contemporary as possible through expertise in research, design, installation, and service. Advice is offered to staff, faculty, students and special interest groups about lecture theatre operations. Other services include sales of audio visual materials, the dissemination of cable and satellite services over the in-house CATV system, video conferencing, and webcasting. Expertise is offered to those wishing to purchase or evaluate equipment, plan system installations, or learn about new technologies.

## Library Services

### Samuel and Frances Belzberg Library

Simon Fraser University Vancouver, 515 West  
Hastings Street, Vancouver, BC, V6B 5K3,  
778.782.5050 Tel, 778.782.5052 Fax,  
[www.sfu.ca/about/belzberg](http://www.sfu.ca/about/belzberg)

The Belzberg Library supports teaching, research and lifelong learning at Simon Fraser University Vancouver by providing reference assistance, liaison, borrowing, course reserve items, and materials requests from the W.A.C. Bennett Library and Simon Fraser University Surrey library. On-line services, including the library catalogue, full text databases, electronic journals, and access to Web sources, form an essential element of this 'electronic' library.

The library collection, which supports Simon Fraser University Vancouver courses and programs, consists of more than 10,000 books and several hundred journal titles, microfilm, fiche, and digital collections. In addition, students have full access to the other Simon Fraser University campus libraries, including almost 2.5 million items and extensive online collections at the main Bennett Library in Burnaby.

The Samuel and Frances Belzberg Library was developed through the generous donation of the Belzberg family.

Library hours: Monday to Thursday 9 am – 10 pm;  
Friday 9 am – 7 pm; Saturday 10 am – 5 pm, Sunday  
10 am – 5 pm (fall and spring terms). Service hours  
are reduced during term breaks, summer term, and  
public holidays.

### W.A.C. Bennett Library

Burnaby campus, library hours 778.782.4351, library  
information 778.782.3869, Fax 778.782.3023,  
[www.lib.sfu.ca](http://www.lib.sfu.ca)

The library provides a range of collections, services,  
space, and technology to support students,  
researchers and faculty in their academic pursuits.

### Collections

The library has over 2.7 million books and subscribes  
to over 54,000 journals, of which 47,000 are online.

Strong collections are available in all  
University-taught disciplines. The library website  
provides access for researchers on or off campus  
through the library catalogue, indexes to journals,

electronic journals, and other digital resources.

Special Collections include the contemporary  
literature collection for the avant-garde poetry  
student, the finest William Wordsworth collection in  
Canada, the Wosk-McDonald Aldine collection, BC  
publishing materials, British Columbia literary, social,  
and political materials, editorial cartoons, significant  
manuscript and archival collections. The curriculum  
collection contains curriculum guides and suggested  
readings prescribed by the Ministry of Education for  
BC school use. A collection of sound recordings,  
scores, slides, DVDs, videos and films is available in  
the Media Resource Centre. The maps, data, and GIS  
area provides access to computer-readable files of  
statistical and other data such as survey, census and  
GIS files, and over 120,000 maps.

### Information

Librarians help find library resources, suggest  
research strategies, and answer questions. Visit the  
third floor Alumni Information Commons help desk,  
Monday to Thursday 9 am – 8 pm; Friday 9 am – 6  
pm; Saturday and Sunday 10 am – 6 pm. Off-campus  
users can reach a librarian online via the AskAway  
live chat reference service Sunday to Thursday  
10 am – 9 pm; Friday and Saturday 11 am – 5 pm, or  
via email at [libask@sfu.ca](mailto:libask@sfu.ca). Research classes are  
offered at term start with an introduction to effective  
research techniques. Liaison librarians provide  
customized, course-specific research instruction upon  
faculty request.

### Space

Designated quiet study carrels are located on the  
floors 4, 5, and 6, with a silent study room on the fifth  
floor. Group study rooms are on floor 2 and may be  
reserved through the website. The library, in  
consultation with the Centre for Students with  
Disabilities, provides assistance to students with  
disabilities such as reserved study rooms.

### Technology

The third floor Alumni Information Commons offers  
computers, laser printers, color printers, scanners  
and application software. Technicians will help with  
problems at the help desk. Computers are also  
available on floors 2, 4, 5 and 6. Microform readers  
and printers, DVD, video and cassette tape players,  
photocopy machines, and laptop computer lending is  
available. Bring-your-own computer carrels are on the  
sixth floor, with wireless access on all floors. Adaptive  
technology is available for students with disabilities.

### Using the Library

The student identification card is also a library card,  
and is required to borrow materials. Reserve  
materials are assigned short loan periods of two  
hours to one week to increase availability. Lecture  
recordings for selected courses are accessible  
digitally. Faculty and students are eligible for a free  
library card from other Canadian university libraries.  
Document delivery services provide access to  
materials not held at the University through  
agreements with BC and other post-secondary  
libraries. Delivery of the University's collections to  
distance education students is also provided.

### Hours

Monday to Thursday 8 am – 11:45 pm; Friday  
8 am – 8 pm; Saturday and Sunday 10 am – 10 pm.

Normally, the building closes during statutory  
holidays. For service hours information, visit the  
library website at [www.lib.sfu.ca/about/hours.htm](http://www.lib.sfu.ca/about/hours.htm)

### Fraser Valley Real Estate Board Academic Library

Simon Fraser University Surrey, 778.782.7411 Tel,  
778.268.7420 Fax, [www.lib.sfu.ca/about/surrey/](http://www.lib.sfu.ca/about/surrey/)

This library supports teaching, learning and research  
at Simon Fraser University Surrey. A full range of  
services, including reference, liaison, instruction,

circulation, course reserves and document delivery  
are offered. The library also circulates laptop  
computers, digital camcorders and other media  
equipment for class or assignment use.

The on-site collections support Simon Fraser  
University Surrey programs and include over 15,000  
books, 100 print journals, DVDs, videos, CDs,  
CD-ROMs and games. Students can arrange delivery  
of items from the Burnaby and Vancouver libraries to  
the Surrey campus, thereby providing access to an  
additional 2.5 million titles. The library's on-line  
collection (375,000 e-books, 47,000 e-journals,  
580,000 art e-images and hundreds of databases)  
can be accessed on the web anytime, anywhere.

## Microcomputer Store

8961 Cornerstone Mews, Burnaby, BC V5A 4Y7,  
778.782.3098 Tel, 778.782.4783 Fax,  
[www.sfu.ca/microstore](http://www.sfu.ca/microstore), [micro\\_store@sfu.ca](mailto:micro_store@sfu.ca)

The store sells educationally-priced computer  
hardware, software, supplies and accessories to  
current Simon Fraser University students, staff and  
faculty. Educational discounts are available on  
computer hardware (Apple, DEL, HP, Lenovo, Sony,  
etc.) and software (Adobe, Corel, FileMaker,  
Microsoft, Symantec, etc.). The store stocks  
hardware, software, toner, memory, CD media, paper,  
cables and other items. It also has demonstration  
computers, monitors and printers. The service shop  
can upgrade and/or repair most computer equipment.  
Hours are Monday to Friday, 10 am – 4:30 pm.

## Museum of Archaeology and Ethnology

8602 Education Building, 778.782.3325 Tel,  
778.782.5666 Fax, [www.sfu.museum](http://www.sfu.museum), Monday to  
Friday, 10 am – 12 noon and 1 – 4 pm, closed on  
statutory holidays

The museum exhibits and collects objects from  
around the world, with a specific emphasis on the  
archaeology and ethnology of BC First Nations,  
especially the Northwest coast. Virtual exhibits on  
many topics can be found on our website. The  
museum is located in the northeast corner of the AQ  
in the Atrium off the north concourse near  
Renaissance Coffee.

## Office of the Ombudsperson

2267 Maggie Benston Student Services Centre,  
778.782.4563 Tel, [ombudsoffice@sfu.ca](mailto:ombudsoffice@sfu.ca),  
[www.sfu.ca/ombudsperson](http://www.sfu.ca/ombudsperson)

The Ombuds Office is dedicated to promoting fairness  
for all University community members. The  
ombudsperson provides information about existing  
review or appeal procedures, and advises on, and  
assists with, informal complaint resolution and  
problem solving processes. The ombudsperson may  
also inquire into the administration of University  
practices, procedures, processes and policies.

## Centre for Online and Distance Education

1300 West Mall Centre, 778.782.3524 Tel,  
778.782.4964 Fax, toll free within Canada  
1.800.663.1411, [codehelp@sfu.ca](mailto:codehelp@sfu.ca), [www.sfu.ca/cde](http://www.sfu.ca/cde)

Courses offered through the centre provide an  
alternative to traditional classroom learning for those  
who cannot attend scheduled classes. Since 1975,  
when Simon Fraser University introduced its first five  
distance education courses to 55 students, the  
program has grown to over 14,000 course enrolments  
a year in over 160 credit courses.

## 456 Academic and Campus Services

All courses carry full university credit and run parallel to the on-campus offerings. Students may complete some certificate, diploma and degree programs entirely by distance education, or may take a combination of distance, evening or day courses to fulfil academic requirements.

Depending on the courses, students receive study material either online and/or in print. Other course-related components (e.g. DVDs, lab materials, equipment, etc.) are also prepared by and distributed through the centre. Each course is assigned a tutor marker who is responsible for grading assignments and assisting with course work. All have scheduled office hours for telephone and/or online consultation.

### The Peak Newspaper

2901 Maggie Benston Student Services Centre, 778.782.4560, [www.the-peak.ca](http://www.the-peak.ca)

Published weekly each term, *The Peak* is Simon Fraser University's independent student newspaper. Students may place free personal classified ads, sit on the board of directors, vote, volunteer, work as an editor or write a letter to share opinions. In addition to being a valuable source of information, *The Peak* provides employment and experience for Simon Fraser University students, maintains an archive, computer lab and website. The Peak is a member of the Canadian University Press.

### Peer Programs

2000 Maggie Benston Student Services Centre, 778.782.4678 Tel, 778.782.5773 Fax, <http://students.sfu.ca/peerprograms>, [student\\_leadership@sfu.ca](mailto:student_leadership@sfu.ca)

Peer educators are student volunteers who provide support and assistance to students on a variety of issues including health, academic performance, career development and personal counselling. They receive professional training and work under staff supervision to meet with student clients, organize campus events and conduct educational workshops.

To become a peer educator, volunteer profiles and online application are available at <http://students.sfu.ca/peerprograms>. Recruitment occurs in the spring term. Training is in late August.

### Public Affairs and Media Relations

2200 Strand Hall, 778.782.3210 Tel, 778.782.3039 Fax, [www.sfu.ca/pamr](http://www.sfu.ca/pamr)

This office provides media relations, information dissemination and publicizes campus events and achievements, offers media and community liaison, publishes *Simon Fraser University News* and *AQ* magazine, and maintains information on the University's website. It offers media training workshops, crisis and emergency communications assistance, and regulates the use of University branding. News and story ideas are always welcome.

### Recreation

101 Chancellor's Gymnasium Complex, 778.782.3675 Tel, 778.782.3425 Fax, [www.sfu.ca/recreation](http://www.sfu.ca/recreation)

Simon Fraser University provides a welcoming and friendly environment with diverse opportunities for friendship, fun and active living through recreation. The Burnaby campus offers a fitness centre, aquafit and fitness classes, drop-in swimming, drop-in sports (from badminton to basketball), competitive intramural leagues, lessons and classes including yoga, dance and martial arts, and clubs. There are also recreation opportunities at Simon Fraser University Surrey and at Simon Fraser University Vancouver. Recreation

memberships, which include fitness centre, pool, drop-in sports and intramurals, are free for most students. Visit the Recreation office in the Chancellor's Gymnasium Complex for a membership. Pre-register for recreation classes by visiting the Recreation office or by phoning 778.7823.4142.

### Residence and Housing Office

On-campus housing for traditional residences, studios, townhouses, apartments: Residence Administration Building, 778.782.4201 Tel, 778.782.5903 Fax, <http://students.sfu.ca/residences/>

#### Residences and Facilities

Residences are assigned based on age and year of study. Recently graduated secondary school students are generally assigned to those buildings which have required meal plans. Students who have previously lived in residence or who are college transfers may request living arrangements in Shell House or McTaggart-Cowan Hall. Townhouses are for upper division students.

There are several residences on campus.

- Towers\* co-ed residences with required meal plans accommodate 737 students
- Shell House, a traditional\* co-ed residence, accommodates 130 students
- McTaggart-Cowan Hall, a traditional\* co-ed residence, accommodates 200 students.
- Hamilton Hall, a co-ed residence, accommodates 103 graduate students in single, fully furnished studio suites.
- a townhouse complex accommodates 396 single students in four bedroom, fully furnished townhouses
- Louis Riel House, a graduate and family apartment building of 210 one and two bedroom units is supplied with a stove and refrigerator in each unit. Apartments are prioritized for couples, families with children, single parent families, single graduate and mature students. Some furnished apartments are available upon request.

\*In single student residences, accommodations are fully furnished and are equipped with refrigerators. Students share common kitchens in Shell House and McTaggart-Cowan Hall.

McTaggart-Cowan Hall, Hamilton Hall, the Towers, and Louis Riel House offer rooms suitable for students with disabilities.

#### Application

New or returning full-time Simon Fraser University undergraduate and graduate students applying for single student housing for fall term are encouraged to do so before February 28. Students must meet all applicable University and Residence and Housing deadlines, and eligibility requirements before their application will be considered.

Applications for Louis Riel House and Hamilton Hall are accepted year-round. Traditional residences and townhouse applications for the fall, summer and spring terms are available December 15 of the year prior. Apply as soon as possible within the application period dates. An academic application to the University is not an application for residence. Also, academic acceptance from the University is not an offer of residence.

#### Regulations

Every student entering a residence is required to sign a license agreement, which is renewable, based on the completion of residence and housing admittance and eligibility policy requirements. Students living in traditional residences and the townhouses are required to re-apply for the fall term.

### Off Campus Housing

<http://www.sfuoffcampushousing.com/>

This website contains a current listing of all types of student housing in the neighboring community. The service is free to students. Listings are not inspected. Landlords listing their accommodation are required to pay a per listing fee for a one month display.

### SFU Bookstore

#### Burnaby campus store

Maggie Benston Student Services Centre, 8888 University Drive, Burnaby, BC, V5A 1S6, 778.782.3656 Tel, 778.782.3401 Fax, [bookstore@sfu.ca](mailto:bookstore@sfu.ca), [www.sfu.ca/bookstore](http://www.sfu.ca/bookstore), 9 am – 4:30 pm Monday to Thursday, 9:30 am – 4:30 pm Friday

#### Surrey campus store

Mezzanine, Simon Fraser University Surrey, 250 – 13450 102nd Avenue, Surrey, BC, V3T 0A3, 778.782.7537 Tel, 778.782.5219 Fax, [srybooks@sfu.ca](mailto:srybooks@sfu.ca), [www.sfu.ca/bookstore](http://www.sfu.ca/bookstore), 10 am – 3 pm Monday to Friday

#### Vancouver campus store

Harbour Centre Mall, Simon Fraser University Vancouver, 555 West Hastings Street, Vancouver, BC, V6B 4N4, 778.782.5048 Tel, 778.782.5219 Fax, [hcbooks@sfu.ca](mailto:hcbooks@sfu.ca), [www.sfu.ca/bookstore](http://www.sfu.ca/bookstore), 10 am – 6 pm Monday to Friday, 10 am – 5 pm Saturday

SFU Bookstore is a not-for-profit service to students. Owned by the University and operating on a break-even basis, the Bookstore works to provide the right book at the right time, and at the best possible price. The Bookstore has virtually every required text at least two weeks before the start of classes.

Course books are available at their respective campuses — the Burnaby campus store carries course books for the Burnaby campus and Distance Education courses; the Vancouver store has course books for Vancouver campus courses; the Surrey campus store carries course books for Surrey campus courses. Enrolled students can use the Bookstore eService to review required course books with the option to purchase online.

The Burnaby and Vancouver stores have a selection of general books that cover a variety of subjects and focus on the specific interests of customers at each campus.

All three stores offer an assortment of Simon Fraser University insignia merchandise, stationery supplies and general giftware.

### SFU Campus Security

#### Patrol Operations/Information Centre

01 Transportation Centre, 778.782.3100 (24 hours), 778.782.3469 Fax, [security@sfu.ca](mailto:security@sfu.ca), [www.sfu.ca/security](http://www.sfu.ca/security)

SFU Campus Security operates and provides campus patrol, emergency response, campus information, Safe Walk, complaint investigation and referral programs, the campus lost and found, parking sales, and the University's key and card access.

778.782.4500 (24 hours) all emergencies, 604.444.4929 (24 hours) or [www.sfu.ca/security](http://www.sfu.ca/security) for road conditions, 778.782.5451 lost and found, 778.782.5448 card access, 778.782.3920 lockshop/keys

## General Office

1300 Transportation Centre, 778.782.5983 Fax, 778.782.5450 personal security

## Parking Services

3110 West Mall Centre, parking@sfu.ca, 778.782.5534 Tel, 778.782.5386 Fax, 778.782.4577 information telephone line

All parking lots on campus, with the exception of visitor parking, are reserved for valid permit holders. Those without valid permits, including Burnaby campus visitors, park in one of the five designated visitor parking lots (rates subject to change).

Parking Lot	Price per term	Eligible for
G search lot	\$174.08	undergraduate and graduate students, faculty and staff
Convocation Mall and West Mall reserved parking space	\$380.25	undergraduate and graduate students, faculty and staff
visitor parking	\$2.75 per hour, \$11.75 per day	undergraduate and graduate students, faculty, staff and visitors

Undergraduate students may purchase a permit for G lot, Convocation Mall or West mall as follows:

### G Lot (search lot)

#### Parking Lottery

G lot permits are available through the parking lottery held prior to the fall and spring terms. Students may enter the lottery through the Parking Services website at [www.sfu.ca/security/Parking](http://www.sfu.ca/security/Parking), or in person at the Parking Services office. You must have a Simon Fraser University student number to enter, as well as a current Simon Fraser University e-mail account.

#### Open Sale

An open sale is held on April 20. Open sale permits is based on availability and sold first-come, first-served.

### Convocation Mall and West Mall (reserved space)

Undergraduate students may purchase a permit for the Convocation and West Mall reserved parking lots, when available. If available, permits are purchased through an open sale, which is held approximately two weeks prior to the beginning of each term. Please visit the Parking Services website for a schedule of open sale dates. Once these permits are issued, they must be renewed each term to maintain status. For more detailed information, visit the Parking Services website at [www.sfu.ca/security/Parking](http://www.sfu.ca/security/Parking).

## SFU Career Services

0300 Maggie Benston Student Services Centre, 778.782.3106 Tel, [www.sfu.ca/career](http://www.sfu.ca/career), [careers@sfu.ca](mailto:careers@sfu.ca)

Make your transition from Simon Fraser University to the workforce with our multidisciplinary team of career advisors and peer educators. These professionals support students and recent graduates through this transition with free one-on-one career sessions, on-line resources, mock interviews, and workshops. Drop by MBC 0300 to review our extensive career services resource library to 'kick start' your career.

## SFU Childcare Society

Children's Centre, west side of Burnaby campus; Verdant, UniverCity; 778.782.4569 Tel, 778.782.3058 Fax, [www.sfu.ca/childcare-society](http://www.sfu.ca/childcare-society)

The society has 13 quality childcare programs for children of students, staff and faculty. The unique

world-class facility provides full and part-time care to over 260 children aged three months to 11 years. The satellite program Verdant, for one to three year olds, operates at UniverCity on the Burnaby campus east side. School aged children are transported off campus to attend a local Burnaby school.

All childcare staff are fully qualified early childhood educators, and provide a caring, enriched, developmentally balanced program. Parent participation at the program and board levels is an important part. Fees are payable monthly. Childcare bursaries are available to eligible students and staff. The Ministry for Children and Families also subsidizes fees for those parents qualifying under their financial need criteria. For information and/or a visit, call the Childcare office, 8 am – 5 pm Monday to Friday.

## SFU Community Trust

Suite 150 – 8960 University High Street, 604.291.3000 Tel, 604.291.3189 Fax, [www.univercity.ca](http://www.univercity.ca)

The SFU Community Trust is responsible for the planning and development of UniverCity, a model sustainable community neighboring Simon Fraser University. Developed through a collaborative and integrated planning process, UniverCity is designed to be a compact, mixed use and transit-oriented community founded on four cornerstones of sustainability: equity, economy, education and environment. UniverCity is currently home to over 2,000 residents and is planned to accommodate more than 10,000 when fully built. Visit our website or our office for more information.

## Simon Fraser Public Interest Research Group (SFPIRG)

326 Transportation Centre, 778.782.4360 Tel, 778.782.5338 Fax, [sfpirg@sfu.ca](mailto:sfpirg@sfu.ca), [www.sfpirg.ca](http://www.sfpirg.ca)

This student-based resource centre, located at the Burnaby campus, provides resources, training and support for students who are working on social and environmental justice issues.

SFPIRG offers a lounge; an alternative resource library about social justice issues; battery recycling; a bicycle fix-it space with bike tools, volunteer mechanics and cycling resources; volunteer opportunities; and skills training. Students may volunteer in the library; attend a workshop on issues such as media-skills training, participatory action research, anti-oppression and conflict resolution; or work with one of SFPIRG's action groups or projects on issues such as climate change, and the impact of the coming Olympic Games. SFPIRG's research component, called the Action Research eXchange (ARX), facilitates research partnerships between students and community groups in need of research, but without the resources to conduct it. Apply to work on a community-based project and get class credit for your research. Visit [www.sfpirg.ca/arx](http://www.sfpirg.ca/arx).

SFPIRG welcomes new volunteers to use resources, socialize, receive support for on and off campus organizing, to join a project or start one of your own. Visit the office Monday to Friday, 10:30-4:30 pm. SFPIRG has over 25 years of student organizing for a just, sustainable, and meaningful world.

## Simon Fraser Student Society

2250 Maggie Benston Student Services Centre, 778.782.3870 Tel, 778.782.5843 Fax, [www.sfss.ca](http://www.sfss.ca)

### Membership

All students are members of the Simon Fraser Student Society (SFSS), a registered not-for-profit organization that has represented Simon Fraser

University students for over 40 years. The goals of the SFSS are to unite student voices, lobby the University and government about important student issues, and to provide valuable services to its members.

### Resources

The SFSS provides resources and support to dozens of departmental student unions and clubs. Each department has its own student union so if a student enrolls in a course in any department, they are eligible for membership in that department's student union. Students may also participate in activities of the SFSS itself. As well, any student may join an SFSS club, or start one of their own.

### Representation

The SFSS supports constituency groups to ensure that all students have a voice in the student society and also the broader community. Examples of these constituencies are international students, women, First Nations, students with disabilities, and lesbian, gay, bisexual, transgendered and questioning students. The SFSS provides staff and funding for the Women's Centre ([www.sfuwomenctr.ca](http://www.sfuwomenctr.ca)) and Out on Campus ([www.outoncampus.ca](http://www.outoncampus.ca)).

### Services

The SFSS provides services such as the SFSS Copy Centre, free legal clinics, and the U-Pass program. It owns and operates food services including The Ladle, Higher Grounds coffee bar, and the Highland Pub ([www.highlandpub.ca](http://www.highlandpub.ca)).

### Events

The SFSS organizes several fun yearly events such as pancake breakfasts and Clubs Days. Event notices are printed in the free Member Handbook and Day Planner which is available at the general office.

## SFSS Health and Dental Plan

The SFSS provides undergraduate students, including international students, with an extended health and dental plan that covers many services and expenses not covered by a basic health care plan, such as prescription drugs, dental cleanings and checkups, fillings, eye exams, eyeglasses and contact lenses, visits to health practitioners, travel coverage, and more. The SFSS Health and Dental Plan does not replace basic medical coverage such as Medical Services Plan (MSP). Students must have provincial health coverage or equivalent to be eligible to use the extended health coverage provided through the student plan. For information, eligibility and enrolment instructions, contact [studentcare.net/works](mailto:studentcare.net/works) at 866.369.8795 or visit [www.ihaveaplan.ca](http://www.ihaveaplan.ca).

### British Columbia Medical Services Plan

All students should maintain the British Columbia Medical Services Plan (BC MSP) while attending Simon Fraser University. The University is not liable for any medical or dental expenses while students attend here. Students from other Canadian provinces must also obtain BC MSP and should check with their provincial medical services plan to verify the coverage that would apply until a new BC MSP card is received. Remember to bring the Care Card when accessing health services.

#### Medical Requirements

Simon Fraser University does not require a pre-admission medical examination, but does reserve the right to require a student to submit a medical certificate at any time. It is the student's responsibility to have adequate hospital and medical insurance coverage. Adequate insurance is that which is provided under the Medical Services Plan of BC, or any other plan, government or private, that provides coverage equivalent to that offered under the Medical Services Plan of BC coverage.

## 458 Academic and Campus Services

Students who seek medical treatment through either the University Health Services or off-campus medical facilities must provide evidence of medical insurance. Failure to provide adequate information will result in a direct charge for services rendered. Often BC residents take health care for granted under the MSP of BC, but those who do not have medical coverage will bear the costs, which can be expensive.

The University assumes no liability for a student's failure to maintain adequate medical or hospital (or dental) insurance, nor is the University responsible for any costs not covered by the student's personal insurance plan(s), whether it is Medical Services Plan coverage or otherwise. Questions should be directed to the Medical Services Plan of BC, telephone 604.683.7151 (toll free).

Students who are not citizens or permanent residents should contact a private insurance company for coverage during the Medical Services Plan coverage waiting period. For private medical plan information, contact SFU International, 778.782.4232.

#### International and Exchange Students

New international and exchange students who will be in British Columbia for longer than six months must apply for MSP by themselves as soon as they arrive. Application forms for British Columbia MSP are available online at [www.hlth.gov.bc.ca/msp](http://www.hlth.gov.bc.ca/msp).

There is a 90 day waiting period for BC newcomers who are eligible for the BC Medical Services Plan. This waiting period is required by the BC government to process newcomers' applications and is governed by the BC MSP Act. Before or upon arrival, apply for private temporary insurance through the Global Campus Health Insurance Plan from the David Cummings Insurance Company, or another private carrier, to insure the first three months in Canada (two full months plus the remainder of the month of BC arrival). Global Campus Health Insurance Plan forms and information are available at SFU International or online at [www.david-cummings.com/sfu](http://www.david-cummings.com/sfu). Read the policy carefully to know which services are covered.

#### Exchange and Visiting Students

Students in Canada for less than six months are not eligible for the BC Medical Services Plan and must have private temporary coverage for the entire stay in Canada. For further information, contact SFU International at 778.782.4232; [intl\\_advising@sfu.ca](mailto:intl_advising@sfu.ca); <http://students.sfu.ca/international>.

### Membership Dues

Undergraduate Student Activity Fee Breakdown	full time \$62.14	part time \$31.09
Simon Fraser Student Society membership fee	\$32.99	\$16.50
Student Society Building Fund/Capital Levy	\$15.00	\$7.50
Simon Fraser Public Interest Research Group	\$3.00	\$1.50
Peak Publication Society	\$4.90	\$2.45
CJSF — Campus Community Radio Society	\$3.75	\$1.88
Student Refugee — WUSC	\$1.00	\$0.50
First Nations Student Association	\$0.75	\$0.38
Accessibility Fund	\$0.75	\$0.38

The Simon Fraser Student Society collects term fees and levies to fulfil its responsibility to represent and service students. Each member pays a membership fee to fund projects, services and advocacy. Senior citizens are exempt from SFSS fees.

### Simon Fraser University Gallery

3004 Academic Quadrangle, 778.782.4266 Tel, 778.782.3029 Fax, [www.sfu.ca/artgallery](http://www.sfu.ca/artgallery), [gallery@sfu.ca](mailto:gallery@sfu.ca), Tuesday to Friday, 10 am – 5 pm, Saturday noon to 5 pm, free admission, [www.sfu.ca/gallery](http://www.sfu.ca/gallery)

The gallery hosts exhibitions at two sites: the main exhibition space at the Burnaby campus, and Simon Fraser University Vancouver's Teck Gallery. Exhibitions are drawn from a range of sources and serve students, faculty, staff and the public. Many exhibitions are drawn from the Greater Vancouver region and as resources allow, from other parts of the world. Yearly, the gallery hosts at least one exhibition featuring work by Simon Fraser University students or faculty and staff. The main gallery is located on the busy Academic Quadrangle's south concourse. Exhibitions, talks, discussions and lectures are free to everyone. The gallery is the custodian of the University's 5,000 piece art collection. Approximately 1,300 are currently displayed around the University, many of them in public spaces.

### Statistical Consulting Service

K10557 Shrum Science Centre, 778.782.4670 Tel, [www.stat.sfu.ca/people/consulting](http://www.stat.sfu.ca/people/consulting), [stat\\_scs@stat.sfu.ca](mailto:stat_scs@stat.sfu.ca)

This service, a component of the Department of Statistics and Actuarial Science, provides advice and assistance in the design of experiments, surveys and analysis of all manner of data to university and community clients. The service draws on the statistics expertise of faculty and graduate students. The SCS has a full-time director who is a qualified statistical consultant. A satellite service is now available on a part-time basis at the Surrey campus.

### Student Development

2000 Maggie Benston Student Services Centre, 778.782.4476 Tel, 778.782.5773 Fax, [www.sfu.ca/studentlife](http://www.sfu.ca/studentlife)

#### General Information

Student Development's friendly staff can help you find the information you need at Simon Fraser University. We'll answer your questions, and if we don't know the answer, we'll contact someone who does.

#### New Student Orientation – Discover SFU

Three times a year the centre organizes orientation programs for new undergraduate and new graduate students. Over 3,000 students attend these orientation sessions each year, and you should, too! We work closely with other Burnaby and Surrey campus services that offer specialized orientation programs such as Parent & Family, First Nations, international, and residence. For more orientation information, visit [students.sfu.ca/orientation](http://students.sfu.ca/orientation).

### Leadership Programs

Each September, we accept a cohort of students into the Simon Fraser University LEAD certificate in innovative leadership, a non-credit program for student leaders that includes workshops from leadership experts and an applied community project.

Our department also works with other university departments to enhance student leadership programs including the annual Leadership Summit and Passport to Leadership. For more leadership information, visit [students.sfu.ca/leadership/](http://students.sfu.ca/leadership/)

### University Life (ULife)

[www.sfu.ca/ulife](http://www.sfu.ca/ulife)

The ULife initiative connects you with campus life. Find out about campus events and how to organize them, review current events, or post your own on the online events calendar.

### Food Bank

The centre operates the Simon Fraser University Food Bank in conjunction with the Simon Fraser Student Society to meet the needs of its community. For information about this confidential service, visit [students.sfu.ca/studentlife/foodbank](http://students.sfu.ca/studentlife/foodbank).

### Student Learning Commons

#### Director

E. Fairey BA, MA (Br Col), MLS (Tor)

#### Learning Services Co-ordinators

D. McGee Thompson BA (S Fraser), MA (Br Col)  
K. Ricketts BA (S Fraser), MA (Br Col)  
R. Silverman BA (Carleton), LLB (Ottawa), MEd (S Fraser)

#### EAL Services Co-ordinator

T. Mossman BPE, MA (TESOL) (Br Col)

#### Yosef Wosk Student Learning Commons

Co-ordinator, Simon Fraser University Surrey  
C. Wright BFA, MEd (Br Col)

#### Writing Services Co-ordinator

R. McCallum BA, MA (Texas)

[www.learningcommons.sfu.ca](http://www.learningcommons.sfu.ca)

The Student Learning Commons (SLC) assists with academic writing, learning strategies, English language skills, and works closely with library research, computer technology assistance and other student services. SLC services include workshops, appointments, drop-in assistance, in-class presentations and online resources. In Burnaby, the SLC is located on the main floor of the Bennett Library. The Yosef Wosk SLC at Simon Fraser University Surrey is located in the library on the podium level. At Simon Fraser University Vancouver, services are located in the Belzberg Library.

# Simon Fraser University Surrey

Central City, 250–13450 102nd Avenue, Surrey, BC  
V3T 0A3, 778.782.7400 Tel, 778.782.7488 Fax,  
www.surrey.sfu.ca, surrey@sfu.ca

## Executive Director

J. Curry BComm (Manit) MBA (S Fraser)

## Facilities and Services

In September 2006, Simon Fraser University opened its expanded Surrey campus. The facility is located in Central City, an award winning architectural complex designed by architect Bing Thom, an honorary degree recipient. The campus offers 322,000 square feet of classrooms, teaching and research laboratories, library facilities, and offices.

## Amenities

The campus is located in a commercial area with many amenities — shopping, recreation, parks and restaurants — within easy walking distance. All three campuses are linked by SkyTrain.

## Information Technology (IT)

778.782.7490 Tel, 778.782.7505 Fax,  
help-surrey@sfu.ca, www.surrey.sfu.ca/itservices

Client Support and Research Services (CaRS) and Network Services (NS) provide and maintain Simon Fraser University Surrey's computing and multimedia infrastructure. In support of Surrey academic programs, CaRS manages the distributed computing facilities including instructional classrooms, computer labs, studio labs, drop-in labs, the Library's InfoCommons, tutorial and seminar spaces, and the multimedia production studios. In support of the staff, faculty and research community, CaRS provides multi-platform microcomputer and workstation hardware and software support, printing, file storage, audio-video set-up, support and consultation services. NS provides the network (wired and wireless) and core services for the campus such as firewall, IP addressing, Active Directory domain servers, computer names, distributed file store, network time, and FTP.

## Fraser Valley Real Estate Board Academic Library

778.782.7411 Tel, 778.782.7420 Fax,  
Lib-surrey@sfu.ca, www.lib.sfu.ca/about/surrey/

This library supports teaching, learning and research at the Surrey campus. Services include reference, liaison, instruction, circulation, course reserves and document delivery. The library also circulates laptop computers, digital camcorders and other media equipment for class and assignment use. The on-site collections support the Surrey campus' programs and include 18,000 books, 100 journals, DVDs, videos, CDs, CD-ROMs and games. Arrangements can be made for the delivery of items to Surrey from the Burnaby and Vancouver university libraries, thereby providing access to an additional 2.5 million titles. The library's online collection (375,000 e-books, 47,000 e-journals, 580,000 art e-images and hundreds of databases) can be accessed on the web.

## Recreational Services

778.782.8171 Tel, http://cgi.sfu.ca/~recreati/newsite/

Recreational programs at Simon Fraser University Surrey are offered in partnership with the City of

Surrey Parks and Recreation. Access is currently available to Simon Fraser University Surrey community members including students who have been accepted or approved to programs/majors specifically available at the Surrey campus. Facilities include community fitness/weight rooms, swim sessions, and non-registered aquatic and fitness programs. Students in approved Simon Fraser University Surrey programs can also participate in various intramural and fitness classes.

## SFU Bookstore

778.782.7537 Tel, srybooks@sfu.ca,  
www.sfu.ca/bookstore, Monday to Friday,  
10 am – 3 pm

The Bookstore at Simon Fraser University Surrey sells course books for all classes offered at the Surrey campus. The Bookstore also offers an assortment of insignia clothing/giftware and stationery products.

## Registrar and Information Services

778.782.7400 Tel, 778.782.7403 Fax, stserv@sfu.ca,  
http://students.surrey.sfu.ca, Monday to Friday,  
9 am – 4:30 pm

Registrar and Information Services provides

- official transcripts
- verification of enrolment
- tuition fee payments and admission deposits
- processing of some financial assistance documents
- Simon Fraser University Surrey photo ID/Library card and U-pass production
- appointment bookings for academic advising

To view other resources available to Surrey campus students, please visit <http://students.surrey.sfu.ca>

## Student Development and Programming Centre

778.782.7407 Tel, 778.782.7403 Fax,  
studentlife-surrey@sfu.ca,  
www.sfu.ca/studentlife/surrey

This centre provides students with opportunities and support for their personal and academic development, their connection to others and to the University, and their involvement in shaping the campus community. This is accomplished through the New Student Orientation and Mentorship Programs, Student Ambassador Program, and spirit building events and initiatives. The centre is staffed by the student life co-ordinator, student staff and volunteers.

## Enrollment and Recruitment Services (Surrey Campus)

778.782.7400 Tel, 778.782.7403 Fax,  
ugrad-surrey@sfu.ca, www.surrey.sfu.ca/students

Enrollment and Recruitment Services provide prospective students, parents, teachers, counsellors, advisors and the general public with information about the people, programs, and services available at Simon Fraser University and the Surrey campus. Prospective student advisors provide detailed guidance on University entrance and admission, and also co-ordinate outreach activities such as campus tours, information sessions, shadow days, open houses, and presentations for a broad range of audiences. Online resources for prospective students are available at [www.surrey.sfu.ca/students](http://www.surrey.sfu.ca/students).

## Yosef Wosk Student Learning Commons at Surrey

Room 3695, 778.782.7614 Tel, 778.782.7420 Fax,  
<http://learningcommons.sfu.ca>

The Yosef Wosk Student Learning Commons is an academic learning centre providing friendly and knowledgeable assistance with a wide range of academic topics and skills including support in writing, learning skills, and course specific software, peer tutoring, math drop-in and more. Our goal is to provide students with the strategies and tools needed for academic success.

## Learning and Instruction Development Centre

[www.lidc.sfu.ca/](http://www.lidc.sfu.ca/)

The Learning and Instructional Development Centre (LIDC) provides pedagogical, media and technical support to the University community.

LIDC includes several divisions:

- Educational Support and Innovation (ESI) assists faculties and departments with learning design, learning technology and teaching enhancement
- Media Design operates an in-house, full-service digital media studio for the Simon Fraser University Community. Projects encompass rich-media productions, websites, print communication design, video productions and photography
- Classroom and Technical Services provides, maintains and manages the inventory of audio/visual equipment to classrooms, lecture theatres and public spaces at the Burnaby and Vancouver campuses

## Research

Simon Fraser University Surrey is home to faculty and graduate students conducting research across all faculties. Notably, the campus houses labs and researchers in interactive arts and technology, mechatronic systems engineering, computing science, education, mathematics and business. Just a few of the application areas under investigation include:

- bioinformatics
- digital game development
- virtual worlds
- wireless
- tangible interfaces
- eBusiness
- education policy
- operations research
- network architecture
- visual analytics
- user centred design
- control systems
- video compression
- software optimization
- regional development and planning
- sustainable communities
- tools for digital animation

A technology manager from the University Industry Liaison Office is based at Simon Fraser University Surrey who can assist in identifying technologies or researchers to work with companies, government and non-profit agencies.

# Simon Fraser University Vancouver

515 West Hastings Street, Vancouver, BC V6B 5K3,  
778.782.5000 Tel, 778.782.5060 Fax,  
www.vancouver.sfu.ca

## Executive Director

A. Cowan BA (Tor), MA (Car)

Unless otherwise noted, programs and services are located at the address above.

The Simon Fraser University campus in downtown Vancouver now comprises the headquarters at Harbour Centre, 515 West Hastings Street, the Morris J Wosk Centre for Dialogue at 580 West Hastings Street, the School for the Contemporary Arts studios at 611 Alexander, the Segal Graduate School of Business at 500 Granville Street, and the School for the Contemporary Arts at Woodward's, 149 West Hastings Street.

## Morris J Wosk Centre for Dialogue

580 West Hastings Street, Vancouver V6B 1L6,  
778.782.5800 Tel, 778.782.5818 Fax,  
dialogue@sfu.ca, www.sfu.ca/dialogue/

The Wosk Centre for Dialogue is a dedicated, International Association of Conference Centres rated facility available for use by university, business and community clients for conferences, meetings and events. It is also the site for dialogue-based programming associated with Simon Fraser University Continuing Studies Dialogue Programs and the Academic Centre for Dialogue. The Wosk Centre brings together diverse sectors and organizations to participate in open-minded discussion that broadens perspectives and inspires participants to find collaborative solutions to complex problems.

The unique Asia Pacific Hall has circular seating for up to 154, plus advanced technology capabilities including video conferencing, webcasting, translation and production services. Its name recognizes the federal government's support and honors Canada's Year of the Asia Pacific. The restored heritage bank building, which houses 14 meeting rooms, was a gift from Allied Holdings.

## Simon Fraser University at Woodward's

149 West Hastings Street, Vancouver V6A 1N5,  
School for the Contemporary Arts 778.782.7880 Tel,  
events and facilities 778.782.5800 Tel

A new home for the School for the Contemporary Arts is under construction at the heritage Woodward's site in the heart of old Vancouver. The school's distinctive programs in contemporary music, dance, theatre, film, visual art, and art and culture studies will relocate from the Burnaby campus in 2010. With exciting new cultural facilities — theatres, screening rooms, sound studios, and galleries — Simon Fraser University's new city space will combine public events with intensive interdisciplinary training, and promises to be a magnet for art scholars, students and enthusiasts from around the world. Please call for details of the inaugural program and ticketing information.

## Segal Graduate School of Business

500 Granville Street, Vancouver, BC V6C 1W6  
Graduate Business Programs: 778.782.5013  
Events and Facilities: 778.782.5800,  
www.business.sfu.ca/segal

This is the home of Simon Fraser University Business graduate management programs and services. The building was donated by chancellor emeritus Dr. Joseph Segal and his family. Located in the heart of the financial district, the restored heritage building houses doctoral, master's, diploma, certificate and executive programs and two research centres: CMA Centre for Strategic Change and Performance Measurement and CIBC Centre for Corporate Governance and Risk Management.

Degree and diploma programs offered include:

doctor of philosophy  
master of business administration  
executive MBA  
global asset and wealth management MBA  
management of technology/biotechnology MBA  
master of financial risk management  
graduate diploma in business administration

## Student and Registrar Services

778.782.5000 Tel, 778.782.5060 Fax, 10 am – 7 pm  
Monday to Thursday, 10 am – 5 pm Friday, (reduced  
hours in effect during term breaks),  
www.vancouver.sfu.ca/misc/inforeg.html

### Manager

A. Wiseman BTh, MDiv (Heritage Sem), MA (Trin W)

The office provides a wide range of services for all Simon Fraser University Vancouver students and prospective students including, but not limited to:

- information on all programs at Simon Fraser University Vancouver
- information on courses, programs and services at the Burnaby Mountain and Surrey campuses
- information on graduate programs
- academic advising
- assistance and information on admission to, and enrolment in, undergraduate and credit-free courses
- information on distance education courses and programs
- course changes
- fee payments

The Continuing Studies catalogue of programs, courses and events, as well as brochures describing individual programs, are available at Registrar and Information Services.

## Admission and Enrolment

Enrolment in undergraduate and graduate courses is a two step process. Students must first be admitted to the University before choosing courses. Admission to the University is competitive and applications should be completed early. Consideration for admission is given for the University as a whole and is not specific to any campus. Therefore, students wishing to enrol in undergraduate or graduate courses only at the Vancouver campus must meet all the University admission requirements. For information about undergraduate or graduate admission, please see the appropriate sections of this *Calendar*.

Those who are currently students of the University can select Vancouver courses through the usual course enrolment process. For information about undergraduate course selection, see "Student Enrolment" on page 26 and for graduate information, see "Graduate General Regulations" on page 219.

Enrolment for and/or admission to most credit-free programs is on-going and continues until the program or course is full. Call Continuing Studies at 778.782.5100 for information.

## Samuel and Frances Belzberg Library

778.782.5050 Tel, 778.782.5052 Fax, 9 am – 10 pm  
Monday to Thursday, 9 am – 7 pm Friday,  
10 am – 5 pm Saturday, and 10 am – 5 pm Sunday  
(September to April) (reduced hours during term  
breaks and summer semester), www.lib.sfu.ca/about/  
belzberg

### Head

K.V. Marotz BA (S Fraser), MLS (Br Col)

Belzberg Library serves students, staff and faculty of Simon Fraser University Vancouver with a range of library services including reference assistance, loan of library material, access to course reserve items and requests for materials from the W.A.C. Bennett Library at the Burnaby campus, the Simon Fraser University Surrey library, and other academic libraries. On-line services form an essential element of this electronic library. A web-based catalogue, commercial and public databases, electronic journals, and access to library files on the campus network are all available. Quiet study space is provided in the library, and group study rooms on campus may be booked online.

The library collection supports the courses and programs offered downtown. It consists of over 14,000 books and several hundred journal titles as well as microfilm and fiche collections. In addition, students have full access to the other Simon Fraser University libraries, including almost 2.5 million items and extensive online collections at the main Bennett Library in Burnaby.

Student Learning Commons services and support for students downtown are co-ordinated through Belzberg Library. <http://learningcommons.sfu.ca>.

Library Cards: The student identification card serves as library card; it is issued to Vancouver campus students enrolled in credit courses by Registrar and Information Services. Students in credit-free courses at the Vancouver campus may request a library card from the Belzberg Library. Cards for external users are available for an annual fee.

Textbooks: All downtown credit and credit-free course textbooks are sold from a branch of the SFU Bookstore located at Simon Fraser University Vancouver.

## Academic Computing Services

### Royal Bank Instructional Computing Facility

778.782.5030 Tel, 10 am – 10 pm Monday to  
Thursday, 10 am – 7 pm Friday, 10 am – 12 noon,  
1 pm – 5 pm weekends,  
www.vancouver.sfu.ca/mecs/labs.htm

### Senior Systems Consultant

M. Jutras

The Royal Bank Instructional Computing Facility at Simon Fraser University Vancouver has five well-equipped teaching labs and a drop-in centre that may be used by Simon Fraser University students, faculty and staff in support of the academic and professional development programs offered at the downtown campus. When the teaching labs are not being used for scheduled classes or tutorials they are available for drop-in use. All users must be part of the University community and are required to have a valid Simon Fraser University computing account (e-mail account) or an authorized provisional account.

IBM Labs (North and South): 17 machines, 7th floor lab: 31 machines. All are equipped with Dell Optiplex GX 620 3.2 GHz Pentium IV microcomputers for students with one machine connected to an overhead display for use by the instructor.

Mac Annex Lab: nine Apple eMac microcomputers with Mac OS X. One Epson Perfection 1640 SU flatbed scanner, an external floppy drive, and external 250 MB zip drive also available.

#### Himie Koshevoy Publishing Lab

Located on the second floor of Simon Fraser University Vancouver, this lab has 18 Power Mac G4 microcomputers with two page color displays and CD-RW/DVD-ROM. One machine is connected to an overhead display for use by the instructor. One Epson Perfection 3200 photo flatbed scanner, an external floppy drive, and an external 250 MB zip drive are also available.

1340 Drop-in Centre: Equipped with six eMacs and 10 Dell machines with the same configuration as the other labs. This area may not be reserved.

All labs are connected to a network server, standard, large format, and color laser printer, as well as Unix and other campus network services.

## Lectures, Exhibitions and Special Events

778.782.5800 Tel, meet@sfu.ca  
www.vancouver.sfu.ca

The campus community and the general public are invited to attend the many Vancouver campus public lectures and special events. Public events are generally free but seating is limited; reservations are recommended. Please see the website for event listings. For email notification, write to maillist@sfu.ca and enter <subscribe sfuvan-info> in the subject line. For School for the Contemporary Arts programs and tickets, please call 778.782.7880.

### Teck Gallery

778.782.4266 Tel, www.sfu.ca/gallery

The Teck Gallery is located on the ground floor of Simon Fraser University Vancouver, 515 West Hastings Street, and is open during regular campus hours. The exhibitions at the Teck Gallery frequently deal with art that addresses social and environmental concerns. The Simon Fraser University Gallery located on the Burnaby campus is responsible for programming at the Teck, as well as overseeing the many artworks from the permanent collection that are displayed in the public spaces and offices at Simon Fraser University Vancouver.

## Continuing Studies

778.782.5100 Tel, 778.782.5098 Fax,  
www.sfu.ca/cstudies

Dean

(to be announced)

Continuing Studies' hallmark is the leadership role it plays in creating bridges between the University and

the community. Continuing Studies acts as a welcoming portal for the University because its programs introduce many adult, online and non-traditional learners to a university environment. Simon Fraser University offers graduate degrees, undergraduate and degree completion programs, and selected certificate programs at its Vancouver and Surrey campuses. It also offers specialized short courses, seminars, workshops and conferences developed from University and community resources.

Participants in the latter category are not required to be formally admitted to the University, although some programs have their own admission requirements. As a rule, there are no examinations and no university credit is awarded. In every other way these programs meet the high standards of university level instruction.

The University awards certificates for selected credit-free programs that have been approved by senate and meet specific criteria, including a minimum of 120 contact hours and formal evaluation.

Programs are held during the day, evening and on weekends. They are taught by faculty from the University, business, the arts and the professions.

For detailed information, or to enquire about in-house programs which can be developed for companies and organizations, see the *Continuing Studies* section, or call Continuing Studies at 778.782.5100.

## Research Institutes

The following institutes and centres are based at the Vancouver campus. Consult the Calendar index (see "Index" on page 479) to locate further details about these organizations.

- Canadian Centre for Studies in Publishing
- Centre for Applied Research in Mental Health and Addiction
- Centre for Policy Studies on Culture and Communities
- Centre for Policy Research on Science and Technology
- Centre for Public Policy Research
- Centre for Research on Violence Against Women and Children
- Centre for Sustainable Community Development
- Children's Health Policy Centre
- CIBC Centre for Corporate Governance and Risk Management
- CMA Centre for Strategic Change and Performance Measurement
- Centre for Dialogue
- Gerontology Research Centre
- Health Research and Methods Training Facility
- Human Security Report Project
- Institute for Critical Studies in Gender and Health
- Institute for the Humanities
- David See-Chai Lam Centre for International Communication
- Geraldine and Tong Louie Human Performance Centre
- PolyLab
- W.J. VanDusen BC Business Studies Institute
- 7th Floor Media

## TIME Centre

778.782.7970 Tel, www.sfu.ca/time

The Technology, Innovation, Marketing and Entrepreneurship (TIME) Ventures Incubator is a Simon Fraser University initiative to encourage and facilitate active interactions between the small and medium enterprise (SME) community, the technology community, and the Simon Fraser University community. The incubator's SME outreach program includes: SME Think Tank, TIME Business Centre, Milestones to Success; SME Seminar Series, Vancouver Greentech Exchange. The incubator also sponsors the Vancouver Angel Technology Network (VANTEC), Vancouver Enterprise Forum, New Ventures BC Competition, and the BC Technology Business Mentorship Program.

## Services

### Health and Counselling Centre

300 Simon Fraser University Vancouver,  
778.782.5200 Tel, www.students.sfu.ca/heal

The Vancouver campus' medical clinic is open Tuesday to Friday, 9:30 am to 5 pm (subject to change).

Physicians provide a full range of medical care for students, faculty and staff. Referrals are made for diagnostic tests, special health problems and surgical procedures. A counsellor is available, for students only, on Tuesdays and Wednesdays. All files are maintained in the strictest confidence. Drop in or make an appointment.

### Meeting, Event and Conference Services

1.866.619.6338 Tel, 778.782.7621 Fax

Simon Fraser University Vancouver is the ideal venue for conferences, meetings, seminars and special events, offering superb facilities and catering, innovative programming and professional event management across four unique buildings:

Simon Fraser University Vancouver, 515 West Hastings Street  
Segal Graduate School of Business, 500 Granville Street  
Morris J Wosk Centre for Dialogue, 580 West Hastings Street

### SFU Bookstore

Harbour Centre Mall, 778.782.5048 Tel,  
778.782.5219 Fax, www.sfu.ca/bookstore,  
hcbooks@sfu.ca

Hours are Monday to Friday 10 am – 6 pm, and Saturday 10 am – 5 pm.

The Bookstore at Simon Fraser University Vancouver carries course books for all classes offered at the Vancouver campus. The Bookstore also offers a broad range of general books and general giftware along with an assortment of insignia clothing/giftware, stationery, greeting cards, and magazines.

# Centres and Institutes

## BC Synchrotron Institute

Director: K.L. Kavanagh BSc (Qu), PhD (Cornell), 778.782.4244 Tel, 778.782.3765 Fax, kavanagh@sfu.ca, www.sfu.ca/vpresearch/centres+institutes/BCSynchrotron.html

The institute's members come from the University of BC, University of Victoria, Simon Fraser University, and University of Northern BC, BC companies, federal and provincial government laboratories in BC. The mandate is to inform the BC academic, industrial and government laboratory communities of opportunities through synchrotron radiation studies, particularly at the Canadian Light Source; to raise BC's profile nationally in research and development; and to assist in preparing BC funding applications for facilities and equipment from agencies such as CFI.

## Behavioural and Cognitive Neuroscience Institute

Interim Director: U. Ribary MSc, PhD (Swiss Inst Tech), LEEF Chair in Cognitive Neurosciences in Early Childhood Health and Development, 778.782.3791 Tel, 778.782.3427 Fax, urs\_ribary@sfu.ca

This institute fosters interdisciplinary research and training about the mind and body relationship. Building on world-renowned researchers who investigate behavioral, cognitive, sensory-motor, and neurophysiological phenomena, the BCNI focuses on broad topics such as attention, perception, language, memory and action. Our major emphases will be on using structural and functional brain imaging to better understand the underlying neurophysiology of cognitive human brain function, cognitive disability, neurological and psychiatric symptoms. The goal is to develop objective diagnostic procedures that translate into better pedagogical applications and specific cognitive, pharmacological and surgical interventional therapies. Some of the institute's main objectives are

- to understand the relationships between behavior, cognition and their neurobiological substrates
- to understand brain development and life-long plasticity of brain and behavior
- to understand the nature of the deficits and spared capacities that are specific to particular syndromes and developmental disorders
- to develop diagnostic markers that can be related and translated into specific cognitive pharmacological and surgical interventions
- to co-ordinate initiatives to secure world-class collaborative neuroscience research tools and facilities among BC universities and hospitals

The institute provides a matrix to further facilitate scientists working synergistically toward these and related goals across disciplines and institutions.

## Evolutionary and Behavioural Ecology Research Group

Director: B.D. Roitberg BSc (S Fraser), MSc (Br Col), PhD (Mass), 778.782.3585 Tel, 778.782.3496 Fax, roitberg@sfu.ca, www.sfu.ca/biology/berg

The research group was formally established in 1989 to pursue basic research in behavioral ecology; to maintain and develop an internationally recognized student training centre in behavioral ecology, and related areas of inquiry; and to provide a service to government, industry and others to tackle basic and applied problems in behavioral ecology through collaborative research. Members are drawn from the Departments of Biological Sciences, Psychology, and the School of Resource Management.

## Bill Reid Centre for Northwest Coast Art Studies

Director: G. Macdonald BA (Tor), PhD (Yale), LLD (Calg), OC, 604.682.3455 Tel, 604.682.3310 Fax, gmacdonald@billreidfoundation.org

The centre's objective is to promote understanding of the history and principles of Northwest Coast Indigenous art through research and connoisseurship, and to promote its application to contemporary art and design in British Columbia with special reference to the interests of Indigenous Peoples. The centre provides a meeting place for students and scholars of diverse backgrounds, and serves as a virtual access portal for Native community centres, museums and academic departments around the world.

## Canadian Centre for Studies in Publishing

Director: R.M. Lorimer BA, MA (Manit), PhD (Tor), 778.782.5240 Tel, 778.782.5239 Fax, ccsp-info@sfu.ca, www.ccsp.sfu.ca

This centre was established in 1987 to pursue the study of publishing and to serve the research and the information needs of the publishing industry. The CCSP engages in basic research into the history, management, technology and policy issues related to the industry. Projects are initiated by the CCSP and undertaken under contract to, or by means of grants from industry, government and granting agencies. The research of the CCSP involves faculty, graduate students and independent researchers from a variety of disciplines. From time to time, the CCSP publishes monographs and reports on the theory and practice of publishing and sponsors seminars, conferences and professional development courses.

### Centre for Applied Research in Mental Health and Addiction

Director: J. Somers BA (S Fraser), MSc, PhD (Wash), 778.782.5148 Tel, 778.782.7768 Fax, info@carmha.ca, www.carmha.ca

CARMHA develops knowledge and practices that enhance the effectiveness, efficiency, and quality of mental health and addiction resources. It promotes innovation, accountability, and inclusiveness to improve mental health and reduce substance use problems. Recent major projects focus on housing, telehealth, primary healthcare, corrections population, workplace mental health, Aboriginal people within the justice system, assertive community treatment, cognitive behavioral therapy, dementia and identifying gaps in mental health and addictions services.

### Centre for Coastal Studies

Director: P. Gallagher BSc, BEd (Br Col), PhD (S Fraser), 778.782.4653 Tel, 778.782.3851 Fax, patricia\_gallagher@sfu.ca, www.sfu.ca/cstudies/science/coastal.htm

The centre promotes interdisciplinary research, education and dialogue about Canada's coastal ecosystems, particularly in British Columbia. By linking social and natural science with local knowledge, the centre focuses on marine conservation, diversification of coastal economies, and capacity for resource management. Activities include collaborative research involving universities, industry, communities, First Nations, NFOs and governments; public education; programs and projects that enhance capacity building and information sharing. The centre's meeting and office space are provided for interdisciplinary networking and a location for visiting researchers.

### Centre for Comparative Study of Muslim Societies and Cultures

Director: D.N. MacLean BA (NY State), MA, PhD (McG), 778.782.4437 Tel, 778.782.5837 Fax, ccsmsc@sfu.ca, www.sfu.ca/ccsmsc

The centre facilitates the academic discussion and public understanding of the cultures and societies of past and present Muslim peoples. By focussing on diversity, the centre encourages the shift in analysis from a single religious ideascap defined by Islam to a more complex view of Muslims as agents in the construction of their own history. It sponsors Muslim studies conferences, workshops, public lectures, visiting scholars, international exchange, library augmentation, and language acquisition.

### Centre d'études Québec-Pacifique

Director: C. Guilbault BA, MA (Laval), PhD (Alta), 778.782.6783 Tel, 778.782.5932 Fax, guilbault@sfu.ca, www.sfu.ca/french/cefqp.html

This is a research and documentation centre for gathering and disseminating information relating to French literature, culture and language of the Pacific region, as well as interdisciplinary research in literature, sociolinguistics, cinema and culture. It supports and sponsors conferences, colloquia and visiting speakers. As the only research centre of its kind west of the Rockies, it's activities and programs focus on the distinct culture of BC and Pacific Rim French speakers. It also acts as a liaison between the Centre d'études Québécoises (CETUQ) of the University of Montreal and the Pacific Region.

### Centre for Dialogue

Director: M.L. Winston BSc, MA (Boston), PhD (Kansas), 778.782.7894 Tel, 778.782.7892 Fax, dialogue-info@sfu.ca, www.sfu.ca/dialogue

Established in March 2002, the centre promotes dialogue inside and outside the University through

applied, theoretical, and collaborative research, education and professional development and teaching. It brings together community leaders and organizations, faculty members from Simon Fraser University and beyond, and undergraduate and graduate students to explore dialogue as a discipline and its application in solving complex problems. The centre focuses on the relationship of dialogue and negotiation, on dialogue around foreign affairs issues such as war, environment, trade and immigration, on responding to local communities' needs for specific kinds of dialogue, first to relieve rising tensions and then to open possibilities of changing relationships. Within British Columbia, dialogues about the relationship of aboriginal and non-aboriginal futures are of continuing interest. The centre is guided by the Centre for Dialogue steering committee and is currently chaired by M. Winston, Director, Undergraduate Semester in Dialogue; Fellow, Morris J. Wosk Centre for Dialogue; Professor, Department of Biological Sciences.

### Centre for Disability Independence Research and Education

Director: J.A. Hoffer BS (Mudd), PhD (Johns H), 778.782.3141 Tel, 778.782.3040 Fax, cdire@sfu.ca, www.sfu.ca/cdire

This centre provides a site where persons with physical disabilities can meet with researchers and jointly analyze, conceive, develop and test innovative solutions for improved performance of activities of daily living and for other unmet needs. This unique setting encourages participation and knowledge transfer by people with physical disabilities, researchers, undergraduate and graduate students, educators, clinicians and health professionals from British Columbia and beyond.

### The Centre for Education, Law and Society

Director: W. Cassidy BA, MEd (S Fraser), PhD (Chic), 778.782.4484/4203 Tel, cassidy@sfu.ca, www.cels.sfu.ca, www.lawconnection.ca (website for teachers)

The centre was established in 1984 and given formal approval by the Board of Governors in 1994. Its central purpose is to improve the legal literacy of children and young adults through a program of research, teaching, curriculum development, and community initiatives. Law-related education encompasses: an understanding of law, its role in society and impact on the individual; the relationship between law and governance/citizenship/democracy; issues relating to social justice and fundamental human rights; conflict and dispute resolution; school law, policies, procedures and culture. CELS works primarily with teachers and prospective teachers, school administrators, and educational and legal organizations to help fulfil its mandate. Projects include: research into cyber-bullying; support for a school for high risk youth; investigating the ethics of care and justice in school settings; inquiry into aboriginal knowledge and perspectives in education; case studies on environmental law; a website for teachers on current legal issues; assessing students' understanding of human rights, citizenship, identity and sustainability. Projects vary from year to year, depending on the needs of the educational community, the centre's priorities, and the ability to obtain external funding. Three undergraduate courses and one graduate course in law education have been developed and are offered on a regular basis through the Faculty of Education. The three undergraduate courses also are available through the Centre for Online and Distance Education. The centre attracts a number of graduate students interested in human rights, social justice, citizenship education, the ethics of care, and school culture.

### Centre for Education Research and Policy

Director: J. Friesen BA (Br Col), MA, PhD (Tor), 778.782.4575 Tel, 778.782.5336 Fax, kowallis@sfu.ca, www.sfu.ca/~cerp

This centre (CERP) co-ordinates the activities of interdisciplinary researchers who are interested in education policy in British Columbia. The centre examines the academic consequences of various aspects of education policy, including assessment and accountability frameworks, school and program choice, and funding levels. In addition to looking at academic outcomes, the centre measures the effects of these policies on geographic segregation, social interactions and inter-group attitudes, and will emphasize the interactions between distinct ethnic and linguistic groups, including off-reserve aboriginal students and communities.

CERP includes social scientists from economics, education, psychology and public policy who have expertise in quantitative, qualitative and experimental methods. CERP is committed to working in partnership with students, parents, educators, administrators and community organizations province-wide to generate high-quality research that informs and enriches public debates about education policy, locally, nationally and internationally.

### Centre for Experimental and Constructive Mathematics

Director: M.B. Monagan BSc (Massey), MMath, PhD (Wat), 778.782.5617/4279 Tel, 778.782.5614/4947 Fax, mmonagan@cecm.sfu.ca, www.cecm.sfu.ca

The centre furthers research and graduate education in computation in the mathematical sciences.

The centre's activities include: participation in the training of graduate students in experimental and computational mathematics; provision of post doctoral fellowships in areas related to experimental and constructive mathematics; sponsorship of regular short term and long term research visitors to the centre; organization of regular colloquia and occasional conferences on advances in experimental and computational mathematics; providing access to computing resources and mathematical software packages (currently Maple and Magma); provision of tutorials and consulting assistance for faculty and graduate students at Simon Fraser University in the use of the centre's software and other computer algebra systems; establishment, development and maintenance of accessible software archives; collaboration with similar centres and appropriate individuals at other Canadian and foreign universities. Such collaboration may include co-sponsorship of speakers, workshops and visitors, joint application for external research funds, exchange of software and expertise, establishment of a Canadian mathematical computation network.

Subject to the director's approval, membership is open to Simon Fraser University faculty, and post-doctoral and graduate students who are active in mathematical computing. Associate membership will be available to faculty at other universities.

### Centre for Forensic Research

Co-directors: M.F. Skinner BA (Alta), PhD (Camb), 778.782.4171 Tel, 448.782.5666 Fax, mskinner@sfu.ca, G.S. Anderson BSc (Man), MPM, PhD (S Fraser), 778.782.3589 Tel, gail\_anderson@sfu.ca

This centre is designed to create new knowledge in the forensic sciences to solve crimes, identify human remains, determine elapsed time since death and circumstances of death on local and global scales. The core researchers specialize in entomology, bone chemistry, anthropology, DNA and botany. The centre is designed to attract researchers and students

internationally who seek a facility with well-equipped, secure laboratories and experienced colleagues to create new research initiatives arising from the challenge of cold cases, recent deaths and large scale mass disasters. The centre serves the research and day-to-day needs of law enforcement and death investigation agencies nationally and provincially. The services and product of the centre are available to all who seek an independent forensic scientific opinion.

### Centre for Global Political Economy

Director: S. McBride BSc (Lond), MA, PhD (McM), 778.782.4375 Tel, 778.782.4786 Fax, cgpe@sfu.ca, www.sfu.ca/cgpe

This centre is housed in the Department of Political Science, and involves faculty from other Simon Fraser University units to provide a focus in the field of global political economy and to win a position as an international centre for such research. This will be accomplished through external grants, high quality publications and a variety of other activities.

### Centre for Imaginative Education

Director: M. Fettes MA (Camb), MSc (Br Col), PhD (Tor), 778.782.4479 Tel, mffettes@sfu.ca

This centre seeks to nurture a new way of thinking about and practicing education, for institutions, individuals, and communities. Drawing on leading-edge research into the ways in which understanding develops, for individuals and cultures, the centre works with educators of all kinds to engage a greater range of emotions and cognitive abilities in the processes of teaching and learning. Among other outcomes of this approach, learning environments can become more inclusive and exciting places, learners gain a deeper, more lasting, and more flexible grasp of subject matter, and educators develop new skills, energy, and inspiration.

The centre co-ordinates both the Imaginative Education Research Group at Simon Fraser University, and the International Research Network on Imaginative Education, which involves researchers around the world. It also provides publications, workshops, and other materials and services to educators in the field.

### Centre for International Studies

Director: J. Harriss BA, MA (Camb), PhD (E Anglia), 778.782.7898 Tel, 778.782.7837 Fax, jharriss@sfu.ca

The centre provides a setting for students, faculty, and community members to explore the global issues in today's increasingly complex, inter-dependent and rapidly changing world. Through a comprehensive, rigorous, and focused program of studies, research efforts, and dialogue, the centre examines the most pressing international issues confronting the members of the global community. The centre's programs will explore the character and causation of various global problems, examine how such issues have been manifest in diverse regional and cultural settings, and evaluate the alternative policies that have been offered to manage or resolve existing global challenges.

While focused on the important task of analyzing and responding to challenges of the current global situation, the centre will offer practical training for the solution of major problems within and across societies, as well as developing toleration and understanding among diverse cultures.

Thus, in addition to providing a solid academic basis for the analysis of international affairs, the centre will offer exposure to a global network that links students, citizens, policy makers, members of non-governmental organizations, and academic specialists.

### Centre for Labour Studies

Director: M. Leier BA, MA (S Fraser), PhD (Nfld), 778.782.5827 Tel, 778.782.5837 Fax, tessaw@sfu.ca, www.sfu.ca/labour

The centre promotes the study and understanding of labor, working people, and their organizations from a comprehensive social, cultural, historical, political and economic perspective. The centre aims to provide a range of taught courses and programs (both credit and non-credit), offer research opportunities and assistance to both Simon Fraser University students and provincial labor organizations, and create mutually supportive and beneficial links between the academic and labour communities.

### Centre for Natural Hazards Research

Director: J.J. Clague, BA (Occidental), MSc (Calif), PhD (Br Col), PGeo, Canada Research Chair in Natural Hazards, 778.782.4924 Tel, 778.782.4198 Fax, jclague@sfu.ca, www.sfu.ca/cnhr

The Centre for Natural Hazards Research (CNHR) is an interdisciplinary and multi-departmental research facility within the Department of Earth Sciences at Simon Fraser University. CNHR conducts research on natural geophysical processes that pose a hazard to Canadians, including earthquakes, tsunamis, landslides, floods, and the impacts of climate change on the landscape and ecosystems. It is grounded in the physical sciences but conducts social and policy research on risk perception. CNHR provides graduate students with training and skills in a range of disciplines required for careers in government, academic institutions, and the private sector.

### Centre for Operations Research and Decision Sciences

Director: A. Punnen BSc (Kerala), MSc (Kanpur), PhD (IIT Kanpur), 778.782.7611/7488 Tel, 778.782.7485 Fax, apunnen@sfu.ca

This centre (CORDS) is located at Simon Fraser University Surrey. With more than 15 members from various departments such as mathematics, computing science, business, resource and environmental management, it focuses on research activities in the area of operations research — the science of optimal decision-making. Members undertake various applied research projects.

### Centre for Policy Research on Science and Technology (CPROST)

Director: R.K. Smith BA (Car), MA, PhD (S Fraser), 778.782.5116 Tel, 778.782.5239 Fax, smith@sfu.ca, www.sfu.ca/cprost

CPROST was established in 1988. Its primary research is the relationship between public policy and management of technology. The centre brings together practitioners and scholars to study the interaction of advances in science and technology, its implementation in the marketplace, and the impact on community and individual interests.

### Centre for Policy Studies on Culture and Communities

Co-directors: A.C.M. Beale BA, MA, PhD (McG), 778.782.5160 Tel, 778.782.5239 Fax, beale@sfu.ca, C.A. Murray BA, MA (Wat), PhD (Qu), 778.782.5322 Tel, 778.782.5239 Fax, murraye@sfu.ca

This centre promotes teaching, research and public outreach on cultural politics, policy and planning in communities from the local to the global, and how these support cultural practices in communities that contribute to sustainability and an inclusive society.

The centre promotes studies of policy not restricted to governments or public administration, but addressing the interaction of networks of voluntary, not-for-profit,

neighbourhood and virtual community citizen-based initiatives as well as all levels of government, private foundations, and knowledge creators and disseminators.

In 2007-2008 the centre's major research project is the 'Centre of Expertise on Culture and Communities,' a project funded by Infrastructure Canada. The project website is www.cultureandcommunities.ca

### Centre for Public Policy Research

Director: N.D. Olewiler BA (Col), MA (S Fraser), PhD (Br Col), 778.782.5289 Tel, 778.782.5288 Fax, mpp@sfu.ca, www.sfu.ca/mpp

The purpose of the centre is to promote interdisciplinary research, education, and dialogue on a broad range of public policy issues in Canada. The Centre supports and initiates research, publications, colloquia, conferences, visiting researchers and speakers, and international relationships. It is the research arm of the Public Policy Program at Simon Fraser University, complementing the master in public policy graduate degree program.

### Centre for the Reduction of Violence Among Children and Youth

Director: (to be announced)

The centre was approved by the Board of Governors on September 20, 2007. Some main objectives are to:

- inform public policy regarding pathways to violent behaviour and provide public policy recommendations or the effective allocation of limited resources
- establish training in effective and evidence-based interventions for youth and families in collaboration with stakeholders including schools, law enforcement, community, provincial and federal government ministries and other organizations
- integrate basic scientific research on risk and protective factors for violence from across Canada and abroad
- attract other researchers and funding to this important issue
- develop greater research capacity at Simon Fraser University, and increase its dissemination through publications of scientific research papers and monographs
- demonstrate the social and economic benefits of these strategies
- strengthen the knowledge economy by hosting international conferences on youth violence

### Centre for Research on Adaptive Behaviour in Economics (CRABE)

Director: J. Arifovic BA (Sarajevo), MA, PhD (Chic), 778.782.5603 Tel, 778.782.5944 Fax, arifovic@sfu.ca, www.sfu.ca/crabe

The centre's activities and program are intended to initiate and promote research related to experimental and behavioural economics, and computational methods of the study of learning, adaptation and evolution in economic environments. The centre will facilitate the conduct of faculty and student research projects by providing infrastructure for computer simulations, economic experiments with human subjects and survey studies. The centre will also organize conferences, colloquia, visiting speakers' seminar series, and visiting scholar programs.

### Centre for Restorative Justice

Co-directors: E. Elliott, BPE (Ott), MSW (Car), PhD (S Fraser), 778.291.4730 Tel, 778.782.4140 Fax, B. Morrison, BA, PhD (ANU), 778.782.7627 Tel, 778.782.4140 Fax, cfjr@sfu.ca, www.sfu.ca/cfrj

The centre, in partnership with individuals, the community, justice agencies and Simon Fraser

University exists to support and promote the principles and practices of restorative justice. The centre provides education, innovative program models, training, evaluation and research through a resource centre and meeting place that facilitates outreach, promotion, dialogue and advocacy.

### Centre for Scientific Computing

Director: R.D. Russell BS, BA, MA, PhD (New Mexico), 778.782.4819 Tel, 778.782.4947 Fax, rdr@cs.sfu.ca, <http://csc.sfu.ca>

Motivated by the expanding role of scientific computation and mathematical modeling in science and engineering, the centre brings together interdisciplinary research teams from various Simon Fraser University faculties. It provides Simon Fraser University with a visible focus for computational research both on campus and in the wider Pacific Rim research community. Specifically, the centre's goals are to facilitate discussion between scientific computing research groups (through seminars, workshops, conferences) to provide advanced instruction in computational techniques and applications (through graduate and post-doctoral programs), and to actively pursue joint research ventures with industry, government and laboratories.

### Centre for Scottish Studies

Director: L. Davis BA (Sask), MA, PhD (Calif), 778.783.4833 Tel, 778.783.5737 Fax, leith@sfu.ca, [www.sfu.ca/scottish](http://www.sfu.ca/scottish)

The centre's activities and programs promote teaching, research and community programming in Scottish studies. It supports and initiates research, publications, non-credit and credit instruction, colloquia, conferences, visiting speakers and international relationships. In the pursuit of these objectives, the centre provides support to existing individual, departmental and cross-departmental activities at Simon Fraser University in the area of Scottish studies.

### Centre for Studies in Global Asset and Wealth Management

Director: P.C. Klein BSc, LLB, MBA (WOnt), PhD (Tor), 778.782.7962 Tel, 778.782.5122 Fax, gawm@sfu.ca, [www.sfbusiness.ca/gawm](http://www.sfbusiness.ca/gawm)

The centre, which was approved by the Board of Governors on January 25, 2007, will focus on two fundamental issues with respect to financial investing. First is to address the growing need to research and assess global financial markets. Affiliated with the school's global asset and wealth management MBA program, this centre's mandate is to develop a better understanding of the ever-increasing array of global investment instruments and their suitability as client investment opportunities. The centre will complement the school's markets research and trading room, where faculty and students can use the latest technologies to access global stock exchanges and on-line financial databases to explore and evaluate the details of particular investment strategies. Increasingly we see the creation of new asset classes, such as hedge funds and boutique investments. Evaluating these new instruments, posing new instruments, and maximizing investment alternatives will be central activities of this new centre. Secondly, the centre will develop research expertise with respect to the development of investment policies to better guide advice that is given to investors. More and more investors have invested in a broad array of investment opportunities, many of which are truly global. Such investors often must deal with highly specialized issues such as complex taxation consideration, large accrued capital gains and multi-generational concerns, situations in which simple investment structures are clearly not sufficient.

What is needed are investment policies that more appropriately reflect such individualistic situations, rather than policies reflected in current investment planning, focusing on an average, stereotypical investor wherein decisions come down to selecting a debt/equity mix and little else.

The centre will marshal the academic resources for undertaking such advanced research and analytical capabilities. These academic resources would include researchers affiliated with the centre, visiting research fellows, and an affiliated PhD stream, as well as inter-institutional research linkages.

### Centre for Studies in Print and Media Cultures

Director: E.A. Schellenberg, BEd, BA (Winn), MA, PhD (Ott), 778.782.3095 Tel, 778.782.5737 Fax, schellen@sfu.ca, [www.sfu.ca/~mevorton/cspmc.htm](http://www.sfu.ca/~mevorton/cspmc.htm)

This centre was established to encourage cross-disciplinary research and exchange in the fields of print culture, media cultures in general communications technologies, the arts, and the public sphere. Current faculty members of the centre are from the departments and schools of communication, contemporary arts, English, history, interactive arts and technology, linguistics, the library, and political science. We welcome anyone in related areas of research to join us.

### Centre for the Study of Educational Leadership and Policy

Director: D.A. Laitsch BA (VPI&SU), MEd (Virginia), PhD (American DC), 778.782.7589 Tel, 778.782.8119 Fax, dlaitsch@sfu.ca, <http://www.cselp.ca>

CSELP focuses on research that supports the advancement and improvement of K-12 and post-secondary education in British Columbia. The centre's mission is to use a variety of academic and distributive resources to expand the public policy knowledge base and its role in developing leadership capacity. The centre strengthens communicative networks between researchers, policy makers, practitioners and the public to increase the power of research to inform the work of each constituent group. CSELP seeks to become the premier source for ideas, resources, and practices in educational leadership and policy in BC and Canada.

### Centre for Sustainable Community Development

Director: M.L. Roseland, BA, MA (Wesleyan, Conn), PhD (Br Col), 2100 East Academic Annex, 778.782.5849 Tel, 778.782.5473 Fax, cedadmin@sfu.ca, [www.sfu.ca/cscd](http://www.sfu.ca/cscd)

Sustainable community development integrates economic, social and environmental objectives in community development. Sustainable community development is based on a consideration of the relationship between economic factors and other community elements such as housing, education, the natural environment, health, accessibility and the arts. SCD has emerged as a compelling alternative to conventional approaches to development, a participatory, holistic and inclusive process that leads to positive, concrete changes in communities by creating employment reducing poverty, restoring the health of the natural environment, stabilizing local economies, and increasing community control.

Simon Fraser University's Centre for Sustainable Community Development (CSCD), formerly the Community Economic Development Centre, was founded in 1989. The centre's mission is to support the sustainable development of communities through education, research and community mobilization. It provides research, training and advisory services

throughout BC and Canada as well as internationally. The CSCD offers an undergraduate certificate and post-baccalaureate diploma (also available through distance education), graduate support, and a non-credit professional program.

### Centre for Tourism Policy and Research

Director: P.W. Williams BA (Ott), MA (Wat), PhD (Utah State), 778.782.3103 Tel, 778.782.4968 Fax, peter\_williams@sfu.ca, [www.sfu.ca/~dossa](http://www.sfu.ca/~dossa)

This centre is housed within the School of Resource and Environmental Management. The school plays a leading role in managing the operation of the centre. The centre provides academic counsel to graduate students, supports the delivery of professional development seminars and workshops, and conducts tourism policy and planning research projects for public and private sector tourism organizations.

### Centre for Wildlife Ecology

Director: R.C. Ydenberg BSc (S Fraser), DPhil (Oxf), 778.782.4282 Tel, 778.782.3496 Fax, constans@sfu.ca, [www.sfu.ca/biology/wildberg](http://www.sfu.ca/biology/wildberg)

The centre fosters high quality, graduate training and research, conducts basic and applied research in wildlife ecology, and provides knowledge and personnel that will help Environment Canada and other agencies meet conservation challenges in the 21st century. The central concept is to foster synergy between mission-oriented research and management policies of the Canadian Wildlife Service and the basic research agenda of Simon Fraser University.

### Chemical Ecology Research Group (CERG)

Director: G.J. Gries Diplom, PhD (Gött), 778.782.4392 Tel, 778.782.3496 Fax, gries@sfu.ca, [www.sfu.ca/chemistry/Research/cERG.html](http://www.sfu.ca/chemistry/Research/cERG.html)

This association of research groups, established in 1981 as a regional graduate and post graduate chemical ecology training centre, offers a service to government and industry; to isolate, identify and synthesize semiochemicals; to clone, express and study enzymes involved in the perception and biosynthesis of semiochemicals; to study interactions between organisms mediated by semiochemicals; and to develop practical semiochemicals applications.

### Children's Health Policy Centre

Director: C. Waddell BSc, MSc (Br Col), MD (McM), 778.782.7769 Tel, 778.782.7777 Fax, chpcom@sfu.ca, [www.childhealthpolicy.sfu.ca](http://www.childhealthpolicy.sfu.ca)

Located in the Faculty of Health Sciences at Simon Fraser University, we are an interdisciplinary research group dedicated to integrating research and policy to improve children's health. We primarily focus on children's social and emotional development, or children's mental health, as one of the most important investments that any society can make.

We conduct research on the policy process and research relevant to inform policy-making: addressing determinants of health; preventing problems in children at risk; promoting effective programs and services; and monitoring our collective progress towards improving the lives of all children. Reciprocal relationships with government and community groups in turn inform our research.

We provide education in health policy, children's mental health and population health. As well, we provide service: to the research community in the form of consultation on the policy process; and to the wider community in the form of consultation to government and public advocacy groups concerned with children's health. Our work supports and complements the vision of the Faculty of Health Sciences to integrate research and policy for public and population health locally, nationally and globally.

### CIBC Centre for Corporate Governance and Risk Management

Director: M. Parent BCom, MBA, PhD (Qu),  
778.782.5214 Tel, 778.782.5153 Fax,  
mparent@sfu.ca, www.sfu.ca/cibc-centre

The centre provides innovative, interdisciplinary and collaborative research on current topics and issues in corporate governance and risk management. The centre's mandate focuses on the nature and effects of good corporate governance and the relationship between corporate governance and strategic, financial, technical, ethical and social risk. The centre facilitates and disseminates research through its own research program including the research of its director, executive director, fellows and research associates. The centre also has a mandate to engage relevant stakeholders through seminars, public dialogues, conferences, visiting scholars and the centre's website. The centre has an international rather than only national focus. In executing on this mandate, the centre fosters national and international collaboration among various scholars and practitioners in the area of corporate governance stakeholders including other academic centres dealing with corporate governance and risk management issues.

### CMA Centre for Strategic Change and Performance Measurement

Director: T.B. Lawrence BComm, PhD (Alta),  
778.782.5154 Tel, 778.782.5153 Fax,  
tom\_lawrence@sfu.ca, www.sfu.ca/cma-centre

The purpose of the centre is to promote research and knowledge dissemination about how organizations plan and execute strategic change, and how best to measure the performance of organizations undergoing such change. Funded by the Certified Management Accountants (CMA) of Canada, the centre will conduct research into three broad yet highly interrelated themes: strategic change and the execution of strategic change, appropriate measurements for the evaluation of the performance of such changes, the evolution of organizations undergoing rapid change.

### Co-operative Resource Management Institute

Director: A.S. Harestad BSc, MSc, PhD (Br Col),  
778.782.4809 Tel, 778.782.4968 Fax,  
dallaway@sfu.ca, www.rem.sfu.ca/crmi

This institute on the Burnaby campus, houses personnel from natural resource management agencies. It facilitates solutions to difficult multidisciplinary issues in resource management by providing an environment where personnel from different management agencies such as forestry, fisheries, and wildlife can work side-by-side along with Simon Fraser University faculty, graduate students, post-doctoral fellows, and research associates on a daily basis. The university benefits from greater concentration of expertise in resource management on campus and from new opportunities for multidisciplinary, collaborative research programs.

### Criminology Research Centre

Director: W.G. Glackman BA (Calif), MA,  
PhD (S Fraser), 778.782.5352/4041 Tel,  
778.782.4140 Fax, crc@sfu.ca, www.sfu.ca/crc

This centre was established in 1978 to facilitate criminological research by faculty and graduate students. Funds to establish and maintain the centre were provided by the Solicitor General of Canada for the first 15 years of operation. Since then, grants and contracts obtained by School of Criminology faculty from provincial, federal and private sources have maintained the centre at a minimal level. Currently, the centre operates largely as an administrative unit for external funding received by faculty of the school.

Funding for the administrator's salary is derived from these sources. As well, a modest library is maintained for the Simon Fraser University community.

### David See-Chai Lam Centre for International Communication

Director: T.A. Perry BA (Wabash), PhD (Indiana),  
778.782.3913 Tel, 778.782.5112 Fax,  
dlam-info@sfu.ca, www.cic.sfu.ca

This interdisciplinary centre, which began in 1989, integrates university, government, professional and business resources for research, education, development and community outreach. It focuses on international, intercultural, and interlingual communication in Canada and overseas, with emphasis on the people and institutions of the Pacific Rim. Activities include international and intercultural communication research and development projects, Chinese, Japanese and other East Asian culture, language and communication courses, cross-cultural management and communication seminars, and the Pacific Region Forum on Business and Management Communication.

### David Wheeler Institute for Research in Mathematics Education

Co-directors: S.R. Campbell, P. Liljedahl, N. Sinclair,  
R. Zazkis, 778.782.3662/4370 Tel, zazkis@sfu.ca

This Simon Fraser University research group integrates humanistic and scientific approaches in different areas related to mathematics education. The institute's mission is to generate and share knowledge about acquiring mathematical literacy and understanding at all ages and to advance humanity by enriching the lives and options of learners. Current research projects focus on mathematics teacher education in both cognitive and affective domains, on mathematical anxiety, on aesthetics of mathematical experience, and on uses of computer technology that promote learning and teaching.

The centre also advances knowledge about the learning of mathematics, and situating this knowledge within the lived experiences of learners by drawing on international expertise in a variety of research initiatives. Through community outreach in real world settings, we promote effective change that meets the needs of students, teachers, parents, and the community. Our outreach programs provide a platform for conducting classroom research and for implementing research results in practice through ongoing collaboration among researchers and teachers and school districts, as well as the creation of partnerships with families, administrators, and policy makers who will benefit from our research.

### Feminist Institute for Studies on Law and Society

Co-directors: D.E. Chunn BA (Br Col), MA, PhD (Tor),  
778.782.4761 Tel, chunn@sfu.ca, W. Chan BA (Car),  
MA (Sheff), PhD (Camb), 778.782.4761/4469 Tel,  
778.782.5799 Fax, fisl@sfcu.ca

Established in 1990, this Simon Fraser University institute facilitates and continues the development of feminist analyses on law and society; facilitates creative interaction among scholars and community representatives who are involved in its work locally, nationally and internationally; and bridges gaps between legal and social science research.

### 4D LABS

Executive Director: N.R. Branda, BSc, PhD (MIT),  
778.782.8158 Tel, 778.782.3765 Fax,  
info@4dlabs.ca, www.4dlabs.ca

4D LABS was formed to foster fundamental university research in the areas of advanced materials and nano-scale devices. A multidisciplinary team of leading researchers will work to design, develop and

demonstrate prototype devices that can lead to major advances in information and health technologies.

4D LABS integrates an international research team of chemists, physicists and engineers with expertise in nanomaterials engineering and devices. This team leads the transformation from traditional electronic information processing systems to new technology platforms. Each team member is internationally recognized and has a proven track record. Team specializations include functional molecules, functional solid state materials, surface chemistry and modification, electrochemistry, fabrication methods, lithography, polymers, biomaterials, materials characterization, theoretical chemistry and physics.

### Gerontology Research Centre

Director: A. Sixsmith BA, MA (Keele), PhD (Lond),  
778.782.5065 Tel, 778.782.5375 Fax, gero@sfu.ca,  
www.sfu.ca/grc

Established in 1982, the centre promotes and conducts innovative interdisciplinary research on topics relating to individual and population aging, serves as an information clearing house, and provides consultation and technical assistance to the academic community, government, public and private organizations. The centre houses a specialized collection of research materials, maintains an active publications program, organizes workshops and conferences, and is a contributing member of two inter-university research consortia. Research activities focus on applied gerontology with concentrations in: aging and the built environment; health promotion/population health and aging; prevention of victimization and exploitation of older persons; changing demography and lifestyles; and culture and aging. The associated Department of Gerontology offers a post baccalaureate diploma in gerontology, a minor, and a master of arts degree and a PhD degree.

### Institute for Canadian Urban Research Studies

Director: P.L. Brantingham AB (Col), MA (Fordham),  
MSP, PhD (Florida State), 778.782.3515 Tel,  
778.782.4140 Fax, pbrant@sfu.ca

The institute is intended to further multidisciplinary research on urban issues. Its objectives are: to provide a focus for research about urban problems and issues in Canada; to promote interdisciplinary collaboration and research; to provide an institutional focus for international scholarship concerning urban problems; to provide a facility in which data for the study of urban problems can be collected, catalogued, and made readily accessible through modern data management; to provide a facility in which research and techniques can be made available to those having a responsibility for policy.

The focus has evolved into an emphasis on public urban safety and security as well as vulnerability and risk. This focus is supported with memoranda of understanding (MOU) between Simon Fraser University and several government ministries. The primary university/government MOU is with the Ministry of Public Safety and the Solicitor General including a formal research protocol with "E" Division of the RCMP. Under this MOU, ICURS engages in developing innovative and evidence-based approaches to advancing public safety research in general and crime reduction in particular.

### Institute for Critical Studies in Gender and Health (ICSGH)

Co-directors: O.A. Hankivsky BA (Tor), MA,  
PhD (WOnt), 778.782.5182 Tel, M.H. Morrow BA  
(Br Col), MA, PhD (Tor), 778.782.6906 Tel,  
778.782.5288 Fax, oah@sfu.ca/mmorrow@sfu.ca,  
www.sfu.ca/~icsgh/

This institute anchors a vibrant interdisciplinary community of over 30 scholars, researchers and students. Its objectives and foci support the University's strategic research plan in the areas of i) health, genomics and physiological sciences and ii) history, culture, social relations and behavior. The ICSGH complements the Faculty of Health Sciences and the Institute for Health Research and Education, which seek to integrate social and natural science research with population outcomes, societal application, and policy analysis. The ICSGH will also play a key role in the Faculty of Arts and Social Sciences which has identified health and public policy as a priority research area.

Each year, the institute will identify a key research area that will be supported through seminars devoted to directed readings, public lectures, and an annual conference. Annual conferences will bring together local, national and international scholars, activists, and practitioners from a number of disciplines and areas of research to consider conceptual and practical issues related to the institute's research mandate. Conferences will provide opportunities for discussion and debate, the development of intellectual networks and collaborative partnerships, and the chance to produce new and original research.

### Institute of Governance Studies

Director: P.J. Smith BA, MA (McM), PhD (Lond), 778.782.3088 Tel, 778.782.4293 Fax, igs@sfu.ca, psmith@sfu.ca, www.sfu.ca/igs

This institute furthers research on governance issues. Specifically, its objectives will include the following.

- to provide research focus on Canadian governance at the municipal, regional/metropolitan, provincial and federal levels, in comparative domestic and aboriginal systems and in the emerging global order
- to promote collaboration and research on issues of governance among scholars in a variety of disciplines located at Simon Fraser University
- to promote an institutional focus for international scholarship concerning issues of governance.
- to provide a forum within the Vancouver metropolis, BC and Canada to present and disseminate research and ideas about governance issues
- to provide a facility in which data for the study of contemporary governance and related public policy can be collected, catalogued and made accessible through data management and exchange
- to provide a facility in which research and techniques are available for exchange with those having responsibility for contemporary governance

### Institute for the Humanities

Director: A.M. Feenberg-Dibon Licence d'Anglais, Diplôme d'Etudes Supérieures (Sorbonne), PhD (Calif), 778.782.3763 Tel, 778.782.5788 Fax, graham@sfu.ca, www.sfu.ca/humanities-institute

This institute provides support to develop humanities programs and humanities concepts which already exist throughout the University. The institute explores and disseminates knowledge about traditional and modern approaches to the humanities, and explores critical perspectives that relate social concerns to the cultural and historical humanities legacy. The institute, which is affiliated with the Department of Humanities, initiates conferences, seminars, projects and publications in interrelated humanities fields and social sciences for the University and the community.

### Institute of Micromachine and Microfabrication Research

Director: M. Parameswaran BE (Madr), MSc, PhD (Alta), 778.782.4971 Tel, 778.782.4951 Fax, param@sfu.ca, www.sfu.ca/immr

This institute will stimulate, encourage and enhance micromachining and microfabrication research by

providing a focus and resource base for collaborative and multidisciplinary research leading to new processes and new devices of benefit across a wide array of disciplines.

### Institute for Research on Early Education and Child Health

Director: M.J. Hoskyn BHE, MA (Br Col), PhD (Calif), 778.782.5808 Tel, 778.782.3203 Fax, reach@sfu.ca, www.educ.sfu.ca/reach

REACH is a multidisciplinary Simon Fraser University research group whose mission is to generate and share knowledge about child health and education to advance humanity by enriching the lives of young children and their families. Current research projects focus on young children from infancy to eight years of age and the communities in which they live. We advance knowledge about the interplay between biology and environmental experiences that influence child health, psychosocial development and learning. Through community outreach in real world settings, we promote change that favors children in early education and public policy at local, national and international levels. We believe that effective research focuses on the child and the child's rights, advances theory, and defines the learning environments that promote child health and family well-being. An important part of this process is ongoing collaboration among researchers and the creation of partnerships with families, health-care professionals, educators, administrators, advocacy groups, and policy makers who will potentially benefit from our research.

We believe that effective research focuses on the child and the child's rights, advances theory, and defines the learning environments that promote child health and family well-being. An important part is ongoing collaboration among researchers and partnerships with families, health-care professionals, educators, administrators, advocacy groups, and policymakers who will benefit from our research.

### Institute for Studies in Criminal Justice Policy

Director: D. MacAlister BA, MA (S Fraser), LLB (Br Col), LLM (Qu), 778.782.3019 Tel, 778.782.4140 Fax, dmacalis@sfu.ca, www.sfu.ca/criminology/research/index.html

The institute was established with the initial support of the Donner Canadian Foundation in 1980. The purpose of the institute is to contribute to the examination of criminal justice policy by providing a setting in which academics, justice system personnel and members of the community can assemble to apply scholarly research to policy development and analysis. The institute undertakes projects on its own initiative as well as under contract.

### Institute for Studies in Teacher Education

Director: P.P. Grimmett BA (Newcastle, UK), BEd (Keele), MA, MEd (Alta), EdD (Br Col), 778.782.4937 Tel, 778.782.3203 Fax, grimmett@sfu.ca, www.educ.sfu.ca/iste/index.html

The general aim of the institute is to promote and carry out research in the area of teacher education. It also seeks to develop collaborative links with groups within and outside the university community.

### Institute for the Study of Teaching and Learning in the Disciplines

Director: C.L. Amundsen BA (Wash), MEd (Alaska), PhD (Montr), 778.782.4853 Tel, 778.782.3203 Fax, camundsa@sfu.ca

The institute's primary purpose is to inspire, support and enhance faculty-led inquiry into all aspects of teaching and learning at the University. Faculty-led

inquiry is discipline-focused, initiated by individual faculty members or groups of faculty, and related to questions about teaching and learning specifically of interest to faculty. Two aspects of the Institute will be primary in supporting faculty-led inquiry:

- faculty-led inquiry projects: funds will be made available through the institute for faculty-led inquiry that adheres to specific criteria. The findings will be made public, through both informal University presentations and publications and more formal external presentations and publications.
- faculty teaching scholars: these faculty members serve as the institute's core membership. Committed to further developing knowledge of teaching and learning processes in their respective disciplines, they work with other faculty who are interested in development through institute-sponsored projects.

### Interdisciplinary Research in the Mathematical and Computational Sciences (IRMACS)

Project Leader and Executive Director: P.B. Borwein BSc (WOnt), MSc, PhD (Br Col), 778.782.4376 Tel, Managing Director: P. Borghardt, 778.782.6989 Tel, 778.782.7064 IRMACS Tel, 778.782.7065 Fax, irmacs@irmacs.sfu.ca, www.irmacs.sfu.ca

The IRMACS Centre is a unique, interdisciplinary research facility that enables collaborative interaction — intellectually, physically and virtually. IRMACS removes traditional boundaries between scientific disciplines and creates a stimulating environment for researchers. It provides a versatile, computationally sophisticated infrastructure for nearly 300 scientists whose primary laboratory tool is the computer.

The centre encourages creative communication and idea exchange. The configurable, open research facility incorporates a diverse community of scientists, research associates, visitors and students, in a flexible manner. Whether on-site or around the world, IRMACS researchers enjoy expert technical support and state-of-the-art computation, visualization and communication resources. The centerpiece of the centre is its presentation studio, seating up to 100 people. It is a state-of-the-art audio-visual environment including a high-resolution 3D projection system. It forms part of a global network of AccessGrid video-conferencing rooms. The flexible meeting rooms and presentation studio are configured to facilitate distance collaboration in seminars, lecture series, workshops, medium-size research conferences and related activities.

### International Centre of Art for Social Change

Co-directors: C. Snowber BA (SWMass), MA (Gordon-Cornwell), PhD (S Fraser), celeste@sfu.ca, J. Marcuse LLD (S Fraser), Judith@jmrprojects.ca, 778.782.8559 Tel, 778.782.5098 Fax, www.ICASC.ca

Judith Marcuse Projects and Simon Fraser University (with Continuing Studies and the Faculty of Education) have established this centre, which will be a nexus for skills training, professional development, local and international networking, research and community engagement — all aimed at advancing best practices in the field of art for social change.

### International Centre for Criminal Law Reform and Criminal Justice Policy

President: D.C. Préfontaine BA (Rockhurst), LLB (Sask), LLM (Missouri), QC; Acting/Executive Director: K. Macdonald, 604.822.9875 Tel, 604.822.9317 Fax, icclr@law.ubc.ca, www.icclr.law.ubc.ca

This international centre was established in 1991 in Vancouver, BC, by its founding charter members

Simon Fraser University, the University of British Columbia and the International Society for the Reform of Criminal Law. The centre is formally affiliated with the United Nations and functions as one of two inter-regional UN affiliates of the United Nations Crime Prevention and Criminal Justice Program. The centre's mandate promotes human rights, the rule of law, democracy and good governance. To fulfil its mandate, the centre co-operates closely with other members of the United Nations Crime Prevention and Criminal Justice Network of Institutes, as well as federal and provincial governments.

### International Cybercrime Research Centre

Director: W.G. Glackman BA (Calif), MA, PhD (S Fraser), RPsych, 778.782.4041 Tel, 778.782.4140 Fax, [crc@sfu.ca](mailto:crc@sfu.ca)

The International Cybercrime Research Centre (ICRC) is a focal point for collaboration among cybercrime researchers from universities, government agencies, NGOs, and private sector organizations. Current projects are concerned with economic crime, pornography, child exploitation and terrorism, among other issues.

### Logic and Functional Programming Group

Director: V. Dahl MSc (Buenos Aires), PhD Aix-Marseilles I, Dipl d'Et App Aix-Marseilles II, 778.782.3426/3372 Tel, 778.782.3045 Fax, [lf@cs.sfu.ca](mailto:lf@cs.sfu.ca), [www.cs.sfu.ca/research/groups/Logic-Functional.html](http://www.cs.sfu.ca/research/groups/Logic-Functional.html)

This group was established in 1990 under Simon Fraser University's policy AC-35 to facilitate research on the theory and applications of declarative programming (in particular logic programming, and function programming, constraint logic programming and logic grammars). It is strongly interdisciplinary comprising several Simon Fraser University members from several SFU units (computing science, linguistics, mathematics, engineering science), and two University of BC units (linguistics, computing sciences), University of Victoria, Université de Provence, Roskilde University, Trinity Western University, ILOG in France, and University of Dallas.

The group furthers state-of-the-art theoretical and practical aspects of developing declarative programming tools, at investigating the uses of these tools for concrete intelligent systems, and facilitating result transfers and collaborations with other academic units and industry. Members' interests include logic, functional and constraint-based programming theory and tools, natural language processing, linguistic theory automation, deductive data bases, knowledge representation, hardware design, expert systems, robotics, distributed processing, mobile code and virtual worlds, tools for molecular biology, and software for the handicapped.

### Mental Health, Law and Policy Institute

Director: R.M. Roesch BS (Arizona), PhD (Ill), 778.782.3370 Tel, 778.782.3427 Fax, [mhlpi@sfu.ca](mailto:mhlpi@sfu.ca), [www.sfu.ca/~mhlpi](http://www.sfu.ca/~mhlpi)

This institute, established in 1991, promotes interdisciplinary collaboration in mental health, law and policy research and training. Its membership is drawn from the Department of Psychology and the School of Criminology at Simon Fraser University as well as government and community agencies in Canada and internationally. The institute has received federal and provincial grants for a variety of research projects in the area of mental health and law, and also sponsors lectures and workshops. It also publishes forensic psychology books including manuals for

assessing risk for violence and recidivism and assessing mental health problems in pretrial jails.

### Nanomed Canada Research Network

Executive Director: N.R. Branda, BSc, PhD (MIT), 778.782.8061 Tel, [info@nanomedcanada.org](mailto:info@nanomedcanada.org), [www.nanomedcanada.org/home](http://www.nanomedcanada.org/home)

Nanomed Canada is a community of nanotechnology researchers (chemists, physicists, mathematicians and engineers), medical researchers (clinicians, biotechnologists, pharmacologists and geneticists), medical institutes, pharmaceutical and diagnostic companies and government organizations who share knowledge and work collaboratively to advance medical diagnostics and therapeutics. It initially focuses on cancer, cardiovascular disease and central nervous system disorders.

Canada has demonstrated research leadership in both the nano and applied side; however the two groups rarely cross paths and share knowledge. Nanomed Canada is using the Internet to create a virtual information exchange community which features on-going discussions through forum posts, weekly archived on-line presentations, membership directory, catalogue of relevant research facilities and appropriate Canadian contacts, private collaborative workrooms and social networking technologies for information exchange. It will host quarterly topically-focused meetings to develop collaborative nanomedicine research projects. Network members can access presentations and summary papers through the virtual network. Nanomed Canada presents events and presentations for non-members to attract new members. It will become an information warehouse about Canada's nanomedicine industry to match companies and researchers to facilitate technology transfer. Companies contact Nanomed Canada for recommendations about obtaining expertise from universities, and university researchers contact Nanomed Canada for a list of companies that are interested in a particular technology they have patented.

Nanomed Canada members appreciate that implementing new technologies can have a profound effect on public health. A secondary benefit of the network is its relevant expertise to help policy makers and regulatory agencies evaluate the scientific and ethical impact of new nanomedicine technologies.

### Pacific Institute for the Mathematical Sciences

Director: R. Choksi BSc (Tor), MS, PhD (Brown), 778.782.6655 Tel, 778.782.6657 Fax, [sfu@pims.math.ca](mailto:sfu@pims.math.ca), [www.pims.math.ca](http://www.pims.math.ca)

The Pacific Institute for the Mathematical Sciences (PIMS) is dedicated to promoting all aspects of the mathematical sciences by stimulating, co-ordinating and facilitating the activities of mathematical and computational scientists. This is achieved by

- promoting research in mathematical sciences areas
- initiating and promoting mathematics education at all levels: K-12 and university
- initiating collaborations and strengthening ties between mathematical scientists in the academic community and those in the industrial, business and government sectors
- training of highly qualified personnel for academic and industrial employment
- developing new technologies to support research, communication and training.

Associated with PIMS are projects of the Mathematics of Information Technology and Complex Systems NCE (MITACS). Through the strength and vitality of its programs, PIMS and MITACS are able to serve the

mathematical sciences community as a catalyst in many areas of significance: communication and dissemination of mathematical ideas through public outreach, mathematical education and training at all school levels; and creation of strong mathematical partnerships and links. PIMS involves scientists in several faculties at Simon Fraser University including the Faculties of Science, Applied Sciences, and Education. The PIMS community includes specialists in mathematics, statistics, computer science, mathematical physics, biology, chemistry, economics, operations research, management, engineering, and other fields involving mathematical methods. In addition, PIMS involves teachers in the mathematical sciences at all levels. PIMS-SFU is the Simon Fraser University representative of PIMS and shares the goals and ideals of PIMS generally while also meeting the specific needs of the PIMS/MITACS and mathematical sciences community at this University.

### Tri-University Meson Facility (TRIUMF)

Director: N.S. Lockyer BSc (York), PhD (Ohio), 604.222.1047 Tel, 604.222.1074 Fax, [finance@triumf.ca](mailto:finance@triumf.ca), [www.triumf.ca](http://www.triumf.ca)

TRIUMF is a joint venture of the University of Alberta, the University of British Columbia, Carleton University, l'Université de Montréal, Simon Fraser University, the University of Toronto and the University of Victoria.

The TRIUMF facility is based on a 520MeV cyclotron capable of producing multiple proton beams simultaneously, each at a different energy level. TRIUMF has developed a world-class facility called ISAC, which produces beams of unstable rare isotopes. Scientific research at TRIUMF includes medium energy nuclear and particle physics, astrophysics, condensed matter studies and radiochemistry for the production of radiopharmaceuticals. Applied research includes the design of small cyclotrons, microchips, controls software, and medical applications such as the use of proton beams and radioisotopes for cancer therapy.

### Western Canadian Universities Marine Sciences Society (Bamfield)

Director: B. Anholt PhD (Br Col), 250.728.3301 (extension 215) Tel, 250.728.3452 Fax, [info@bms.bc.ca](mailto:info@bms.bc.ca), [www.bms.bc.ca](http://www.bms.bc.ca)

This society was founded in 1969 with the objective of operating a major research and teaching facility in coastal and marine sciences. The Bamfield Marine Sciences Centre offers year round research facilities that enable resident and visiting scientists and students (MSc and PhD) to develop a range of research programs. Courses that lead to academic credit for undergraduate and graduate degree programs at member universities are given at the station. The centre also runs a public education program from September through April.

### W.J. VanDusen BC Business Studies Institute

Director: D.M. Shapiro BA (Calg), MA, PhD (Cornell), 778.782.4183 Tel, 778.782.5833 Fax, [dshapiro@sfu.ca](mailto:dshapiro@sfu.ca), [www.sfbusiness.ca/research](http://www.sfbusiness.ca/research)

Established to focus research efforts on issues of particular relevance to corporations and government agencies in BC. The institute brings the expertise and research acumen of the Faculty of Business Administration to the Segal Graduate School of Business where faculty and business executives have greater and more direct opportunities to work together. The institute sponsors lectures and has an executive-in-residence program to bring business leaders into the University's classroom.

# Governing Bodies and Faculty

## Convocation

Chancellor – Chair  
President and Vice-Chancellor  
Registrar – Secretary  
Members of senate  
All faculty members  
All graduates of Simon Fraser University  
All persons whose names are added to the roll of Convocation by regulations of the senate

## Board of Governors

*Expiry dates of terms of office are shown where applicable.*

## Ex Officio

Chancellor  
President and Vice-Chancellor

## Appointed by Order-in-Council

L. Brown-Ganzer, January 2010  
P. Dhillon, February 2011  
R.G. Elton, July 2009  
M. Francis, December 2011, chair  
J. McPhee, July 2011  
D. Pekarsky, January 2010  
B.E. Taylor, February 2011

## Elected by Faculty Members

P. Percival, May 2012  
J. Zaichkowsky, May 2010

## Elected by Students from the Students

A. Dhillon, May 2010  
K. Harding, May 2010

## Elected by University Employees (excluding Faculty Members)

A. Barton, May 2011

## Administrative Officers

S. Gill, Associate University Secretary and Associate General Counsel  
J.A. Osborne, Vice-President, Legal Affairs and University Secretary

## Senate

*Expiry dates of terms of office are shown where applicable.*

## Ex Officio

Chancellor  
President and Vice-Chancellor – Chair  
Vice-President, Academic  
Vice-President, Research  
Associate Vice-President, Academic  
Dean of the Faculty of Applied Sciences  
Dean of Continuing Studies  
Dean of the Faculty of Arts and Social Sciences  
Dean of the Faculty of Business Administration  
Dean of Faculty of Communication, Art and Technology  
Dean of the Faculty of Education  
Dean of the Faculty of Environment  
Dean of the Faculty of Health Sciences  
Dean of the Faculty of Science  
Dean of Graduate Studies  
Registrar – Secretary of Senate  
University Librarian

## Elected by the Faculties

### Faculty of Applied Sciences

M.F. Golnaraghi, May 31, 2011  
C. Sahinalp, May 31, 2012

### Faculty of Arts and Social Sciences

G. Dow, May 31, 2011

M. Howlett, Political Science  
J. Martin, Psychology  
Z.K. Punja, Biological Sciences  
P.C. Ruben, Biomedical Physiology and Kinesiology  
M.L.W. Thewalt, Physics

*Jack and Nancy Farley University Professor in History*  
P.E. Dutton, Humanities

*Thelma Finlayson Professorship in Biological Control*  
J. Cory, Biological Sciences

*Forest Renewal BC Chair in Terrain Analysis and Forest Geoscience*

D. Stead, Earth Sciences

*Merck Frosst LEEF Chair in Pharmaceutical Genomics and Bioinformatics in Drug Discovery*  
R.N. Young, Chemistry

*Hellenic Canadian Congress of BC Chair in Hellenic Studies*

A. Gerolymatos, History, International Studies

*Stephen Jarislowsky Chair in Religion and Cultural Change*

T. Moustafa, International Studies

*LEEF Chair in Cognitive Neuroscience in Early Childhood Health and Development*

U. Ribary, Psychology

*Centre for North American Business Studies Professorship*

A. Vining, Faculty of Business Administration

*RBC Professor of Technology and Innovation*

B. Reich, Faculty of Business Administration

*RCMP Chair in Computational Criminology*

P.L. Brantingham, Criminology

*RCMP Chair in Crime Analysis*

P.J. Brantingham, Criminology

*Gordon M. Shrum Chair in Science*

S. Thompson, Statistics and Actuarial Science

*Simons Chair in International Law and Human Security*

J.T. Checkel, International Studies

*Telus Endowed Professorship*

R.G. Harris, Economics

*Weyerhaeuser Professorship in Change Management*

T.B. Lawrence, Business Administration

*J.L. Wighton Professor in Engineering*

A. Parameswaran, Engineering Science

*Ming and Stella Wong Endowed Chair in International Business*

R.L. Tung, Business Administration

*J.S. Woodsworth Chair in Humanities*

E. Stebner, Humanities

*Ruth Wynn Woodward Chair*

A. Cooper, Women's Studies

*Deana Wosk Professor in Art and Culture Studies*

L. Marks, Contemporary Arts

**Sponsored Chairs and Professors**

*Canada Research Chairs*

D.L. Baillie, Molecular Biology and Biochemistry

D. Bingham, Statistics and Actuarial Science

N.R. Branda, Chemistry

J.J. Clague, Earth Sciences

M. Collard, Archaeology

N. Dulvy, Biological Sciences

K. Egan, Education

E.G. Emberly, Physics

A.L. Feenberg, Communication

G. Flowers, Earth Sciences

B.D. Gates, Chemistry

D.J. Gromala, Interactive Arts and Technology

B. Kaminska, Engineering Science

M.E. Kelm, History

J. Kesselman, Public Policy

K. Kohfeld, Resource and Environmental Management

C.A. Lowenberger, Biological Sciences

I.P. McCarthy, Business Administration

J.J. McDonald, Psychology

B. Mohar, Mathematics

P. Mooney, Physics

W. Palen, Biological Sciences

C.K. Patton, Sociology and Anthropology, Women's Studies

R.M. Peterman, Resource and Environmental Management

S.N. Robinovitch, Biomedical Physiology and Kinesiology, Engineering Science

A.J. Robson, Economics

S.C. Sahinalp, Computing Science

J.K. Scott, Health Sciences  
 G. Tardos, Computing Science  
 G.F. Tibbits, Biomedical Physiology and Kinesiology  
 D.J. Vocado, Chemistry  
 C. Waddell, Health Sciences  
 J.R. Welch, Archaeology, Resource and Environmental Management
