EXECUTIVE SUMMARY

OPPORTUNITIES FOR LEADERSHIP:
STRATEGIES FOR IMPROVING FACULTY DIVERSITY
IN ILLINOIS HIGHER EDUCATION

Study Process
This report is an outgrowth of a 2001 Board study on student diversity, *Gateway to Success: Rethinking Access and Diversity for a New Century*. For this report, staff and Board members sponsored hearings, conducted focus groups and small group discussions, consulted national experts, reviewed national and state level research, and collected information and data from Illinois colleges and universities.

The Importance of Faculty Diversity
A diverse faculty and student enrollment enhances the education of *all* students and better prepares students to work and live in an increasingly diverse world. Faculty diversity is especially critical for students from underrepresented groups. A recent Board study found that the presence of students and faculty/staff from various ethnic groups was “very important” in the decision of underrepresented students to stay in school.

The Lack of Faculty Diversity At Illinois Institutions
African-American faculty constitute five percent and Latino faculty two percent of all faculty at Illinois colleges and universities. This level of representation is much lower than the diversity found in Illinois’ student enrollment and state population. The average student attending a public college or university outside the City of Chicago is unlikely to have more than one course with an African-American faculty member and unlikely to have even one course with a Latino faculty member during his or her college years.

Leadership: The Essential Ingredient
Increasing faculty diversity will not occur automatically by implementing new processes and procedures but requires leadership at all levels. Working with their Boards of Trustees, presidents must ensure that faculty diversity is embedded in campus missions and strategic plans and then act to see that others implement these goals. Deans and department chairs can make substantial improvements to the search process and campus climate.

Opportunities for Improvement
- *The “Pools” of Potential Faculty.* Graduates of master’s programs and nontenure-track faculty constitute untapped “pools” of eligible underrepresented faculty that need development. At universities, graduate faculty must inform master’s students about community college teaching and help interested students acquire the skills and experience needed to pursue this career. Community colleges must also encourage public universities to provide them with information about eligible master’s degree candidates and should give such referrals serious consideration. Institutions, especially community colleges, also need to look to the part-time nontenure track as a resource for diversifying tenure-track faculty.
• **IMGIP/ICEOP.** Illinois can improve the record of the state’s two minority graduate fellowship programs, the Illinois Minority Grant Incentive Program (IMGIP) and the Illinois Consortium for Educational Opportunity Program (ICEOP), in placing degree recipients in teaching positions at Illinois institutions. The most recent evaluations of these programs indicated that 19 percent of IMGIP’s doctoral degree recipients, 35 percent of ICEOP’s master degree recipients, and 46 percent of ICEOP’s doctoral degree recipients have taken positions at Illinois colleges and universities. Many program recipients take jobs in industry or in academic positions at out-of-state institutions.

• **The Search Process.** Recent years have shown that changes in the search process can help colleges and universities diversify their faculty. Initiatives that can yield results include structural and procedural changes to the search process, adjustments to institutional culture, and strengthening the roles of deans and department chairs.

• **Campus Climate.** Diversifying the faculty depends upon retaining those who are hired. Unfortunately, evidence gathered for this study reveals that many underrepresented faculty are frustrated and disappointed with their campus environment. Opportunities exist to improve the campus climate by careful consideration of the special burdens and obstacles faced by underrepresented faculty.

• **Accountability.** The statewide accountability mechanisms now in place for faculty diversity are weak and do little to foster improvement. The information collected and reported about underrepresented faculty is inadequate, and there is no reporting of progress at individual institutions. At the institutional level, improvement is needed in the process by which requests for a “reasonable accommodation” from faculty with disabilities are reviewed and acted upon.

**Strategies for Statewide Action**

This report puts forward strategies that can help institutions exert more effective leadership and create a supportive statewide climate. Initiatives seek to strengthen the pools for underrepresented faculty by sponsoring workshops, funding projects, expanding outreach efforts to underrepresented students, and combining the IMGIP/ICEOP programs and changing their governance and award processes. The Illinois Board of Higher Education will need to exercise strong and active statewide leadership, if these initiatives are to be successful. The report also proposes sponsoring a statewide conference on the search process, advocates that each public college and university should evaluate its climate for underrepresented faculty and report to Board on the results of this assessment, and urges changes to statewide and institutional policies and practices to strengthen accountability.
PREFACE

This report is an outgrowth of a previous Illinois Board of Higher Education study on student diversity entitled Gateway to Success: Rethinking Access and Diversity for a New Century. To conduct this study, staff and Board members sponsored hearings, conducted focus groups and small group discussions, consulted with national experts, reviewed national and state level research, and collected information and data from Illinois colleges and universities. In fall 2002, Executive Director Daniel J. LaVista presided over two public hearings in Springfield and Chicago. A copy of all written testimony presented at the hearings is available at the Board’s Web site. The Board also instituted its first “Web Hearing” which enabled persons who could not attend a public hearing to participate in the Board’s inquiry.

This report concentrates on minority faculty and also examines the representation of female faculty and faculty with disabilities. Minority faculty were of particular interest to members of the Board’s Committee on Access and Diversity because of the low level of African-American and Latino representation in faculty ranks. This focus also responds to general interest on issues of minority representation arising from legal questions recently before the U.S. Supreme Court. The report includes a close examination of the state’s two fellowship programs for minority graduate students, the Illinois Minority Grant Incentive Program (IMGIP) and the Illinois Consortium for Educational Opportunity Program (ICEOP).

To address the issues of campus leadership and the search process, staff convened two formal focus groups. Participants included presidents, provosts, deans, department chairs, affirmative action officers, and other campus leaders, including African-American and Latino leaders, who have advanced faculty diversity on their own campuses. Meetings were held with the Illinois Committee on Black Concerns in Higher Education (ICBCHE), the Illinois Latino Council on Higher Education (ILACHE), and ICEOP/IMGIP board members. Staff also met with faculty and students from the Board’s advisory councils, as well as groups of African-American faculty, Latino faculty, faculty with disabilities, and female faculty.

The Board thanks the hundreds of persons who advised us on this study. The Board would like to recognize, in particular, the persons who helped organize our small group discussions. This list includes Rose Thomas and Seymour Bryson with ICBCHE, Elizabeth Ortiz with ILCAHE and Latino faculty, Eric Thomas with African-American faculty, Linda Gannon with female faculty, and Brad Hendricks with faculty with disabilities. The ICBCHE and ILACHE groups offered valuable assistance in providing information and opinion, as did IMGIP/ICEOP staff and board members.
INTRODUCTION

There are few words that are encountered more often in contemporary life, or better reflect the demographic and social change that is one of our society’s defining characteristics, than the word diversity. All major sectors of our nation feel the need to represent and respond to the diverse world around them. Perhaps, no sector feels this need more acutely than higher education which seeks to educate and prepare students for tomorrow’s, as well as today’s, world.

There is no group within higher education that is less diverse than its faculty. Faculty ranks have changed little throughout the decades in their race and ethnicity, especially in regard to African-American and Latino representation. As the face of our nation and state has changed, our faculty has not changed along with it. As a result, questions arise about whether faculty are as effective as they can be, and what implications the lack of faculty diversity has for higher education as a whole.

Is faculty diversity an intractable or difficult issue to resolve? In our many conversations, this opinion was asserted, albeit with differing rationales. Some said that any solution was at best long term and depended upon an increase in minority graduate enrollment. Others said that the campus climate for minority faculty was so unfriendly or “chilly” as to discourage many young persons from entering faculty ranks and to chase away others initially so inclined. Both positions cited the slow rate of change in African-American and Latino faculty as evidence for their views.

Despite the best efforts of many dedicated people, pessimism has become a common refuge when discussing faculty diversity. Challenges do exist. However, the information contained in this report shows improvement is possible. Three areas, in particular, provide grounds for optimism.

First, and perhaps surprisingly, we found that many Illinois higher education institutions have not drawn effectively on the pools of African-Americans and Latinos eligible for entering faculty positions. “Undeveloped pools” are found among graduates of master’s programs and among nontenure-track faculty. The report offers suggestions on how Illinois higher education can make better use of these pools to increase the representation of underrepresented students in graduate programs and increase the proportion of degree recipients from these programs that enter faculty ranks. The report also examines how to increase the number of minority graduates in the state’s fellowship programs who become college faculty.

Second, there are other proven strategies that Illinois higher education can pursue to increase faculty diversity. This report targets four areas for improvement: the search process, campus climate, leadership, and accountability. Drawing upon recent research, national and state examples of best practice, and testimony presented to the Board, the report shows how institutions can take advantage of current opportunities for increasing faculty diversity. As suggested in the final chapter, effective change will depend upon a
coordinated approach in which the Board of Higher Education encourages, facilitates, and supports institutional efforts.

Finally, our conversations with faculty and administrators have convinced us that many in Illinois higher education are dissatisfied with the lack of faculty diversity at our institutions and want to bring about change. Historically, institutions have approached hiring issues in this area by ensuring legal compliance and enacting guidelines and procedures to prevent discrimination. While such steps are necessary, they alone will not bring about the progress that is needed. At the campus level, this will only occur through active, coordinated leadership among an institution’s board, president, provost, deans, department chairs and faculty. This report offers examples of the kind of leadership that has yielded results in diversifying the faculty. We also identify areas where campus leaders must do more.
CHAPTER I

DIVERSITY AND HIGHER EDUCATION

Diversity is a nice word, but what exactly does it mean?

In August 2001, the Board of Higher Education issued a report entitled *Gateway to Success: Rethinking Access and Diversity for a New Century*. Citing recent research, the report showed that diverse classrooms enhance student learning and better prepare students to be effective employees and citizens. The report also showed that many Illinois residents generally understand the benefits of a diverse education. For example, a survey of Illinois residents conducted by the National Center for Public Policy and Higher Education found that “an ability to get along with people different from themselves” ranked second among eight outcomes that Illinois citizens believed “a student should gain from college.” Diversity ranked ahead of other desired outcomes such as “learning high tech skills” and “specific expertise and knowledge in chosen careers.”

Since issuance of the Board’s report and the appearance of other related studies across the nation, persons have requested clarification of the meaning of the word, diversity. The vagueness of the term bothered some who asked about the attributes and characteristics of persons to be included. Suspicions also were voiced about the intentions and effects of this new language. A few viewed diversity as a code word for affirmative action without any real substance. Others worried that the language would divert attention from a key issue: improving African-American and Latino representation in higher education.

Any explanation of the word diversity, at least as used in educational policy, must start with the recognition that its focus is student learning. The term is rooted in the tradition and practices of higher education and the notion that students benefit when they have the opportunity, both intellectually and socially, to interact with people different from themselves. College admission philosophies have followed this guiding principle for more than one hundred years. Since each campus has its own educational mission and goals for learning, institutions must decide for themselves how to apply this term and make decisions about the types and numbers of diverse students to be admitted. However, for higher education as a whole, the term should be broadly understood to encompass not only differences in student talents and interest, but also differences in region, class, income, culture, religion, gender, age, race/ethnicity, and disability.

The tremendous growth in Latino, and to a lesser extent Asian, populations during the 1990s, fueled by rising rates of immigration, also meant that the term diversity had currency beyond higher education, appearing more often in conversations among other sectors of our society, such as business and government. This trend is best exemplified in the amicus briefs submitted by many “Fortune 500” companies in the recent United States Supreme Court cases over the University of Michigan’s undergraduate and law school admission policies.
In their legal briefs, the Fortune 500 companies described the economic benefits that they derive from having a diverse workforce and how they depend upon the University of Michigan and other universities to supply them with minority graduates, as well as White graduates who can work in a diverse business setting. The message of these briefs and their corporate authorship show that discussion about the use of certain race/ethnic preferences has shifted considerably from the days of the civil rights era. Arguments of enlightened self-interest now overlay concerns of social justice as it is better understood how all segments of our society benefit when diversity is embedded in the fabric of our economic, social, and educational systems.

Ideas of community are at the heart of the diversity discussion. Through this language and approach, higher education hopes to reassert the importance of its ability to create learning communities that meet the educational needs of all students. At the same time, higher education seeks to show that it is responding to the broader social and economic requirements of an evolving nation.

The recent U.S. Supreme Court rulings in the University of Michigan cases provide recognition and support of the need to achieve diversity in higher education. The two cases affirm that the state has a compelling interest to seek diversity in higher education but make clear the court’s intention that diversity must be broadly defined. Thus, in the undergraduate case, *Gratz v. Bollinger*, the court ruled against the use of an undergraduate admissions policy that assigned weight to each minority applicant based on a point system. However, in the law school admission case, *Grutter v. Bollinger*, the court upheld the use of race/ethnic considerations when part of an individualized, holistic admission process. The broad, educational view of the role of diversity taken by the court is consistent with the Board’s use of the term in this report and in its previous study on student access and diversity. The Supreme Court’s ruling is also consistent with the Board’s position that colleges and universities should look for avenues to advance student and faculty diversity that do not require the use of race/ethnic diversity alone.
CHAPTER II

FACULTY DIVERSITY PROMOTES
STUDENT LEARNING AND SUCCESS

Diversity is a fundamental value in higher education for good reason: diversity enhances the education of all students. An increasing body of research reveals that both student and faculty diversity improve student learning outcomes. Students’ critical thinking skills, their commitment to being engaged citizens and active participants in a democracy, and their preparation for work in a global economy are all positively affected by diverse learning environments.

A diverse faculty brings benefits that go beyond a diverse student body. Minority and female faculty are more likely to use various modes of teaching, particularly interactive teaching strategies, and they are, therefore, often more successful in tapping into students’ different learning styles and engaging student interest. In addition, underrepresented faculty, through their experience, perspectives, and research interests, redefine and expand the range of scholarship in their fields.

The educational benefits of diversity are maximized when educational institutions use the diversity on their campuses in intentional ways. It is through altered pedagogy, multicultural content in courses, and the use of increased inter-cultural interactions both inside and outside the classroom that the presence of diversity is made meaningful and instructive. These educational efforts must be led by faculty, and research suggests that such changes are most likely to come from underrepresented faculty. In addition, minority faculty often take the lead in shaping the public discourse on the educational benefits of diversity. In doing so, they have brought about greater access and opportunities for previously neglected groups and have broadened the educational experiences of all students.

Diversity within the faculty also improves student satisfaction. This finding consistently appears in the national research and the Board’s own studies on underrepresented groups in Illinois higher education. For example, the 2002 Annual Report on Underrepresented Groups found that all students are beginning to recognize diversity as an indicator of institutional quality and excellence, as shown below.

- A significant number of students [from all backgrounds] voiced their preference for having greater numbers of minority faculty and staff.
- All student groups reported they had gained a greater understanding and appreciation of multicultural differences as a result of campus diversity.
- A large percentage of students expressed improvement in their attitudes towards different racial/ethnic groups since first attending college.

The 2002 Underrepresented Groups Report found that the presence of students and faculty/staff of various ethnic groups was “very important” in the decision of underrepresented students to stay in college.
For underrepresented students, in particular, a diverse faculty creates a more welcome campus climate and provides increased opportunities for students to find mentors who can also serve as role models. The 2002 Annual Report on Underrepresented Groups found that the presence of students and faculty/staff of various ethnic groups was “very important” in the decision of underrepresented students to stay enrolled in college.

Campus climate, especially on predominantly white campuses, is experienced differently by students of color. As Seymour Bryson of Southern Illinois University at Carbondale has noted, “racially diverse faculty and staff are key factors in establishing a positive campus ambience for black students, faculty, staff and administrators.” Faculty with racial and ethnic identities that mirror student enrollment can signal an institutional commitment to diversity which is more than mere rhetoric.

Finally, for some institutions, particularly many Illinois community colleges, hiring practices are the only viable means of creating a diverse campus. Unlike four-year schools, some community colleges with little race/ethnic diversity in their district cannot work to improve campus climates by diversifying their enrollment. For those colleges whose districts are overwhelmingly white, diversity must be sought by integrating multiculturalism throughout the curriculum and diversifying the faculty.

Institutions with diverse faculties will enjoy growing recognition and respect in our multicultural nation. The converse is also true. In a world in which the public, students, and leaders are increasingly diverse, faculties and institutions lacking diversity will be seen as unresponsive and failing to provide the educational experiences needed by all students.
CHAPTER III

FACULTY REPRESENTATION
AT ILLINOIS COLLEGES AND UNIVERSITIES

Did students see Mr. Chips in terms of race and gender? Probably not. However, today’s students might, especially given changes in the student body. The problem, of course, is not Mr. Chips or those like him. Great teachers are a real resource and should be valued. The real problem is a lack of alternative role models. African-American and Latino faculty representation is shockingly low, especially when one considers that these groups represent 27 percent of Illinois’ population and 24 percent of enrollment at Illinois colleges and universities. Change is occurring, but not quickly enough to conclude that existing policies and practices can resolve the situation.

Table 1 indicates that in 2001 African-Americans represented 5.1 percent, or 1,374 of the 26,787 full-time faculty employed at Illinois colleges and universities. The proportion of African-American faculty varied from 3.9 percent at private institutions (473) to 7.9 percent at community colleges (353). Latinos made up 2.3 percent or 616 of all full-time faculty and representation varied from 1.5 percent at community colleges (67) to 2.8 percent at public universities (290). The race/ethnic distribution of faculty in Illinois is similar to the national picture. The National Center for Education Statistics reports that African-Americans accounted for 4.9 percent, Latinos 3.4 percent, and Asians 7.2 percent of all full-time instructional faculty in the United States in 1999. Distribution of African-American and Latino faculty among nontenure-track and part-time faculty is discussed in Chapter IV.

Table 1

<table>
<thead>
<tr>
<th>Sector</th>
<th>White</th>
<th>African-American</th>
<th>Latino</th>
<th>Asian</th>
<th>Other</th>
<th>Total</th>
</tr>
</thead>
</table>
| Public University | 79.7% | 5.4%             | 2.8%   | 8.9%  | 3.2%  | 100.0%
| Community College | 86.2  | 7.9%             | 1.5%   | 3.6%  | 0.9%  | 100.0%
| Private Institution | 81.3  | 3.9%             | 2.1%   | 7.1%  | 5.5%  | 100.0%
| Total             | 81.5% | 5.1%             | 2.3%   | 7.2%  | 3.8%  | 100.0%

Figure A, below, shows that race/ethnic diversity among Illinois faculty is much lower than diversity in Illinois’ higher education enrollment and the state’s population. At these levels of underrepresentation most students at best only have occasional contact with African-American and Latino faculty. This low level of interaction is accentuated by the distribution of minority faculty in the state. Ten Chicago institutions employ 53 percent of all African-American faculty and 42 percent of all Latino faculty employed
at Illinois public colleges and universities. As a result, nearly two hundred thousand students enrolled at the other 50 public institutions in Illinois have less than a two in fifty chance of being taught by an African-American faculty member and less than a one in fifty chance of being taught by a Latino faculty member. *Put more simply, the average student attending a public institution outside the City of Chicago is unlikely to have more than one course with an African-American faculty member and unlikely to have even one course with a Latino faculty member during his or her college years.*

![Figure A](image)

**Minorities, Illinois Higher Education Institutions and State**

Women represent approximately 40 percent of full-time faculty. In 2001, the proportion of full-time female faculty varied from 37 percent at Illinois public universities and private institutions to 48 percent at community colleges. Considerable discrepancy exists in female representation with regard to tenure status and discipline. For example, at public universities, females made up 44 percent of tenure-track faculty and 53 percent of nontenure-track faculty but only 28 percent of all tenured faculty. In 2001, women represented less than 20 percent of all tenured faculty in 8 of 32 major discipline areas.

In recent years, growth has occurred in the number and proportion of diverse full-time faculty. From 1993 to 2001, African-American faculty grew by 13 percent as increases at private institutions and public universities were partially offset by a 24 percent decline at community colleges. Two-year institutions were affected by the closing of Metropolitan Community College in East St Louis and faculty cutbacks at the City Colleges of Chicago. Overall, the proportion of African-American faculty rose from 4.8 percent in 1993 to 5.1 percent in 2001. Latino faculty increased by 46 percent from 1.7 percent in 1993 to 2.3 percent in 2001. During these years, the proportion of female faculty rose from 34 percent to 39 percent. While positive growth rates are an encouraging sign, representation among African-American and Latino faculty is so low that it would take more than one hundred years at current growth rates for African-Americans and Latinos to reach the level of representation in faculty ranks that they now have in the state’s population (that is, 14.9 percent for African-Americans and 12.3 percent for Latinos).
CHAPTER IV
THE “POOLS” OF POTENTIAL FACULTY

Why do colleges and universities employ so few African-American and Latino faculty? Many say that the limited number of qualified candidates is the reason. That is, the scarce number of African-Americans and Latinos with doctoral degrees makes it difficult for colleges and universities to “find” underrepresented faculty.

Recent research provides some support for this view. Stephen Cole and Elinor Barber in *Increasing Faculty Diversity* (2003) have found “little difference among the four ethnic groups …in their occupational preferences in so far as academia is concerned: approximately 10 percent of each ethnic group selected “college professor” as their most likely occupational choice. The low number …is caused not by a lack of interest, but by the relatively low absolute numbers of these ethnic groups in the undergraduate population, particularly the dearth of such undergraduates in arts and sciences programs who perform at a high level academically.”

Cole and Barber’s research should be taken seriously. In 2001, Latinos constituted only 2.5 percent and African-Americans 4.7 percent of all doctoral recipients at Illinois colleges and universities. The number of doctoral recipients from these groups must grow.

Cole and Barber’s focus is on the doctoral pool, as is most other related research. The preparation of underrepresented faculty, however, is a broader topic than such research suggests. Indeed, too narrow a concentration on the Ph.D. pool has its own set of limitations and liabilities, as demonstrated below.

- Higher education is not a monolith. Post-secondary institutions include research universities, comprehensive universities, liberal arts colleges, proprietary institutions, and community colleges with widely varying missions and educational goals. These institutions have different policies and practices for hiring and promotion.

- There are multiple pools for new faculty, not a single one. Many entering faculty are not hired from a Ph.D. program to a tenure-track position. In fact, the Board’s April 2002 study on nontenure-track faculty found that tenure-track positions requiring a Ph.D. constitute only about one quarter of all faculty positions at Illinois public colleges and universities. At most community colleges, faculty are required to have a master’s degree. Also, at community colleges and, less commonly, at public universities, full-time faculty are hired from the nontenure track.

- Whatever the proportion of minority students receiving graduate degrees each year the actual number of minority degree recipients is substantial. This is especially true at the master’s level, where minority master’s degree recipients have grown remarkably in recent years. In 2001, African-American students received 2,311 master’s degrees or 8.5 percent of all master’s degrees awarded by Illinois public universities.
institutions. Latino students received 978 master’s degrees or 3.6 percent of the total. While the proportion of African-American and Latino master’s graduates remains low, it is hard to conclude that lack of available African-American and Latino candidates has prevented two-year institutions from hiring from this pool, as shown in Table 2.

- Research on the doctoral degree pool, as a single entity, can obscure the fact that in some disciplines the proportion of minority faculty is lower than the proportion of minority doctoral graduates. In the field of education, for example, the proportion of African-Americans receiving doctoral degrees has been climbing for at least a decade. In 2001, African-Americans made up 17.4 percent of all Illinois doctoral recipients in this field, but only 8.3 percent of all faculty employed in the field by Illinois public universities.

- The perception that few prospective minority faculty exist, while certainly true in some disciplines, has the overall effect of discouraging aggressive efforts to search out and hire those who are available, whatever the discipline. Minority faculty who are eventually hired also find themselves in the unenviable position of either being seen as less qualified or as temporary employees who will soon be lured away by a better offer from another institution. In fact, as Daryl Smith of Claremont University has shown, only a small percentage of minority doctoral recipients are actively sought after by multiple institutions and few enjoy the competitive position of superstar scholars such as Henry Louis Gates and Cornell West.

- Whatever the current supply of African-American and Latino doctoral recipients, through vigorous effort, leadership, and strategic initiatives, Illinois higher education can acquire more than a proportional “share” of minority faculty. The following
chapters offer examples of strategies that Illinois institutions can employ to take the lead in attracting and hiring a diverse faculty.

Master’s level education and nontenure-track faculty constitute “undeveloped pools” that many institutions have overlooked in their efforts to improve faculty diversity. Higher education, generally speaking, relies upon doctoral education for the development of future faculty. Graduate faculty mentor and support their doctoral students to prepare them to become faculty members. Doctoral students, in turn, take advantage of the opportunities presented to them to prepare for their future profession, taking teaching assistant and other part-time teaching positions, attending conferences, and exploring opportunities to publish their research.

Few graduate faculty, or even graduate students, take into consideration the fact that a master’s degree is the credential needed to become a faculty member at a community college. Few master’s degree students are mentored by their graduate faculty to assume such a role. The university faculty and administrators whom we spoke with knew little about how community colleges hire their faculty and how graduate programs might coordinate with these efforts. Such lack of knowledge is unfortunate not only for diversifying community college faculty but university faculty as well, since community college teaching can serve as an excellent position from which to continue a doctoral education.

Since graduate students have little knowledge about the kind of educational preparation needed to teach at a community college, they can and do close off opportunities for community college teaching without even knowing it. For example, teaching at a community college requires a master’s degree in a “subject area.” A number of faculty and administrators testified that minority students were often surprised and disappointed to learn that a master’s degree in education would not automatically qualify them to teach at a two-year institution. Those testifying urged Illinois higher education to make a greater effort to communicate to master’s degree students how their choice of field affects their prospects for teaching at a community college.

Perhaps it is not surprising, given the above situation, that community colleges are hiring an increasing number of doctoral graduates for faculty positions. While there are conflicting educational arguments for and against hiring faculty with advanced research training to teach at two-year institutions, it is seldom recognized that one hidden cost or victim of this new practice is faculty diversity. After a decade of growth, substantial numbers of minority master’s degree graduates are now available for community college faculty positions. Unless greater efforts are made to develop this pool, the prospects of diversifying community college faculty are likely to remain limited.

The Board’s April 2002 study on nontenure-track faculty found that about one third of all public university faculty and nearly three quarters of all community college
faculty occupied part-time or full-time nontenure track positions. The study also found that minority representation among nontenure-track faculty is slightly greater than among tenured/tenure-track faculty. For example, at community colleges African-American and Latino nontenure-track faculty, combined, accounted for 12 percent of all part-time faculty compared with nine percent of full-time faculty in fall 1999. At public universities, African-American and Latino faculty accounted for eight percent of full-time and 10 percent of part-time nontenure-track faculty compared with eight percent of tenured/tenure-track faculty.

Given the richness of the nontenure-track pool and the common practice among community colleges of hiring tenure-track faculty from the part-time teaching staff, it is unfortunate that institutions are not looking more consciously to this resource to diversify their faculty. One administrator from a Chicago community college testified that establishing a statewide internship program for nontenure-track faculty could greatly facilitate institutional efforts to hire more underrepresented faculty from the nontenure track. Such a program does hold promise. However, the Board also believes that institutions can do more on their own.

Parkland College, for example, has established a program aimed at helping underrepresented faculty move from part-time to tenured positions. The college began this program since it found many minority candidates lacked the experience to successfully compete for tenure-track jobs. According to Dale Ewen of Parkland College, this supervised faculty internship program brings “recent graduates of master’s degree programs to Parkland to teach up to two years full-time in adjunct positions not only with commensurate full-time faculty salaries and fringe benefits but also with mentoring and other support provided in preparation for future full-time, tenure-track faculty openings. We must make certain that there will be tenure-track positions available after the internship. We broadened the definition of ‘diversity’ to include any underrepresented group.” Richland Community College also has established a program based on the Parkland College model.

Colleges and universities should take every opportunity to develop the undeveloped pools of potential faculty. At universities, graduate faculty must inform diverse master’s students about community college teaching and help them acquire the skills and experience needed to pursue this career. Community colleges must also encourage public universities to provide them with information about master’s degree candidates and indicate through their actions that such referrals will receive serious consideration. Likewise, institutions and, especially, community colleges must look to the nontenure-track faculty as a resource for tenure-track positions and use creative approaches in developing this pool. The importance of taking these initiatives should not hamper or divert efforts to develop the traditional doctoral pool, a subject addressed in the next chapter.
Illinois has two unique programs to develop and diversify the academic pipelines. The Illinois Minority Graduate Incentive Program (IMGIP) and the Illinois Consortium for Educational Opportunity Program (ICEOP) provide graduate school fellowships to minority students who plan to pursue faculty positions in higher education. IMGIP fellowships are awarded to graduate students pursuing degrees in the fields of mathematics, science, and engineering; ICEOP awards are available to master’s and doctoral students in any field.

Since their inception in the mid-1980s, these two state programs have increased minority graduate enrollment and degree completion, according to a number of studies. A staff evaluation in the mid-1990s suggested that because of the programs’ influence, minority graduate enrollment in Illinois had increased at a rate faster than the nation. Two studies of these programs conducted by Jack McKillip of Southern Illinois University in 2000 and 2003 found that participants had high completion rates and the programs had a major impact on the number of graduate degrees awarded to minority students in Illinois. In 2002, Seymour Bryson of Southern Illinois University conducted an evaluation for the Illinois Board of Higher Education that also noted the programs’ higher graduation rates. Fellows testified at the Board’s public and Web hearings that the state awards had made it possible for them to enroll and continue in graduate school.

While the programs have increased minority graduate enrollment and degree completion in the state, they have had more limited success in placing graduates in faculty positions in Illinois. According to the 2003 McKillip report, “sixty-three percent of those who had completed their academic program reported that they were employed as faculty at institutions of higher education, with the majority of these employed in Illinois’ higher education (39 percent of all graduates). Thirty-five percent of ICEOP master’s graduates, 46 percent of ICEOP doctoral graduates, and 19 percent of IMGIP doctoral graduates worked in higher education in Illinois.” McKillip’s earlier study had found that former fellows made up roughly nine percent of all minority faculty in Illinois.

Although similar in mission and function, these programs display differing characteristics. IMGIP is administered and funded under the Higher Education Cooperation Act grant program. ICEOP, created by state statute, is funded under a separate appropriation. The separation of the two programs creates inefficiencies and at least one questionable practice, the awarding of IMGIP fellowships to some out-of-state residents, which contributes to the program’s poor placement record.

The size and composition of the fellowship boards—with 47 ICEOP and IMGIP board members and no members from community colleges or members who have authority over placement, as noted in the Bryson study—hinders policy development, accountability, and improvement. What is needed is a more strategic and systematic approach toward program governance to increase the number of fellows that can and will
assume faculty positions in Illinois. To achieve this purpose, the Board proposes establishing a smaller, policy-oriented fellowship board that would govern a new fellowship program formed by combining IMGIP and ICEOP.

The new board would be appointed by the Board of Higher Education and composed of 15 members. Persons selected would include individuals such as presidents, provosts, deans, and affirmative action/diversity officers who have been successful in increasing faculty diversity on their own campuses, as well as those who have contributed statewide leadership. Institutions that demonstrate a proven commitment to faculty diversity would be given special consideration for membership. Representation on the new board would be diverse and include representatives from each higher education sector and minority higher education organizations, as well as the Illinois Board of Higher Education and the Illinois Community College Board.

More can be done to increase fellows’ chances of securing faculty positions in Illinois. One way to accomplish this is to prioritize fellowships according to an institution’s past placement record and support for a sponsored candidate, especially teaching opportunities. Priority also should be given to candidates seeking degrees in fields that do not have a large proportion of minorities already pursuing graduate work and fields that are most likely to have open positions. According to McKillip, master’s and doctoral fellows in the field of education have received thirty-eight percent of all ICEOP awards; yet, this is a field with few faculty positions at community colleges.

Discussion with faculty and administrators in Illinois reveals a lack of awareness about these programs. Recently, program administrators have enhanced the Web site and begun circulating marketing materials earlier in the year at a time in keeping with academic hiring schedules. Program administrators are now working more closely with higher education institutions, offering workshops and seeking other outreach opportunities. Gwen Koehler of Carl Sandburg College also is developing a database and marketing materials to make program information more useful to students and employers.

Still, more tracking is required in order to locate the holes in the pipeline between the fellows’ graduate programs and placement in Illinois faculty positions. Currently, there is no ongoing system that indicates whether fellows are interviewed and offered positions, and whether they are choosing careers outside of Illinois due to lack of opportunity or more favorable opportunities elsewhere. Currently, there is also no tracking of institutional efforts either to hire or place fellows.

These two state fellowship programs can only do so much to improve the proportion of minority graduate students at Illinois colleges and universities who remain in the state to teach. While these programs receive much attention, program participants make up only a fraction of all minority graduate students. For example, graduating fellows represented 14.5 percent of the total number of doctoral degree recipients and 0.7 percent of the total number of master’s degree recipients awarded by Illinois institutions in 2001. As suggested in the previous chapter, more successful placement requires working with all minority students in the faculty pools.
CHAPTER VI

THE SEARCH PROCESS

How can higher education faculties become more diverse? One promising answer lies in the search process. In recent years, a number of researchers and campus administrators have begun to look more closely at the search process and the way in which faculty hiring decisions are made. As with any new initiative, the results of their examinations and actions remain uneven and incomplete. Yet, the good news is that fundamental changes are underway, and these innovations are producing results. Greater statewide leadership and sharing of information across institutions offers considerable promise for building upon these initiatives.

One key change in the search process has been to establish guidelines designed to guard against bias, as well as to ensure that search criteria reflect both departmental and institutional objectives. Western Illinois University’s “Affirmative Action and Equal Opportunity Recruitment Manual and Hiring Guidelines” is an example of an approach that seeks to more fully articulate the specific elements of search processes. Greater attention is also being given to the composition of the search committees to ensure gender and racial diversity. Some campuses now use an affirmative action officer or a “diversity representative” on each search committee. Another strategy is to provide training for faculty on search committees. DePaul University, for instance, uses Behavioral Based Interviewing Techniques Training from Impact Training Solutions, and a number of other institutions have used other consulting groups with reported success.

Progress is also possible when proactive leaders develop budgets that allow for continuous recruitment. In their study of faculty diversity in eight Midwestern states, Faculty of Color in Academe: Bittersweet Success, Caroline Sotello Viernes Turner and Samuel L. Meyers, Jr. report that funding for minority recruitment is one of four factors contributing to hiring a diverse faculty. Other factors include funds for minority faculty development, the realization that minority faculty representation is inadequate, and a genuine recognition of the value of diversity.

A number of Illinois institutions have created budgets to facilitate diverse hiring. The Target of Opportunity Program at the University of Illinois-Urbana Champaign enables the appointments of outstanding minority scholars, regardless of whether the university has a position open in the scholar’s area. These and other changes have resulted in more diverse hiring on many campuses. For instance, the percentage of minority and female faculty at Northeastern Illinois University now exceeds national averages, while last year at Illinois State University fourteen percent of new hires were minority faculty and staff.
Additional progress is possible through careful examination of how an institution’s culture may narrow and limit a search. While such limitations may seem quite benign, they act to restrict the number and diversity of eligible candidates. One example of such a limitation is the informal practice that exists at some community colleges of giving serious consideration only to candidates who have past experience with a two-year institution.

In both the four-year and two-year sectors, institutional or departmental culture can lead to the hiring of candidates with similar interests and backgrounds while excluding from consideration others whose qualifications are different in kind, not quality. From this point of view, hiring people who “fit” becomes a distinct liability and can exclude or devalue candidates whose research interests or work experience differs from the norm of the hiring institution.

Another subtle impediment is “credentials creep.” At some comprehensive universities, status considerations can come strongly into play as departments may opt for candidates whose background and training at elite institutions reflect little interest or experience in teaching undergraduates. One consistent problem observed at universities, especially, research universities, is that the prestige of an institution granting the graduate degree can carry undue weight in evaluating a candidate’s application, and this practice can lead search committee members to blame their lack of progress in diversifying the faculty on the limited pools.

Correspondingly, at community colleges, where a master’s degree is the minimum credential, search committee members may place increased value upon candidates with a doctoral degree even though that degree may reflect greater research training and not more teaching experience. The over-emphasis on where people earn their degrees occurs, in most cases, when committees have no clear working definition of merit.

Job descriptions written with attention to diversity objectives and an institution’s broad educational needs can help to reverse the above barriers. Deans, department chairs, and diversity representatives play a key role in ensuring the criteria used to determine “most qualified” remain constant throughout the process for all candidates and place priority on meeting an institution’s educational goals and objectives.

Search committees also are more likely to stay on track if they are made aware of the tendency to read between the lines of resumes. Women faculty have told us that some search committee members will point to unexplained gaps in women candidates’ resumes that actually result from childbirth or other family or partner commitments as a liability for the candidate. The common assumption drawn from such gaps is that these applicants have no “clear career path” and, therefore, are not serious academics.

On the other hand, search committee members’ willingness to consider “value added” criteria (such as experience working with a diverse student body, evidence of creative pedagogy, extensive involvement in service or community projects, and research in innovative areas) opens up increased opportunities to diversify the faculty. The aim,
then, is to include, rather than exclude, especially at the early stages of the process. An inclusive search process can also be extended to include time for interaction between the underrepresented candidate and non-search committee members, thereby, increasing the likelihood that an institution can successfully hire a candidate to whom an offer is made. Search committees can facilitate a number of activities for an underrepresented candidate while he or she is on campus, such as arranging for the prospective faculty member to meet with campus academic leaders and faculty from underrepresented groups.

Untraditional backgrounds, not the lack of qualifications or the minimum required academic degree, are what often push underrepresented candidates out of serious consideration. As the pool begins to shrink due to these unacknowledged restrictions and assumptions, search committees frequently conclude that “there are not enough qualified minority candidates.” In other words, it is not the pipeline (that is, minority graduate enrollment and completion rates), but the narrow writing of job descriptions and the narrow reading of the resumes that most often pare down the pools of candidates.

Our research has shown that altering the search structures and procedures can make a difference. As discussed below, campus leaders play a critical role in this process for as the importance of faculty diversity is embedded in campus plans and strategies, campus attention switches to the question of how to diversify, not if to diversify. With greater awareness and commitment to expose and counter hidden barriers and unchallenged assumptions, progress is possible. While each institution will have its own set of obstacles and opportunities, it is no longer enough to proclaim, “we can’t find any qualified, diverse candidates.” Rather, those engaged in the search process might begin to realize, “we can go about this in a more effective way.”
Chapter VII

CAMPUS CLIMATE

What’s the weather like where you are? Ask an underrepresented faculty member this question and the likely response will be “pretty chilly.” A “chilly climate” is probably the most cited obstacle for the retention of female, disabled, and minority faculty—and students. The cultural changes necessary to make campus climates warmer and more inviting require a careful examination of the temperature on each campus.

Survey research conducted throughout the country makes it clear that underrepresented faculty have strong criticisms about their working environment. The hearings, meetings, and private discussions conducted for this study confirm that many minority, female, and disabled faculty in Illinois have similar frustrations and concerns. Feelings of isolation, a lack of sufficient professional mentoring and collegial support, and being overburdened by diversity-related work and student mentoring are common problems. Many institutions are increasingly sensitive to such criticism, although efforts to ameliorate conditions have lacked the scale or intensity needed for widespread impact.

Faculty’s feelings of isolation are felt most at the departmental level, and this isolation can be particularly problematic for new faculty attempting to become part of the campus community. While all new faculty face adjustments, these routine difficulties are complicated for faculty members from underrepresented groups. Latino and African-American faculty told us that junior faculty often learn too late that activities that help them in the tenure process are those that are tied to broad institutional, high-level issues, not the diversity-related matters in which they often are asked to participate.

Mentoring can help minimize the extent to which underrepresented faculty are diverted from research and publishing responsibilities, key factors in tenure and promotion reviews at four-year schools. Yet, the quality of mentoring, as well as tenure prospects, is often unnecessarily limited by the fact that many tenured faculty are not interested in the research of faculty who study women and minority issues.

Senior faculty report being pulled in many directions. Often an underrepresented faculty member may be the only minority, woman, or disabled person in a department. This singular fact can both isolate and lead to greater demands to assist in committee work and student mentoring. An African-American woman in a science field testified that her race and gender make her doubly valuable, or vulnerable, for any committee assignment. As this example suggests, the strategies that are encouraged to create an inclusive campus environment are the things that can hamper efforts to support and retain a diverse faculty. This ironic Catch 22 results from the absence, on most campuses, of a critical mass of faculty who can contribute to diversity efforts.

Underrepresented faculty mentor more than their share of students. Such relationships are difficult to limit because faculty and students will seek out connections and a sense of community, especially on mainly white campuses. As one African-
American faculty member testified, the sheer number of students she mentored made her feel less isolated. Yet, the efforts minority faculty engage in to create more welcome environments for minority students (and other minority faculty)—such as participating in more community-based projects—can also serve to further marginalize and overburden them.

Illinois State University's Committee for Diversity has a plan to “Bridge the Gaps” and, thereby, enhance faculty recruitment. Among its sponsored activities are focus groups with members of the campus and surrounding community designed to solicit feedback to improve the campus climate.

Institutional policies also can create chilly campus climates. Women faculty told us that even with maternity leave policies in place, women faculty often must broker deals with their department chairs in order to meet their family and job responsibilities. While women faculty certainly support flexibility to accommodate family issues, they also note that the absence of comprehensive, codified policies can lead to discrepancies in treatment and resulting frustration. Some advocate making tenure policies more flexible to accommodate childbirth, spousal or partner hires, or other circumstances that delay the standard full-time process to tenure.

Unevenly applied or limited campus policies also affect faculty with disabilities. This is one of the least represented groups on campus and accommodations are often aimed more at student than faculty needs. Like female faculty, faculty with disabilities find that in order to get necessary resources and support, they have to bargain on their own and work their way through the various levels of the organization. Also, faculty with disabilities point out that more flexible schedules for tenure review could be of great value to them since disability can have a critical impact upon their time.

Campus climate also affects students’ learning and satisfaction. One result of improving the climate for underrepresented faculty, therefore, is that it also would increase the likelihood that underrepresented students would seek careers in higher education. If underrepresented students do not experience a welcoming environment in college, if students witness faculty members’ stress and isolation that are directly tied to underrepresentation, the problems of the limited pipeline and shrinking candidate pools will only continue. Efforts to improve campus climate must be seen as part of a systemic approach to increasing faculty diversity, now and in the future.

More can be done to warm up campus climates, but in order to discover what is needed, each institution must take its own temperature. The degree of “chilliness” depends on local factors such as the extent to which the surrounding community reflects or welcomes diverse populations and the current diversity among both students and faculty. In addition, the isolation that faculty experience varies according to their particular situation and place of employment. For instance, women of color will feel different pressures from white women in underrepresented fields. There is much campus leaders and faculty can do to improve climates. Indeed, making permanent strides to increase faculty diversity will depend on it.
"It has been my experience that no diversity occurs in an institution unless the leaders in an institution make it happen." This statement from a participant in the Board’s Web hearing has the ring of truth. Effective leadership requires a coordinated effort at all campus levels. Effective leaders plan, make connections, form relationships, develop tools and resources, set an example, and make others accountable. Effective presidents link their words and actions to diversity objectives and make explicit the connections between diversity and student learning. Effective deans and department chairs work together, and with faculty, to improve search processes and enhance the campus climate to support diversity.

Nationally and within Illinois, higher education faculty, administrators and policy makers assert that success requires leadership from the top. In practical terms, this means that Board members, presidents, and high-level administrators recognize, articulate, and act on the connection between educational excellence and diversity and ensure that all diversity efforts are systemic and sustained.

One critical way to advance faculty diversity is through the development and use of clear mission statements and strategic planning documents. National experts, such as Daryl Smith, have observed that mission statements demonstrate how an institution’s viability and credibility are tied to diversity. Strategic plans indicate the extent to which diversity is seen as imperative to success and how much the effort pervades the infrastructure of the whole institution. Zelema Harris, President of Parkland College, whose campus has enacted and revised several versions of such documents, points out that they provide an “authorizing language” and an “intellectual base” from which administrators can guide and invigorate campus efforts.

In diversifying the faculty, successful leaders focus on strategic response and results. Ineffective leaders focus on compliance.

Clear language, of course, is not enough. Even well-crafted missions and strategic plans can have only as much power as the actions that support them. Strong leaders create structures and incentives, as well as articulate the means by which mission and goals are met. Steven Cunningham of Northern Illinois University (NIU) points to efforts on his campus to establish a “strategic” rather than a “compliance” approach to leadership. He notes that within a “compliance paradigm . . . related administrative structures tend to be independent and specialized oversight functions. The scope of organizational integration of these functions is therefore limited.” The Center for Diversity Resources serves to provide much of the impetus and focus for diversity initiatives on NIU’s campus.
As the above suggests, success depends upon careful planning that ensures organizational structures, policies, and budgets are in place for the ongoing recruitment and retention of diverse faculty. Academic leaders can also demonstrate and act on their commitment to diversity through the value they place on the priorities used in faculty evaluation (research, publishing, teaching, and service), and through the extent to which junior faculty are advised and supported accordingly. Much of the research on minority faculty stresses the need to examine the criteria and procedures used for promotion and tenure. Retention is also more likely when administrators support mentoring systems that address the particular and unique issues facing underrepresented faculty.

Campuses need active leaders at all levels of the institution to make gains in faculty diversity. Such broad-based support requires presidents and provosts to communicate both the importance of the issue and the expectation that academic leaders will be evaluated according to their effort and performance. Communication of these expectations facilitates the ability of staff at all levels of an institution to address faculty diversity needs.

Colleges and universities will find it easier to implement evaluation procedures and criteria if they flow from campus-wide plans and goals. For example, Elgin Community College has an institutional goal to “promote the multicultural competence of students, employees and the community.” In turn, one of the “effectiveness indicators” that the college uses to measure multicultural competence is “evidence of progress to reflect the racial/ethnic diversity of the district in the hiring of administration, faculty, and support staff.” Colleges and universities should make all personnel aware of their responsibilities for supporting diversity and have protocols for assessing individual efforts.

In focus groups and during public hearings, a number of higher education leaders emphasized the importance of cooperation and resisting competition among institutions. In fact, sharing information and resources can benefit everyone—especially within Illinois. Oakton Community College, for example, demonstrated its cooperative approach in hosting a faculty job fair. To increase the number of participants from underrepresented groups, co-sponsorships for the fair were established with the National Association for the Advancement of Colored People, the Hispanic Alliance for Career Enhancement, and the National Association for Asian American Professionals. Co-sponsorship gave access to the organizations’ membership lists, publications, and promotion on the organizations’ Web sites.

By virtue of their positions, regardless of the level, campus leaders are the ones responsible for embedding diversity into various institutional activities and plans. To the extent that they are able to keep this focus, and to draw the connections between educational excellence, student learning, and faculty diversity, real change is possible.
CHAPTER IX

ACCOUNTABILITY

Achieving success on an issue as important and complex as faculty diversity requires effective accountability. Unfortunately, the mechanisms now in place in Illinois higher education are weak and do little to foster improvement. In an effective accountability system, leaders are able to ascertain and demonstrate that their efforts have achieved results. Equally important, they have a statewide context in which to interpret their own campus experience.

The information that Illinois higher education now collects and reports on faculty diversity is less comprehensive than information on student diversity. Public and private institutions report faculty data every other year through the Integrated Postsecondary Education Data Survey (IPEDS). Data submitted cover full-time faculty in three tenure categories (tenured, tenure track, and nontenure track) by gender and race/ethnicity. A separate survey collects information each year on faculty salaries, by rank, which the Board uses for the peer group comparisons in its annual faculty salary study.

The Board of Higher Education publishes information about faculty diversity in its Annual Report to the Governor and General Assembly on Underrepresented Groups. This report provides aggregate information from the IPEDS data and includes tables on the number and percent of full-time faculty by race/ethnicity and gender for each higher education sector, as well as the state as a whole. Qualitative information about faculty diversity appears in the report’s focus topics.

To permit more thorough monitoring and analysis, Illinois higher education should undertake a number of steps to improve the reporting of information on faculty diversity. First, institutions should collect and report data annually, not biennially. Second, the Annual Report on Underrepresented Groups should include information on the number of new hires for each underrepresented type of faculty in each higher education sector. IPEDS already collects this type of information and such a change would be easy to implement.

Finally, the Board should report information on faculty by institution, as it does for students. The Annual Report on Underrepresented Groups should present information on the number of new hires by gender and race/ethnicity that community colleges and universities employ each year. The report should also include information on the total number and proportion of female and minority faculty at each institution in order to provide a picture of faculty diversity that accounts for faculty retention.

Accountability for faculty diversity also needs strengthening at the program and institutional levels, as previous chapters have argued. The chapter on IMGIP/ICEOP
proposes structural modifications to enhance the accountability of these programs. The previous chapters show how campuses can strengthen accountability for faculty diversity by assigning responsibility and delineating the roles of board members, presidents, provosts, deans, and department chairs. The Board will also explore how the Annual Report on Underrepresented Groups can be used more effectively to focus attention on issues of campus climate and placement activities.

Each Illinois public institution should ensure that there exists an effective procedure on their campus for addressing the needs of faculty with disabilities. Our conversations suggest that some campuses may have inadequate means for assigning responsibility for faculty with disabilities and providing them with “reasonable accommodations” as required by law. Few departments have faculty with disabilities. Yet, some campuses expect a faculty member with a disability to first seek accommodation in his or her home department. This practice is often unfortunate since neither the chair nor other members of a department are likely to have the knowledge or resources to be of assistance to the faculty member seeking to ameliorate working conditions. One example of an effective approach is Northeastern Illinois University’s policy that general university funds should pay for an accommodation of more than one hundred dollars.
RECOMMENDATIONS

A STATEWIDE APPROACH

This report identifies a variety of opportunities for Illinois colleges and universities to increase faculty diversity. These opportunities should provide some direction and reason for optimism. By themselves, however, they will not ensure success, something that only strong and committed leadership at the campus level can bring about. The following recommendations will provide tools by which institutions can exert more effective leadership and, beyond this, create a statewide climate favorable to sustained progress.

General

The Illinois Board of Higher Education recognizes that student and faculty diversity enhances the education of all students and offers direct and indirect public benefits to our state and nation. Diverse learning environments positively affect students’ critical thinking skills, their civic commitment, and preparation for work in a global economy, among other benefits. The Illinois Board of Higher Education and its public colleges and universities are committed to making the utmost efforts, and using all legal means, to advance diversity in higher education.

Public community colleges and universities should incorporate into their education mission and/or strategic plan a statement(s) that recognizes the educational importance of achieving diversity among students and faculty.

The Preparation and Development of a Diverse Faculty in Illinois

Illinois colleges and universities should encourage and inform underrepresented students about a career as a faculty member and should encourage and inform underrepresented graduate students about faculty opportunities and openings at Illinois two-year and four-year institutions.

The Illinois Board of Higher Education will work with Illinois colleges and universities to facilitate and support efforts to encourage and inform underrepresented students about a career as a faculty member and to encourage and inform underrepresented graduate students about faculty opportunities and openings at Illinois two-year and four-year institutions. The Illinois Board of Higher Education will assist staff at Illinois colleges and universities to identify strategies and practices that are effective in achieving these objectives, as well as to identify underrepresented students eligible for faculty positions.

Illinois colleges and universities should identify and professionally develop interested and appropriately-trained, underrepresented nontenure-track faculty for tenure-track positions and faculty careers. The Illinois Board of Higher Education will establish a statewide initiative that supports these institutional efforts.
The Illinois Board of Higher Education will establish a council to provide advice on effective practices, policies, and programs for increasing the number of underrepresented faculty at Illinois colleges and universities.

**The Illinois Consortium for Educational Opportunities Program/Illinois Minority Graduate Incentive Program**

The Illinois Board of Higher Education will seek statutory authority to combine the Illinois Consortium for Educational Opportunities Program with the Illinois Minority Graduate Incentive Program. The Illinois Board of Higher Education will appoint the Board for the new combined program which will be composed of 15 members who have been successful in increasing faculty diversity on their own campuses and in Illinois higher education. Participating institutions that have demonstrated a proven commitment to faculty diversity will be given special consideration for board membership. Members and/or staff from the Illinois Committee on Black Concerns in Higher Education, the Illinois Latino Council for Higher Education, the Illinois Board of Higher Education, and the Illinois Community College Board will have representation on the board which will also have representatives from each of the higher education sectors.

Other changes to be made in the new, combined program:

- Establishing subcommittees for review of fellowship applications and selection of awards, as well as for other purposes and needs determined by the Board.
- Establishing new fellowship criteria that prioritize awards, giving preference to: doctoral and master’s applicants entering fields with low diversity and high demand; applicants receiving strong support from their sponsoring higher education institutions, such as the offering of teaching fellowships and internships; and applicants from sponsoring institutions that have a good record in placing program fellows and hiring minority faculty.
- Requiring graduating fellows to complete an exit interview that provides the names of in-state institutions from which they received interviews and job offers.
- Requiring participating institutions to report annually on efforts to hire or secure in-state placement of program fellows and hire other minority faculty.

In fiscal year 2003, Board staff will work with ICEOP/IMGIP administration on the consideration of administration and program changes identified for further review by this study. Matters for review will include: the application form; stipend levels; penalties for fellows who take positions outside of higher education and outside the state of Illinois; exit interviews; coordination with IBHE staff; and the development of annual placement reports for participating institutions. When completed, results of the review and intended program changes will be reported to the Board.
Search and Hiring Process

The Illinois Board of Higher Education will assist colleges and universities to reexamine and strengthen their search and hiring processes. The Board will facilitate college and university access to information and search professionals to help them develop strategies for diversifying their faculty.

Campus Climate

Public colleges and universities should develop means for measuring the climate for female, minority, and disabled faculty on their campus and report the results of these assessments, and subsequent actions taken, to the Illinois Board of Higher Education as part of the Underrepresented Groups report. The Board will facilitate the coordination and development of these institutional assessments and reports.

Accountability

Public colleges and universities should ensure that there exists an effective procedure on their campus for responding to the needs of faculty with disabilities. Institutions should assign responsibility for addressing faculty requests to a campus administrator, not a department chair. The responsible official should have both the knowledge and resources to ensure a “reasonable accommodation” in a timely manner. Faculty should receive at the time of hiring information about what is meant by reasonable accommodation, as well as the procedure they should follow to make an accommodation request.

Colleges and universities should report information on underrepresented faculty to the Illinois Board of Higher Education each year, instead of every other year. The Annual Report to the Governor and General Assembly on Underrepresented Groups will publish information on faculty by institution, as well as by education sector, and will include information on new faculty hires and total faculty for each underrepresented group.
APPENDIX I

SELECTED BIBLIOGRAPHY
