COLLEGE STUDENTS, ADULT STUDENTS, TEST SELECTION,
*BIBLIOGRAPHIES

FIFTY-ONE SURVEY-TYPE GROUP READING TESTS DESIGNED FOR USE WITH HIGH SCHOOL AND COLLEGE STUDENTS ARE SUMMARIZED AND REVIEWED BRIEFLY. INFORMATION IS GIVEN ON THE RELIABILITY, VALIDITY, CONTENT, NUMBER OF FORMS, GRADE LEVEL, WORKING AND ADMINISTRATION TIME, DATA. PUBLISHER, GENERAL ABILITIES MEASURED, AND AUTHORS OF EACH TEST. COMMENTS ABOUT TEST WEAKNESSES SELECTED FROM CRITICAL REVIEWS BY SPECIALISTS IN THE FIELD OF READING FOR THE BENEFIT OF PROSPECTIVE TEST USERS ARE PRESENTED. ELEVEN OTHER HIGH SCHOOL AND ADULT TESTS ON WHICH ONLY LIMITED DATA WERE AVAILABLE ARE DESCRIBED IN CHART FORM. THE GUIDE INCLUDES ADDRESSES OF TEST PUBLISHERS AND REFERENCES FOR REVIEWS OF TEST INSTRUMENTS. (LS)

Introduction

This compendium represents an attempt to present pertinent data for group administered, survey-type reading tests which are designed for use with high school and college students. The principle objective is to combine information obtained from critical reviews by specialists in the field of reading. It is not a substitute for direct, first-hand examination of the instruments or the reading of the critical reviews in their entirety.

We have attempted to present the technical data which is most often desired by persons who are faced with the task of test selection. We have also included a section on reviewer comments where such information was available. Due to the obvious space limitations we have endeavored to provide only the salient comments of the test reviewer. In many instances there was more than one review available so that the choice presented herein represents an arbitrary selection on the part of the editors. The rationale governing our selection was principally that of selecting the most comprehensive review available. In abstracting the reviewer's comments our aim is to present the weaknesses or cautions, as identified by the test reviewer, to be noted by prospective users who are unfamiliar with the instruments. It is our belief that, in this instance, critical appraisal is more valuable than laudatory platitudes. For the prospective test selector, we would insist that there can be no substitute for reading all of the reviews available for a particular instrument. A bibliography is provided where such reviews are available.

The notation (+) before the title of a test indicates that levels are also available for testing grades below high school. In most instances there are two numbers indicated for the "Time" of a test. The first number indicates the actual pupil working time. The second number, in parentheses, indicates the average time required for administration of the instrument. All other unique information for a given instrument is indicated with an asterisk and explained in a footnote.

In the Content Analysis section we have attempted to present the general nature of the content contained in the tests. In every instance this information was obtained from direct examination of the instrument. Space limitations have precluded the inclusion of an analysis of more than one form. In most cases, however, the general description of content would be applicable to all available forms of a given test.

Unless otherwise noted, the tests contained herein are still in print and are available from the publisher. This information was determined from consulting Buros, Tests in Print, and this information was correct as of June 1, 1961. It may be that certain tests included here have gone out of print since this date. This information would be available only through direct contact with the publisher.

It should be noted that, in its present form, this compendium is incomplete and should be considered tentative. The problems inherent in attempting to collate data from such a wide variety of sources is readily apparent. The notation that "data is unavailable" simply indicates that we were unable to locate the source where such information is available at the present time.

REVIEWER COMMENTS: Russell G. Stauffer - Bureau 5th
Mental Measurements Yearbook

Has enough bottom to test even the poorest student,
but not enough top to test the good student.

Small standardization sample--- the various batteries
of the ASAT were standardized on 1,000 to 10,000 cases
only

Time allowances tend to place emphasis upon speed.

Useful for a general survey of reading skills.

RELIABILITY

Equivalent-form coefficients reported based on "sampling
100 cases from approximately 1,000 cases in typical
schools."

Sentence and Word Meaning, $r=.953$.
Reading Rate, $r=.855$.

Reading Understanding and Reading Paragraphs, $r=.978$.

VALIDITY

Content validation, "The vocabulary of the tests has
been checked against widely used word lists and text-
books common to senior high students and college
freshmen."

No empirical procedures reported to check on this
content validity.

American School Achievement Tests:

Part I, Reading -
Advanced Battery* 2

CONTENT ANALYSIS

Test I - Vocabulary 20 minutes,
72 items.

Test IIA - Reading Rate, timed
reading for 3 minutes (mark last
word read on signal); 15 minutes
total time for reading and ans-
wering questions. Selection
approximately 1,500 words in length.
Social Studies type content relating
to the country of Salvador.

Test II B - 20 M-C type items cover-
ing material read in Test II A.

Test III - Paragraph Reading Test,
10 selections of approximately 150
words each followed by 5 M-C ques-
tions covering the content.
20 minutes.

Sect. A - Geography of Canada

Sect. B - Physiology, adrenal
glands

Sect. C - Geography, climate

Sect. D - Geography, introduction
of rice to Europe

Sect. E - Geography, Switzerland

Sect. F - History, Mark Twain

Sect. G - Literature, the gift of
a colt

Sect. H - History, League of
Nations

Sect. I - Social Studies, the
nature of constitutions

Sect. J - History, the unifications
of Italy

REVIEWER COMMENTS: Henry S. Dyer - Bureau 5th
Mental Measurements Yearbook

Both the vocabulary section and the reading comprehension section are, in general, measuring only the more superficial aspects of the reading process.

Technical information given in the manual is, in many respects, inadequate.

Essentially no evidence presented on the validity of the test.

Percentile norms are tentative.

Norms and reliability data are reported on the same population.

REVIEWER COMMENTS: William W. Turnbull - Buros 3rd
Mental Measurements Yearbook

Percentile norms for the three scores are provided for college freshmen on Form t only. Since there is no indication of the number or characteristics of this group, these norms are of little or no value. No standardization data are given for Form B, nor between scores on the two forms.

RELIABILITY

No data are reported.

VALIDITY

No data are reported.

CONTENT ANALYSIS

The tests consists of sixteen passages of approximately 300-400 words each. These are followed by four to seven M-C type questions based on the content. The first eight passages (Part I) deal with history, English, economics, sociology and psychology. The last eight passages (Part II) deal with astronomy, physics, geology, biology, and patentology.

The selections, and the questions on each selection, appear in ascending order of difficulty. The student is not allowed to refer to the passage while answering the questions about it.

GENERAL ABILITIES
MEASURED

Comprehension

Author:
J. C. Chapman

REVIEWER COMMENTS: Alton L. Raygor - Buros 6th
Mental Measurements Yearbook
(in press)

The use of scale scores to achieve equivalence of forms is a great deal preferable to the technique used by some other reading test authors, who use some system for determining the difficulty level of items and then build equivalent forms on the assumption that one can do this as a random process.

The test seems well standardized on an adequate number of students representing what seems to be a good selection of schools and colleges.

The level of comprehension score uses a varying proportion of overlapping items with the speed of comprehension score. The statement that the level of comprehension score "indicates the depths of understanding displayed by a student in reading the kinds of material he is ordinarily required to read in high school and college" seems to leave a great deal to be desired in the explanation about the scores in a fashion which will enable the user to successfully discriminate between them and understand the factors which produce differences between the speed score and the level score. This is particularly troublesome when one finds that the two scores are correlated with each other at between .74 and .80; close to the limits of reliability for each score.

RELIABILITY

Equivalent form reliability coefficients are reported for both speed and level scores on samples drawn from grades 11-13. The averages of the correlation between the Level and Speed scores from two different forms are $r=.74$ for grade 11, $r=.77$ for grade 12, and $r=.80$ for college freshmen.

CONTENT ANALYSIS

Fifteen reading selections of varying length are presented to the student. Each selection is followed by M-C type comprehension questions with five detractors each. The questions are designed to measure the student's ability to:

1. Find the answers to questions answered explicitly or in paraphrase in a passage.
2. Weave together the ideas in a passage and to grasp its central thought.
3. Make inferences about the content of a passage and about the purpose or point of view of its author.
4. Recognize the tone and mood of a passage and the literary devices used by its author.
5. Follow the structure of a passage.

The reading passages are from textbooks, stories, humorous writings, scientific reports, and other types of reading material.

VALIDITY

Content validity claimed and the empirical procedures employed are described. Predictive validity based upon the correlation between the Davis Reading Test scores obtained at the beginning of the school year and first semester English grades at mid year is about .50. Current validity coefficients are reported for correlations obtained between the

Part II and III -
non-timed (105-135)

REVIEWER COMMENTS: Frederick B. Davis - Buross 4th Mental Measurements Yearbook

Satisfactory norms are not available.

In general, it must be said that the individual part scores are not sufficiently reliable to identify, with confidence, weaknesses in an individual's ability to read.

The validity of the various part scores can only be determined by subjective judgment. In the reviewer's opinion, the comprehension, vocabulary, and oral reading scores seem acceptably valid measures; the tests of silent word attack do not seem to provide measures of skills that are crucial in this important area; the rate tests are probably about as valid as tests of this kind usually are, but the time and space devoted to them seem to be entirely out of proportion to their very limited meaningfulness or usefulness.

RELIABILITY

Correlation coefficients of internal consistency as compiled by the Kuder-Richardson formula 21 are presented for subjects on forms A and B. These coefficients were computed from samples of pupils from grades 7-13. The correlation coefficients range from .76 to .92. It is pointed out in the technical data manual that the subtest, "Story Comprehension" is not intended to be used as a reliable measure of comprehension.

CONTENT ANALYSIS

Total time, 40 minutes working time.

Reading rate: about 1800 words on "The Crow", maximum time 8 minutes.

Story comprehension: 20 questions on story, 15 minutes.

Vocabulary: 10 minutes, 60 items.

Comprehension: 15 minutes, 4 selections of about 300 words each.

Content: 1. "The Industrial Change Goes On" - Simple content on effects of Industrial Revolution. 2. "How Alexander Won His War Steed" - narrative. 3. "Mars The Warrior Planet" - Simple technical article. 4. "Changes in Agriculture" - Agriculture after the Civil War.

VALIDITY

Extended discussion in manual too lengthy to summarize (see reviewer comments above).

Diagnostic Reading Tests - Section II, 11
Comprehension. Part I, Silent;
Part II, Auditory

REVIEWER COMMENTS: Henry Weitz - Bureau 4th
Mental Measurements Yearbook

The only reliability data supplied for this section suggests the need for great caution in using these tests for individual diagnosis.

RELIABILITY

Kuder-Richardson formula 21 reliabilities for total scores on the Silent Comprehension are reported. Form A, grade 10, $r=.97$; Form B, grade 11, $r=.83$, and Grade 12, $r=.86$. Auditory Comprehension utilizing recorded paragraphs and computed by the Kuder-Richardson formula 21 on sample drawn from grade 8 produced the following coefficients: Form A, $r=.84$; Form B, $r=.89$.

VALIDITY

Extended discussion in the manual too lengthy to summarize.

CONTENT ANALYSIS

Part I - Contains 13 paragraphs, each of which is approximately 250 words in length. Each paragraph is followed by 3-4 MC type comprehension questions.

Part II - Consists of 17 paragraphs, each of which is approximately 250 words in length. Both the paragraph and the MC type comprehension questions are to be read aloud to the student by the examiner. Each paragraph has from two to five comprehension questions.

REVIEWER COMMENTS: Henry Weitz - Buros 4th
Mental Measurements Yearbook

Oral part must be administered individually and is consequently very time consuming.

Reliability coefficients reported for the oral and silent parts of this section appear to be sufficiently high for individual measurement by both subtests and total score.

RELIABILITY

Part I - The consistency of measurement of each form was determined by correlating the number of errors on odd lines with those on even lines, corrected by the Spearman-Brown formula; r's range from .68 to .99. The errors on Form A were correlated with those on Form B, corrected by the Spearman-Brown formula; r's range from .44 to .94.

Part II - Reliabilities were estimated by the Kuder-Richardson Formula 21 on data from 4557 students in grades 7 through college; r's range from .89 to .97.

CONTENT ANALYSIS

Form A

Part I - Six paragraphs each of which is approximately 180 words in length to be read aloud by the student. Content drawn from fields of science and social sciences. Each paragraph has three to four questions to determine comprehension. There are three lists of words for determining recognition of words in isolation.

Part II - Items No. 4-66 pupil is presented with a test word which has a phoneme underlined. He is to find the word which contains this same sound out of the four choices presented.

VALIDITY

Reading Tests

REVIEWER COMMENTS: Herbert F. Spitzer - Buros 3rd
Mental Measurements Yearbook

Vocabulary and level of comprehension tests are both
power tests.

The speed of reading test is a measure of both rate
and comprehension and cannot, therefore be considered
solely as a rate score.

RELIABILITY

Equivalent form coefficients are reported for grades
3.8-8.8. Speed and Accuracy r's range from .82 to
.87. Vocabulary, r's range from .84 to .89. Level
of Comprehension, r's range from .82 to .88.

VALIDITY

Content validity. All the materials in the test
reviewed and revised repeatedly on the basis of
data received from special reviewers, teachers
and pupils.

CONTENT ANALYSIS

Total Time:

Vocabulary, no time, 65 items.
Speed and Accuracy Test, 4
minutes, 36 items
Consists of two sentences
usually - mostly a test on
sentence comprehension.
Level of Comprehension Test,
no time, 21 items.
Consists of very short
paragraph in which subject
must insert two missing
words.

REVIEWER COMMENTS: William S. Gray - Buros 4th
Mental Measurements Yearbook

No specific discussion of the validity of the three tests as measures of reading ability is presented.

The evidence presented does not make clear whether the test is a significant measure of general scholastic ability, reading competence, general intelligence, or a combination of the three.

Because of the composition of the tests, the scores may be used both as gross measures of reading achievement and, to a limited extent, for diagnostic purposes.

RELIABILITY

Test-retest coefficients reported (from not specified) with an interval of two days between first and second administration. Correlations were: Vocabulary, $r=.865$; Sentence, $r=.769$; Paragraph, $r=.806$; Total, $r=.885$.

VALIDITY

Predictive - $r=.61$ for 145 pupils in grades 7C to 8C with a criterion composed of grade location, age, and teacher's estimates of scholarship. Concurrent - $r=.64$ with total score of 7 examinations (Army Alpha, Otis, Pressey, Thurstone, Miller, Delta 2, and Sigma 3) for 60 university students.

CONTENT ANALYSIS

Total Time:

Vocabulary, 6 minutes, 50 items.
Sentence Reading, 4 minutes, 40 items. This tests past knowledge on a large variety of topics. Example: "Is citron found in craters?"
Paragraph Reading, 20 minutes, 7 paragraphs from about 60-160 words per paragraph. All narrative selections.

REVIEWER COMMENTS: Frederick B. Davis - Buross 3rd
Mental Measurements Yearbook

The validity of the total score derived from this test depends on the extent to which the subtests adequately sample the important skills involved in reading ability of the work-study type...the reviewer is inclined to believe that the total score is as valid a measure of this type of reading ability as most reading tests are.

The main criticism of the content of the test is that it never forces a testee to grapple with a difficult passage...they never get at the inner recesses of comprehension and that their use must tend to reward unduly the rapid, superficial reader.

Reliability coefficients obtained by the split-half Spearman-Brown procedure and Kuder-Richardson formula 21 are presented with no warning that meaningful reliability coefficients cannot be obtained for highly speeded tests, such as this on, by either of these two means.

RELIABILITY

Split-half reliabilities using the Spearman-Brown formula are reported for Form Am. Rate $r=.73$; Comprehension, $r=.82$; Directed Reading, $r=.91$; Poetry Comprehension, $r=.80$; Word Meaning, $r=.90$; Sentence Meaning $r=.85$; Paragraph Comprehension, $r=.72$; Part A: Central Idea, $r=.54$; Part B: Development, $r=.73$; Location of Information, Part A: Use of Index, $r=.82$; Part B: Selection of Key Words, $r=.91$; Total Raw Score, $r=.96$.

CONTENT ANALYSIS

Test 1-A -- Rate, Comprehension. Scientific material, 5 min. Paragraph of about 360 words - technical explanation of how rubber is made.

Test 1-B -- Rate, Comprehension. Literature, 5 min. reading time. Paragraph of about 600 words - "The Influence of the Press."

Test 2 -- Directed Reading, 3 min., 20 items. Paragraph of about 360 words - technical explanation of how glass is made. Sentence comprehension.

Test 3 - Poetry Comprehension.
Test 4 - Word Meaning -- Part A, Social Science, 20 items, 2 min.; Part B, Science, 15 items, 1½ min.; Part C, Mathematics, 15 items, 1½ min.; Part D, English, 20 items, 2 min.

Test 5 -- Paragraph Comprehension. 12 items of about 70 words per item - 3 questions per paragraph including choosing appropriate title.

Test 7 -- Location of Information. Use of References. A - Use of Index, 15 items; B - Selection of Key Words, 20 items.

VALIDITY

Content validity claimed. There is no description of empirical procedures utilized in verifying this claim.

REVIEWER COMMENTS: Henry Chauncy - Buros 3rd
Mental Measurements Yearbook

Contains passages which, though individually good, are too largely drawn from the biological as opposed to the physical sciences. The questions are not particularly ingenious and run to type. There are a good many "spot" question, which can be answered by direct reference to the passage. The correlation between this test and the test of "Ability to Interpret Reading Materials in the Social Studies" is probably high.

CONTENT ANALYSIS

REVIEWER COMMENTS: Russell P. Kropp - Buross 5th
Mental Measurements Yearbook

No normative data provided for college freshmen,
adequate for high school groups.

Technically adequate with regard to its construction,
standardization and norming.

The intercorrelations among the three tests are
moderately high indicating that each has much in
common with the others.

RELIABILITY

Split-half reliability coefficients are reported for
three different groups in grades ten and twelve. There
is no description provided for the groups beyond their
geographic location. Correlation of odd and even items
on Form Am corrected by the Spearman-Brown formula are
reported. They range for the total test from .91 to .95.
Equivalent form reliability is discussed in the manual.
However, no empirical data are presented.

VALIDITY

Content validity employed. Difficulty and validity
indices, based upon preliminary try-out, were computed
for each item in the test. Mean difficulty values of
items in final forms are reported in the manual.

Test I - Paragraph comprehension.
20 minutes. Consists of 9 para-
graphs dealing largely with
general science and social science
content. Each paragraph is followed
by 3 M-C type items with 3 detrac-
tors each.

Test II - Directed Reading. 3 min.
for reading each selection and 8
min. for answering 24 questions
covering each selection. Three
selections of about 500-600 words
each, dealing largely with general
science and social science content.

Test III - Retention of Details.
10 minutes, 35 items of M-C type.
Measuring recall of details read
in the 3 selections in Test II
after a brief interval.

Rate score = total number of
sentences read in parts B and C.

CONTENT ANALYSIS

Total time - 7 minutes, 75 items composed of two sentences each.

Student is to cross out one word which spoils the meaning.

Emphasizes speed and accuracy.

REVIEWER COMMENTS: Eason Monroe - Buros 3rd Mental Measurements Yearbook

In order to provide comprehension control, in the latter portion of each item a single word has been inserted which is out of meaning with the rest of the item. As he reads, the subject is required to cross out the "word that spoils the meaning".

Serious question can be raised concerning the extent to which this test measures the types of reading which are most representative and significant in general school and life reading.

One of the most serious shortcomings of this test, in the reviewer's opinion, is the complete lack of continuity of meaning throughout the sequence of items.

REVIEWER COMMENTS: James M. McCallister - Bureau 3rd
Mental Measurements Yearbook

Since few students will be able to finish the vocabulary section in the time allowed, it is an indirect test of speed as well as a measure of vocabulary.

The time limit in the "Power of Comprehension" section is such that nearly all students will complete it before time is called. Therefore, it is primarily a test of power of comprehension independent of speed of reading.

Reliability coefficients are reported in the manual for Form A only.

The standardization populations were different for each of the two forms. Insofar as these two population groups were comparable, approximately similar scores may be expected from use of the two forms.

RELIABILITY

Split-half procedures for a group of 283 high school seniors are reported. Part I, $r=.928$, Part II, $r=.693$. The same procedure was repeated for a group of 216 college juniors. The results obtained were: Part I, $r=.912$; Part II, $r=.780$; and for the test as a whole $r=.865$.

CONTENT ANALYSIS

REVIEWER COMMENTS: Frederick B. Davis - Bureau 1940
Mental Measurements Yearbook

The manual contains no warning of the inevitable unreliability of subtest scores based on only a small number of items. It appears that only the total reading score may be regarded as reasonably accurate in individual measurement. Subtest scores near the median may readily vary as much as thirty percentile rank points on the diagnostic profile by pure chance alone.

CONTENT ANALYSIS

The content of the silent reading test includes a 40-item sentence reading subtest and nine fairly long selections, taken from books suitable for college use in a variety of fields. Each selection is followed by 10 to 16 questions, for the most part in true-false form.

Total time, 40 minutes.

Selection I - Sentence Meaning - tests past knowledge, vocabulary.
Selection II - Paragraph from Source Book of Social Origins - about 400 words of folklore on the creation of the world.

Selection III - Paragraph from Town and Gown - about 300 words - narrative of aspiration of college girl to make a sorority.

Selection IV - The Comedy of Coal - about 300 words of technical treatise on coal electricity.

Selection V - from Elementary Psychology - about 300 words on the mental age of a person.

Selection VI - From The Government of The United States.

Selection VII - From The Soil - technical.

Selection VIII - From General Biology "The Action of Phagocytes".

Selection IX - From The Nature of the World and of Man - "The Nature of Bacteria".

GENERAL ABILITIES MEASURED

Comprehension
Rate

Authors:

H. H. Remmers,
et. al.

REVIEWER COMMENTS: Jerome E. Doppelt - Bueros 5th Mental Measurements Yearbook

The time limit of 25 minutes is evidently not sufficient to make the test a power measure.

There is no evidence that the test is helpful in accomplishing its two stated objectives: (1) to identify supervisors who are in need of developmental reading instruction; (2) if such instruction cannot be given, helpful as a guide to management in writing material that supervisors are expected to read.

At the present time there is a preliminary manual which includes a table of norms based on 137 industrial supervisors representing all levels from first line supervisors to plant superintendents.

RELIABILITY

Estimated by K-R formula 20 applied to the scores of a group of supervisors who finished the test and then correcting the coefficient for the increased range of scores when all supervisors are included (r=.83). When a modification developed by Horst was applied to the K-R formula, the coefficient rose to .91.

VALIDITY

No information available

CONTENT ANALYSIS

Consists of 14 passages with either two or three multiple choice items per passage. The content of the passages centers around factory and industrial situations.

REVIEWER COMMENTS: J. B. Stroud - Buros 3rd
Mental Measurements Yearbook

The rate of comprehension score is not quite as good as it sounds since in effect the score is influenced by rate of not comprehending. It is the equivalent of the traditional comprehension score and as such is a function both of rate and of comprehension. The level of comprehension score is not complicated by rate except for students who do not complete the first scale and for the possibility that quality may be influenced by the rate set of the student. The reading test items run a bit heavily toward literature.

RELIABILITY

No data available

VALIDITY

Content validity claimed. Based upon surveys of curriculum outlines and bulletins, textbook analyses, and consultation with specialists in the different subject matter fields. No empirical evidence presented to verify this claim.

REVIEWER COMMENTS: Miles A Tinker - Buros 3rd
Mental Measurements Yearbook

There are no data in the manual of in the materials accompanying the test on the number of cases employed for standardization or on the equivalence of the two forms.

The two forms have a variation in the length of successive lines of printed material; an undesirable typographical arrangement. Form A is printed in uniform line lengths; Form B has exactly five words in each line. The obvious lack of equivalence in reading rate between the two forms makes interpretation of progress in reading hazardous.

REVIEWER COMMENTS: Arthur E. Traxler - Buros 5th
Mental Measurements Yearbook

A few of the pictures in the Advanced Tests are too small and indistinct to be easily read.

The procedure employed in scoring all tests and subtests allows chance scores to yield substantial grade equivalents.

No evidence is presented to support the use of the same grade equivalents when responses are entered in record booklets and when they are recorded on answer sheets. This procedure may be questioned, since research has often shown that more time is required to record answers on answer sheets than to enter them in the booklets.

Because of their brevity, the grade equivalent scales for some of the subtests are necessarily coarse. In some places, one item makes a difference of more than one grade in a pupil's score.

The items are well constructed, the directions are clearly written, the tests are well printed, and the manual contains a good deal of helpful statistical data.

There are no public school norms available; the reliability of the rate is rather low; and the value of the subtest diagnostic scores is open to question because of their somewhat low reliability and doubtful independence.

The grade equivalents are based on nation-wide testing in Catholic schools.

The reliability coefficient reported for the rate score is only .76, which is hardly high enough to indicate usefulness of the rate measure in the study of individuals (probably due to the brevity of the rate test).

REVIEWER COMMENTS: James M. McCallister - Buross 3rd
Mental Measurements Yearbook

Validity coefficients are reported for the college freshmen level only.

Internal analysis of the test paragraphs and the true-false items indicates that the test measures largely apprehension of specific facts. It provides little opportunity for measuring such things as comprehension of main ideas, recognizing relationships, or evaluating the importance of ideas. These factors should be kept in mind in interpreting the scores as measures of general reading ability.

REVIEWER COMMENTS: Helen M. Robinson - Bureau 5th
Mental Measurements Yearbook

Norms based on 350,000 pupils selected from "all areas of the country, all types of school systems, and all socioeconomic levels."

The reliability is satisfactory.

Unfortunately, the paragraph meaning section relies entirely on selecting words to fit the context - a definite advantage to pupils who have had considerable experience and instruction in using context clues.

The manual states that "these are not speed tests" but also that "under no conditions should the time limits be extended". Even though the time limits may be generous, speed becomes a factor in individual cases.

REVIEWER COMMENTS: Clarence H. Nelson - Bureau 4th
Mental Measurements Yearbook

According to the test builder, these tests have validity in the sense that the materials which provide the basis for the items were drawn from different fields within the natural science area.

Comparable validity of the English and Spanish editions was sought by employing bilingual staff specialists, by using the same exercises in the two languages, by presentation of the exercise in equivalent language, and by checking against standard word lists, such as the Thorndike list.

REVIEWER COMMENTS: Frederick L. Westover - Buros 4th
Mental Measurements Yearbook
(Reviews English edition only)

All of the tests have been well constructed from a variety of intrinsically interesting materials and appear to possess face validity.

Norms are based on administration of the tests to 10,000 pupils in cities of the United States, half of them in Texas. The norms provide information only on the median total scores at each level for which the test is scored.

The words in the vocabulary section are drawn from a wide range of materials.

The tests are of special value to those who wish to use them in connection with the Spanish editions to compare the performance of pupils in English and Spanish.

REVIEWER COMMENTS: Ivan A. Booker - Buros 4th
Mental Measurements Yearbook

The test emphasizes the ability to read and answer fact questions and the ability to read and understand sentences of the proverb or aphorism type. The test is quite heavily weighted with items that call for the interpretation of proverbs or quotations - two fifths of the items are of this type.

The test is most valuable as a survey instrument to measure the general level of reading comprehension.

The time allowance is generous enough to make it a power test for most junior high school students.

The format is somewhat cumbersome for both student and scorer.

Grade and reading age equivalents for each score on each form of the test. No medians, quartiles, percentiles by grades, standard scores, or other interpretative data are included.

RELIABILITY

Equivalent-form reliability of about .90 are reported. This is based only on 4 samples of about 200 students each.

REVIEWER COMMENTS: Leonard S. Feldt - Bureau 5th
Mental Measurements Yearbook

The student is instructed to read with all possible speed and, as a comprehension check, to look for and cross out the one word near the end of each item which "spoils the meaning."

The test provides sufficient homogeneous material to permit a relatively long test, if the user desires one. The two forms are very closely matched in terms of difficulty. This should facilitate assessment of changes in speed of reading.

The principal weaknesses of the test are the deficient norms, the inadequate reliability data, and the absence of correlations with other types of rate measures.

The only norms provided are based upon groups of 96 to 135 sophomores of the University of Minnesota. Norms are presented for 5, 10, and 30-minute tests.

minutes.

REVIEWER COMMENTS: Harold D. Carter - Buross 4th
Mental Measurements Yearbook

Fifty minute working time required may be awkward
in many school situations.

Reported reliabilities are satisfactory. Norming
population adequate.

RELIABILITY

Split-half coefficient reported for rate test using
Spearman-Brown formula, $r=.92$ (based upon performance
of two continuous 150 second reading periods). Number
of pupils not given. Story comprehension test-retest
coefficient $r=.72$. Number of pupils not given.

VALIDITY

Item validity reported. Each comprehension question
was studied by noting the degree to which it distinguished
between the good readers and the poor readers as shown by
the scores on all items of each kind.

CONTENT ANALYSIS

CONTENT ANALYSIS

REVIEWER COMMENTS: J. Thomas Hastings - Buros 4th Mental Measurements Yearbook

It is quite unfortunate that virtually all the adverse criticism made at least 11 years ago are still valid.

The manual says that the new grade norms are based upon the scores of about 25,000 pupils. There is no indication of how these cases are distributed according to grade level and no description of the samples in terms of ranges, standard deviations, or chronological ages.

The data presented in the manual concerning validity, reliability, and equivalence of forms are still insufficient.

The good points mentioned in previous reviews are still valid: (a) comprehension; (b) the rate test is interesting reading, and should appeal to the ages for which it is intended; (c) use of sentences or phrases in the word meanings test is a more meaningful device than the use of words by themselves; (d) the time limits on the various parts are such that it is not likely to be a speeded test at any of the intended grade levels.

REVIEWER COMMENTS: Frederick B. Davis - Euros 3rd
Mental Measurements Yearbook

The test consists of twenty items based on a single long passage characteristic of a textbook in modern history. Since no data have been obtained showing that ability to understand passages in the social studies is by no means identical with ability to understand passages taken from other academic fields the validity of this test is at once brought into question. The test is a reasonably satisfactory survey test of speed of comprehension of social studies type material.

The reliability of the scores derived from this test are not stated in the manual (the reviewer estimates that they might be around .75 in a typical high school grade.)

Too limited a range of reading skills and content is presented to warrant confidence in the validity of the test as a measure of general reading ability.

The score resulting from the test is a mixture of speed of reading and level of comprehension.
